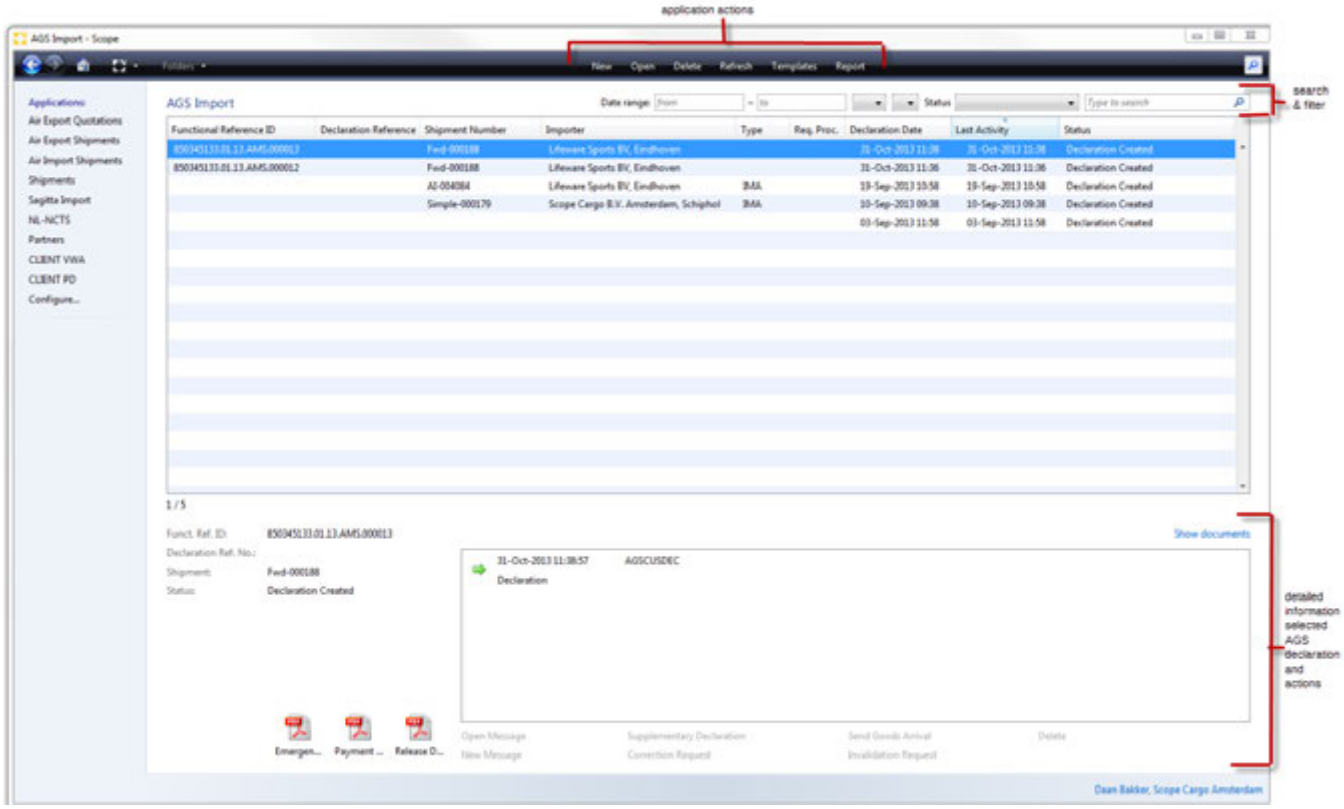
AGS Homeview

- Introduction
- Description

Introduction

Description

The General overview of AGS is started via the path NL Customs \ AGS.



Application Actions

New

Option to create a stand-alone new AGS declaration not linked to a shipment.

Open

Opens the selected AGS declaration in write-enabled or disabled mode depending on the status of the declaration.

Delete

Allows the delete of a AGS declaration, this option will only be available for AGS declaration with the status "Declaration Created", in other cases the declaration can not be deleted.

Refresh

Option to refresh the homeview to ensure the latest information is displayed.

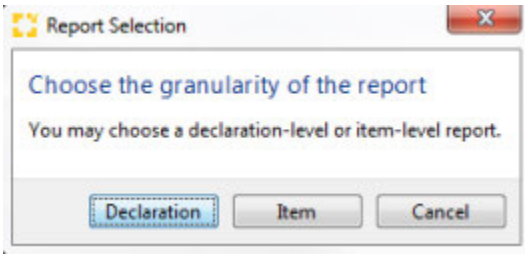
Templates

Changes the homeview from actual declarations to an view of existing templates with the option to create new or modify existing templates.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Report

option which allows to export the details of the declarations which meet the active filter criteria



The report can be produced either:

- one line per declaration and all items details consolidated, in the linked sample all exported fields are shown,
- one line per item of each declaration, in the linked sample all exported fields are shown.

Search & filter

in the search and filter bar AGS declarations can be filtered and searched for with the following options.

Date range (from / to)

Filter declarations where the create or accepted date of the declaration is within the entered date range.

Declaration type

Filter declarations on basis of the declaration type, (IM, CO and EU)

Declaration Method

Filter Declaration on basis of the declaration method

code	description
A	Normal Declarations
B	Incomplete declarations
D	Pre-arrival declaration
E	Incomplete - pre-arrival declaration
Y	Afterwards declarations (used after emergency procedure)

Declaration Status

Filter Declaration on basis of the declaration method, The possible status are explained in the general page regarding AGS

Search Box

Search box to filter declarations on entered details.

Homeview Columns

In the homeview columns the following columns can be displayed

Functional refererence ID

The functional reference Id is the indentification assigned by Scope to the declaration. this is a unqiue number for the Netherlands and consists of the following logic

Position	Details
1 - 9	Eori number of the Agent (the partner creating the declaration)
10-11	Subnumber of the vat number of the agent
12-13	last 2 digits of the declaration year

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

14-16	The branch code
17-23	6 digit counter - reset at the start of the year

Declaration reference

The declaration number as assigned by NL customs after the declaration has been accepted.

Shipment number

The shipment number on which the declaration has been created

Importer

The importer of the declaration,

Type

The type of the declaration, concatenation between the declaration type (IM,EU,CO) and the method (A,B.D.E,Y)

Req. Procedure

The requested procedure as used in the declaration, Code list A35

Declaration date

The date the last outgoing message has been created on the declaration.

Last Activity

The date the last activity took place on the declaration.

Status

The current status of the declaration.

Declaration detailed information

In the section of the detailed information more information regarding the selected declaration is displayed.

In the left corner there are some reference of the declaration, These references can be selected and put the clipboard using CTRL - C

Functional refererence ID

The functional reference Id is the indentification assigned by Scope to the declaration. this is a unqiue number for the Netherlands

Declaration reference

The declaration number as assigned by NL customs after the declaration has been accepted.

Shipment number

The shipment number on which the declaration has been created

Status

The current status of the declaration.

Documents

The following documents can be produced on a declaration

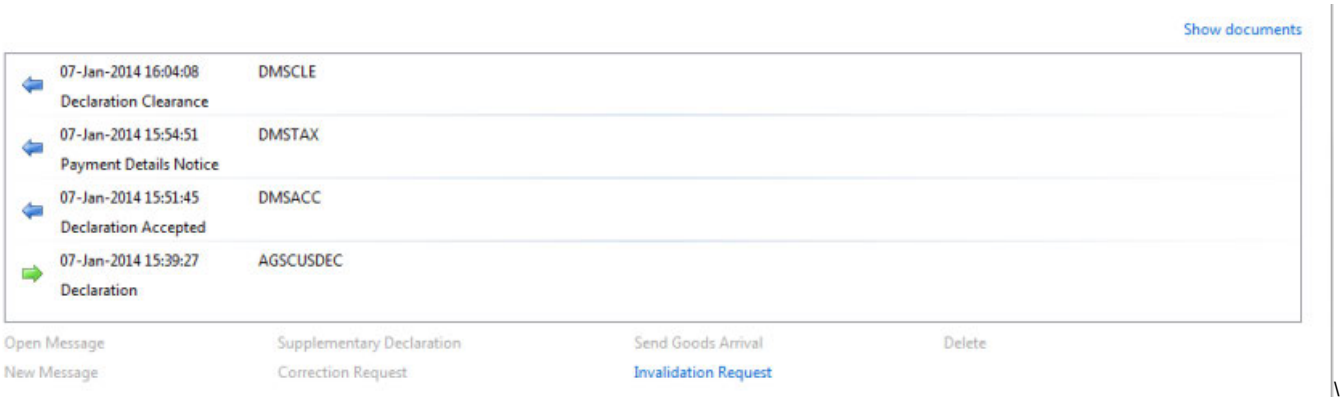
Document	Details	sample
Emergency Procedure document	Document to print in case communication with customs is not possible & customs have given the approval to use the emergency procedure.	Fehlerhafte Verknüpfung
Payment Details	Overview of the Payments due on declaration	Fehlerhafte Verknüpfung

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Release document	Release document with all details of the declaration, Note: There is no official NL customs Layout and application is free to create own layout, untill NL customs has decided upon a official layout this is the layout Scope will be using.	Fehlerhafte Verknüpfung

Message

In the messages box a chronological overview of all incoming and outgoing message are displayed



Action Links

Under the message are shown the available action links, if an action link is enabled or disabled depends on the state of the declaration and if a message is selected.

Action link	Active	description
Open Message	Whenever a message has been selected	opens the declaration message related to the selected message.
New Message	When on the last outgoing message (regardless of the type) an rejection has been received	Allows modification and sending of a new message
Supplementary Declaration	When a declaration with method set to "B" is in the correct state (Goods released)	Allow creation and sending of the supplementary details on a incomplete declaration
Correction	When a declaration is in the correct state to allow corrections. Status must be higher then "Accepted" but lower then "Cleared"	Allow creation and sending of the correction on the declaration.
Send Goods Arrival	When a declaration with method set to "B" is in the correct state (Pre-declaration received)	Allow creation and sending of the Goods Arrival Message
Delete	When a Correction or Invalidation Request, Supplemental declaration or Goods Arrival has been created but not send	Allow the deletion of the created additional message and return the declaration to the previous state of the original declaration

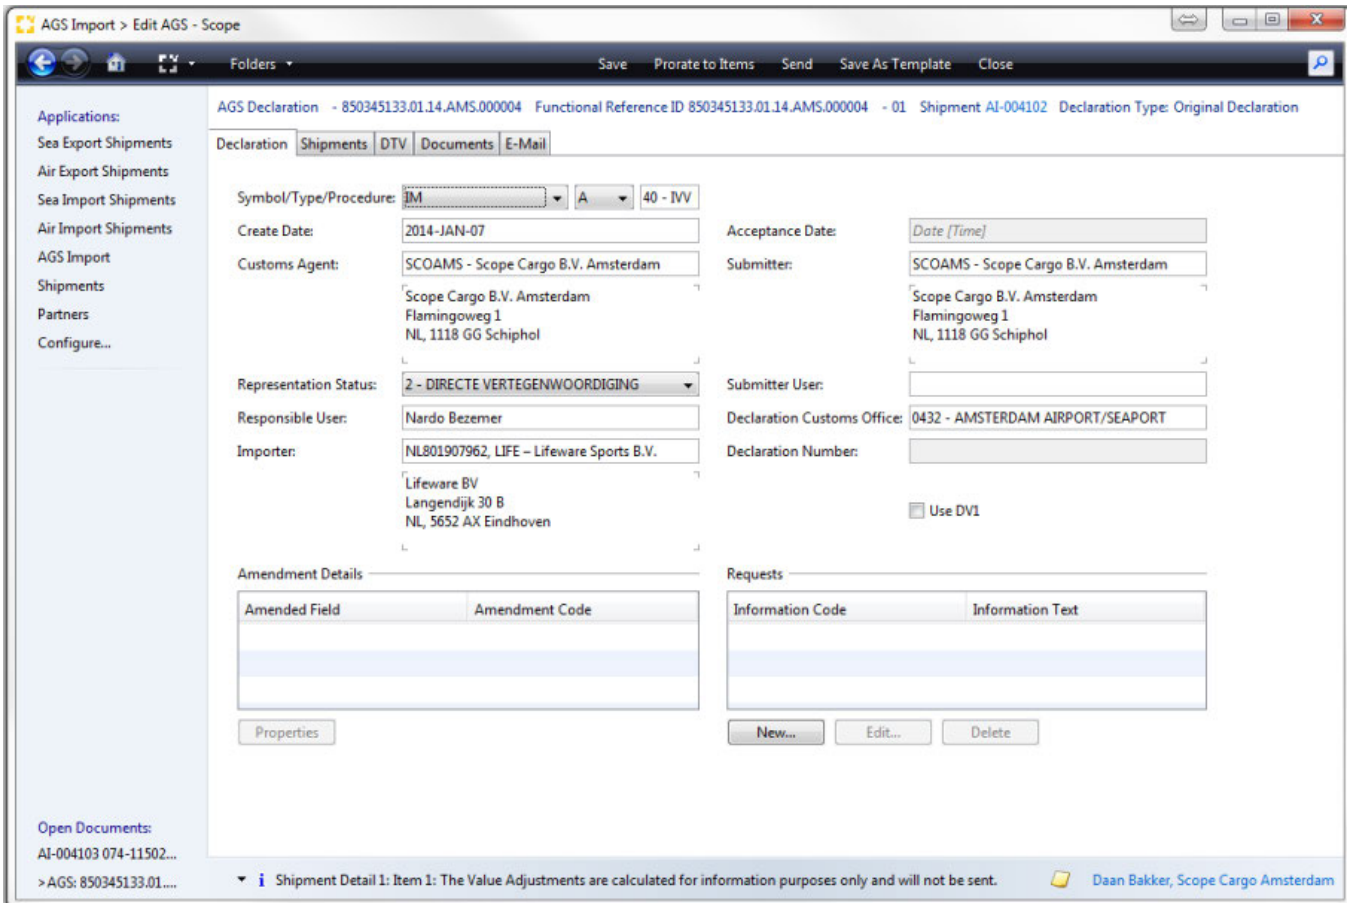
AGS - Declaration

- Introduction
- Description

Introduction

Description



Symbol

The symbol of the declaration (EU,CO, IM)

Type

The type / method of the declaration

code	description
A	Normal Declarations
B	Incomplete declarations
D	Pre-arrival declaration
E	Incomplete - pre-arrival declaration
Y	Afterwards declarations (used after emergency procedure)

Procedure

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The request procedure based on the code list A35, determines werther the declaration is an:

Type	
Import	40,42,45,41(customs matrix column H) 51,53,54,91,92((customs matrix column I)
Storage	71,78 ((customs matrix column J)

Create date

The date the declaration is created will be defaulted with today

Customs Agent

The Partner details of the assigned declarant on the branch partner. This should be the partner which holds the license to do AGS declarations electronically

Representation status

The representation status of the declaration.

Importer

The importer applicable for the application, determined by the representation status.

The term importer in AGS should be seen as the juridical described "Aangever" in the Dutch customs laws.

We refer to the separate section where the logic of a importer is described.

Declaration Customs office

The customs office where the declaration will be handled

Use DV1

Indicates that the DV1 Details are to send.

Requests.

Enter requests, at this moment only request possible is "C1" request extended period incomplete declarations.

Information Code

Select the appropriate code

Information text

Enter applicable details

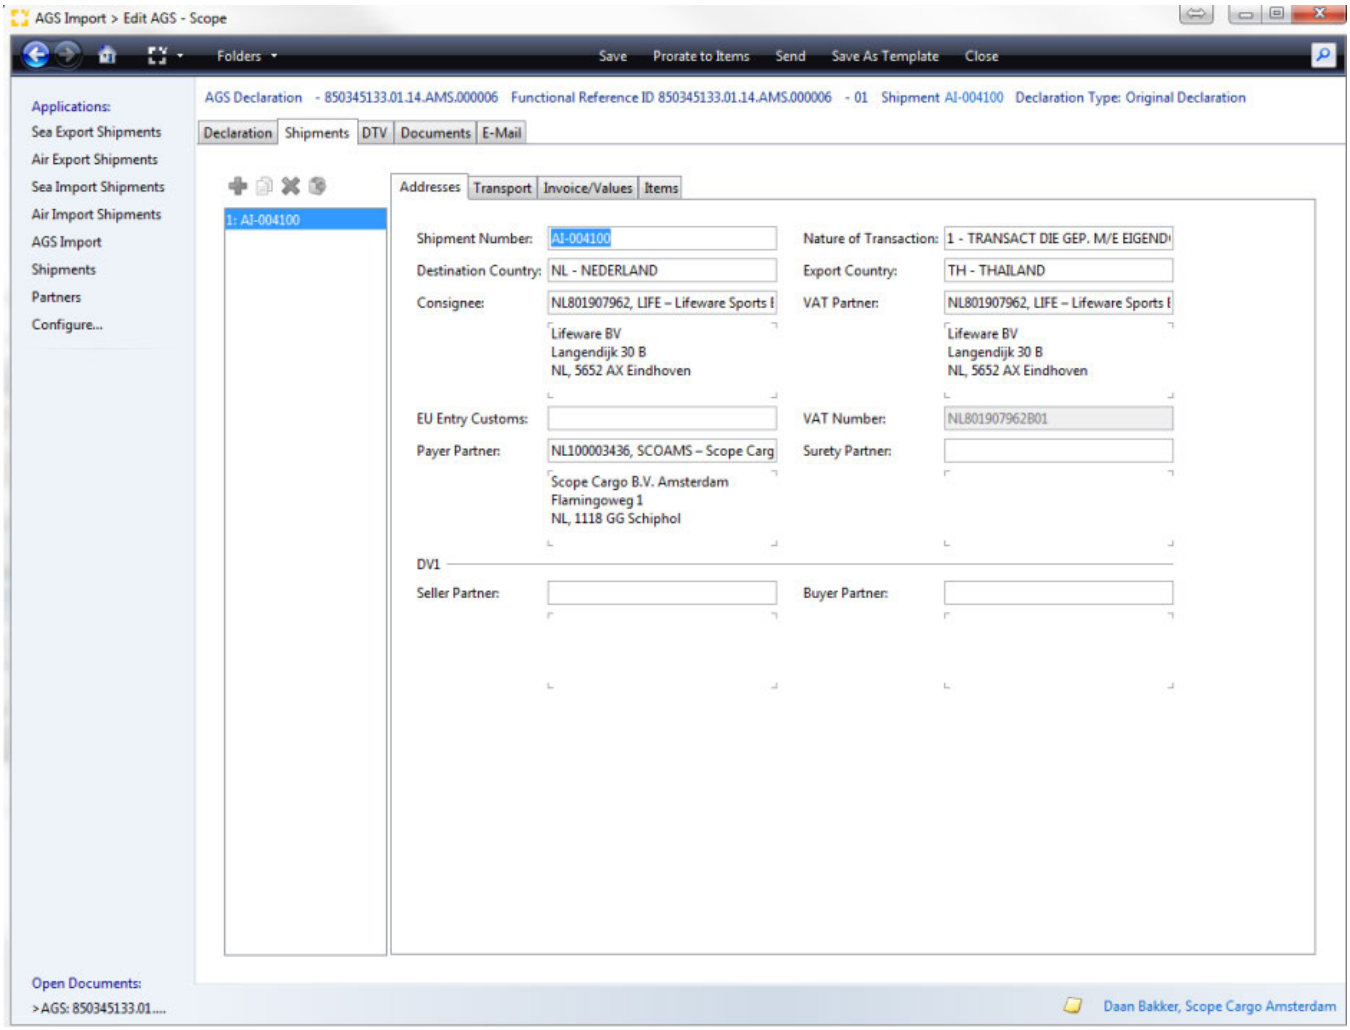
AGS - Shipments - Addresses

- Introduction
- Description

Introduction

In the shipments section of a AGS declaration the details regarding the actual shipment involved partners are registered, AGS in principle supports multiple shipment under one declaration, however this will only be activated when the new EU - UCC customs laws are implemented. Until that time to option to add multiple shipments has been disabled.

Description



Shipment number

The shipment number for which this AGS declaration is created, will be defaulted with the shipment number when the declaration is created from a shipment.

Destination country

Final destination country code in the EU

Nature of transaction

Nature of transaction code, indicating the financial transaction linked to the goods (customs code list A22)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Export Country

The code for the country where the transport originated.

Consignee

The Receiver of the goods as indicated in the transport documentation, Consignee will be validated against the importer as described the general section.

EU Entry Customs

Under certain conditions it might be needed to indicate the customs office code where the goods first entered the EU

VAT Partner

The Partner responsible for the payment / listed of the VAT applicable upon imports. will be defaulted from the consignee settings.

VAT Number

The Vat number of the the VAT partner when the VAT indication of "Art 23, diversion" is active.
If the "Art 23" is not active the VAT number is not defaulted.
Since AGS does not validate the "Art 23" in the declaration no manual input of VAT numbers is allowed, forcing users the update the Partner details.

Payer Partner

The payer partner specifics the partner (eori number) who is responsible for the payments of import duties and taxes. Is only required when the payer party is different from the importer,
and the payer partner has a bond posted at customs. For cash payments this field is not used.

Surety Partner

The payer partner specifics the partner (eori number) who is responsible for the surety for temporary imports etc from the importer, and the partner has a bond posted at customs.

Seller Partner

The actual seller for the goods covered by the shipment, must be supplied in case of DV1, else it should remain empty.

Buyer Partner

The actual seller for the goods covered by the shipment, must be supplied in case of DV1, else it should remain empty.

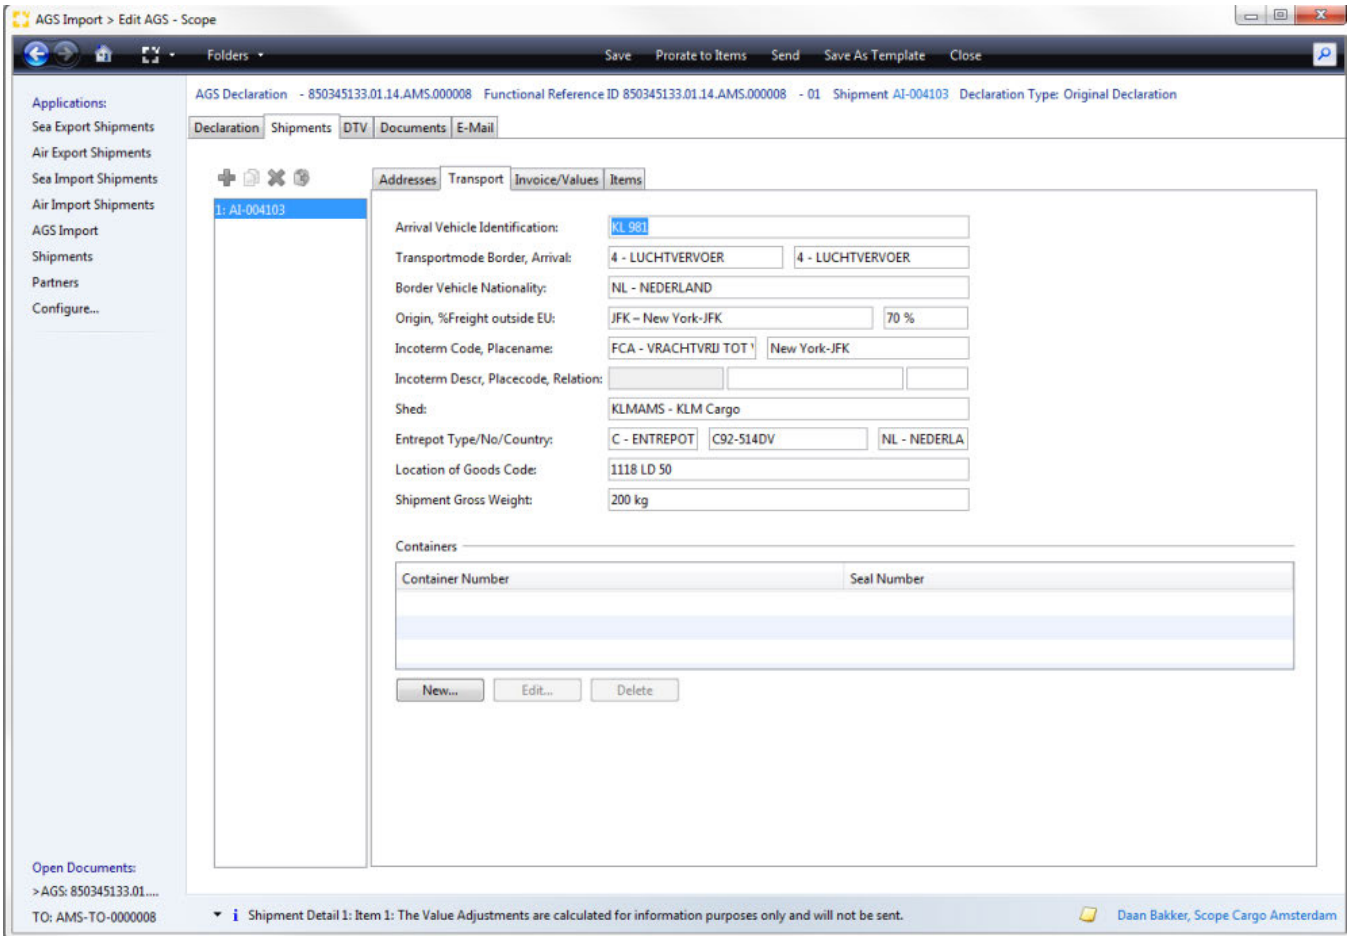
AGS - Shipments - Transport

- Introduction
- Description

Introduction

Description



Arrival Vehicle Identification

Identification of the transport means with which the goods arrive

Transport mode Border

The coded type of transport by which the goods crossed the EU border

Transport mode arrival

The coded type of transport by which the goods arrived at the clearance location.

Border Vehicle Nationality

The nationality of the transport means by which the goods crossed the EU border

Origin, %freight outside EU

The origin code (IATA airport code) to determine the applicable airfreight discount percentage

Inco terms

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The inco terms under which the goods have been sold, shipped.

code

The incoterm code as listed in the code list

place

The place name corresponding with the incoterm, most common used in incoterm declarations.

description

Textual description of the incoterm applicable, only enabled when the code is set to XXX

placecode

The unlo-code for the place applicable on the inco terms, either the name or the code is used, not both together

relation

The relation of between the entered place name / place code and the location where the declaration is done, this field is optional.

Shed

The Partner where the goods are at stored at the moment of the declaration, the the actual AGS details are defaulted from this partner.

entrepot details

The entrepot (custom warehouse details) where the goods are stored, these details are listed below,

- Entrepot Type
- Number
- Country code

The entrepot details must be correct since they are validated in AGS and should only be used if the previous

location of goods code

Cargo Description - Goods - Sea Shipment - Seafreight Export

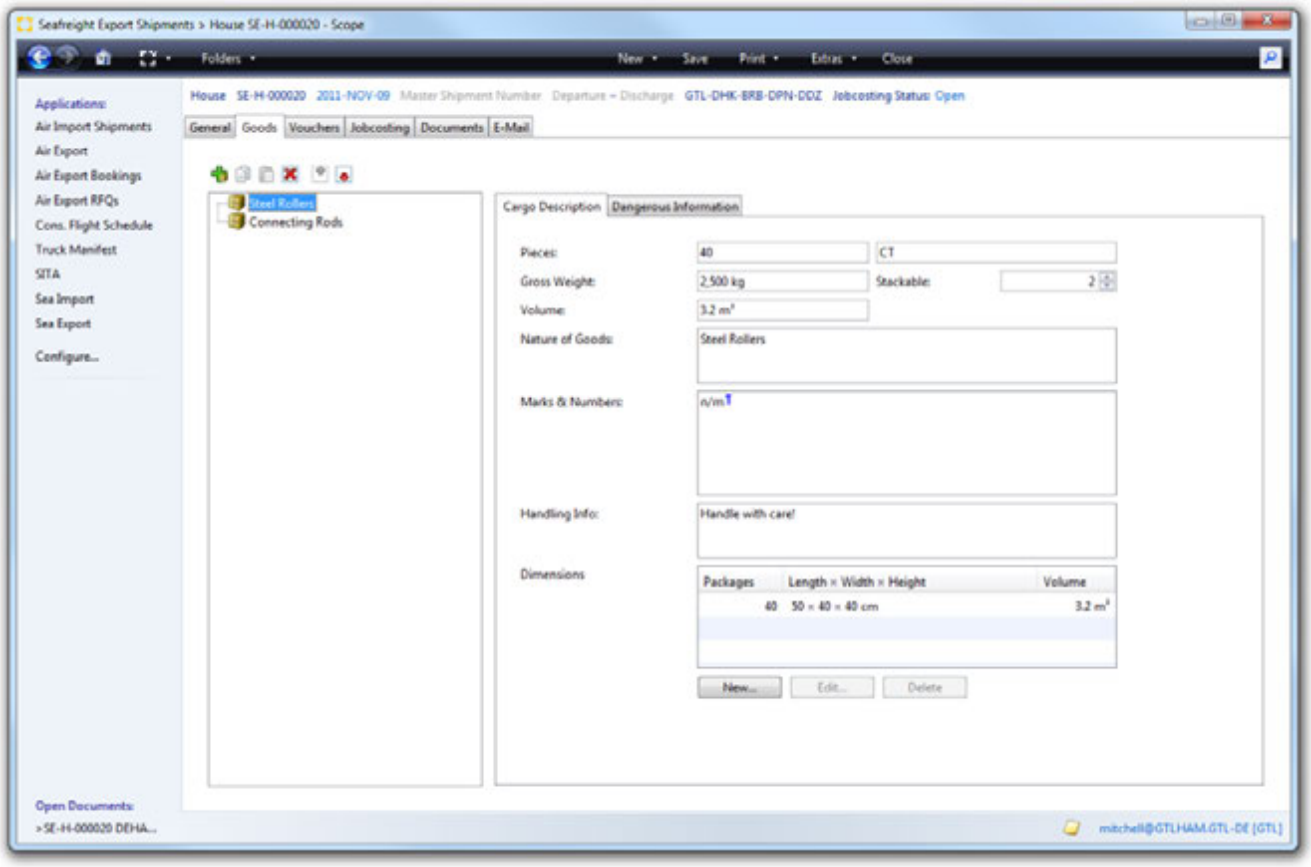
- Introduction
- Description

Introduction

Complete details about the physical nature of the cargo is recorded including marks and numbers and any special handling instructions.

Description

The *Cargo Description* tab will appear as the default tab, showing the details of the cargo highlighted to the left.



Pieces
Packing type
Gross Weight
Volume
Stackable
Nature of Goods
Marks and Numbers
Handling Info
Dimensions
- New
- Edit
- Delete.

Pieces

The exact number of pieces.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Packing type

To the right of the pieces, the type of packing can be described - pallets, boxes, barrels etc.

Gross Weight

The gross weight of the packages. This figure will default to Kg, but this may be changed to Lbs if required.

Volume

The total volume of the packages. This figure will default to Cubic meters (m3), but this may be changed to cubic feet (CFT)if required.

Stackable

The stackablilty of the packages.

Nature of Goods

A description of the goods. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Marks and Numbers

Any marks and numbers on the goods that are to be noted on the documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Handling Info

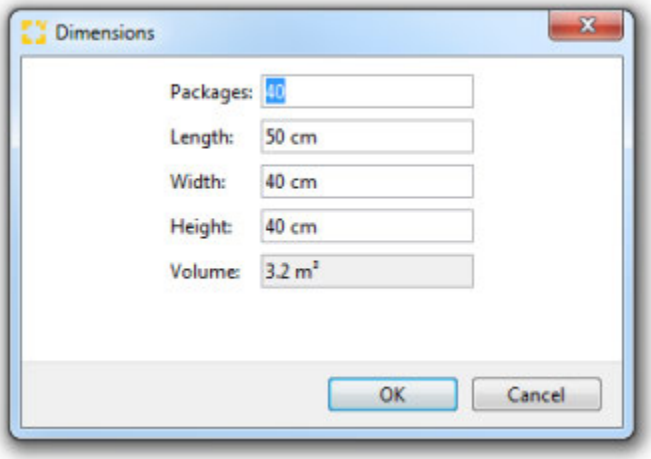
Special handling instructions to be included on documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Dimensions

Each piece of the package can be recorded in the *Dimensions Editor*.

New

By clicking on the **new** button the dimensions editor will appear. This can be repeated for each item until all have been entered and the results will be tabulated.



Data is saved by clicking the "OK" button and discarded by clicking the "Cancel" button.

Packages

The number of packages.

Length

The length of each package. The default measurement will be in **cm** but this can be changed to **in**.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Width

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Height

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Volume

The volume of the packages will be calculated automatically using the dimensions provided. This field cannot bee edited.

Edit

Any existing package in the summary table of packages my be highlighted and edited by clicking the *edit* button.

Delete.

Any existing package in the summary table of packages my be highlighted and deleted by clicking the *delete* button.

Transport Code
Category

Enable dangerous goods entry

Checking the dangerous goods flag marks the entire shipment as carrying dangerous goods. In addition the previous greyed data fields of the dangerous goods tab are now activated for entry.

Any cargo marked as dangerous will appear in the cargo list with a red and white "dangerous" symbol.

IMDG Class

IMDG code for the Hazardous class of materials.

UN Number

The UN number of the substance. This is prefixed by "UN" followed by a 4 digit number.

Proper shipping name

The full shipping name of the substance

Technical Name

The precise technical designation of the hazardous substance. This is on the IMO-DGD.

MFAG Number 1

Medical First Aid Guide - Number 1 acc. IMO-DGD.

MFAG-Number 2

Medical First Aid Guide - Number 2 acc. IMO-DGD.

EMS-(Fire)

Emergency Schedule - Number 1 acc. IMO-DGD.

EMS-(spill)

Emergency Schedule - Number 2 acc. IMO-DGD.

Limited Quantity

Check the field to indicate a limited quantity of the dangerous goods.

Exempted Quantity

Check the field if the limited quantity of the dangerous goods is sufficient to exempt it.

Net Weight

The net weight of the dangerous goods (see IMO-DGD).

Flash Point

The temperature in degrees Celsius (° C) at which the hazardous substance will ignite.

Radioactivity

The radioactivity of the hazardous cargo.

Page Number

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The page of the hazard data sheets.

Packing Group

The packing group according to IMO-DGD.
The following packing groups are available:

Packing Group
I
II
III

Package Type Code

Type of packaging according to ADR regulations.

Transport Code

The transport index for radioactive materials.

Category

Indicate the category (tunnel restriction code A through E)

General

- General
- Structure of the manual
- Definitions and Terminology
- Limitations and Deviations

General

Scope is an innovative, easy-to-use software package for freight forwarding and logistics. While scope is largely self-explanatory all the modules and applications are described and explained in this manual. This page explains the format of the user manual, the terminology and the concepts used. This is to ensure a better understanding of the individual descriptions on the various pages of this manual.

All applications have commonly used functions and areas such as user interface, field types, context menus, help functions, validation etc. These are explained in the general section of the manual, or navigate to them using the links.

Structure of the manual

The individual pages of this manual are generally constructed as follows:

Introduction

This includes a brief explanation of what the application described can be used for and why they should be used.

Instructions

Depending on the application at this point, a sample application in the form of a short animated film is shown.

Definitions and Terminology

The following terms are used in this manual and in scope:

Organizational unit

An organizational unit may also be termed a corporate unit. It can be a collection of countries, or stations, or branches. A business unit may consist of multiple country units. A country can therefore include multiple unit operations or stations.

Applications

The individual program modules are referred to as Scope applications.

Fields

Fields the data fields within each of the applications. In scope, there are different types of fields which will accept different types of data. For Each field various functions and context menus may be available.

Records

A record is all the data related to a particular object such as a shipment or a document. Usually this term is used when viewing an overview of entries. The overview can be termed a table of entries and each row in the table can also be called a record.

Documents

In addition to the printable documents in scope there are captured records such as the commercial invoice or a business partner's airline tariff. To differentiate between these two types of documents, Scope generated documents are generally referred to as "consignment documents" or "shipping documents".

Folder

Use of the folders and filtering are described in greater detail below. Examples of folders are Favorites, Inbox, and recent documents. A "folder" in Scope is not quite the same as a "folder" in the windows operating system. In Windows a "folder" is a physical location on a hard disk, while in Scope a folder can

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

be better understood as a filter which automatically displays only the desired documents. In reality these documents exist only in the database. The folders therefore really "virtual" folders which in reality provide quick links to these documents in the database.

Editors

Within applications data can be collected and processed, therefore these applications are also called editors examples are the shipment editor, AWB editor or address editor.

Tabs

Within each application near the top of the screen tabs may be present and are used to show different data related to the object of the application.

Buttons

Are frequently present within applications. Buttons are used to trigger specific additional functions or processes within the individual applications.

Action links

Just as in a web browser, within scope some text is marked in blue and will become underlined if the cursor is hovered over it. These texts are link actions that are similar to "Buttons" since clicking them will execute further applications.

Limitations and Deviations

In this manual, all applications, modules and functions are described. Depending on system settings and / or user privileges, applications, modules, some features described may not be available or may differ from the description provided here. In these cases further information can be request from the system administrator or request software support from Riege Software International.

Keyboard Shortcuts

- Introduction
- Description

Introduction

Keyboard shortcuts are used to perform certain actions within the application without having to operate the mouse.

Description

Keyboard Shortcut	Action
Tab	Cursor jumps to the next field-/action function.
Shift + Tab	Cursor jumps back to the previous field/Action function.
Shift + Cursor	Select multiple objects.
Ctrl + Tab	Cursor jumps to the next tab.
Ctrl + C	Copy the highlighted text or selected record to clipboard.
Ctrl + S	Saving a record.
Ctrl + F	Open the scope global search (top right).
Ctrl + N	Create a new record (in the Home View).
Ctrl + P	Print (in an editor that allows the print function).
Ctrl + V	Paste data previously copied to the clipboard into the active input field.
Ctrl + W	Closes a data set.
Ctrl + X	Cut the selected text.
Ctrl + T	Insert a text block (choose from the pop-up by highlighting the desired text blocks).
Ctrl + 1-9	Direct access of program modules 1-9 from the Quick Access panel.
Ctrl + 0	Jump directly to the home screen.
Ctrl + Space	Opens search list values starting at the top, available in fields marked with a looking glass.
Ctrl + F1	Open online user manual.
Ctrl + F10 or Menu key	Opens the windows context menu (similar to the windows right mouse action) • Available in all fields with copy/paste actions. • Available in applicable fields to copy in text blocks. • Available with extended functionality in fields marked with the downward facing triangle ().
F1	Open help function.
F3	Editing the master data set from the current field, opening of additional fields to facilitate the processing (e.g., bar, sailing in the "Travel").
F4	Editing a temporary business partner address (no master data change).
F5	Updating of records for the open screen (master data, order status, tariff calculation...).
F6	Sets address to the default address of the partner government.
F8	Saves changed details of an article.
F9	Calculation of Job-costings (in the shipment editor)
F12	Support request
Alt + Shift + N	Opens a new address window, in which a new disposable address (for single use) can be created.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Alt + Shift + P	Opens the trading partner management and provides a blank window to capture new version of a partner to dispose.
Alt + left (cursor)	Move backwards through the history.
Ctrl + I	Display of the responsible user and ability to take over the operation (in the shipment editor).
Ctrl + Shift + I	When the cursor focus is in a partner field, shows address info and contacts of the partner.
Ctrl + Cursor	Moving goods in the tab "goods".
Space bar	Insert and remove a flag marked.
ENTER	Confirm a marked object.
Ctrl + ENTER	Execute the highlighted action in a pop-up window (e.g. OK or Next button)
N	Delete highlighted / circled objects (not always possible).
Insert	To activate insert-mode in AWB editor inserting text instead of overwriting.
Cursor keys	Change of tab (marked when); goods selection in the tab "goods" (when checked), moves a marker.

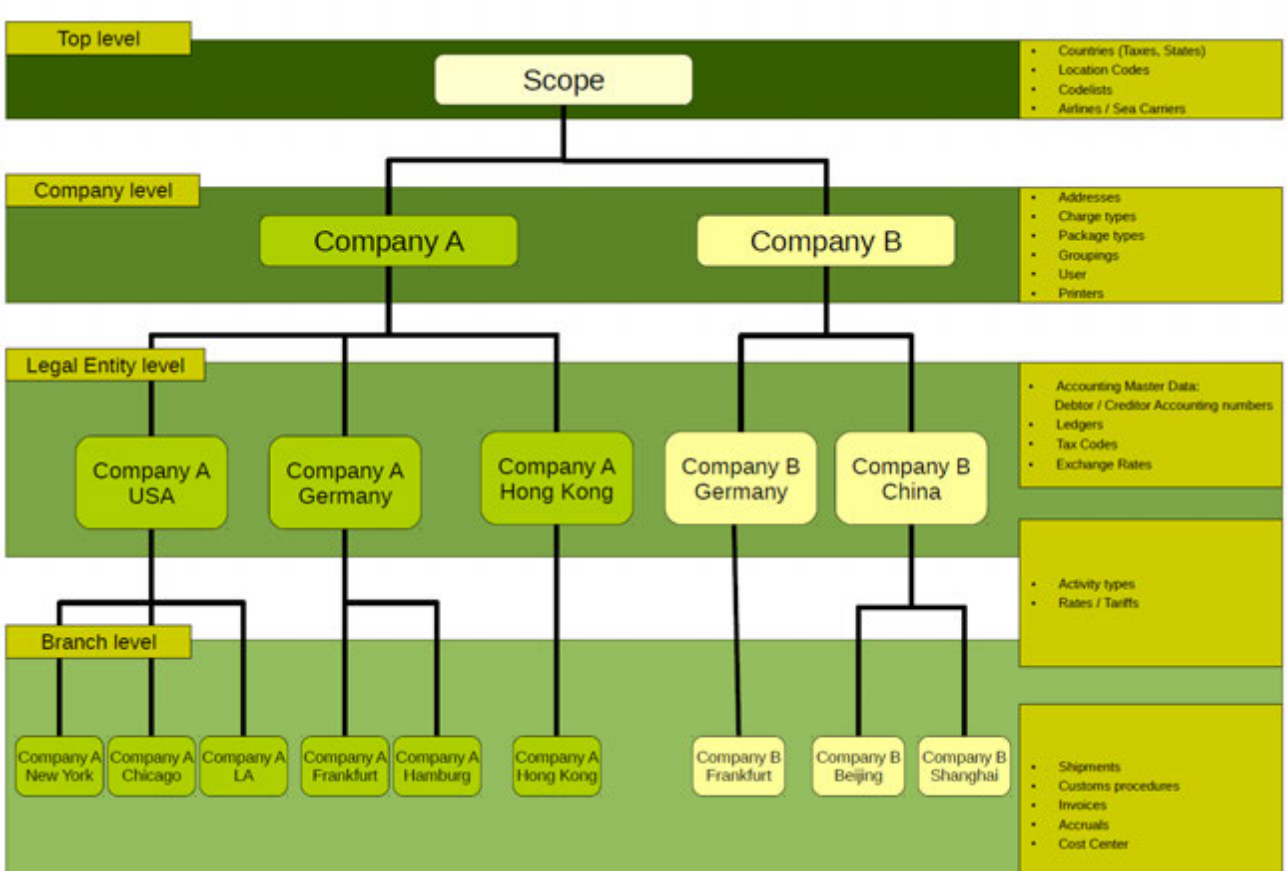
Organizational Structure

Introduction

The organizational structure allows defining master data-sharing on different levels.

Description



Remarks:

The modification of the organization currency in the Organizational Structure Appliance will lead to errors as the organisation currency exchange rate is not automatically adapted and currency conversions rely on this (e.g. calculation of totals in shipment overview, Scope Dashboard). Therefore it is not possible anymore to change organisation currency after setup of organization / first legal entity / first branch and partner is done. The currency field is disabled once maintained and saved. So please make sure to pick the correct organization currency for this legal entity.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Printing

- Introduction
- Description

Introduction

This section provides information about printing such as supported printer types, printer settings etc. More information about printing is also available in the Settings.

The label printers that we currently support must be:

- Connected to the network and accessible through RAW or LPR / LPD print protocols.
- Supporting one of the following protocols / languages:
  - ZPL (Zebra Programming Language)
  - EPL (Eltron Programming Language) (Also used for Zebra printers)
  - For Datamax printers: DPL (Datamax Programming Language)
- Use 203 DPI

Description

Label Printers

The following label printers are currently supported by Scope:

Value	Setting
ZPL (Zebra Programming Language)	Zebra LP2844 (not currently manufactured.) Zebra GK 420d (used in practice) ZT220 (used in practice) (203 DPI)
EPL (Eltron Programming Language) (Also used for Zebra printers)	older Zebra models
Fingerprint ab v. 8.7	e.g. Intermec PX4i
BSX	B-SX4T/B-SX5T from Toshiba
IPL (Intermec Printer Language)	e.g. Intermec
Datamax (Datamax Programming Language)	S4M-Datamax M-4208 (used in practice)

AWB printer

The printer must be set to the following settings:

Value	Setting
CPI (Characters Per Inch)	**10**
LPI (Lines Per Inch)	**6**
Page Length	**12 Inch**
Auto Line Feed (LF)	**OFF**
Auto Carriage Return (CR)	**ON**

It is highly recommended to store these settings in the printer's PROM so that when the printer is turned off and on again the settings are automatically restored.

CR/LF Settings

Scope creates text-based documents (such as the AWB) with **only** *Linefeed (LF)* characters at the end of line. Therefore the printer must be instructed to automatically add an additional *Carriage Return (CR)* character when the LF is encountered. This is what the *Auto Carriage Return (CR)* option above specifies.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Some printers use a different setting for this, this is called *Line Mode*. Here one can usually configure the behavior of the printer when an `LF` or `CR` character is received. Please set this to "`LF = LF+CR`".

Printing to local printers

When a printer is not maintained in the Scope system, but is directly attached to the local PC or the local PC can access the printer on a local network, it is still possible to print to such a device. To deal this this situation, it is possible to define a document as PDF only with no background image. When printed, these documents will generate only the Scope data (no background image) in pdf format. This pdf can then be opened with a PDF reader and printed directly from there to the desired printer.

Configuration:	In the printer queue (users, printers or branch pool) The printer needs to be defined as "PDF" .

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Standard Features

- Introduction
- Description

Introduction

Many standard features operate in the same manner within different applications. These are therefore standard features, commonly available in Scope and they are described in this section.

Description

The following standard features are available throughout Scope applications:

- Compliance Check Shipment
- Address Compliance Check - Functions - General
- Advanced Filter - Functions - General
- Cancel/Revert Cancellation
- Documents - Functions - General
- E-Mail - Functions - General
- Help - Functions - General
- Insert Text Blocks - Functions - General
- Jobcosting - Functions - General
- Notes - Functions - General
- Notifications - Functions - General
- References - Functions - General
- Tracking - General - Standard Feature
- Transport Order - Functions - General
- Vouchers - Functions - General
- AWB Editor - Standard Features

Compliance Check Shipment

- Introduction
- Description

Introduction

Description

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Address Compliance Check - Functions - General

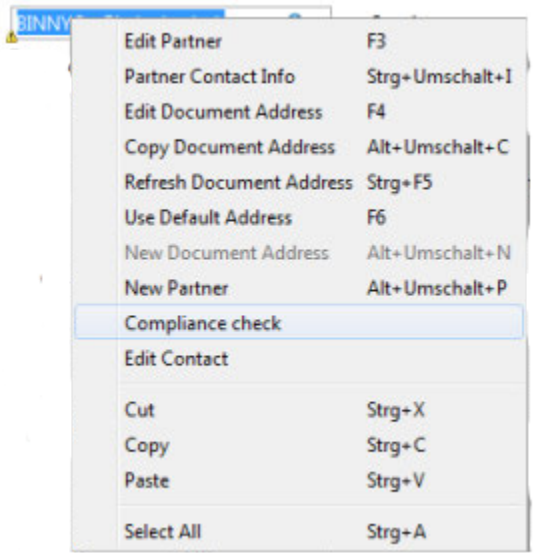
- Introduction
- Description

Introduction

All EU companies, and in particular forwarding and logistics companies are required by the anti-terror EU regulation (EC 881/2002 and 2580/2001) to assure the statutory audit of their business partners in order to detect and prevent company operations on behalf of proscribed business. Scope provides a fully integrated address validation function (compliance check) which can be called directly during the input of any address.

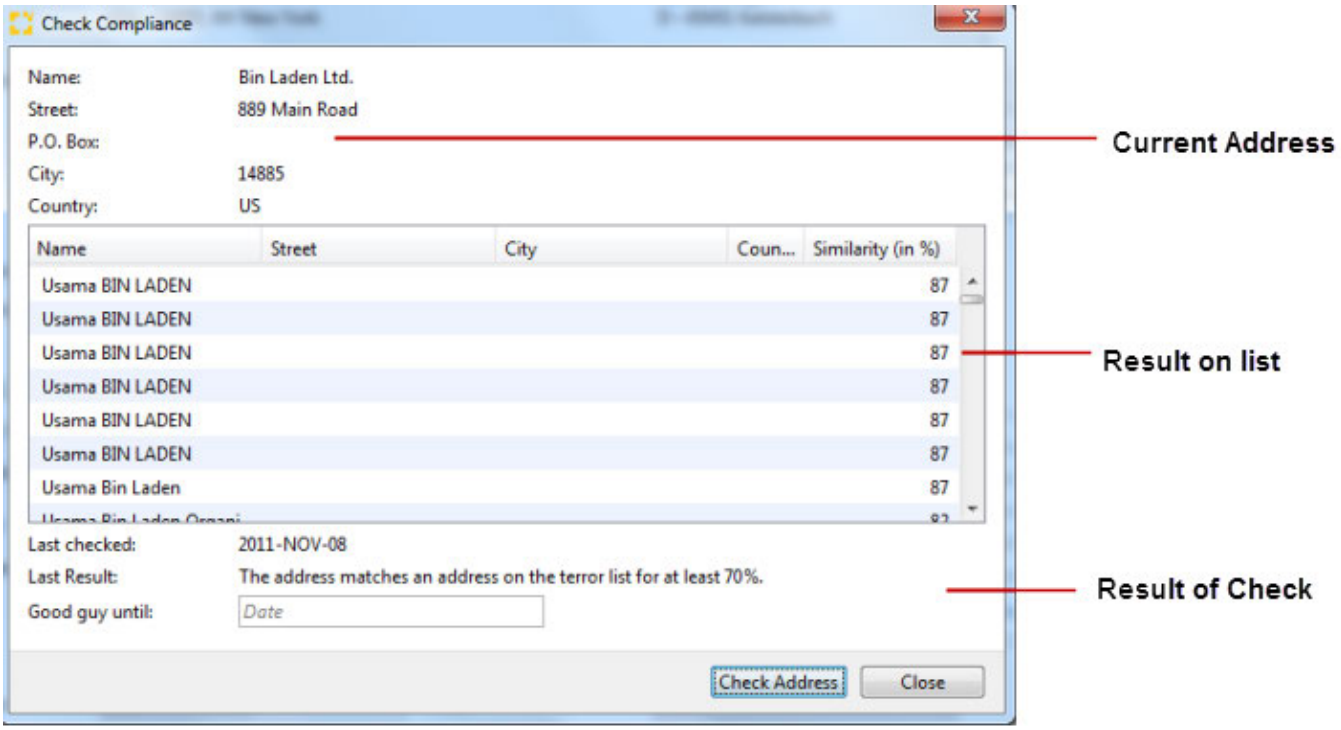
All US companies are required by US law to make similar checks and the Scope compliance checking module checks for companies and individuals proscribed by US law from engaging in international transportation of goods.

Description



Almost any address field provides the compliance check option in the context menu. This option opens a pop-up window where the audit of the address can be conducted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Check Address

Activates the address check via the web which connects to a database of prohibited or suspect addresses.

Close

Closes the address compliance without further action.

Current Address

The address being checked is shown in the top section of the compliance check application.

Results from the terror list

If there is a similarity of the current address to addresses on the terror list, these will be displayed. The similarity column calculates the amount of similarity and displays the results as a percentage of agreement.

Lasted checked.

the date on which the address was last checked.

Last result

the results of the last check on the address:

- Positive - The address has a match of at least nn% with an address on the terrorist list.
- Negative - Not on the terror list

Good Guy until

Once an address is checked a date may be set when the address should be rechecked.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Advanced Filter - Functions - General

- Introduction

Introduction

The homeview of most shipment application provide additional filtering options which enhance search capabilities within these statistic.

Advanced Search with filters

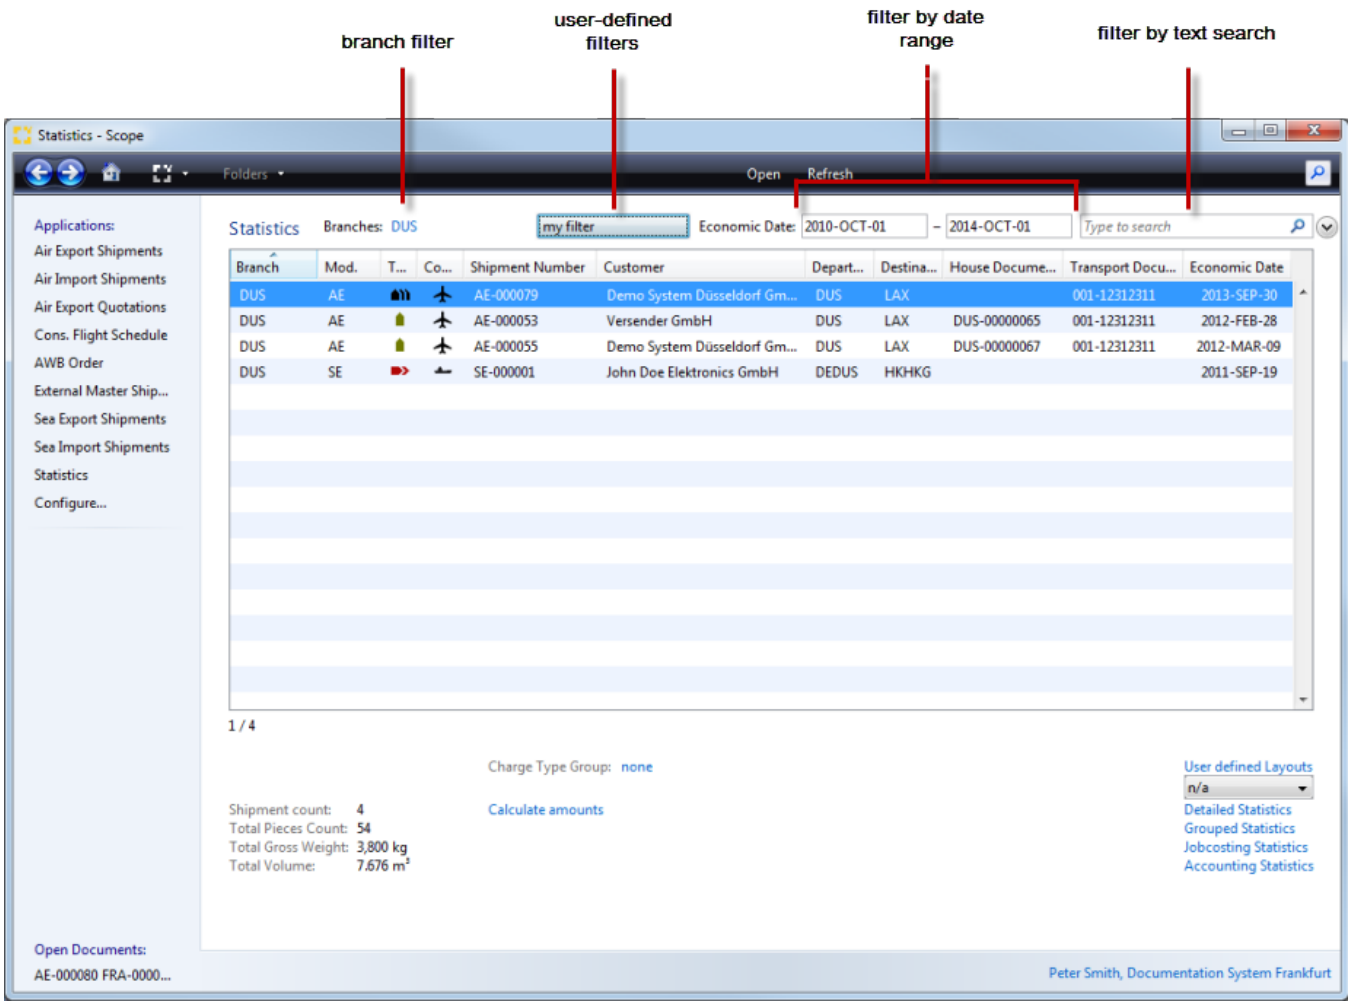
Filters are useful to exclude data from a statistic which is not relevant to the actual analysis.

Three possible ways exist if the user wants to narrow the search result.

- the user may qualify the search result by using the general filter option located in the main menu bar as described below.
- the user may apply temporary filter criteria to the current statistic

  Temporarily applied filters are not stored and they have to be defined each time the user create a statistic.
- the user defines his own filters with the most usual selections.
  These filters get stored and are available anytime the user plans to create a statistic.

General filter option



branch filter: opens a selection window where the branches can be selected which are to be included in the search run.

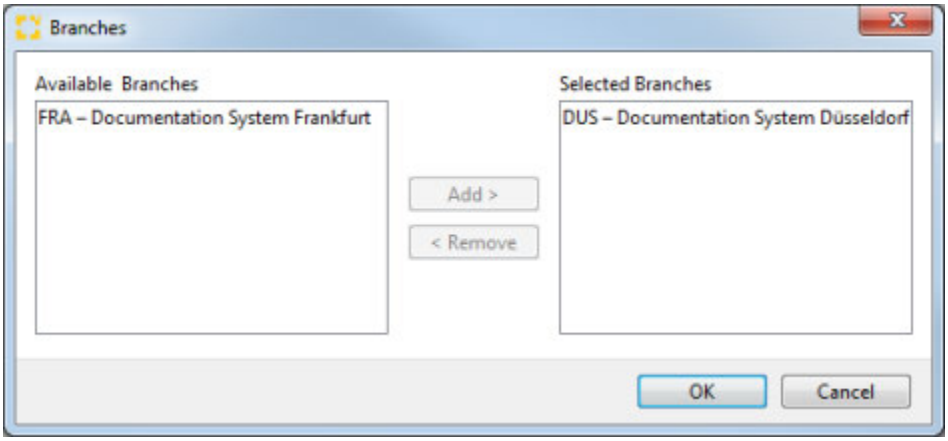
On the left side of the selection window all available branch(es) are listed.
The right side of the windows shows the already selected branch(es).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

A branch is selected by using the Add button and it will be removed from the list of selected branches by clicking the Remove button.

Clicking the Cancel button will close the windows and the selection remains unchanged.

Clicking the OK button will close the window and the changes will take effect.

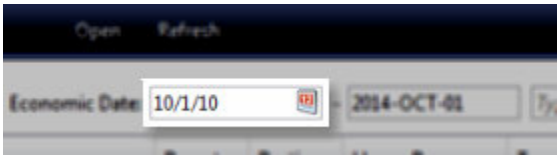


user defined filters: opens a sub-menu which offers a variety of functions. Please see User defined and stored filters

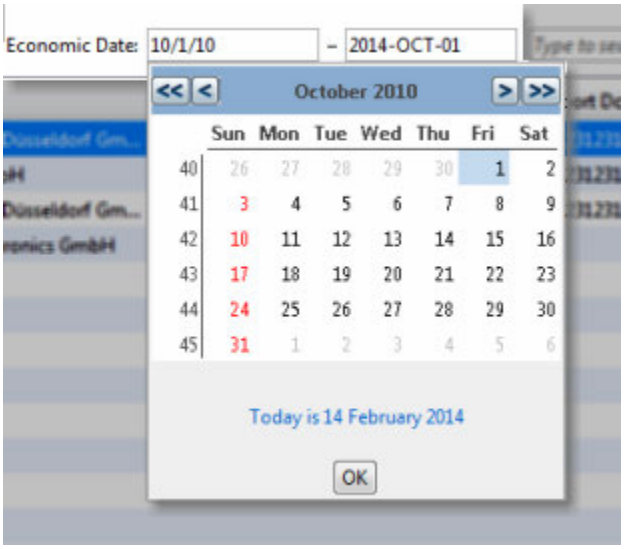
filter by date range:

The kind of the requested date range is displayed lefthand of the text fields. In the example shown below, an *economic date* is requested.

When hovering the mouse cursor over a text field which is intended to receive a date entry by the user, a small calendar icon appears on the right border of this field.
Placing the text cursor in such a field induces the same effect.



By clicking onto this symbol, a calendar window opens up, enabling the user to select a valid date.



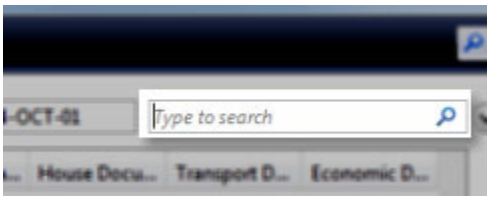
filter by text search:

The displayed records in the list of search results is affected immediately if the user starts typing.
The result list is actualized permantly whilst the user modifies the search value.

It is important to consider, that the search will be done over all listed categories and not only for *shipment number* or *customers name* for example.

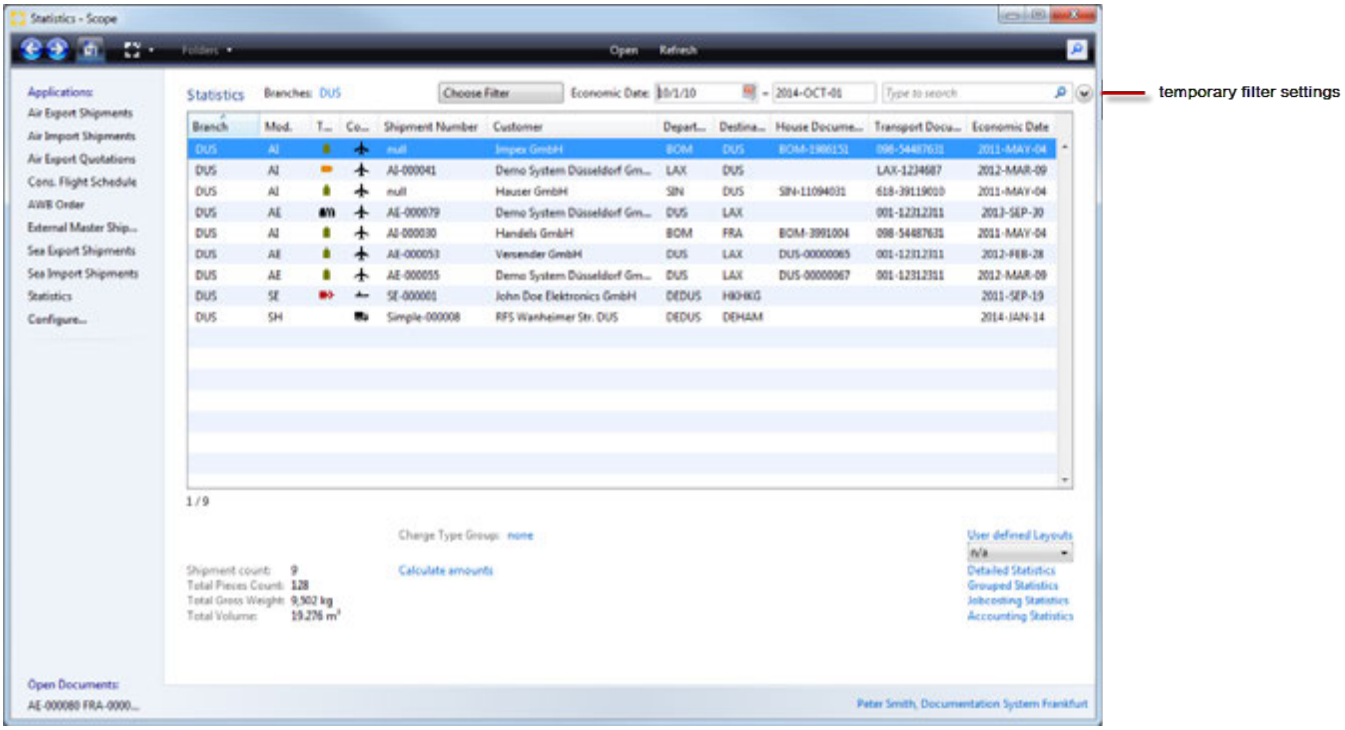
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

As shown in the result list, the destination of the shipment SE-000001 is Hongkong. If the user starts typing *HK* the result will display exactly one row, the
shipment SE-000001. If one enters the letters *AE*, all records for Air Export will be displayed. The user should keep in mind, that the search run is done
over all existing columns which can take an amount of time if the amount of data is large enough.



Temporarily applied filter

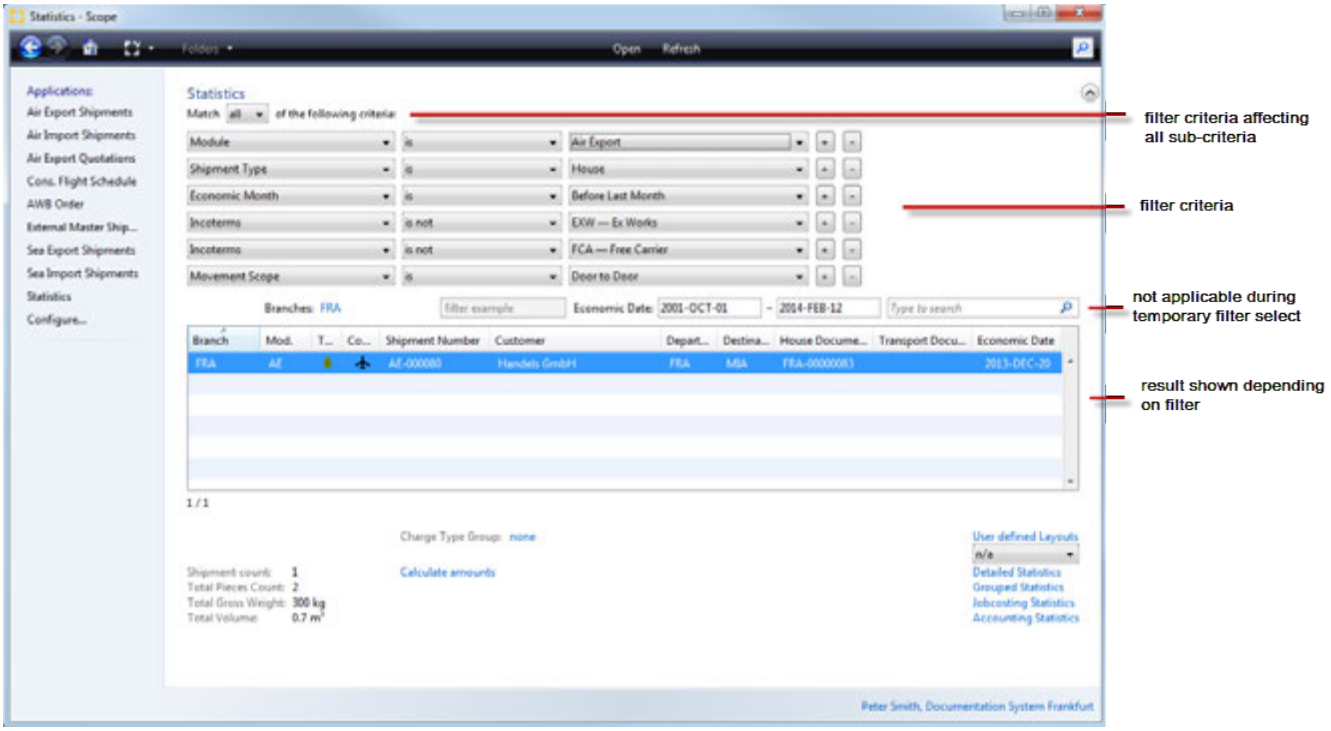
Use the button to expand the filter bar as shown below:



The filter bar will be expanded to enable the user to define his settings.

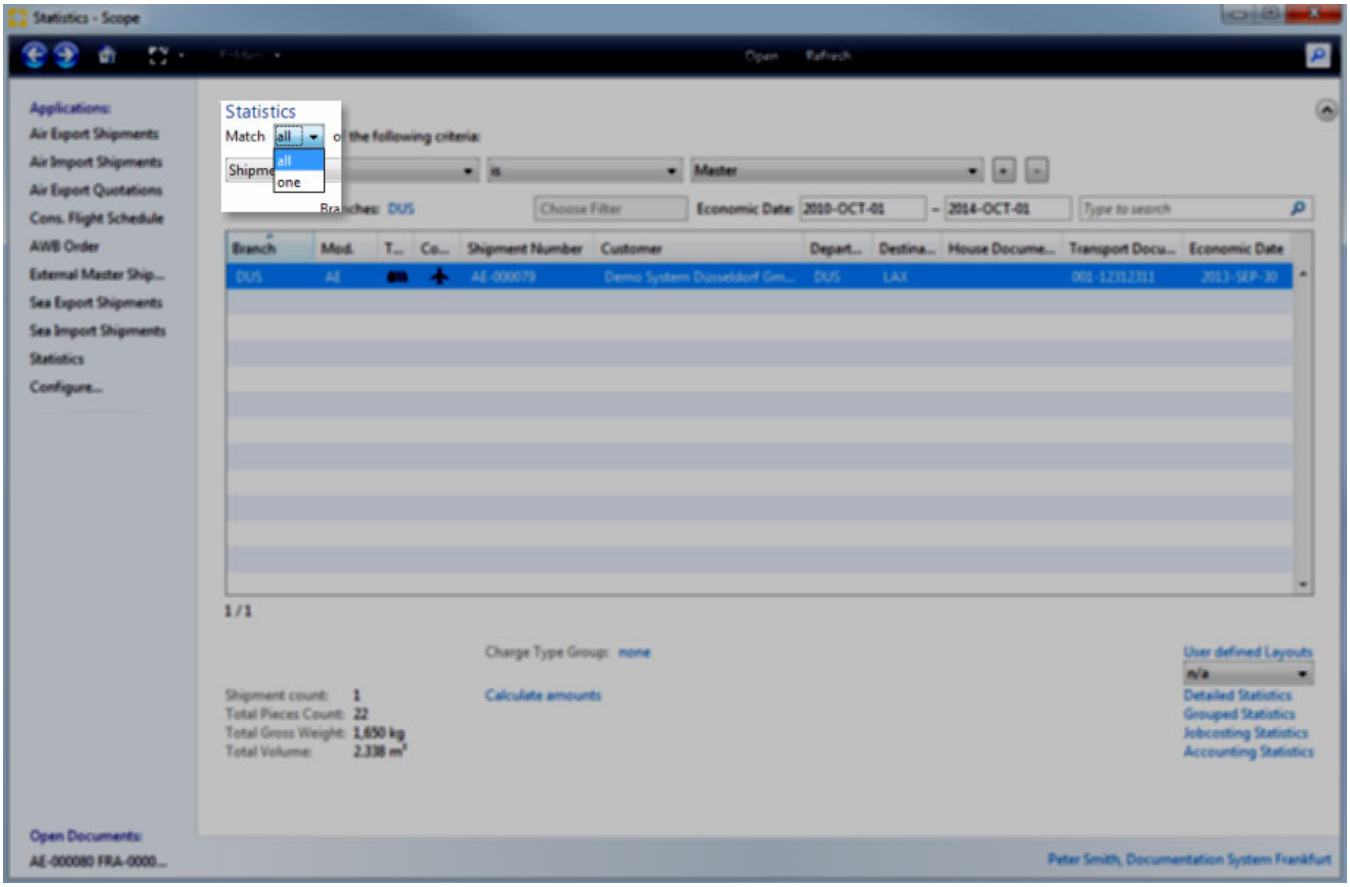
Temporary filter settings

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Filter criteria affecting all sub-criteria

To ascertain the filter rules, the user tells the program how to handle the relationship of the subsequent criteria:

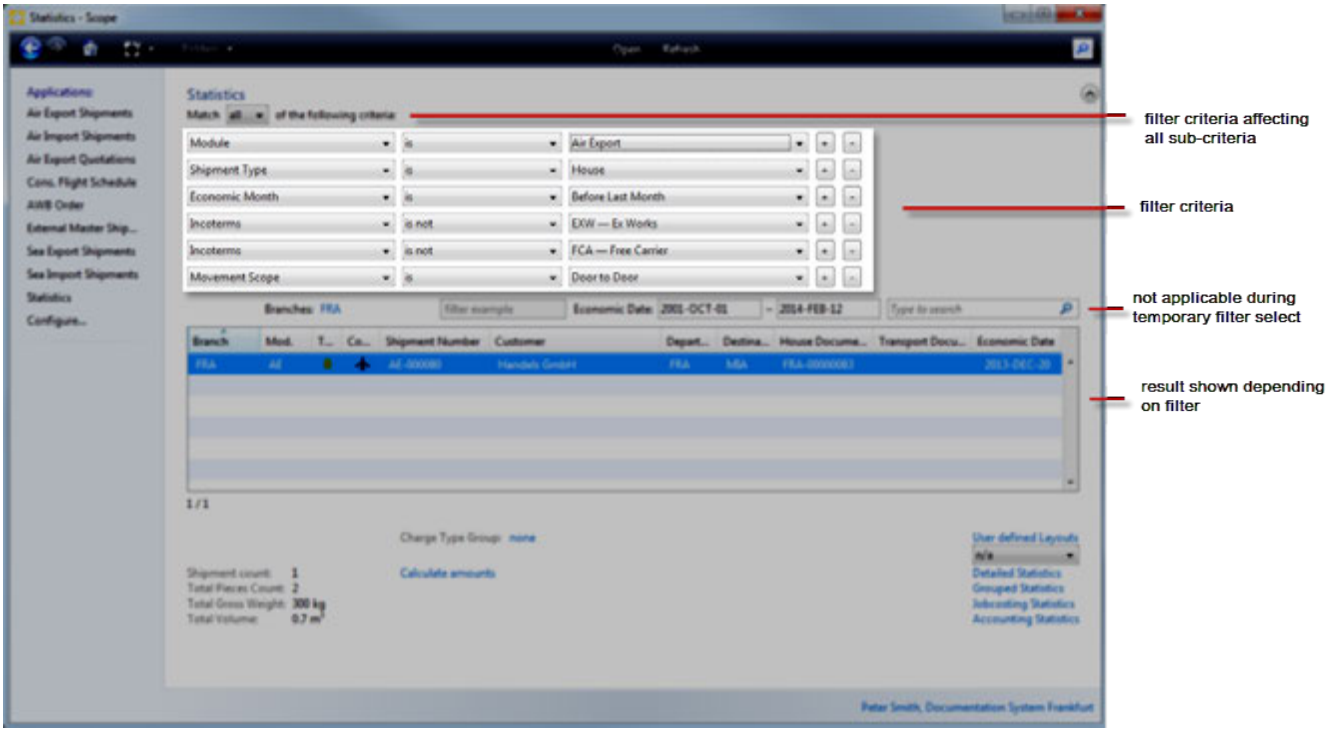


Match all means that all subsequent defined criteria must apply to get the required and expected result - a so called *and - condition*.
Match one means that at least one of the subsequent defined criteria must apply to get the required and expected result - a so called *or - condition*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Filter criteria

The user theoretically may define as much filters as needed. Multiple rows of these filter options can be added using the + button, or removed using the - button.



Each row of filter options comprises the following:

Definition of Criteria

The filter row is comprised of several elements; the object of the search, the comparison criterion and the value of the object itself which may be a date, a location, a time period or a mode of transport. A complete description of the filter row is in the table below:

The filter elements can be defined:

- Service date
- Order Date
- ETA
- Pieces
- Gross weight
- Volume
- Customer
- Consignee
- Shipper
- Export Agent
- Export Gateway
- Departure
- Arrival
- Departure IATA code
- IATA destination code

depending on the filter element chosen the the following criteria are available:

- begins with
- corresponds to
- contains
- does not correspond
- is equal to
- is greater
- is smaller
- is between
- within the last
- is
- is not

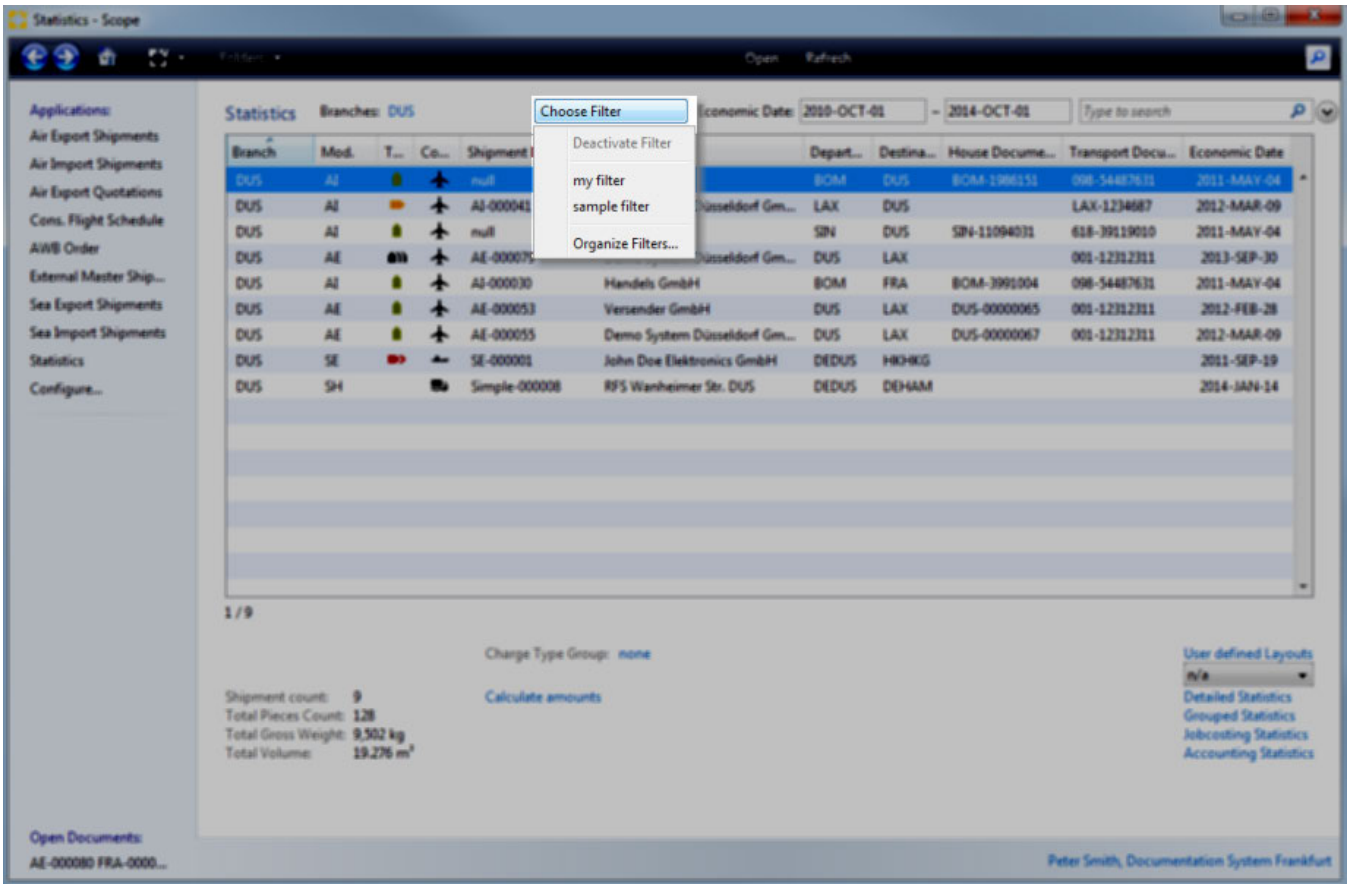
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

After a short time of data collection applying the filter rules to the data the result will be shown in the list below the filter criteria.

User defined and stored filters

The abovementioned completely applies for these type of filters.

Here we will show how to define a stored filter:

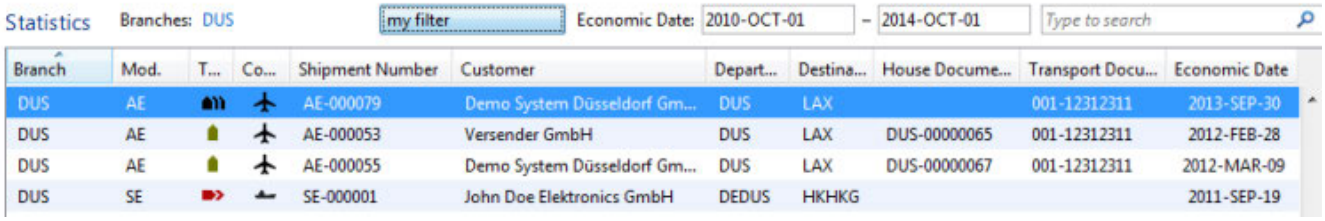


The home view contains a filter bar with a drop-down list, showing ***choose filter*** if none is selected.
By clicking onto this list, a sub-menu gives access to to:

- deactivate an active filter (none actived in this example)
- choose one of the users predefined filters
- organize user filters

Activate a predefined filter

By clicking on the filter name, this filter will be activated.



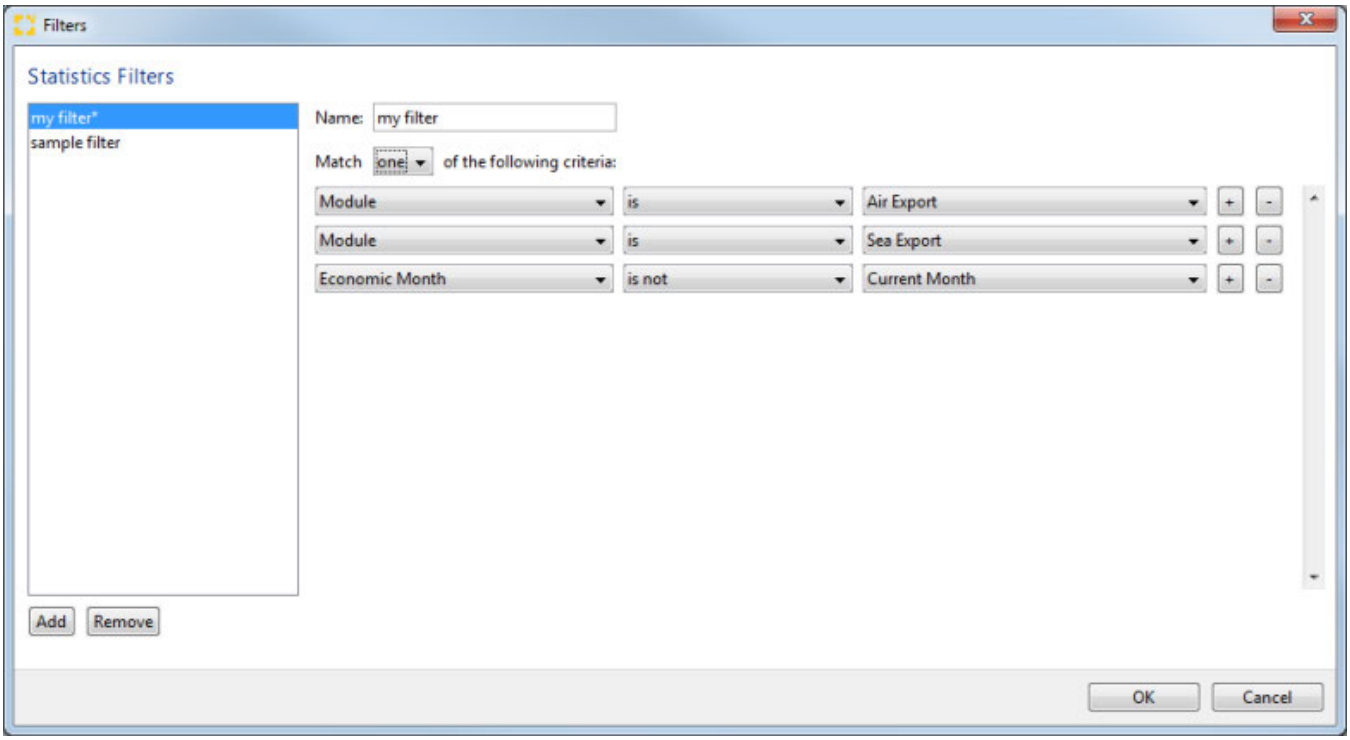
The filter will be activated and takes effect immediately. The result list shows the effect and the name of the filter is displayed as title of the drop-down list .

Deactivate an active filter

By opening the drop-down list the user may choose the topmost item to deactive the appropriate filter. When leaving the drop-down list, the title of this drop-down will be ***choose filter*** again.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Organize filters, i.e. create, edit and remove filter definitions



A new filter may be added by clicking on the Add button.

An existing filters may be deleted by clicking on the Remove button.

If defining a new filter, the user is free to choose to name the filter by entering the name in the appropriate text field.
Please refer to the section Temporary filter settings mentioned earlier on this page.

The settings will be saved by clicking on the OK button and ignored by clicking on the Cancel button.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

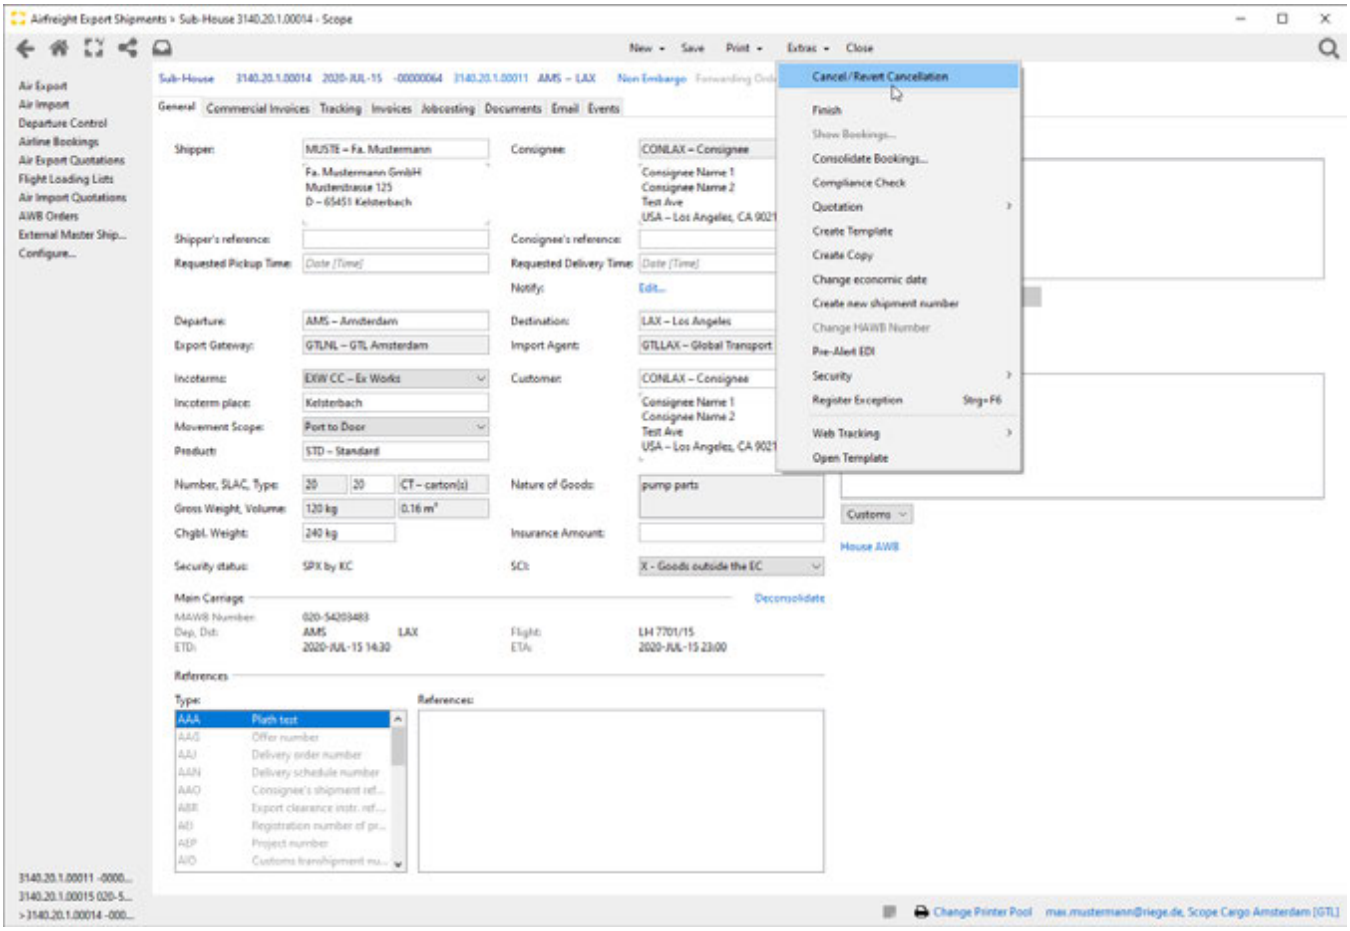
Cancel/Revert Cancellation

- Introduction
- Description

Introduction

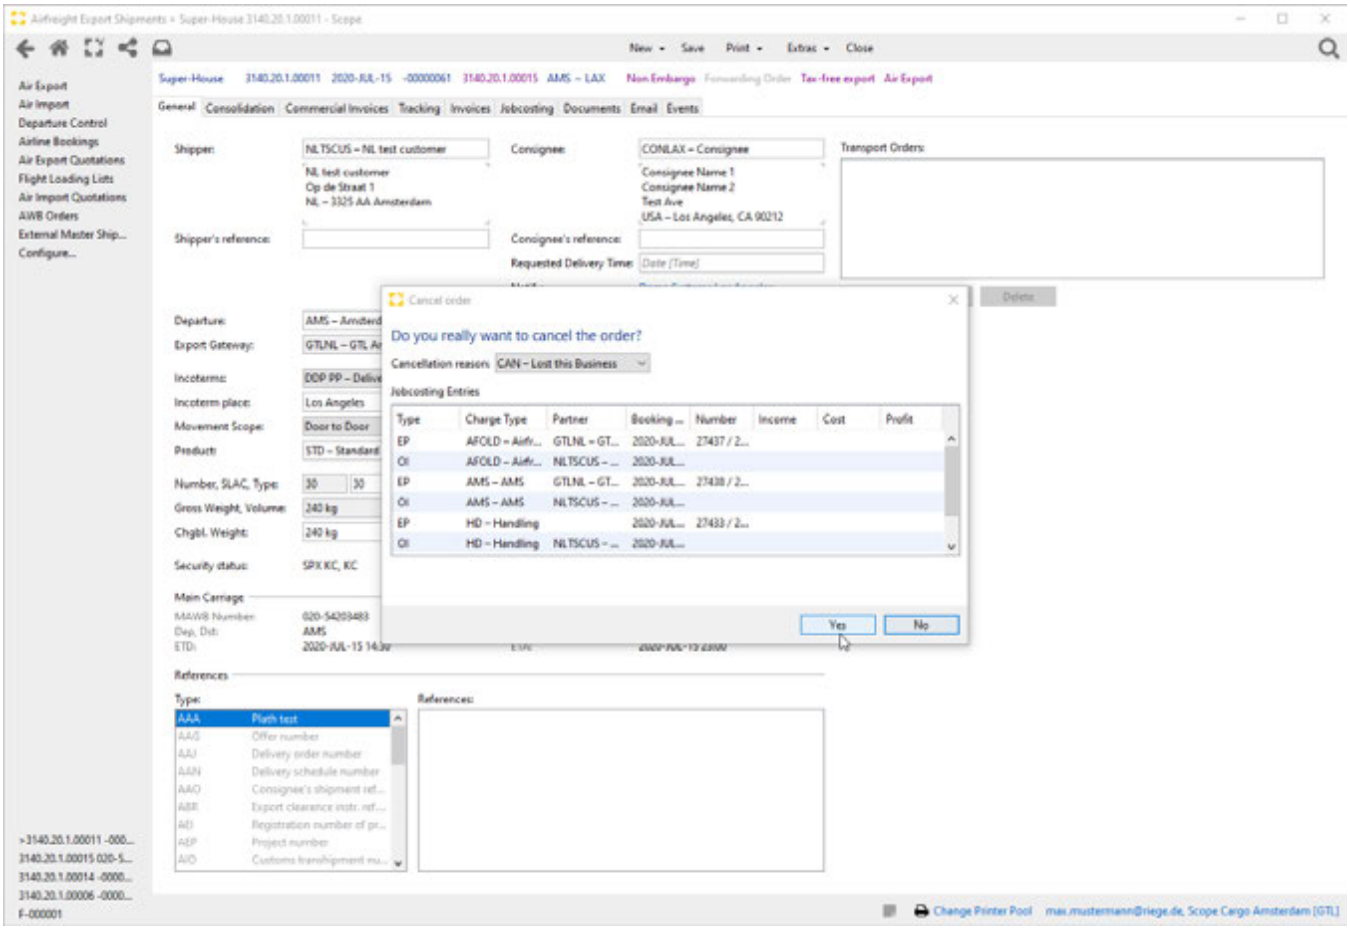
This program function offers the possibility to cancel a shipment or revoke the cancellation of shipment.

Description



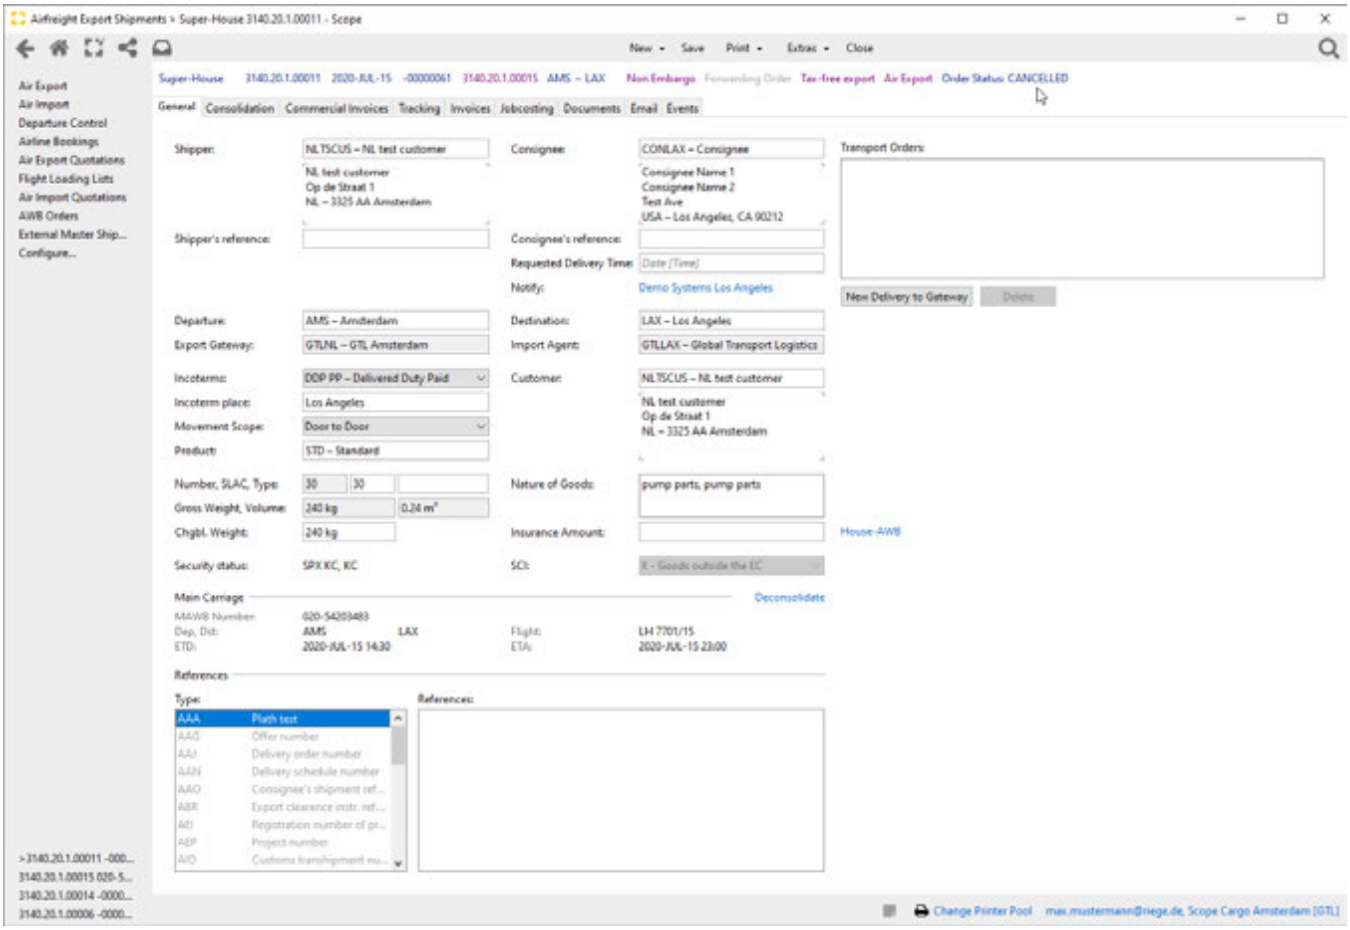
Choosing the program function will open the Cancel Order Editor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



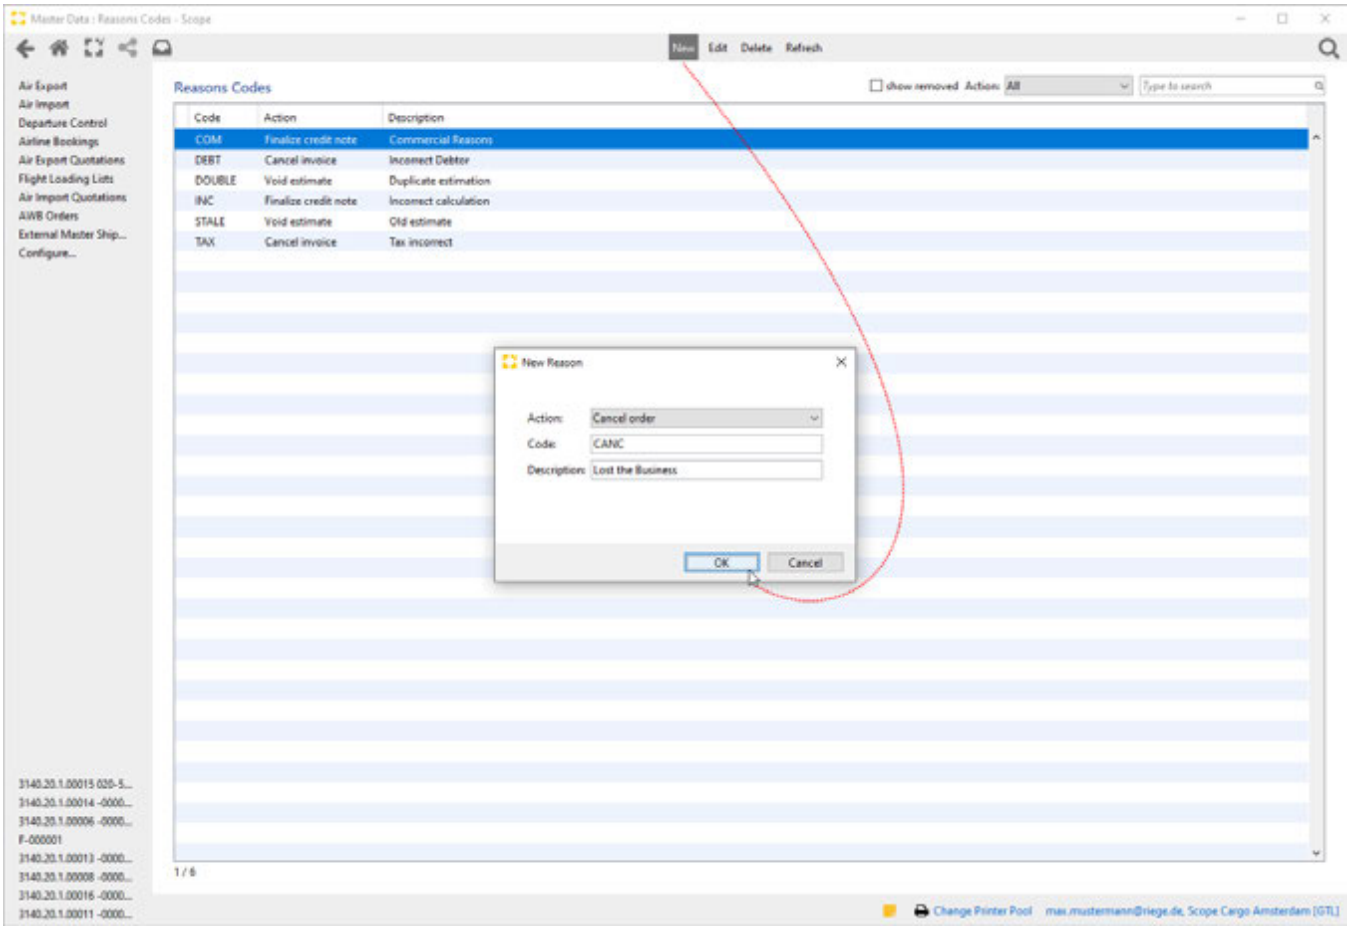
With the button *Yes* the Cancellation of the shipment ca be confirmed. The Order Status of the Shipment will change to CANCELLED. Cancellation can be revoked by clicking on the program function again.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Cancellation reasons can be created as a category "Cancel order" under Master data> Reasons Codes.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

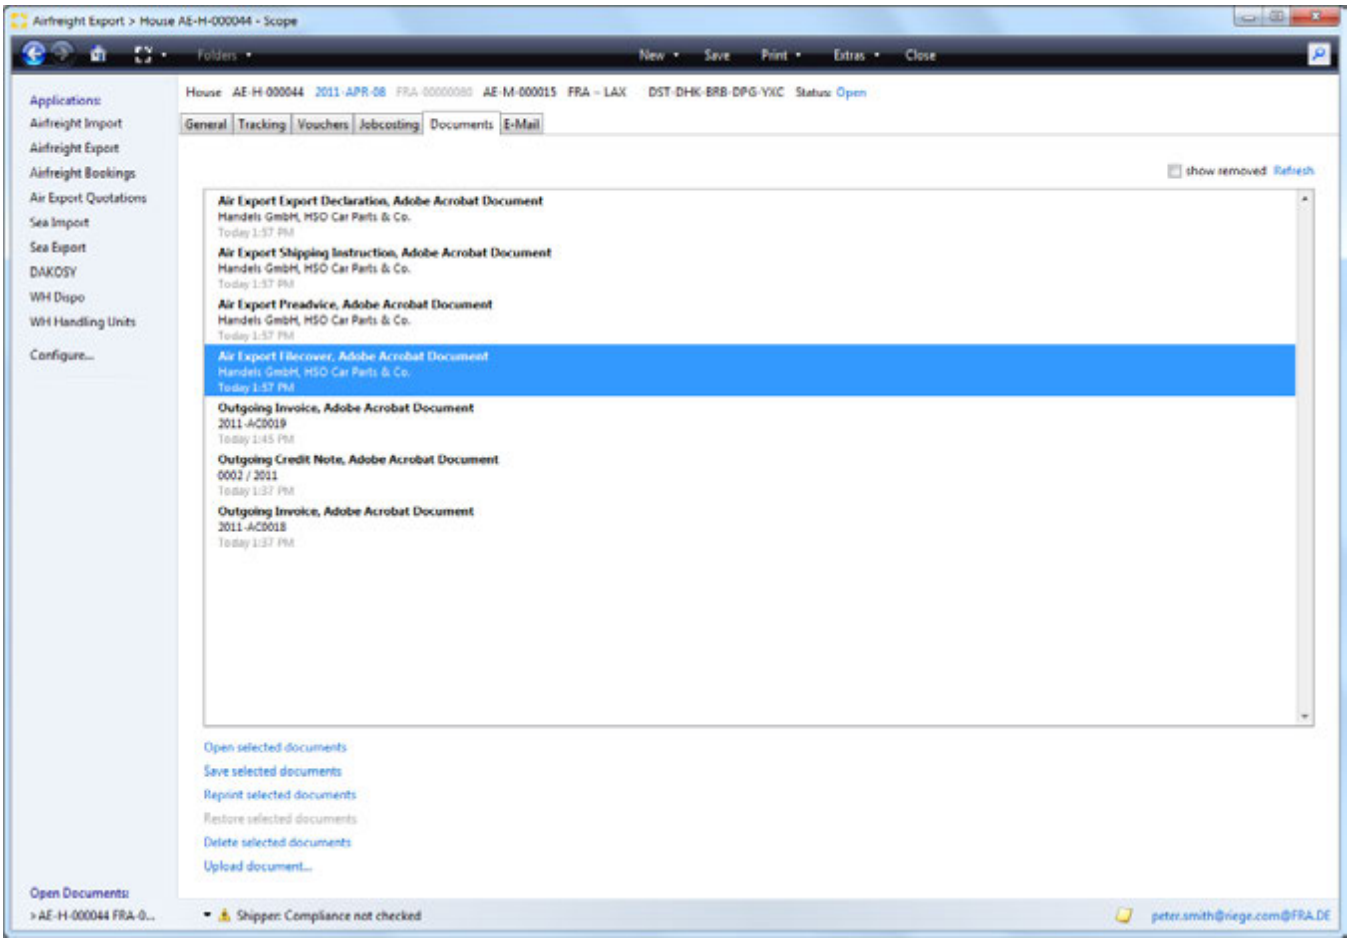
Documents - Functions - General

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. These documents can be opened, downloaded, reprinted, deleted and some documents may be uploaded to web-tracking. Uploaded documents are also displayed.

Description



Document Overview

This area displays all documents that are associated with this shipment or order. The name of the document together with the type of document and creation date are shown. The current version of a document is always displayed. By selecting the show deleted check box, all previous or deleted versions of a document will be shown. These are displayed in ~~strike-through~~ text.

Show removed

Documents that have been previously deleted will be displayed.

Refresh

Updates the current list of documents.

Open selected documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

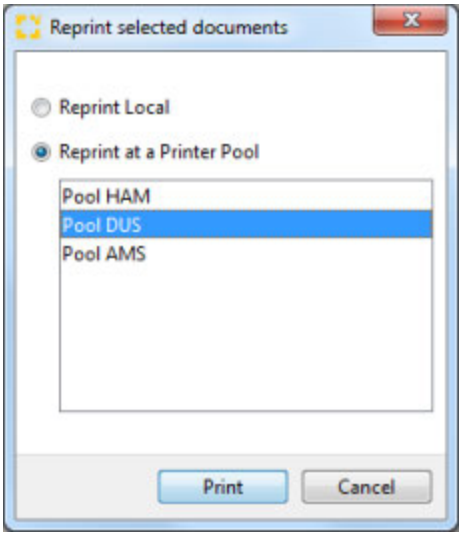
Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the operation without further action.

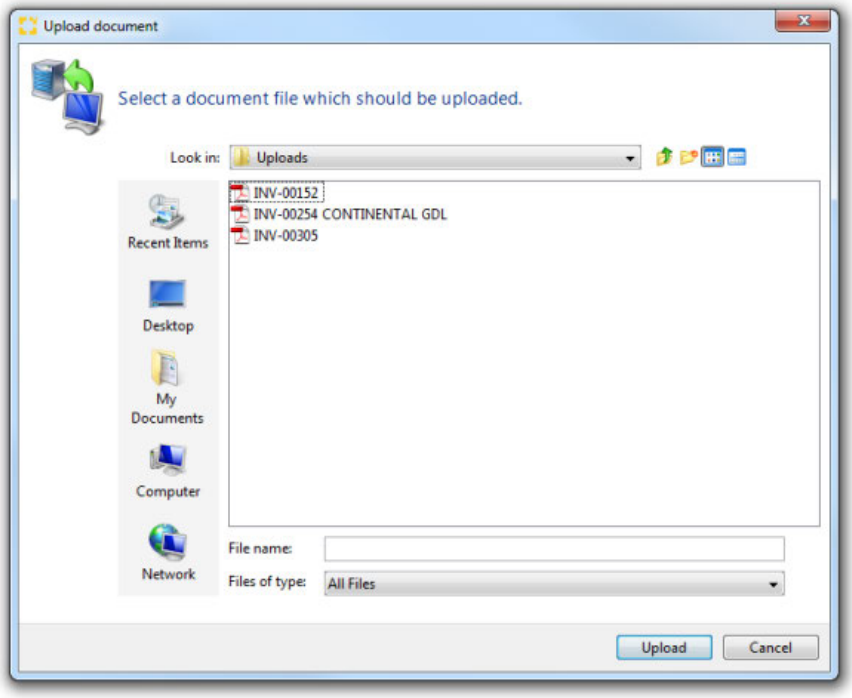
Delete/Restore selected document

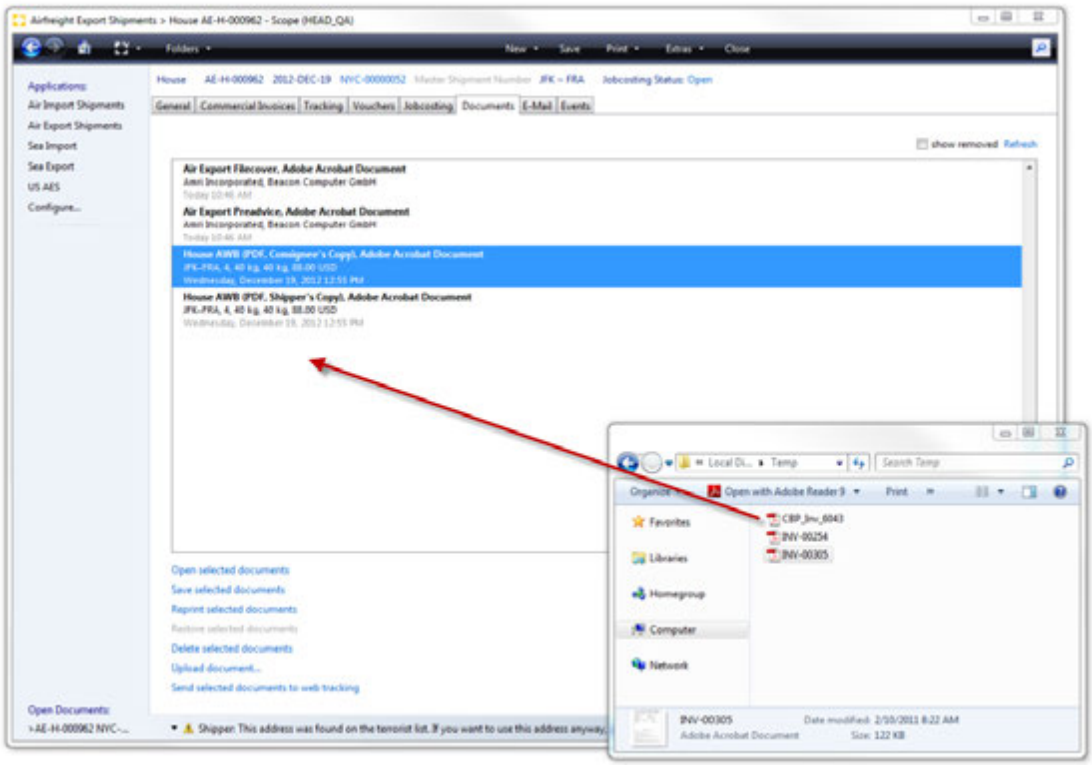
The document highlighted in the list will be deleted from view. Documents are not physically deleted but marked as inactive and therefore not visible. To view all documents including inactive documents, check the show removed box to the right above the document listing. If a document has been deleted, it can be restored by using the show removed check box, highlighting the inactive document and then selecting the *Restore selected documents* action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment. Alternately, navigate to the document on the desktop and drag and drop the document into the documents tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

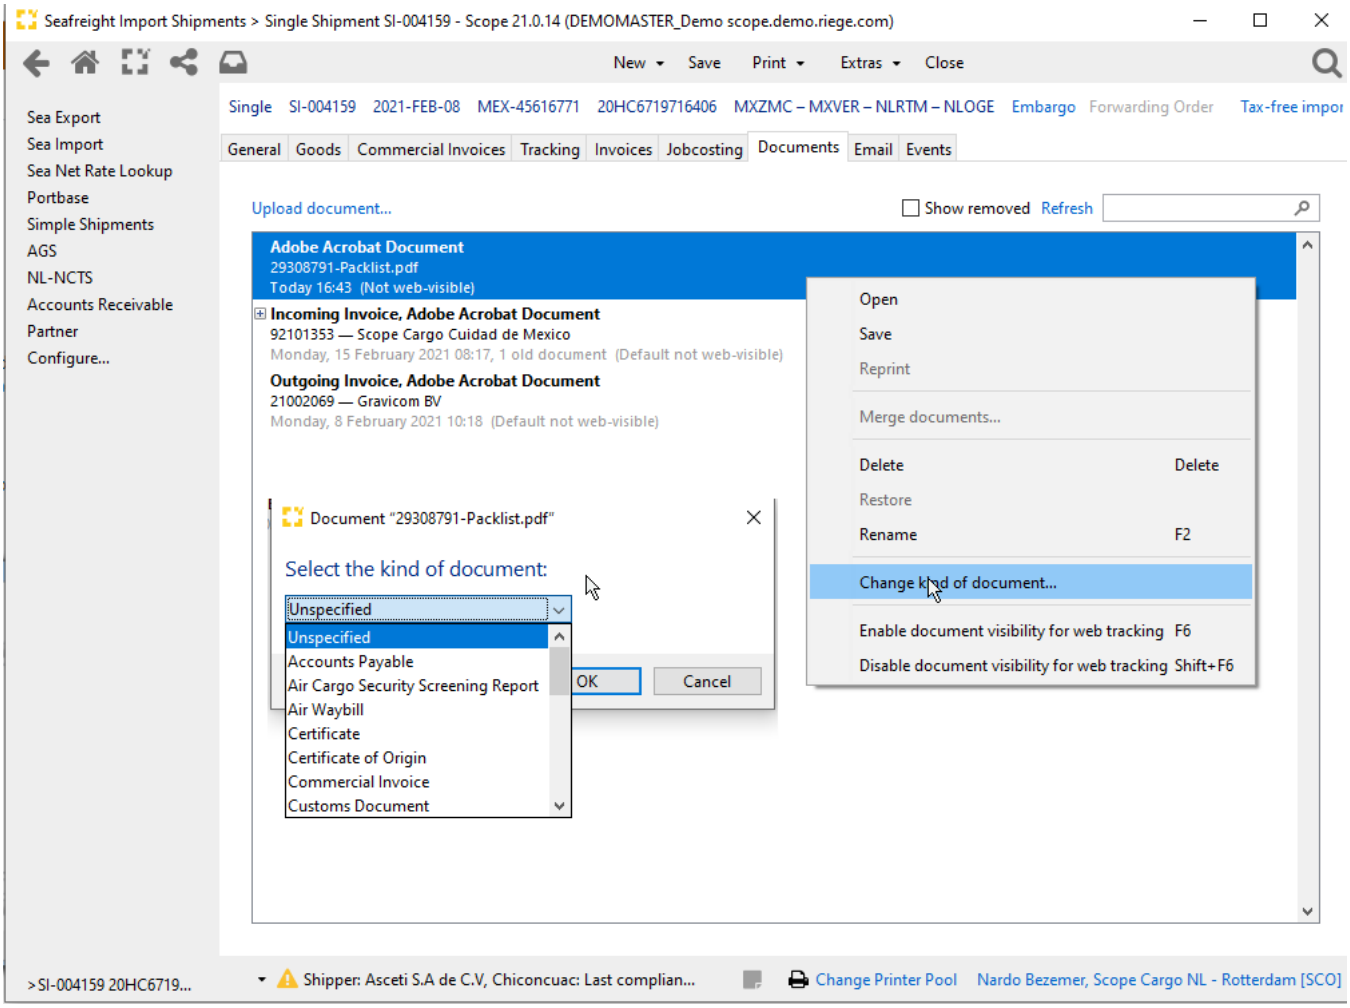




Assign Kind of Document type

During upload or via a right mouse click ,it is possible to set a document kind to the uploaded documents
when a uploaded document has a proper kind set, it will be available to automated email processes (invoices, prealerts)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Available kinds are :

- Accounts Payable (incoming invoice)
- Air Cargo Security screening report
- Air Waybill
- Certificate
- Certificate of Origin
- Commercial Invoice
- Customs document
- Dangerous Goods Declaration
- Forwarding instructions
- Goods receipt
- House Bill of lading
- Image
- Insurance Certificate
- Master Air Waybill
- Master B/L (Draft)
- Master B/L
- Packing List
- Proof of delivery
- Shipping documents
- Shipping Instructions
- Waybill

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

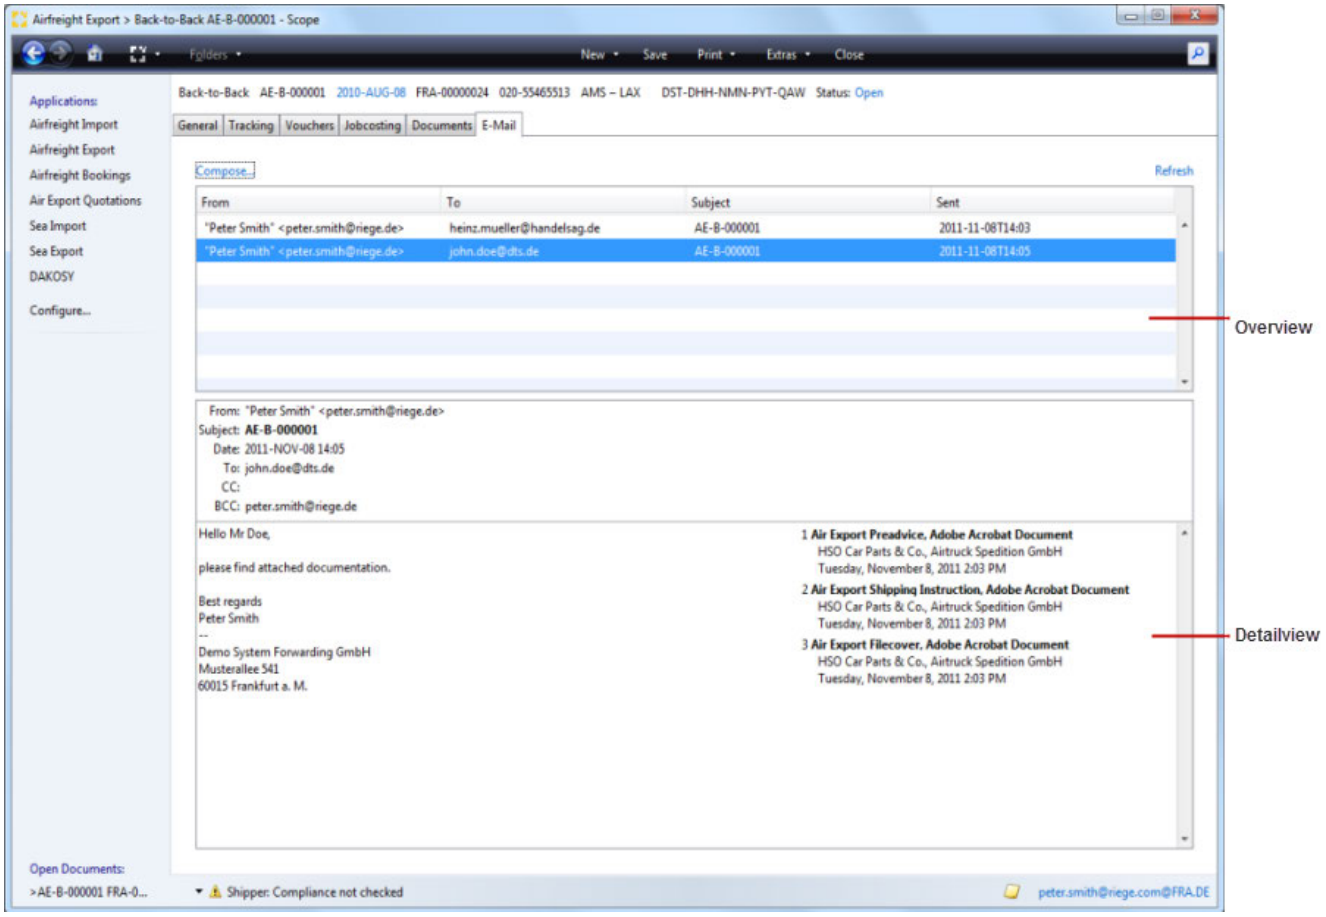
E-Mail - Functions - General

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

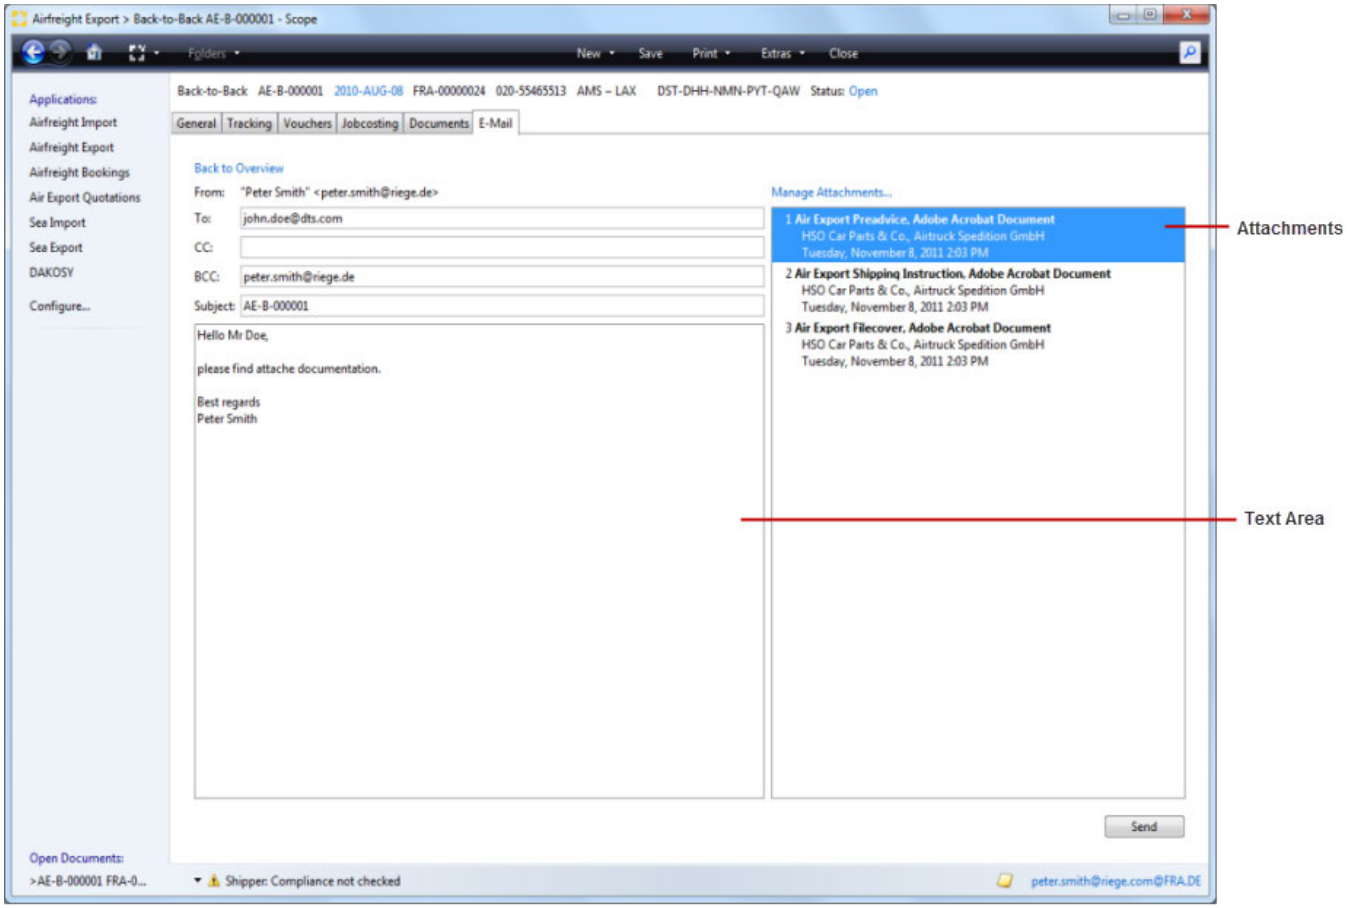
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

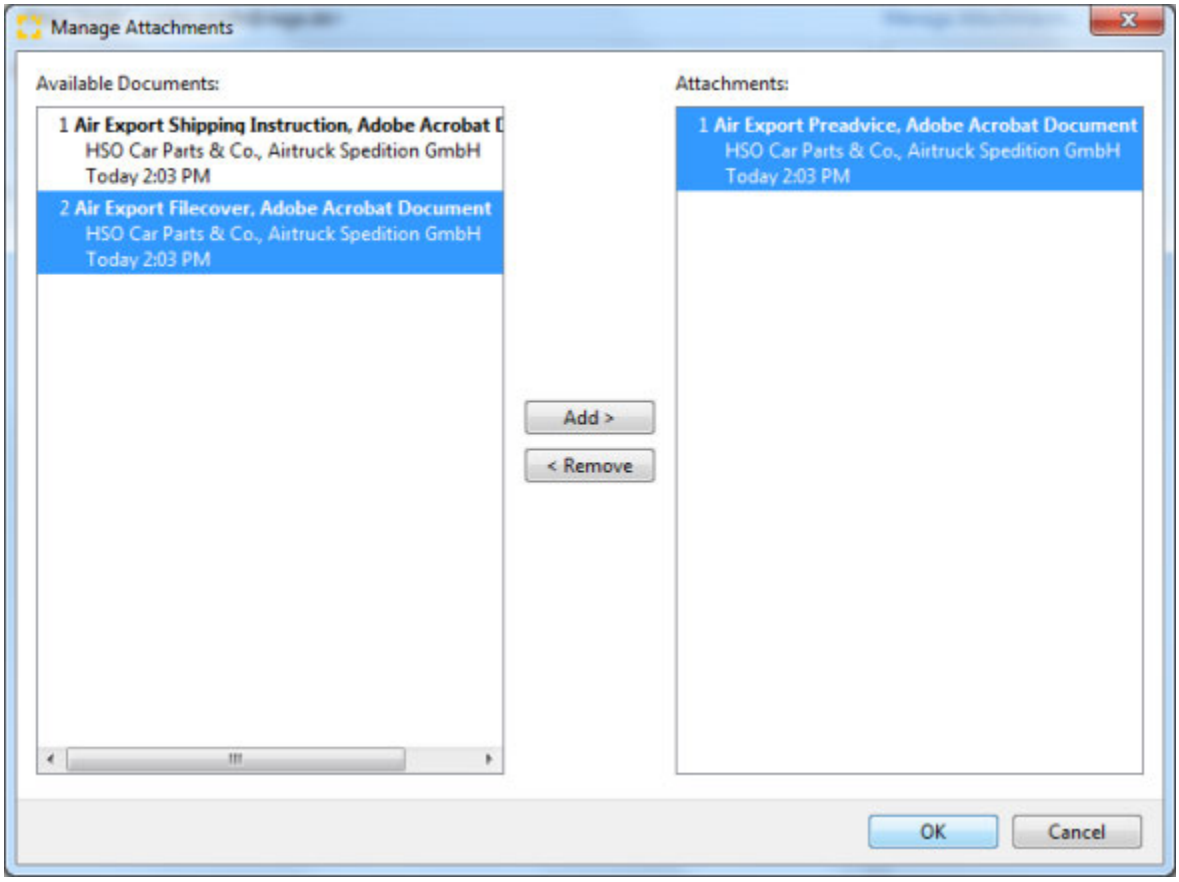
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Help - Functions - General

- Introduction
- Description

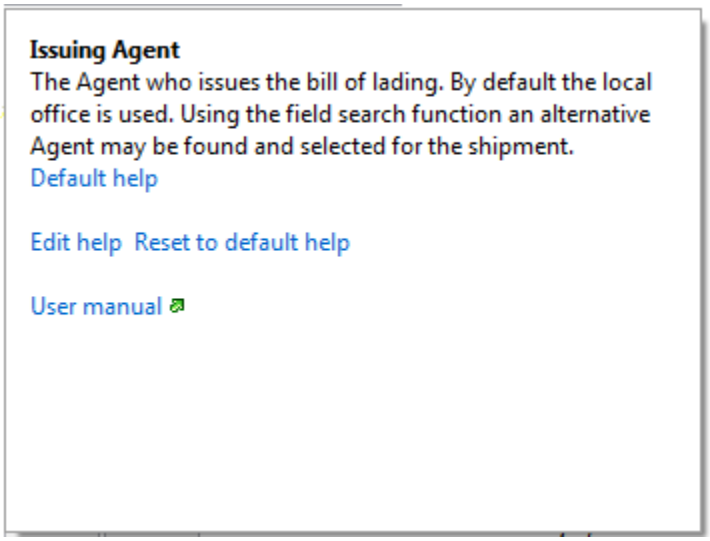
Introduction

In almost all applications there are help functions for the individual fields. In addition to standard scope help texts, local help texts can also be stored. These provide the user with specific in-house auxiliary help information.

Description

The help for a specific field by pressing the **F1** key will be called if the focus is on that field. When calling the help is always local help first appears. If no local help is available, the standard will help loads.

Standard Help



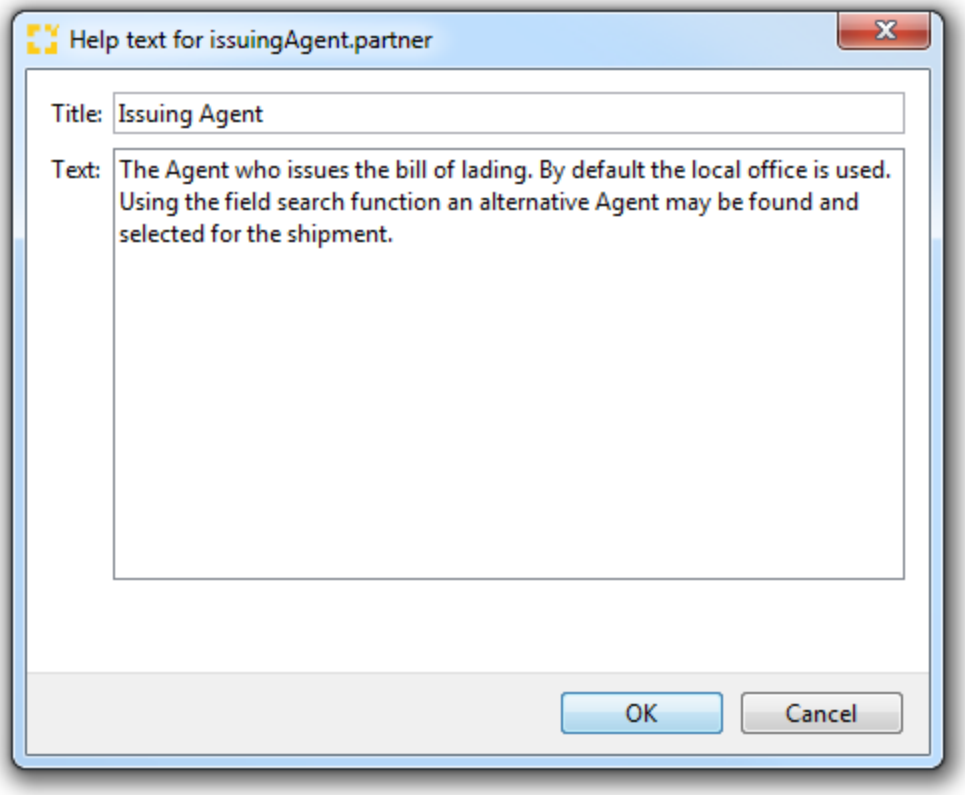
The help function is delivered as a standard part of the software. The default help text will be updated as part of release updates, and expanded where necessary.

Help edit

Opens the help editor for local help

Help editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



When opening the help function, the standard help text is displayed. This may be edited with the help editor. The help title and text may be edited.

OK

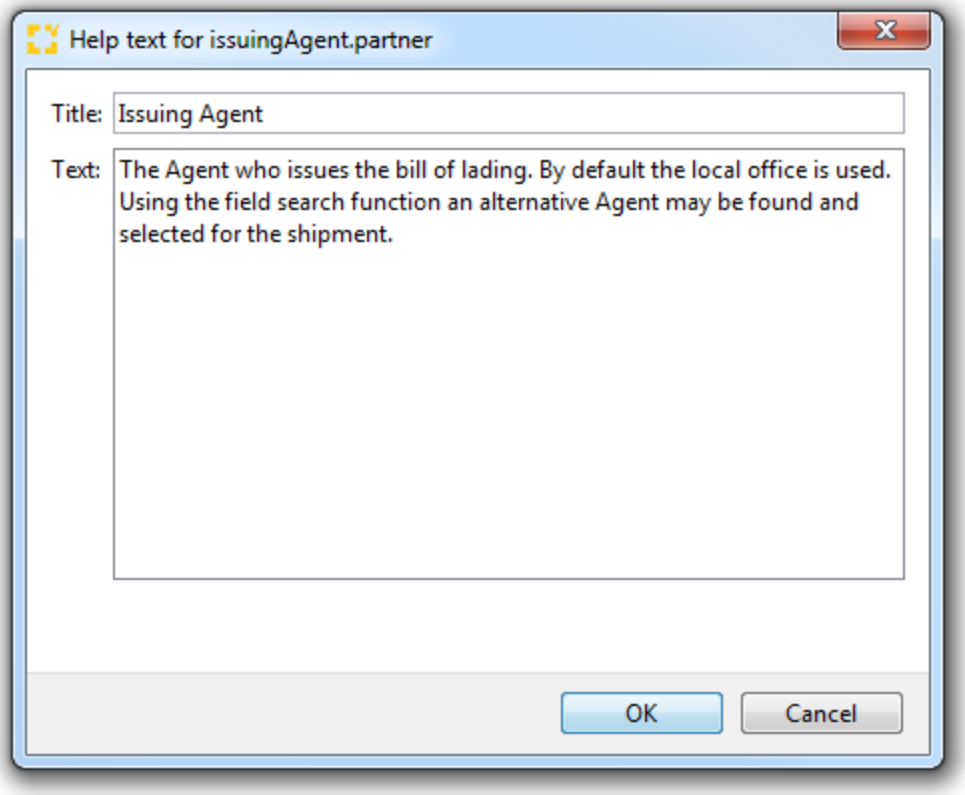
Stores the local help text.

Cancel

Closes the help editor without further action.

Local Help

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Standard help

displays the standard scope help.

Help edit

Opens the editor to edit the local help text.

Reset to default help

Deletes the local help text and replaces it with the standard help text.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

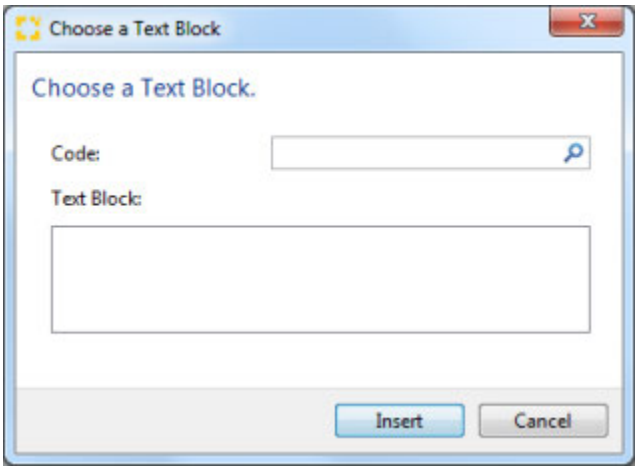
Insert Text Blocks - Functions - General

- Introduction
- Description

Introduction

With this function allows the insertion of text blocks easily and quickly into data fields. Text blocks can be recorded as master data .

Description



The text block editor can be invoked from the context menu for all data fields in which text blocks can be used, or by right clicking in a text field and selecting *Text blocks* or directly with *Ctrl+T*.

Code

Here, the abbreviation of the desired text block can be entered. Stored text blocks can also be accessed via search field .

Text block

After entering the shortcut or selecting from the search result, the selected text block will appear here. The text can be changed if desired before transfer into the application.

Insert

Adds the current block of text into the application and closes the text block editor.

Cancel

Closes the text block editor without any action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

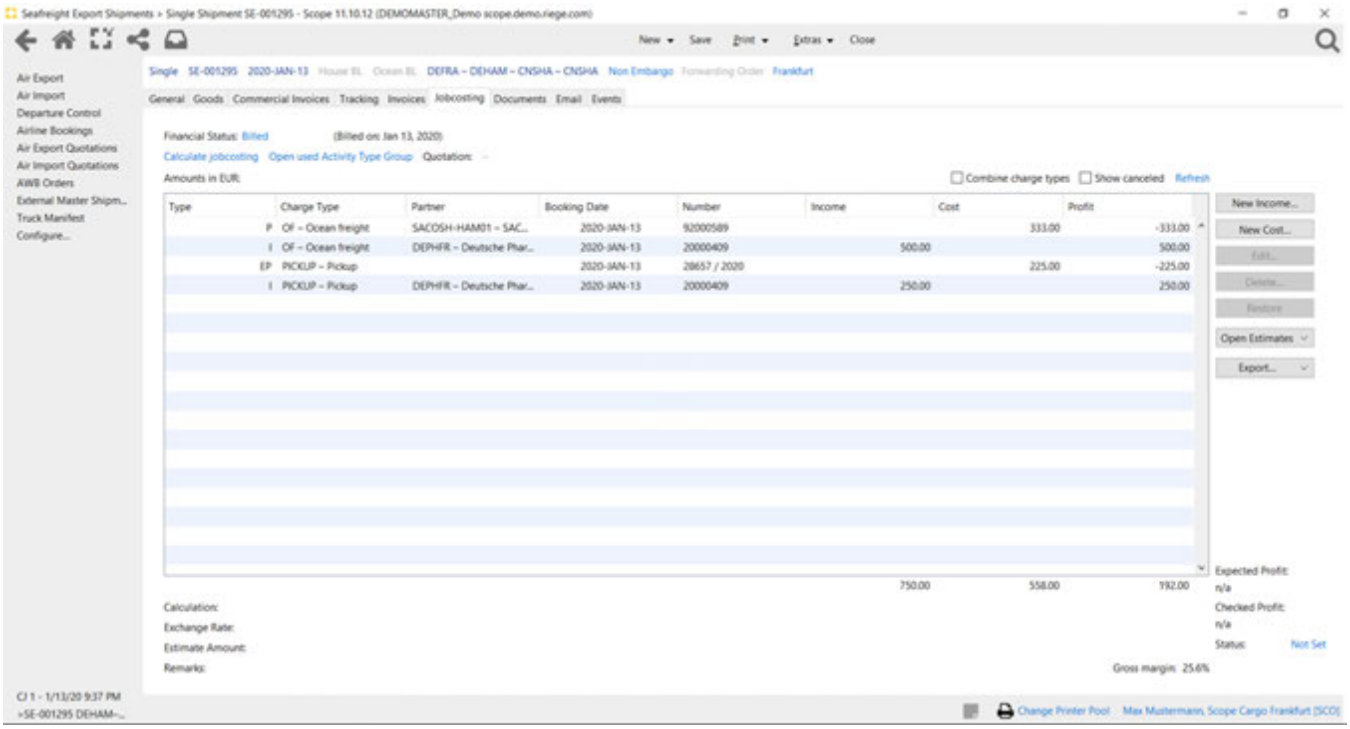
Jobcosting - Functions - General

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

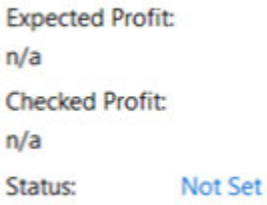
Deletes the charge highlighted in the overview of charges.

Compute Breakdown

The button will recalculate the breakdown of all master to charges to the house shipments on the consolidation. Normally this action occurs automatically, but this button can be used to force the process.

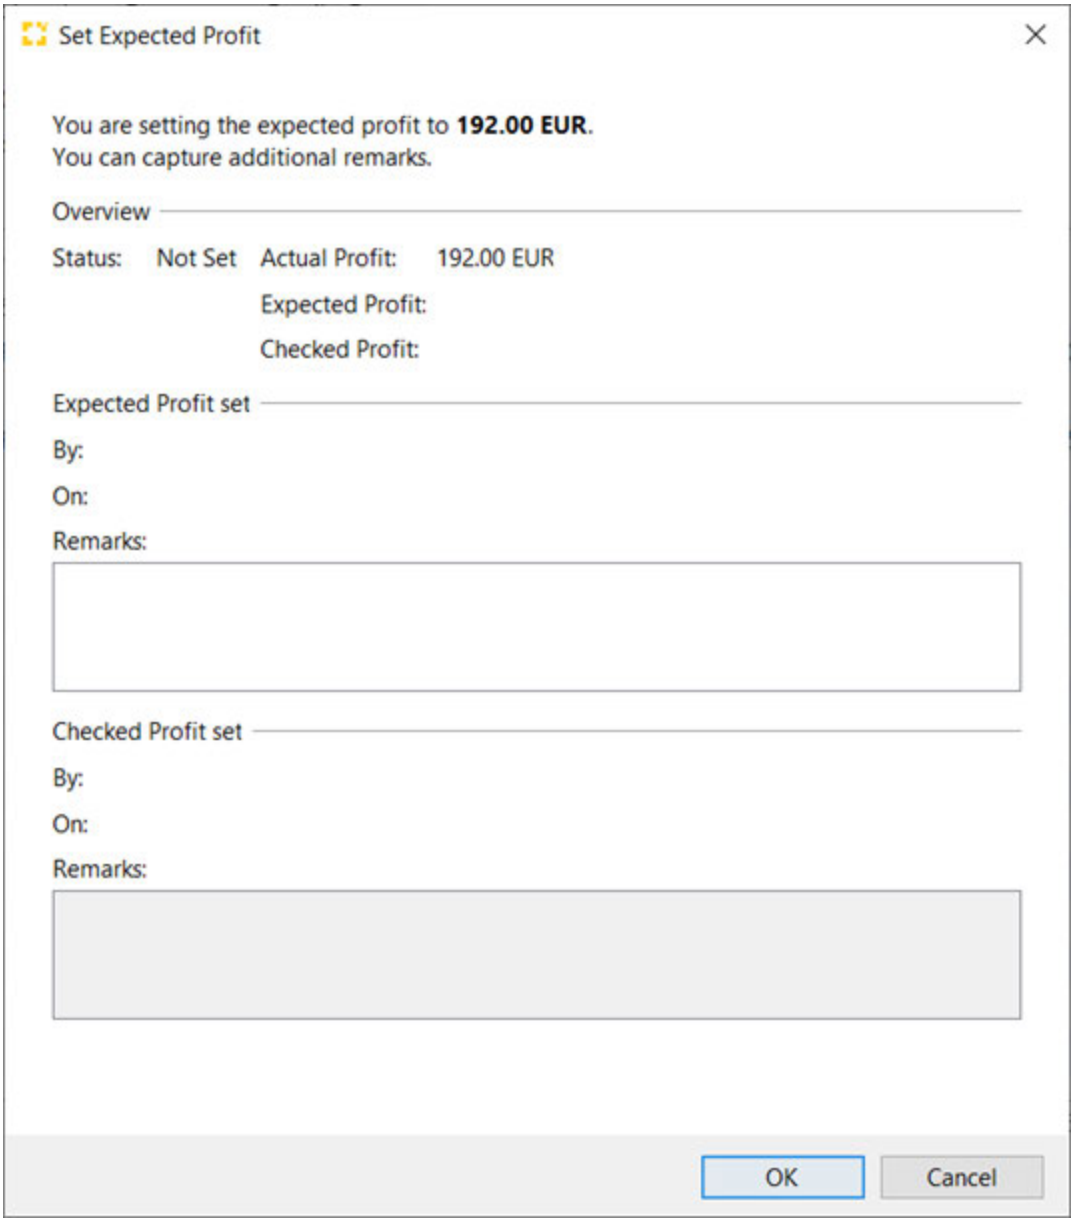
Expected Profit

Set an expected profit



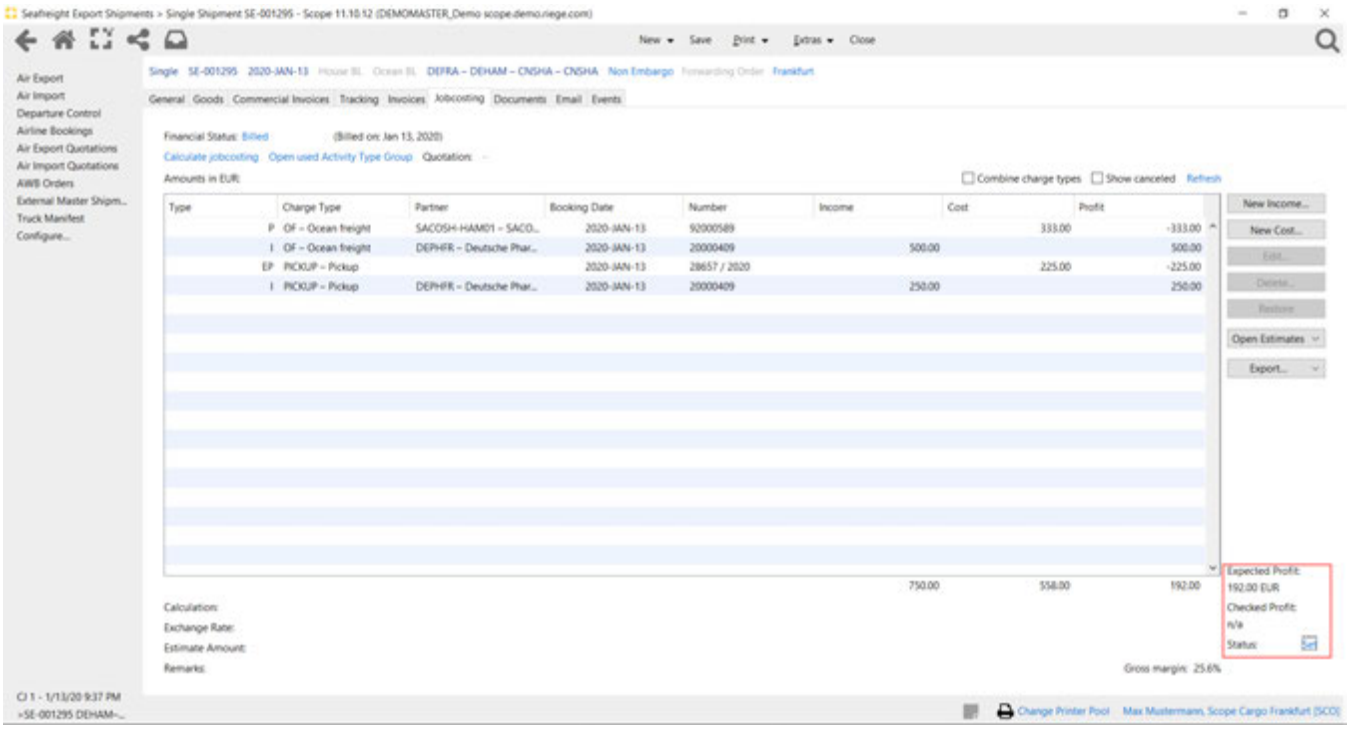
By clicking button "Not Set" a new window opens and the actual profit can be set as expected profit. Previously all expected income and expected costs have to be added to jobcosting.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



After confirming expected profit status changes at jobcosting tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

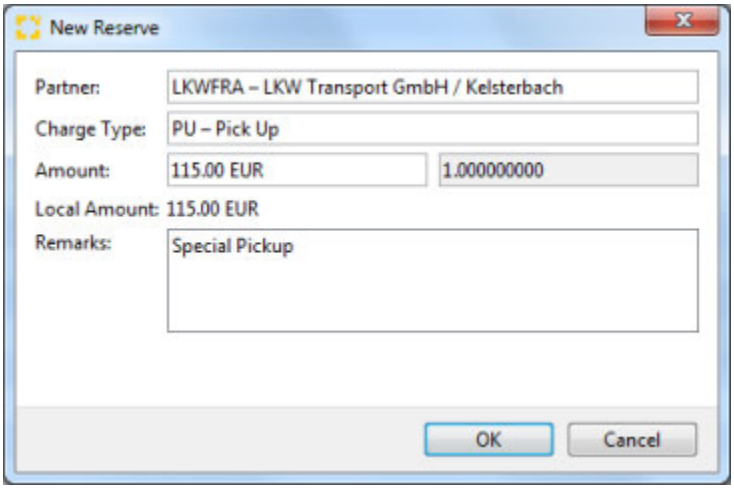
Cost or expenses amount.

Profit

The profit of the line item.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Charges Editor



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Notes - Functions - General

- Introduction
- Description

Introduction

The note application allows for the creation of notifications that will appear when using a business partner, during a shipment entry, when opening a program or when a particular bill of lading number appears. Depending on the priority (notes), or significance of these messages, they will automatically disappear after a few seconds or must be closed(sticky message). The purpose of notes is to keep the user aware of issues relevant to the users activity.

Description

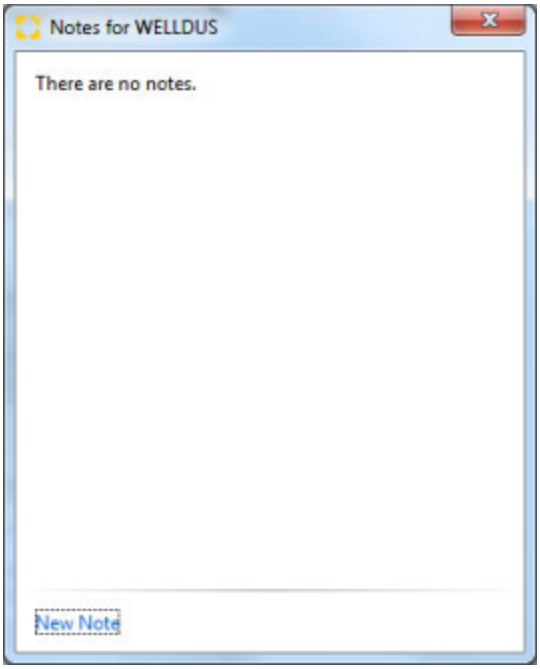
Clicking the icon  will display notes and allow new notes to be created. When using the data to which a note has been applied, for example a shipment address or the creation of a document, then the appropriate note will be displayed as a popup. Notes with the priority "low" or "medium" appear only briefly and disappear automatically, these are termed "Growl" messages. The during the appearance of the note, the user is informed if the note is of low or medium priority, but there is no other behavioral difference between these levels of priority. Notes with "High" priority will be displayed on screen until the user closes them. These are termed "sticky messages".

If a note already exists then the icon changes slightly to .

Actions

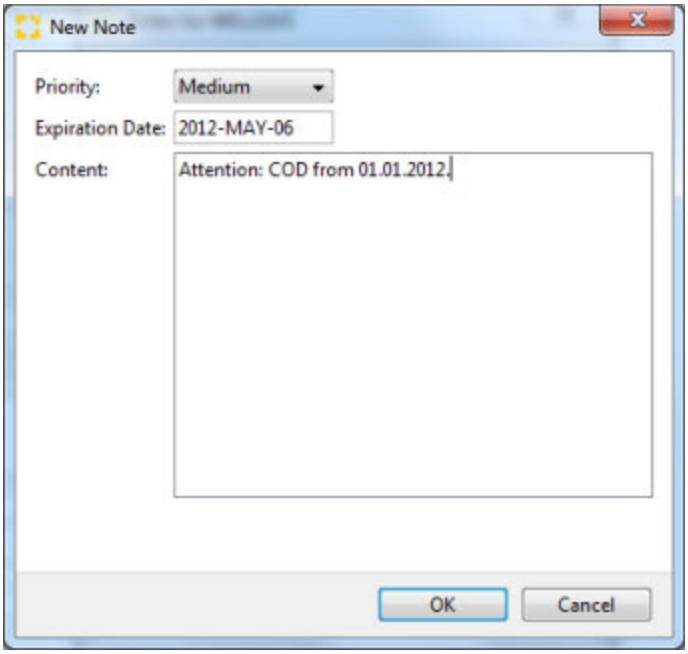
New Note

In order to create a new note the option "New Note" must be selected.



This produces the following fields:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



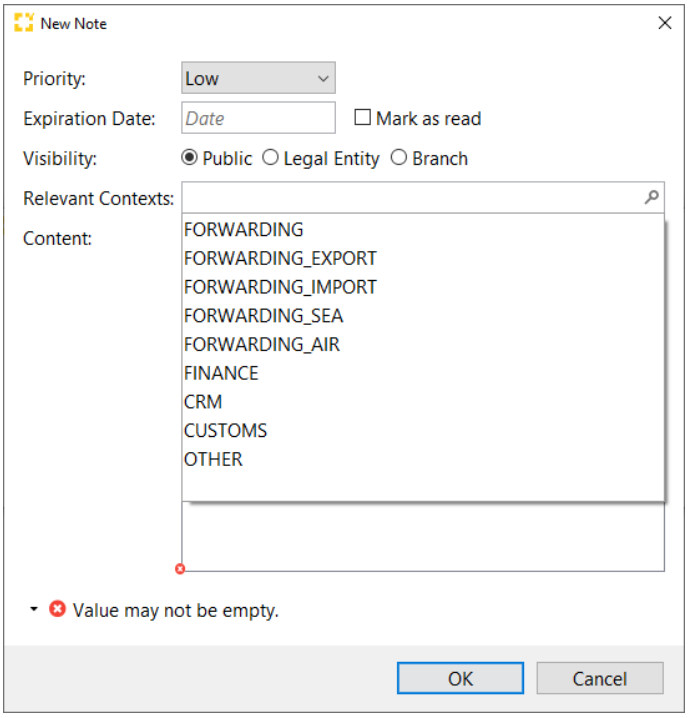
Priority (low / medium / high)

Changing the priority of the message sets the note as a "growl" or a "sticky" message.

Expiration date

The date on which the note will expire.

Relevant Contexts



Other	Note is displayed if it is realted to UNLocodes
Empty	If no selection is done, note is displayed everywhere
Forwarding_Sea	Note is displayed if it is an oceanfreight shipment, no matter if import or export
Forwarding_Import	Note is displayed if shipment type is "Import"

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Forwarding_Export	Note is displayed if shipment type is "Export"
Forwarding_Air	Note is displayed if it is an airfreight shipment, no matter if import or export
Forwarding	Note is displayed in Forwarding shipments (Air, Ocean, Shipment light)
Finance	Note is displayed if a financial service (e.g. incoming or outgoing invoice, dunning, ...) is created for the partner
Customs	Note is displayed if the partner is used in a customs order
CRM	Note is displayed if the partner is used in a quotation

Content

The text that is displayed when the note appears.

A maximum of 1024 characters may be stored in notes. An error will appear if this is exceeded and will remain until the total characters are within the allowed limit.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

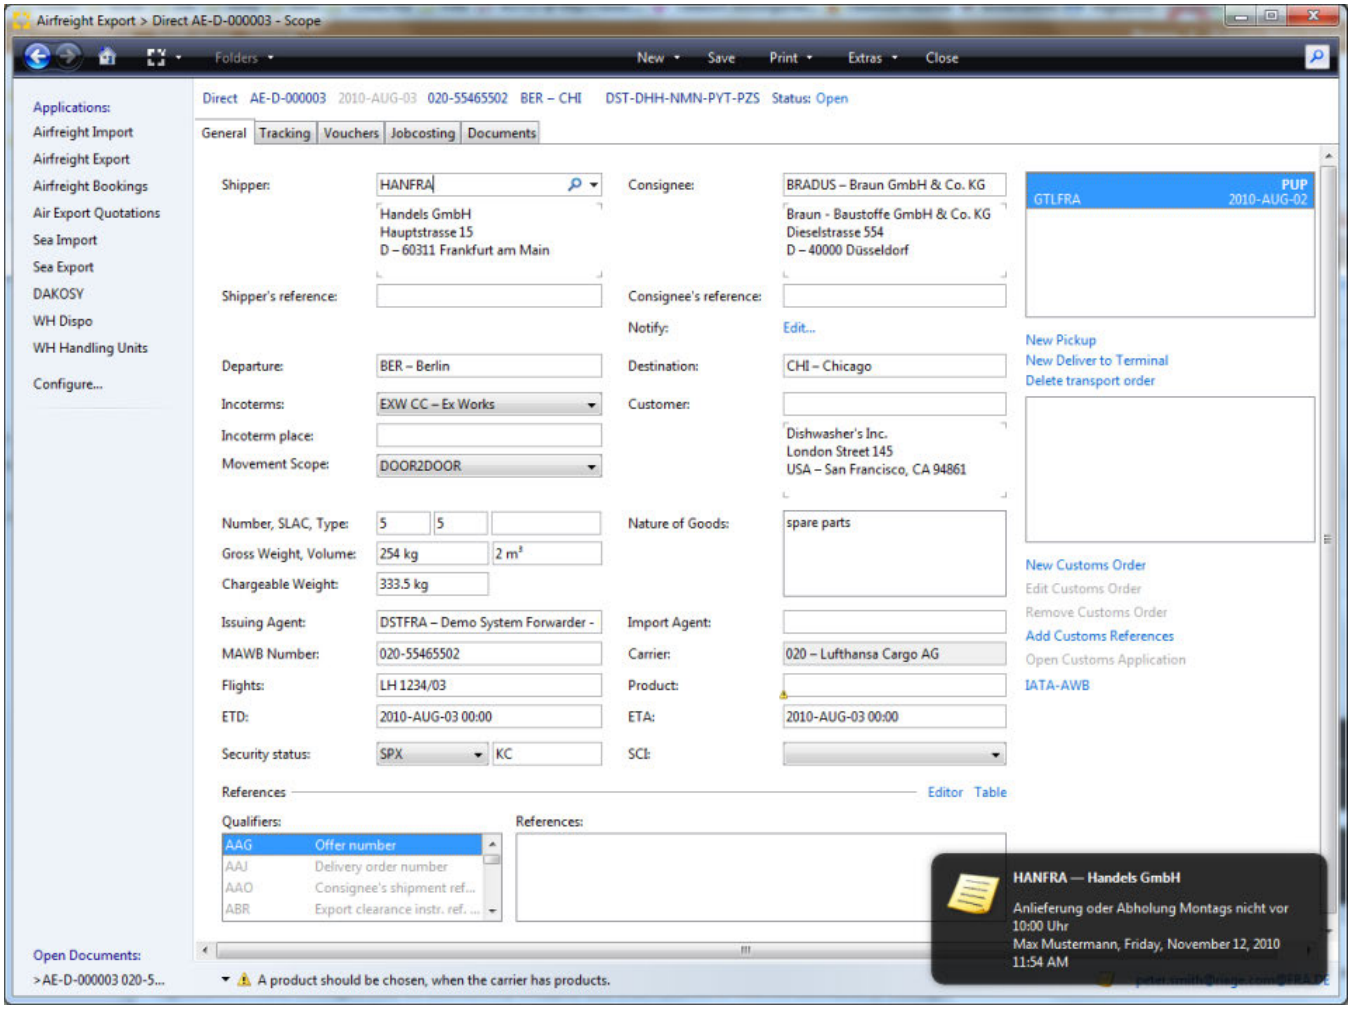
Notifications - Functions - General

- Introduction
- Description

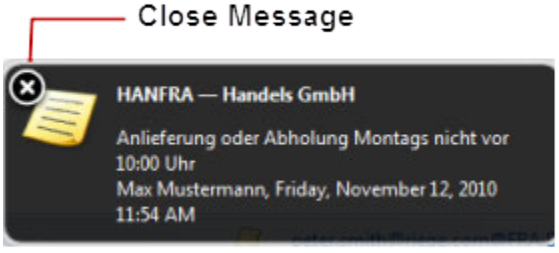
Introduction

Various applications in scope (eg, credit control , notes , AWB pool , etc.) send a notification to the user when certain events occur. These notifications appear at the bottom right of the user interface and are known as "sticky messages".

Description



Depending on the application, notifications may appear when using a business partner, during a shipment entry, when opening a program or when a particular bill of lading number appears. Depending on the priority (notes), or significance of these messages, they will automatically disappear after a few seconds or must me closed(sticky message).



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

All notifications can be actively closed by clicking on the close icon. This symbol appears when the cursor is moved over the note.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

References - Functions - General

- Introduction
- Description

Introduction

This application is embedded in various shipment editors and is used to record different types of reference numbers. These reference numbers can be reused in other applications. The user, for example, can have these references inserted into printed documents.

Description

Record reference numbers

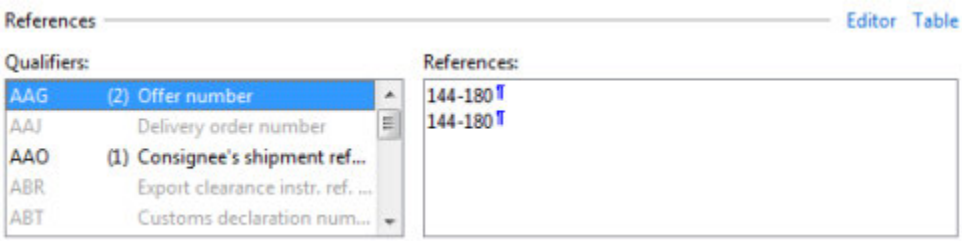
Editor

Changes to editor mode. By default, the editor mode is active.

Table

Changes to table mode.

Editor-Mode



Qualifiers

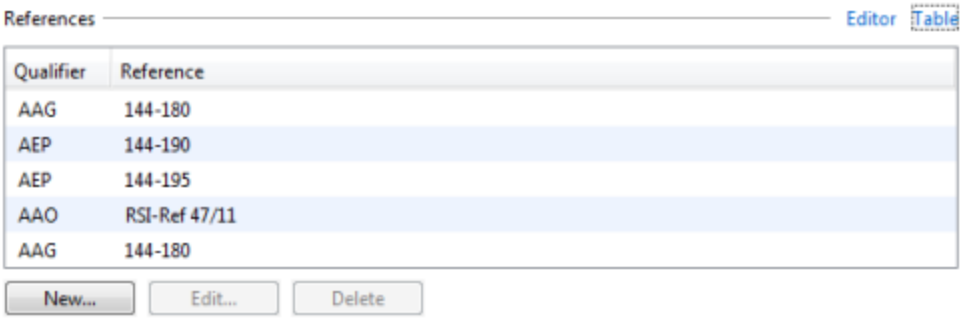
This list displays the possible kinds of references. The kind of reference is highlighted and then the actual references inserted in the *references* pane on the right. Once a reference has been entered, the qualifier appears in dark text and shows the number of references that have been entered for that reference type in brackets.

References

Here, the references to the selected reference qualifier must be entered. Predefined text blocks can also be inserted here.

Table Mode

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



New

Opens the table editor for entry of a reference.

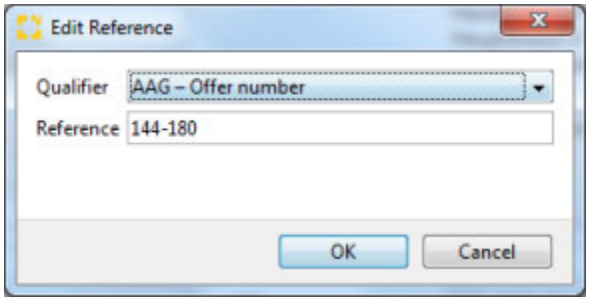
Edit

Opens the table editor and places the selected entry in the table, ready for editing.

Delete

Deletes the selected entry from the table.

Table editor



Qualifier

From the selection list, the reference qualifier can be selected for the reference.

Reference

The reference for the selected reference qualifier can be entered. It is also possible to insert predefined text blocksin this field.

OK

Saves the entry and closes the table editor.

Cancel

Closes the table editor without further action.

Reference types

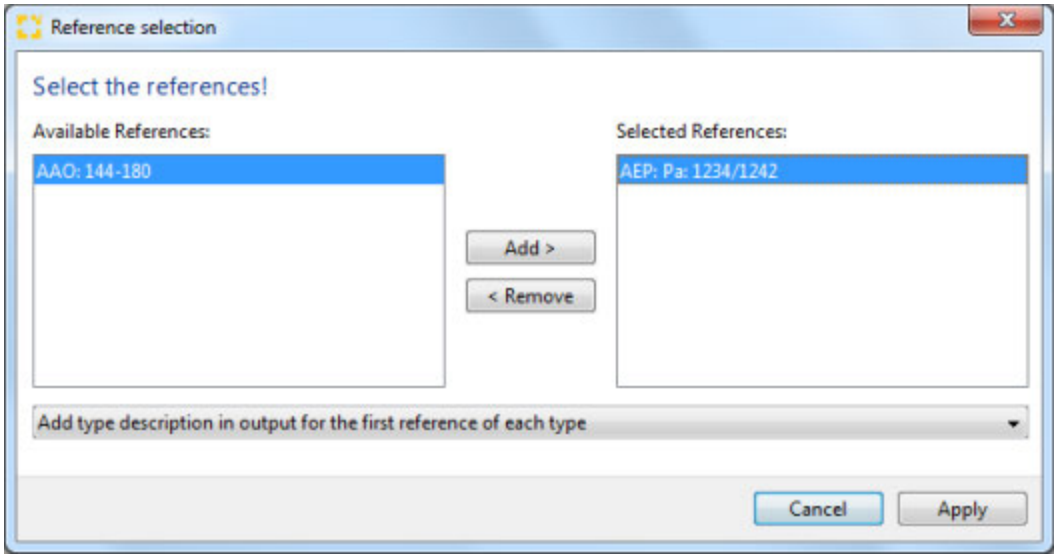
The following reference types can be maintained:

Qualifier	Term
AAG	Offer number
AAJ	Delivery order number
AAO	Consignee's shipment reference number
ABR	Export clearance instr. ref no.
ABT	Customs declaration number
AEP	Project number
AIO	Customs transshipment number

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

BC	Buyer's contract number
BN	Booking reference number
CU	Consignor's reference number
ON	Order number (purchase)
VC	Vendor contract number
ZZZ	Mutually defined reference number

Insert Reference number



Available references

All the available references which have been recorded in the shipment will be displayed here.

Selected references

In this field, all selected and assigned references are displayed.

Add

Moves a reference from the *Available References* to the *selected references* .

Delete

Moves the reference from the *selected references* and into the field *available references*.

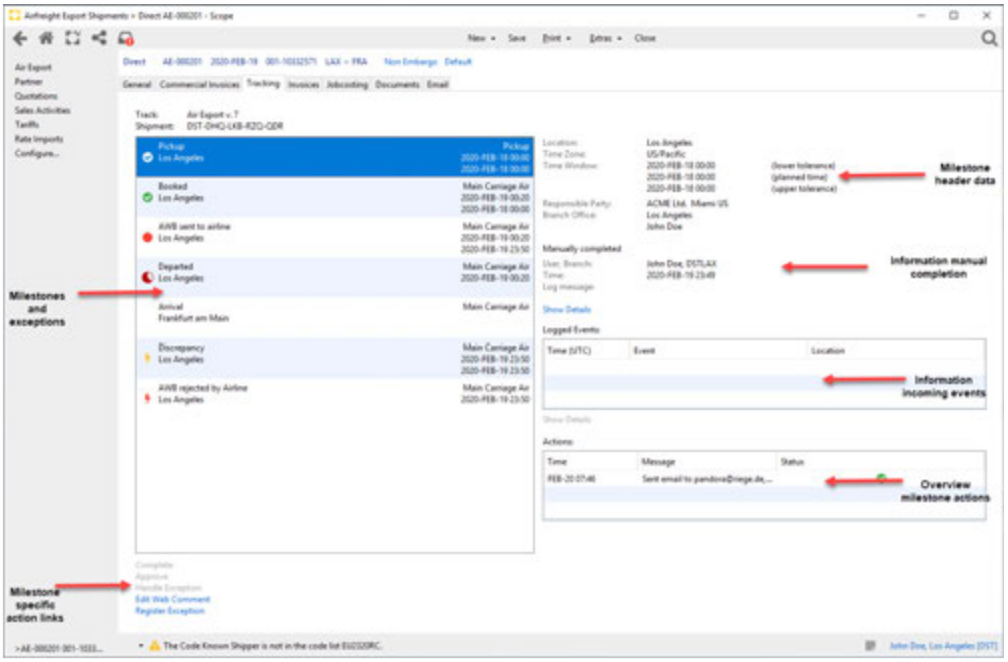
Tracking - General - Standard Feature

Introduction



Each milestone has three timestamps:

- lower tolerance
- planned time
- upper tolerance

The planned time described, when completion of a milestone is expected. E.g. completion of milestone Departure is expected at the time of departure.

Lower and upper tolerance describe a time window before and after the planned time, where Scope considers a milestone to be completed on time (green).

Example

From the general tab of a shipment, Scope derives the departure time of shipment (in this example: 27.01.)

- Milestone DEP is setup in tracking templates to have a planned time "ETD" with no tolerance.
- Milestone FWB is setup in tracking templates to have have a planned time of ETD with a lower tolerance of 30 days

Milestone DEP has three timestamps:

- lower tolerance: 27.01.
- planned time: 27.01.
- upper tolerance: 27.01.

Milestone FWB has three timestamps:

- lower tolerance: 27.12.
- planned time: 27.01.
- upper tolerance: 27.01.

The visualisation of the status of the milestone is done via the following symbols:

Symbols in Scope

Symbol	Description
	Milestone not completed, tolerance in the future (not reached yet)
	Milestone not completed, tolerance started, planned time not overdue

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

	Milestone not completed, planned time overdue, tolerance not overdue
	Milestone not completed, tolerance overdue
	Milestone completed out of timeframe, no approval via codelist required
	Milestone completed out of timeframe, approval via codelist required
	Milestone completed out of timeframe, approved via codelist

Exception Status

The status of an exception is displayed as a symbol:

Symbol	Description
	Unhandled exception
	Handled exception

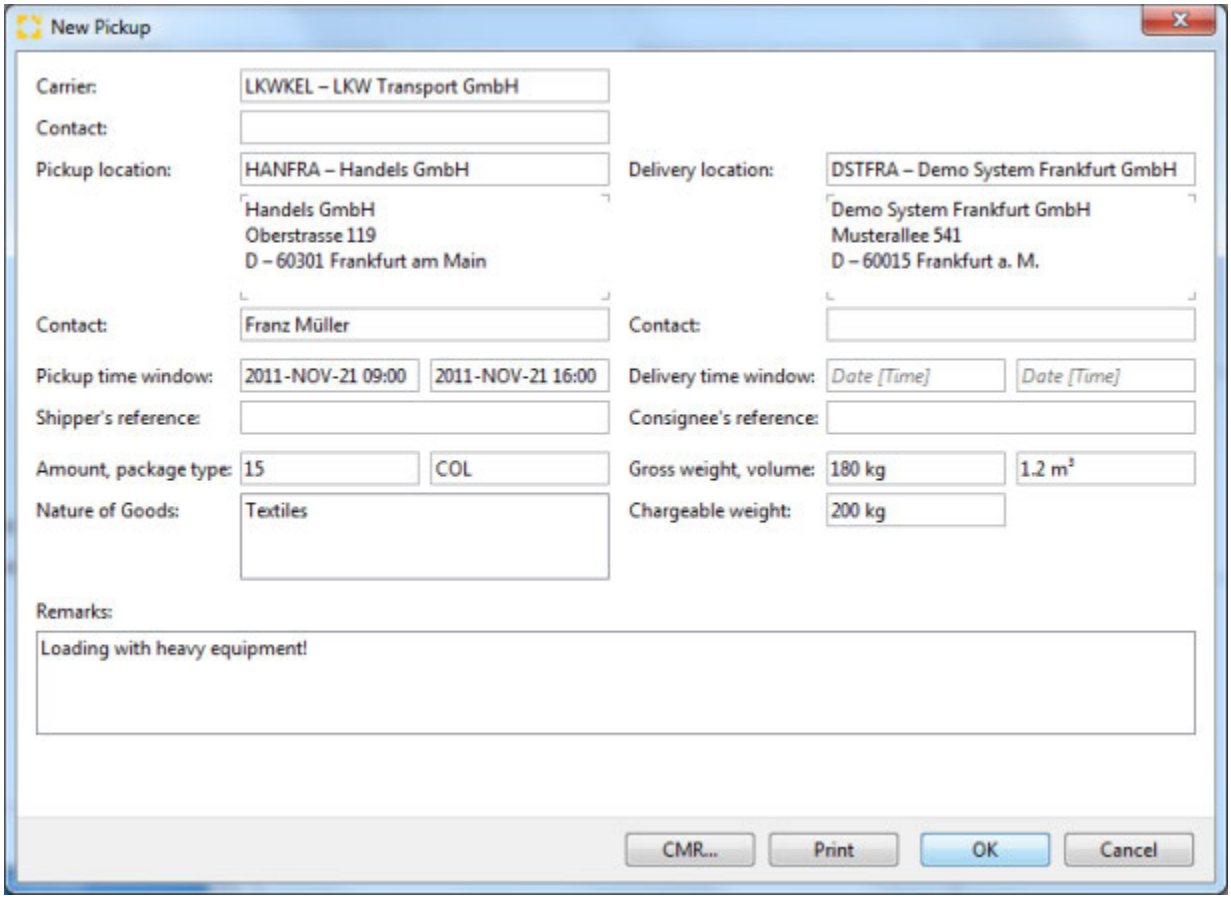
Transport Order - Functions - General

- Introduction
- Description

Introduction

Create and print pickup notes for collection of goods and delivery orders for transport of goods to the terminal. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the shipper. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window (Date / Time|Datum und Uhrzeit - Feldtypen - Benutzeroberflaeche - Allgemein]), in which the consignment is to be picked up.

Delivery time window from /to

The delivery window (Date / Time|Datum und Uhrzeit - Feldtypen - Benutzeroberflaeche - Allgemein]), in which the consignment is to be delivered.

Shippers reference

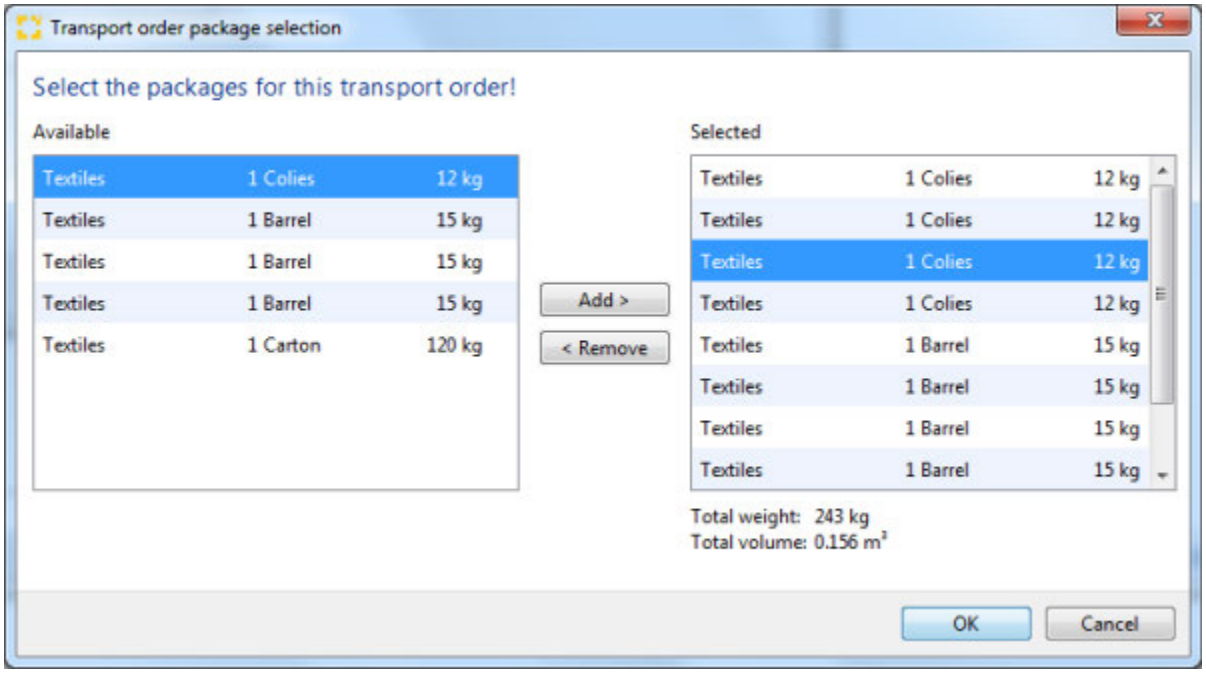
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery oder editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

CMR - Transport Order - Functions - General

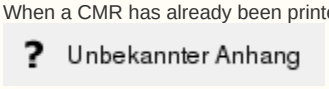
- Introduction
- Description

Introduction

The CMR editor is used to create a CMR waybill according to the Convention on the Contract for the International Carriage of Goods by Road. These may be printed and stored as PDF copies.

Description

When a CMR has already been printed, on selecting the *CMR* option a dialogue will appear asking if existing CMR data should be used.



Yes

Opens the existing CMR in the editor.

No

Creates a new CMR.

CMR Editor

Sender

This is the sender of the shipment. This is a search field that can be used to locate the correct partner.

Carrier

The carrier who will transport the shipment. This is a search field that can be used to locate the correct carrier.

Consignee

The recipient of the shipment. This is a search field that can be used to locate the correct partner.

Successive Carriers

A free text area where the names of carriers who will transport the goods subsequent to the first carrier may be recorded.

Place of Pickup

The location where the goods will be picked up. This will default to the city and state of the sender.

Date of Pickup

The date when the goods are to be picked up. This is a date field .

Place of Delivery

The city where the and state where the goods will be delivers. This will default to the city and state of the consignee.

Date of delivery

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The date the goods are to be delivered. This is a date field .

Documents

Any documents included with the shipment should be listed here.

Carrier remarks

Any remarks from the carrier.

Print detail lines

The details of the cargo are shown in a summary table, being the marks and numbers, the number of pieces, packing type, nature of goods, weight and volume. If these are to print on the CMR then the *Print details lines* box should be checked.

Remarks

The shipment number appears in the general remarks area below the detail line. Further remarks may be added.

Sender Instructions

Special instructions from the sender may be recorded here.

Special Agreements

If special arrangements have been made, these may be recorded here.

Place (of issue)

The place where the CMR is issued.

Date of issue

The date the CMR is issued. This is a date field .

Free/Not free

Payment instructions for the CMR:

- Free = The sender has paid the freight charges.
- Not free = The recipient must pay the freight charges.

Print

Prints the CMR documents. PDF copies of these documents will appear in the *documents* tab of shipments. The Editor is then closed and the data is stored.

The following PDF documents are created:

- CMR 1 (Sender)
- CMR 2 (Receiver)
- CMR 3 (Carrier)
- CMR 4 (Carrier)

Example CMR consignment note

Cancel

Closes the CMR editor without further action.

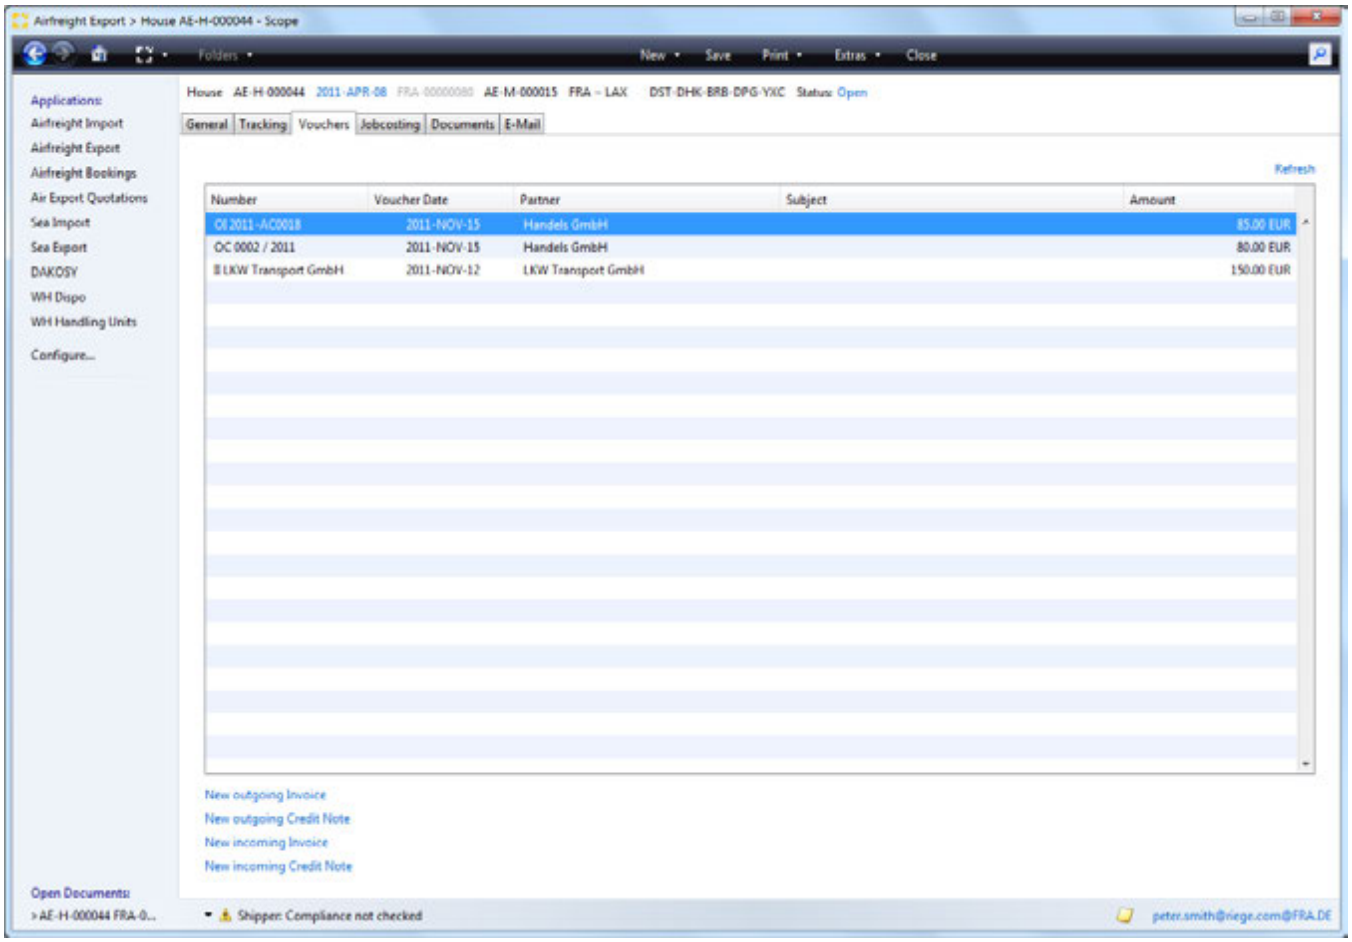
Vouchers - Functions - General

- Introduction
- Description

Introduction

For all shipments and orders, the **voucher** tab displays all billings associated with the job. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Tab **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Outgoing Credit Note

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Consol Profit Analysis (For air export master shipments)

Opens the application to make master shipment profit analysis .

Refresh

refreshes the list of vouchers.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Vouchers - Functions - General

- Introduction
- Description

Introduction

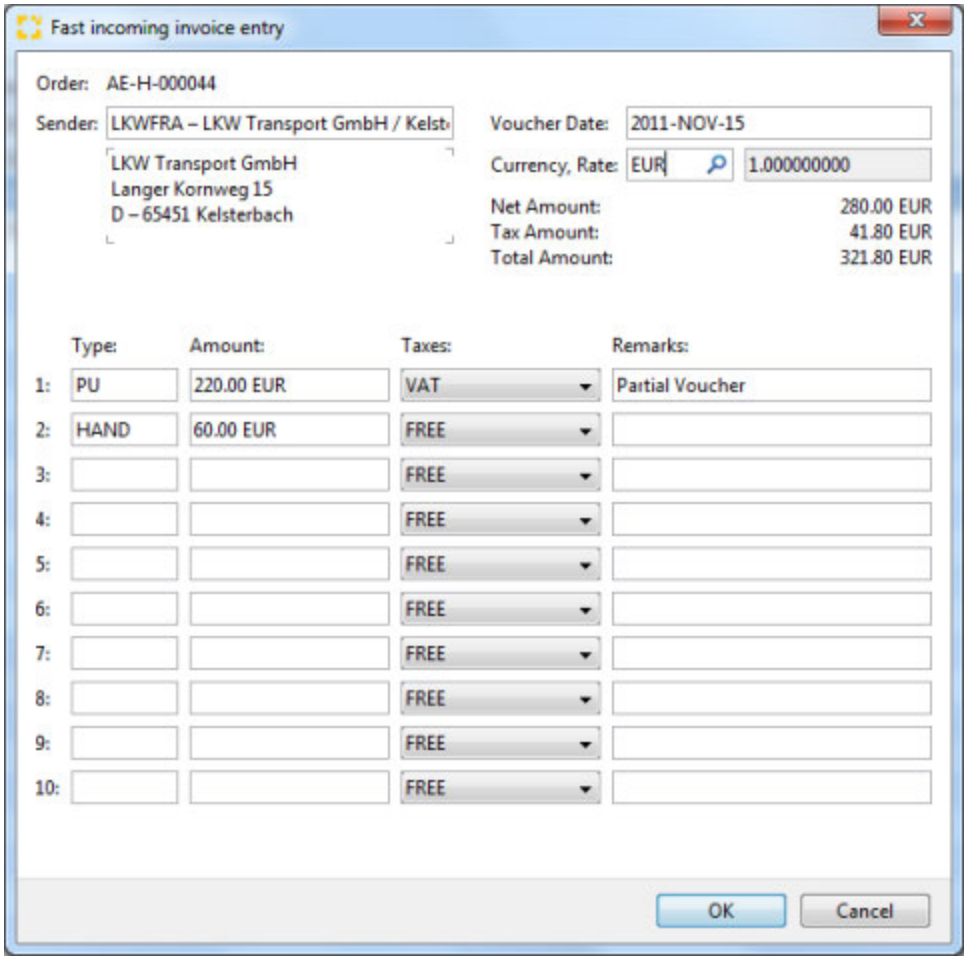
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

The shipment number of the current shipment is automatically used.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

? Unbekannter Anhang

Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

Open Order

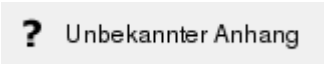
Open the shipment to which the line item belongs.

Tip

Use the key combination **Crtl + I** to display the following information:

- The user who generated the invoice
- The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Questions

Outgoing Invoice - Vouchers - Functions - General

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

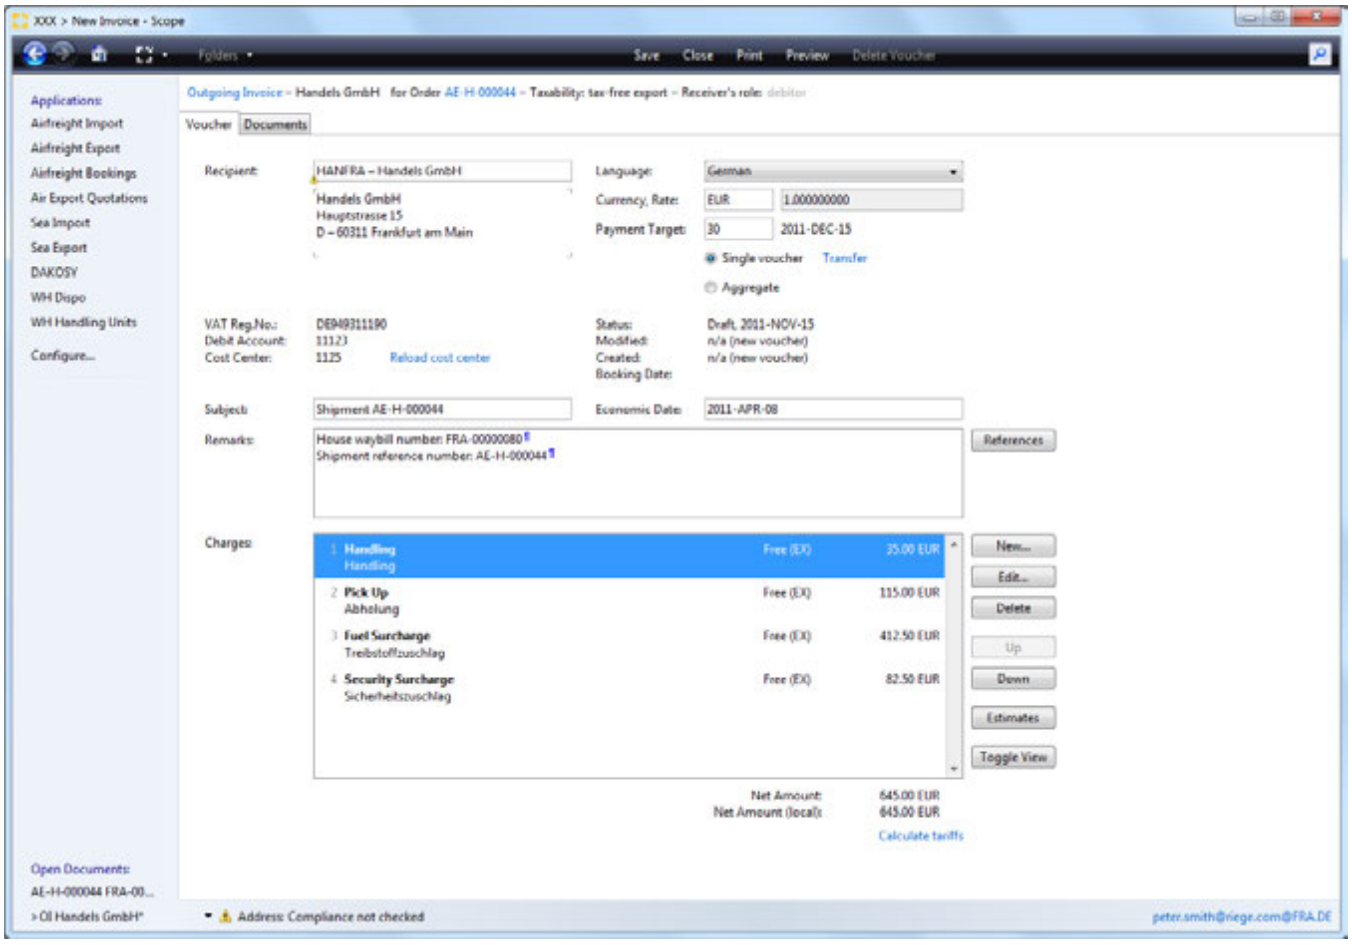
documents in the voucher overview screen may be in either of 2 states:

- *New/Open documents
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Save

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

The selected item will be moved one position down in the list of charges.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

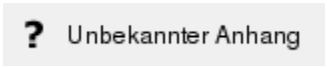
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.

Close

Closes the document and returns to the overview of vouchers.

Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Questions

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

AWB Editor - Standard Features

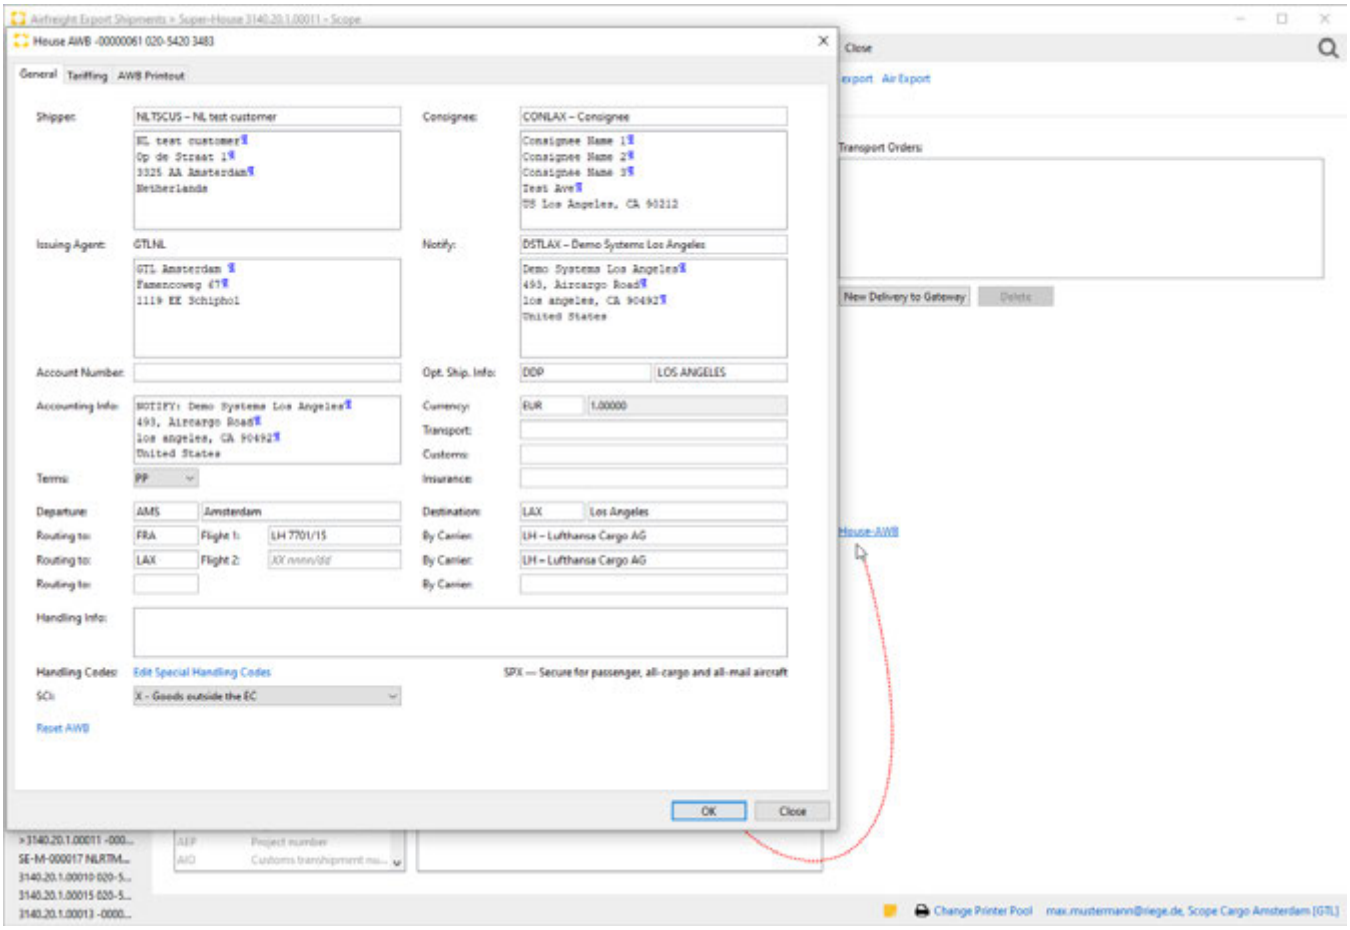
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to create, edit, customize and print AWBs. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be overridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the HAWB on screen before it is actually printed.

Description

With the corresponding *action link (House-AWB, IATA-AWB, MAWB-AWB)* the AWB Editor can be opened.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(a) General - AWB Editor - Standard Features

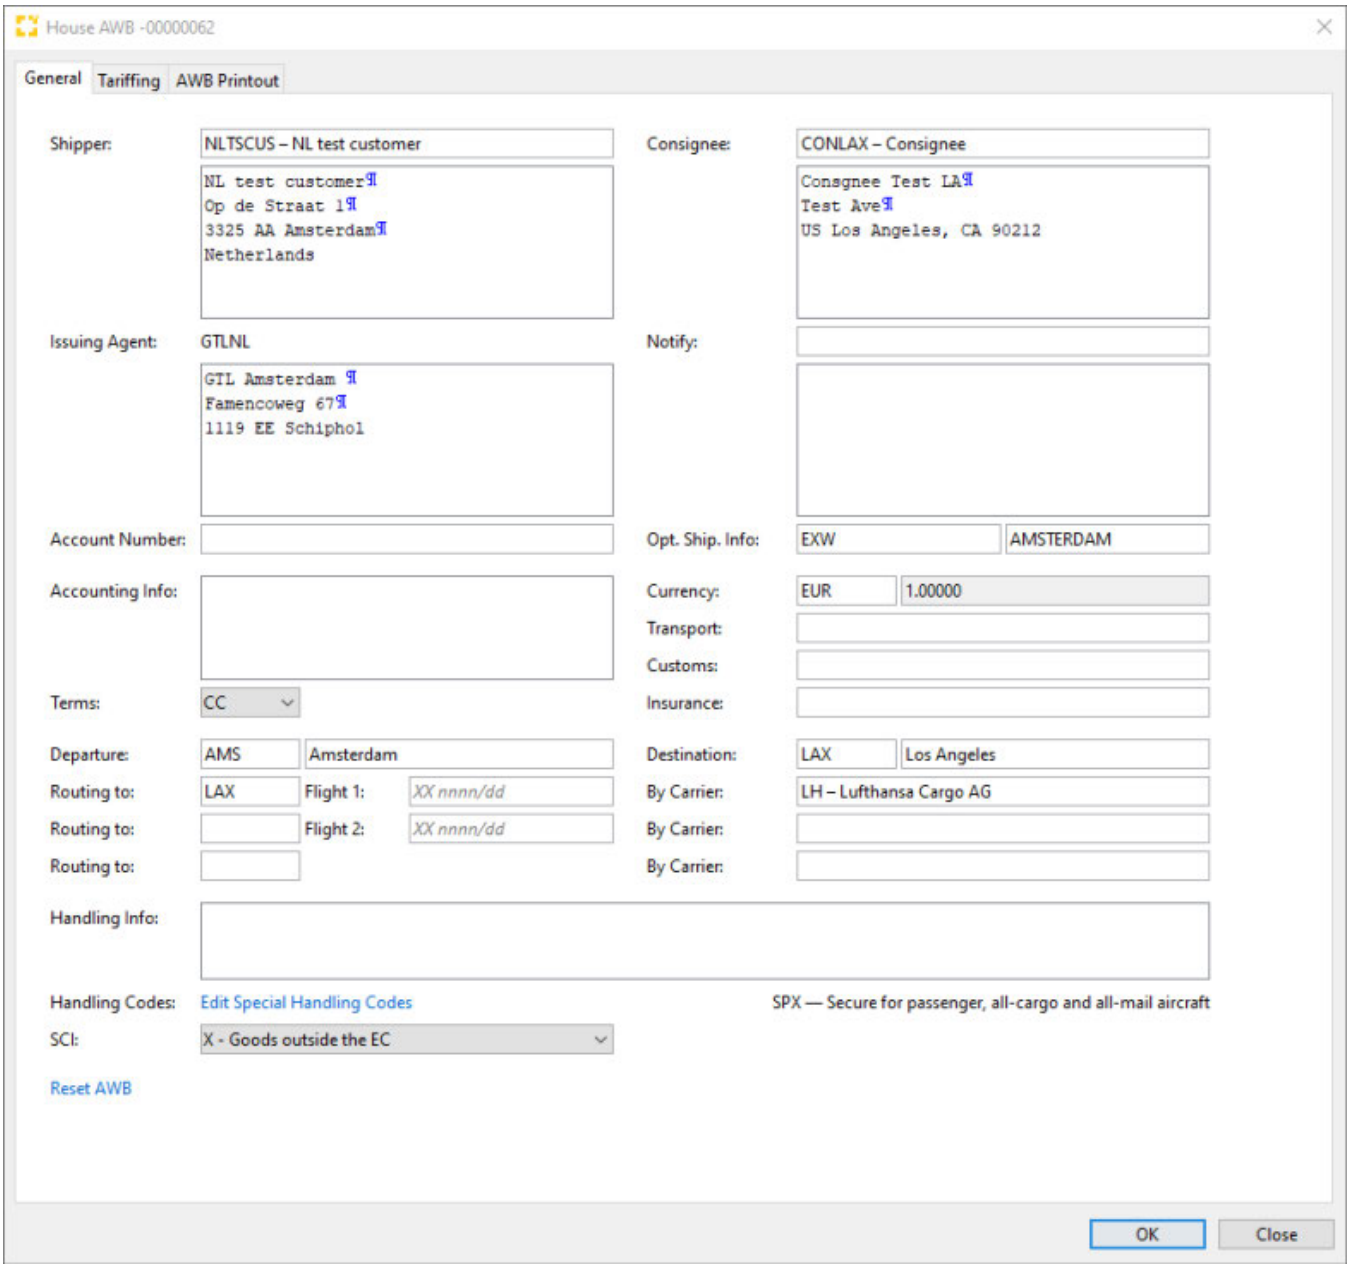
- Introduction
- Description

Introduction

In the AWB Editor General Tab the data from the shipment general data tab will be displayed and can be edited.

Description

- Notify
- Accounting Info
- Edit Special Handling Codes
- Reset AWB



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper / Consignee

Shipper and Consignee for the shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Account Number

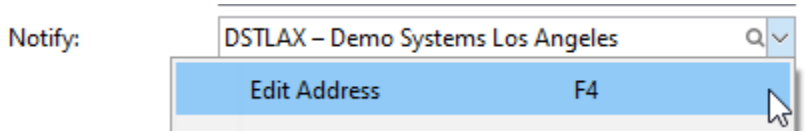
This field is used for master, Back2Back and direct shipments for the Cass-Account number of the agent. For a house bill of lading it has no function.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

If necessary, the addresses can be adjusted for example to differentiate e-AWB addresses for senders, recipients and notify at EDI level by using the drop-down Menu and option Edit Address F4.

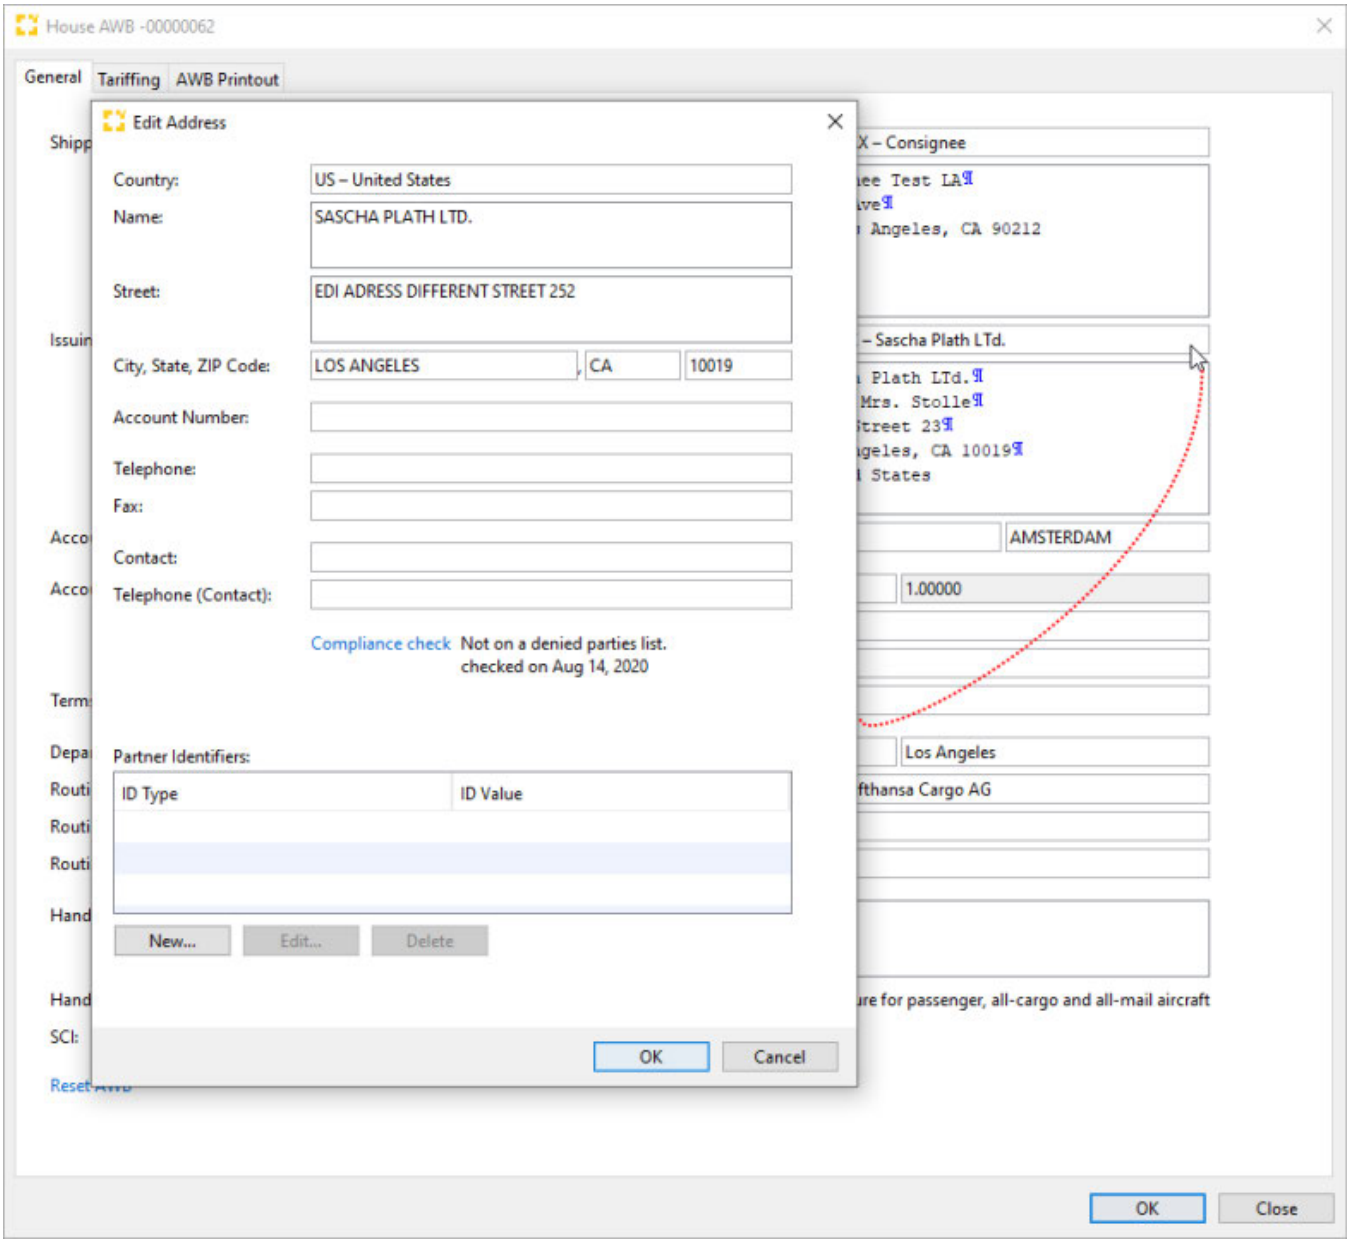
- *Edit Address F4*



Hint

Edit Address F4: By calling F4 for HAWB and MAWB-E-AWB addresses, you can differentiate between sender, recipient and notification on EDI level.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Opt.Ship.Info

Additional information regarding incoterms and place of the shipment

Accounting Info

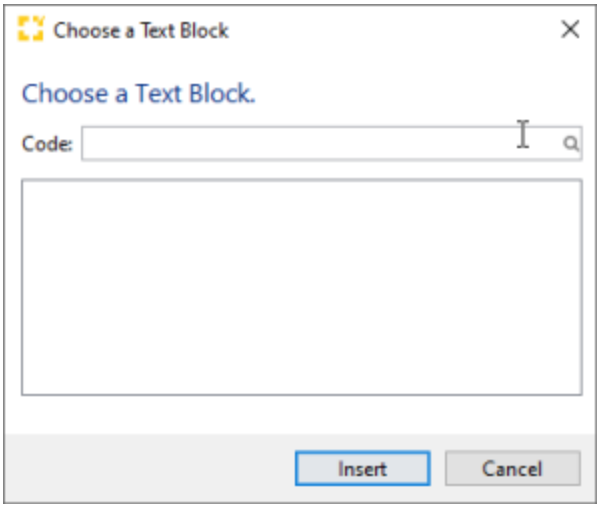
Accounting information can be entered here, which is then printed out in the box provided on the waybill. If a Notify has been entered, it will be inserted here by default. In addition, it is also possible to insert predefined text blocks (CTRL+T) in this text field. References from the shipment entry can also be adopted here via the context menu or the key combination (CTRL + R). A window opens from which the references or text blocks can be selected and inserted.

- text blocks and references

In the pure text fields in the AWB editor, text blocks and references from the Shipment can easily be transferred and inserted into the AWB editor.

Choose a Text Block (CTRL+T)

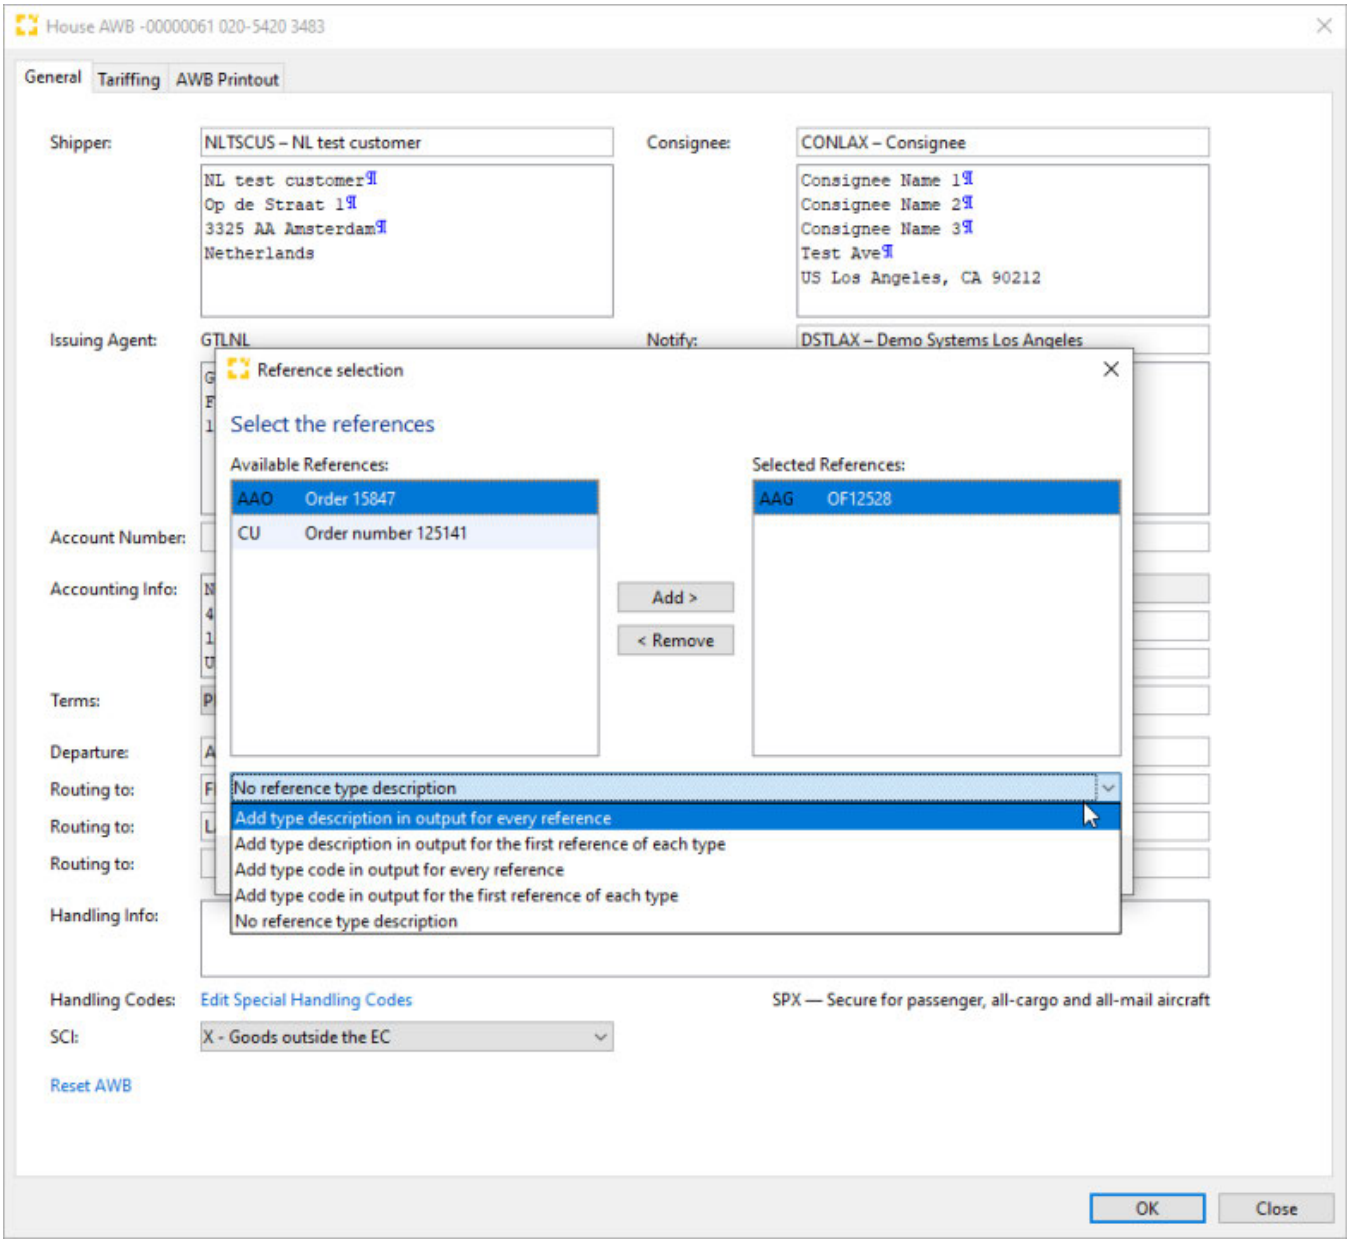
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Reference Selection (CTRL + R)

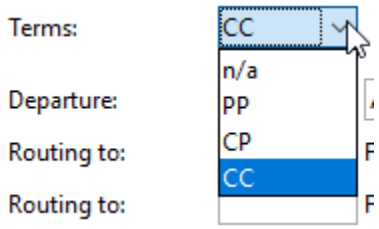
With "Add" selected references ca be added and with "Remove" the references are removed from the overview and not printed on the AWB. In addition, it is possible to also add the type description and code for the references selected. The entry can then be confirmed with "OK" or the action can be ended with "Cancel".

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Terms

The delivery terms are taken from the shipment editor, but can be replaced as needed by an entry from the drop-down menu.



Currency / Transport / Customs/ Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure/destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Routing to / Flight / Carrier

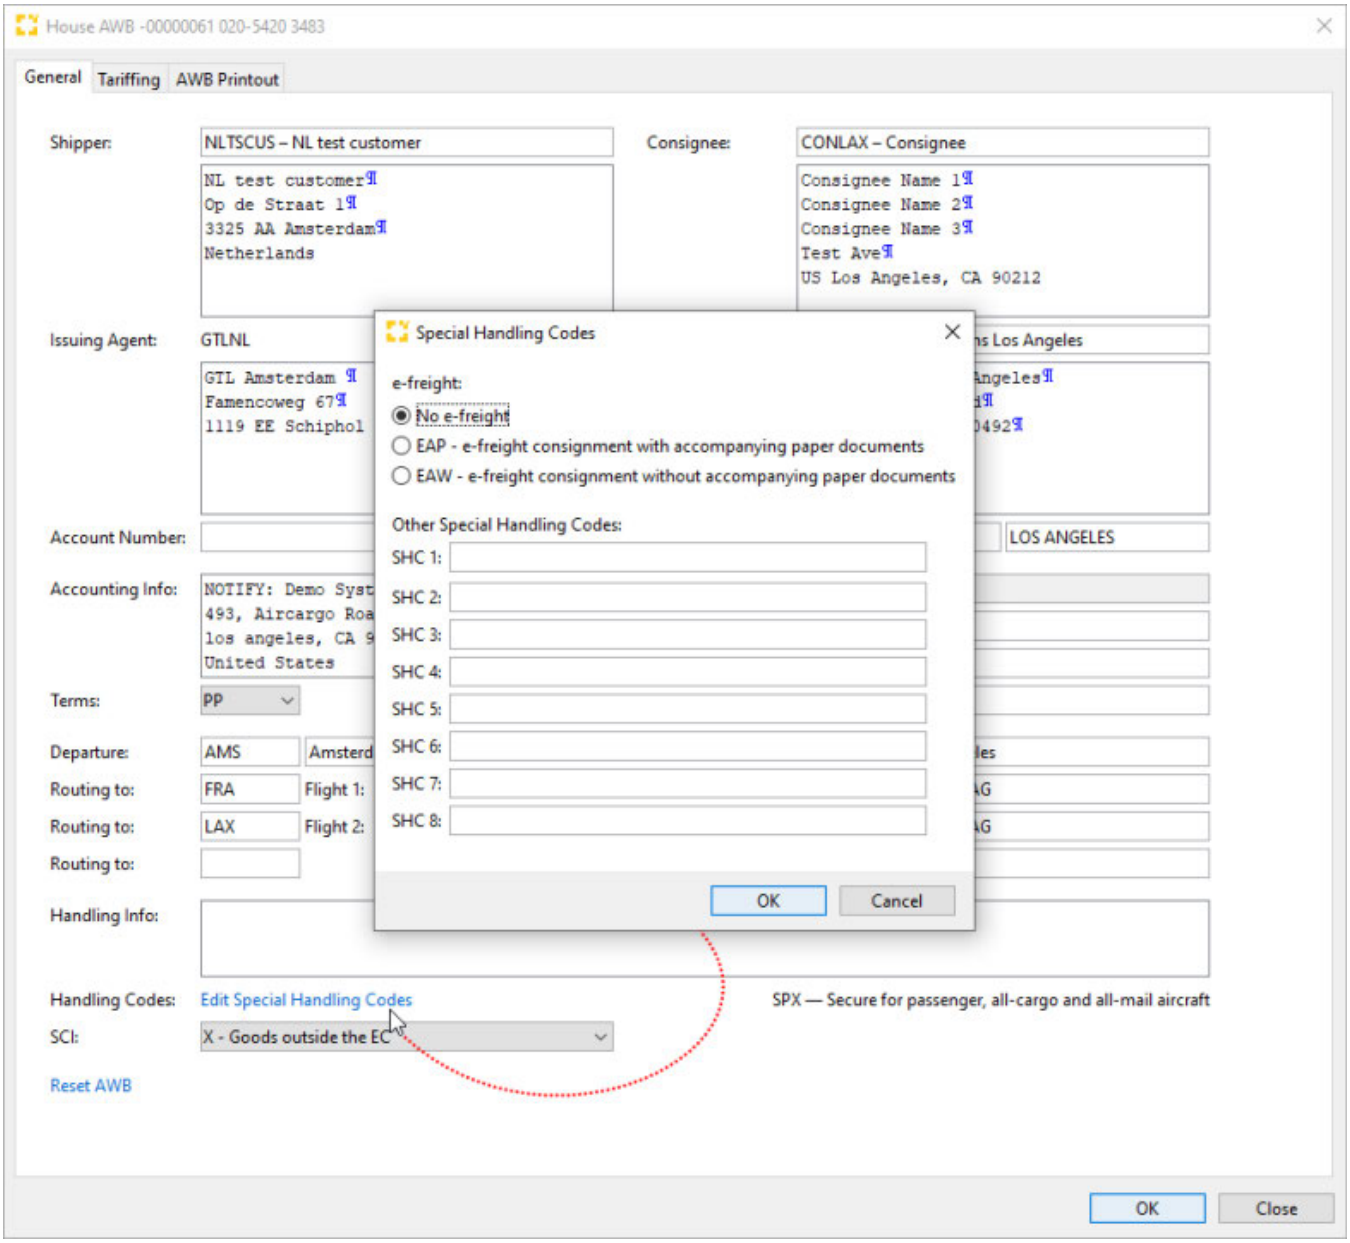
The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned, they will appear blank but can be completed manually. The Routing to and By Carrier fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks . References from the shipment entry can also be adopted here via the context menu or the key combination (CTRL + R). A window opens from which the references or text blocks can be selected and inserted. See also text blocks and references

Edit Special Handling Codes

This action link opens the Special Handling Editor. The information inserted here can be used for the handling via e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For further information regarding e-freight see e-freight.



SCI (Special Customs Information)

custom status (if any) can be selected from the drop-down menu.

Security Status

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field cannot be changed.

Reset AWB

If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Reset Individual fields with F5

Alternatively, only the contents of individual fields can be updated using the function *key F5* or via the corresponding entry in the context menu in the respective fields. This function is available in the following fields:

- Shipper
- Consignee
- Notify
- Accounting Info (complete content)
- Incoterms (only possible with function key)
- Routing, with place of departure, arrival, flight number and Carrier (complete routing will be updated)

Attention!

With the Reset AWB action (formerly 'Synchronize AWB with shipment') or when updating individual fields, any changes made previously in the AWB editor are lost because the AWB data is overwritten with the data from the shipment editor! When the AWB editor is opened, the shipment number, the AWB number and the security status are updated automatically.

(b) Tariffing - AWB Editor - Standard Features

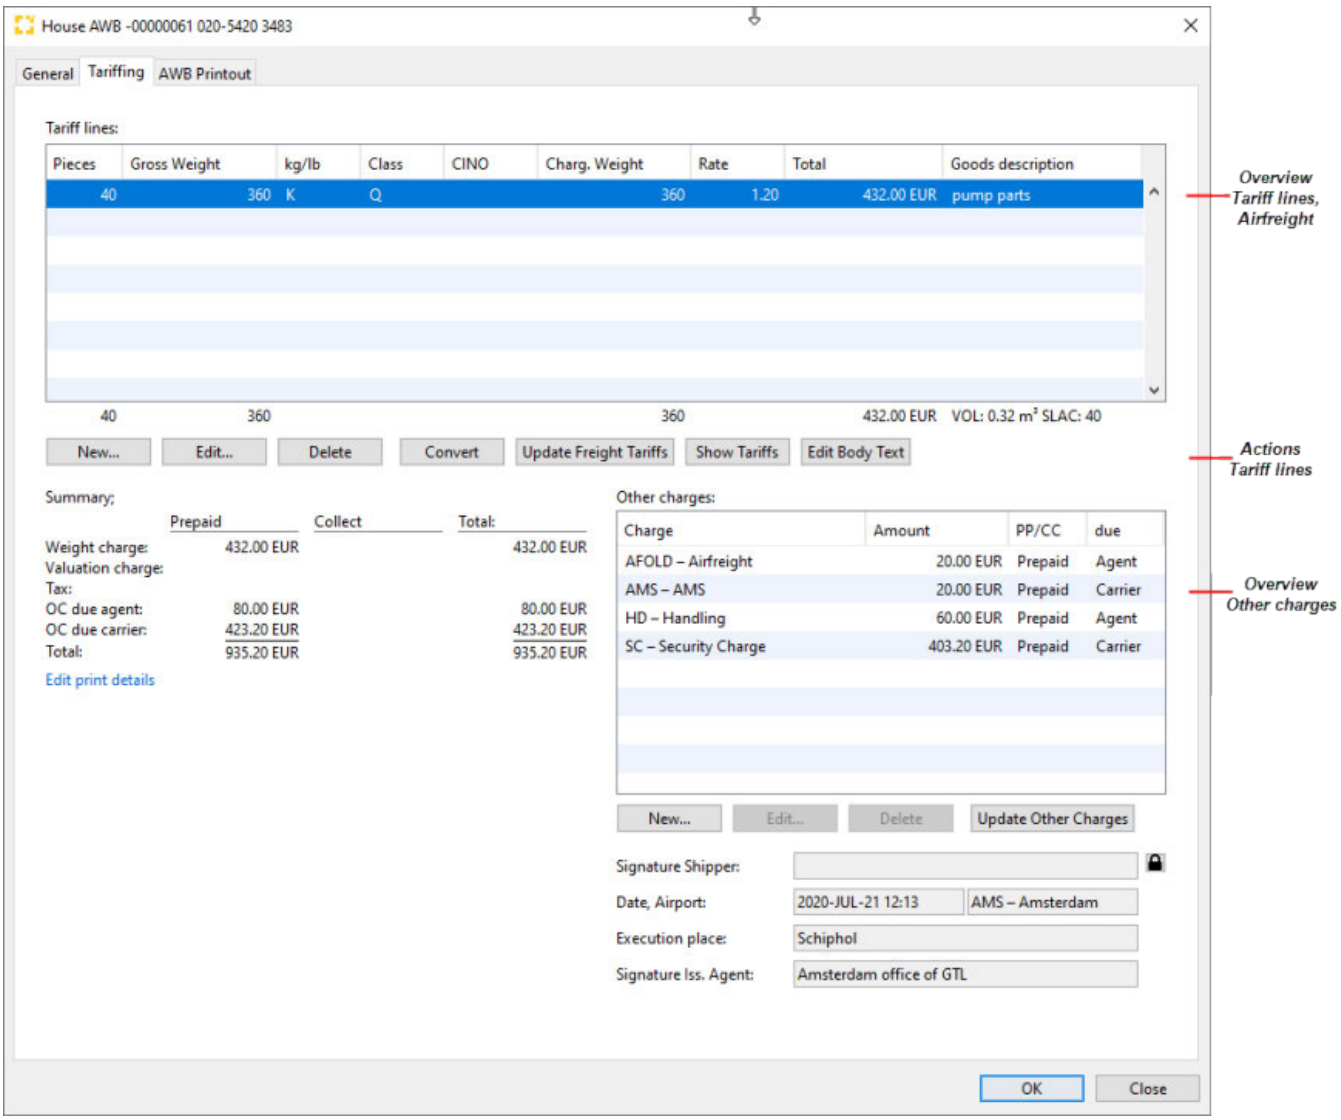
- Introduction
- Description

Introduction

The tariffing Tab shows the calculated and collected tariff lines for the shipment. Charges, tariff lines and cost distribution can be edited here.

Description

- Tariff lines
- Actions Tariff Lines
- New...
- Edit...
- Delete
- Convert
- Update Freight Tariffs
- Show Tariffs
- Edit Body Text
- Other Charges
- Summary - Cost Distribution - Print Details



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Tariff lines

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Class

`The class of the tariff rate applied. The following are available as rate classes:`

rate type	rate class
Simple Rate	M, N, O, Q
Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Charg.Weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods description

This information is defaulted from the field *description* in the shipment editor but can be (if necessary) amended as described below.

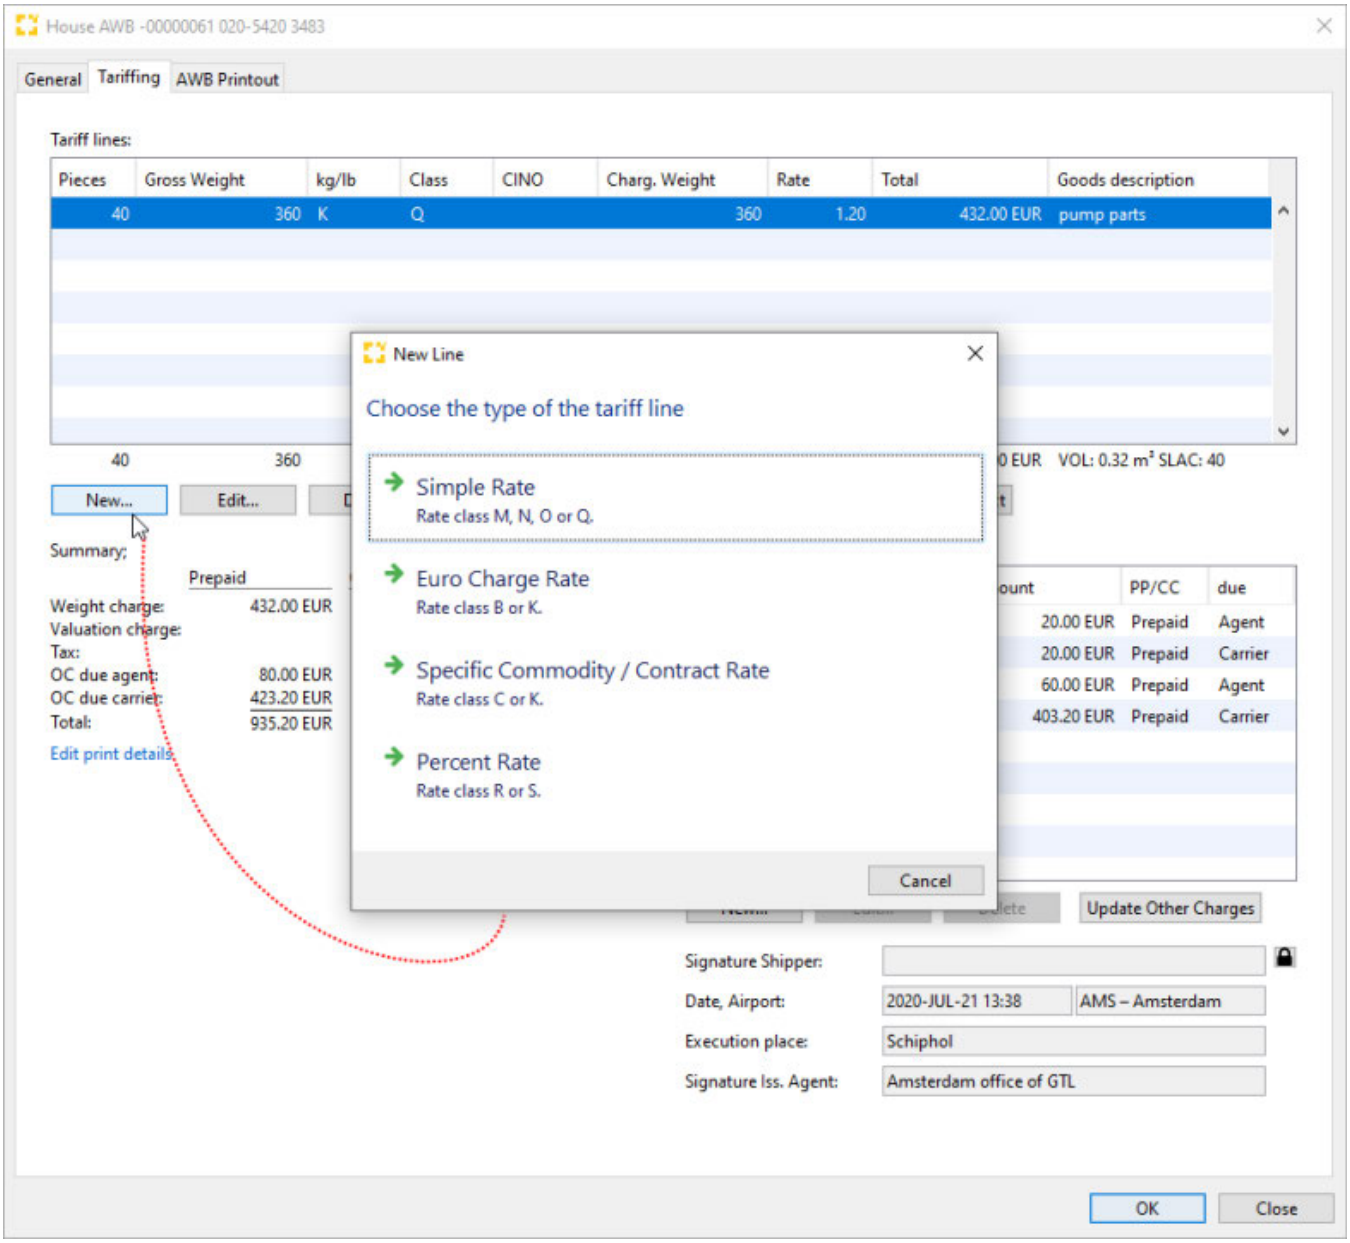
Actions Tariff Lines

- ### New...

This button creates a new freight tariff line. First the type of the tariff line must be selected from the offered rate types

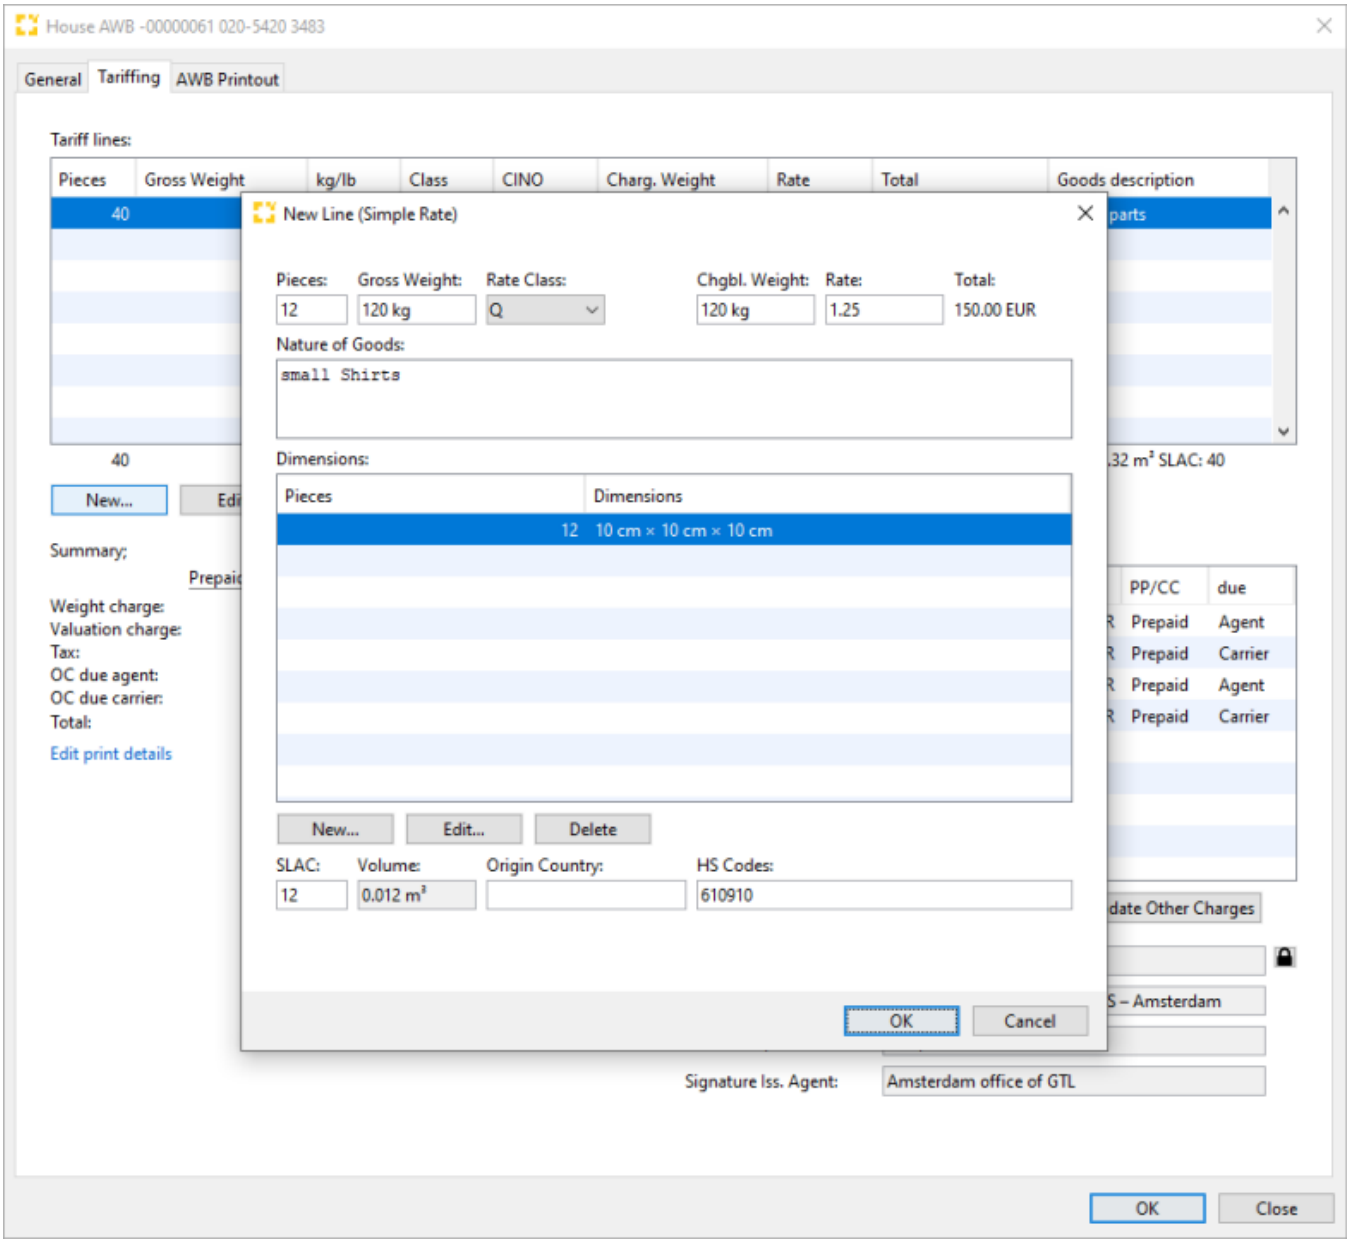
- Simple Rate = Rate classes M, N, O, Q
- Euro Charge Rate = Rate class B und K
- Specific Commodity / Contract Rate = Rate class C und K
- Percent Rate = Rate class R und S

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



After the selection of the type of rate the editor for entering the data of the new tariff line opens.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Pieces

Number of packages.

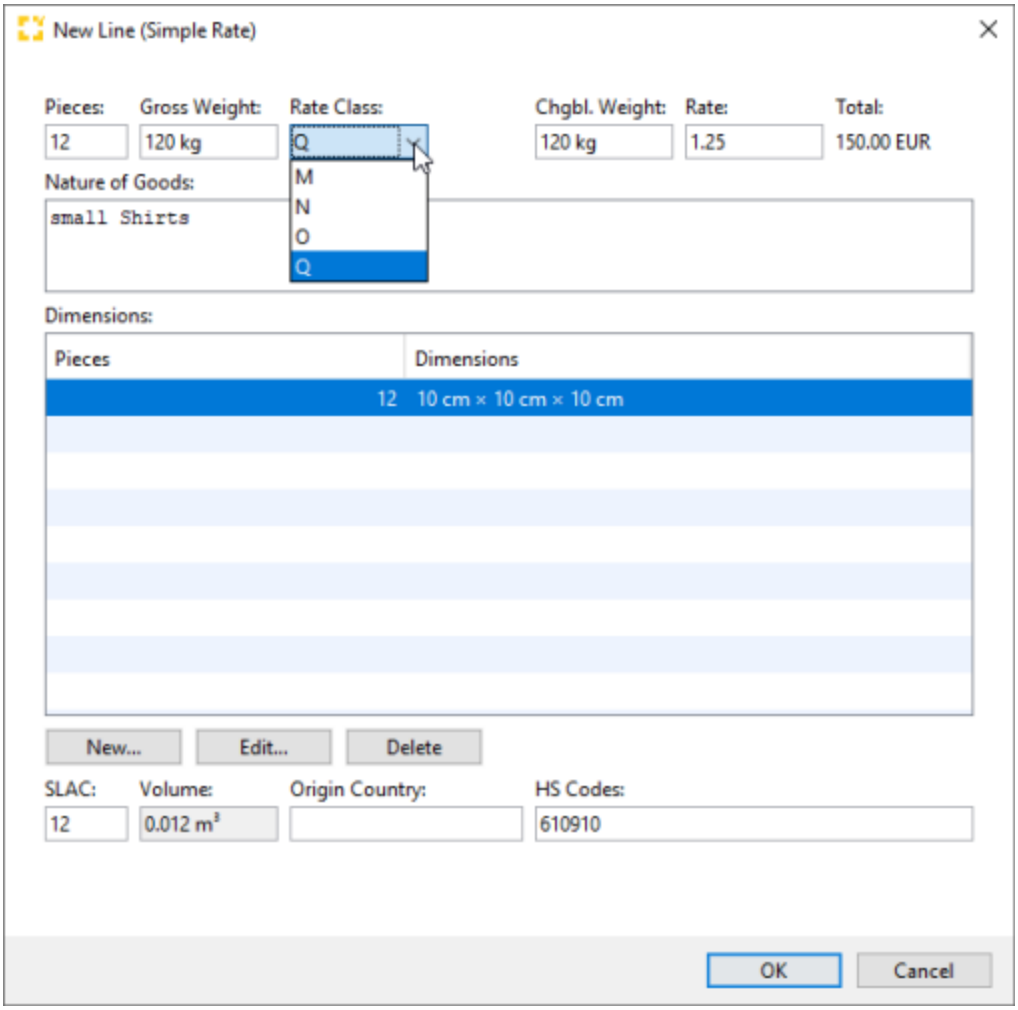
Gross weight

Gross weight of packages.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



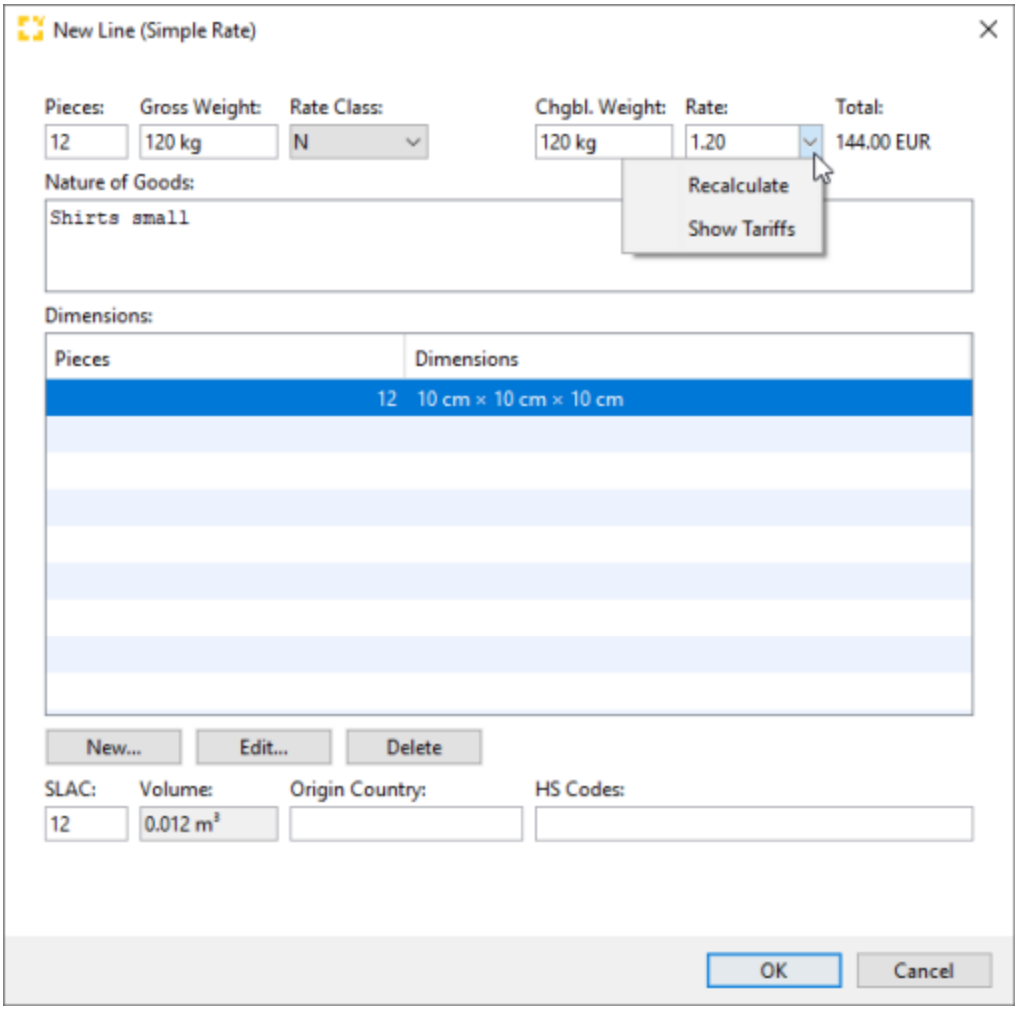
Chargeable Weight

chargeable weight of packages.

Rate

The required airfreight rate can be entered here.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



A drop menu offers the following options:

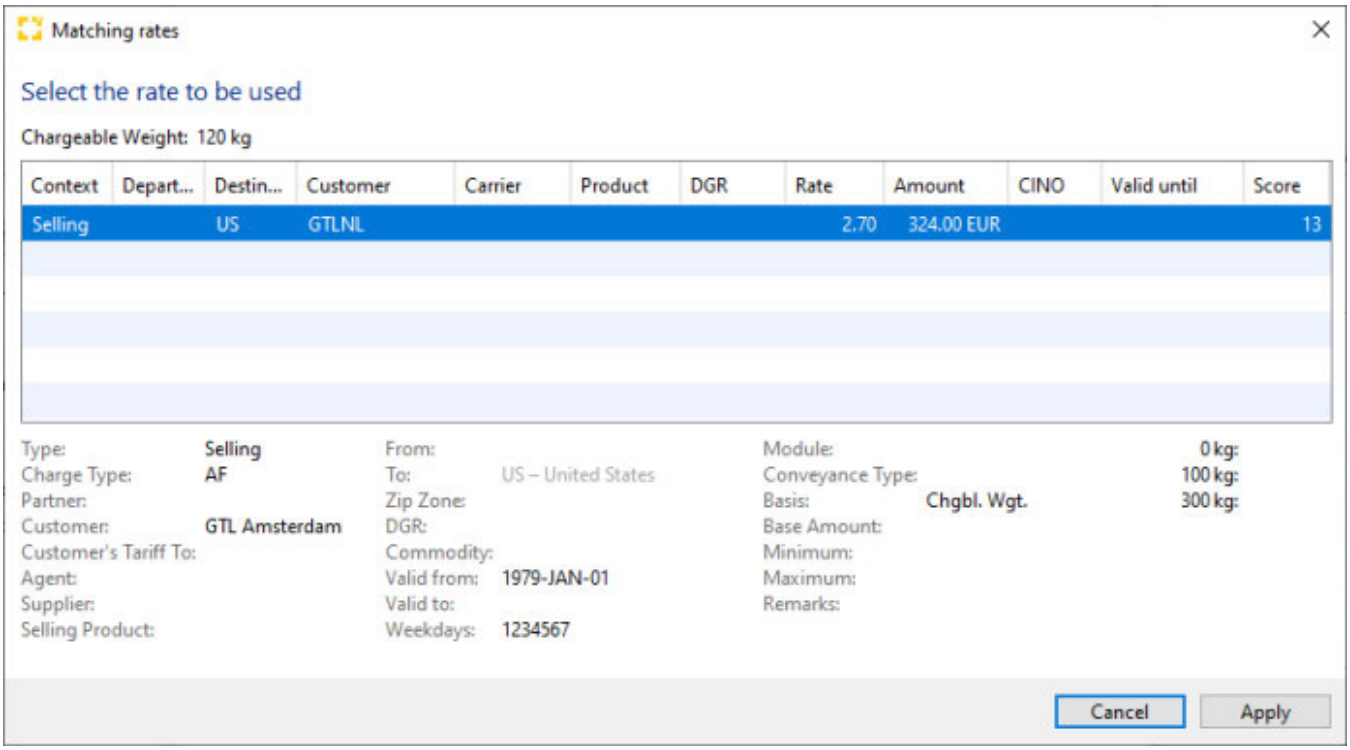
- Recalculate

Starts a new tariff search to recalculate the charges

- Shows Tariffs

Starts a search for tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window *Matching rates.* In the Matching rate window, the Score is displayed. Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Total

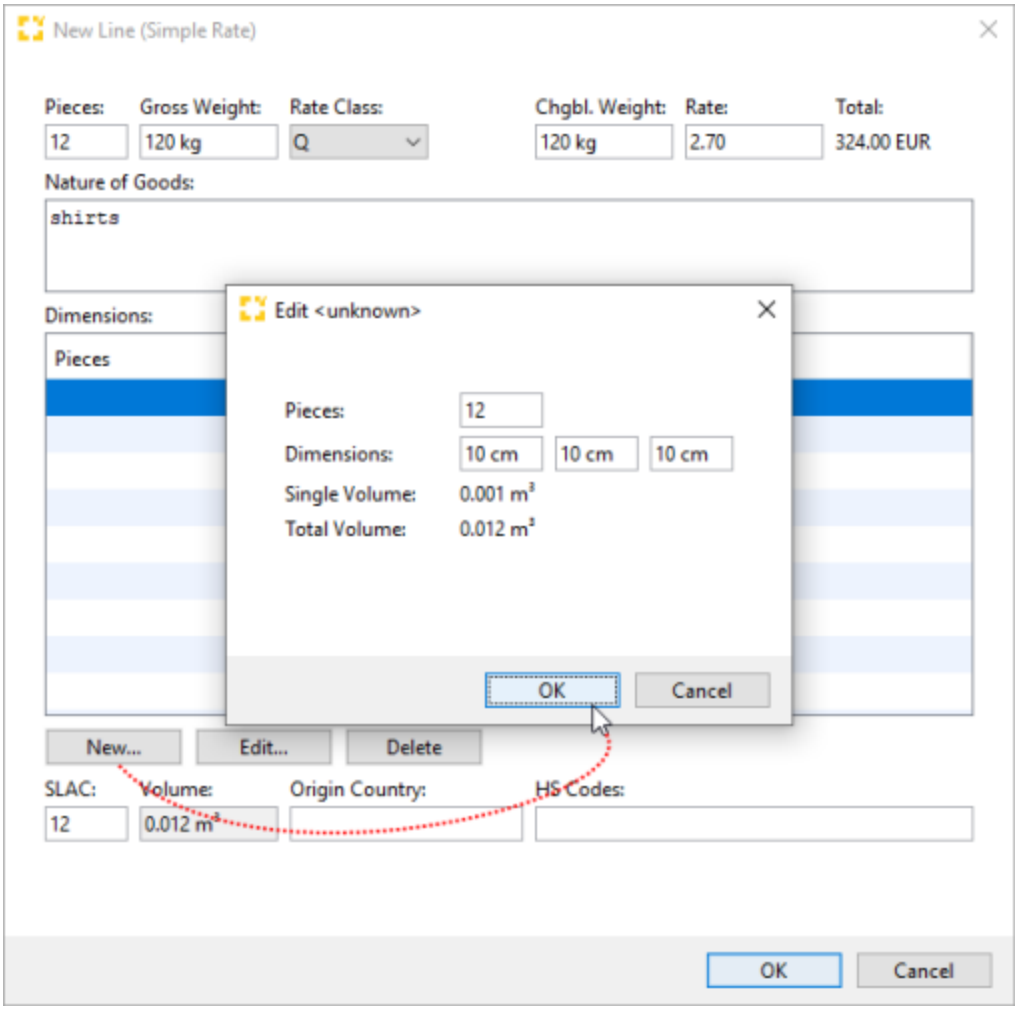
Shows the total of the calculated charges

Dimensions New

With the button *New* you can enter a new line with the number and dimensions of the packages. With *Edit*, a line marked in the overview is opened for editing. Alternatively, this can also be opened by double-clicking on the corresponding line. *Delete* removes a selected line.

- The data in the freight cost line editor is automatically updated with the data entered here.
- The number of packages and dimensions entered here are NOT adopted in the shipment editor. Date in the consignment editor can then differ from data on the air waybill editor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



SLAC

The shippers load and count of the packages can be entered here.

Volume

Volume can be entered here, or will be filled automatically with the dimensions entered

Origin Country

County of origin can be entered here or chosen from the drop-down menu.

HS Codes

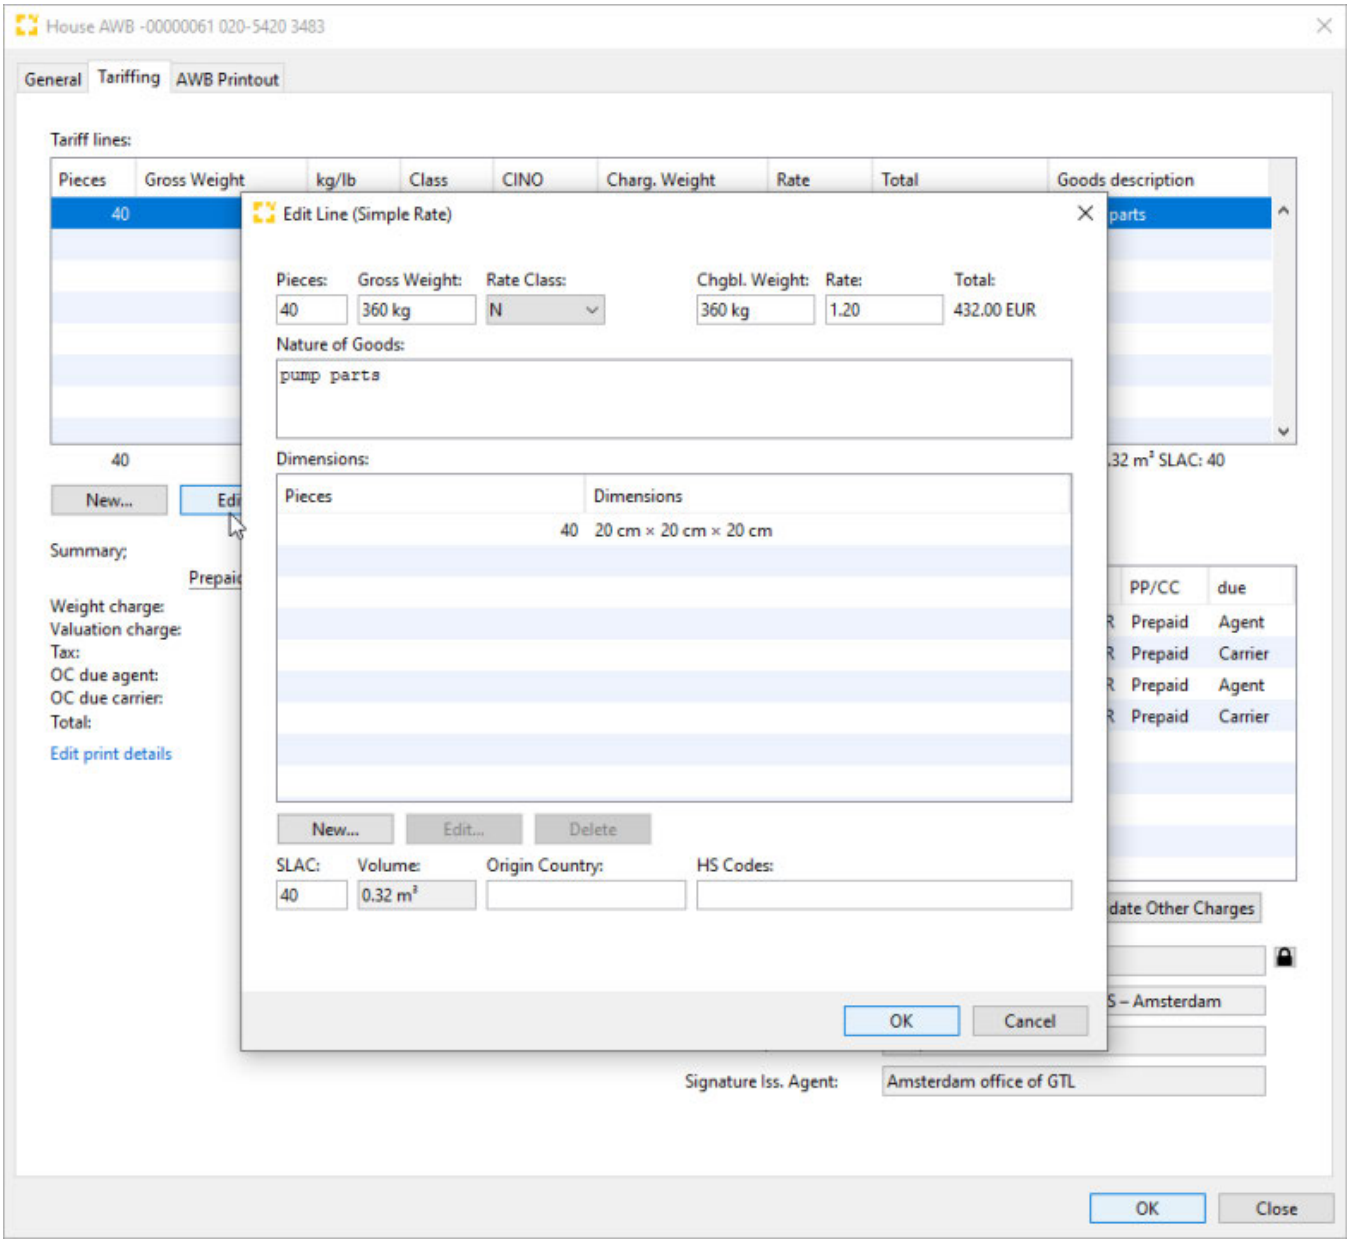
HS Code can be entered here or chosen from the drop-down menu.

The data entry in the New Line editor can be confirmed with the button *OK* or dismissed with the button *Cancel*.

- **Edit...**

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it. The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

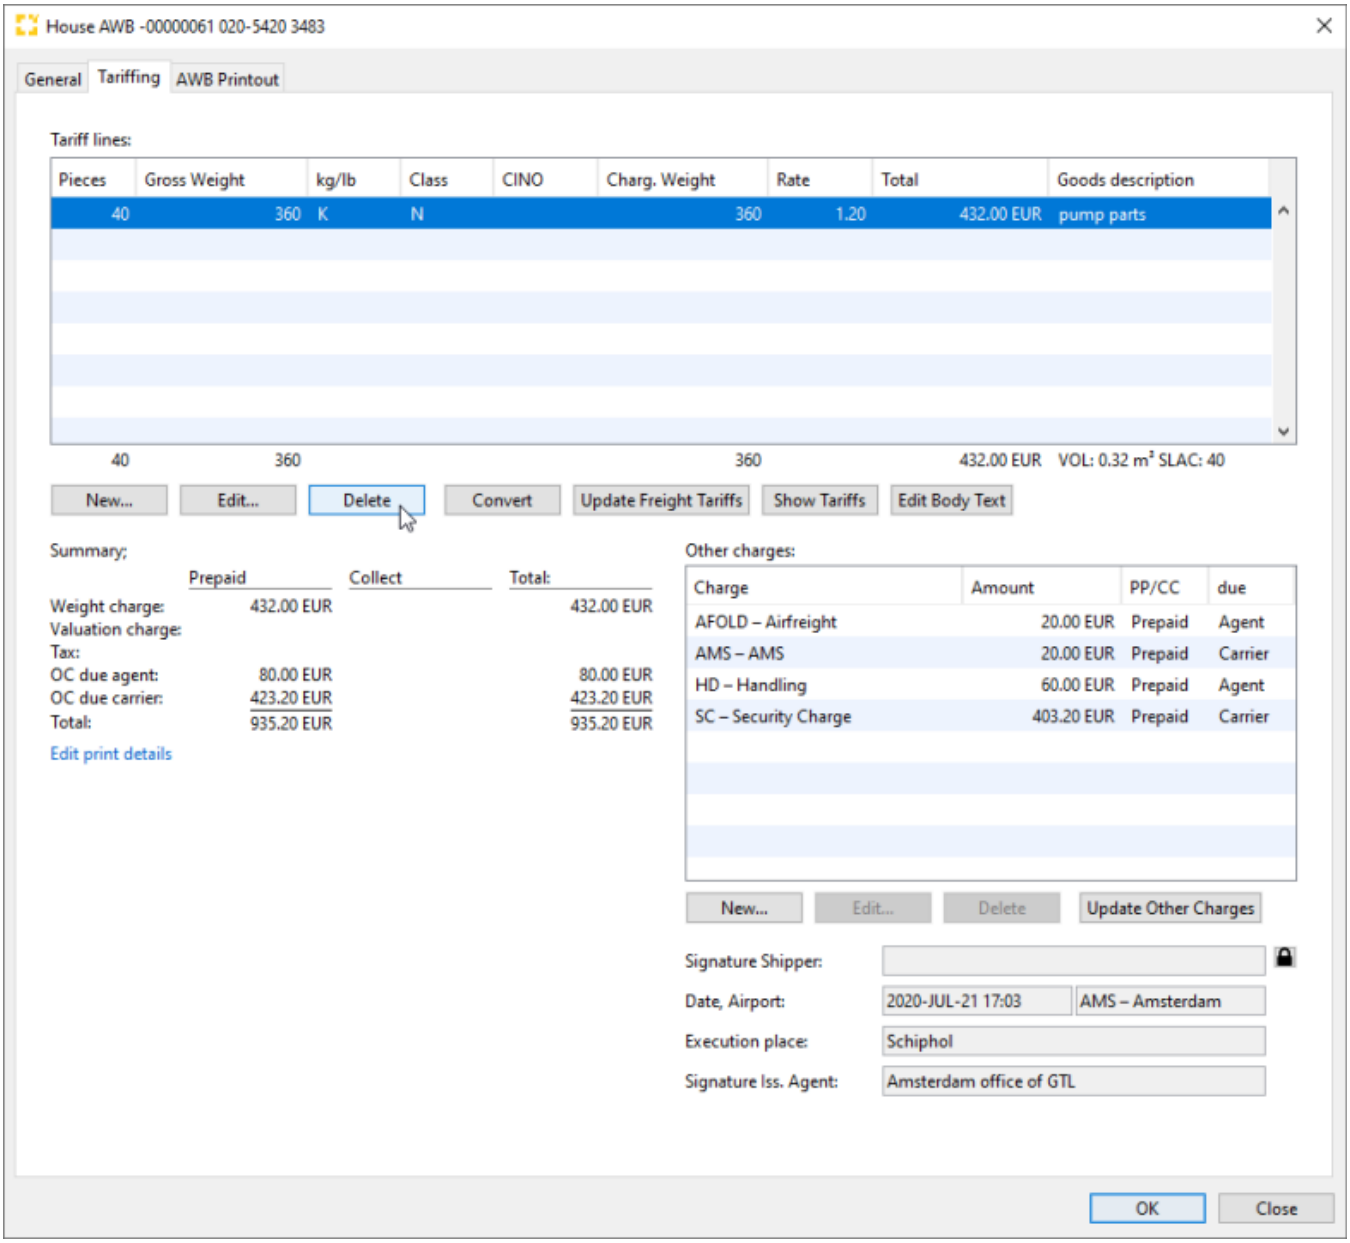
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Delete**

Deletes a marked line in the freight cost overview.

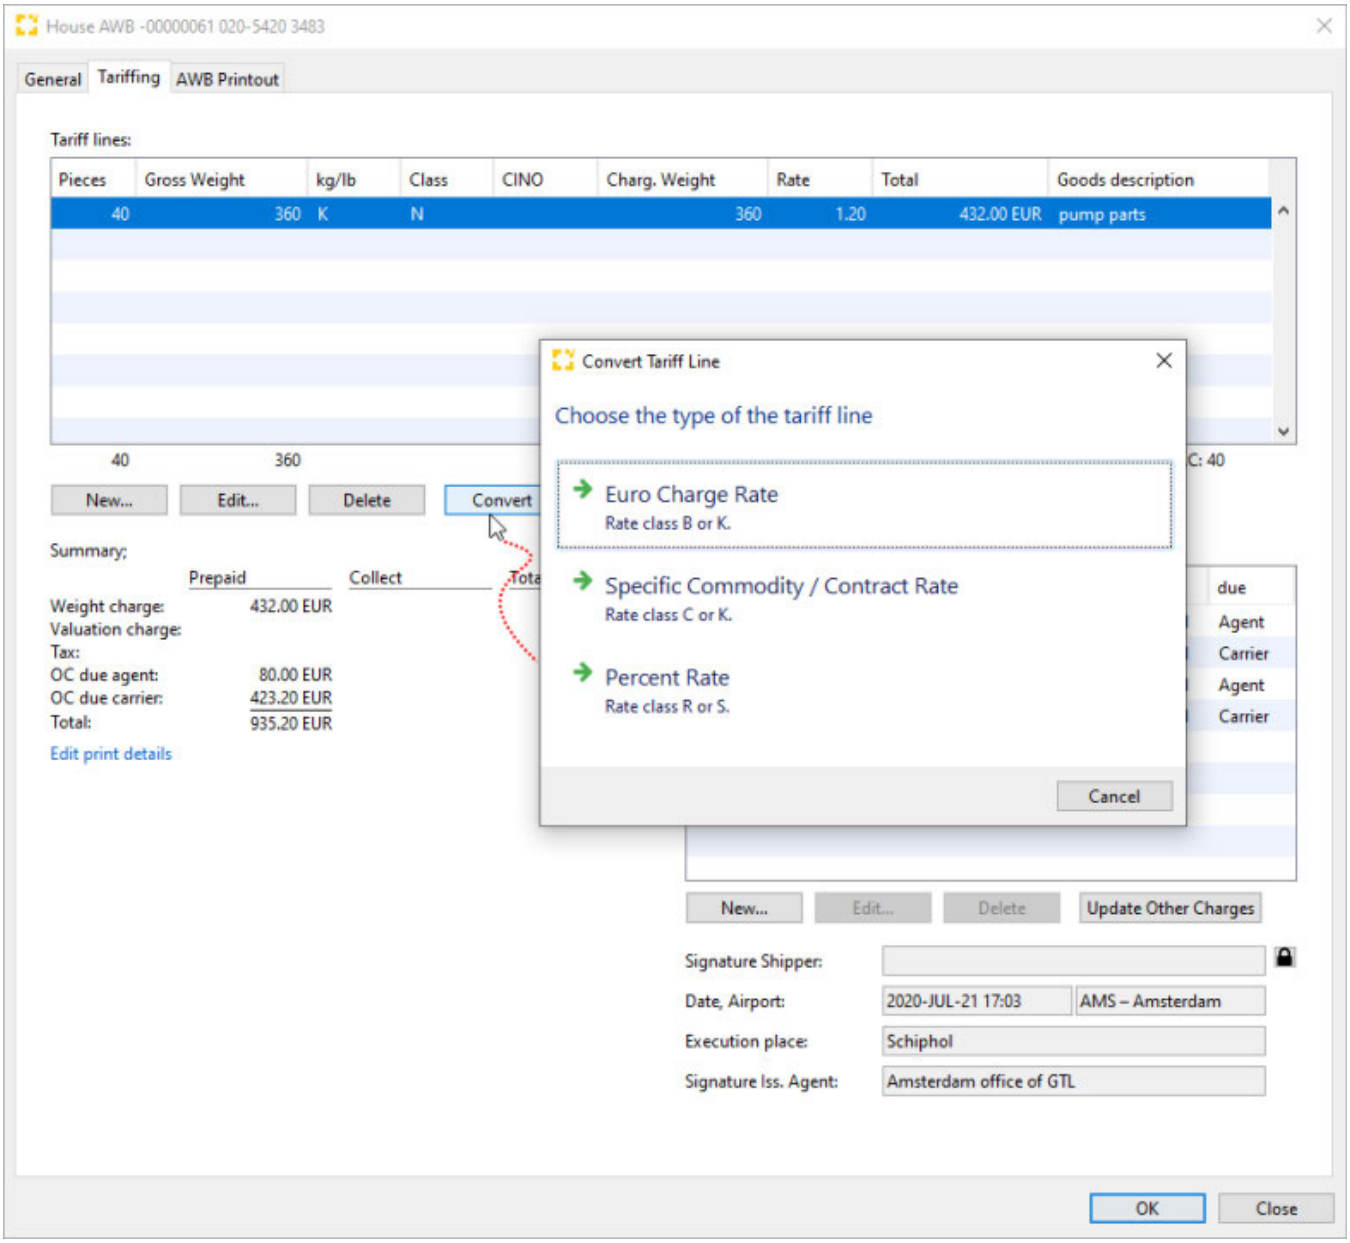
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Convert**

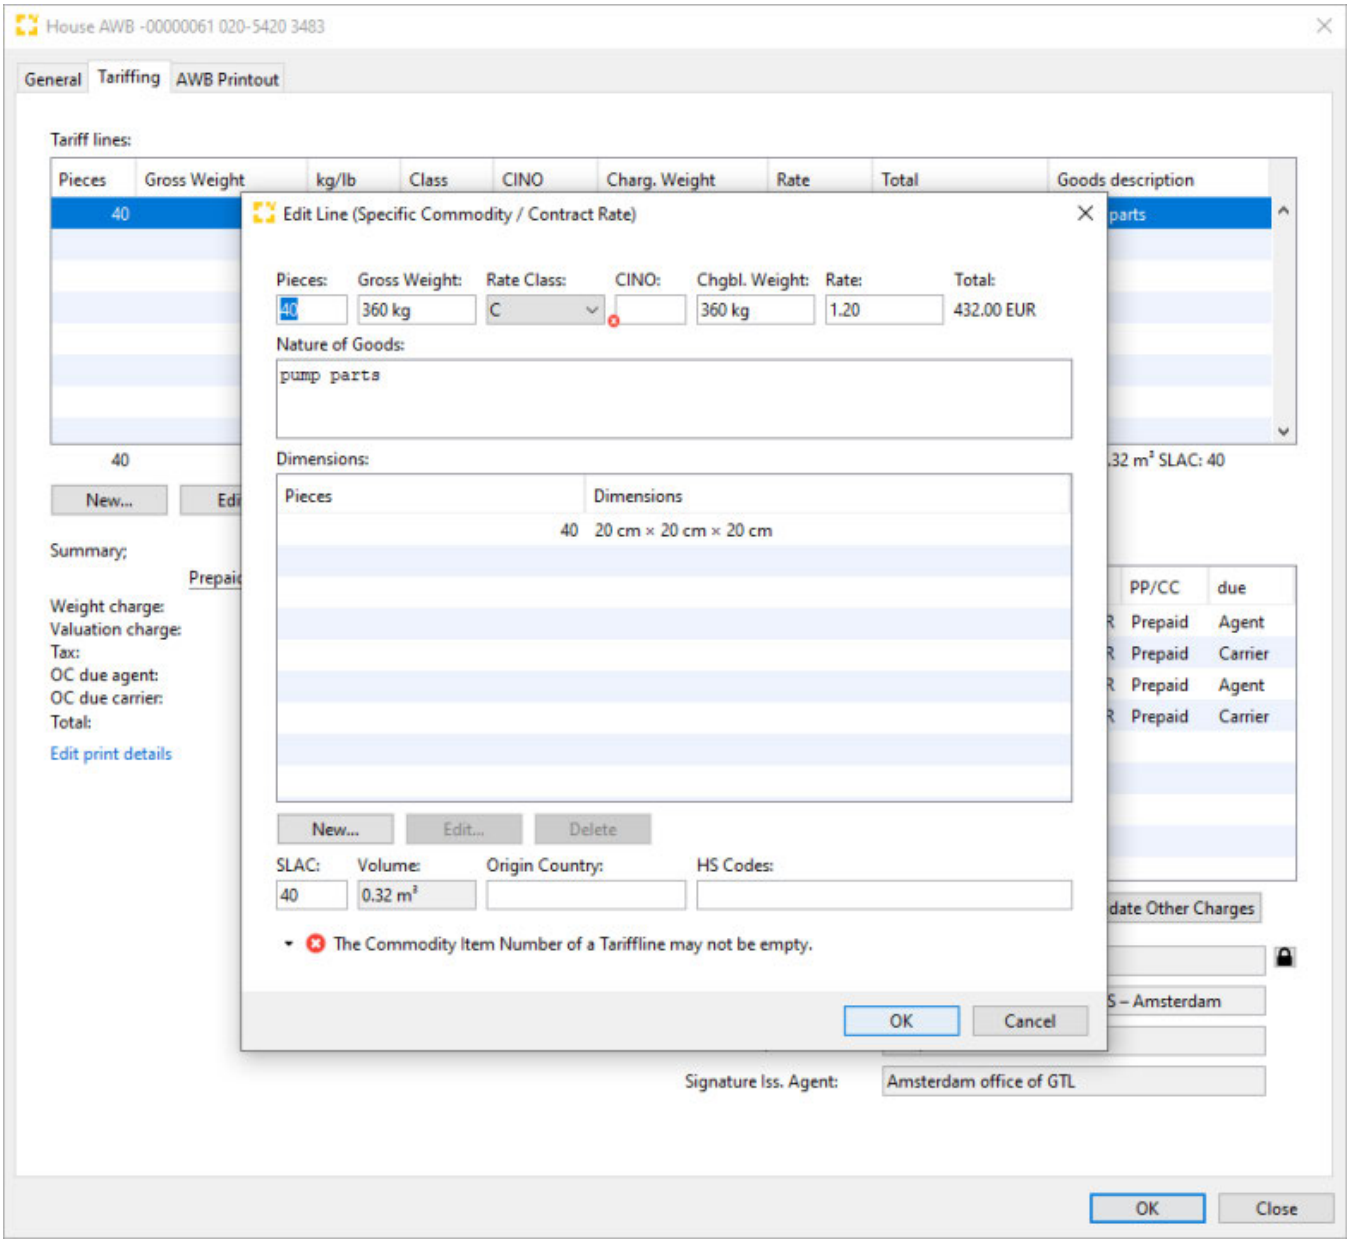
Converts the marked rate into a new rate. The rate can be selected in the Convert Tariff window.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



After the selection of the type of rate the editor for entering the data in the tariff line opens.

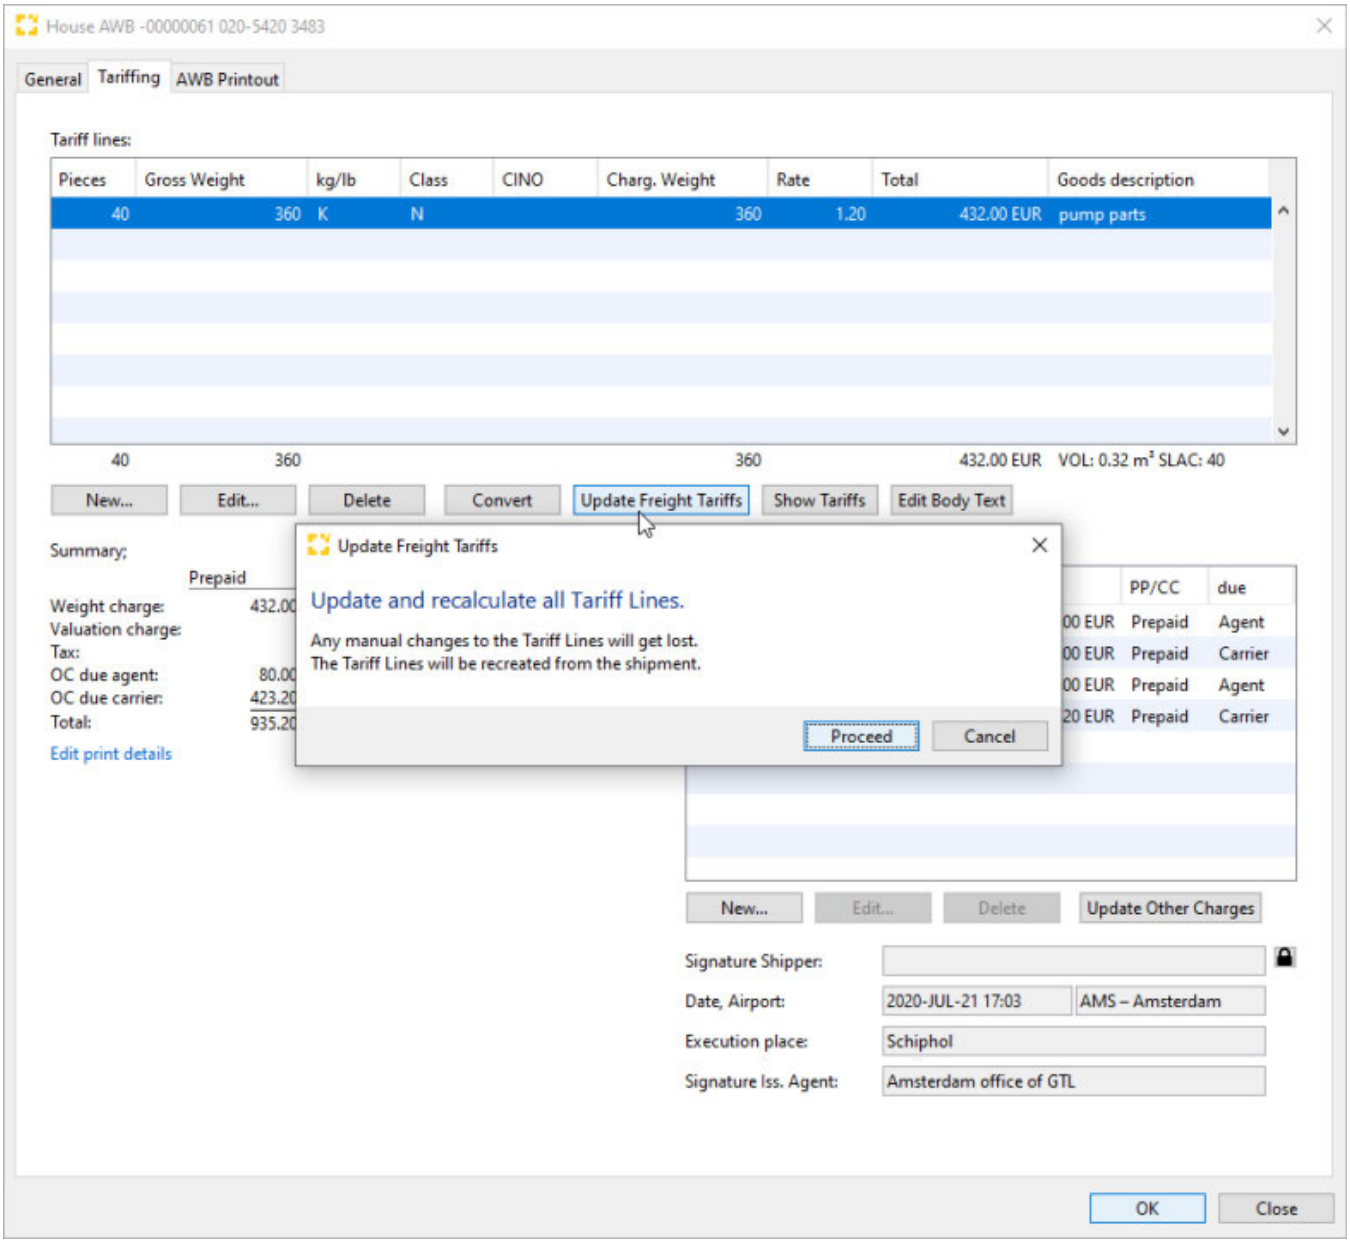
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Update Freight Tariffs**

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor. With button *Proceed* the action can be confirmed. Cancel closes the window with no further action.

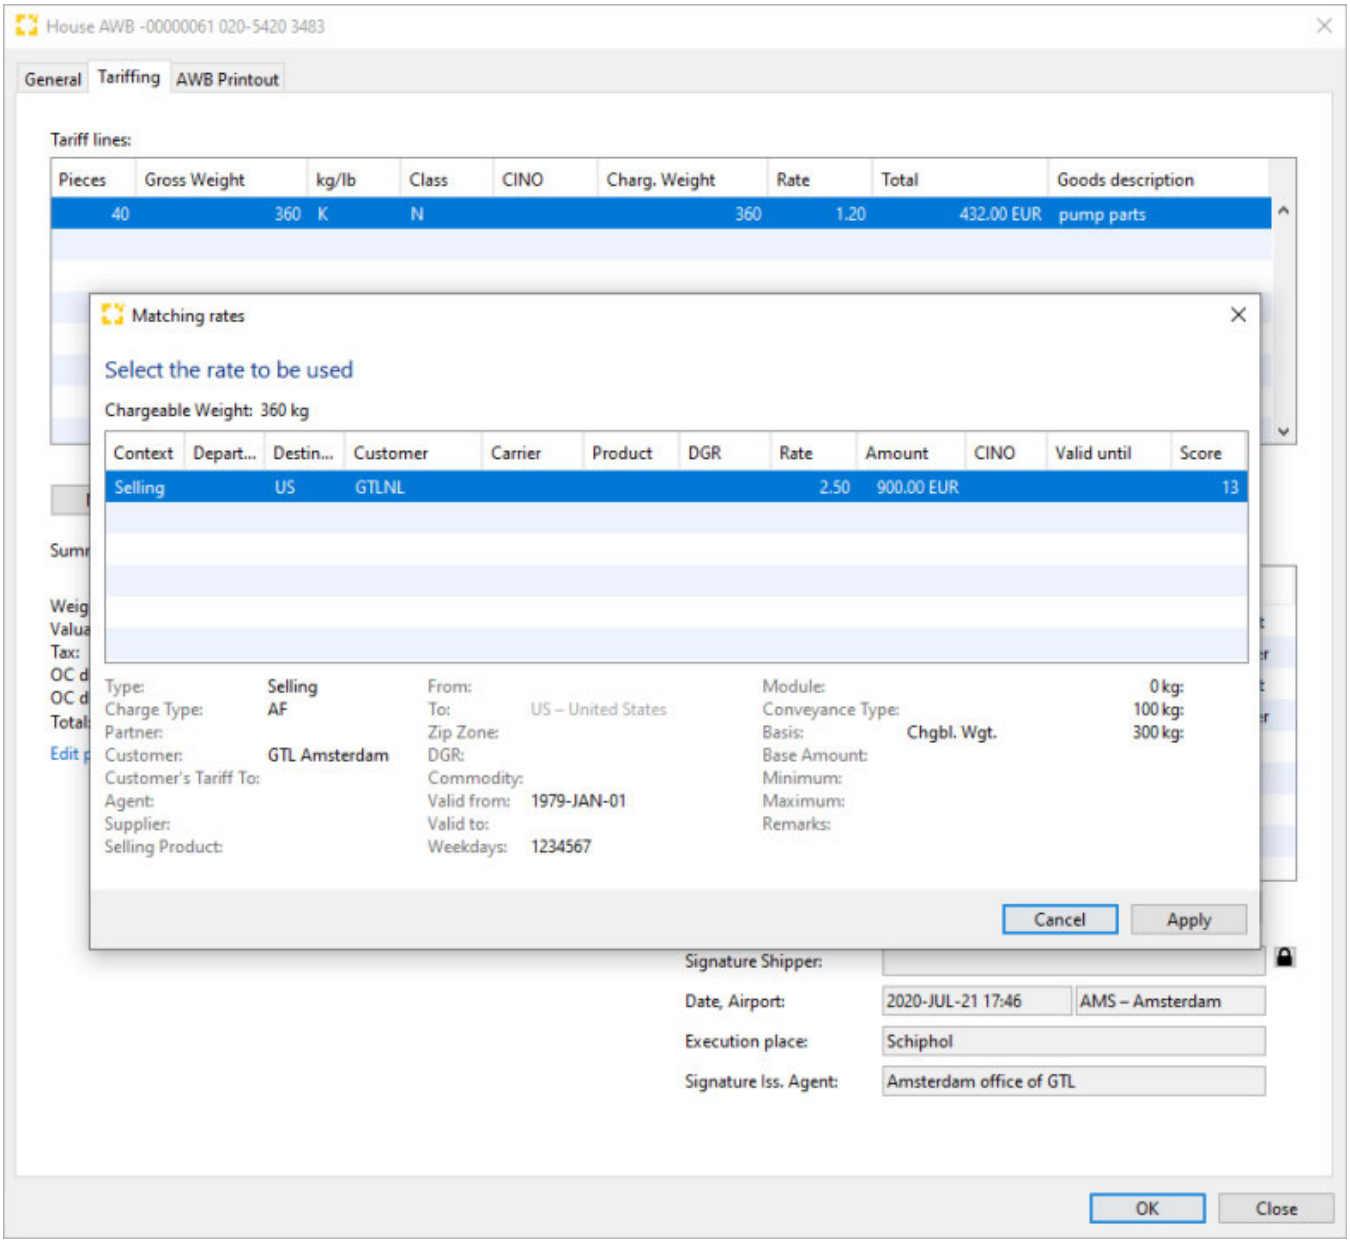
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Show Tariffs**

Starts a search for tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window *Matching rates.* In the Matching rate window, the Score is displayed. Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Kontext

Shows he tariff context (tariff type). Only sales and IATA tariffs are shown as the purchase tariffs at this location are irrelevant.

Depart... / Destin... / Customer / Carrier/ Produkt/ DGR

Here, the data from the master data tariff are displayed, due to which the displayed tariff for the current shipment has been selected.

Rate / Amount

Shows the air freight rate stored in the relevant tariff as well as the freight costs calculated from the chargeable weight and air freight rate.

CINO

Shows the CINO number (Commodity Item Number) stored in the tariff, if available.

Valid until

Validity date of the tariff displayed.

Score

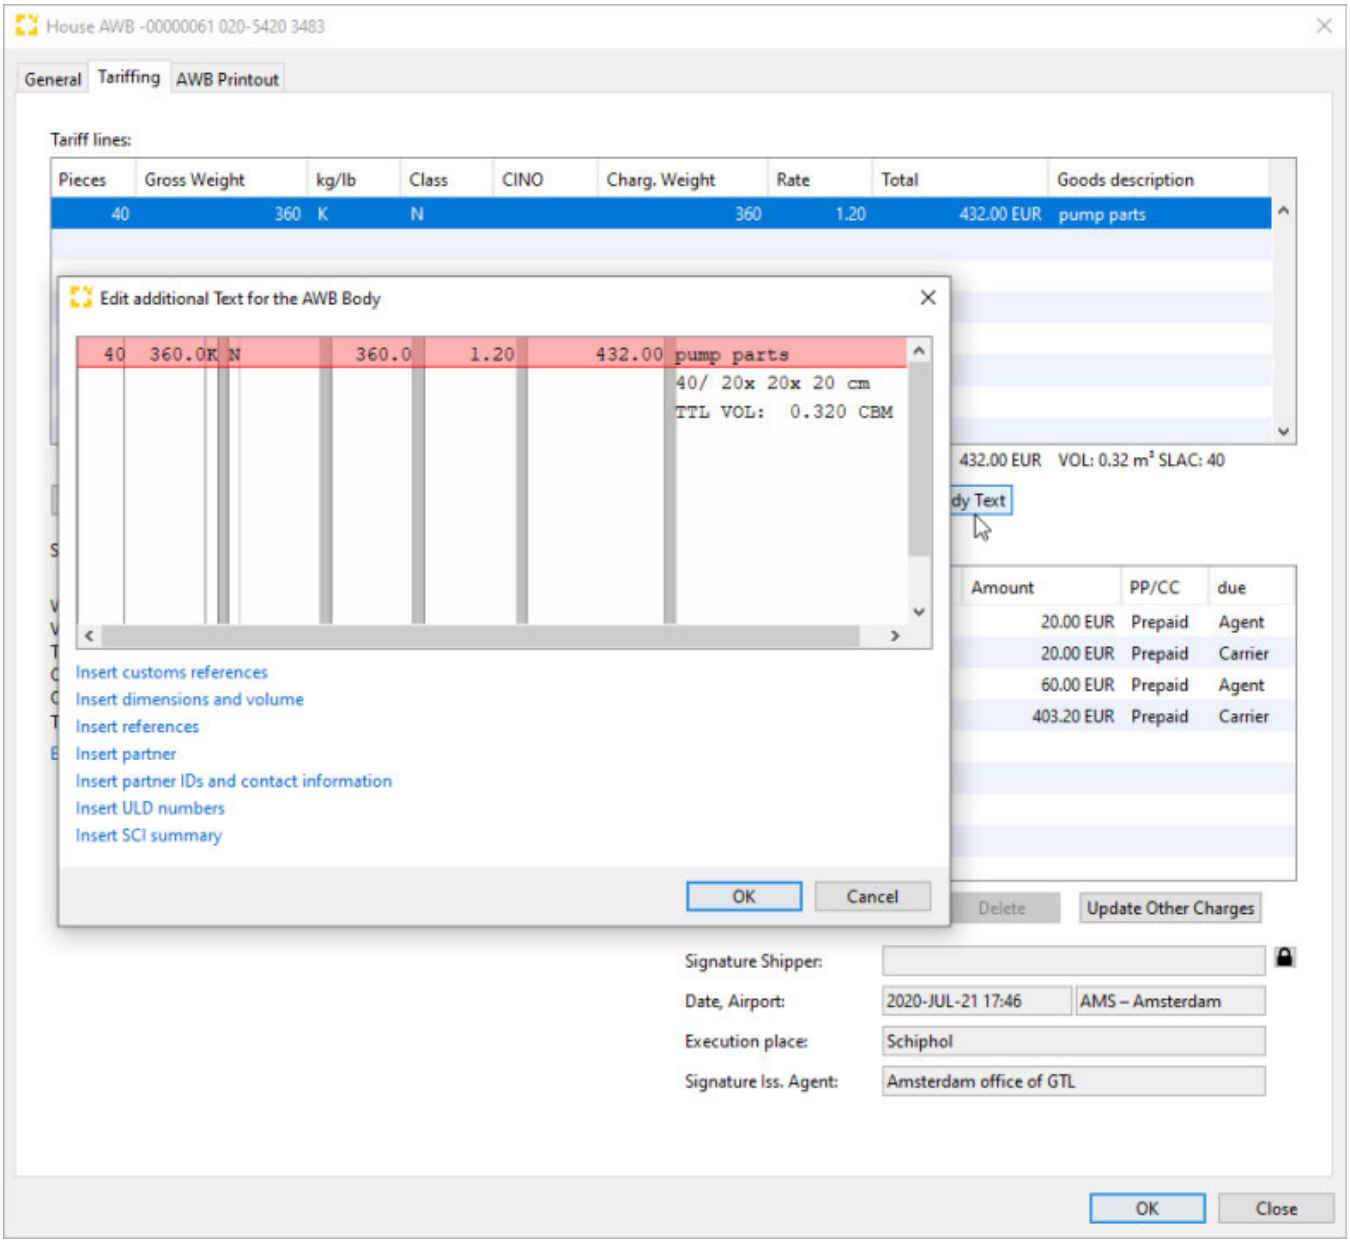
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

The selection can be button apply or dismissed with the button *Cancel*.

- **Edit Body Text**

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume

Adds any existing dimensions and volume at the position of the cursor.

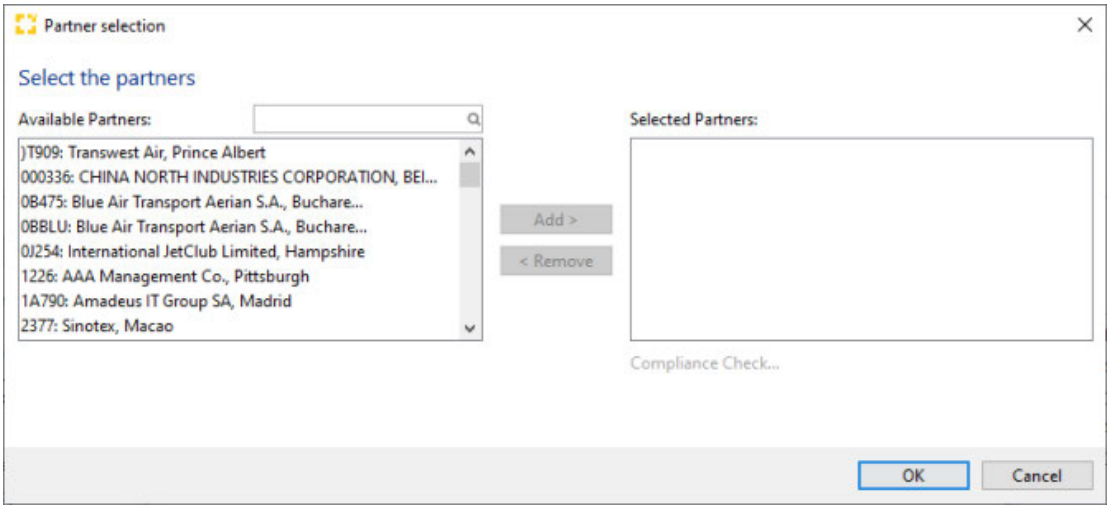
Insert References

Opens the selection of references screen from which the desired references can be chosen and inserted at the position of the cursor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Insert Partner

Opens the partner selection window from which a business partner can be selected. The address details are also printed in the waybill. The data entry can be confirmed with the button *OK* or dismissed with the button *Cancel*.



Insert Partner IDs and contact information

Adds any existing partner IDs or contact information

Insert ULD Numbers

`Inserts the ULD number in the editor for the AWB Body.`

Insert SCI summary

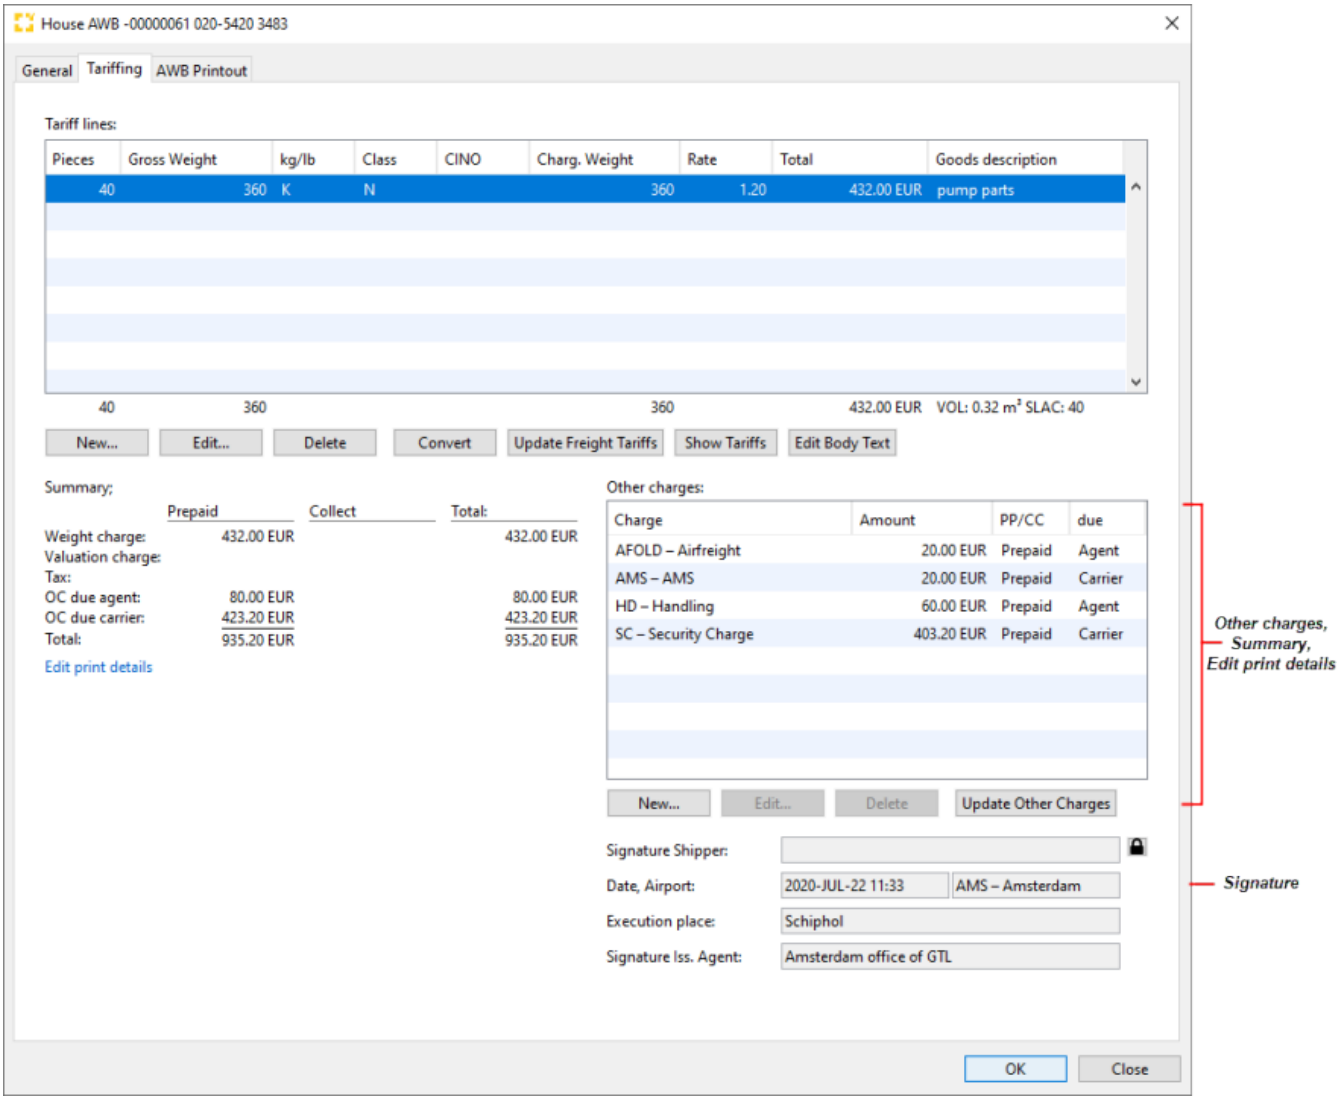
Inserts a summary of any existing Special Customs Information; used for consolidations with multiple House-SCI Status

The data entry can be confirmed with the button *OK* or dismissed with the button *Cancel*.

Other Charges

All associated costs such as collection, handling, surcharges, etc. are present in the ancillary charges table. The charge types are based on the master data (activity types , master data rates)) combined with the shipment data (Incoterms , chargeable weight). Totals are therefore automatically determined and proposed for settlement.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Other charges:

Charge

The charge for which the amounts are calculated.

Amount

the amount of the charges. These are entered manually, or are automatically calculated from the master data

PP/CC

Depending on the incoterms selected in the general tab of the shipment this field indicates if the charge is prepaid or collect. The payment terms can be as per the following table:

Code	Designation	Explanation
PP	Prepaid	Costs are paid by the sender
CC	Collect	Costs are paid by the recipient

due

Indicates to whom the costs should be paid:

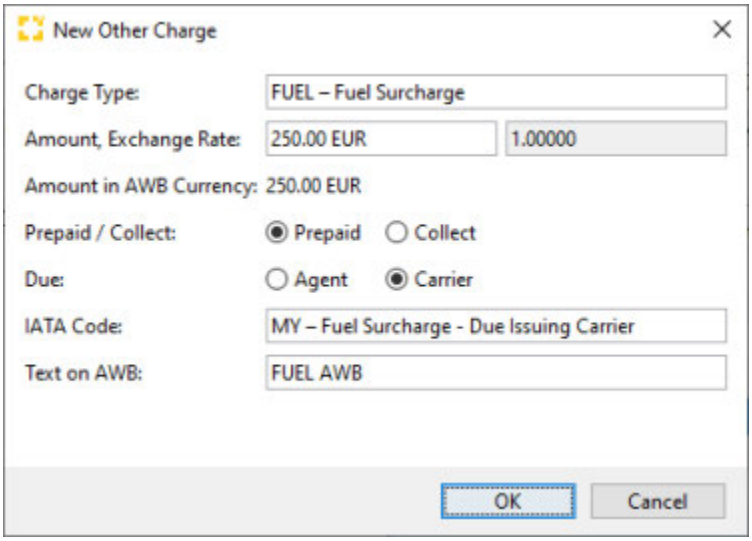
Designation	Explanation
Agent	The agent or carrier who issues the Air Waybill (PP) and who is defined as the receiving agent (import agent) or carrier (CC).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Carrier	The carrier or airline who transported the shipment

New

The button opens the *New Other Charge* editor which allows new charges to be inserted. The data entry can be confirmed with the button *OK* or dismissed with the button *Cancel*.



Charge Type

New charges can be found using the search function.

Amount, Exchange Rate

If a valid tariff has been found for the charge code, the total amount of the charge will automatically be calculated and inserted. Use the dropdown menu or the F5 function key if the tariff needs to be recalculated. The amount can also be manually entered or changed. The currency of the charge will default to the local currency, but it may also be entered or changed. In the adjacent field the exchange rate for the charge will appear. If the local currency is used the rate will be 1.0000, if a foreign currency used the rate will appear automatically or can be entered or changed.

Amount in AWB Currency

If the charge has been entered in a foreign currency, this field will show the amount converted to the local currency.

Prepaid/Collect

Indicates whether the charge is prepaid or collect. The default value will be based on the inco terms (see the *general tab*) but this default can be changed.

Due

Defines if the charge is *due Agent* or *due Carrier*. The default value for charges can be stored in the air cargo master data

IATA Code

The official IATA code for the selected cost type is used here. This value can be stored as a standard value in the AWB Other Charges Profile.

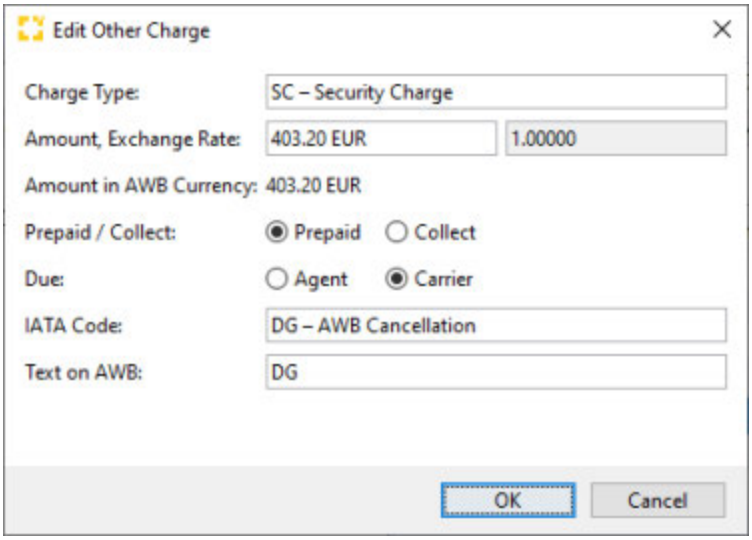
Text on AWB

This will be the code used on the AWB to describe the charge type. By default, the first 2 digits of the IATA code are used.

Edit

The button opens the Edit *Other Charge* editor which allows new charges to be inserted. A data entry can be confirmed with the button *OK* or dismissed with the button *Cancel*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Delete

Removes the highlighted ancillary charge.

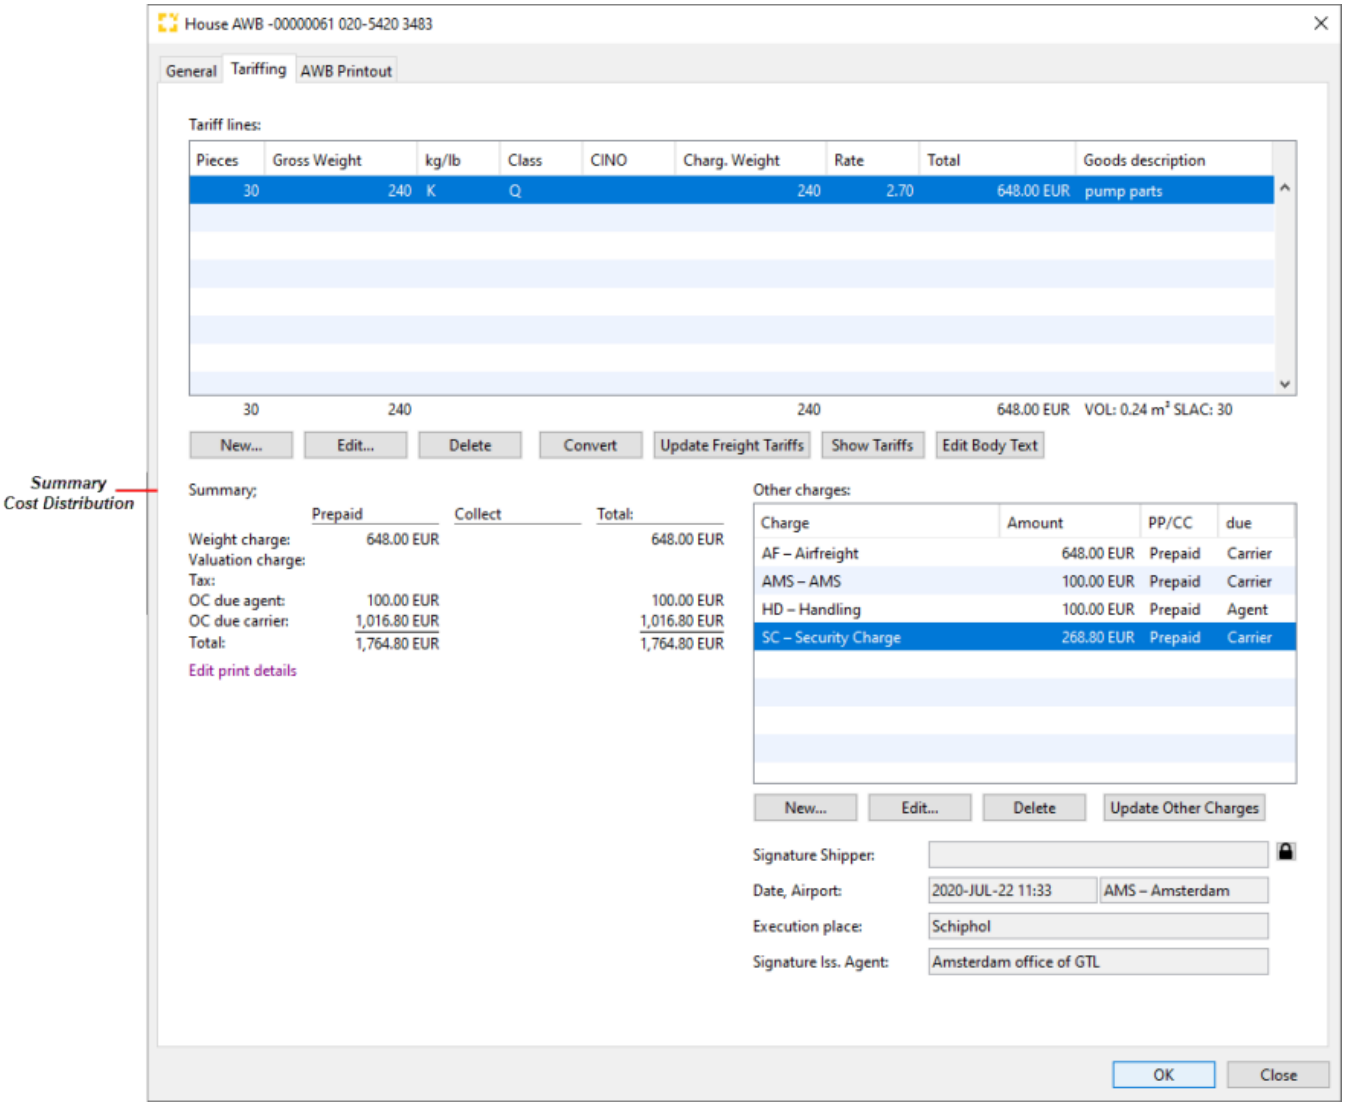
Update Other Charges

This action link will recalculate all ancillary charges according to current tariffs.

Summary - Cost Distribution - Print Details

The summary area shows of the sums of the additional costs, divided into prepaid or collect as well as due agent (for agent) or due carrier (for carrier).

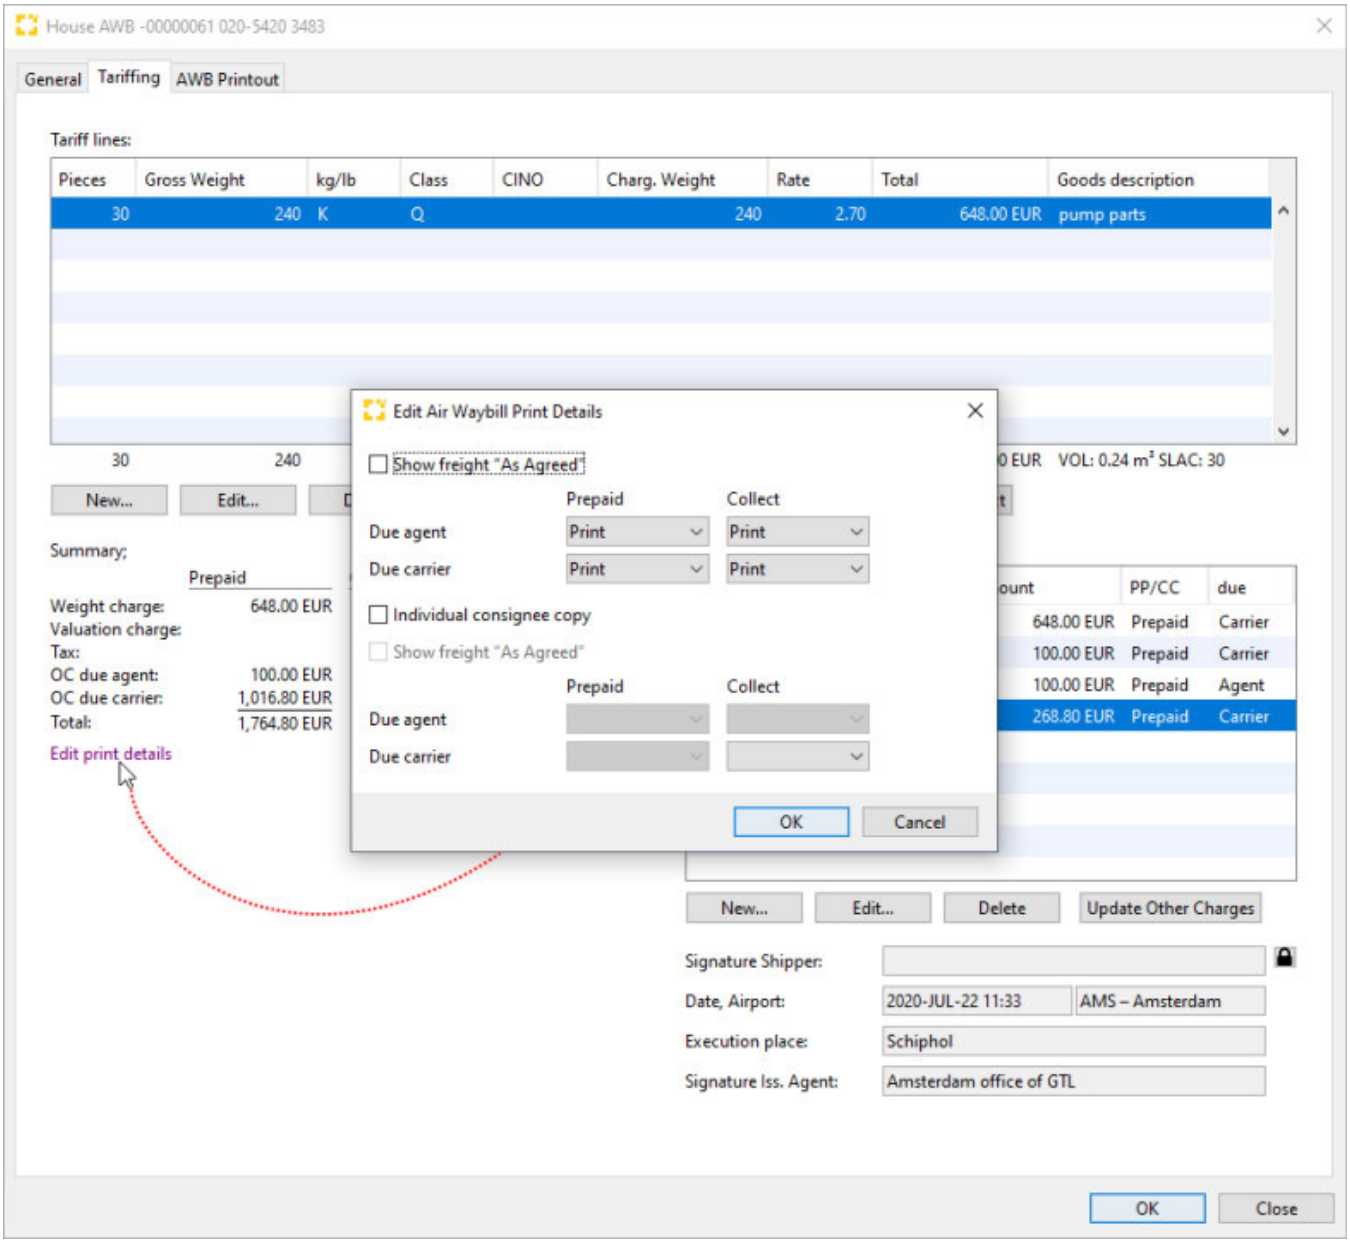
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Edit Print Details

This action link opens the editor Air Waybill Print Details. For each of the four sums mentioned above, you can determine whether and how the costs should be printed on the Airwaybill by selecting the corresponding option from the associated drop-down menu.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



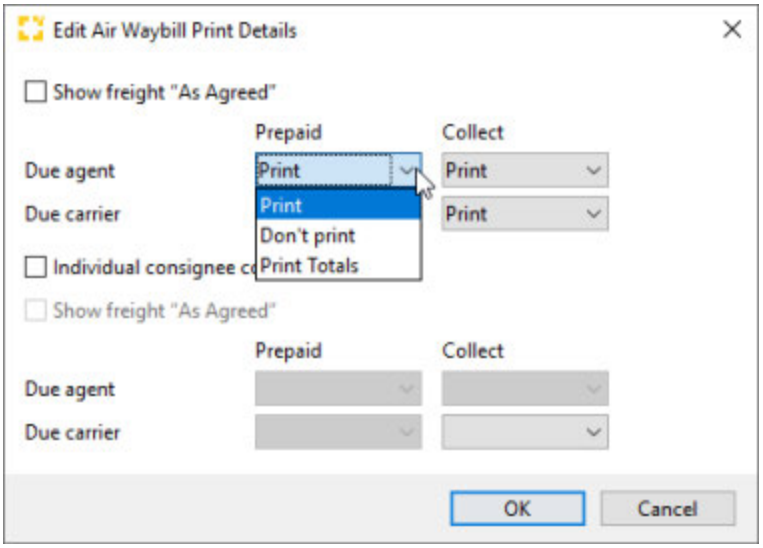
Show freight "As Agreed"

By activating this check box, the freight amount and the additional costs will not be printed on the air waybill but will be output as a note AS AGREED.

Due agent, Prepaid, Collect

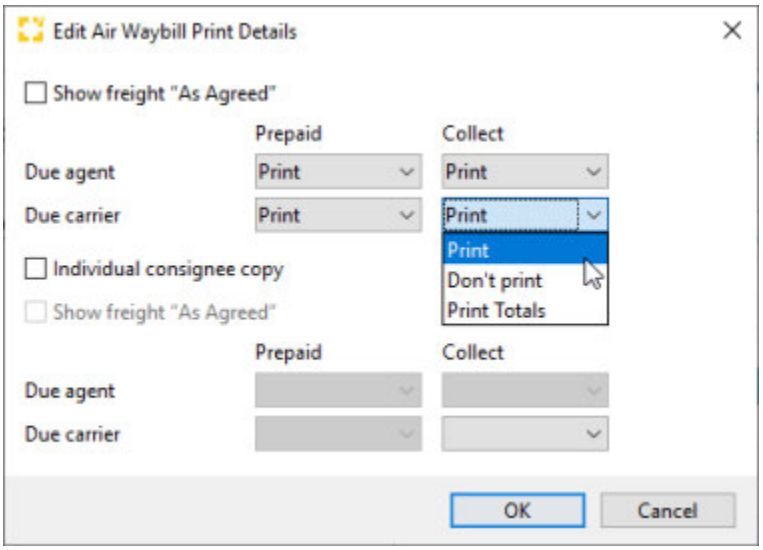
It is possible to determine whether and how the charges Due agent should be printed on the Airwaybill by selecting the corresponding option from the associated drop-down menu.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Due carrier, Prepaid, Collect

It is possible to determine whether and how the charges Due carrier should be printed on the Airwaybill by selecting the corresponding option from the associated drop-down menu.

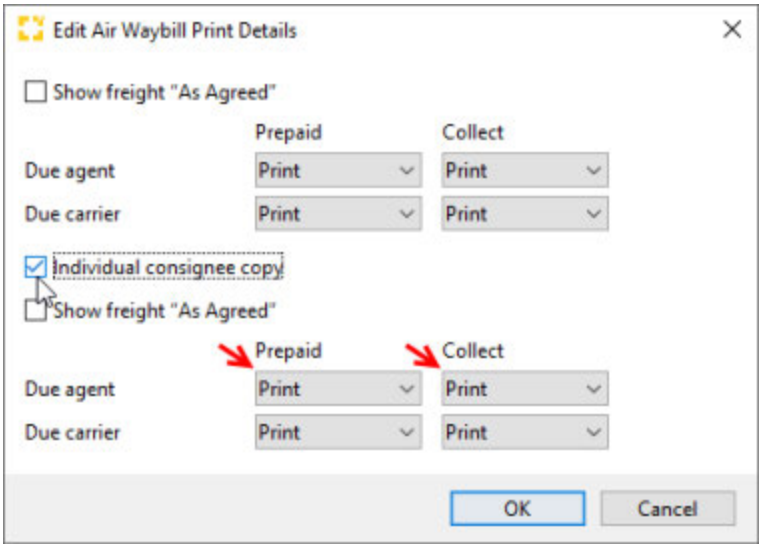


Individual consignee copy

Sometimes it can be useful to design the first copy of the printouts (shipper) differently than the second copy (consignee). For this, the check box Individual consignee copy can be activated.

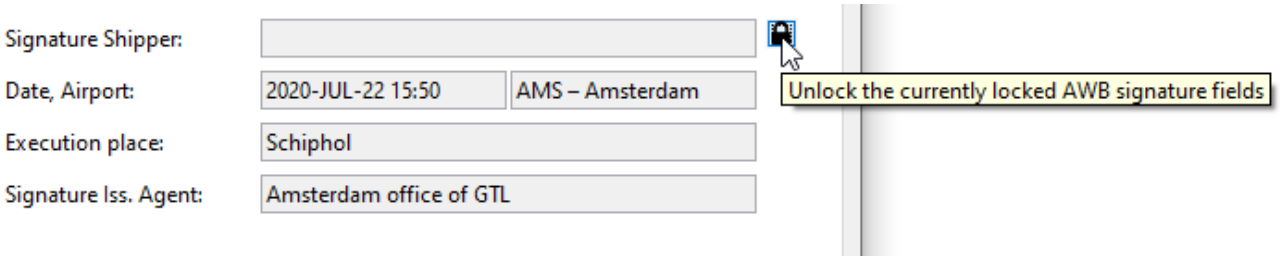
The additional fields Due Agent, Due Carrier, Prepaid and Collect can be edited:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Unlock locked AWB signature fields

Clicking on the lock Symbol unlocks the AWB signature fields and the signature fields will be editable,



Signature shipper

Scope automatically presets the field with the currently logged in user.

Date, Airport

`Date including airport.`

Execution place

Place of issuing

Signature Iss. Agent

Signature of the issuing agent

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(c) AWB Printout - AWB Editor - Standard Features

- Introduction
- Description

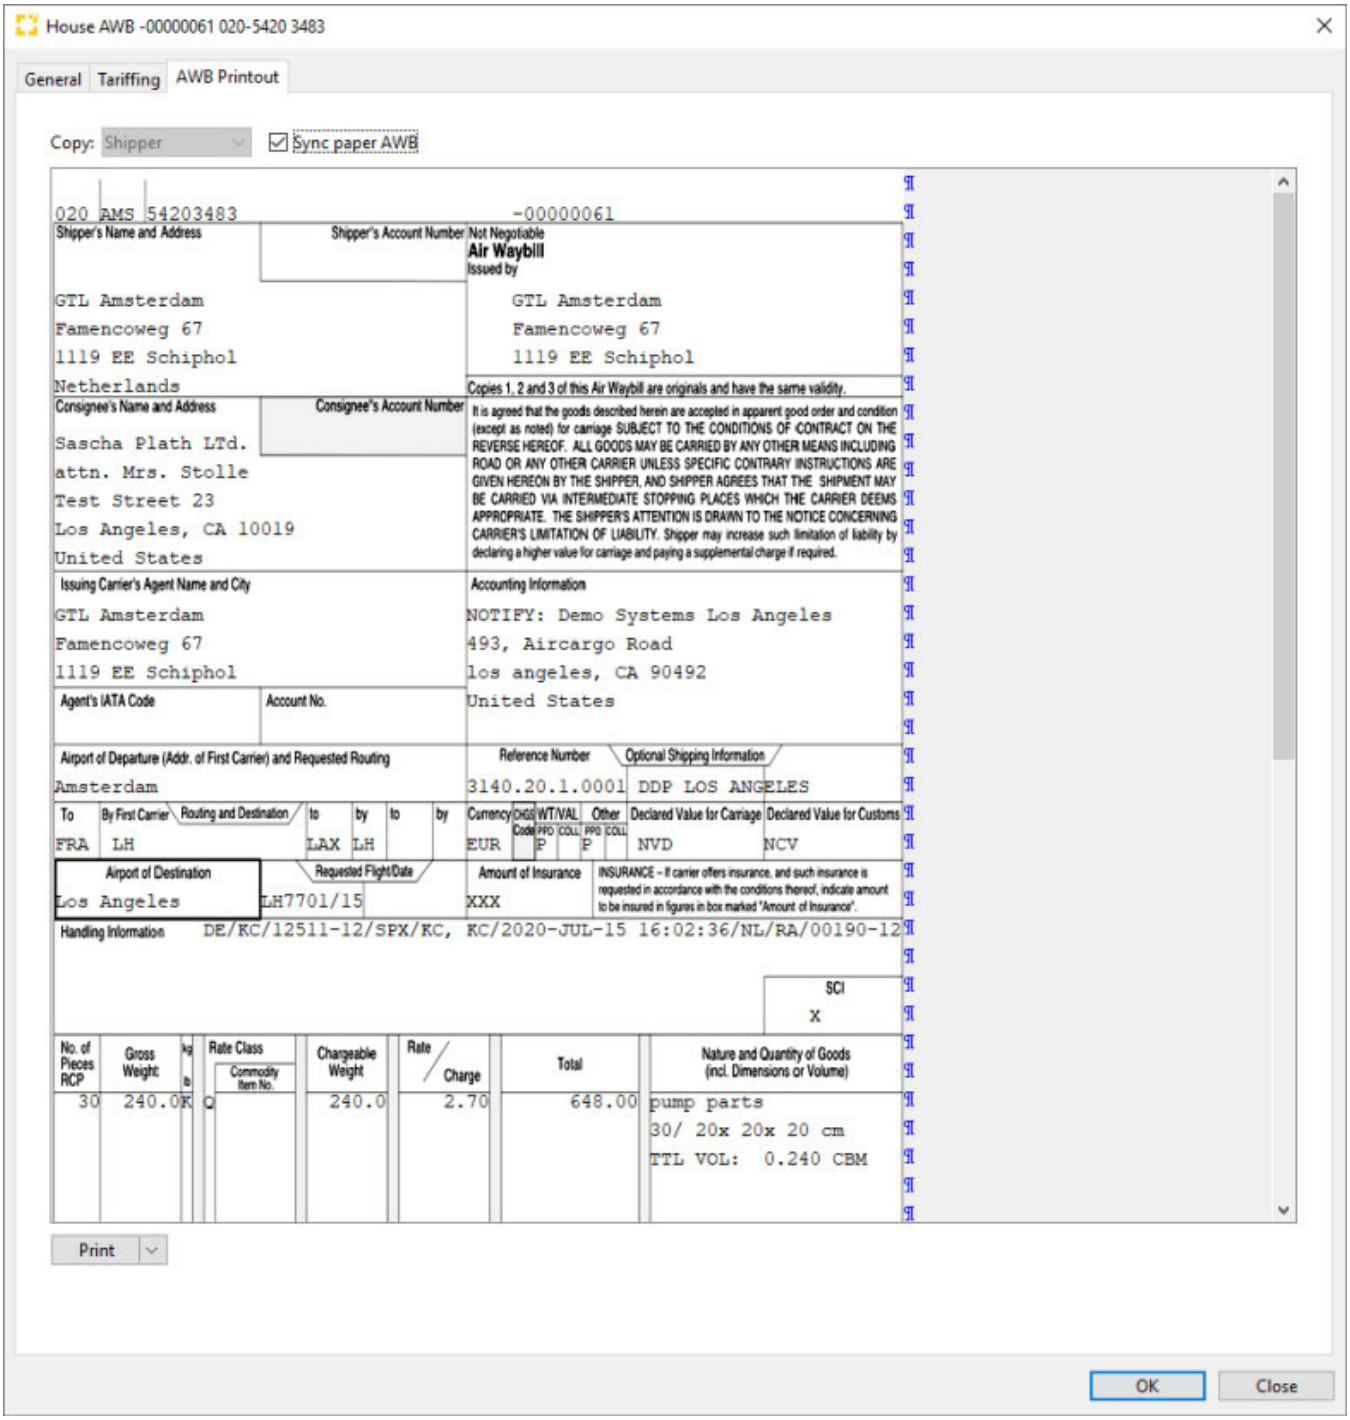
Introduction

This tab provides a visual representation of the printed AWB.

Description

- Copy
- Sync paper AWB
- Print
- IATA AWB - Transmit e-AWB (e-AWB including e-Manifest)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



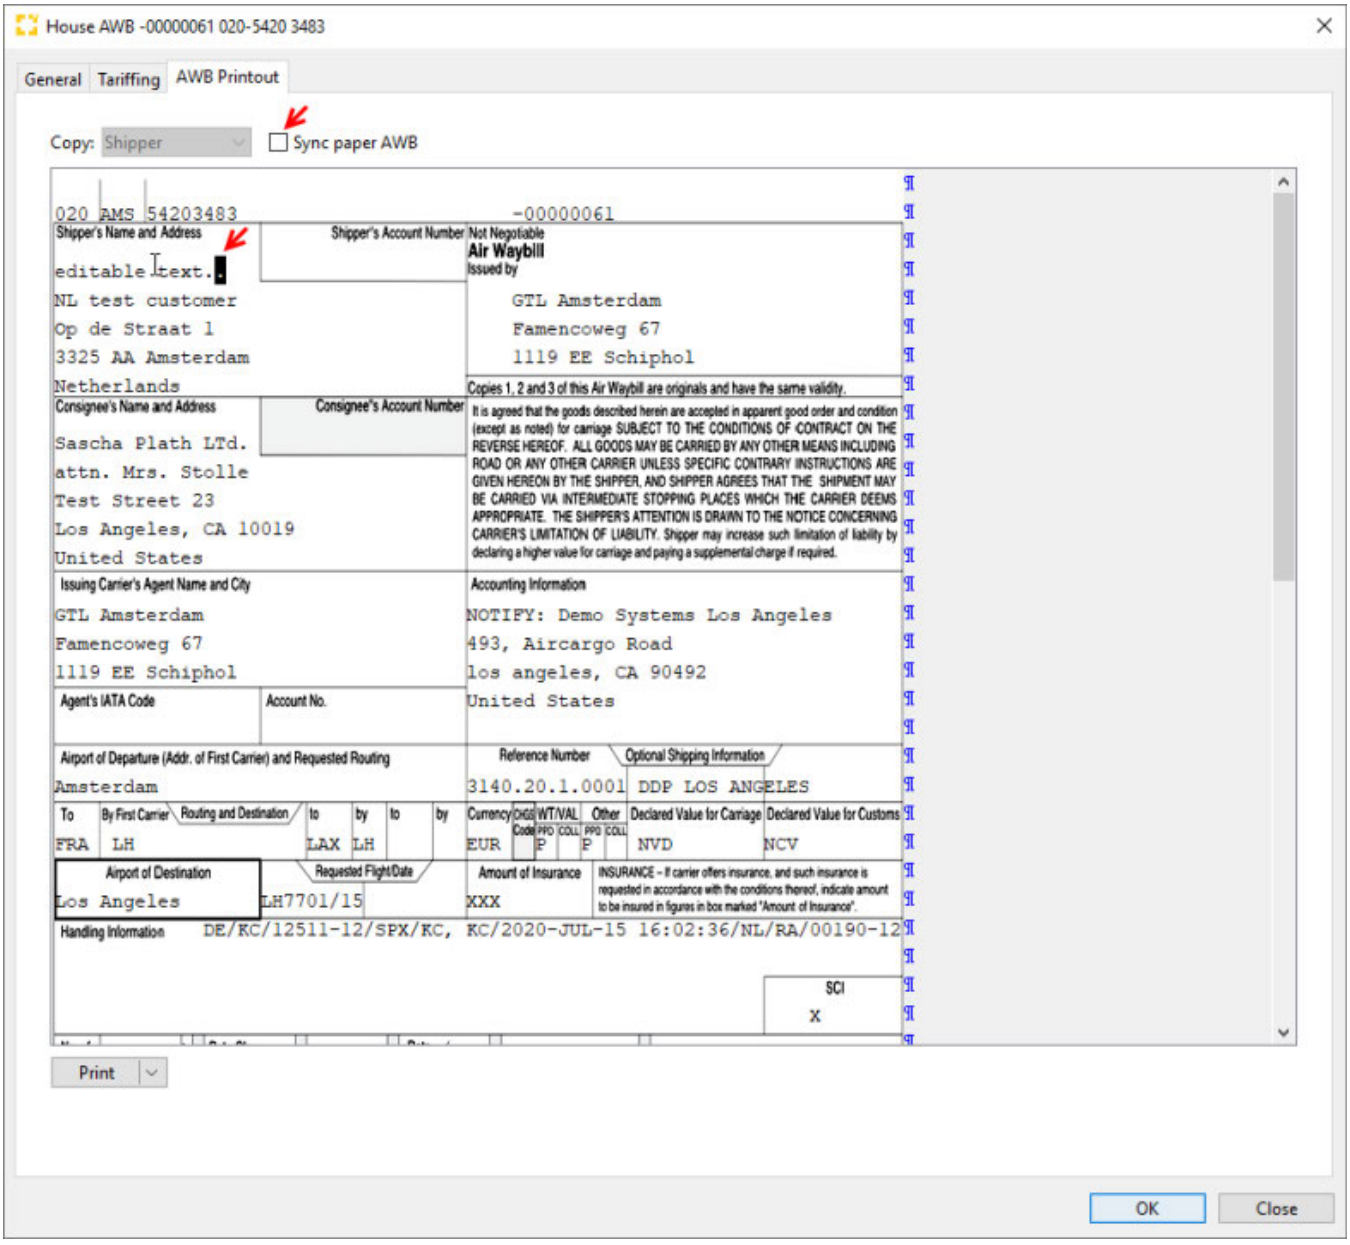
Copy

Selection of the copy to be used. By default, the copy shipper is set, and the field is grayed out. If the "Individual consignee copy" checkbox has been activated in the tariffing tab, it is possible to choose between the shipper and consignee copy using the drop-down menu. Particularly frequently used changes can be set directly in this area, the copies can be individually designed on the Paper tab.

Sync paper AWB

This box is checked by default and causes the AWB to be shown as per all the data entered in the *general* and *tariff* tabs. When check the representation of the AWB cannot be edited. If the box is unchecked, then the AWB may be freely edited and the text blocks can be accessed and inserted into the AWB.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



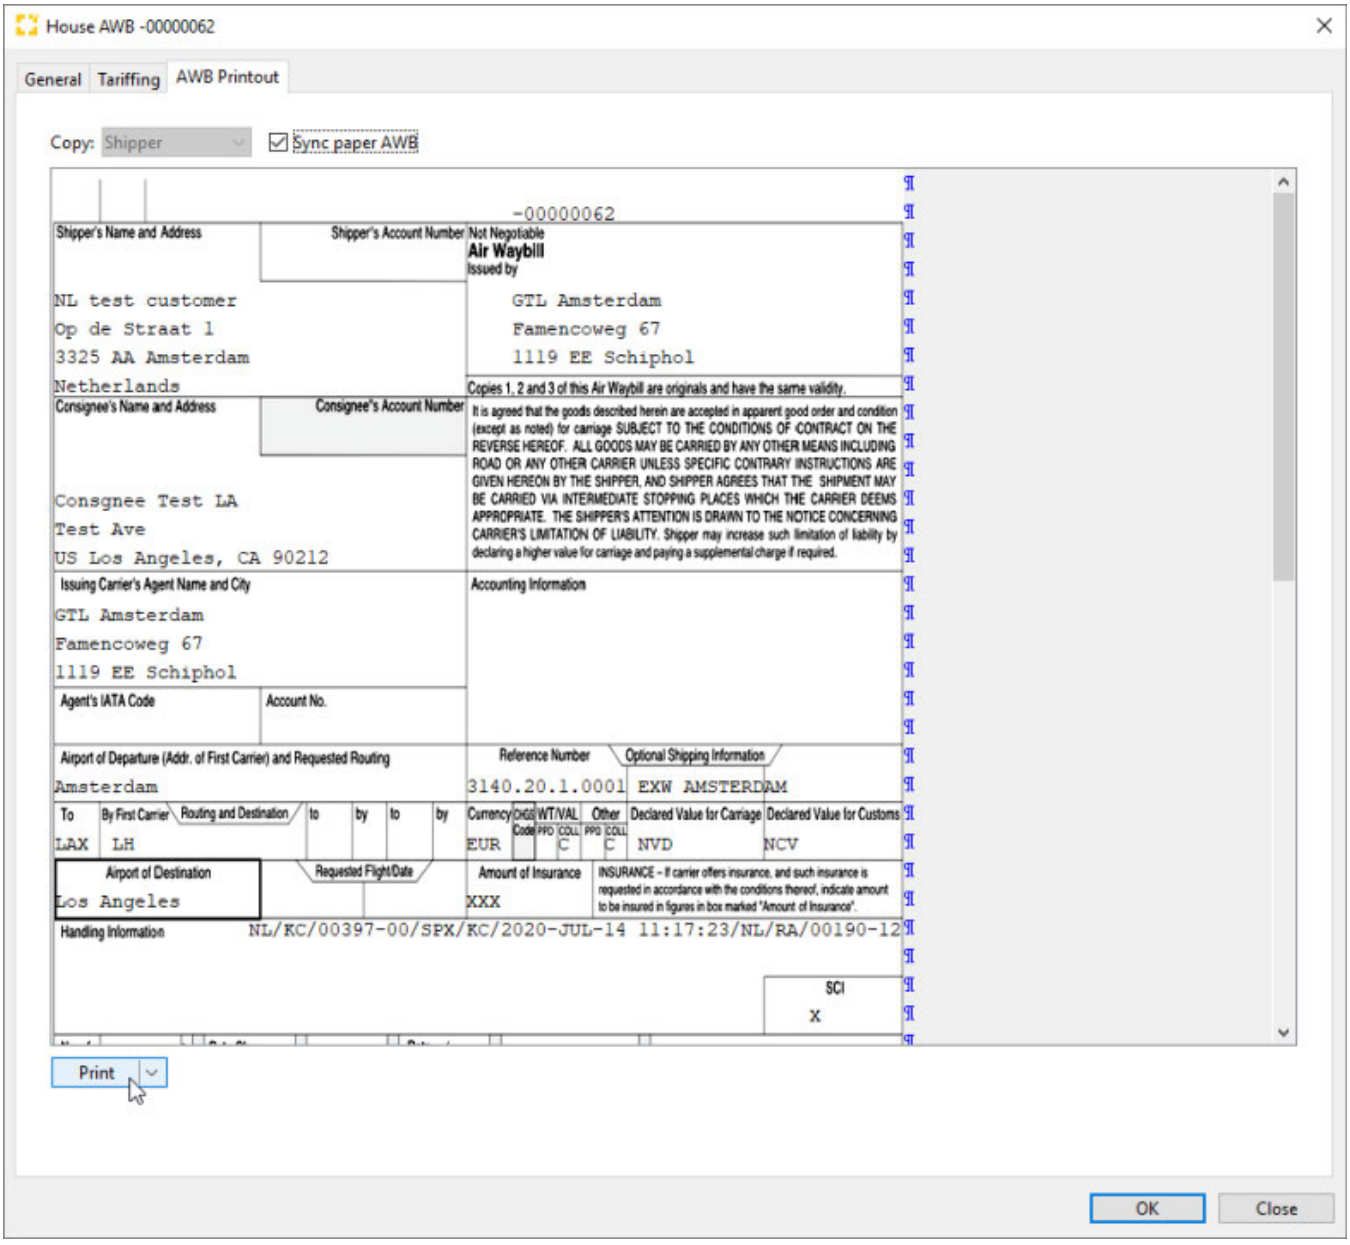
Attention!

If the box is checked again after editing the AWB, all changes will be lost because the document will once again be regenerated according to the data stored in the *general* and *tariff* tabs.

Print

Clicking on the action Print, will prints the AWB exactly as it appears in the representation to the predefined printer. The document will also appear as a text document and pdf document in the documents tab of the shipment. The pdf version may then be sent attached to an email.

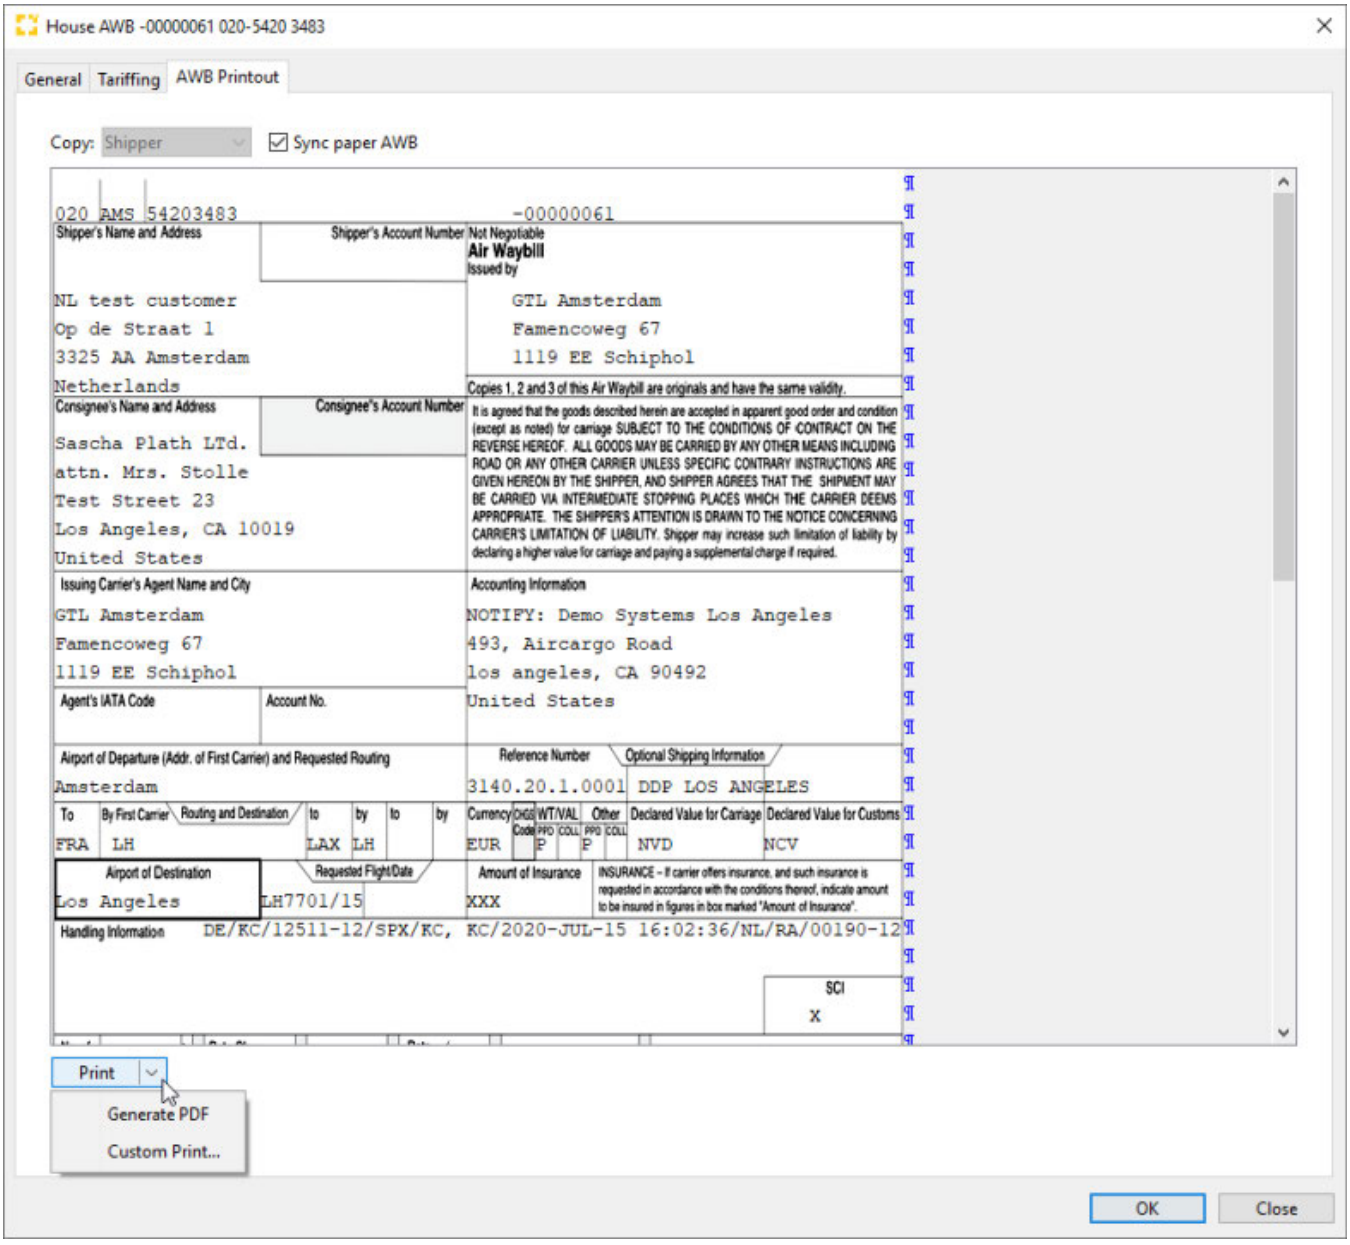
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Generate PDF, Custom Print...

With the print action, the print options Generate PDF and Custom Print... are available.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



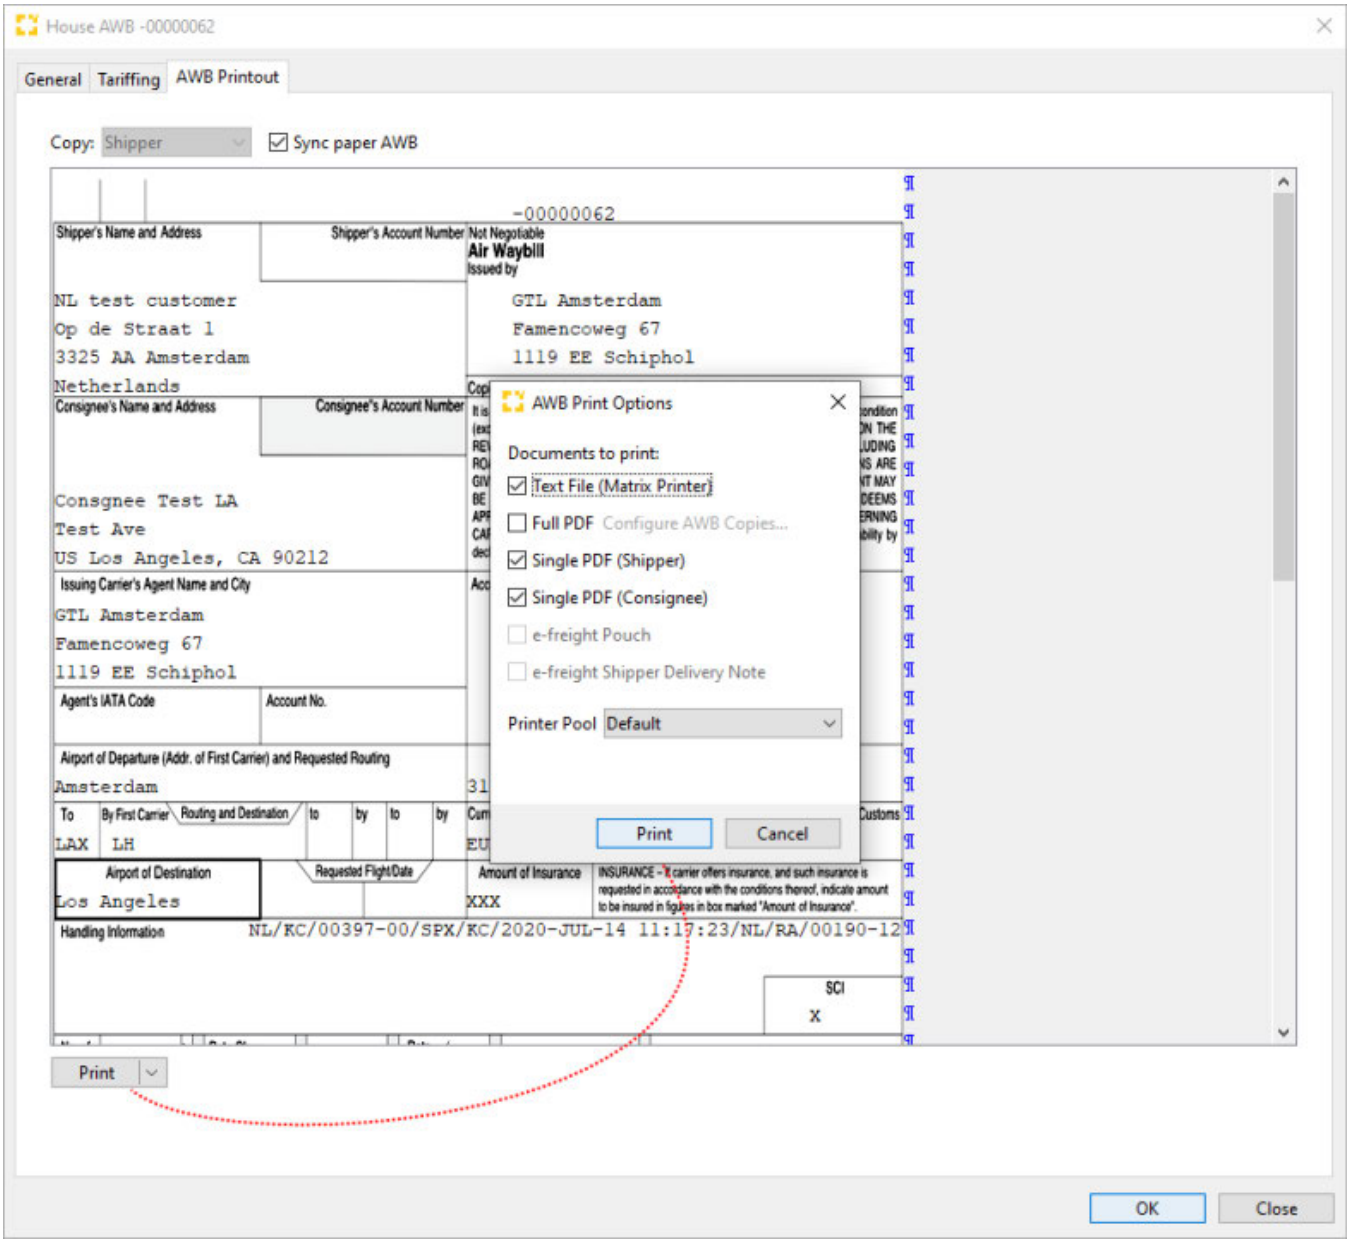
Generate PDF

Generates a complete set of the air waybill (with AWB layout). The corresponding PDF file is then available in the documents tab.

Custom Print...

Opens a window with further AWB print options.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



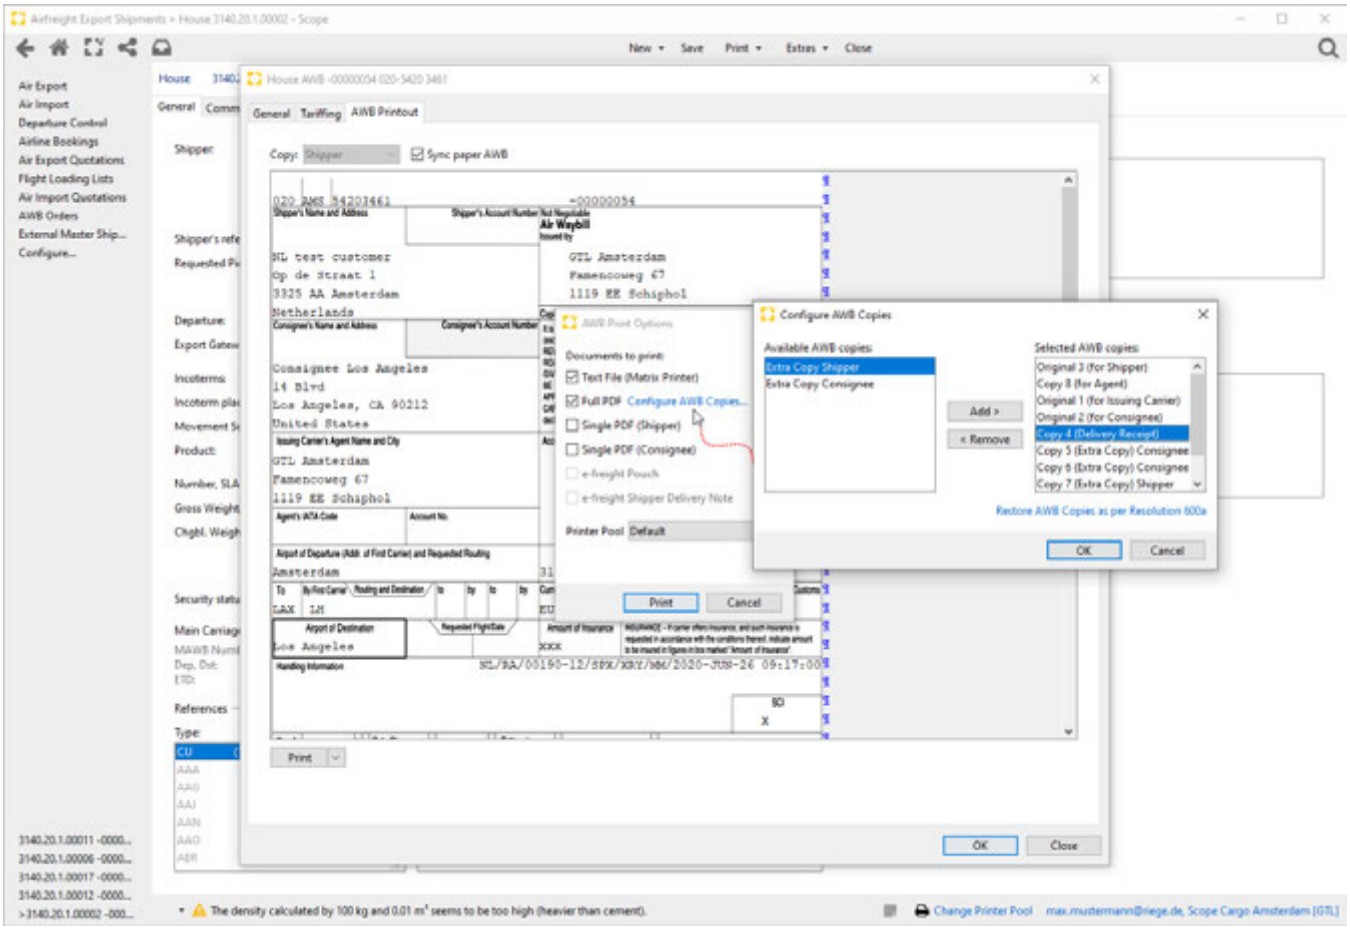
Text File (Matrix Printer)

If this checkbox is activated, a text file for the physical printout on matrix printers will be created.

Full PDF Configure AWB Copies...

If this check box is activated, it is possible to configure single AWB copies to be printed. *Add* will add available AWB copies to the Selected AWB copies. *R emove* will remove AWB copies from the Selected AWB copies. The action link *Restore AWB Copies as per Resolution 600a* will set the selection back to the Standard set.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Single PDF (Shipper)

Generates the PDF of the AWB Shipper´s copy

Single PDF (Consignee)

Generates the PDF of the AWB Consignee`s copy

e-freight Pouch

Single page PDF file used as a cover for the pouch in case of EAP eFreight variant.

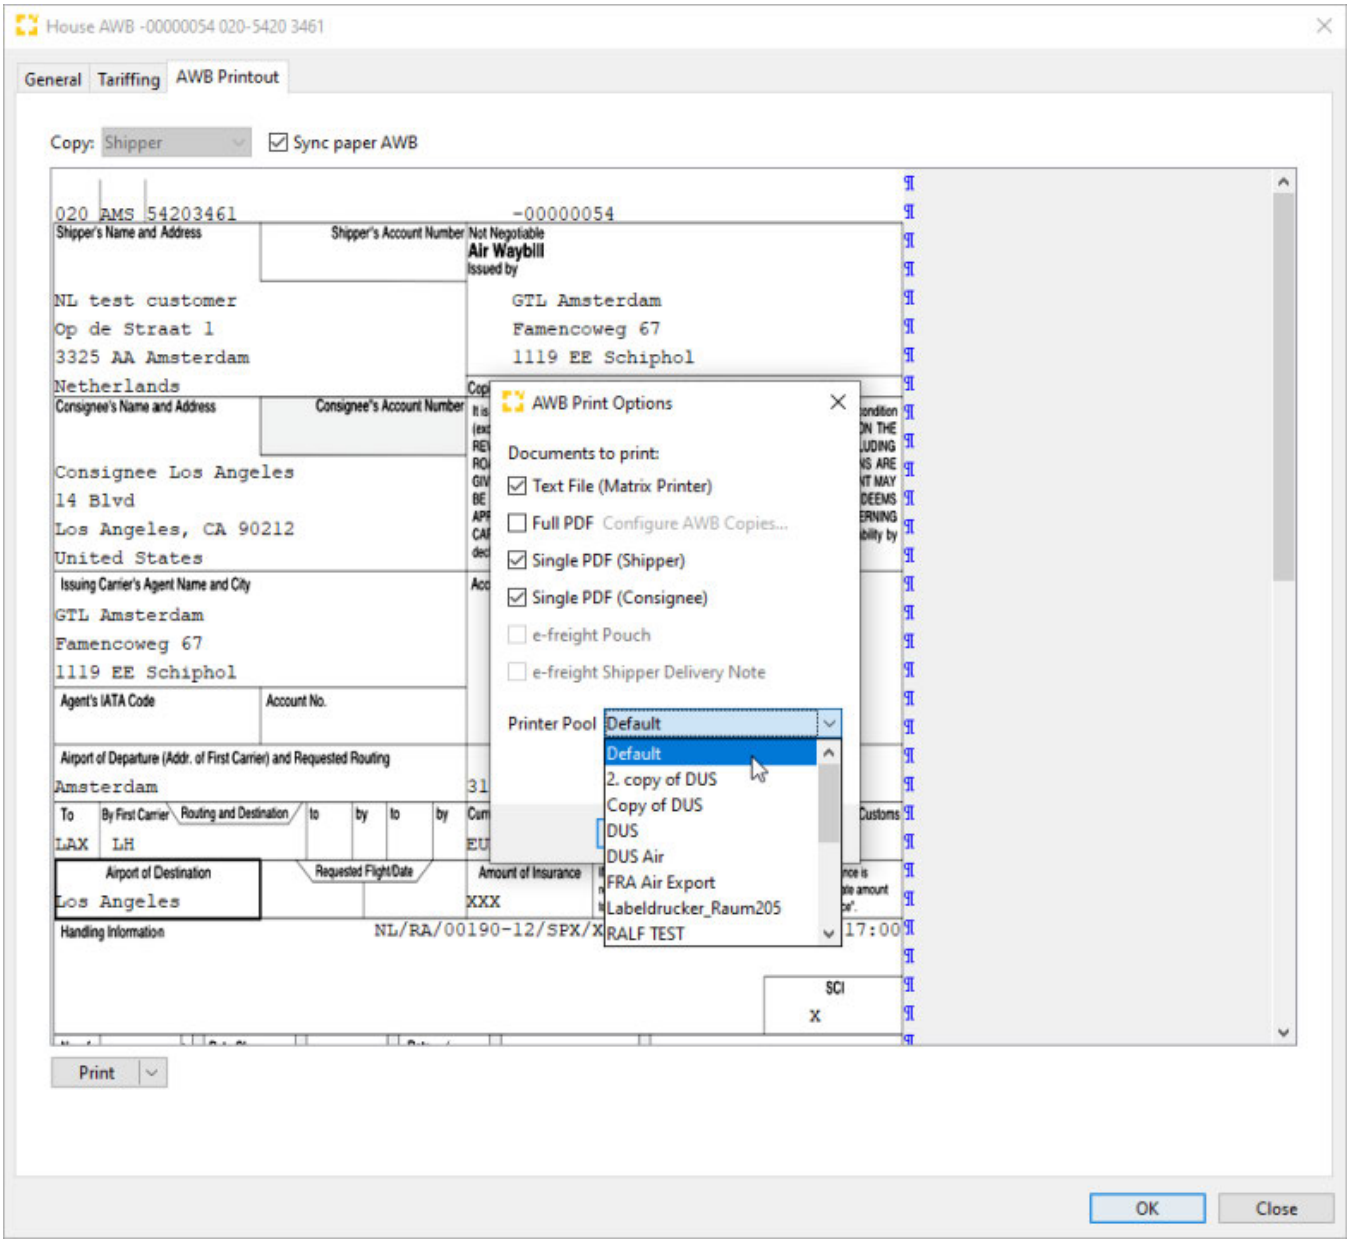
e-freight Shipper Delivery Note

Single page PDF file, replacing the AWB in case of eFreight

Printer Pool

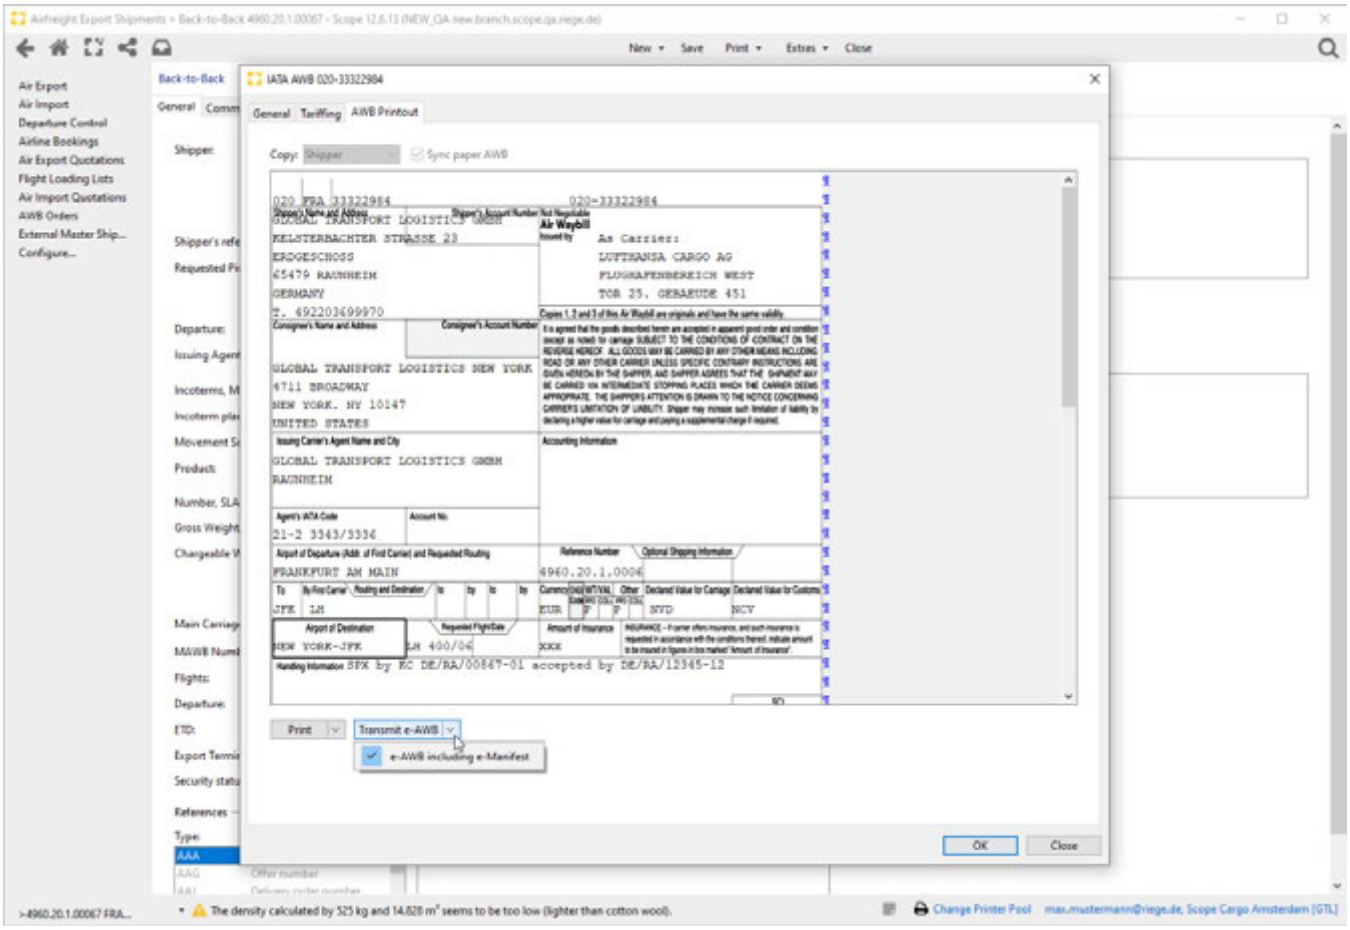
Default printer is set. If more printers are available, they can be selected by the drop-down menu.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



IATA AWB - Transmit e-AWB (e-AWB including e-Manifest)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Transmit e-AWB

Sends the shipment electronically to TRAXON Global Cargo Communications System. There is no print of the document. The event FWB, FHL send is shown in shipment Tab *Events*.

e-AWB including e-Manifest

With the Drop Down Menu of the action Transmit e-AWB, it is possible to activate the checkbox e-AWB *including e-Manifest*, so that an e-AWB will be send to TRAXON Global Cargo Communications System including the e-Manifest.

OK

Stores the data and closes the editor.

Close

Closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Ticket System

- Introduction
- Description

Introduction

JIRA is a ticket- und project monitoring software from Atlassian, which is used for customer support, bug monitoring and development of new projects for Scope.

For each of our Scope customers, we create a separate project in JIRA which can only be accessed by this specific customer's users and the Riege support team. Each user in JIRA can directly track the process of requests and communicate with the Riege support team.

The following short documentation will give a short overview of the features in JIRA.

Description

When a Scope user generates a support request via F12, an issue in the according project in JIRA will be created automatically. Each request is registered with a unique ticket number. The Riege support team then handles each request via the JIRA web-interface. If the customer decides to use JIRA as well, designated Scope users may get access to the JIRA system.

- Create Issue - Ticket System
- Dashboard - Ticket System
- Email Reply - Ticket System
- Jira Workflow - Ticketsystem
- Login - Ticket System
- Notifications - Ticket System
- User Profile - Ticket System
- View Issue - Ticket System

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

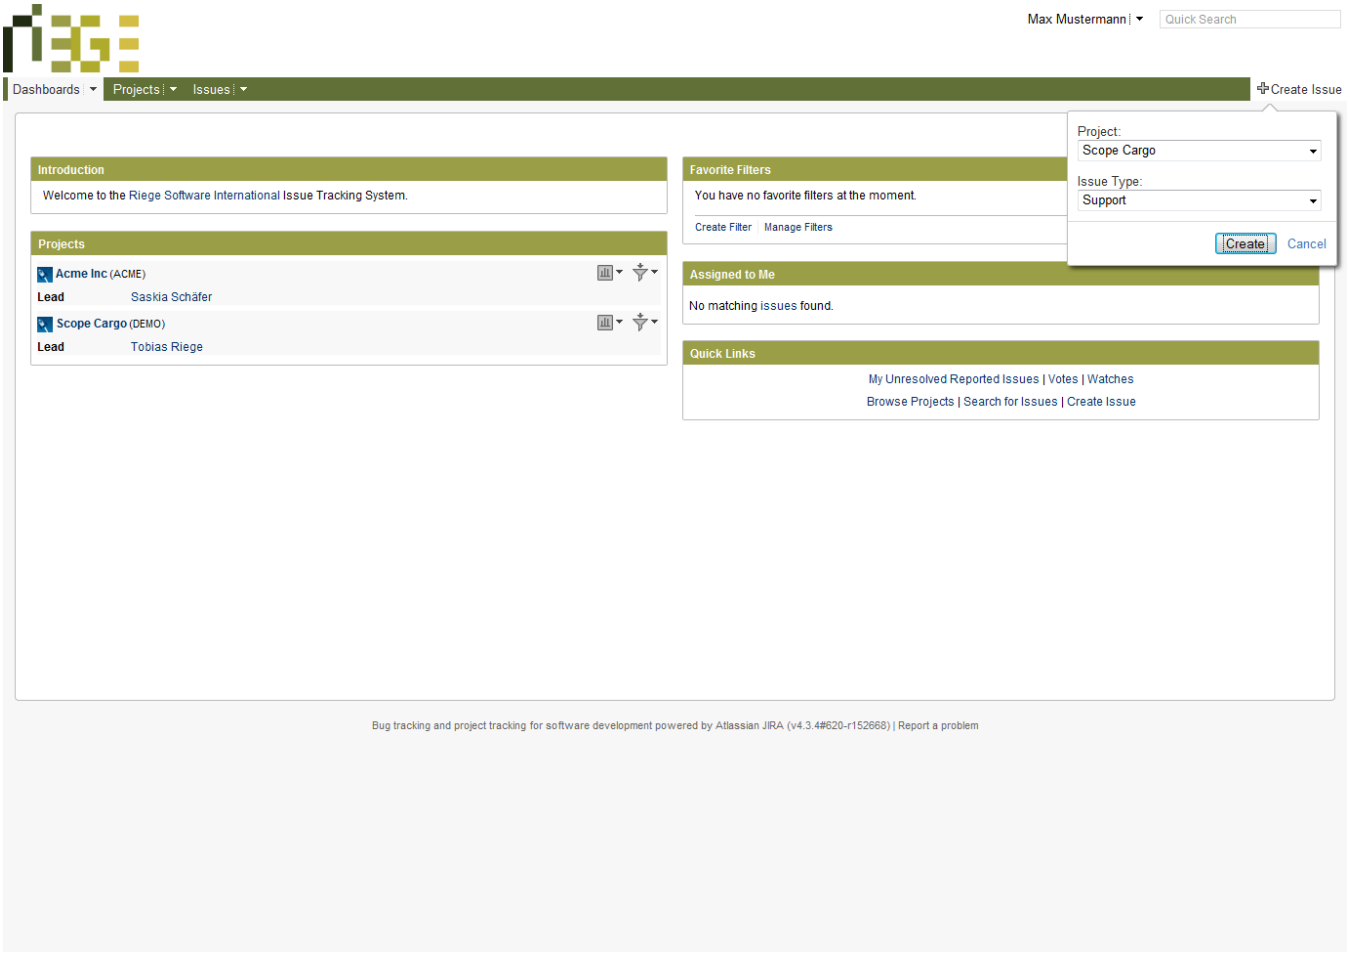
Create Issue - Ticket System

- Introduction
- Description

Introduction

The user may either press F12 from Scope to generate an issue in Jira, or create an issue via the Jira web-interface. On the upper right of the webpage, a new issue can be created by clicking "Create Issue".

Description



Project

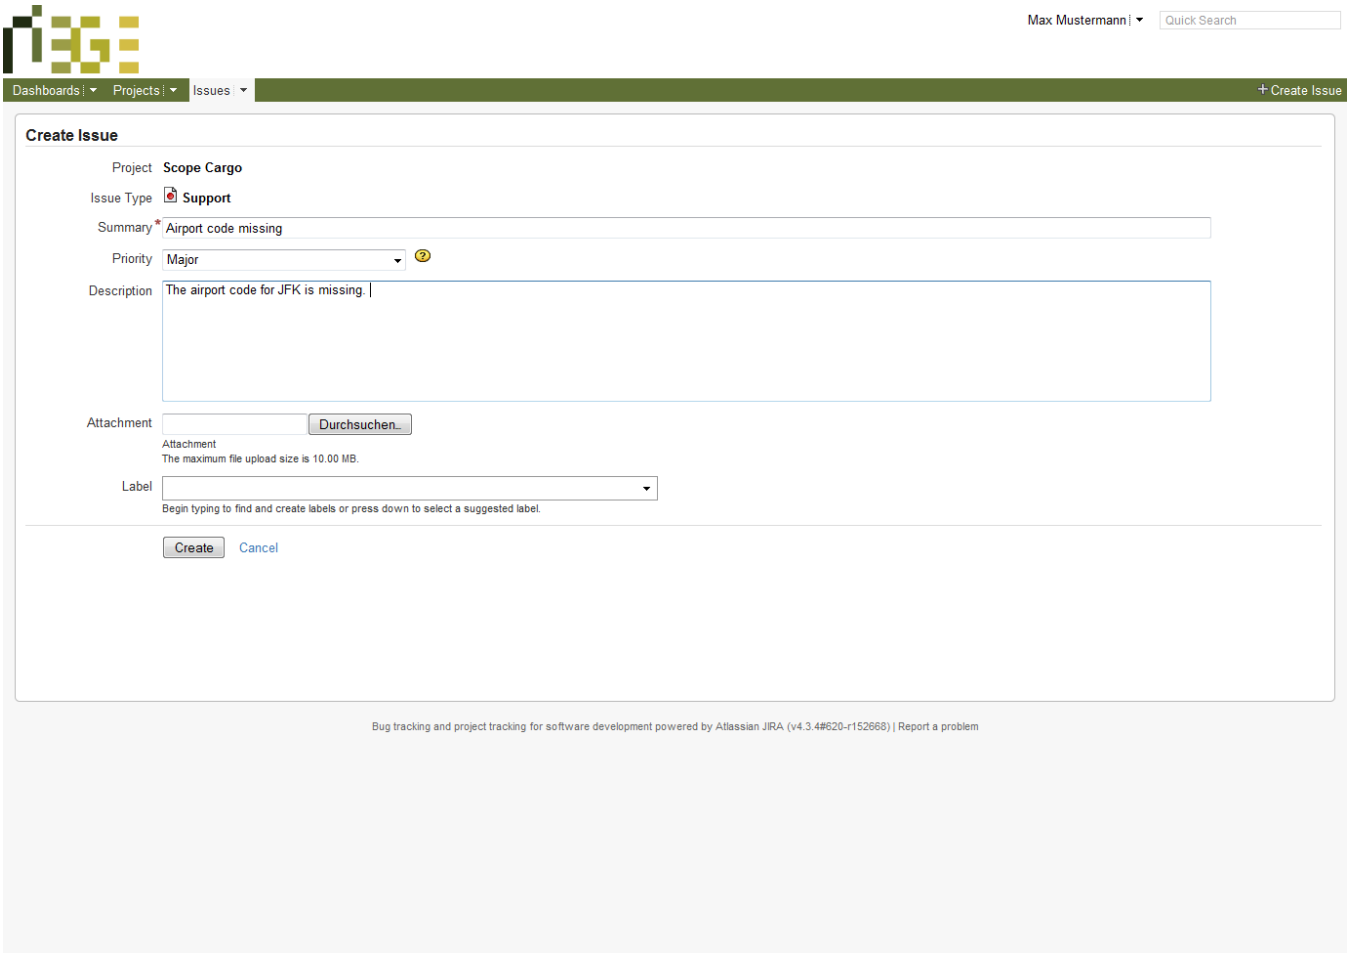
The standard (or most often used) project where the user has permission to browse in is predefined. If the user has access to multiple projects, you can choose to change the default project via the drop down menu.

Issue Type

The default issue type is "Support". The user can choose between three issue types:

- Support - For bugs and questions occurring during the use of Scope
- Service - For training and setup (new users, branches) requests
- Change Request - Suggestions for program changes and enhancements in Scope

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Summary

Short description of the problem, the question or request.

Priority

The user can choose between 5 different priorities:

- cosmetic - E.g. for spelling mistakes
- minor - Minor bugs that do not hinder the user to progress with his work
- major - Major bugs that hinder or delay the work of the user, but there is a workaround.
- critical - Major bugs that massively hinder the work of the user.
- blocker - The user isn't able to progress with his work anymore

Description

Detailed and precise description.

Attachment

For adding documents with relevant and additional information.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

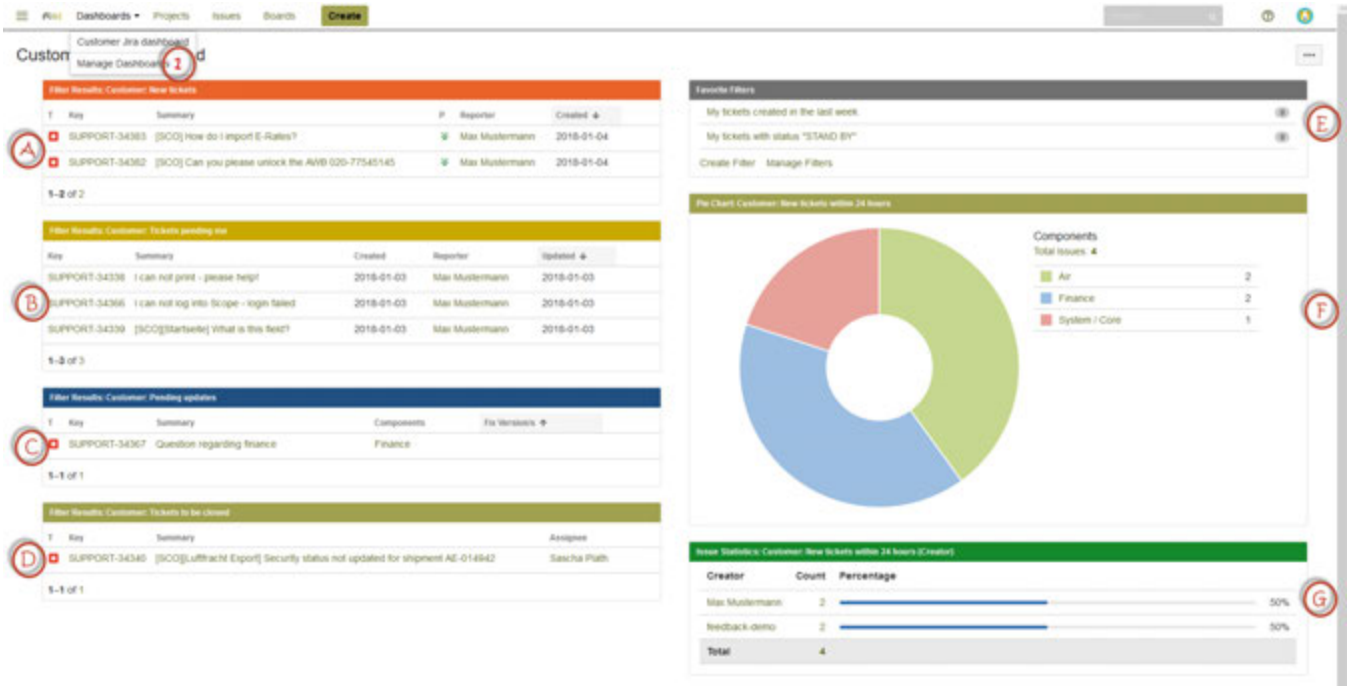
Dashboard - Ticket System

- Introduction
- Dashboard Overview
- Dashboard Installation

Introduction

The overview of your Scope requests after login in our ticket system JIRA is called "dashboard". We provide you with a specially developed dashboard "Customer Jira dashboard" to give you a complete overview of all requests followed by our standard procedures.

Dashboard Overview



A - New tickets

Overview of all your requests, which have ticket status "New" (= is not in progress by Scope Helpdesk yet)

B - Tickets pending me

Overview of all requests created by you and your colleagues with ticket status "Clarification": Scope Helpdesk is awaiting a response/reply by you

C - Pending updates

Overview of all requests created by you and your colleagues, which will be solved by a new Scope release. Column "Fix Version" should display the corresponding version, which need to be installed.

D - Tickets to be closed

Overview of all requests with status "Resolved": Scope Helpdesk is awaiting your confirmation to close this ticket and set the ticket from status "Resolved" to "Closed".

E - Favorite Filters

Overview of your private filters, which you have created

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

F - Pie chart: New tickets within 24 hours

Overview of all requests created by you and your colleagues in the last 24 hours. The result is ordered by the component: when you click on one component, you will see all tickets matching this selection.

G - New tickets within 24 hours (Creator)

Overview of all requests created by you and your colleagues in the last 24 hours. The result is ordered by the creator of the ticket: when you click on one user, you will see all tickets matching this selection.

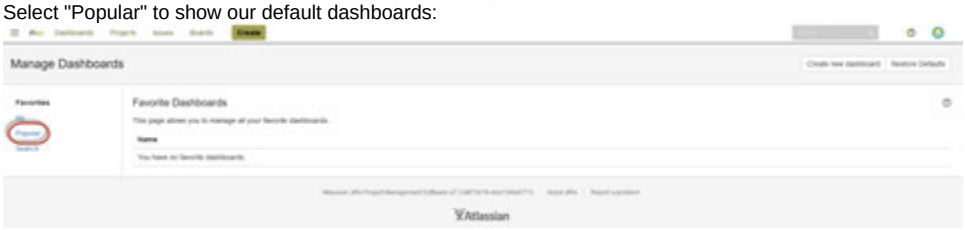
1 - Manage Dashboards

To add our default dashboard to your profile or create an own dashboard.

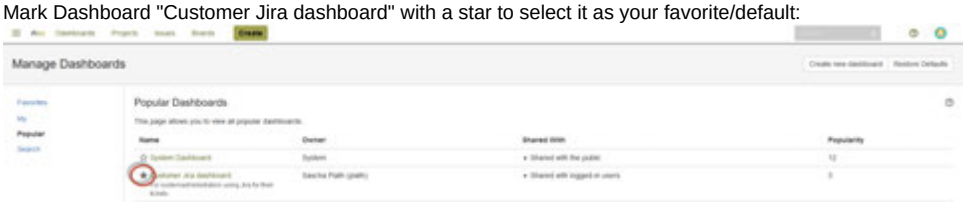
Dashboard Installation

In order to use our dashboard, you have to select "Manage Dashboard" as shown above:

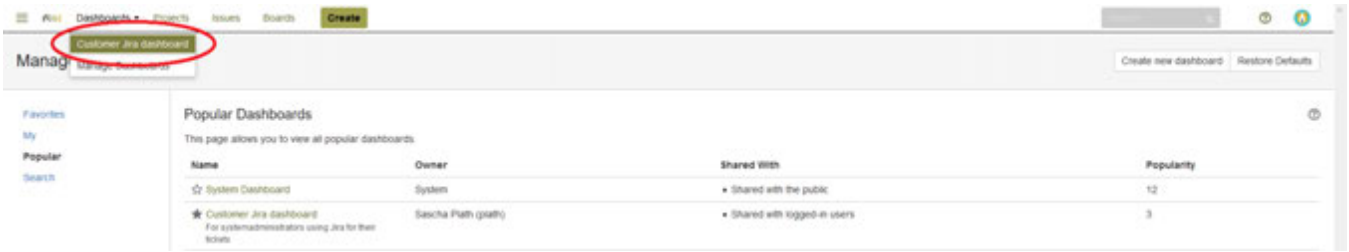
1. Click on Dashboards Manage Dashboards (see above)
2. Select "Popular" to show our default dashboards:



3. Mark Dashboard "Customer Jira dashboard" with a star to select it as your favorite/default:



By clicking on "Dashboards" our dashboard will be shown to be selected. After login into JIRA your new default dashboard will be directly used:



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Email Reply - Ticket System

- Introduction
- Description

Introduction

It is important to note that replying to emails send by JIRA via the 'reply to' option in the email program, the Riege support team **will not** be informed and receive the customer email. Users should always follow the issue link in the JIRA email and communicate to the Riege support team via the JIRA web-interface.

Description

A notification email arrives and the user wants to provide the support team with additional information or wants to ask for the status of the issue. Please **do not** use the reply function of the email client but proceed as follows:

1. Click on the link of the JIRA issue provided in the email notification
2. Log-in to JIRA (if not logged in already)
3. Please press "Comment" or "Attach Screenshot", depending on the information that you want to supply to the Riege support team.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Jira Workflow - Ticketsystem

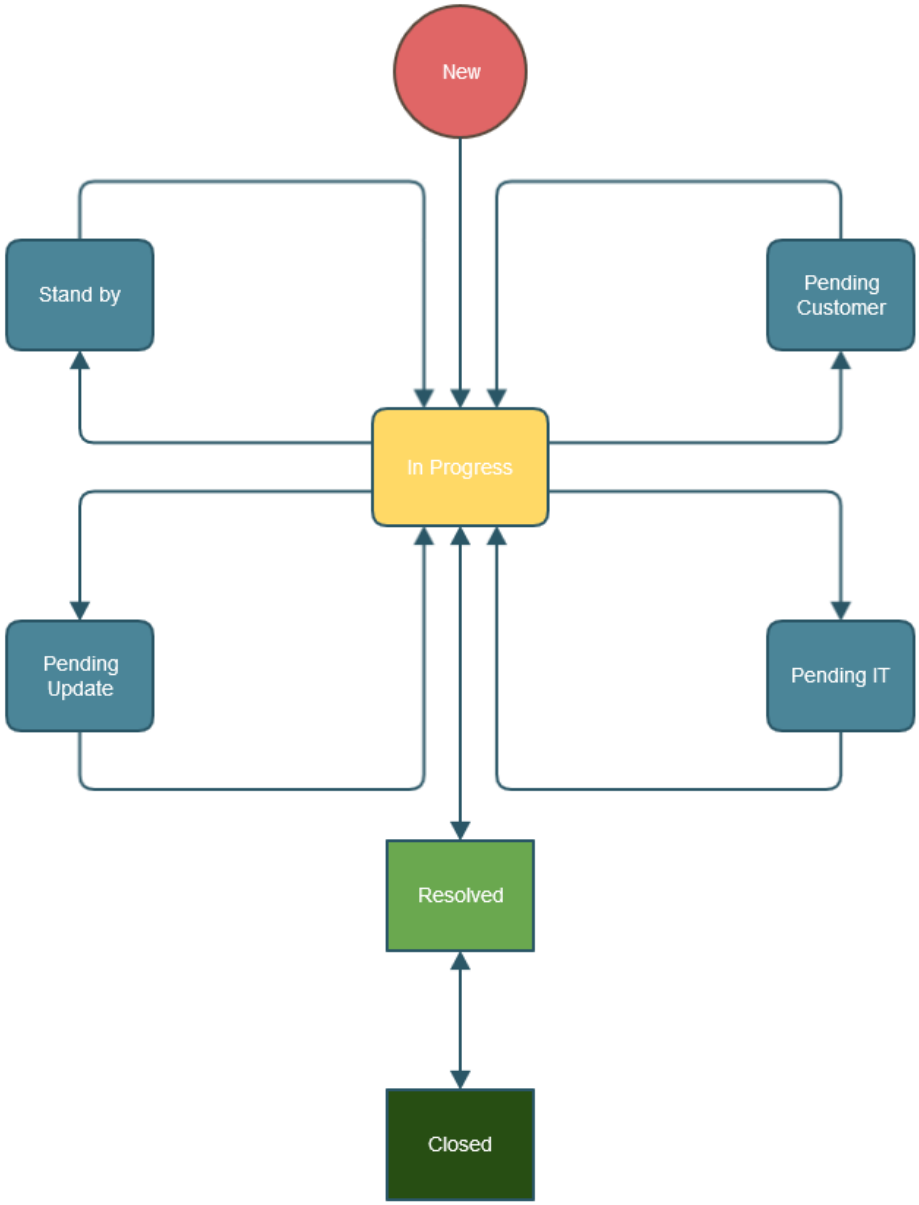
Introduction

Each request passes through a ticket cylce showing you the current status of your inquiry. The status can be set either by you or by RSI to change the workflow of your request.

The status can be used as a filter in our ticket system showing you for example all tickets which are pending by an answer from you or which are currently in progress by RSI. This transparency secures the optimal handling of your requests.

Workflow

This is the workflow of a Support-Ticket in Jira:



The marked Status- and Action fields can be set by you:

Status	Status Description	Action	Action Description	Status

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

		Field		Change
New	Your request is created via • F12 in Scope • manually in Jira • Email function	Start Progress Resolve **Close**	Support starts analysing your request Your request is resolved by RSI, but requires your confirmation Your request is completed and confirmed by you	In Progress Resolved Closed

Field description

Customer

This field gets automatically filled in your JIRA ticket while created via Scope F12. If created manually in JIRA, please make sure to insert the corresponding value in this field in order to see the ticket by you and your colleagues. Please contact your Scope Support Team if you are unsure, which value to insert. In general we always suggest to create a ticket via Scope F12 to fill all fields and also include logfile, print screens and other important information to your Support Team automatically.

Support Team

This field gets also automatically filled in your JIRA ticket while created via Scope F12. If created manually in JIRA, please make sure to insert the corresponding value in this field in order to for your Support team see the ticket in their overview. Otherwise the start of analysing your request might unnecessarily get delayed. Please contact your Scope Support Team if you are unsure, which value to insert.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

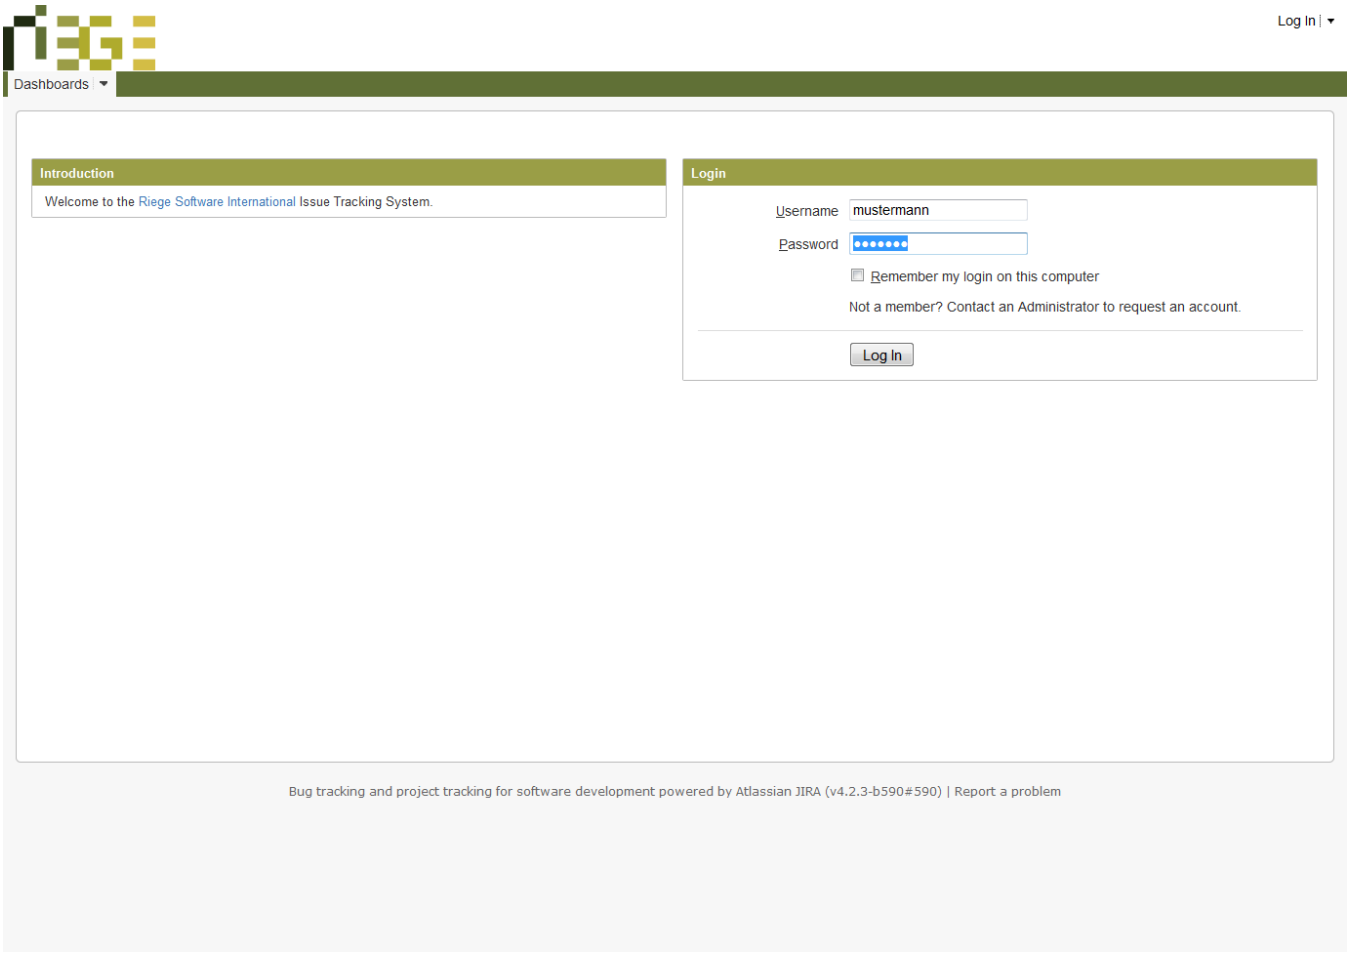
Login - Ticket System

- Introduction
- Description

Introduction

There are two ways to get to the JIRA login page. One way is to open http://jira.riege.com via your browser. The other way is to click on the JIRA link which comes with the emails sent out by JIRA upon creation, commenting, or status updates of the tickets. Each JIRA enabled Scope user is able to login with the exact same login information used by Scope itself.

Description



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Notifications - Ticket System

- Introduction
- Description

Introduction

JIRA sends notification emails automatically on creation or update of an issue. Additionally the Riege support team also receives notification on all changes.

Description

Riege has configured the following notification preferences for the customer project areas:

Event	Who gets notified
Issue created	Reporter
Issue commented	Reporter, Watcher
Issue resolved	Reporter, Watcher
Issue reopened	Reporter, Watcher

Watchers are all persons who chose to "watch" the issue. They will get notified about changed (see above) via email.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

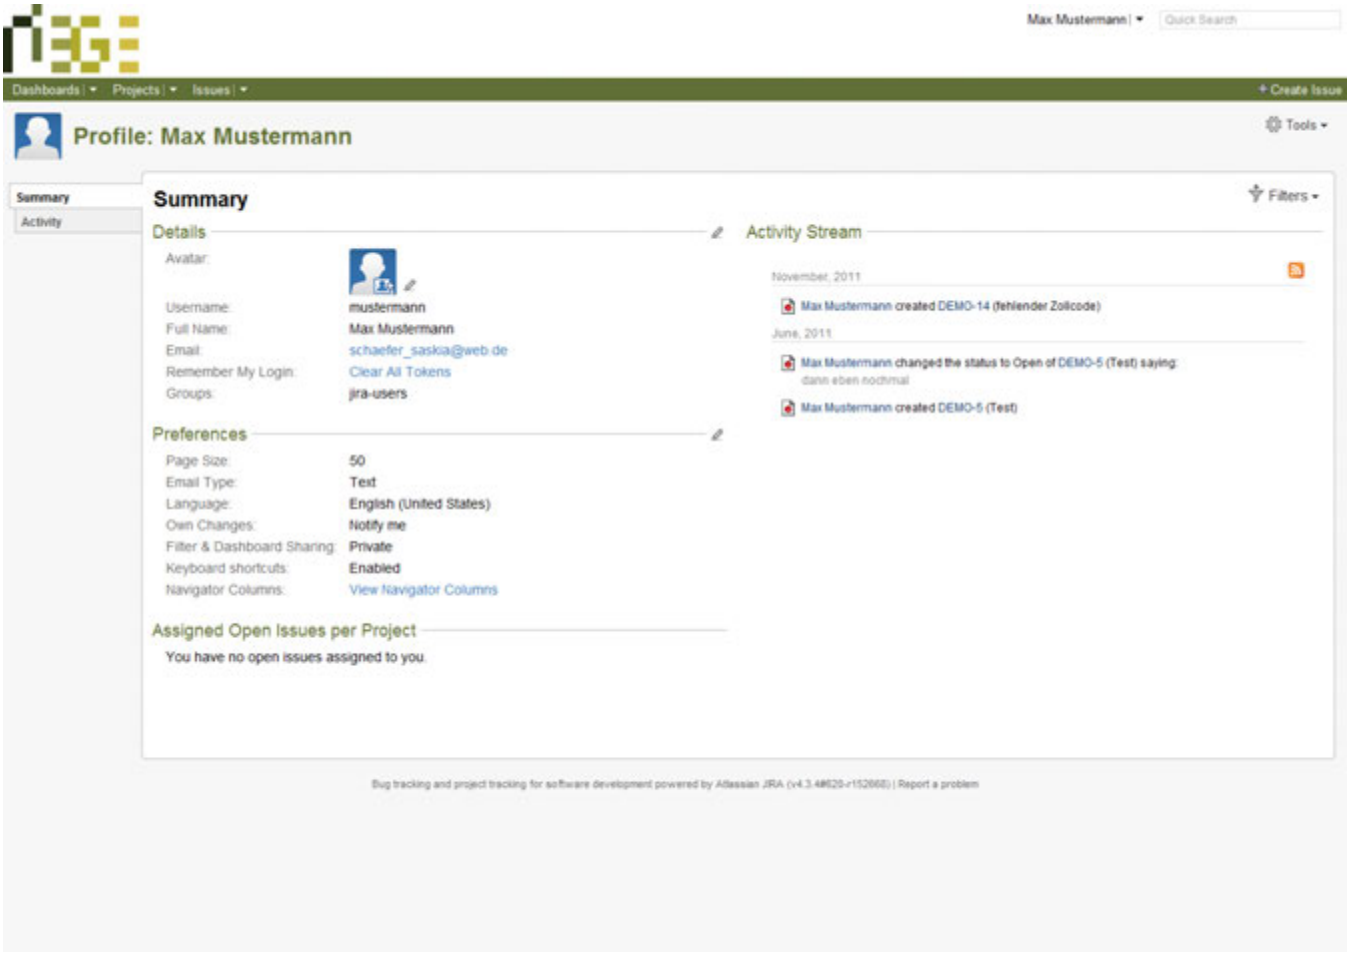
User Profile - Ticket System

- Introduction
- Description

Introduction

The user profile lists the preferences and user details. Some options - for example the language for the Jira web-interface - can directly be changed by the user itself.

Description



Details

Within the details, the user can change his username, email address and password. There is also an option to upload an avatar. Additionally all the groups are listed of which the user is part of. Usually this is limited to the customer group.

Preferences

In the preferences, the user can change the standard user configuration, for example changing the language from English to German (Default: English).

Assigned Open Issues per Project

Similar to "Assigned to me" on the dashboard.

Activity Stream

Shows the last activities of the user in Jira.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

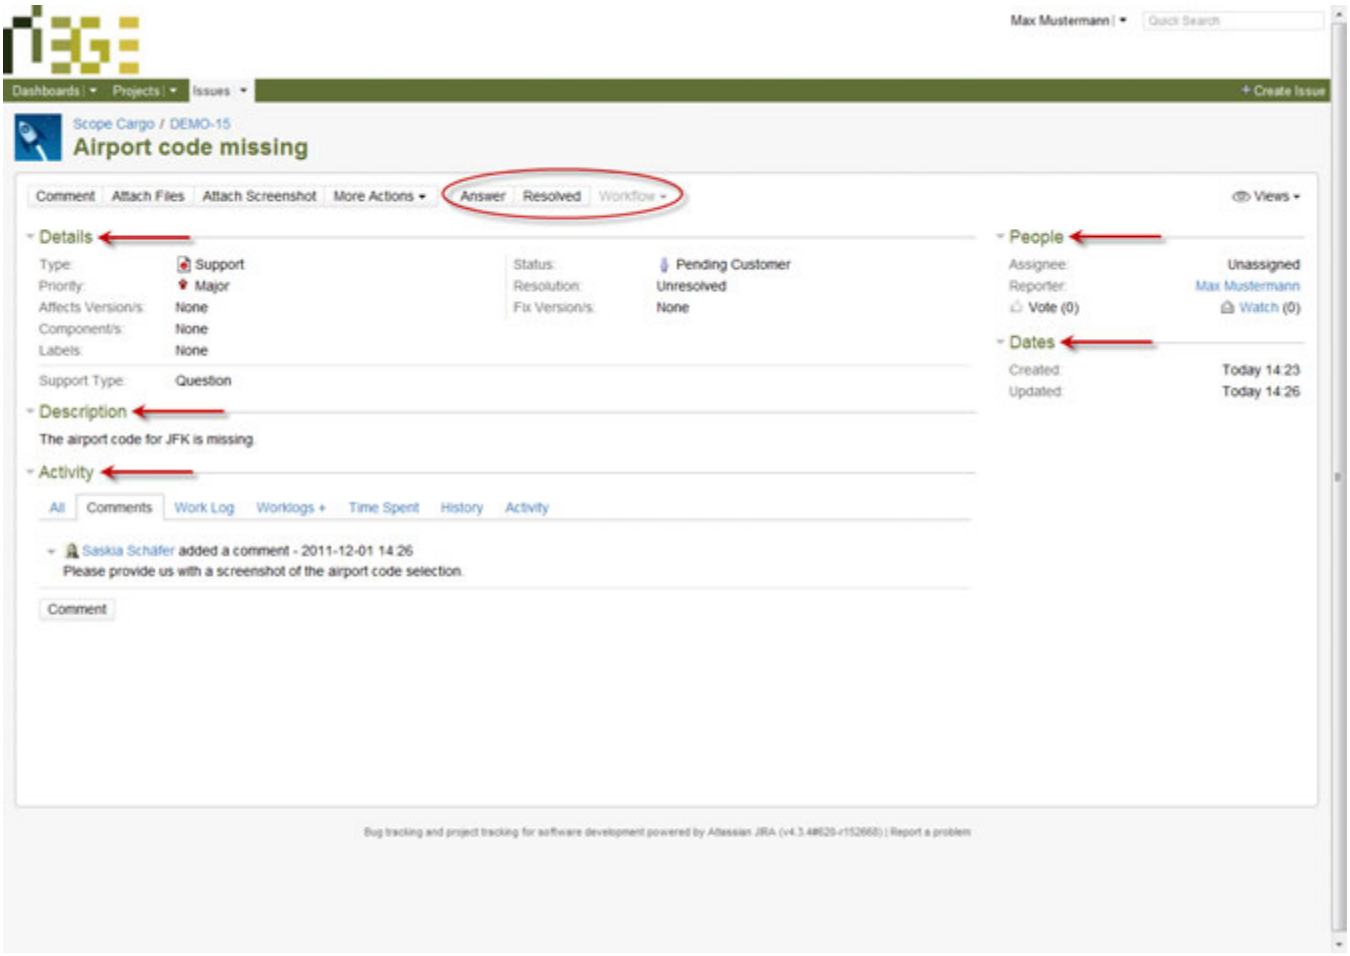
View Issue - Ticket System

- Introduction
- Description

Introduction

The issue view provides a detailed overview on the actual state of an issue.

Description



Details

- Type - The issue type (support, service, change request)
- Priority - The priority (cosmetic, minor, major, critical, blocker)
- Affects Version/s - Only for bugs, displays the active version when the customer reported the bug
- Component/s - The affected component in Scope (e.g. Air, Sea, Forms)
- Status - The actual status of the issue:
    - New - The issue has been created recently
    - In Progress - The issue is in progress
    - Pending Customer - The support has requested additional information and is waiting for a response of the customer
    - Resolved - The issue has been solved successfully
- Resolution - How has the issue been solved:
    - Fixed - The problem has been solved and won't occur again when the fix version is deployed to the customer
    - Won't fix - The problem won't be solved.
    - Duplication - The problem is a duplicate of an existing issue
    - Incomplete The problem is not completely described
    - Working as intended - The problem is not really a problem
    - Cannot reproduce - All attempts at reproducing this issue failed or not enough information was available to reproduce the issue.
    - Invalid - The problem described an issue which is invalid.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

    - Completed - Development work for this change request is done and will be available when the fix version is deployed to the customer.
- Fix Version/s - The Scope version for which the issue has been solved or the change request is available.

People

- Assignee - The Riege support team member or user who is working on this issue
- Reporter - The user who created the issue
- Watch - The user can decide to watch an issue without being assignee or reporter and will get according notifications.
- Vote - not in use

Dates

- Created - When has the issue been created
- Updated - When the last activity on the issue has taken place (comment, change of status, ...)

Description

View of the detailed description of the issue

Activity

- Comments - Detailed view of the comments
- Work Log - Time spent on the issue
- History - Changes of this issue
- Activity - Overview of the dates when activities have been undertaken on this issue
- All - Main overview of all activities, changes, work and comments on this issue

Workflow

The red marked area contains two buttons. Pressing one of them changes the status of the issue.

- Answer - In the window that follows when pressing the button, the user can answer to questions of the support team. The issue then automatically will have the status "In Progress" and the support team will get notified.
- Resolved - In case the issue has been resolved in the meantime (e.g. has been clarified on the phone), the issue can be set to resolved.

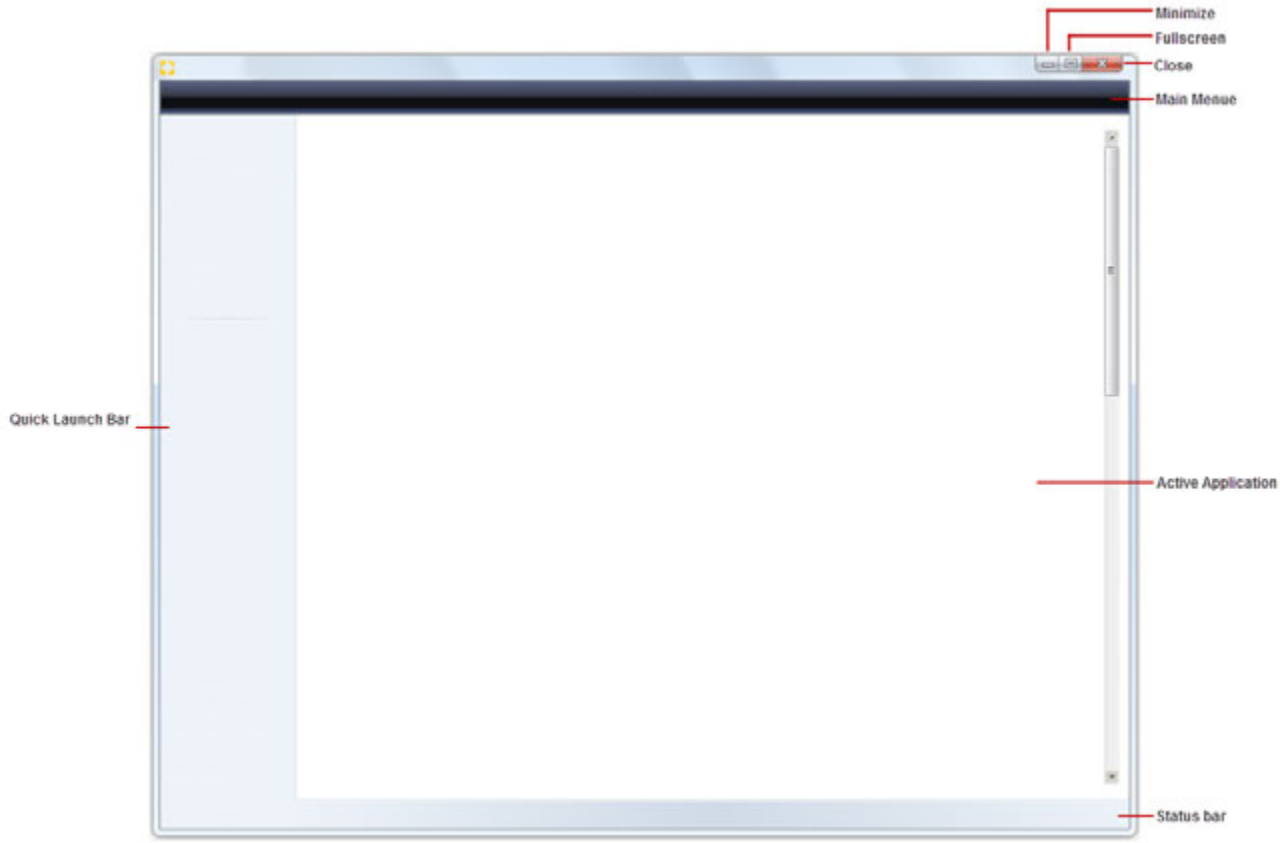
User Interface

- Introduction
- Description

Introduction

The Scope interface enables fast and efficient workflow via a logical and clear structure which assures intuitive handling.

Description



Scope The user interface consists of the following basic elements.

Minimize

Minimizes the application window in the taskbar.

Full screen

Maximizes the application window to full screen mode.

Close

Closes the application window and terminating the application.

Main Menu Bar

Global actions, program actions and quick search are found on the menu bar.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Quick Access Toolbar

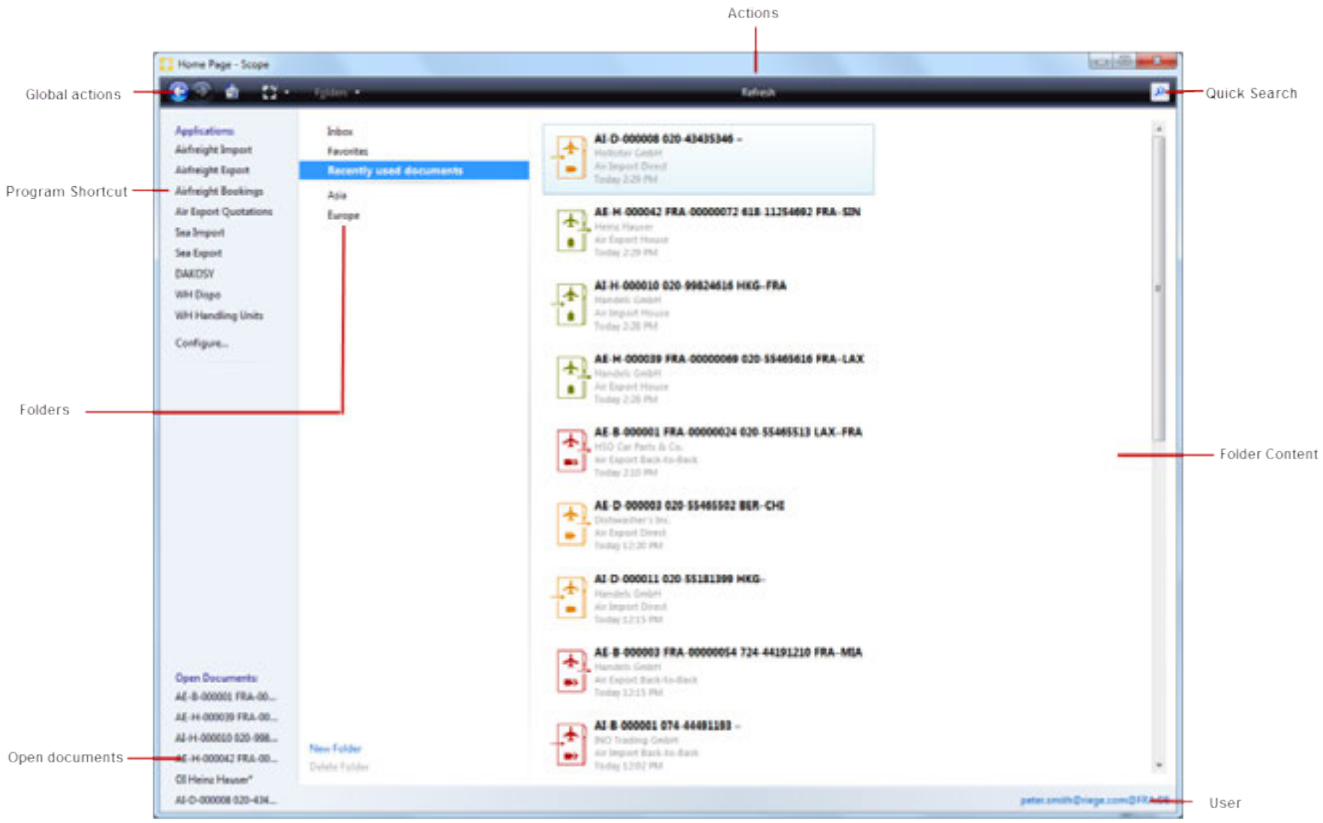
This toolbar on the left of the screen offers quick-access to the most important applications as well as currently open documents.

Active application

This is the work area. The active applications are loaded in this area.

Status bar

Information such as current username, validation reports and errors. Depending on the properties of elements, a left click can be used to perform further actions.



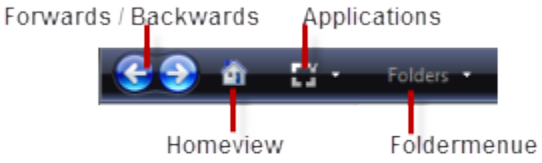
After login the Scope Home screen is opened. This allows navigation within scope, offers quick access to key applications and displays open documents available folders. The Quick Access toolbar and status bar are also always available when further applications are loaded.

Program Actions

These will vary depending on the active application being displayed. Individual program actions are explained in detail in the descriptions of each application.

Global Action

Global actions are independent of the currently active scope application.



Forwards/Reverse

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

These buttons are modeled on those found in a web browser. They allow scrolling forward and backward between the used applications and documents.

Home

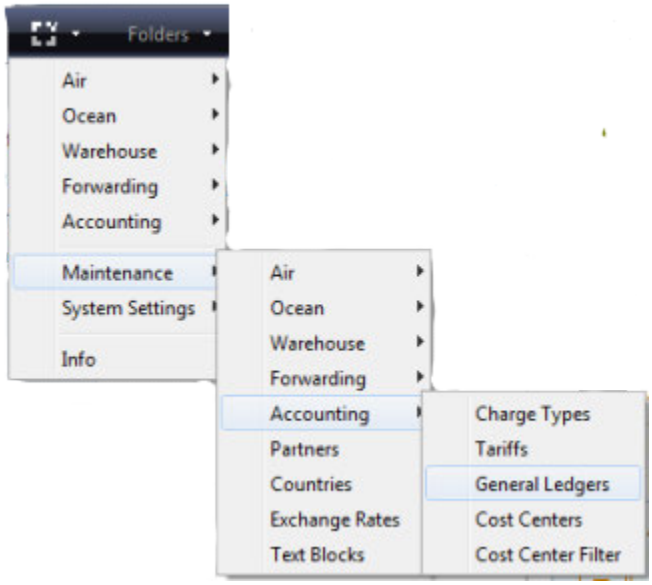
As found in a Web browser, reload of the home page within Scope, regardless of the current application being used.

Folder Menu

Add documents to a specific folder or sending to the Inbox folder of another user.

Scope Applications

This button displays the entire scope application menu. The various applications are arranged by topic each has a sub-menu. Clicking a menu item will open the desired application.



Quick search

Global Quick Search allows you to quickly locate the desired information.

Quick access

Quick access bar to the 7 most important scope-applications.

Folders pane

In addition to the System folder

- Inbox
- Favorites
- Recent Documents
  A left click will provide " New Folder "and" Delete Folder "your own folders to be created or deleted. (The System folder can not be deleted.)

Folder contents

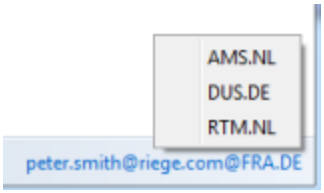
Contents of the selected folders are displayed, which the selected folder. The default is to display the contents of the "recently used" folder.

Open document

This area shows the currently open documents. By clicking on the desired document, it is reloaded as the active application.

User

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Clicking on the user name produces a list of available organizational units. Clicking on the desired entry will switch to that organizational unit (switch to a different branch).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

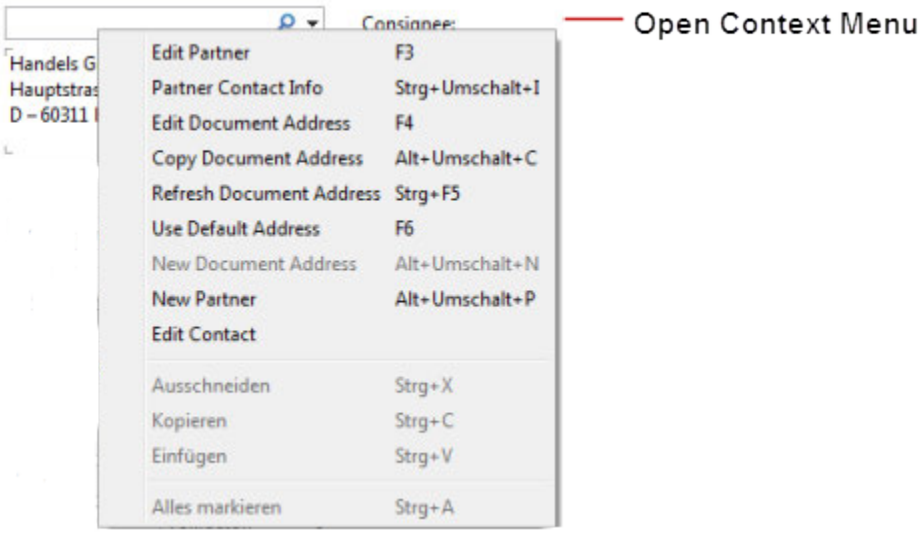
Context menus - User desktop - General

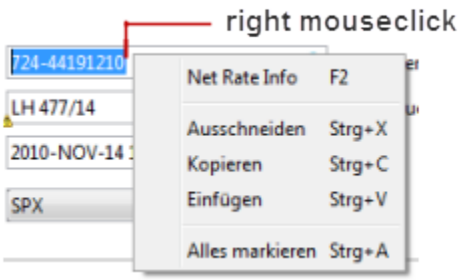
- Introduction
- Description

Introduction

Virtually all data fields have context menus. Depending on the type of data field this allows access to additional functions particular to the type of field.

Description





Depending on the type of field data, a pop up menu can be summoned the drop-down button and / or by right clicking.

Standard Features

Cut

Removes the selected text from the field and store it in the clipboard.

Copy

Copies the selected text to the clipboard.

Insert

Insert a stored text from the clipboard.

Select All

Selects the entire text in the current field.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Special features

Edit business partner

Edit address

Update address

Use default address

New one-time address

New business partner

Edit contact partner

Address validation

Next delivery address

Delivery address

Edit dimensions

Total volume sync with dimensions

Synchronize total data with dimensions

Net Rate Info

text blocks ...

Insert references

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Field types - User desktop - General

- Introduction
- Description

Introduction

Scope utilizes various field types that allow different types of data to be entered. Depending on the data to be entered the field can have special properties and functions. This simplifies data collection and prevents incorrect entries and data inconsistencies.

Description

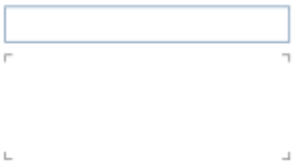
Search field

Allows quick and easy location of the desired information. Immediatly after entering the first character in a search field, the application begins filtering for matching data. As further characters are entered the search becomes more specific.

Date and Time field

Requires a date and time to be entered.

Business partner field



These fields assist with searching for or entering and processing a business partner and the partners addresses. These fields offer the full text search function.

Weight field

Is used to record net, gross weight or volume (chargeable weight).

Volume factor- and volume fields

For input of the Volume factor and the Volume of the package.

Flight data field

Formatted for the entry of flight number and flight date .

Dropdown field

Provides a list of values available which may be used in the field. Example are movement type or Incoterms).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Monetary field

Allows input of funds including the associated currency code. If no specific currency code is entered, the system will automatically use the local currency.

Currency and Rate field

A currency field is normally associated with a currency rate field. A currency field will default to the local currency, but the code or name or part thereof of a different currency may be entered to search for different currencies. If a foreign currency is selected the application will try to use the maintained exchange rates to automatically determine the correct rate for the currency selected. This may be over-written if required.

Text field

For entering texts. The text length can depending on the intended use of the text field. Using the integrated context menu, complete Text blocks , or existing references can be inserted into text fields.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

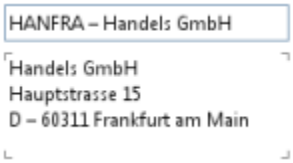
Business partner - Field types - User desktop - General

- Introduction
- Description

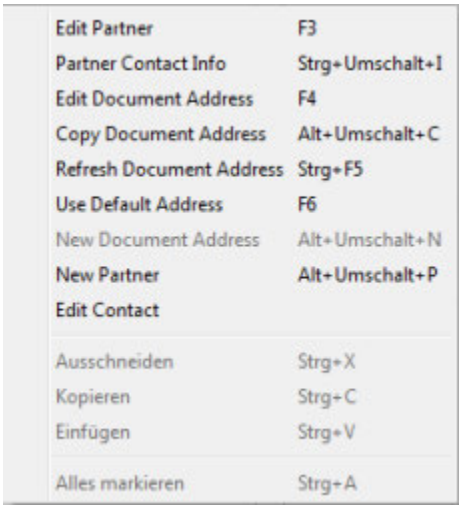
Introduction

All business partner fields in scope offer a full text search This is to enable fast search for the desired business partner and to easily insert this partner in the field. In addition, a context menu is available which provides various functions such as the creation of a new partner or a compliance check of the address can be performed. Partner can be easily found, or changed using this tool.

Description



The desired business partner can be found and inserted using the full text search .



The context menu of the field allows the creation of a new partner or the modification of an existing partner's data. This can be done with the drop down context menu or the function keys when the focus is on the partner field.

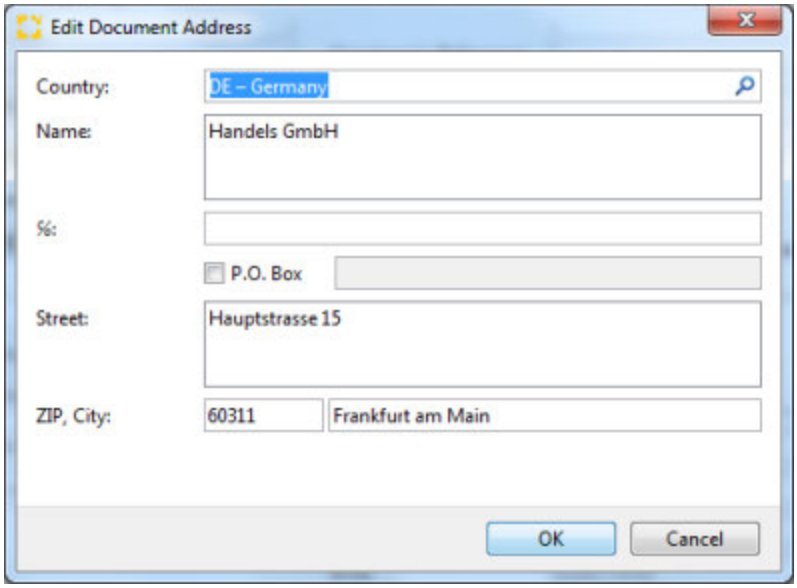
Edit partner (F3)

Opens the business partner editor , where the partner can be edited.

Edit address (F4)

Opens an editor to change the address only as it appear on the documentation. The changes made here only recorded in the current shipment. The original master data of the partners is not changed.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Copy address (Alt+shift+C)

Copies the address to the clipboard of the local computer. The address can then be pasted into any other text field or external application .

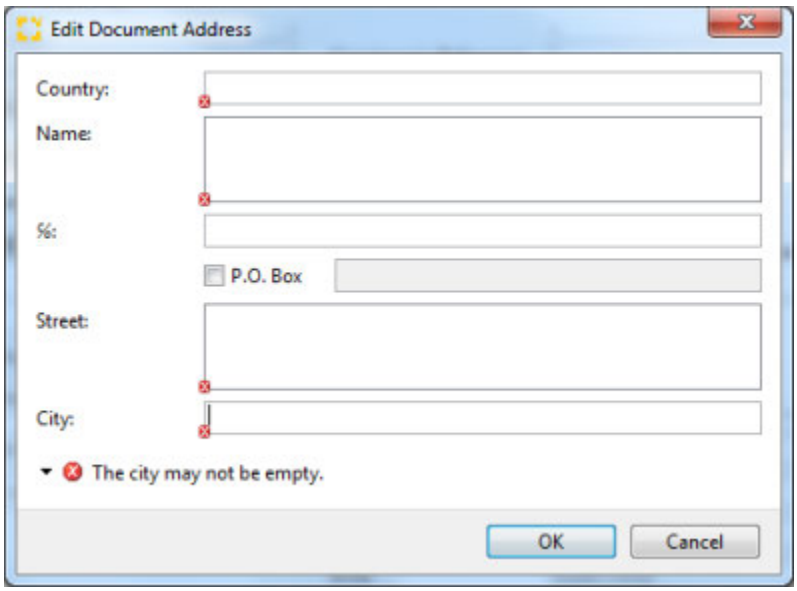
Refresh document address (Ctrl+F5)

Updates the address from the master address data.

Use default address (F6)

Sets address to the default address for the field stored in the master address data.

New document address (Alt+Shift+N)



Open a new blank address window in which a new disposable address (for single use) can be created. This address is only stored for the current program and **not** in the master address data.

New partner (Alt+Shift+P)

Opens the master address editor and allows a new partner address to be entered.

Compliance check

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Performs an address compliance check .

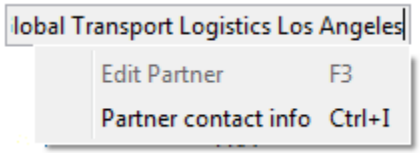
Edit contact

Opens a window where a new contact and details can be entered for this shipment.

Agents fields

Agent fields are used exclusively for import agents, export agents, export and import gateways.

The desired agent address can be found using the {search function | Full Text Search - Field Types - User Interface] of the field.



The context menu of an agent field enables:

- The agent details may be edited.
- The contact information associated with the agent may be viewed.

Behavior of the agent field

The agents available in the agent field will depend on the departure or destination ports stored against the partner in the agent role. The agent field will behave as follows:

Condition	Behaviour
• **No** departure or arrival recorded	• **All** business partner role which the agent will have assigned for selection • **the** agent is not used automatically
• Departure or arrival recorded • only one partner is the role of agent with this departure or destination assigned	• This business partner is automatically the agent used
• Departure or arrival recorded • **several** business partners , the role of agent with this departure or destination assigned	• These business partners are offered for selection • the agent is not used automatically
• Departure or arrival recorded • any business partner is the role of agent with this departure or destination assigned	• **No** partner is offered to selected • the agent is not used automatically
• Departure or arrival recorded • Routing agent profile in forwarding client for the receiver and the destination defined • only in air and sea freight export	• defined agent is automatically used (regardless of the rules above)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Customer - Field types - User desktop - General

- Introduction
- Description

Introduction

The customer is the party, which gives the order for the business regardless of the incoterms and the movement. The field "customer" is used to identify the corresponding tariffs and activity types, but also to select the corresponding invoice receiver.

Description

Depending on the shipment type (Export or Import), incoterms and movement the default of the customer and invoice receiver will be set as well as the charge codes from the activity types and tariffs inserted as follows:

Export shipments

Orderer, invoice receiver and tariffs

With release 4.0 there is a new option in tariff and activity types maintenance to define additionally for the customer the corresponding "Customer's Tariff to" to involve the shipper or consignee. The system first checks the existence of a tariff and activity type with the corresponding customer and "tariff to" partner, in second priority it will check for a customer tariff without a "tariff to" partner and in third priority it will check for general tariffs and activity types.

Example:

Air Export shipment - House shipment incoterm CC: the customer is set per default by the consignee entry. The order of the main transport was given by the import agent though. So the user changes the value of the customer to the corresponding import agent. For collect charges the system first checks for the activity type and tariffs maintained with the equal customer (= import agent in this case) + "tariff to" = consignee. A check for the customer without the "tariff to" does not occur unless the customer is the consignee!

Overview of default values

Default Customer

Shipment typs	Incoterms	Default customer
House	PP	Shipper
House	CC	Consignee
House	CP	Consignee
Direct	PP	Shipper
Direct	CC	Consignee
Master	PP	Import-Agent

Default invoice receiver per Charge-Type

Freight	Charge-Type Incoterm	Invoice receiver
Prepaid	Prepaid	Customer Exception: customer is the import agent or consignee, then shipper
Prepaid	Collect Theoretical case	Import Agent

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Collect	Prepaid	Customer Exception: customer is the import agent or consignee, then shipper
Collect	Collect	Import Agent

Partner for Activity types and tariffs

Freight	Charge-Type Incoterm	Movement Scope	Tariff-Customer	Tarif-Customer's *Tariff to*
Prepaid	Prepaid	Door2... or Port2...	Customer	Shipper
Prepaid	Collect Theoretical case	Door2... or Port2...	Consignee For the system the meaning of the party, which ordered the main transport, can not be clearly defined. Due to the fact, that the collect charges are not related to the freight handling, the customer of the shipment is mostly not the customer of the collect charges. Therefore the consignee is used.	–
Collect	Prepaid	Port2...	Shipper For the system the meaning of the party, which ordered the main transport, can not be clearly defined. As the main-transport consists of *from port* and the prepaid charges are not related to the freight handling, the customer of this shipment is mostly not the customer of the prepaid charges (Addition: follow-up order by shipper). Therefore the shipper is used.	–
Collect	Prepaid	Door2...	Customer For the system the meaning of the party, which ordered the main transport, can not be clearly defined. As the order is by *from door* and therefore the pre-carriage as well as the main carriage is ordered by the customer, the customer is used.	Consignee
Collect	Collect	Door2... or Port2...	Customer	Consignee

For **Mastershipments** no partner-depended tariffs are used at the moment.

Import-Shipments

Customer, Invoice receiver and Tariffs

For import shipments the focus is based on the follow-up transport as the main transport is already done by the export department.

In Import the customer is always the invoice receiver, which will be defaulted by incoterms and movement of the shipment as follows:

Incoterms	Movement	Default customer and invoice receiver	Activity type and tariff to
Collect	X to door	Consignee	Customer (if necessary with link to the consignee)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Collect	X to port	Consignee	Customer (if necessary with link to the consignee)
Prepaid	X to port	Consignee	Customer (if necessary with link to the consignee)
Prepaid	X to door	Export Agent	Customer (if necessary with link to the shipper)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Date and time - Field types - User desktop - General

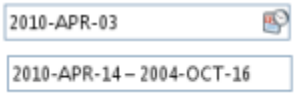
- Introduction
- Description

Introduction

Scope fields that accepts dates and times are designed to make input of this kind of information as quick and accurate as possible.

Description

Date- and time fields



The date field *date[time]* are marked by a date symbol on the right edge of the field. In addition, date fields are also available as *date range* in which a range of dates (including time) of / can be entered. Date and time can be entered in several ways.

Examples:

To enter date 11 May 2010 and the time 10:15 a.m. the following methods could be used (the time is not obligatory):

- 110510 10:15
- 11.05.10 10:15
- 11052010 10:15
- 11.05.2010 10:15
- 2010-May-11 10:15

The date can also be entered in relation to the current date:

- 0 = today
- +1 = tomorrow
- -1 = yesterday
- + 14 = 14 days from today
- - 10 = 10 days prior to current date

The time can also be include in the above options by using a blank space after the codes shown above and then the time (+1 10:15):

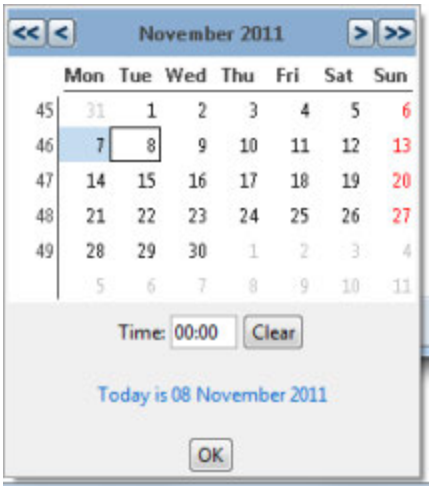
Relative day specifications

In some applications relative days are used. For weekly recurring events (eg, in a flight plan) the indication of an absolute date would be very complicated. In these cases a date can be set relative to the date and time of the event. For example the deadline (last possible date) for an air freight export delivery is 17:00 hours the day before the flight departs, this is relative to the flight date as **-1**.

- 0 or empty = day of the event
- 1 = day after the event
- 2 = 2 days after the event
- 3 = 3 days after the event
- 4 .... etc.
- -1 = the day before the event
- -2 = 2 days before the event
- -3 = 3 days before the event
- -4 .... etc.

Calendar

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Input can also be done using the calendar application. Click on the calendar icon to open it. Here the desired day and time can be selected.

None

An existing time specification is removed. (The time does not necessarily have to be entered)

OK

The calendar application is closed and the selected data is copied into the current field of the main application.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Flight data - Field types - User desktop - General

- Introduction
- Description

Introduction

The entry of flight data is simplified using the flight data entry fields available in the cargo applications. The format of flight data is the airline code, flight number and flight date in accordance with applicable IATA rules. Flight data fields therefore require this information to ensure accurate capture of flight data. This simplifies the entry and reduces errors and data inconsistencies. The entry of multi-leg flight information is also supported with a separate flight data editor.

Description

Flight data field

The flight data is recorded in the following format:

Airline-Code Flight number/flight date

Example:

Entry: LH4489/15

On exiting the field, the above entry will automatically be formatted a standard flight information shown below:

Result: LH 4489/15

In formatting the data, the following rules apply to this field:

- Airline code can be 2 - 3-digits. For 3 digit codes, the first two digits must be a numeric.
- Flight number may be up to 5 digits. In the case of 5 digits, the last digit must be a letter.
- If the flight number is 3-digits or less, leading zeros are not suppressed. 4-digit flight numbers must not start with a 0.

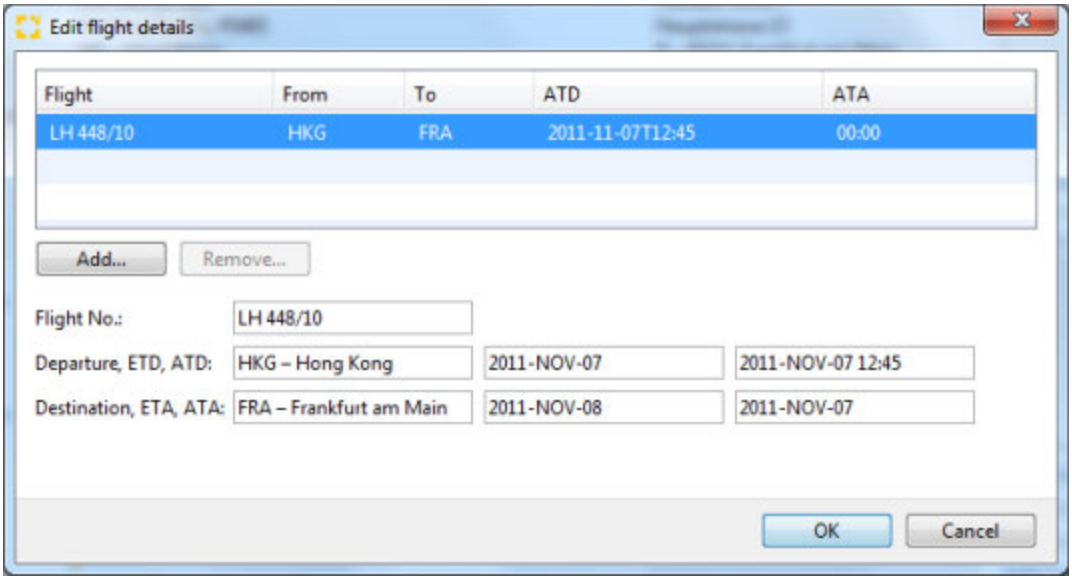
Example:

- DL1 0145/08 is **not** valid.
- 1LH 145/08 is **valid**
- D1H 014/08 is **valid**

Flight data-Editor

Use the context menu or the F3 function key to launch the Flight Data Editor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



New

Add a new flight.

Delete

Deletes the highlighted flight.

Departure, ETD

Airport of departure can be entered directly or airport code can be found via the full-text search full text search and the expected departure date and time may be entered.

Flight number

The flight number of flight for the shipment.

Destination, ETA

Destination airport. The airport code my be entered directly or found via full text search and the expected arrival date and time at the destination airport.

OK

Closes the flight data editor and transfers the data into the application.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Full Text Search - Field Types - User Interface - General

- Introduction
- Description

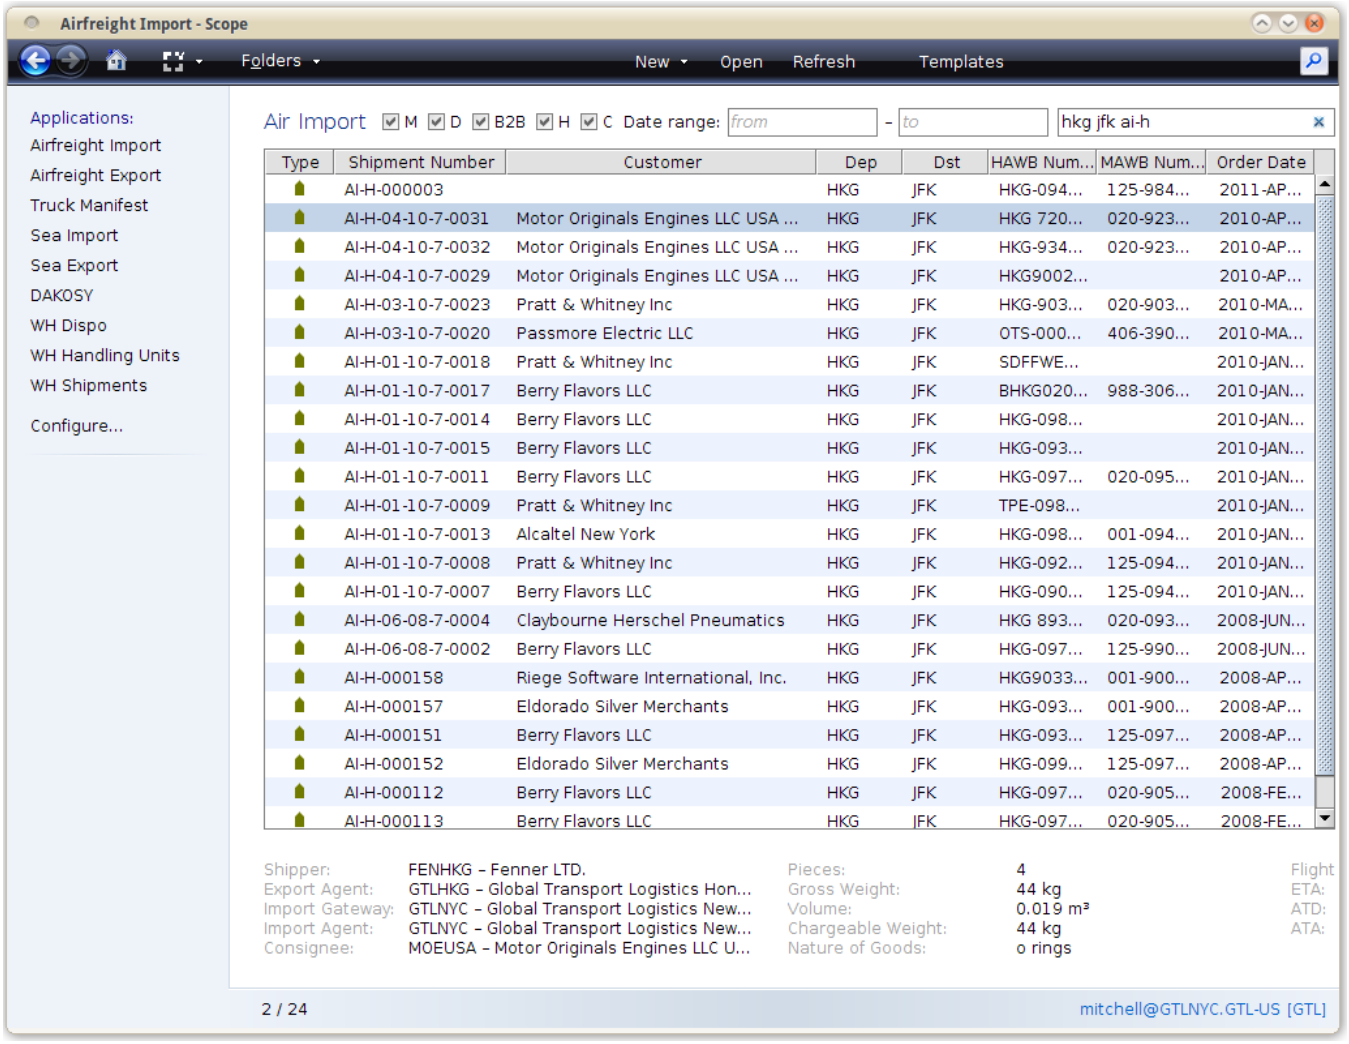
Introduction

Various fields within scope can be used for a full-text search. Results are displayed based on the text entered (similar to the quick search). The more specific the search text, the more specific is the result.

Description

Within the applications there are two types of full-text search fields, both are marked with the  Symbol.

Overview Search



In the summary search, all data in the overview and some other important data of the individual records in the current list were included in the search. As in the quick search it is possible to include more than one search text.

Reset the search box by clicking on the symbol  . All data will now be shown again in the overview.

Example:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- The search text "HKG", "JFK", "AI-H" will find all the items in the current overview which have been transported from HKG (Hong Kong) to JFK (New York) and have been recognized as an air import house shipments.

Search box

In the Search box, all relevant records are searched; partner records will be searched in partner fields while UNLOCODES will be search when in country of origin or destination fields. Similar to the the Quick Find, the search begins again when a search string is entered. Multiple texts can also be entered as a single search.

Example:

Input the search text "hand" in a partner-field and all business partners are found which contain the text "hand" anywhere in the name or the address. Using the multiple search text "hal" "stu", the business partner Haller Handling in Stuttgart will be found. The desired data can then be selected with a click of the mouse and will then appear in the partner field.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Movement Type and Incoterms - Field Types - User Desktop - General

- Introduction
- Description

Introduction

Movement type and Incoterms identify in principle, from where and to where a transport is contracted and who will bear which costs.

Description

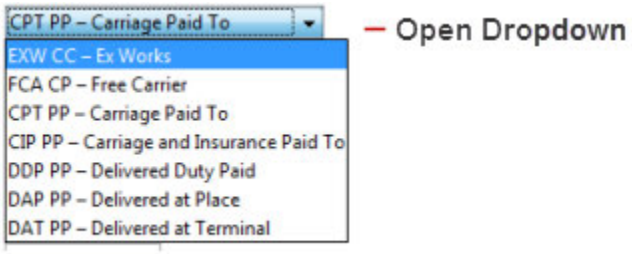
Movement type

The movement type defines the places the transfer order applies to.

The following types are available:

Size of order	Description
DOOR2DOOR	from domicile of the shipper to the domicile of the consignee
DOOR2PORT	from domicile of the shipper to the port / airport of the consignee
PORT2DOOR	from the port / airport of departure to the domicile of the consignee
PORT2PORT	from the port / airport of departure to the port / airport of destination

Incoterms



Incoterms define the transport costs and risk transitions between seller and buyer of a commodity.

The following entries (Incoterms 2000) are available:

- EXW CC - Ex Works
- FCA CP - Free Carrier
- FAS CP - Free Alongside Ship
- FOB CP - Free On Board
- CFR PP - Cost and Freight
- CIF PP - Cost, Isurance and Freight
- CPT PP - Carriage Paid To
- CIP PP - Carriage and Insurance Paid To
- DAF CP - Delivered at Frontier
- DES PP - Delivered ex Ship
- DEQ PP - Delivered Ex Quay
- DDU PP - Delivered Duty Unpaid
- DDP PP - Delivered Duty Paid

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

From 01 January 2011 the new Incoterms 2010 are as follows:

Instead of 13 there are only 11 Incoterms. In addition, some Incoterms are only valid for sea and inland water transport.

Are repealed:

- *DAF CP - Delivered at Frontier*
- *DDU PP - Delivered Duty Unpaid*
- *DEQ PP - Delivered Ex Quay*
- *DES PP - Delivered ex Ship*

Newly added:

- *DAP PP - delivered at place*
- *DAT CP - delivered at terminal*

Incoterms 2010, valid for all modes of transportation:

- EXW CC - ex works
- FCA CP - free carrier
- CPT PP - carriage paid to
- CIP PP - carriage and insurance paid to
- DAT CP - delivered at terminal **(NEW!)**
- DAP PP - delivered at place **(NEW!)**
- DDP PP - delivered duty paid

Incoterms 2010, only valid for sea and inland water transport:

- FAS CP - free alongside ship
- FOB CP - free on board
- CFR PP - cost and freight
- CIF PP - cost, insurance and freight

Delivery Terms

These are derived from the Incoterms in air cargo. They determine which costs are for the sender (backward) or for the recipient (forward) charged. The air freight delivery terms are assigned in the applications according to the Incoterms.

Delivery Terms	Delivery Terms Name	Description
PP	Prepaid	Transport costs are borne by the shipper
CC	Collect	Transport costs are borne by the consignee
CP	Prepaid/Collect	Transport costs are partly borne by the shipper and the consignee

Examples:

Incoterm	Delivery Term	Costs to shipper	Costs to consignee
EXW - ex works (Ex Werk)	CC	*none*	All costs such as collection, handling, freight, customs, etc.
FOB - free on board	CP	Collection, handling and processing at the point of departure	Freight, handling and processing at the destination, customs etc.
DDP - delivered duty paid	PP	All costs such as collection, handling freight, customs, etc.	*none*

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Weight and Volume - Field types - User desktop - General

- Introduction
- Description

Introduction

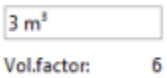
Fields designed to accept only weight and volume are present within the application. These fields allow weight and volumes to be calculated correctly and they simplify data entry and assist with accuracy.

Description

Weight field

Figures entered in weight fields are assumed to be in kilograms (default value) and the figure is completed with the abbreviation "kg". If the number entered is followed by the abbreviation "lb", then the unit of the figure is changed to LBS (British or American pounds).

Volume factor- and Volume field



Similar to the weight field, figures entered are assumed to be cubic meters and the abbreviation "m3" is appended. To change the figure to cubic feet, use the code "CFT" and for cubic inches use the code "CIN".

Volume weight

The volume factor is used to automatically calculate the volume weight. The volume factor of 6 indicates, for example, a weight / volume ratio of 1:6.

Weight / volume ratios (volume factor) in freight forwarding and logistics in general are assumed to use the following values: (variations are possible depending on individual arrangements)

Type of transport	Volume factor	Volume ratio	Calculation
Airfreight	6	1:6	1 m3 = 166.6 kg
Road freight (Truck)	3	1:3	1 m3 = 333.3 kg
Seafreight	1	1:1	1 m3 = 1000 kg
Railway freight	1	1:1	1 m3 = 1000 kg

These values are used within the various applications as a standard-volume factors. Deviations may be defined by business partners in the respective Roles .

Chargeable Weight

To calculate the freight cost, the Chargeable weight is used. It is either gross weight or the volume weight . Depending on which of the two weights is the greater.

Examples:

Type of transport	Gross weight	Volume	Volume weight	Chargeable weight
Airfreight	480 kg	2,6 m3	433,16 kg	480 kg
Airfreight	88 kg	1.2 m3	199.92 kg	199.92 kg
Road freight (Truck)	850 kg	7,2 m3	2388,76 kg	2388,76 kg
Seafreight	22000 kg	18 m3	18000 kg	22000 kg

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Weight, Volume and Dimensions can be captured through detailed packages editors. Depending on the application, the following editors are available:

- Airfreight packages editor - Weight and Volume - Field Types - User desktop - General

The functionality for calculating American or British units of measurement Inch and LBS is currently not consistent. The use of these units of measurement may eventually lead to calculation errors.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Airfreight packages editor - Weight and Volume - Field Types - User desktop - General

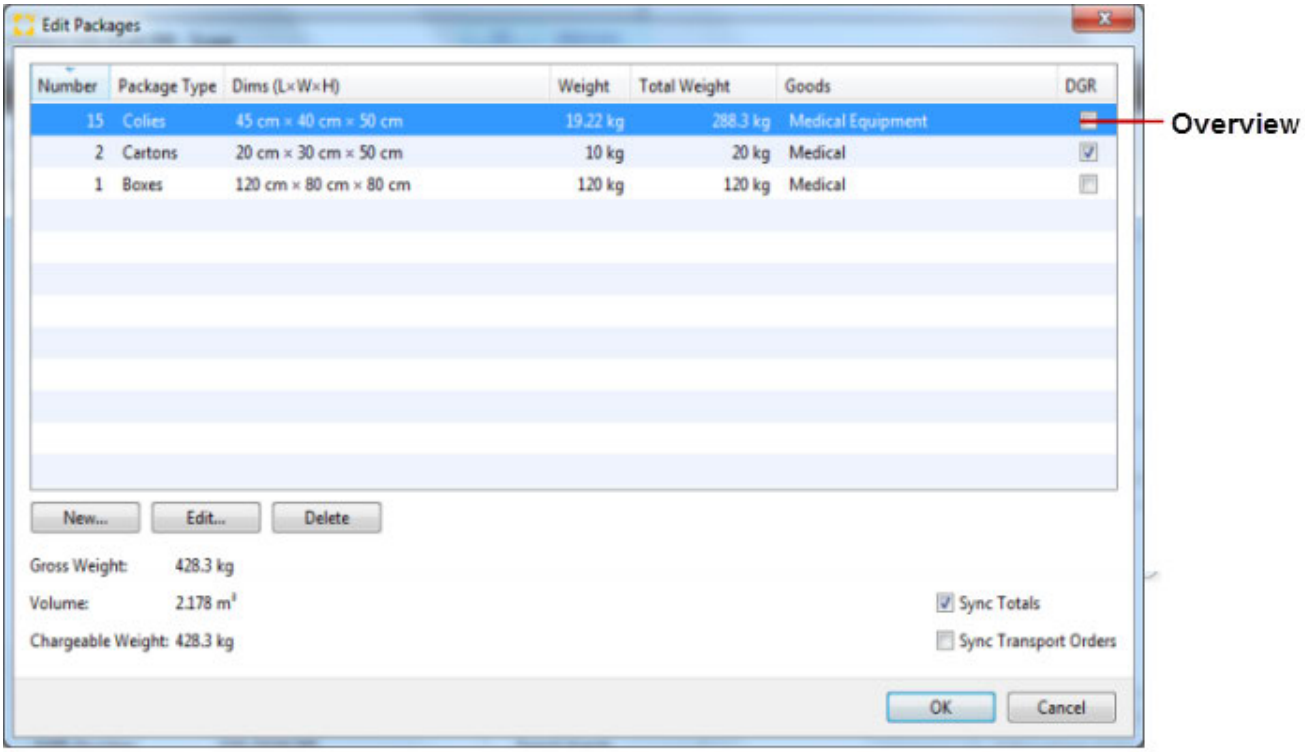
- Introduction
- Description

Introduction

This application enables entry of number, weight, volume and dimensions of packages, or existing entries may be edited. From these details totals can then be calculated.

Description

Packages Editor



The packages editor can be accessed via the context menu entry or with the F3 function key within the field *Number of packages (package)* .

Overview

The summary table shows all existing packages. The number, packaging type, dimensions, weight, total weight, product description and DGR flag are all listed. The DGR flag is enabled if hazardous material information has been entered for a package line.

New

Opens packages line editor to add a new row.

Edit

Opens the item highlighted in the summary table using the packages line editor for editing.

Delete

Deletes the selected row in the table.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Gross weight

Displays the total gross weight of all packages in the overview.

Volume

Displays the total volume of all packages in the overview.

Chargeable weight

Displays the total chargeable weight of all packages in the overview.

Sync totals

This check box is enabled by default and causes the information in the packages editor to be transmitted to the shipment.

Sync Transfer orders

This check box (which is off by default) can be checked to update the information in existing transport orders (collection, transport to the hub) with the total values from the editor packages.

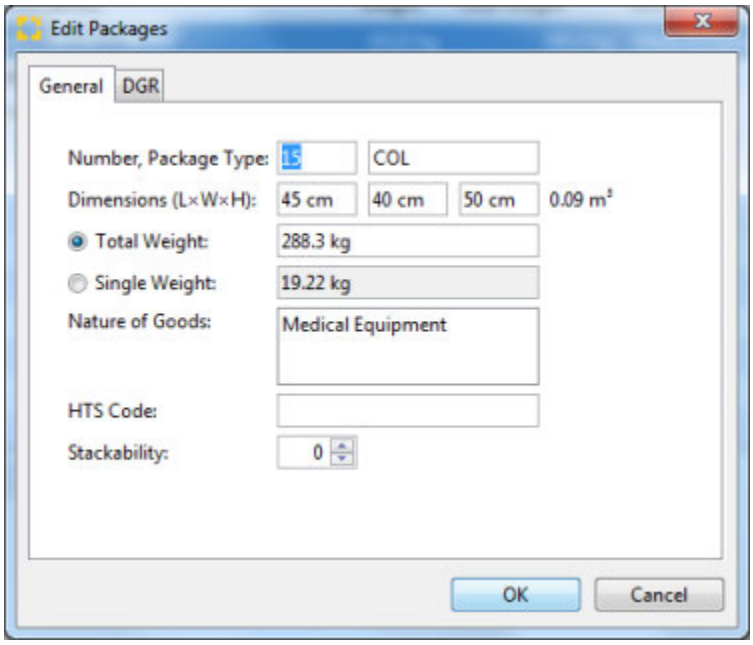
OK

Saves the settings and closes the editor packages.

Cancel

Closes the editor without further action packages.

Packages line editor



Number, package type

The number of packages and the type of packaging .

Dimensions (LxWxH)

Dimensions of a single package. The default unit is "cm" but branches in the USA will default to "in". The default unit can be changed by replacing it with the desired unit. (The figure to the right of the dimensions is the calculated volume of the package is shown in m3.)

Total weight

Total gross weight of all the packages. If the *total weight* option is enabled, the total gross weight divided by the number of packages is used automatically as a single weight.

The default unit is "kg" but branches in the USA will default to "lb". The default unit can be changed by replacing it with the desired unit.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Single weight

Gross weight of a single individual entered piece pack. If the *single weight* option is enabled, the single weight multiplied by the number of packages is used automatically as the total weight.

Nature of goods

The description of goods is normally entered in the shipment editor, if the check box is selected to *adjust totals*. Several different commodity description can be entered as a comma separated values in the *Nature of goods* of the shipment editor.

HTS Code

HTS code of the goods. The HTS code (Harmonized Tariff Schedule) of the goods can be a 6 or 8-digit number

Stackability

The stacking factor of the packages. The *stacking factor* is the number of packages which can be stacked on top of one another without damage.

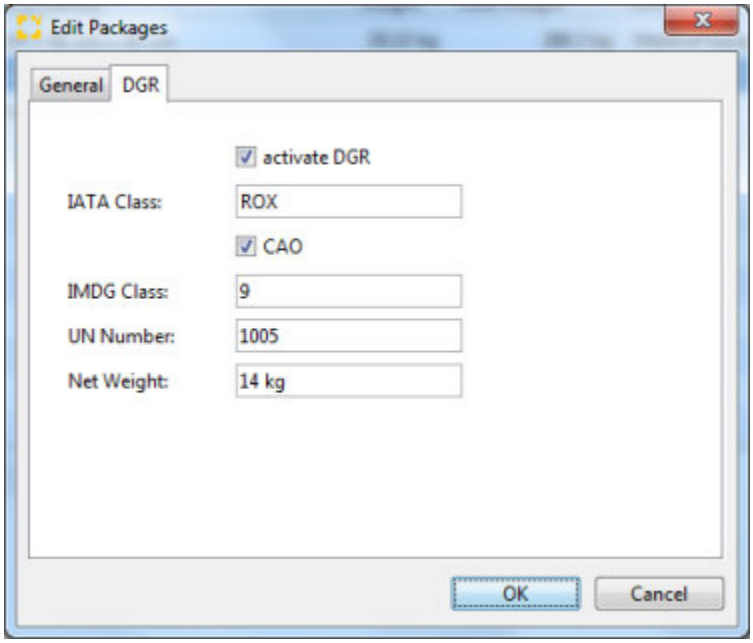
OK

Saves the input and adds the data to the packages line editor.

Cancel

Closes the packages line editor without further action.

Packages line editor - dangerous goods (DGR)



activate dangerous goods

This check box enables the entry of the dangerous goods data (DGR) for the packages.

IATA Class

The IATA class can be found via the search field function.

CAO

Only approved for full cargo aircraft (Cargo Aircraft only). This check box is selected automatically, depending on the IATA class. It can also be activated manually.

IMDG Class

IMDG class according to PED requirements.

UN Number

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

UN number in accordance with PED requirements.

Net weight

Declared net weight of the dangerous goods.

OK

Saves the input and closes the add packages line editor.

Cancel

Closes the add packages line editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

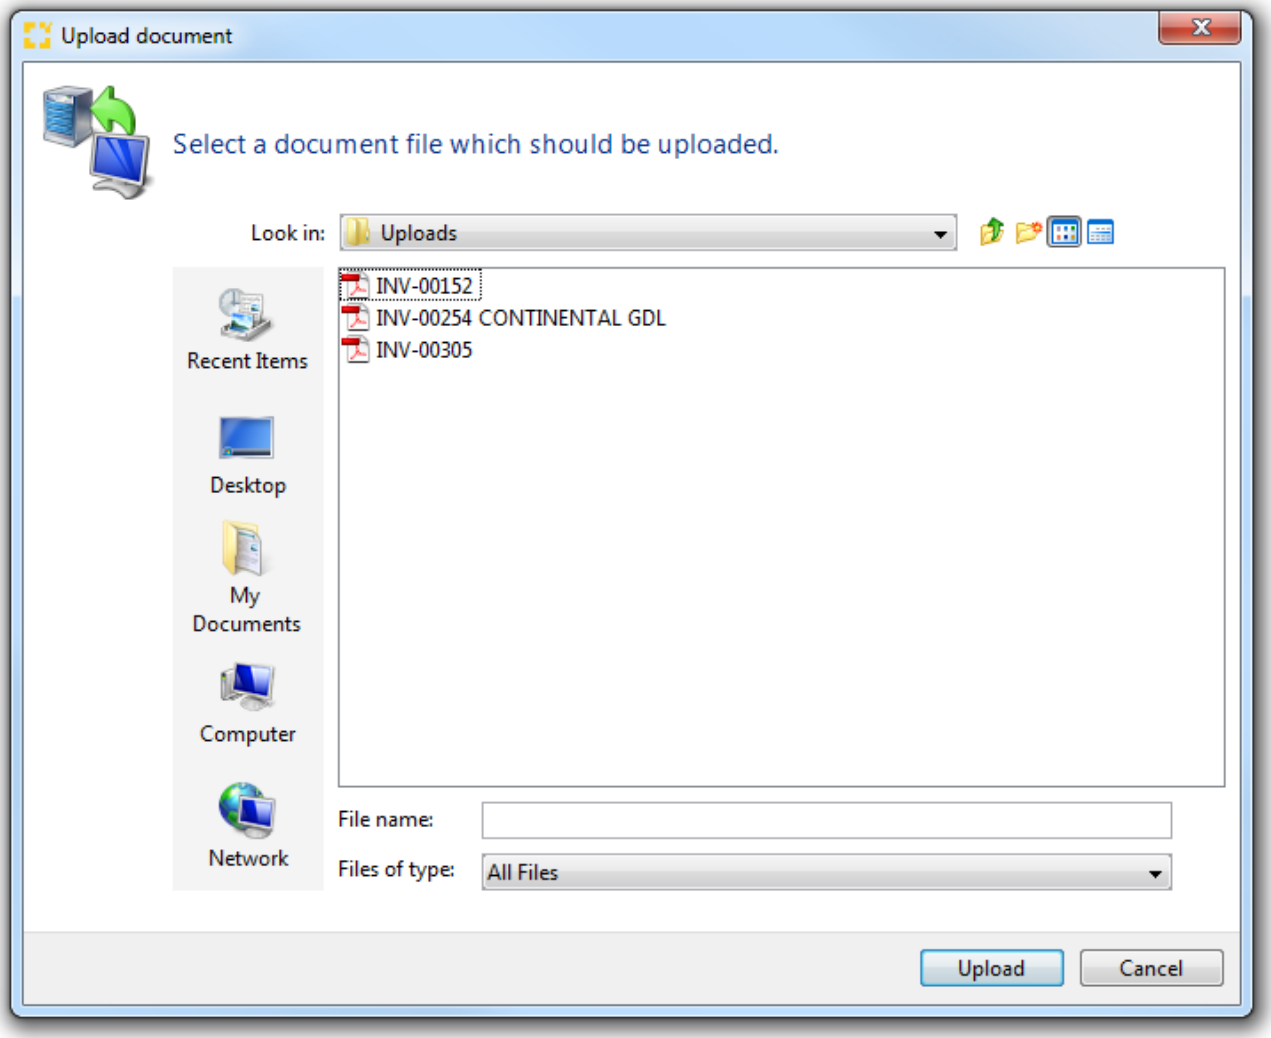
File Browser - User Desktop - General

- Introduction
- Description

Introduction

The main menu bar always displays the quick search. This searches for data based on the text entered in the search field. The more specific the text entered, the more specific the results. In contrast to full-text search in the individual applications, the quick search covers all areas of the system. The results will therefore include items from all areas of the system such as shipments, addresses and documents.

Description



Where a file from the local PC can be uploaded to the application, and action link will normally be provided that launches the file browser. This is used to navigate to the desired file from the local environment that is to be uploaded to the application.

Look in

Displays the name of the current directory with the contents of the directory shown below in the main window.

Main Window

click on directories to open them. Click on files to select them.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Icon Functions

to the right are file browser function icons:

Icon	Description
	moves up one directory
	creates a new directory within the current directory
	display on file names (default)
	display file details names (size and date modified)

Folder - User desktop - General

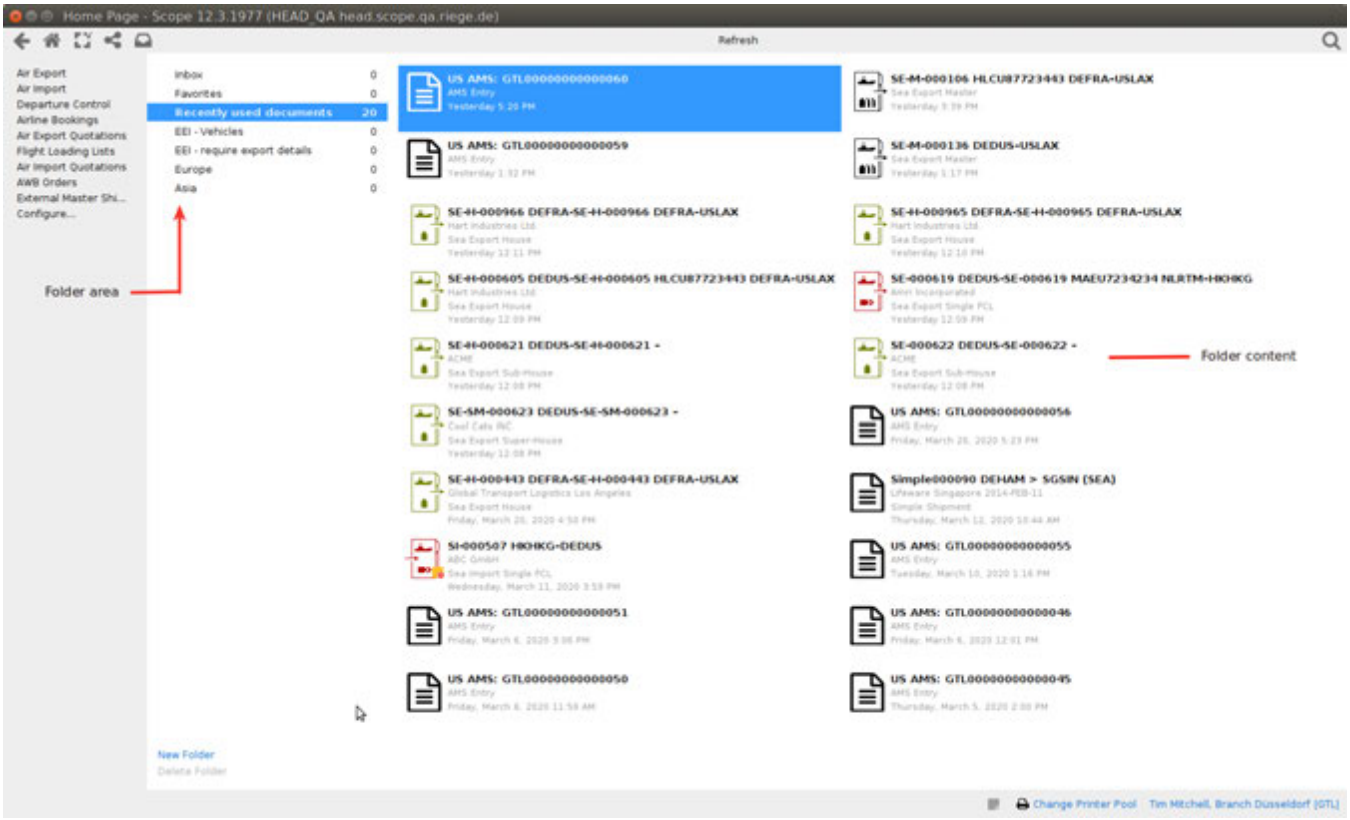
- Introduction
- Description

Introduction

The home page displays the scope folders. In addition to the default folders like *Inbox*, *Favorites* and *Recent used Documents* folder, it is possible for personal folders to be created. Items (shipments, partners) can then be copied to these folders. This allows an optimal organization of the work area and a quick access to important data. It is also possible to put a shipment in the inbox folder of another user who can then process the shipment as required.

Description

It is important to note that the Scope folder concept is not the same as that used in Windows Explorer. Items which are assigned to a folder are there only as a short cut. An item is not physically moved between different folders. If a Shipment is deleted from a folder, the actual shipment is **not** deleted.



Folder

On the home screen, use the *New Folder* option to add folders and use the *Delete Folder* option to delete the highlighted folder.

Folder area

Here, the various folders are displayed. Further information is available in manage folders area below. By clicking on the desired order in the area the *folder contents* are displayed.

folder contents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

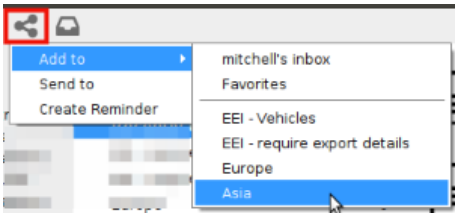
This area displays the contents of the folder.

- Double click the desired shipment or partner to open it in the appropriate editor.
- To remove an item from a folder, highlight the item and use the *delete key* to remove it.

Folder actions

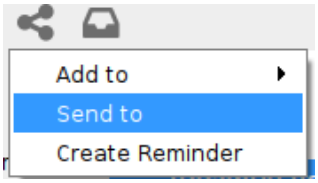
Add to

Use the share icon on the tool bar to This folder action is used to add a marked record (eg a shipment or a partner) to the folder of choice.

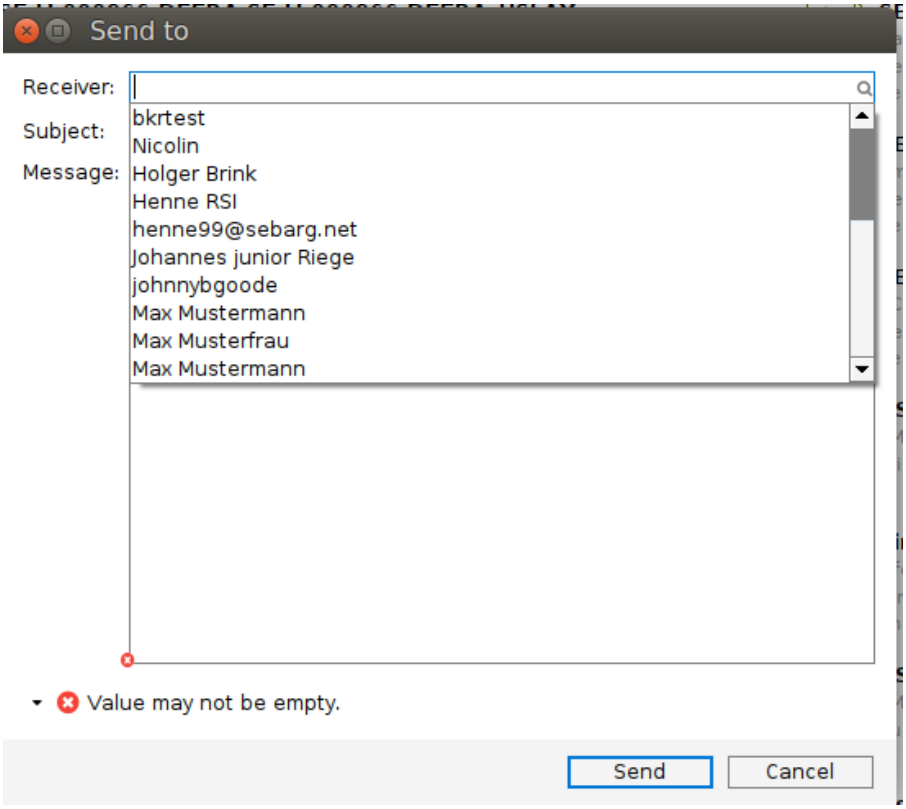


Send to

This action is used to send the currently selected record (eg a shipment or a partner), to the inbox folder of another user. This is mainly used for passing an operation to another user for further editing.



The desired user can be selected from the list of users, or use the keyword search to find the desired user.



Send

Sends the selected document to the Inbox folder of the selected user and assigns it to this user.

Cancellation

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

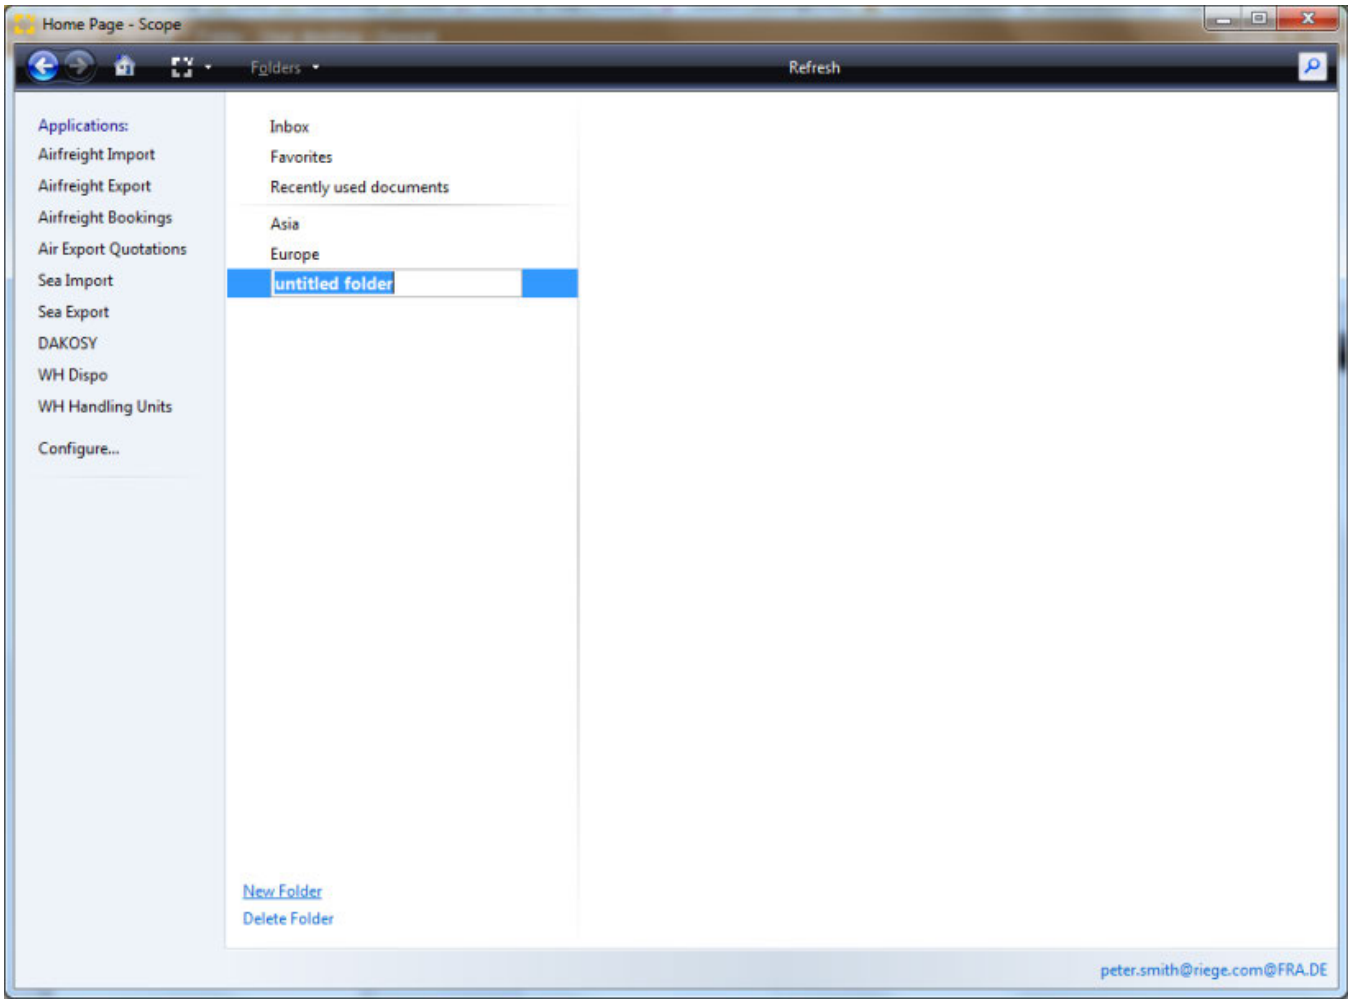
Closes the dialog without further action.

Manage folders area

In the Folders area, there are three system folders

- Inbox
- Favorites
- recent documents

When you load the home page by default the folder displays *Recent Documents* and its contents.



New folder

This action link is used to create a new, user-defined folder.

Rename folders

Double-click the desired folder, the edit mode for the current folder name appears. If desired the folder can be renamed.

Delete folder

This action link is used to delete the selected folder from the folder area, after an appropriate security check has been conducted.

> ⚠ System folders can not be deleted or renamed.

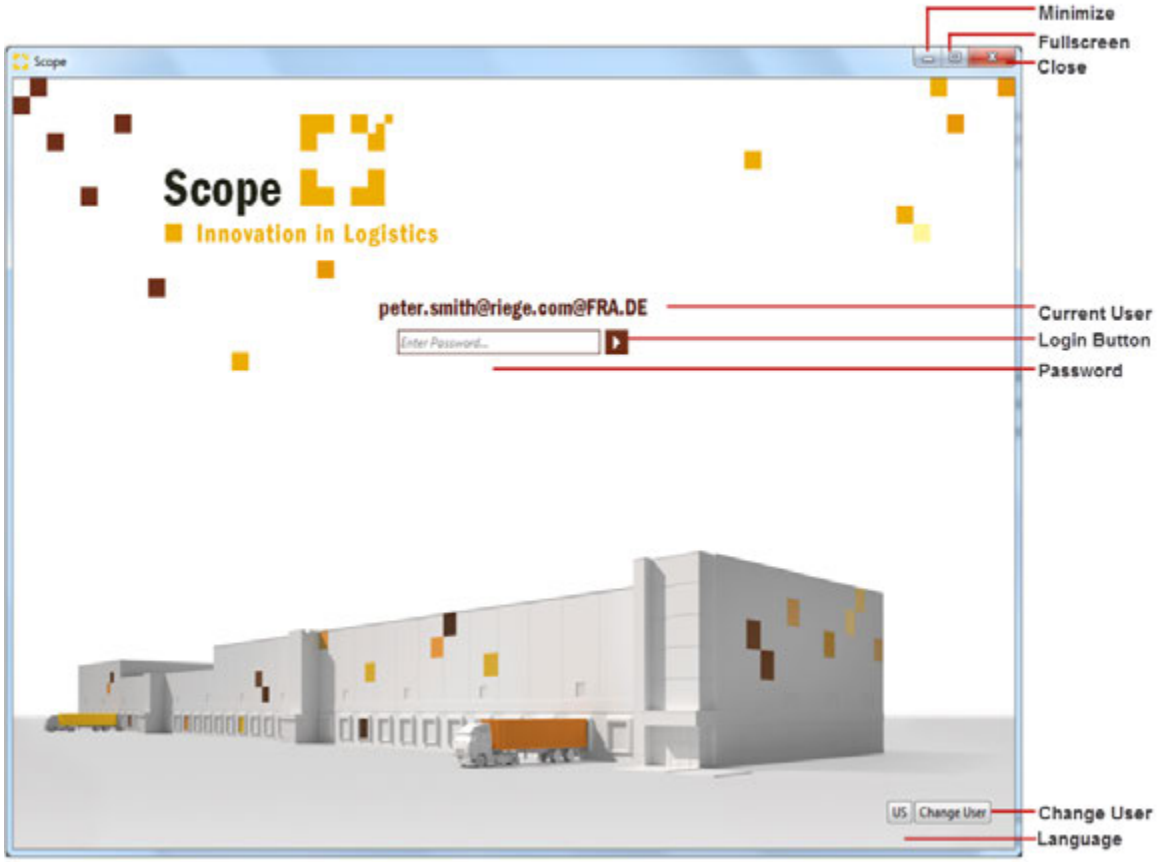
Login screen - User interface - General

- Introduction
- Description

Introduction

The Scope login window allows the selection of language, user and organizational unit. The application will then start with these settings once the user has entered their password.

Description



Minimize

Minimizes the application window in the taskbar.

Fullscreen

Maximizes the application window to full screen mode.

Close

Closes the application window and terminates the application.

Current User

Shows the user who will log in. The user name consists of two parts.

- User's login name

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Organizational unit / login branch.

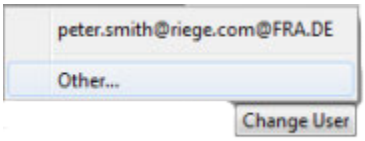
Login

After entering the password, the user logs in by clicking this button.

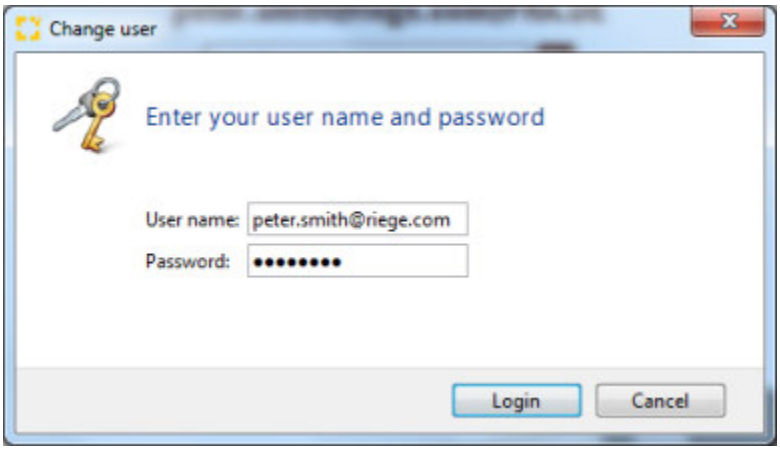
Password

The password for the current user.

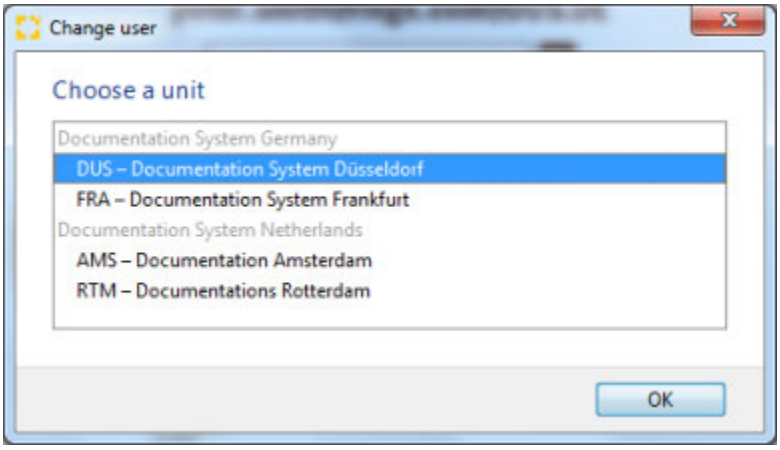
Change User



Displays the last user logged in using this computer. By clicking the **Change User** option the desired user can be selected. The sub-option "Other ..." opens a dialog window to that enables a different user login name to be used.



After entering the user's full name, associated password and click on the "Login" button, another dialog box opens in which the assigned organizational units are displayed.



Here the required organizational unit can be selected and the application will be started by clicking on the "OK". Alternatively, the application may be started by double clicking on the listing.

Language

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Here the desired system language can be selected. (The system language includes the language screen and the keyboard layout.)
Currently available system languages:

- US - English (United States)
- GB - English (United Kingdom)
- DE - German (Germany)
- CH - German (Switzerland)
- AU - English (Australia)
- CN - Chinese (China)
- TW - Chinese (Taiwan)

Other system languages are in preparation.

Keep me signed in (auto login)

The checkbox "Keep me signed in" can be used to log the user directly into Scope, bypassing the user name and password. To unset this option, the user should select the "Configure" option in the left hand menu. Within the "Configure Scope" application, uncheck the "Auto Login Enabled" in the "Settings" tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Change Password Routine

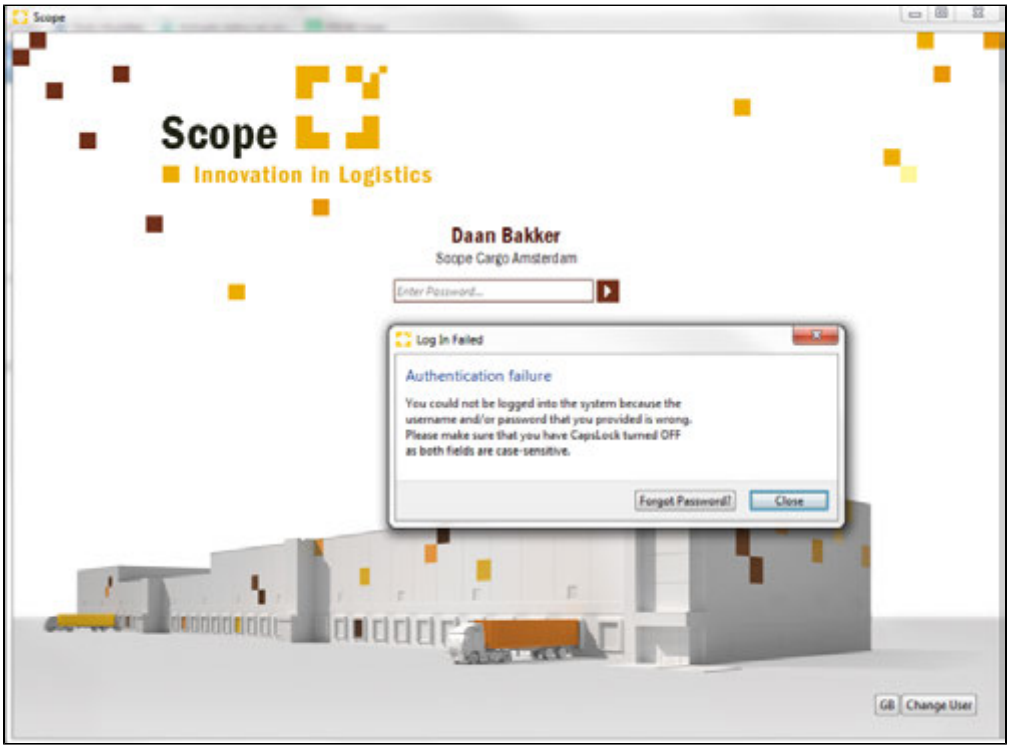
Introduction

This Page describes the routine to be followed by a user to change his/her password and how to reset a forgotten password.

Riege does not create initial passwords for new users. Instead new user accounts are created with an empty password (which prevents the account from being used) and the new user defines his/her password following the lost password routine.

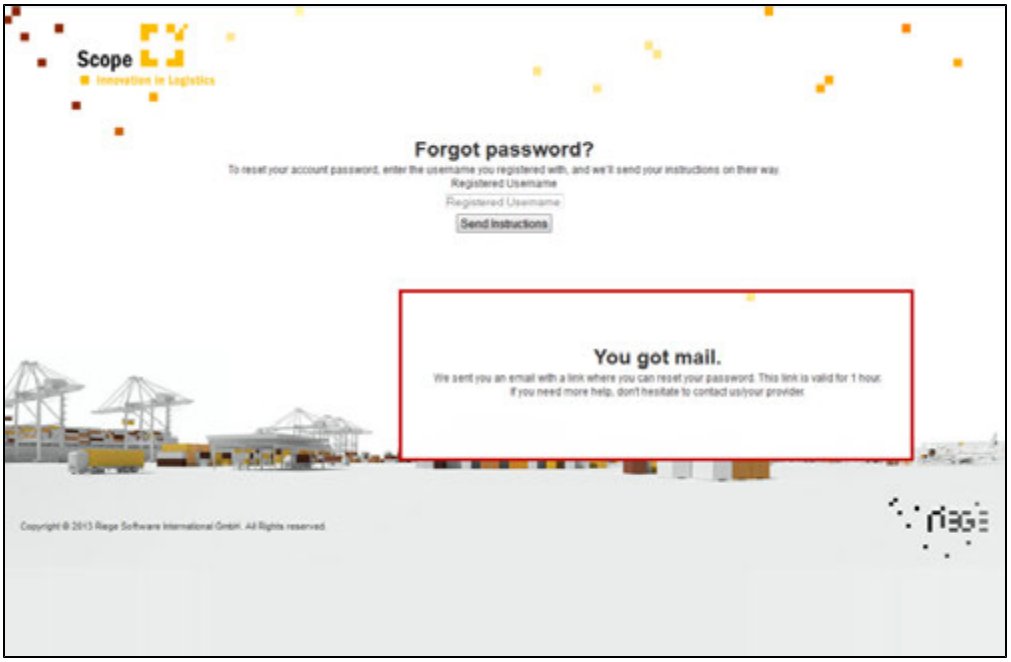
Steps

To Activate the Password routine, start scope as normal but instead of entering your password,
directly use the login action (or enter). In the new dialog choose the option "Forgot password".
Your internet browser will open with a webpage.

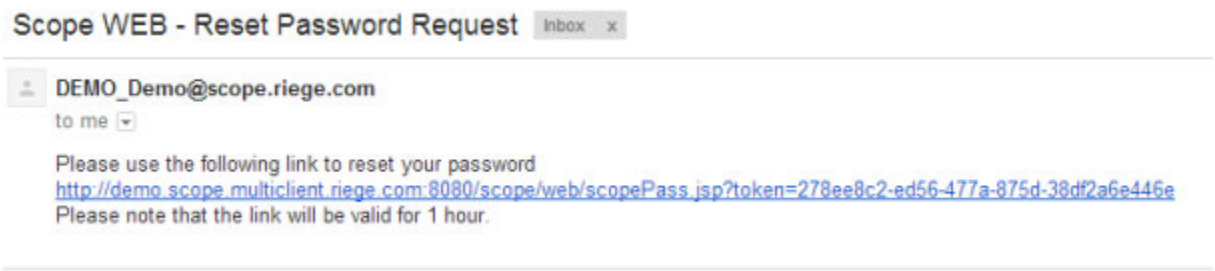


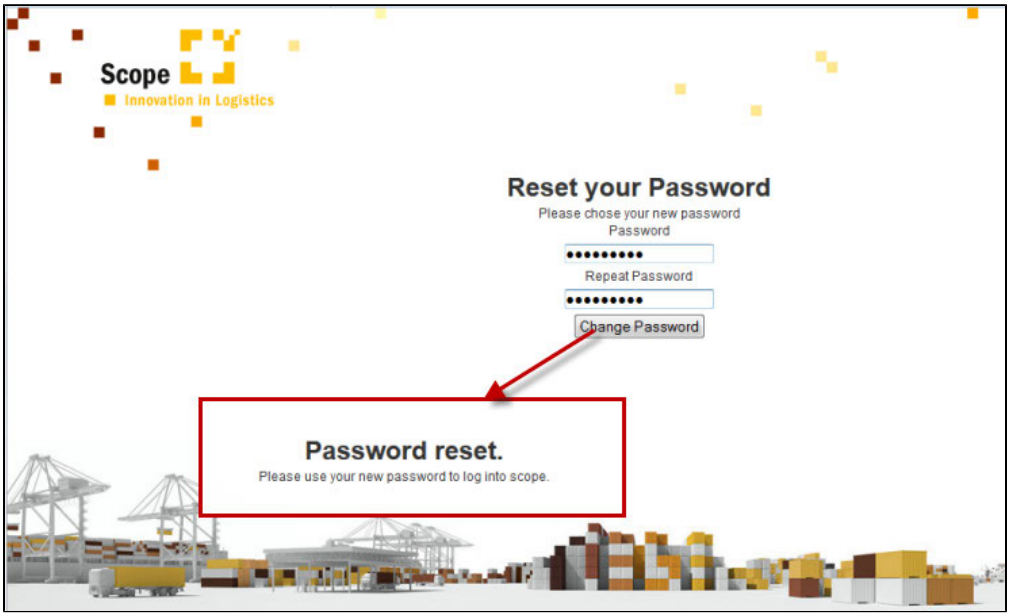
The next step is in the internet browser, to enter your user id,
in order for the routine to retrieve your personal email address and send instructions for the following step of the routine.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Following the link in the email will open a new web page where the password for the user can be reset.





Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

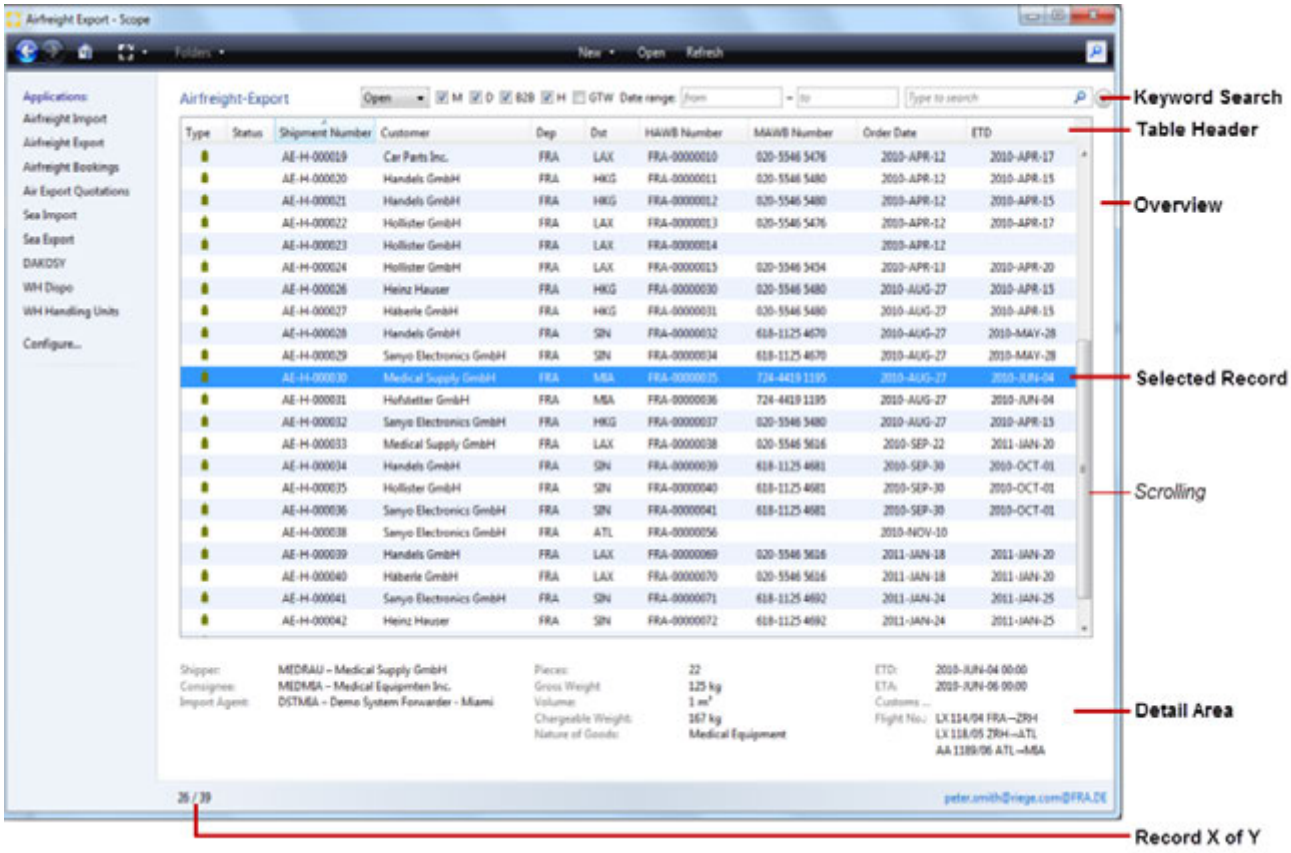
Overviews - User desktop - General

- Introduction
- Description

Introduction

Most Scope applications start with an overview (HomeView) which offers various possibilities depending on the application. Basically, these tables serve to find information and shipments quickly and to provide immediate access to this data.

Description



Summary table

This table lists the records (eg, airfreight export shipments), divided into several columns, which are associated with this application. Use the *scroll bar*, to move moved up and down the table contents. Alternatively, content can be moved with the *arrow up / arrow down* or with the *page up / down* keys.

For performance reasons, a maximum of 100 records will be loaded and displayed. If more than 100 records are available, the following message appears when the end of the table has been reached.

Using the filter functions (application dependent) and by the key word search will limit the number of rows and show only rows with data matching the filter and or key word.

If no records have been found within the application, the following message is displayed:

keyword search (Search term input)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Entering one or more keywords will filter the records displayed. This is termed a full text search.

Table headings / Sorting

By clicking on the column headings in the summary table, the view will be sorted in ascending 
or descending 
order of the clicked column.
The standard sort order is to use the shipment order date in chronological order, newest on the first row.

Marking of rows

By clicking on the desired line in the summary will mark the item. A double click on an item is used to open it in the appropriate editor.

Details area

The most important data of the selected record in the summary table is displayed in the detail area. This provides authoritative information without opening the item in an editor.

Item count - X of Y

The total number of records on view is the right hand amount and the number of the currently highlighted item will be shown as the left hand number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

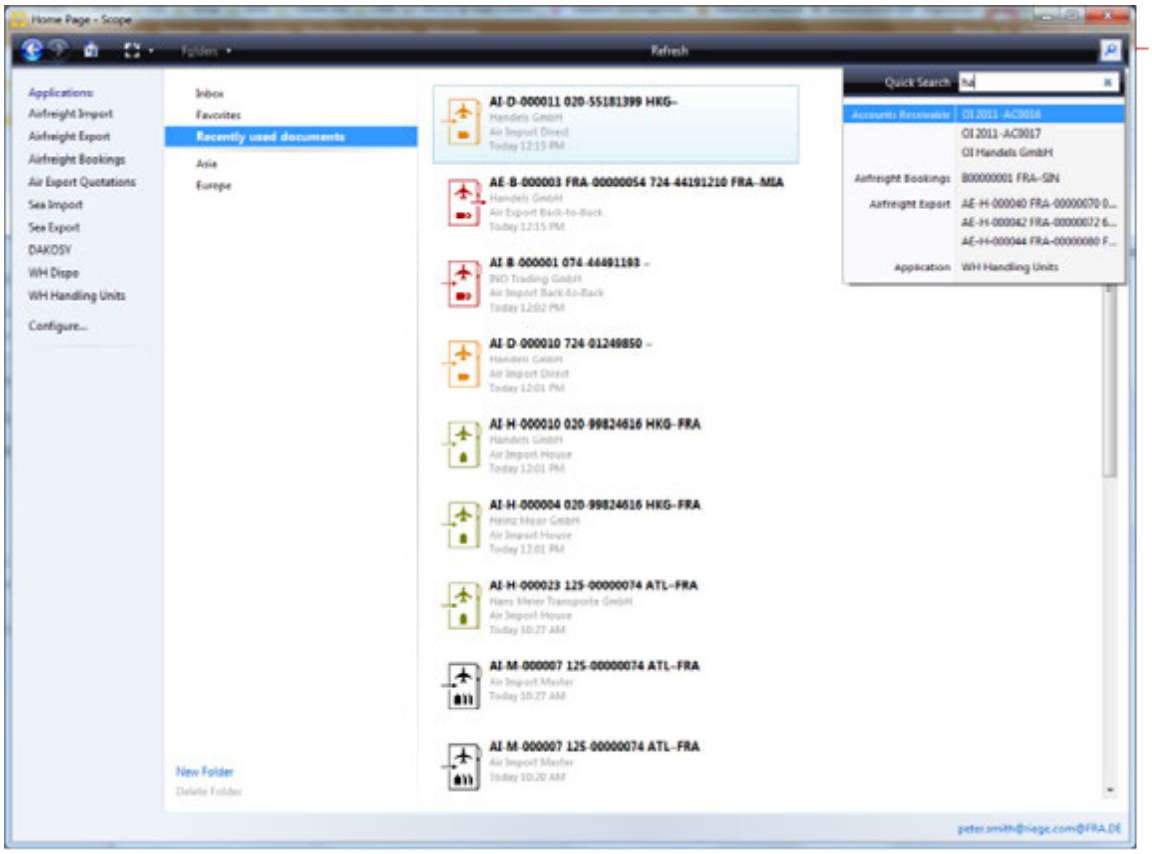
Quick Search - User desktop - General

- Introduction
- Description

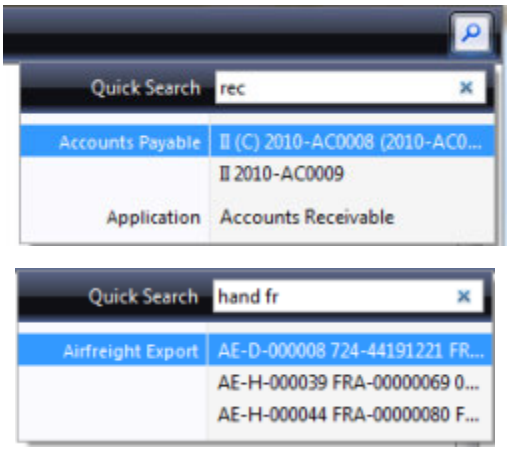
Introduction

The main menu bar always displays the quick search. This searches for data based on the text entered in the search field. The more specific the text entered, the more specific the results. In contrast to full-text search in the individual applications, the quick search covers all areas of the system. The results will therefore include items from all areas of the system such as shipments, addresses and documents.

Description



By clicking on the appropriate icon in the main menu bar will open the Quick Search. As text is entered, matching results will begin to appear.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Examples

- Using the search string "HA" will include shipments, orders and applications in the results.
- The result for the search string "costs" will include all applications which have the term "cost" in the application name.

A search can also be conducted by combining several individual pieces of text.

- The result of the search string "HAND" "FRA" for example, will be all shipments for the company Handels GmbH from / to FRA (Frankfurt).

By clicking on the desired search result that application or the corresponding document is opened.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Validation - User desktop - General

- Introduction
- Description

Introduction

To ensure data quality and integrity, wherever possible, data fields within Scope are subject to a validity check (validation).

Description

The validation "on the fly" is carried out during the data collection. There are two possible types of validation results, an error or a warning, and either of these two types may appear in the field where the validation takes place.

Error

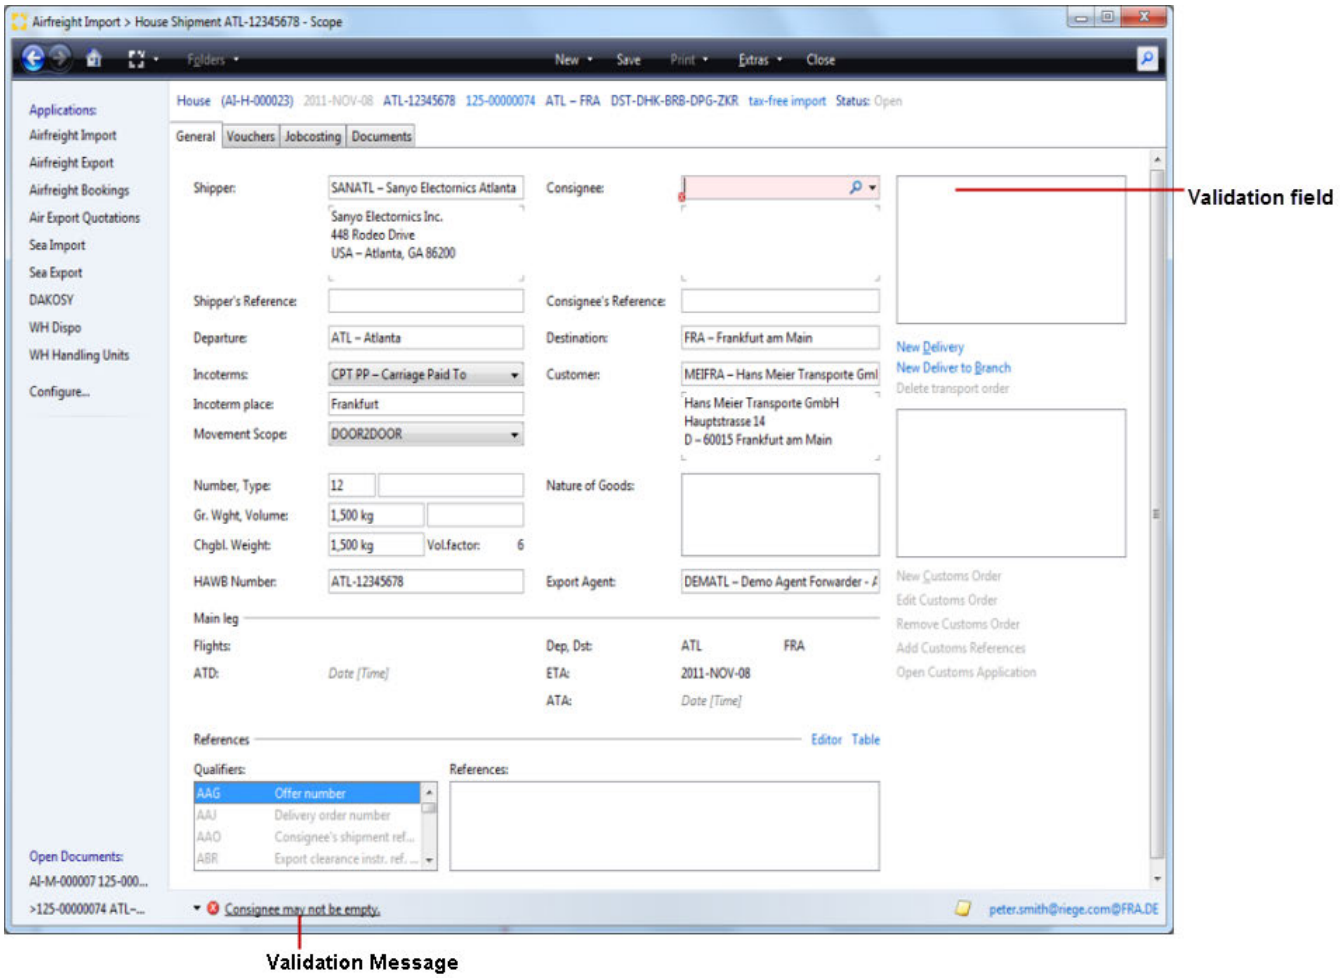
The red "x" on the bottom left of the field indicates the field must be filled with valid data or the input data does not meet the validation guidelines. The data can not be saved while this error remains present.

Warning

This field should be filled or the entered data does not meet the validation guidelines. The data can still be saved.

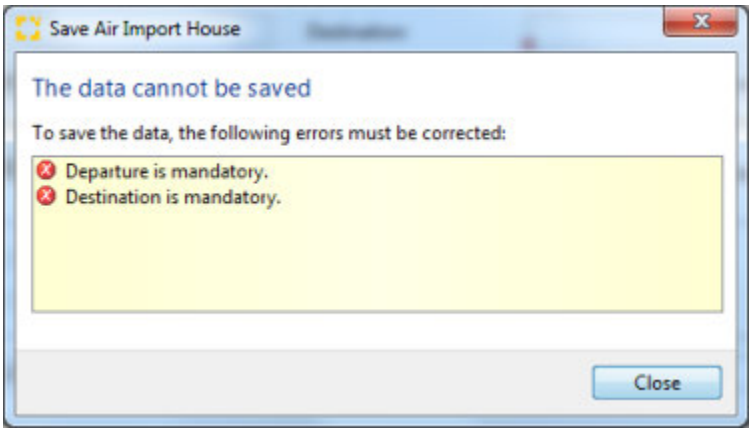
Validation messages

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



The status bar displays the current validation result (error message). Double-clicking any validation message causes the corresponding field to temporarily flash pale red, and thus indicates which field is responsible for the validation message.

Saving data



If a *save* of data takes place while there are still validation errors, a save dialogue will appear displaying all the validation results (error messages) that are preventing the data from being saved. Once all these errors have been resolved, it will be possible to save the data.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Airfreight

- Introduction
- Description

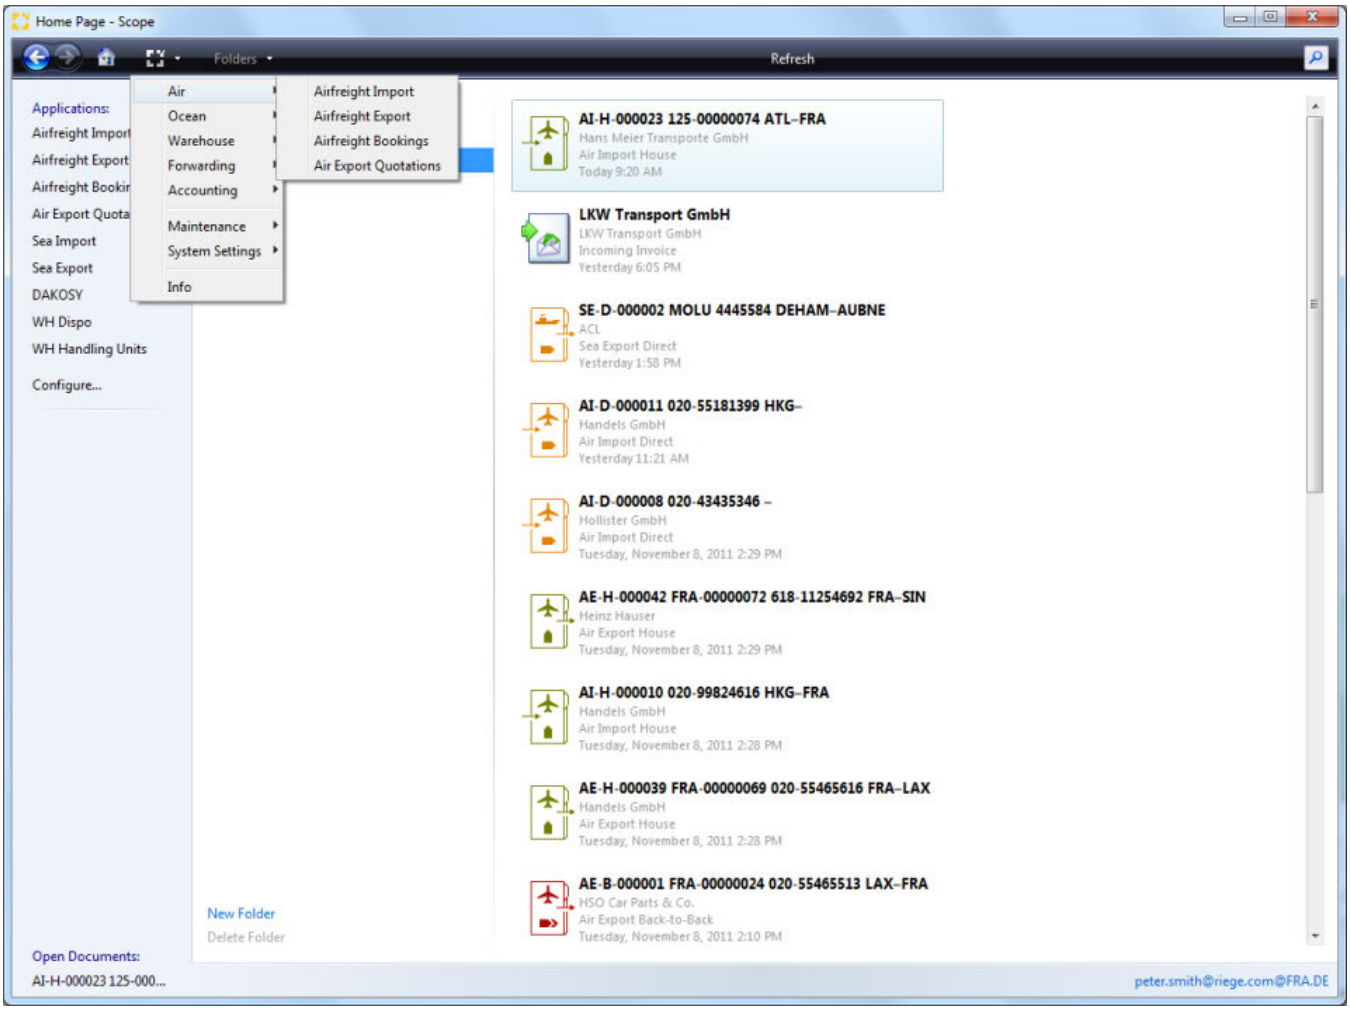
Introduction

The transportation of cargo by air, full cargo or passenger aircraft. Air Freight is transported via different airlines / carrier or may be lifted with company-owned aircraft. Air Freight also includes cargo initially transported via other modes such as truck and rail, but which is delivered to an airport or released from an airport.

With Scope, all air freight processes are undertaken.

Description

The air freight applications can be launched via the menu or directly using the corresponding entries in the shortcut bar.



The following chapters describe the applications is detail:

- Air Freight Export
- Air Freight Import
- Truck Manifest

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Air Freight Export

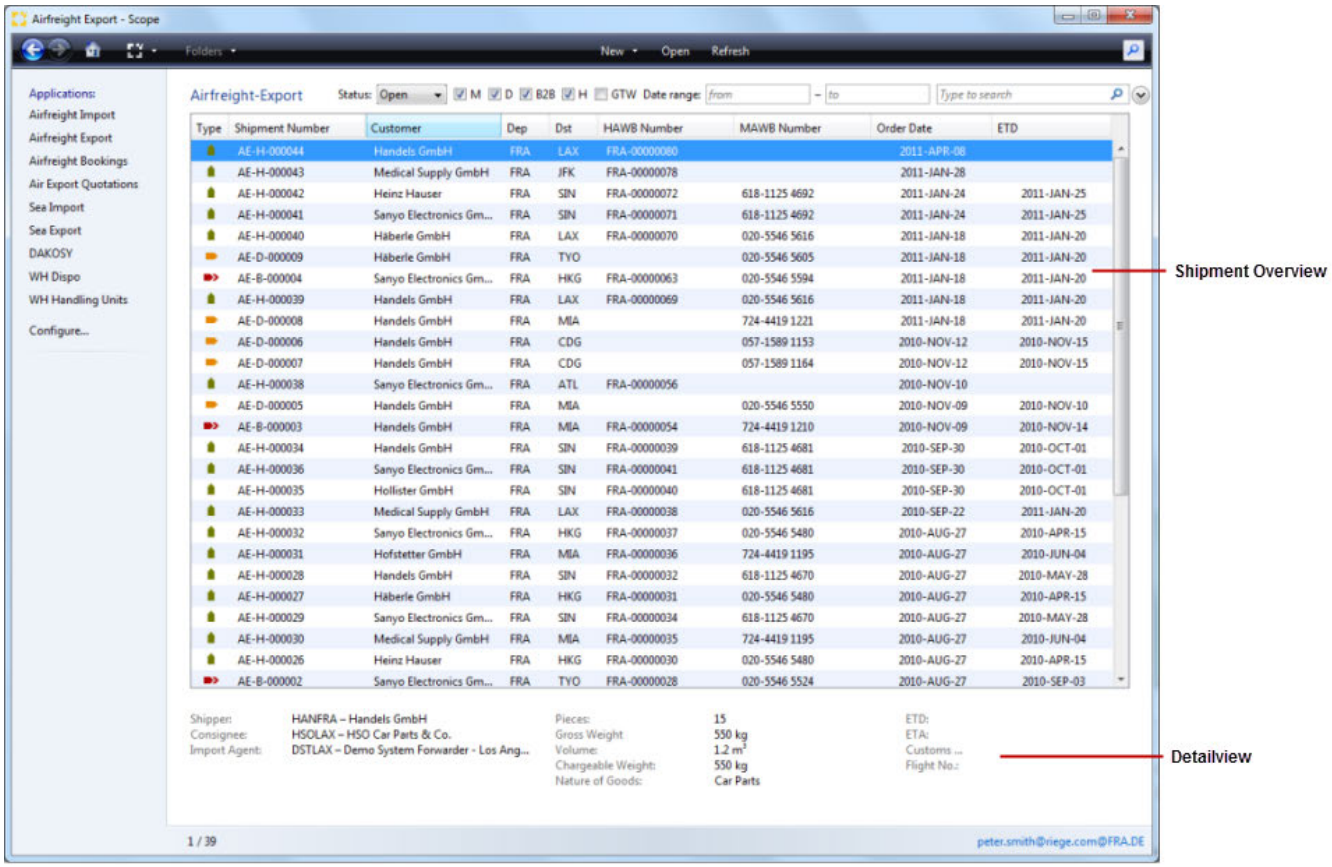
- Introduction
- Description

Introduction

In air cargo export module, all master, house , direct and back-to-back air freight export shipments are created and invoiced. All necessary documents are printed. In addition, shipments from templates can be created. Bookings and quotations are created, these can then be immediately converted into full shipments and used in consolidations. The Air Freight Export Overview also provides extensive search capabilities to quickly and efficiently locate the desired programs.

Description

{toc:maxLevel=1}



Overview

An overview of shipments is available and will show all current shipments. These can be opened by double clicking on the desired row or selecting "open" on the menu bar.

An indication of the shipment type is displayed with the following symbols:

- House shipment
- Direct Shipment
- Back-to-Back-Shipment
- Master Shipment

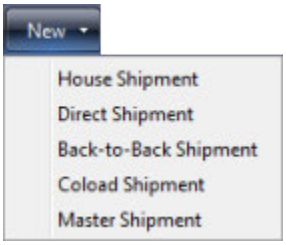
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Detail section

The details pane displays the most important additional information about the highlighted shipment shown in the overview.

New

The new option In the menu bar presents a sub-menu that allows creation of a new house, back-to-back , direct or consolidations. In addition, new shipments from templates, bookings or quotes can be created.



Open

Opens the selected item from the overview. Alternatively, a *double click* will open the shipment from the overview.

Export

Export the data in the shipment overview and opens it on the local computer as a spreadsheet.

Templates

Opens an overview of available templates.

Update

Updates the index of shipments.

Search

Hide or show types

enable or disable check boxes to hide or show the different types of air export shipments.
The available types are:

Type	Description
M	Master (Consolidations)
D	Direct shipments
B2B	Back-to-Back shipments
H	House shipments
GTW	Gateway Shipments

By default, the type GTW disabled and all other types are displayed.

> Gateway shipments (GTW) are houses for consolidation that are sent from another branch. For example, Philadelphia may transmit a house shipment to New York for consolidation. New York may exclude this type of shipment from their overview by checking the GTW box.

Date from / to

The date fields can be used to restrict the list of displayed shipment to a specific time-frame.

Enter keyword

Enter one or more search terms. Displayed items are filtered accordingly (see full text search)

Air Freight Security

- Introduction
- Description

Introduction

- General Information
- Secure supply chain
- Security Status Airfreight

General Information

To protect against attacks on the safety of air traffic national and European legislation has evolved in recent years. In this end EU and Country authorities have create a framework for, monitoring a safe supply chain (e.g. regulated agents, known consignors) and workflow with responsibilities for compliance with the security measures by the air carriers, freight forwarders etc.. Due to these stringent legislation in the freight industry, shippers, suppliers of cargo and service providers should expect more stringent checks by the authorities. To assist in the realization the workflow regarding Air Freight Security in Scope has been updated.

Only air cargo / mail classified as secured may be handed over to the airlines and loaded and flown in the aircraft intended for this purpose. This applies if either the corresponding security measures from production to transport to delivery to the airport have been observed, or if the freight has been checked again immediately before loading. For this purpose, the freight must be examined, for example, before delivery to a departure airport or at the departure airport itself by a company with the status of regulated agents (air freight forwarders, handling agents, logistics providers, storage and transport service companies, etc.) or the shipper is approved as a known consignor.

The security measures of all parties involved in the secure supply chain are intended to adequately protect the freight against unauthorized access and manipulation.

Secure supply chain

Known consignor

As a known consignor, the company claims to be and entitles them to send "safe" air freight. He is the one who gives the air cargo shipment in the country - usually manufacturers of economic goods that are exported. The known consignor must meet certain safety standards. As air cargo must be protected from unauthorized interference and employees must be trained. Until April 2010, the recognition of known consignor by security declaration was common practice. The recognition was made by standard form, with the sender confirms the Regulated agents to meet all safety requirements to comply with the secure supply chain in the business. This practice was being criticized because of the regulated agents against his client has no way to assess the safety standards in the company. Since 29 April 2013 no longer applies this status. Companies need to be validated, by official local authorities before they can maintain the new status of "officially recognized known consignor". If this term and a company is not validated, the respective air cargo of a suitable service provider must be tested separately, be x-rayed and approved before it can be loaded onto an aircraft. This creates the risk of delivery delays for the shipper in addition to increased freight costs.

Regulated agent

The underlying regulation defines the "regulated agent" as an "air carrier, agency, freight forwarder or other body that guarantees security controls for freight or mail. A regulated agent is a service provider in the supply chain, being a transporter, warehouse, freight forwarder or carrier, which has implemented, verified, security measures which allows the service provider to, declare freight as, or handle freight along the steps of the supply chain while maintaining, a secured freight. In order to act as a regulated agent, the approval of the local authorities is required. Regulated agents can handle, store or transport freight within the supply chain without the consignments losing their status as secured freight. If the consignments are "unsecure", the regulated agent can take appropriate measures to check the consignments by means of a freight inspection and to update the unsecure status in a secure status. A cargo control verifies that the shipment actually contains the declared content and ensures that no prohibited items are posted as air cargo. It is a status for companies to simplify the handling of cargo on to reach the airport. This authorization allows a regulated agent to classify a freight that has been handed over to him by a shipper as secure or unsecure and to make unsecure freight secure by taking suitable control measures. As “secured” cargo handed over to an airline, no further security check is carried out.

Haulier

With the entry into force of the new version of the German Aviation Security Act on March 4, 2017, from March 04, 2018 all hauliers that want to transport secured air freight need the status "authorized carrier". All previous carrier declarations for hauliers in Germany lost their validity (exception: hauliers based in other EU countries). If they transport secured freight without an official approval (ID), this air freight is necessarily classified as unsecure. Known consignors and regulated agents may no longer commission a carrier without a valid Haulier Declaration to transport the secured air freight. By applying to the competent authority (German Federal Aviation Office) and granting the status of an approved carrier, he becomes an official participant in the secure supply chain.

Security Status Airfreight

The security status of the air freight shipment is documented on the accompanying documents such as the AWB (Airwaybill). It is noted here for which transport the shipment is secured. This information is identified by special code. The security status on an AWB specifies whether to supply chain security is verified before delivering the consignment to the airline.

For example

SHR (Secure for high risk requirements))

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Air cargo / mail that has this security status may be carried by passenger, cargo-only and mail-only aircraft in accordance with the high-risk requirements. Note: The security status may only be assigned by a regulated agent. The security status on an AWB indicates whether the security of the supply chain to the airline was guaranteed.

- **SPX (Secured for Passenger Aircraft)**

Air cargo, for example the security status "Secured - SPX" has allowed, with both "all-cargo" - and be transported on passenger aircraft. Goods received this status only if it was controlled by a regulated agent or originated from a known shipper. Air freight has this status only as long as it is protected from unauthorized access and tampering.

- **SCO (Secured for Cargo aircrafts Only)**

Air cargo, for example the security status "Secured - SCO" has, may only be transported in all-cargo aircraft. Goods obtain this status when it originates from an unknown consignor. Air freight has this status only as long as it is protected from unauthorized access and tampering. In the registering of cargo security status with this it can sometimes be delays and waiting times.

The reason for issuing the security status is also noted on the accompanying documents. These are also output with certain codes.

For example

- **RA Air** cargo has the status SPX by RA if it is under the control of a regulated agent (RA).
- **KC The** air freight has been started by a known consignor; then you get the security status SPX by KC. The secure supply chain must not be interrupted during the entire transport.

Description

- **Important master data and settings**

`Important master data, or settings that are used to check the air cargo security in Scope, can be found in the chapters`

Regulated Agent - Roles - Business Partner - Maintenance

Secure Shipper - Roles - Business Partner - Maintenance

Air Export Security Setup - Airfreight - Settings

- **Important program functions**

Scope offers various program functions to ensure the careful validation and documentary requirements when processing air freight shipments regarding air freight security. An automatic calculation of the security status in the air cargo shipment, security snapshots per shipment, an automatic query against the Union RAKC database on security of the supply chain, as well as the initiation of security measures. When processing the export of airfreight consignments, built-in validations always inform the user about a security risk.

- Integrated Online Verification against the Union database on supply chain security (RAKC database)
- Security Snapshots, audit trail security status
  - Security status = secure
  - Security Status = not secured - Actions
- Security Measure - Screening Order
- Security Measure - Screening Order Consolidation
- Screening Order Prior Receipt...
- Security Incident...
- Security Incident... Consolidation
- Security Exemption...
- AWB - security information in handling information

Integrated Online Verification against the Union database on supply chain security (RAKC database)

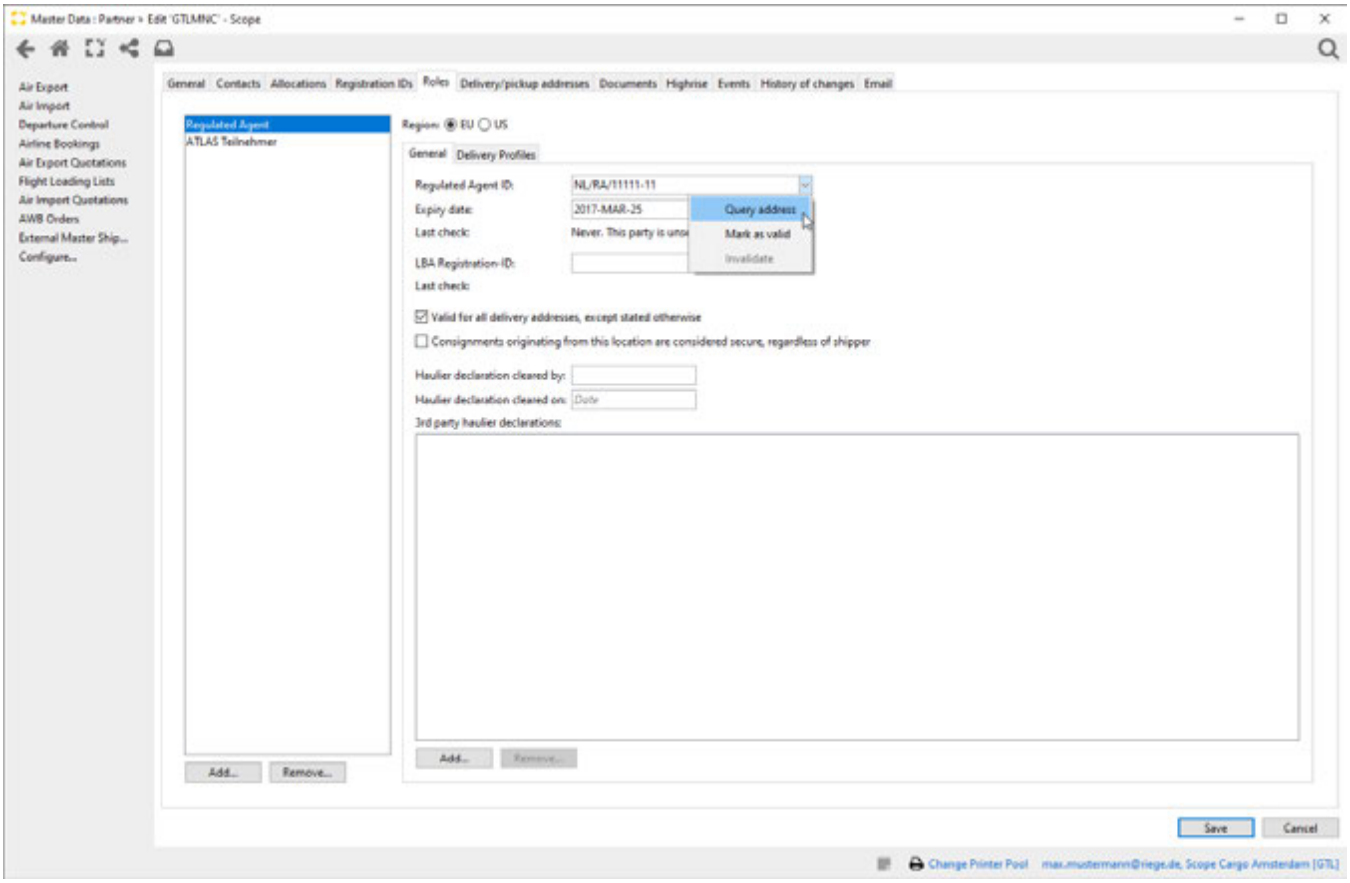
The Union database on supply chain security (RAKC database) contains the latest data on all regulated agents and officially approved known Consignor in the European Union In the security guidelines provided by EU and local authorities, Freight forwarders have the responsibility for regular verification of Known Consignor and Regulated agent against the EU RAKC database. So that a regular query against this database must be made to check the security status of an air cargo shipment before it is loaded onto an aircraft. Therefore Scope offers the possibility to validate the partner addresses against the Union database on supply chain security (RAKC database) automatically or, if necessary, a manual validation can also be done. This query is integrated in the air freight modules in Scope. As soon as the automatic query is carried out, the security status of a shipment is recalculated. The query directly provides the user with information as to whether the security status of the shipment may be endangered by one of the business partners involved.

Local authorities monitor how often each User-Id/password, they have assigned to certified users, is actually used. To ensure that this information, user id & password, is also used during direct verification from scope. In order to register the EU-RAKC User-Id password, Scope will ask during the first verification request by a user for whom no EU Database database details are known, to the user to enter his/her credentials.

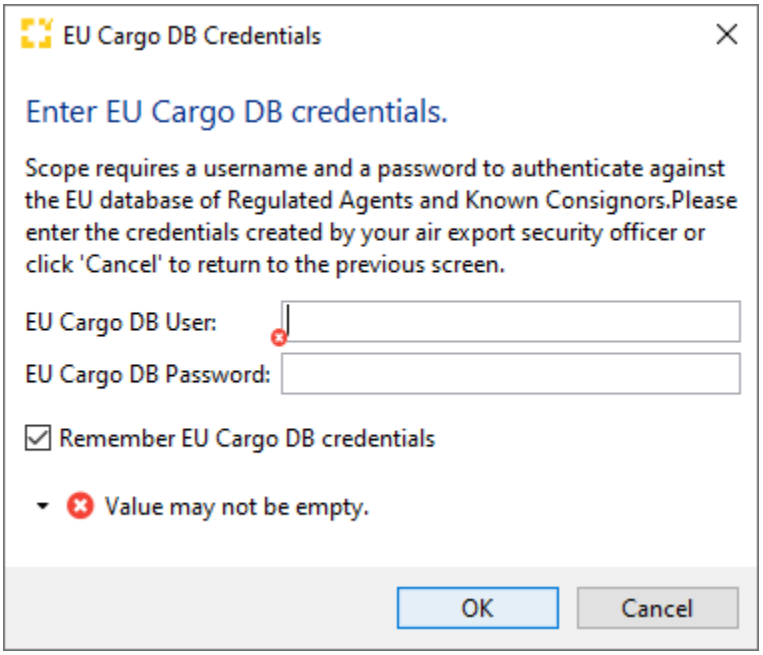
- Regulated Agent - Roles - Business Partner - Maintenance

Via the role Regulated Agent in the master data business partner, the entry dialog *EU Cargo DB Credentials* can be opened to perform an address query against the union database for security of the supply chain.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



The input dialog for entering the access data for the EU database opens:



The process of actually querying the EU database is described in detail in the chapter Master Data - Business Partner - Role - Secure shipper and Master Data - Business Partner - Role - Regulated agent. The configuration of the query process can be defined in the Scope module Airfreight - Air Export Security Setup. There are various ways to check the data here.

In Scope the validation process can be configured in the following methods.

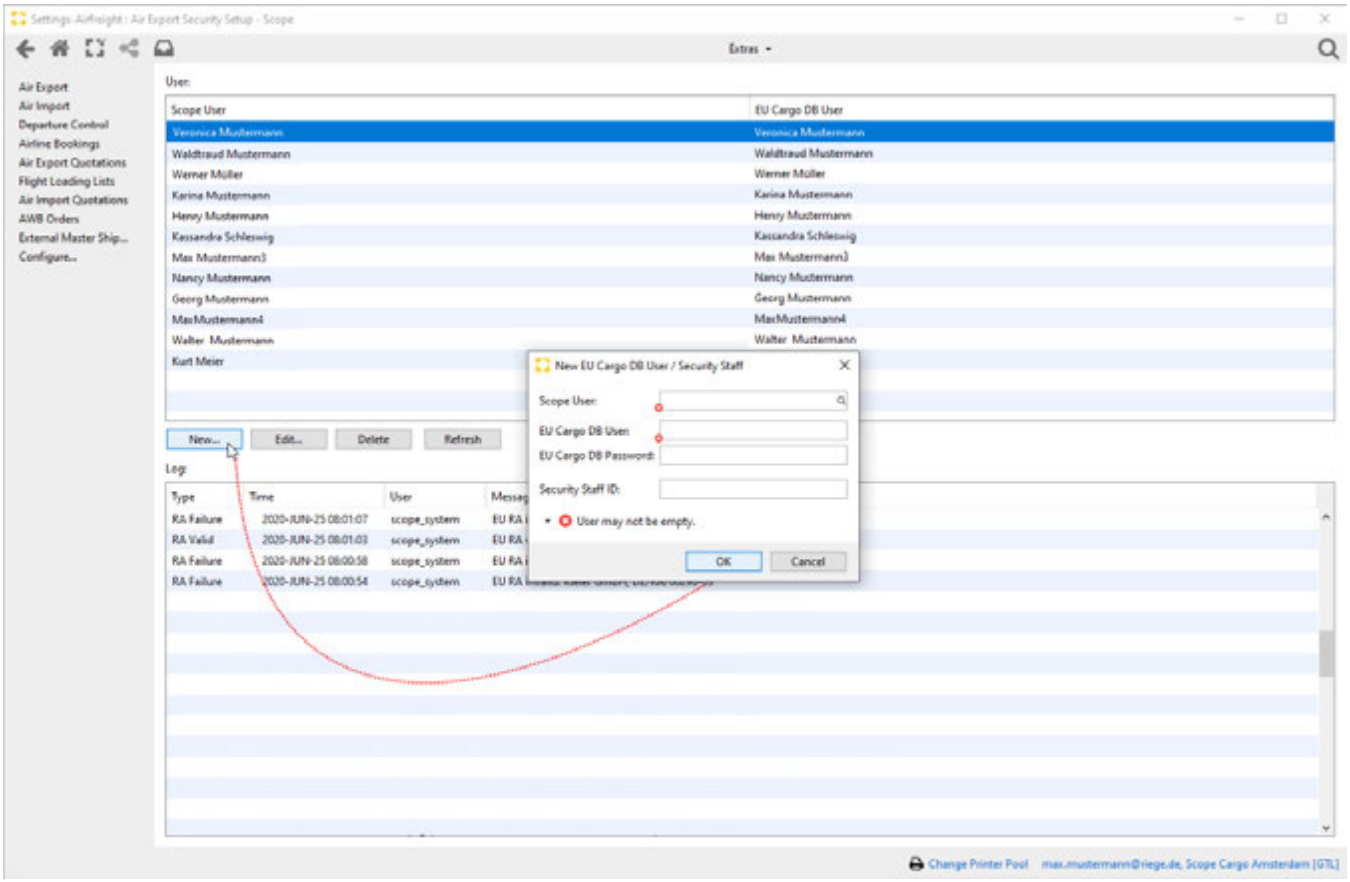
- Online or Manual validation in the partner roles and from the shipment entries only verification of the partner details (no database validation from the shipment)
- Each night Batch validation of all known consignors / regulated agents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Online validation in the partner role and online validation in the shipment when the partner validation details are older than specified in the setup.

In the Scope module Airfreight - Air Export Security Setup the access data of the EU Cargo DB user can be stored. Once entered and stored here, it will no longer be necessary to enter the data manually for each single query. The EU Cargo DB Username and Password will then be automatically pre-assigned. In the Scope module Airfreight - Air Export Security Setup the individual validation events are recorded in a log. Reports can also be created here.

EU Cargo DB User

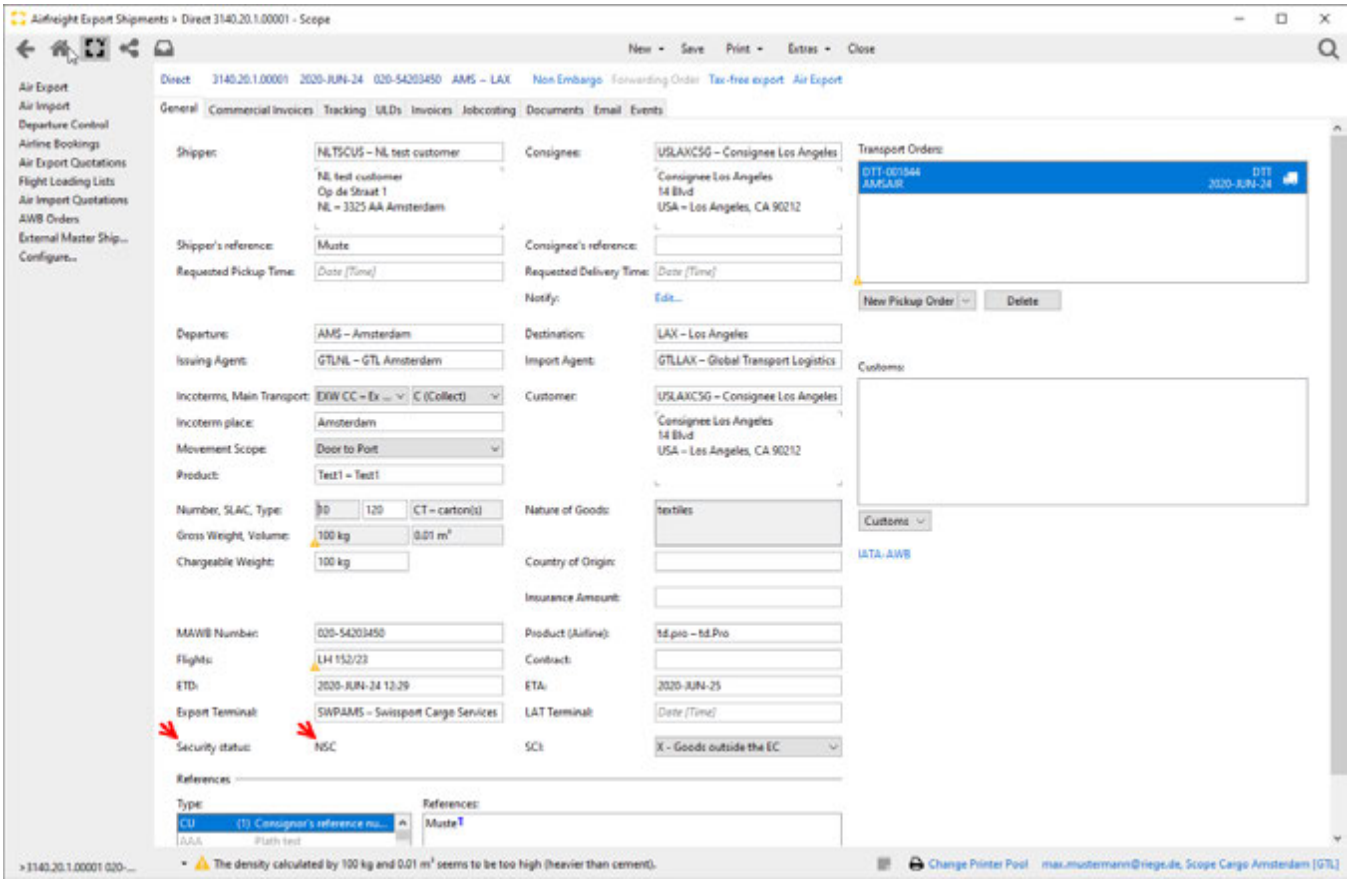


Security Snapshots, audit trail security status

Together with the other participants in the "secure supply chain", the air freight forwarder controls and guarantees that the "safe supply chain" is adhered to and that the freight status "secured" is maintained. If an air freight forwarder does not operate its own warehouse, it is usually not the first regulated agent to come into physical contact with the air freight shipment. The freight forwarder then documents whether the freight will be picked up as "secured" or "unsecured" and, if applicable, the contracted haulier is an approved carrier or regulated agent. The first regulated agent to take the shipment to his warehouse is responsible for determining the security status of the shipment. Subsequent regulated agents who come into physical contact with the shipment (e.g. handling agents) must then determine whether this status can be maintained. In this connection, the freight forwarder's task is limited to obtaining and documenting the safety assessments of these regulated agents. The freight forwarder can assign security orders to other regulated agents (or have them carried out in-house) and document their results. For this reason, in addition to the known consignor, all partners involved in the transport chain (addresses, also pick-up and delivery addresses) are subjected to a check.

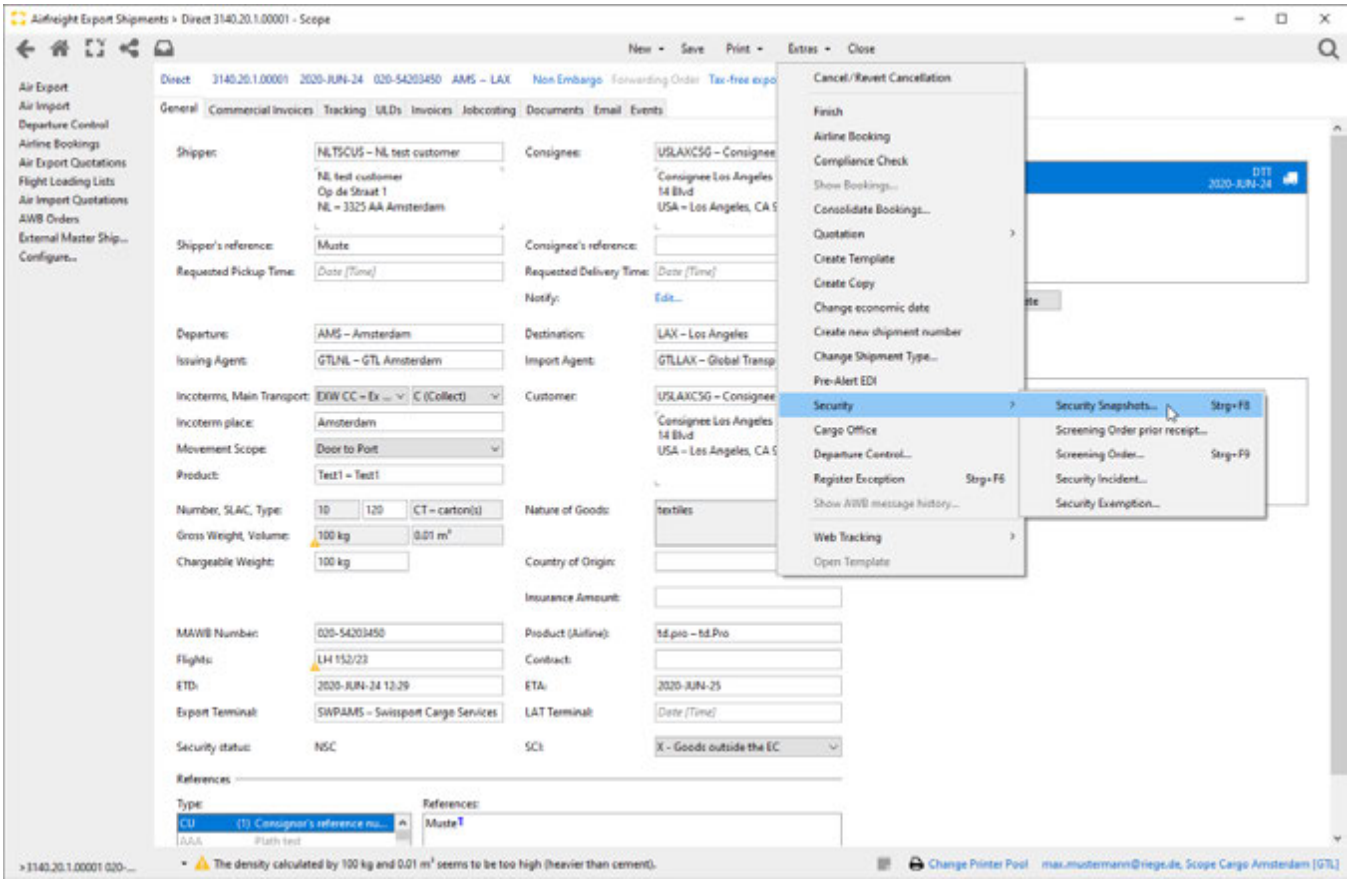
In Scope, the security status of an air freight export shipment is calculated through complex validation of documented security measures and of all addresses involved in the transport process, from collection to delivery to the handling agent of the airline. If one of the parties involved in the shipment does not have a valid status as a known consignor or regulated agent, the status of the air freight shipment is set to not secure. The status does not remain secure until the addresses are all marked as secure or a security measure has been issued. The security status is displayed in the *security status* field within the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

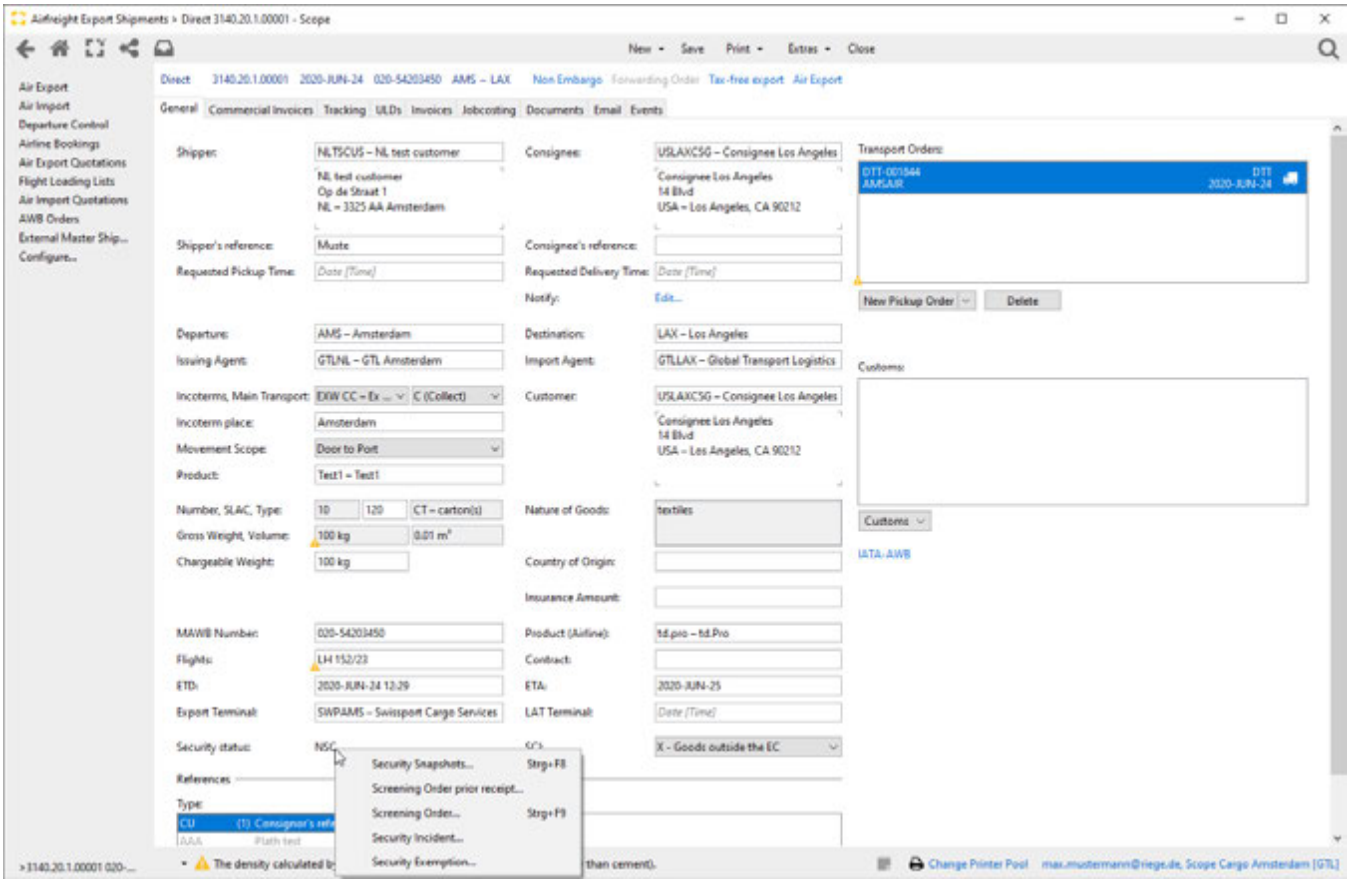


To check how the security status has been achieved or to check why the status may have been calculated as not secure, you can use the program action *Extras - Security - Security Snapshots...* (or use keyboard shortcut Ctrl-F8 or Alt-E S) in the air freight export shipment. A review on shipments security history can be opened.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Instead of using the program action, the menu item Security can also be opened by right-clicking on the displayed security status.

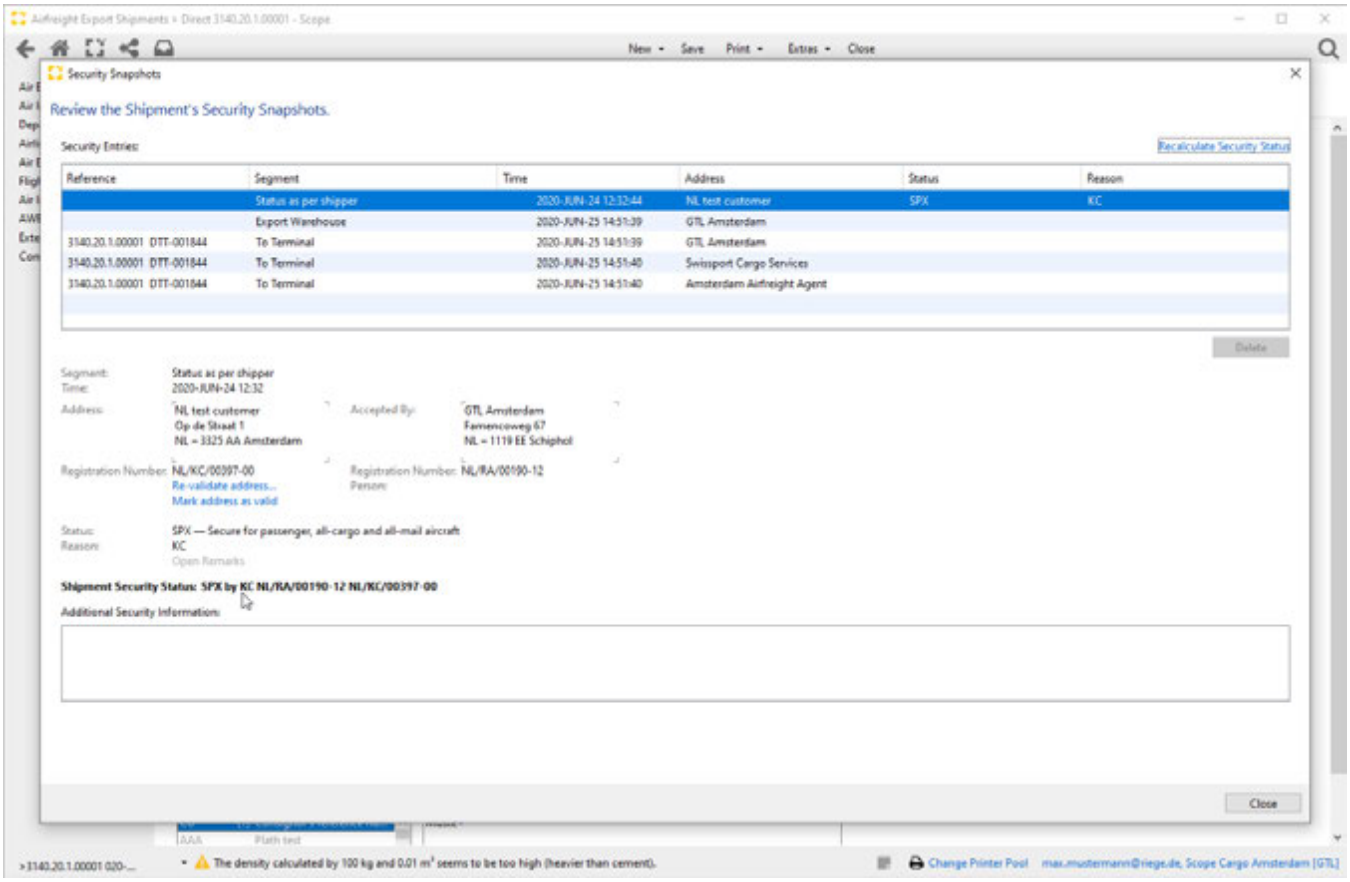


Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In the shipment`s security snapshots window, the complete process chain with all business partners involved is displayed with the status of each individual address in relation to air cargo security. The security status of the shipment is calculated from the sum of the status. This overview can be used to check why the status of the shipment may have been calculated as unsecure. With the action *Recalculate Security Status* the selected address can be checked again against the EU RAKC database. This action is also available for business partners Master Data - Business Partner - Role - Secure shipper and Master Data - Business Partner - Role - Regulated agent.

Security status = secure

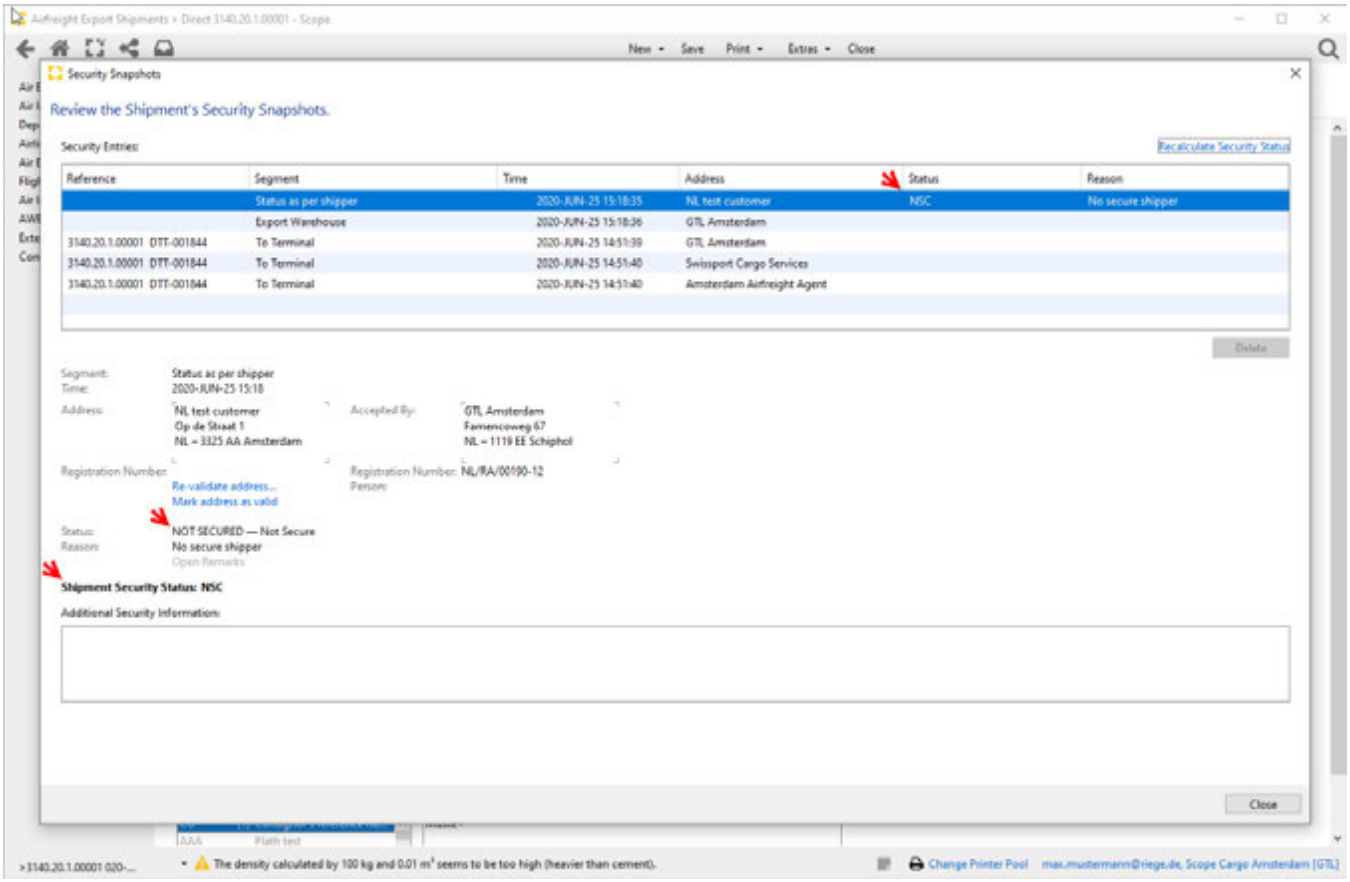
If a shipment could be classified as secure, the result in the shipments security history looks, for example, as in the following illustration. Here, the air freight was brought on the way by a known consignor. Shipment will receive the security status SPX by KC.



Security Status = not secured - Actions

If one of the addresses in a shipment, e.g. shippers or a named pick-up address in the pick-up order is not classified as secure, the result in the shipments security history can look like this:

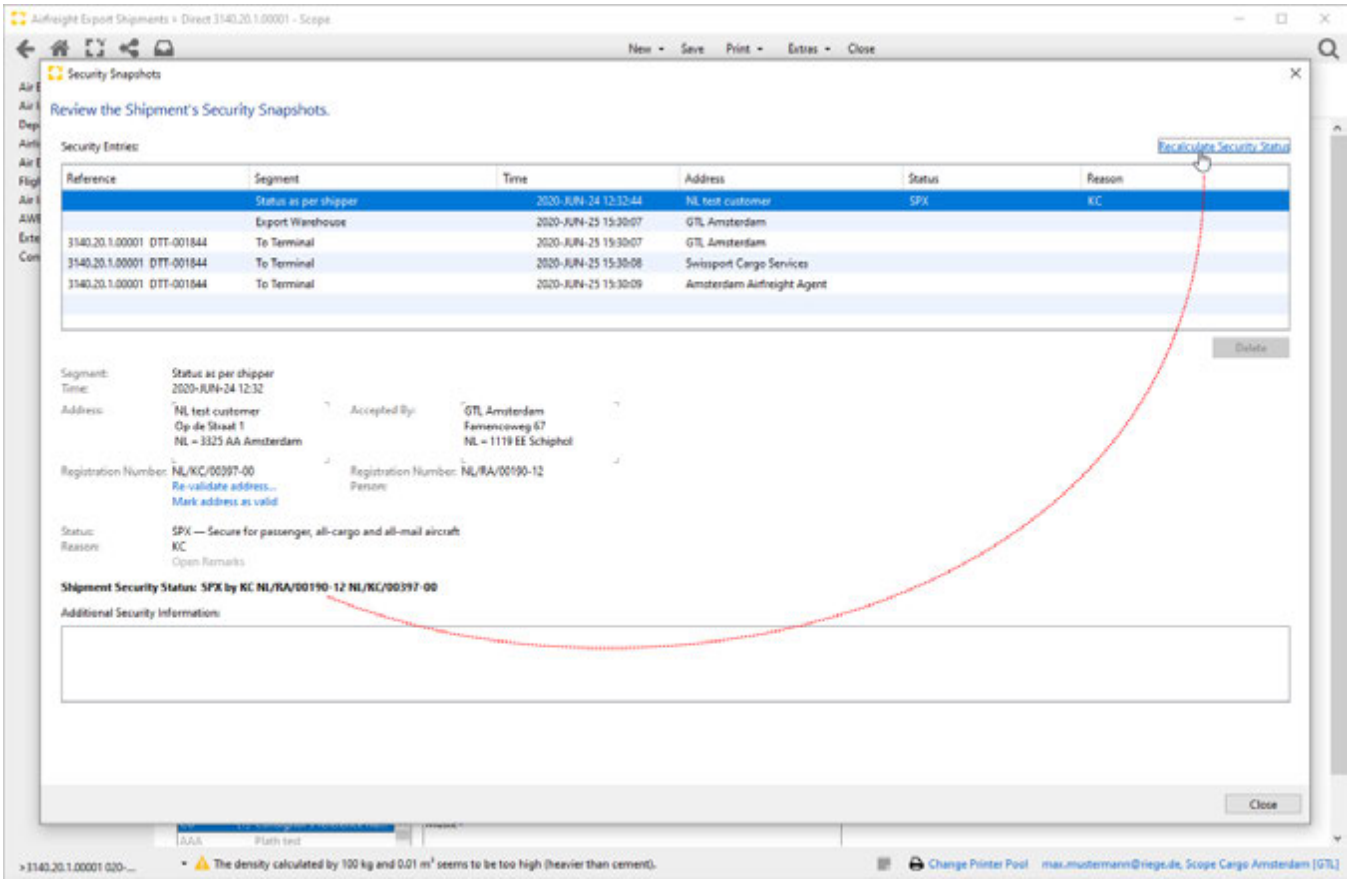
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



The following measures can be taken to set the status of the shipment to Secure:

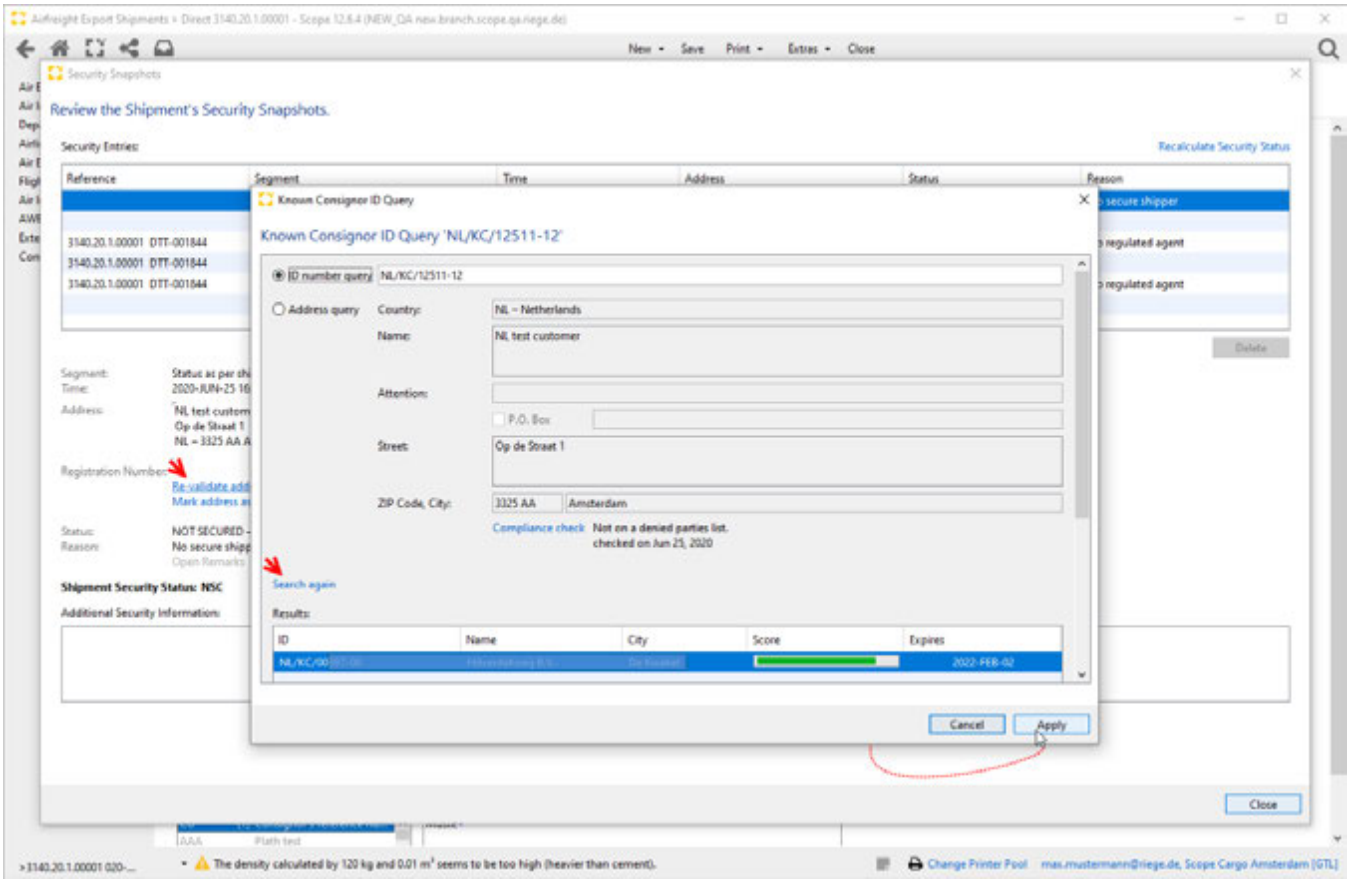
- Using the Action Link ***Recalculate Security Status*** - Security Snapshot, the data can be updated with a database request to ensure that the result was based on the most current version of the EU RACKC database. The status of the shipment is then updated accordingly in the overview.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

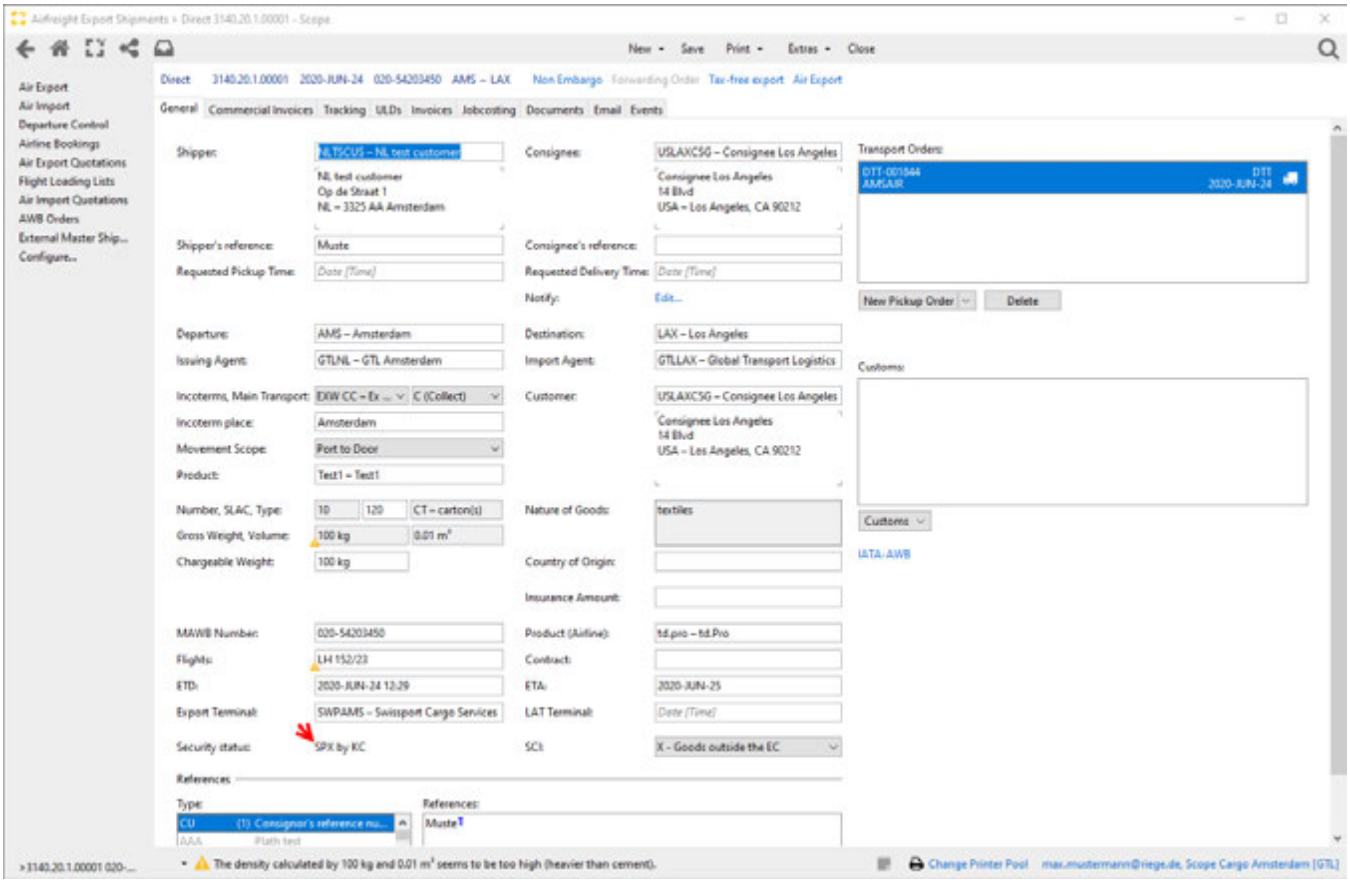


- Using the action link ***Re-validate address...*** - Security Snapshot, the data can be checked directly against the EU database via the address. With the action link ***Search again***, you can start a search using the EC registration number or the address data in the EU database. If a match to a safe address has been found in the database, the current data can be confirmed with the *Apply* button.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



The **updated security status** is then automatically shown in the shipment. Result security status = **SPX by KC**



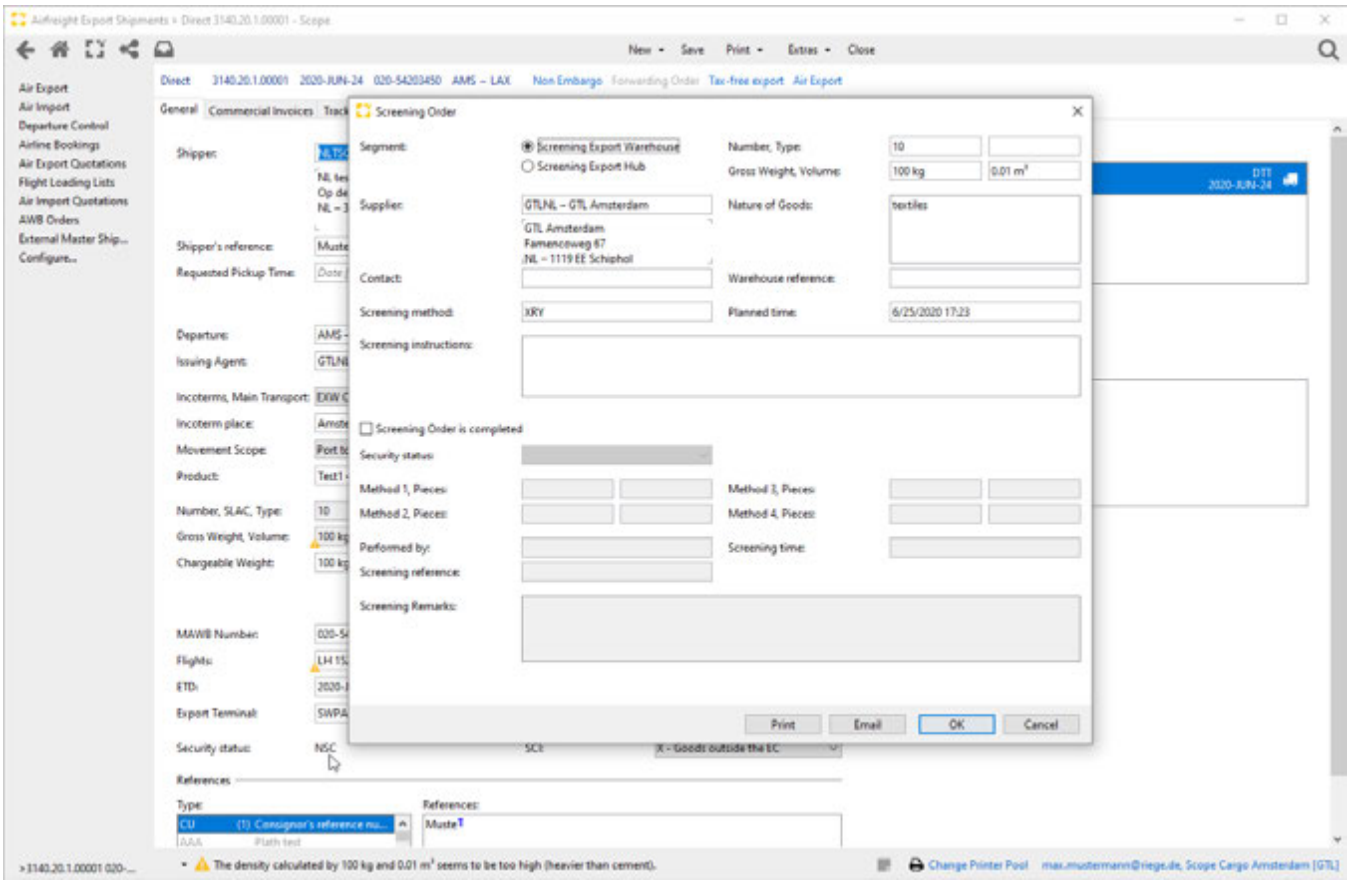
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- **Security Measure - Screening Order**

The status of a shipment can also be updated to a secure status by applying a security measure by using the program function *screening order*. The program function can either be opened via the program action *Extras - Security - Screening order* in the shipment or with the keyboard shortcut Ctrl-F9; or use a right mouse button on the security status shown in the shipment.

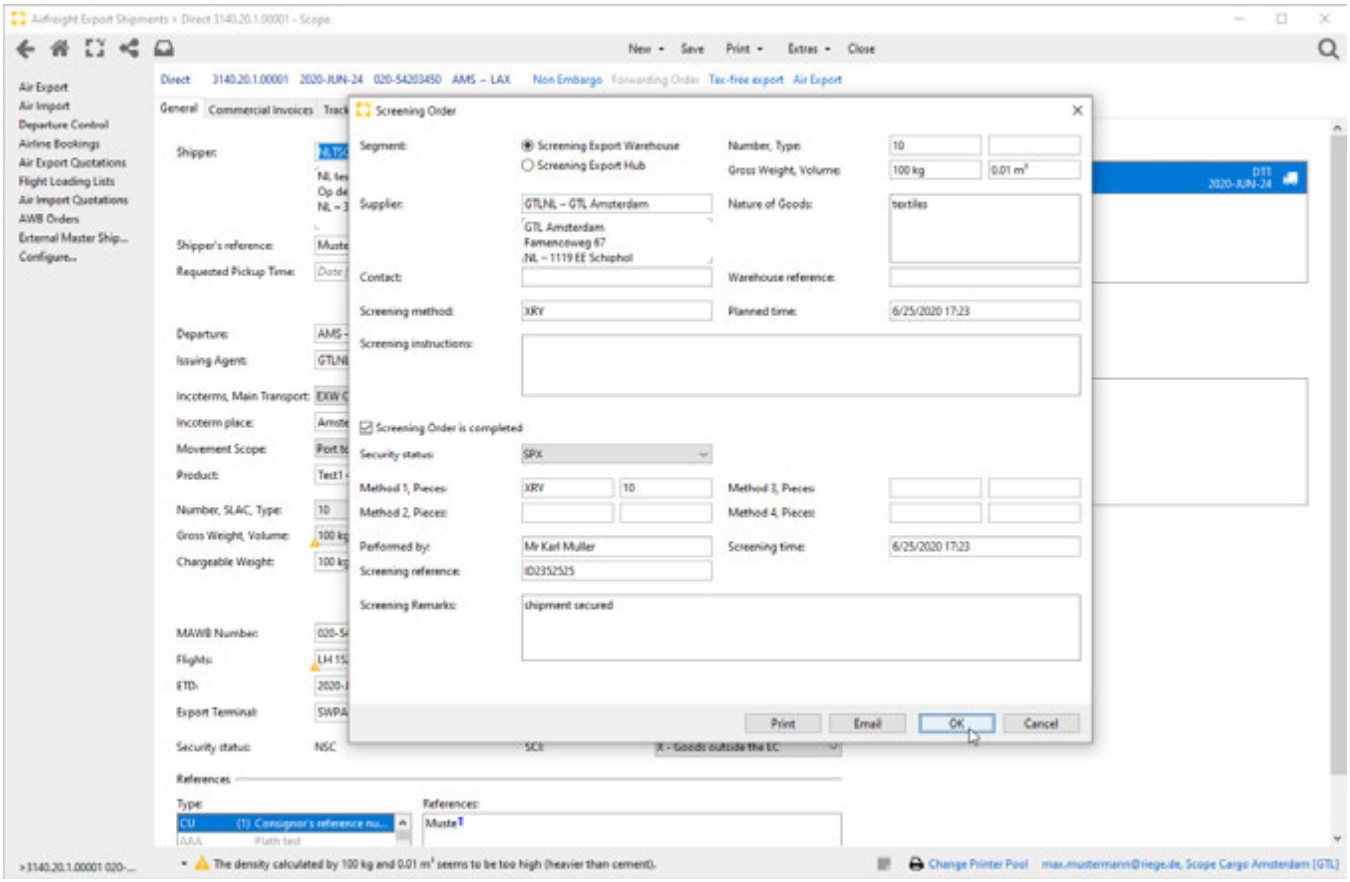
Security Measure - Screening Order

After the Screening order option has been selected as described above, the dialog for entering the data opens. The X-ray of the goods is often used here as a planned security measure (XRY) and suggested in the dialog. The screening order can be addressed to a service provider (e.g. screening via the export hub, the local warehouse or a third party). He should then carry out the security measure for a shipment that could not yet be declared secured based on the known consignor or regulated agent. After the data for the security measure has been recorded, the screening order can be printed out or forwarded by email. The acquisition of the data for the planned measure does not yet lead to an update of the security status in the shipment.

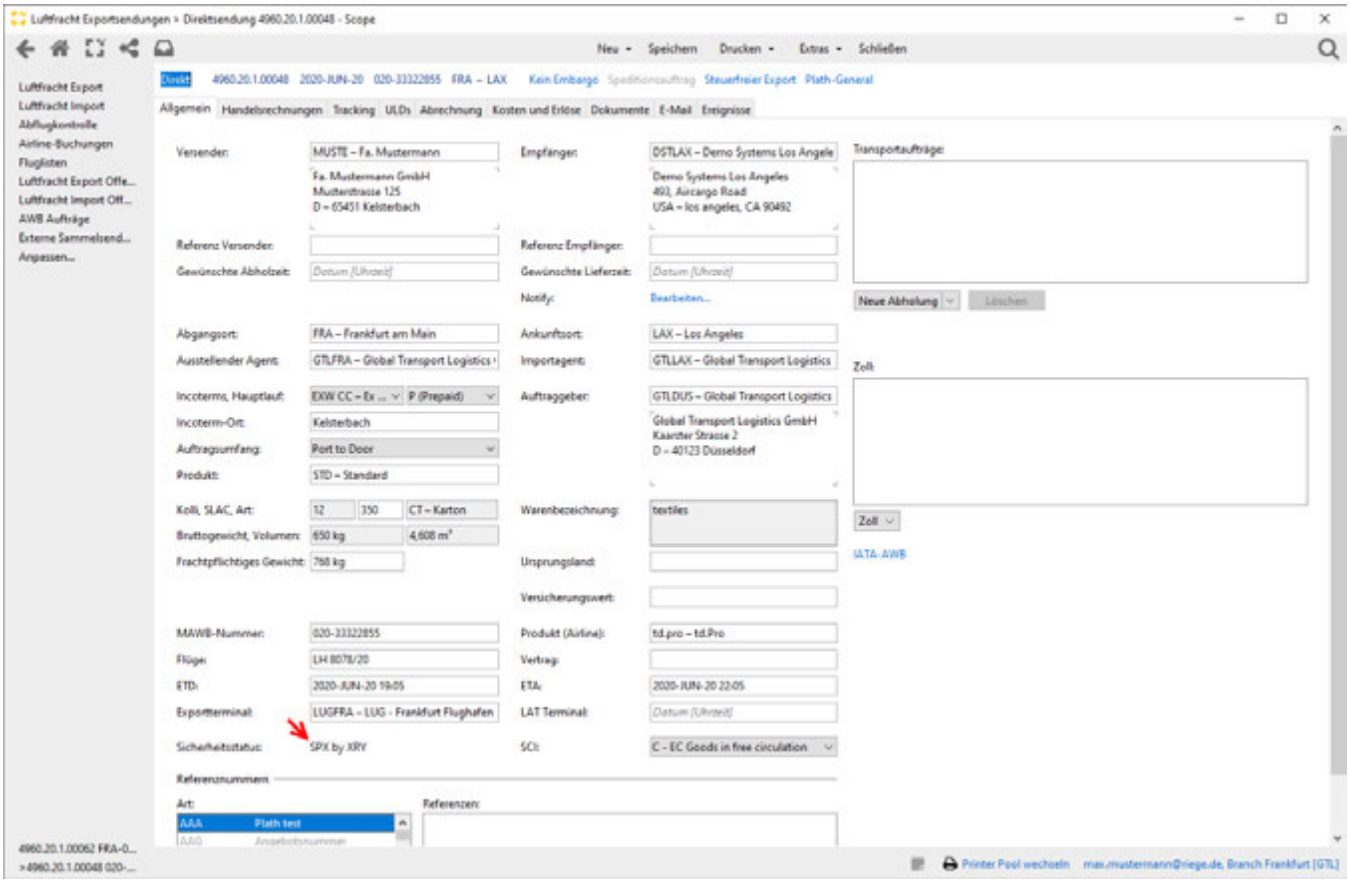


When the security order has been carried out, the details can be entered in the lower area of the dialog window. The fields can be edited by ticking "Screening order is completed". The originally planned time is adopted as a default in the Time field and the data can be recorded.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



After the completion of the screening order, the security status of the shipment is recalculated and updated.

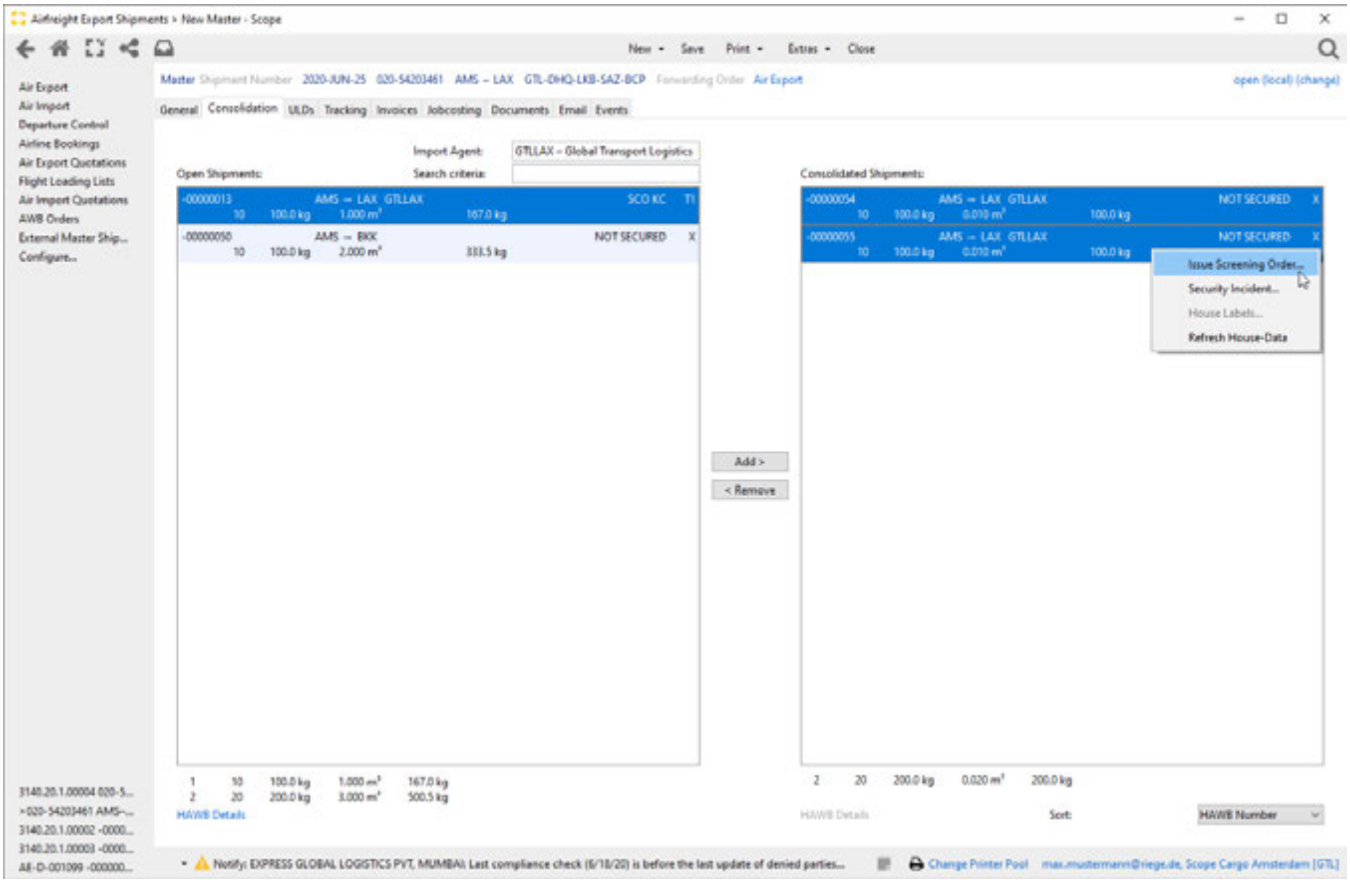


Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Security Measure - Screening Order Consolidation

When handling an air freight consolidation shipment, it is possible to create the planning and documentation for the implementation of security measures directly for one or more of the assigned house shipments, if the shipment has not yet reached the required status. On the Consolidation shipments tab within the bulk shipment, the house shipments already assigned are displayed in the Consolidated Shipments table with their security status.

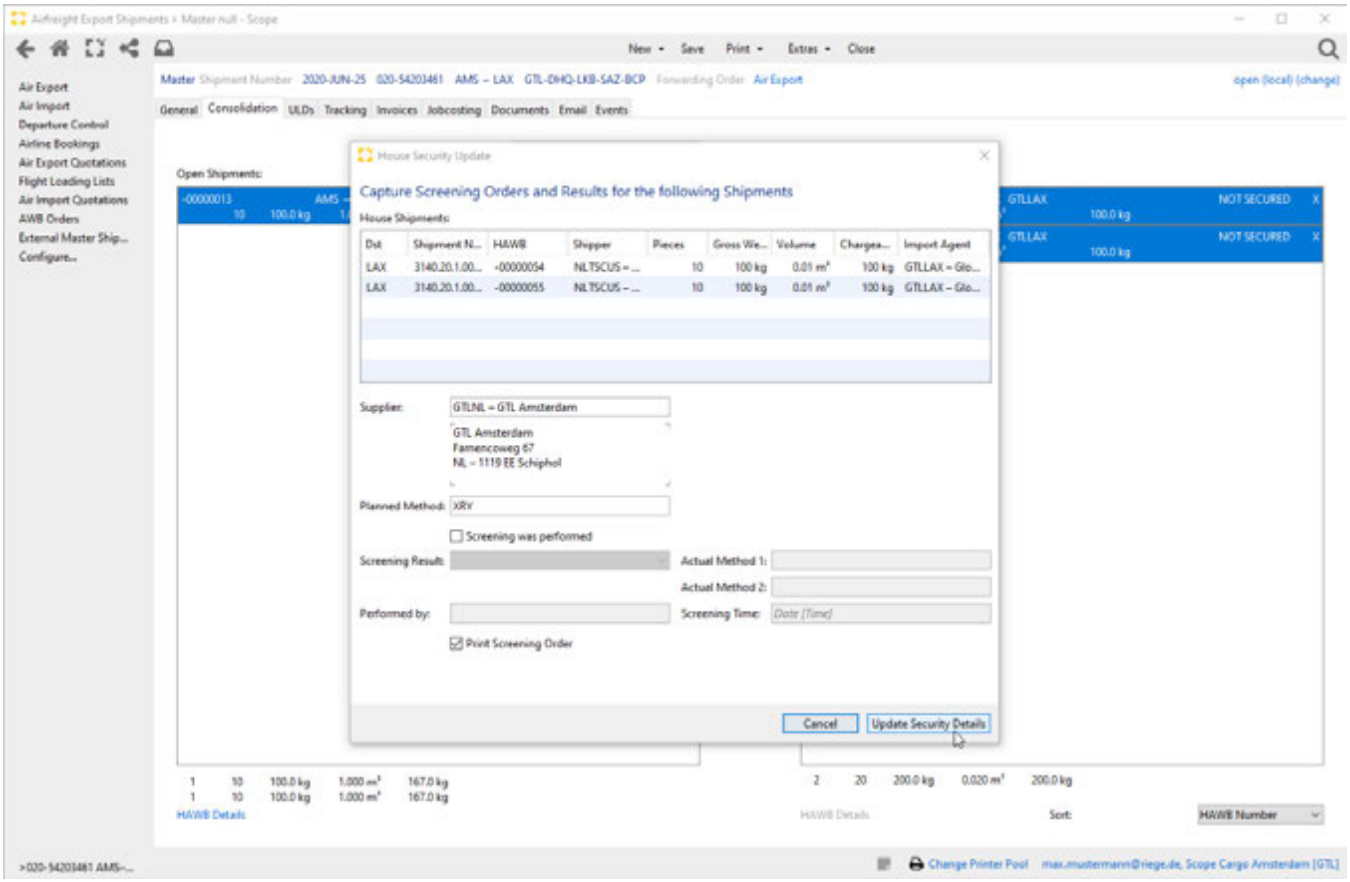
In order to issue a screening Order for one or more house shipments, the affected house shipment or several house shipments must be marked in the overview. By clicking on the right mouse button, the corresponding context menu can be opened in order to issue a screening Order.



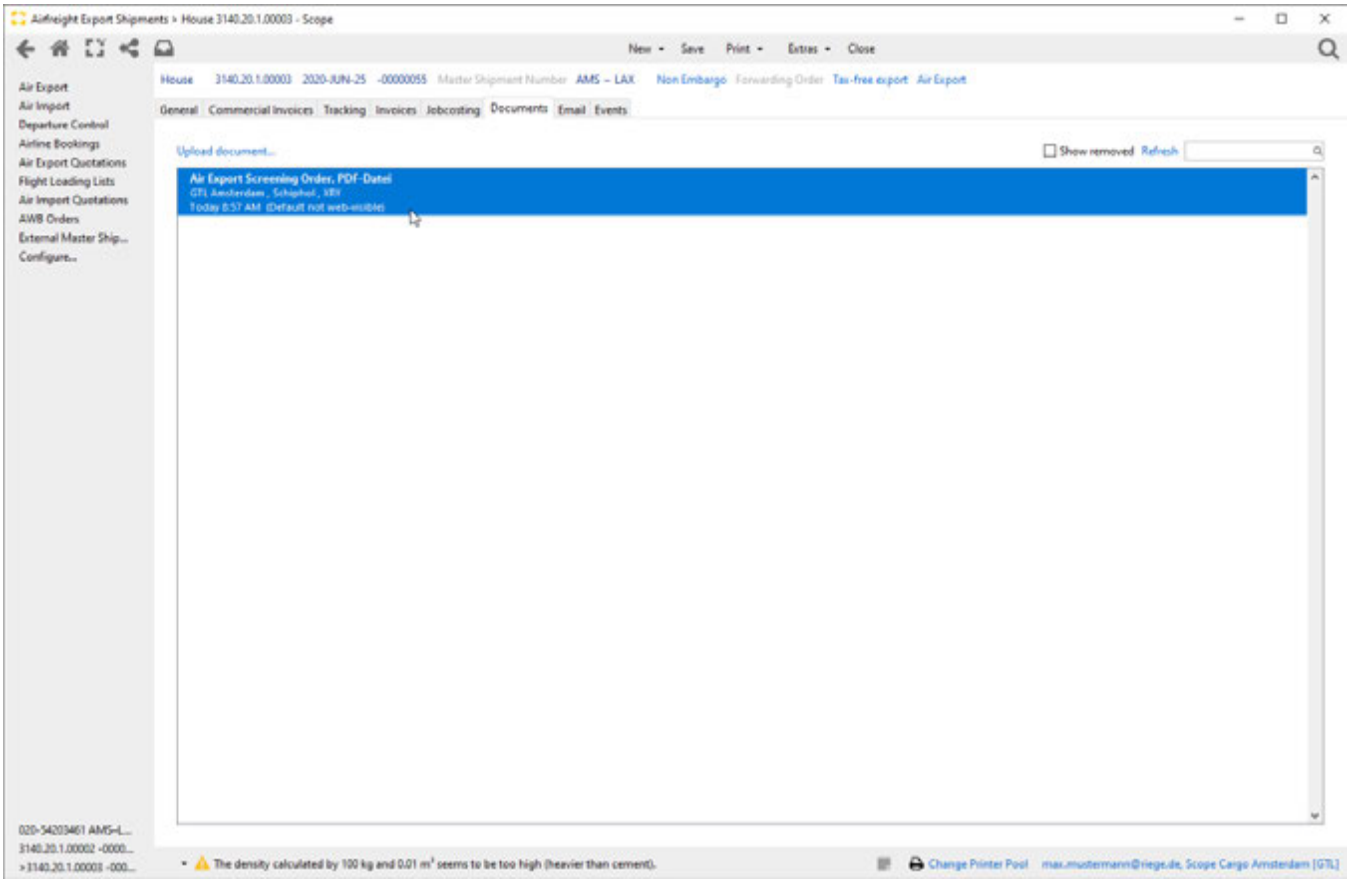
Planned Method - House Security Update

The House Security Update dialog box opens. The information on a planned security measure can be documented in the *Planned method* field. The entry can be confirmed using the *Update Security Details* button. At the same time, the security order document is made available as a PDF in the respective house shipment in the document tab. The recording of the data for the planned screening order does not yet lead to an update of the security status of the shipment.

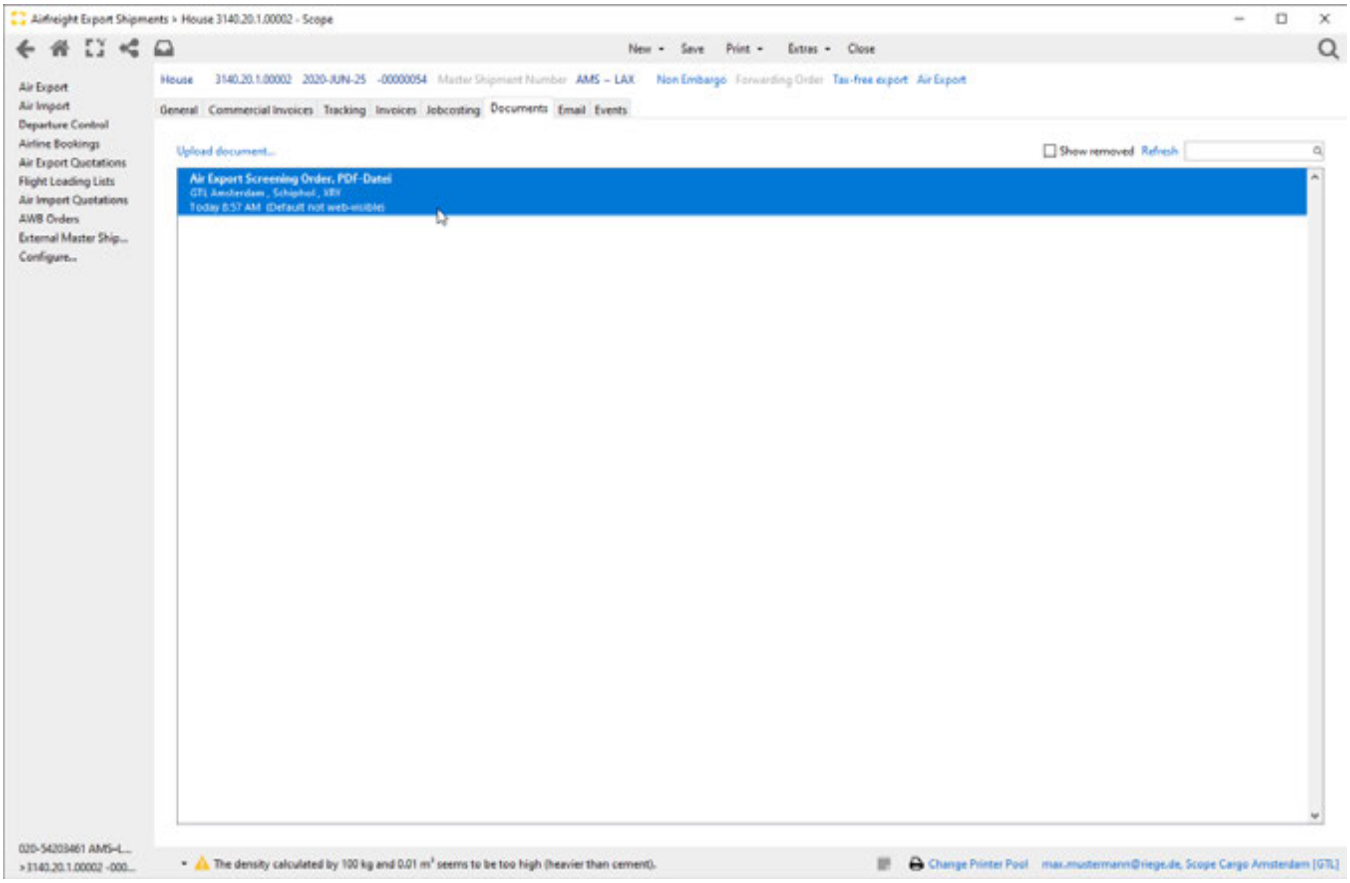
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Printed PDF Screening Order House Shipments



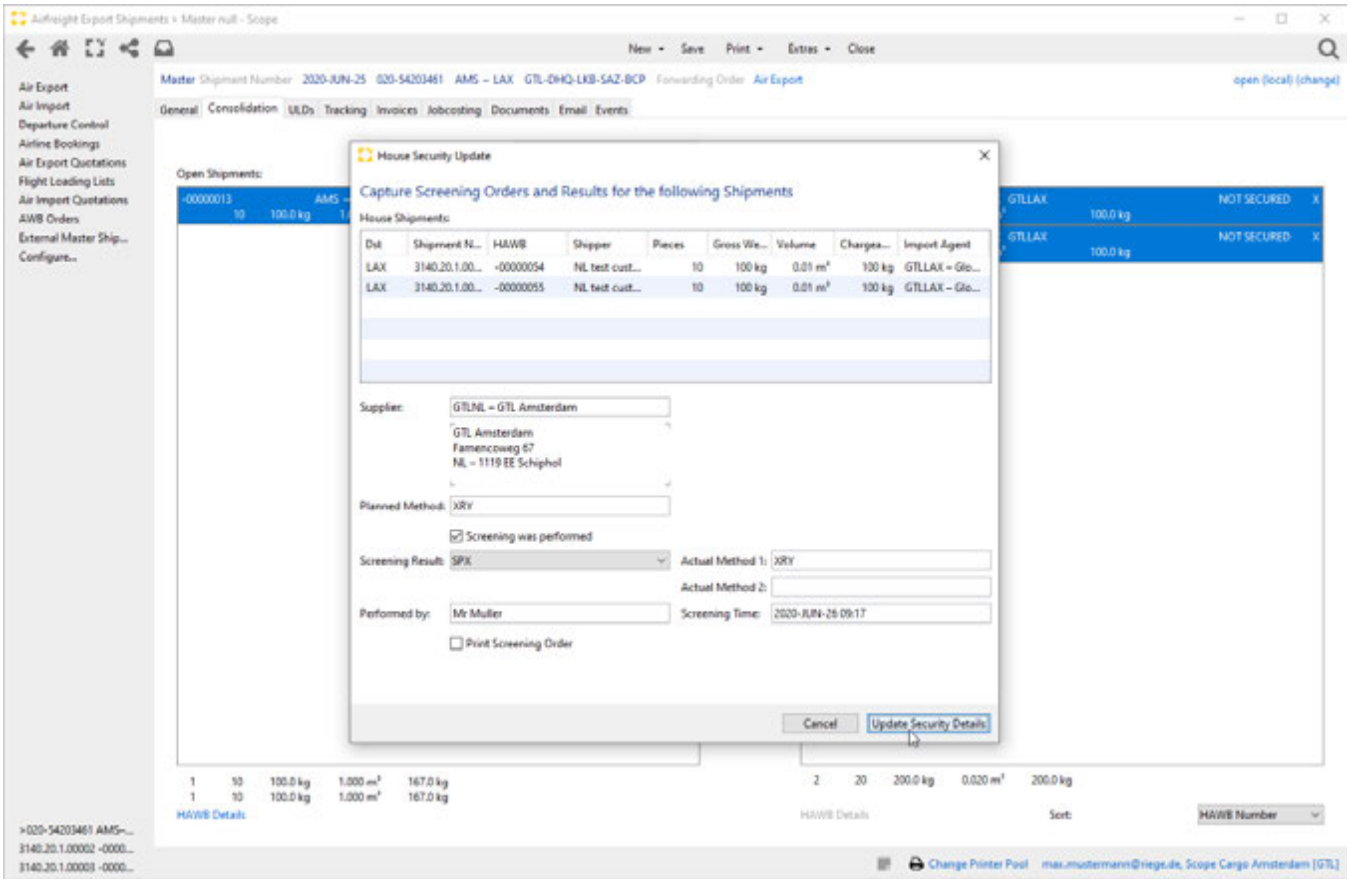
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



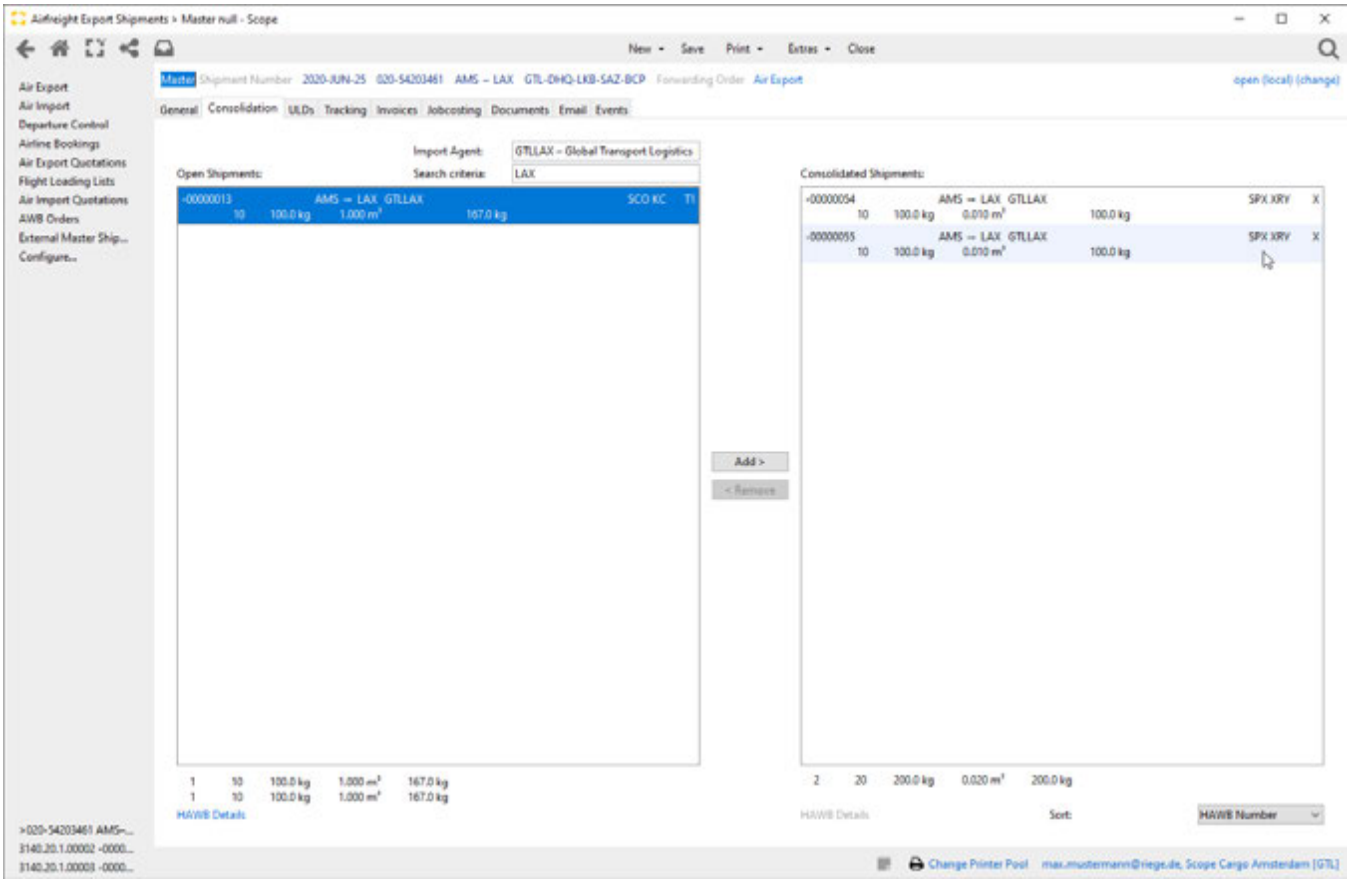
Screening order executed - house shipment

In the lower dialog window *House Security Update*, the data for an executed screening order can be recorded. The fields can be edited by ticking *Screening was performed*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



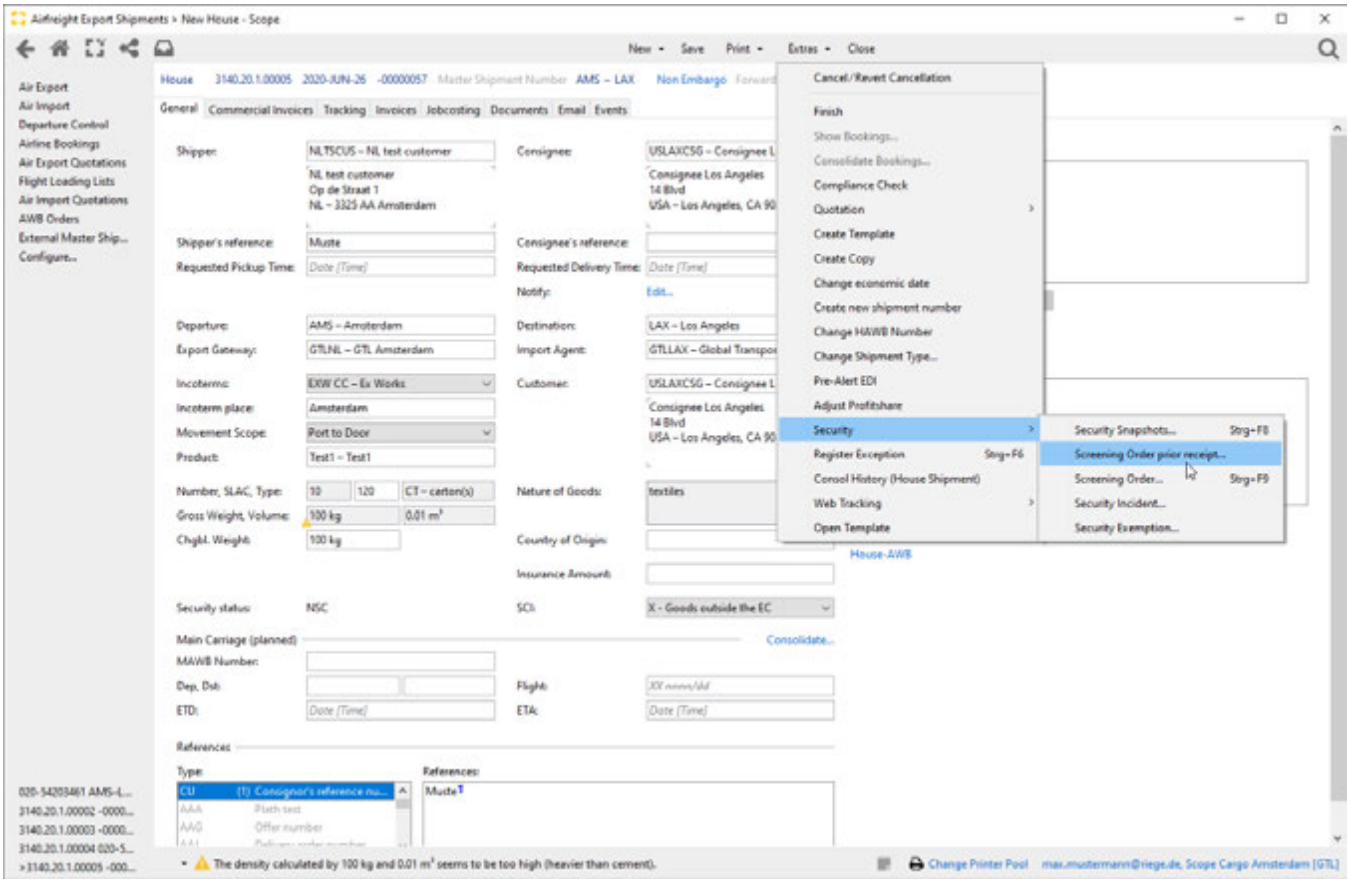
The data entry can be confirmed by using the *Update Security Details* button. At the same time, an update to the security status of the shipments from NOT SECURED is carried out here, in this example by performing the screening order XRY to the status SPX (by) XRY.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

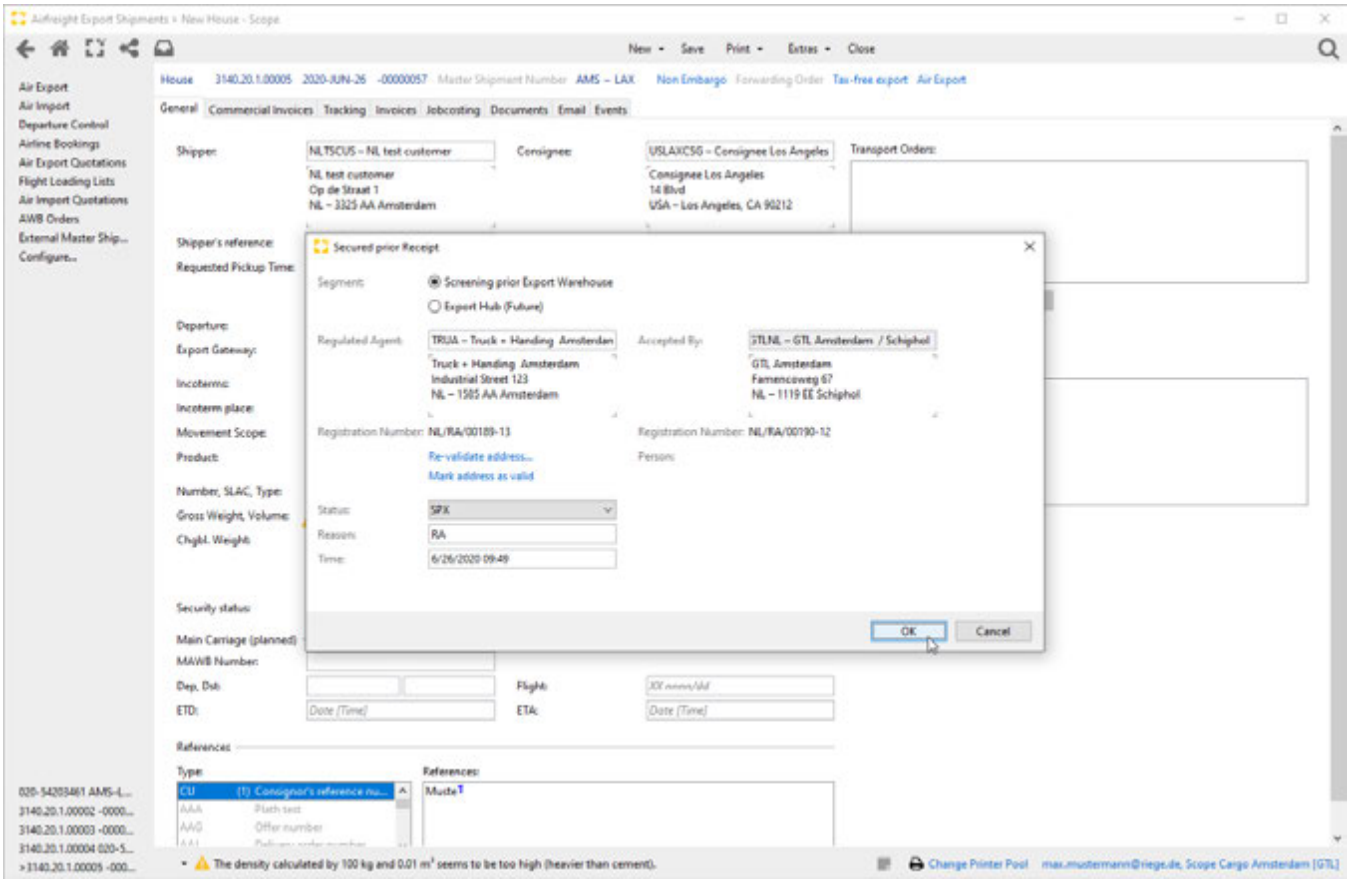
Screening Order Prior Receipt...

In addition to the methods described above, a third-party security status can be assigned for a shipment. For example, for a shipment handover or assignment by a regulated agent or if an external security order has been placed before receipt of the shipment, the program action *Extras - Security - Security Order prior receipt…* can document a security status of third parties for the shipment. In the air freight export consignment, the input dialog for the security status transfer can be called up via the program action *Extras - Security - Screening Order Prior Receipt*... .

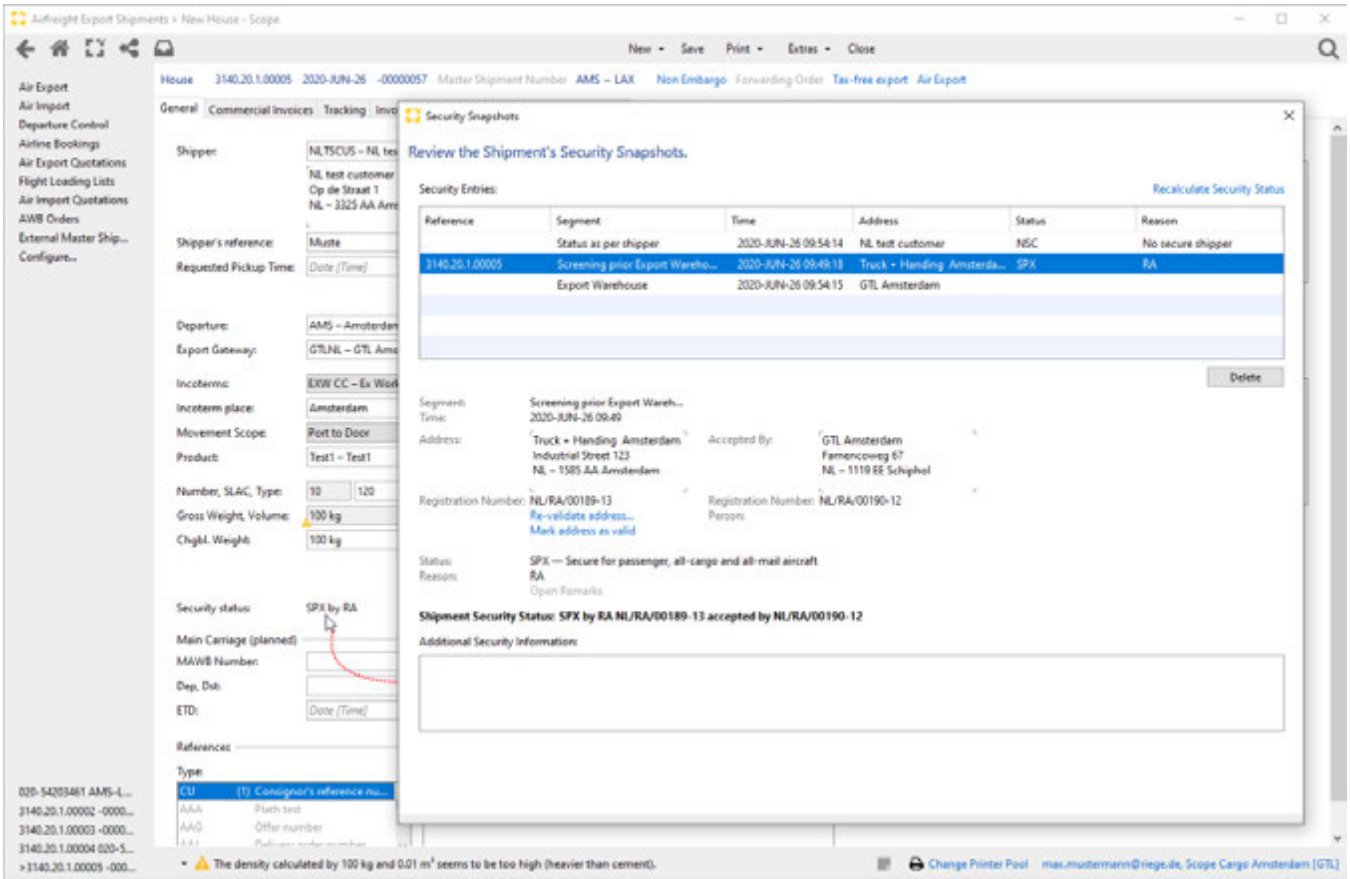


As soon as the data has been entered, the entry can be confirmed with the *OK* button.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



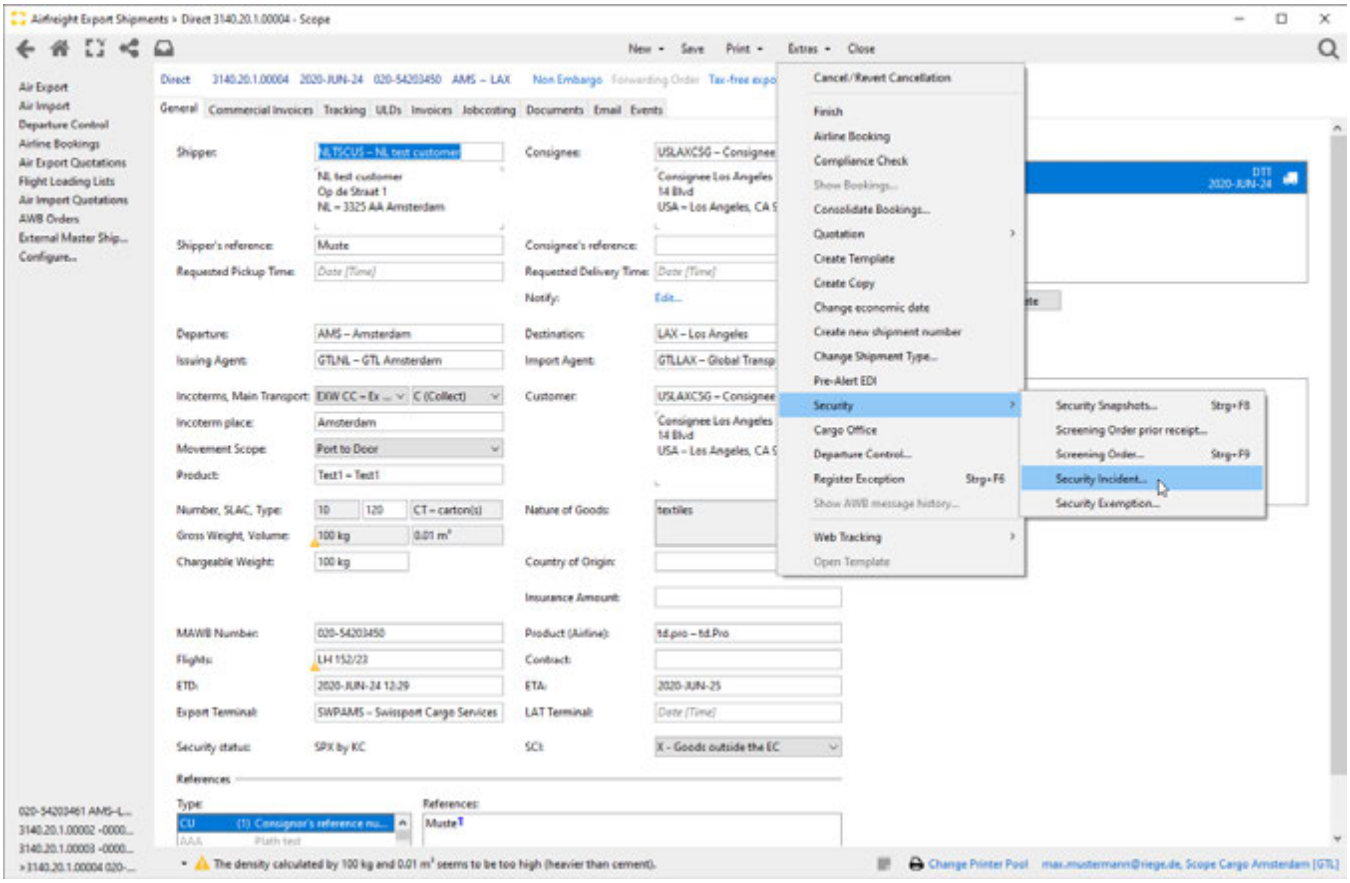
The security status of the shipment will be updated accordingly after the data entries have been confirmed.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Security Incident...

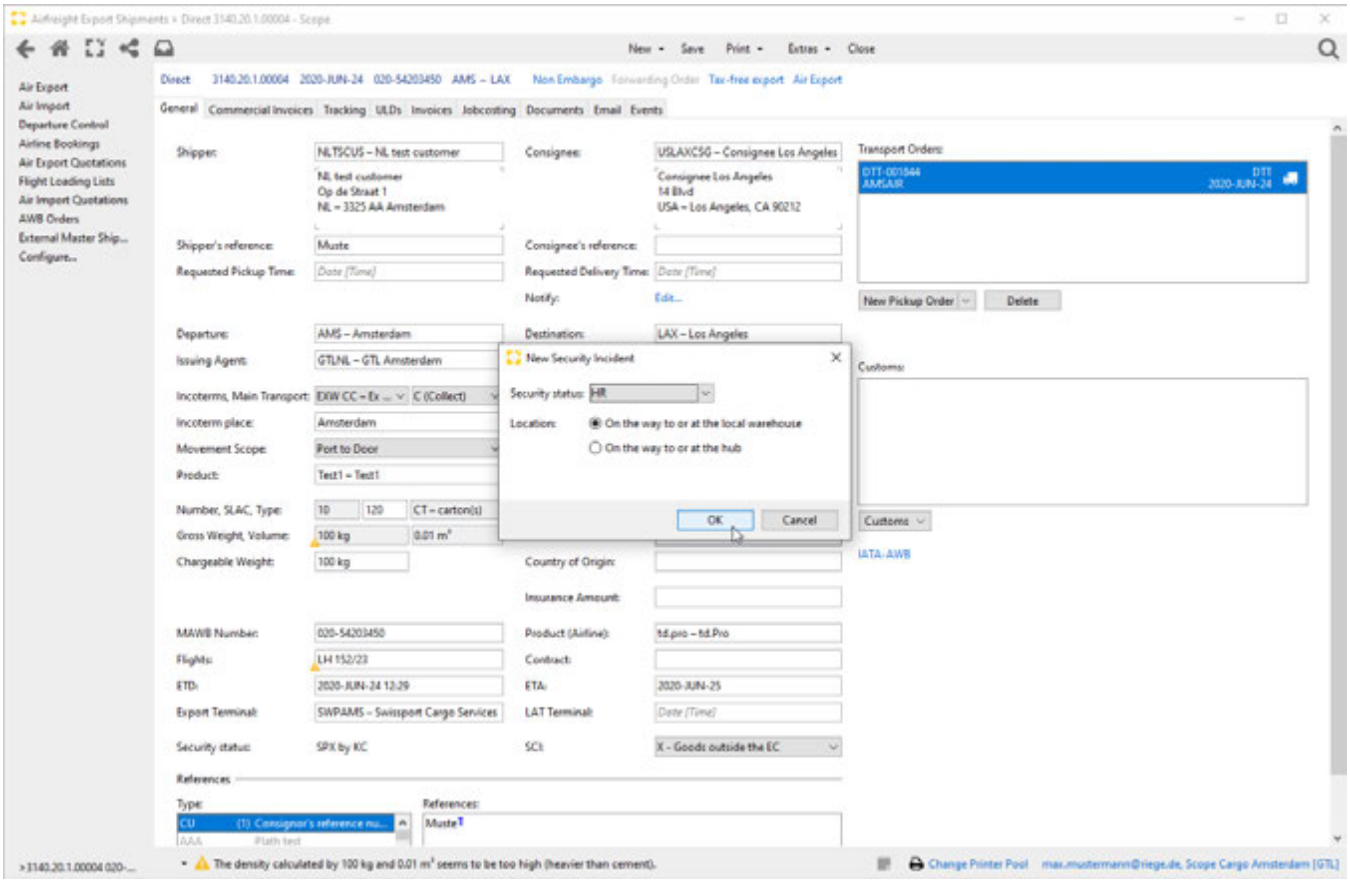
If a security incident has occurred, this can be documented in the air freight export shipment using the program action *Extras - Security - Security incident...* for the air freight export shipment.



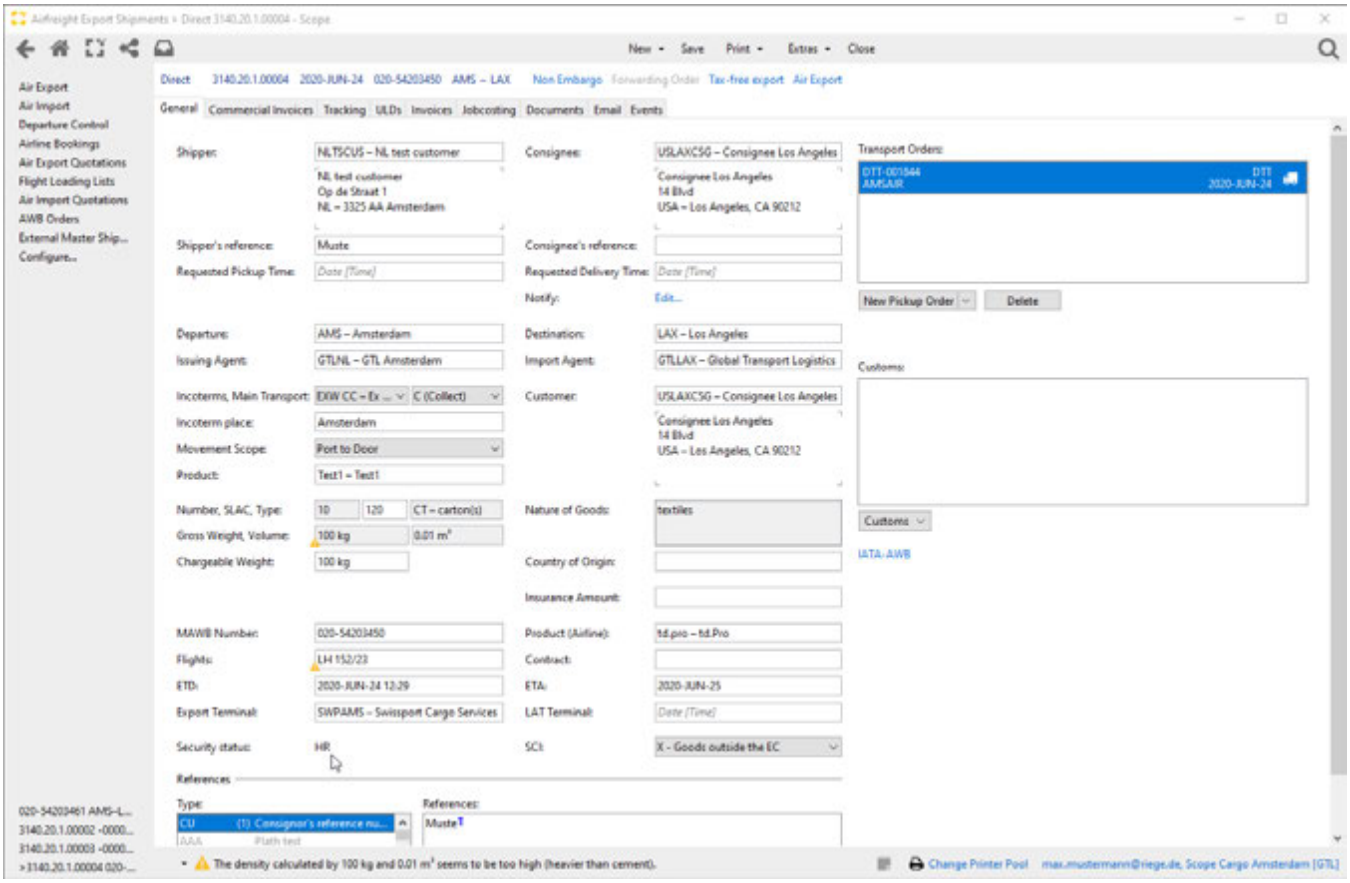
Package damaged, opened

If, for example, a package of a shipment with status SPX has been damaged or opened, the incident must be documented in this way and the **security status** of the shipment will be **changed to HR**, for example. That means freight with particularly high risk = high risk cargo.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

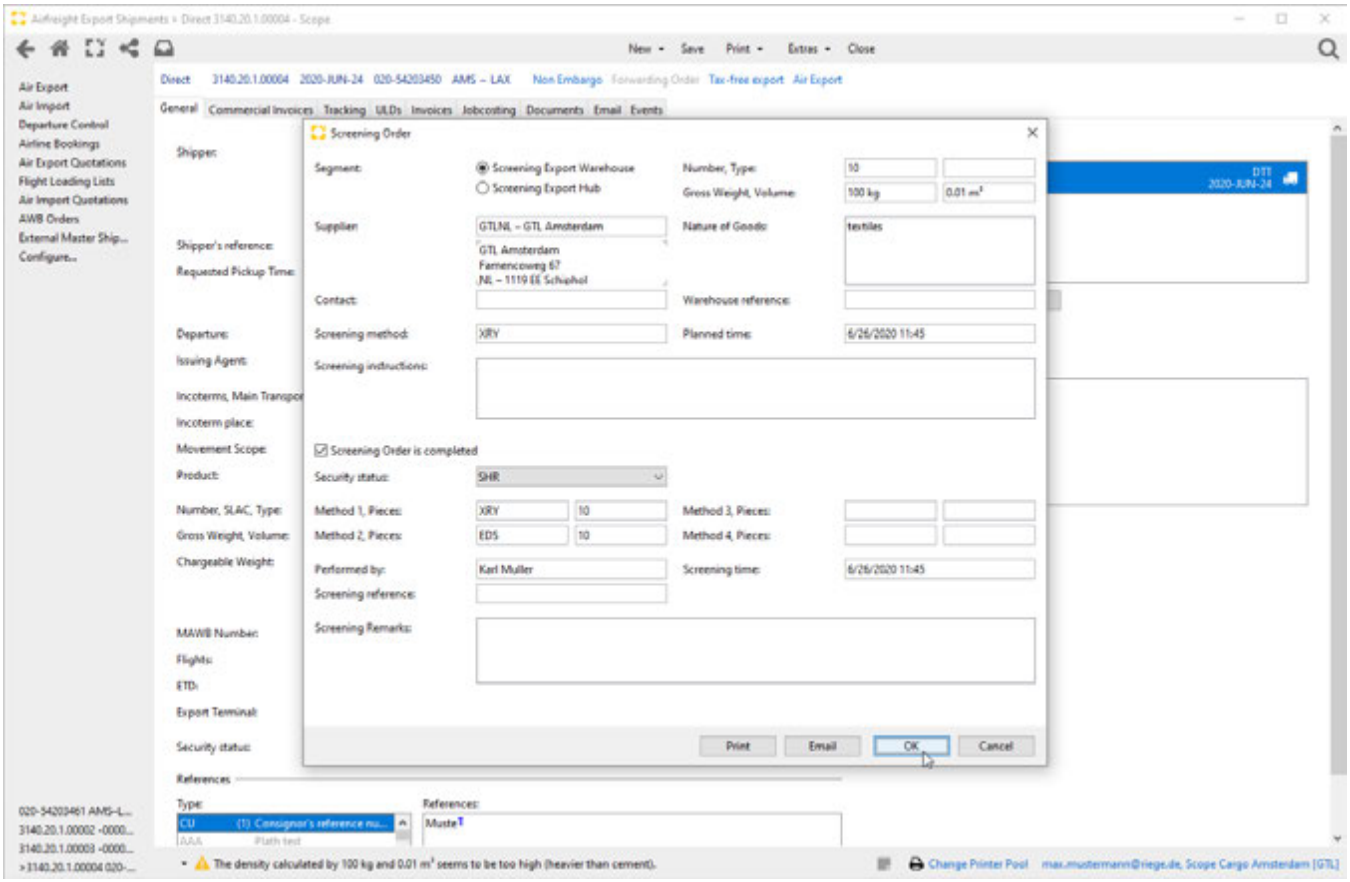


Security Status Update



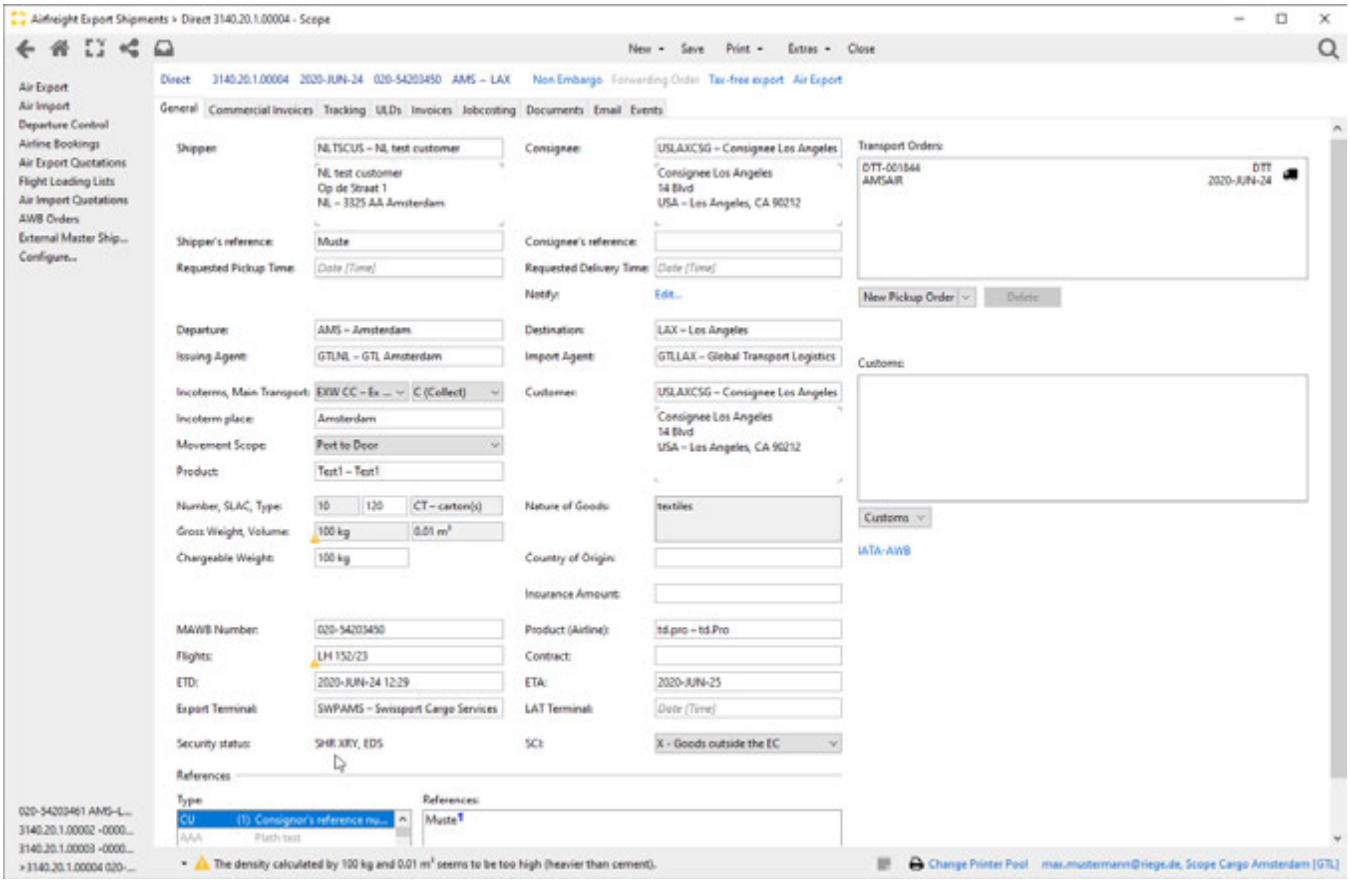
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In this case, the consignment must be checked by an airfreight inspector using the appropriate inspection procedures (**screening order**). This is documented by issuing the security incident.

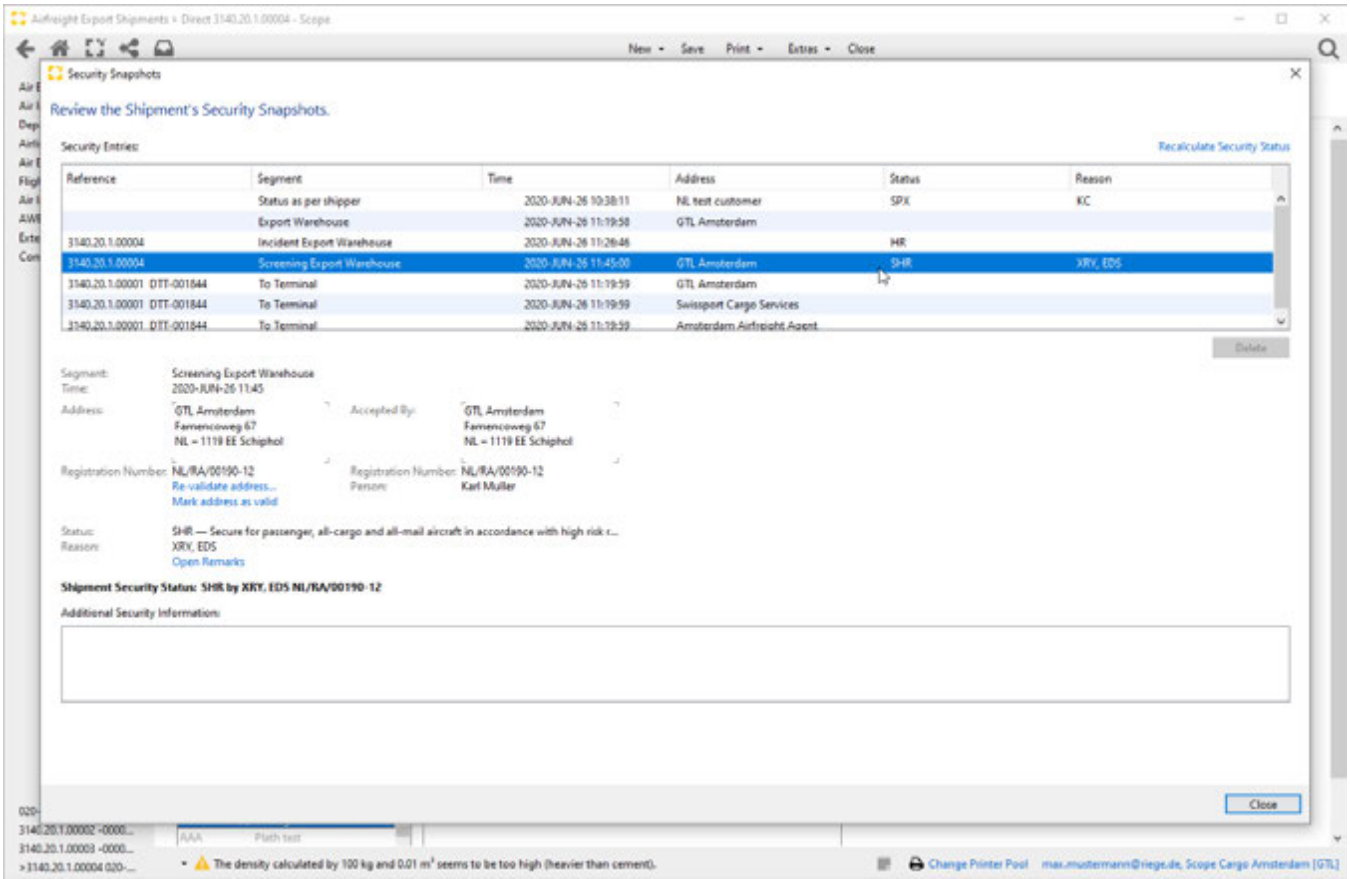


After the screening order is completed, the security status on SHR is updated with the security measures (procedure 1, procedure 2) in the shipment. A damaged package will also be repacked by qualified personnel.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



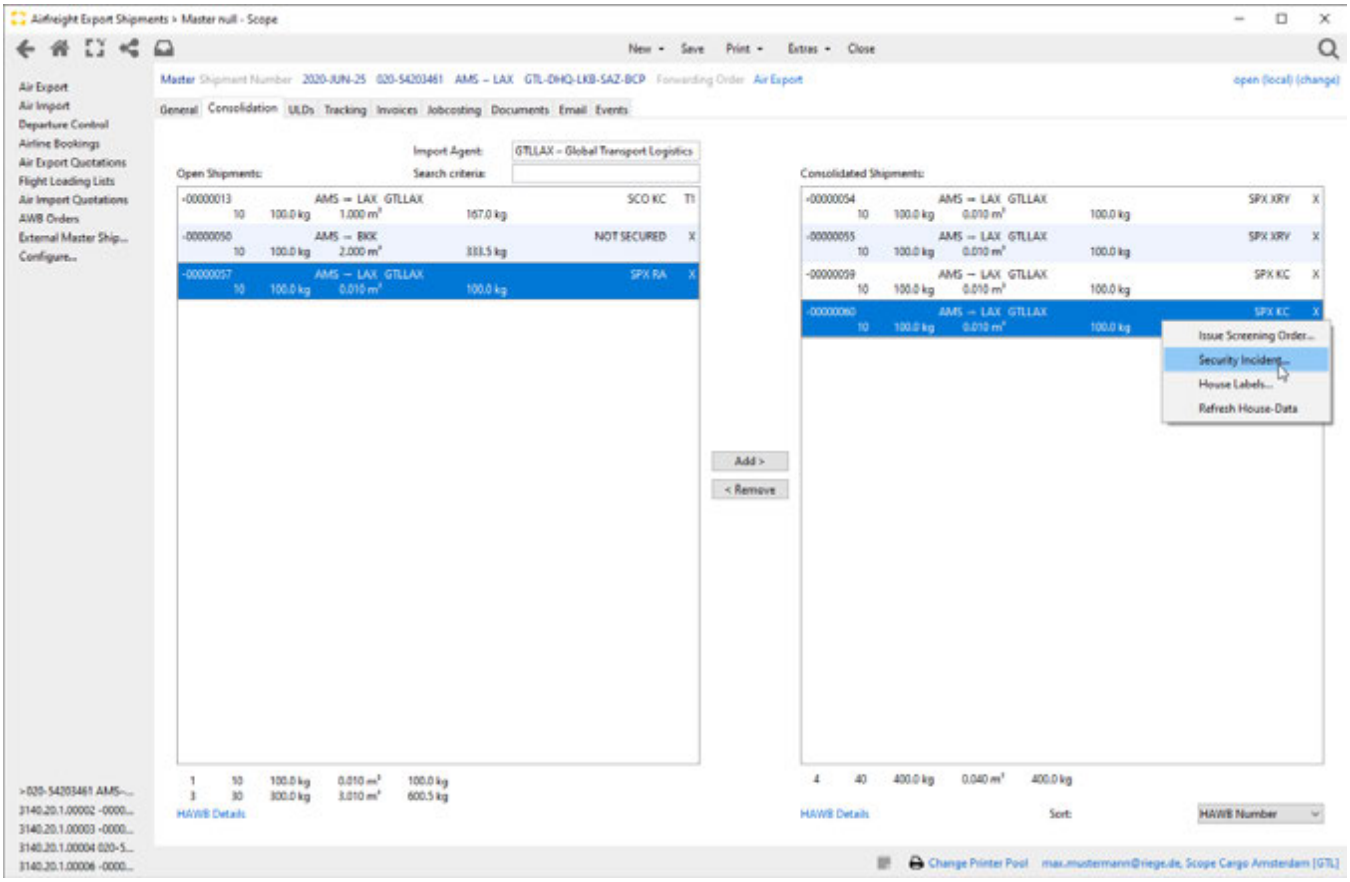
The incident will also be shown in the Security Snapshots.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

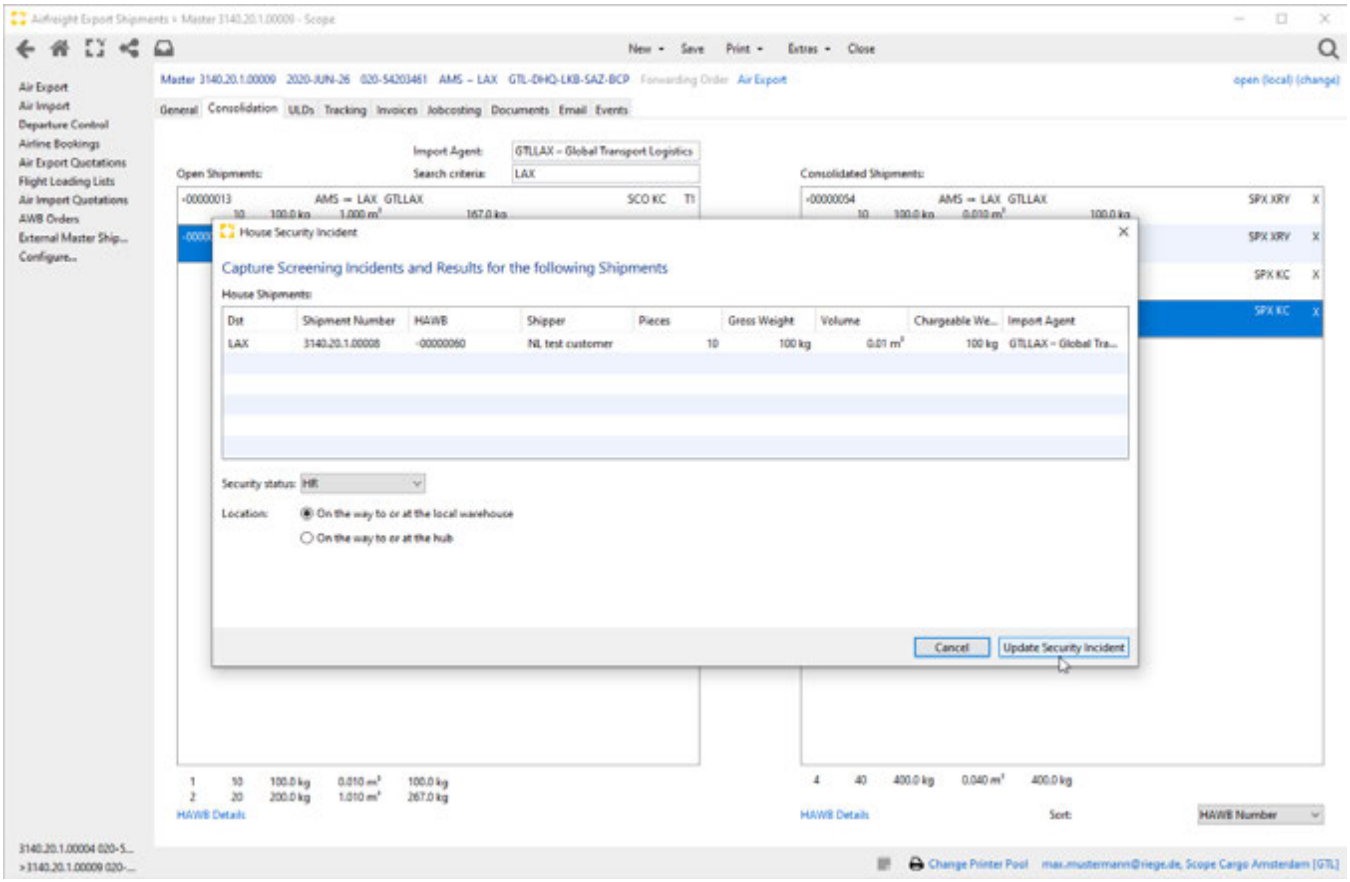
Security Incident... Consolidation

When handling an air freight consolidation shipment, it is possible to create information about a security incident directly for the assigned house shipments. The planning and the documentation for the implementation of subsequent security measures (Screening Order) can be created directly here for one or more of the assigned house shipments. The house shipments already assigned are displayed in the Consolidated shipments table in the Consolidation tab within the bulk shipment. In order to document a security incident for a house shipment, the affected shipment must be marked. By **clicking** on the **right mouse button**, the corresponding **context menu** can be opened to **record** the **security incident**.

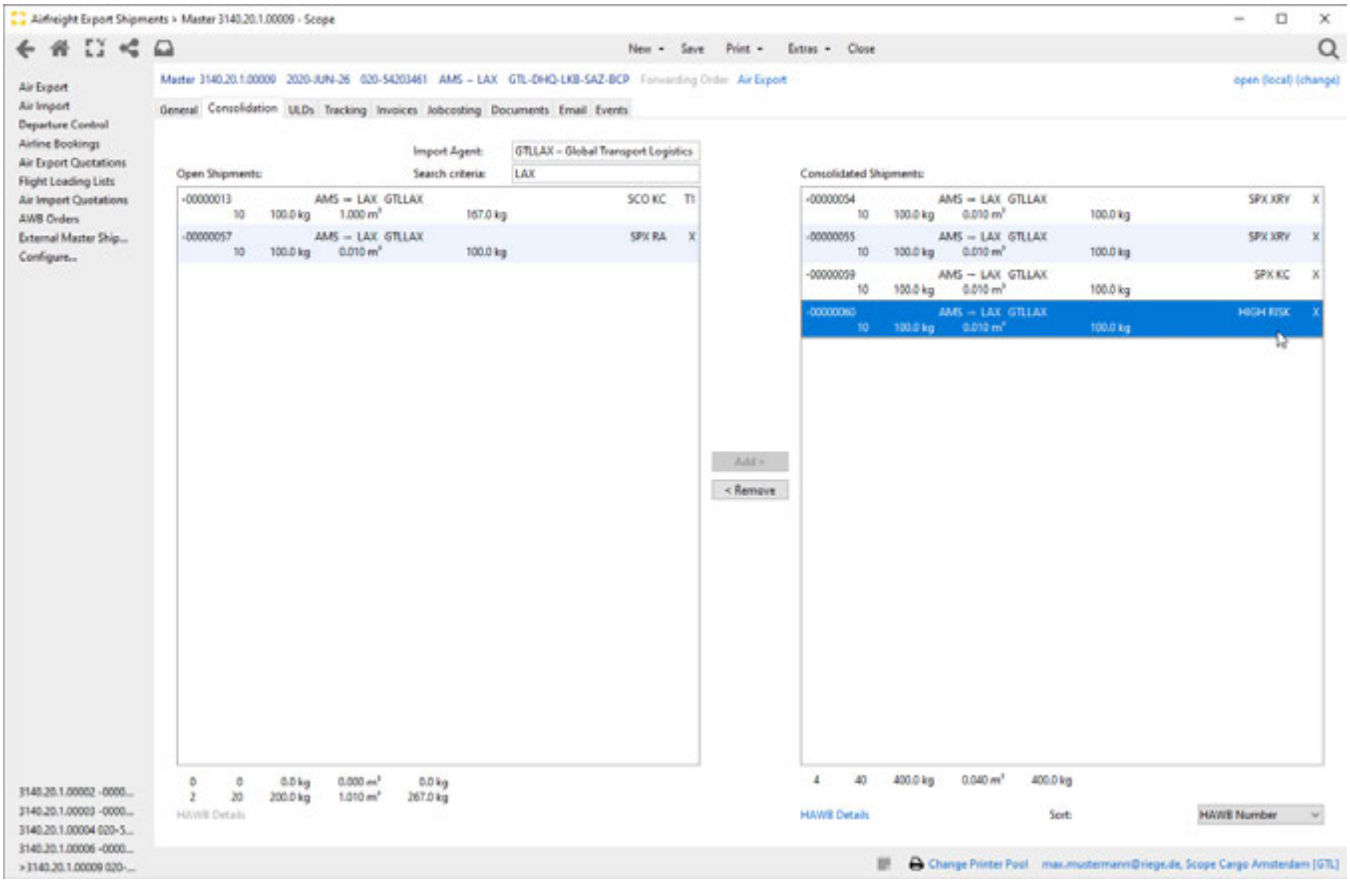


The data entry can be confirmed using the *Update Security Incident* button.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



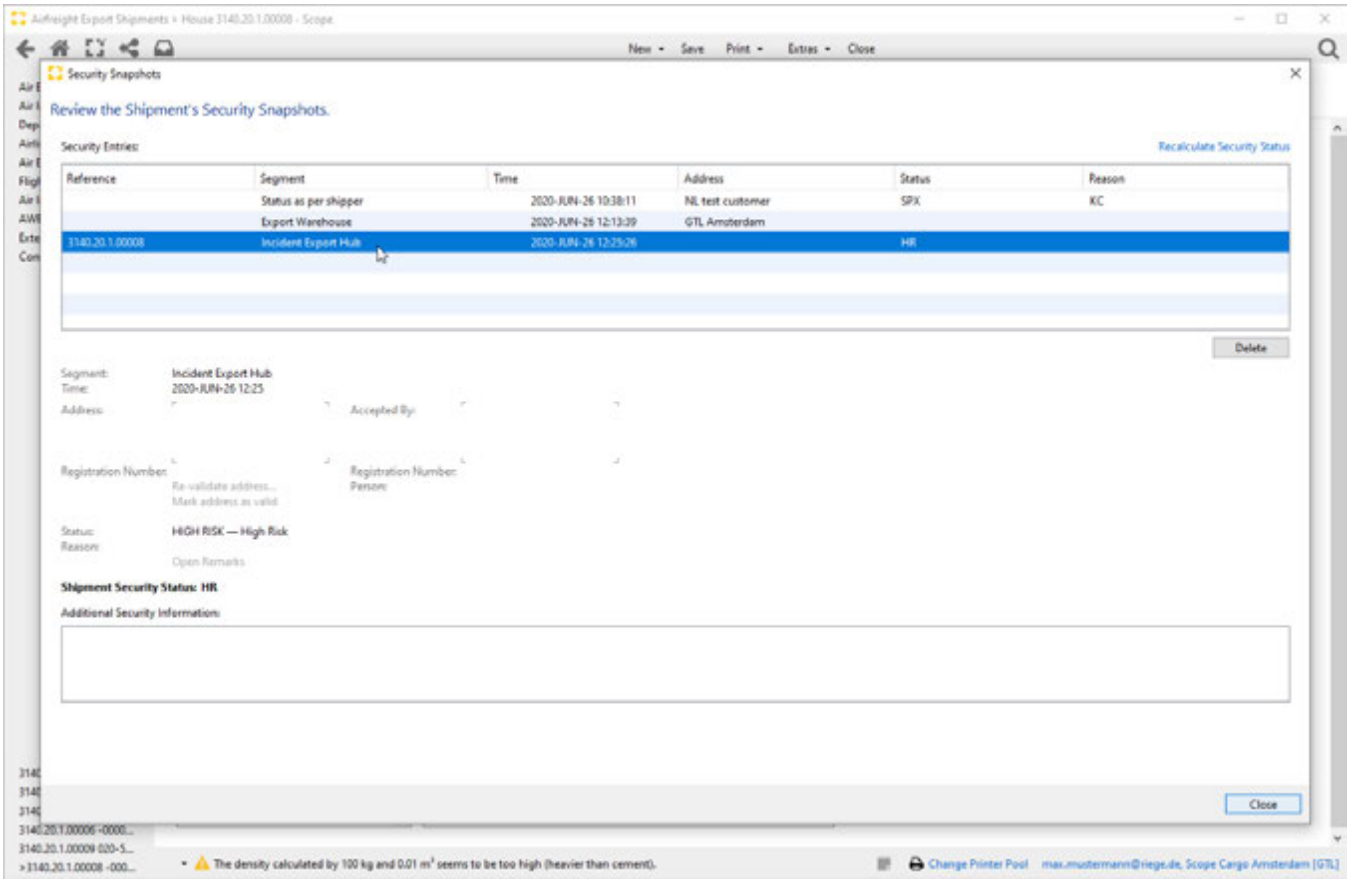
At the same time, the security status of the shipment of SPX KC in this example is updated by HIGH RSIK.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Security Status Update House

In the house shipment, the security status field is updated to HR in the shipment editor and the security incident is documented in the security snapshots of the shipment.

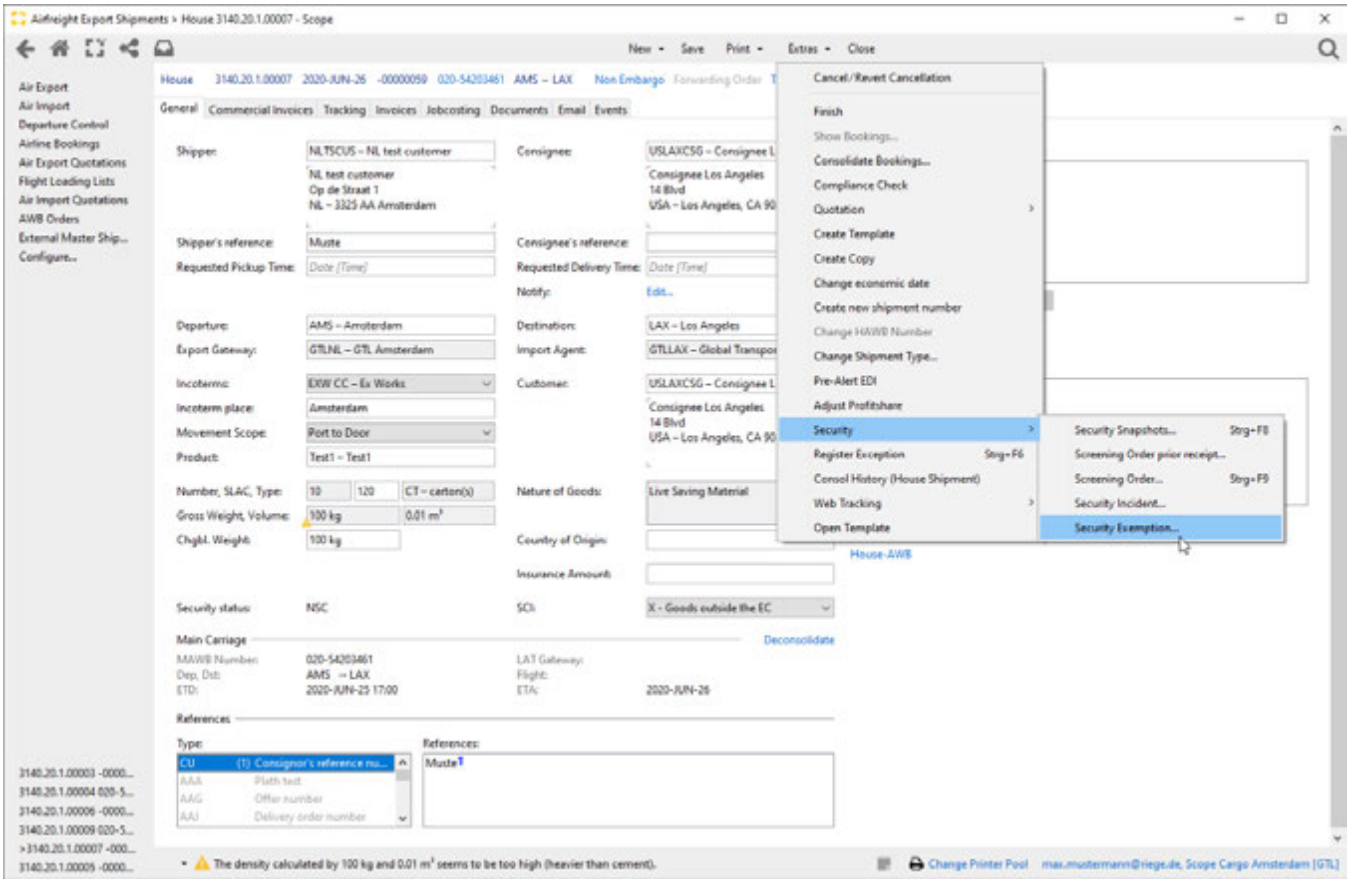


By using security measures (Screening Order), as already described in *Screening Order Consolidation* the security status can also be updated to SHR with details of the applied security measures (procedure 1, procedure 2) in the shipment.

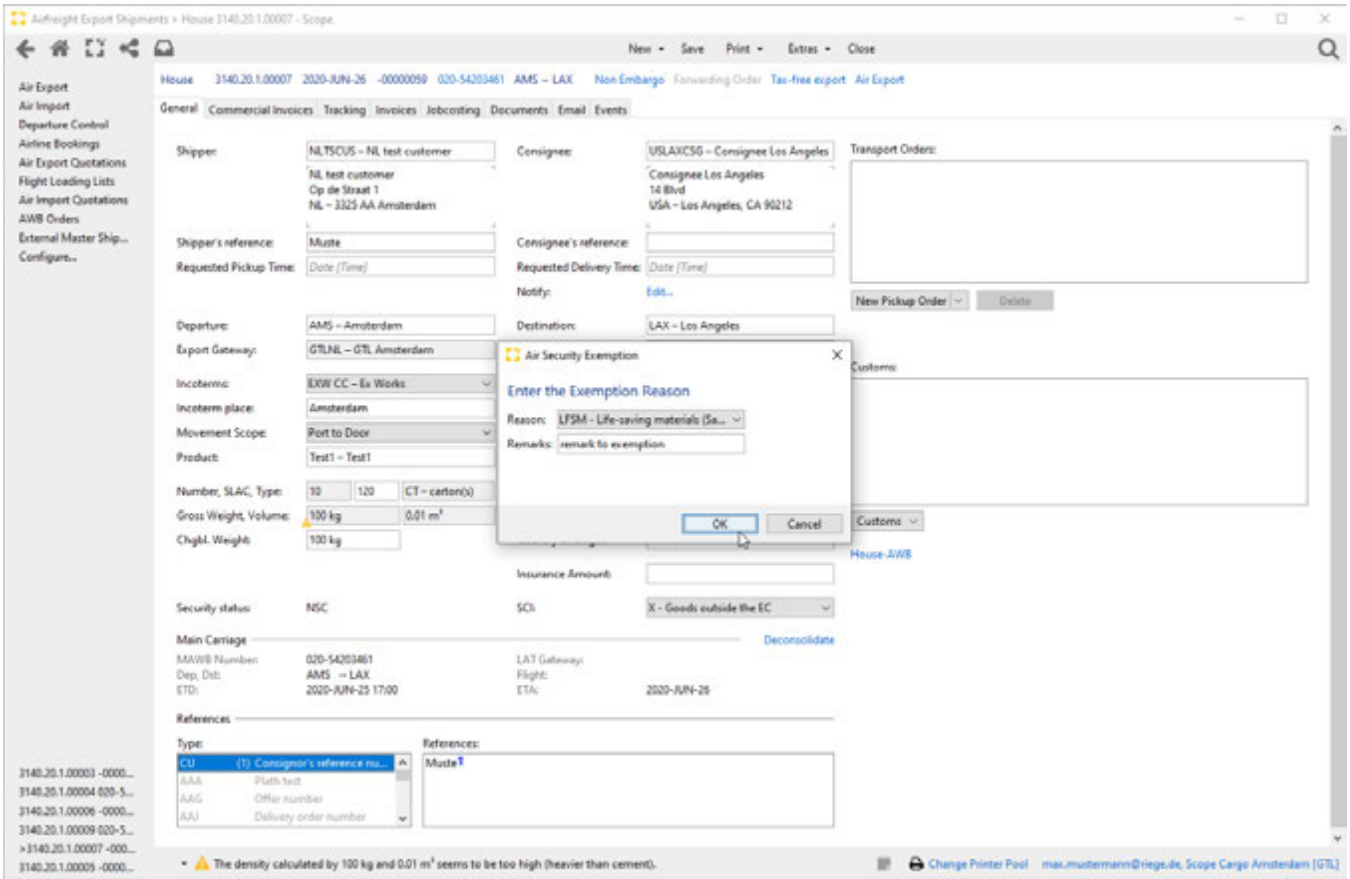
Security Exemption...

If a shipment falls under an exemption regarding security control, this can be documented in the air freight export shipment via the program function *Extras - Security - Security Exemption...* .

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

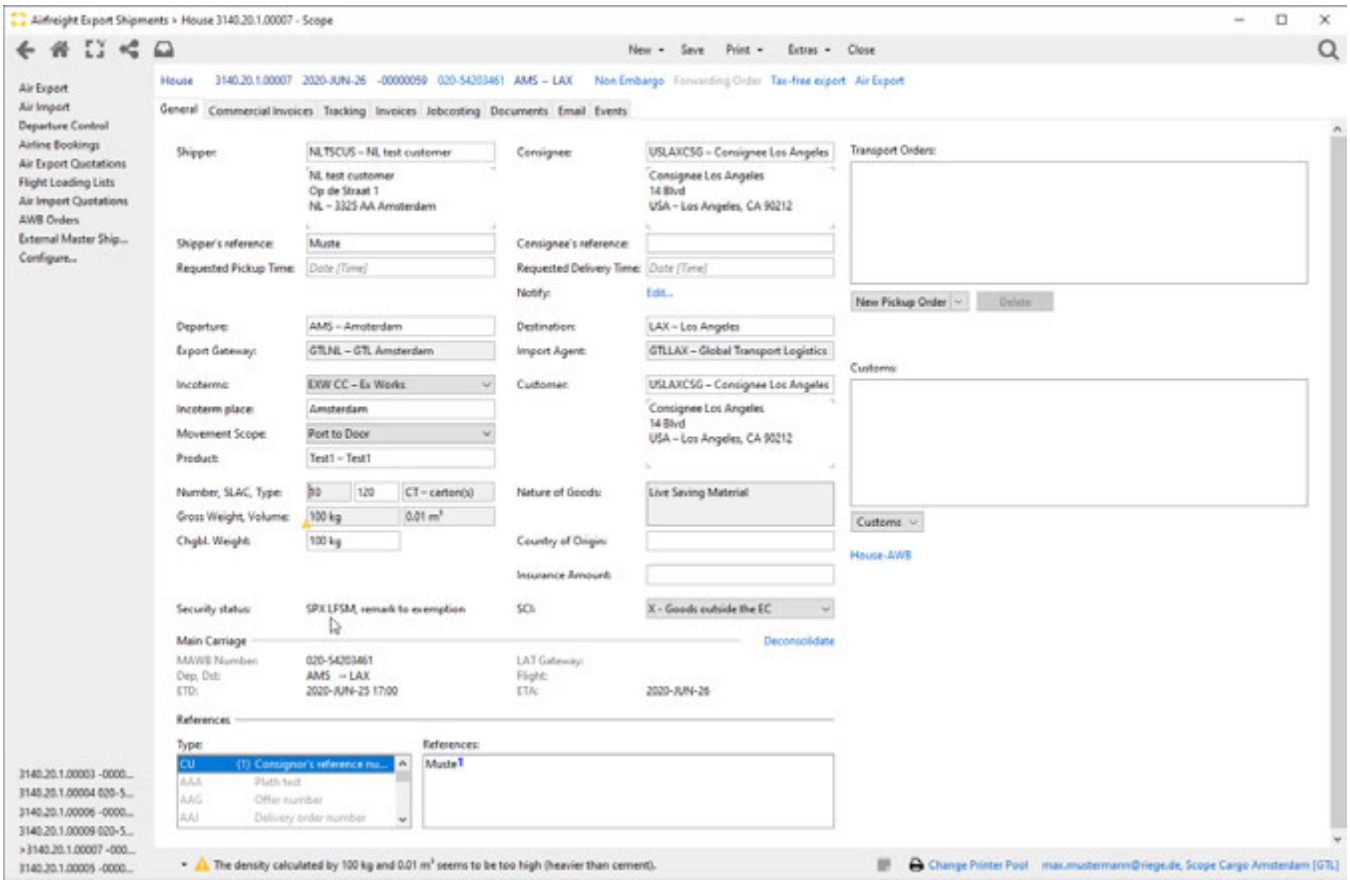


The reason for the exemption must be specified in the input dialog *Air Security Exemption* and a comment can be entered.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The security status for the shipment is then updated by the data regarding the exemption reason, displayed in the field *Security status*.

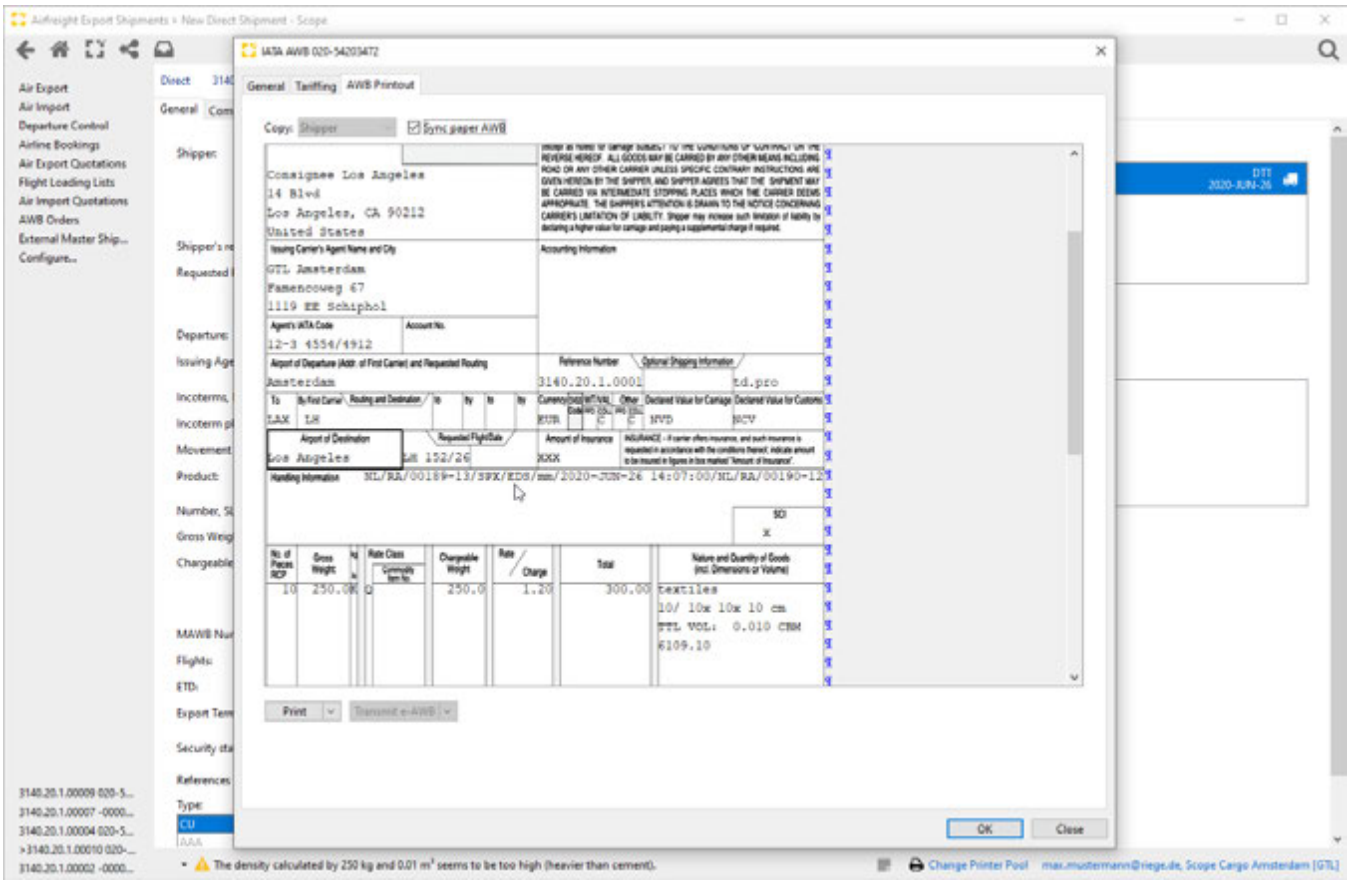


AWB - security information in handling information

The information on the security status of a shipment is printed in the Handling Information field in the AWB. The requirements for this can vary depending on the country and even the airport. The following example shown (SPX by EDS) follows the Dutch logic for Dutch customers.

SPX by EDS

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Sample	NL-RA-003S5-00-0117/SPX/BY EDS BY XX/10.03.2013 10:03
Section	**Explanation**
NL-RA-003S5-00-0117	The Registered agent number of the Branch / Issuing agent of the AWB
SPX	The assigned security status
EDS	The description of the security reason code
XX	The Initials of the user declaring the shipment secure • The user ordering the security measure • The user validating the KC details of the shipper
10.03.2013 10:03	Date time the shipment was declared secure • Date / time as entered as planned time in the security measure • Date / time the KC details were last validated.

Airline booking

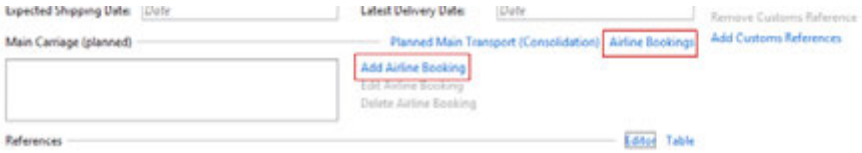
Introduction

In this function it is possible to generate an airline booking, either as EDI - FFR message or PDF attachment form.

Description

The function airline booking can be started as either:

- A function option in the command bar under extras, in case of directs or back-to-back entry
- A tab in the Consol Flight Schedule template
- A action line in the booking or master entry.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

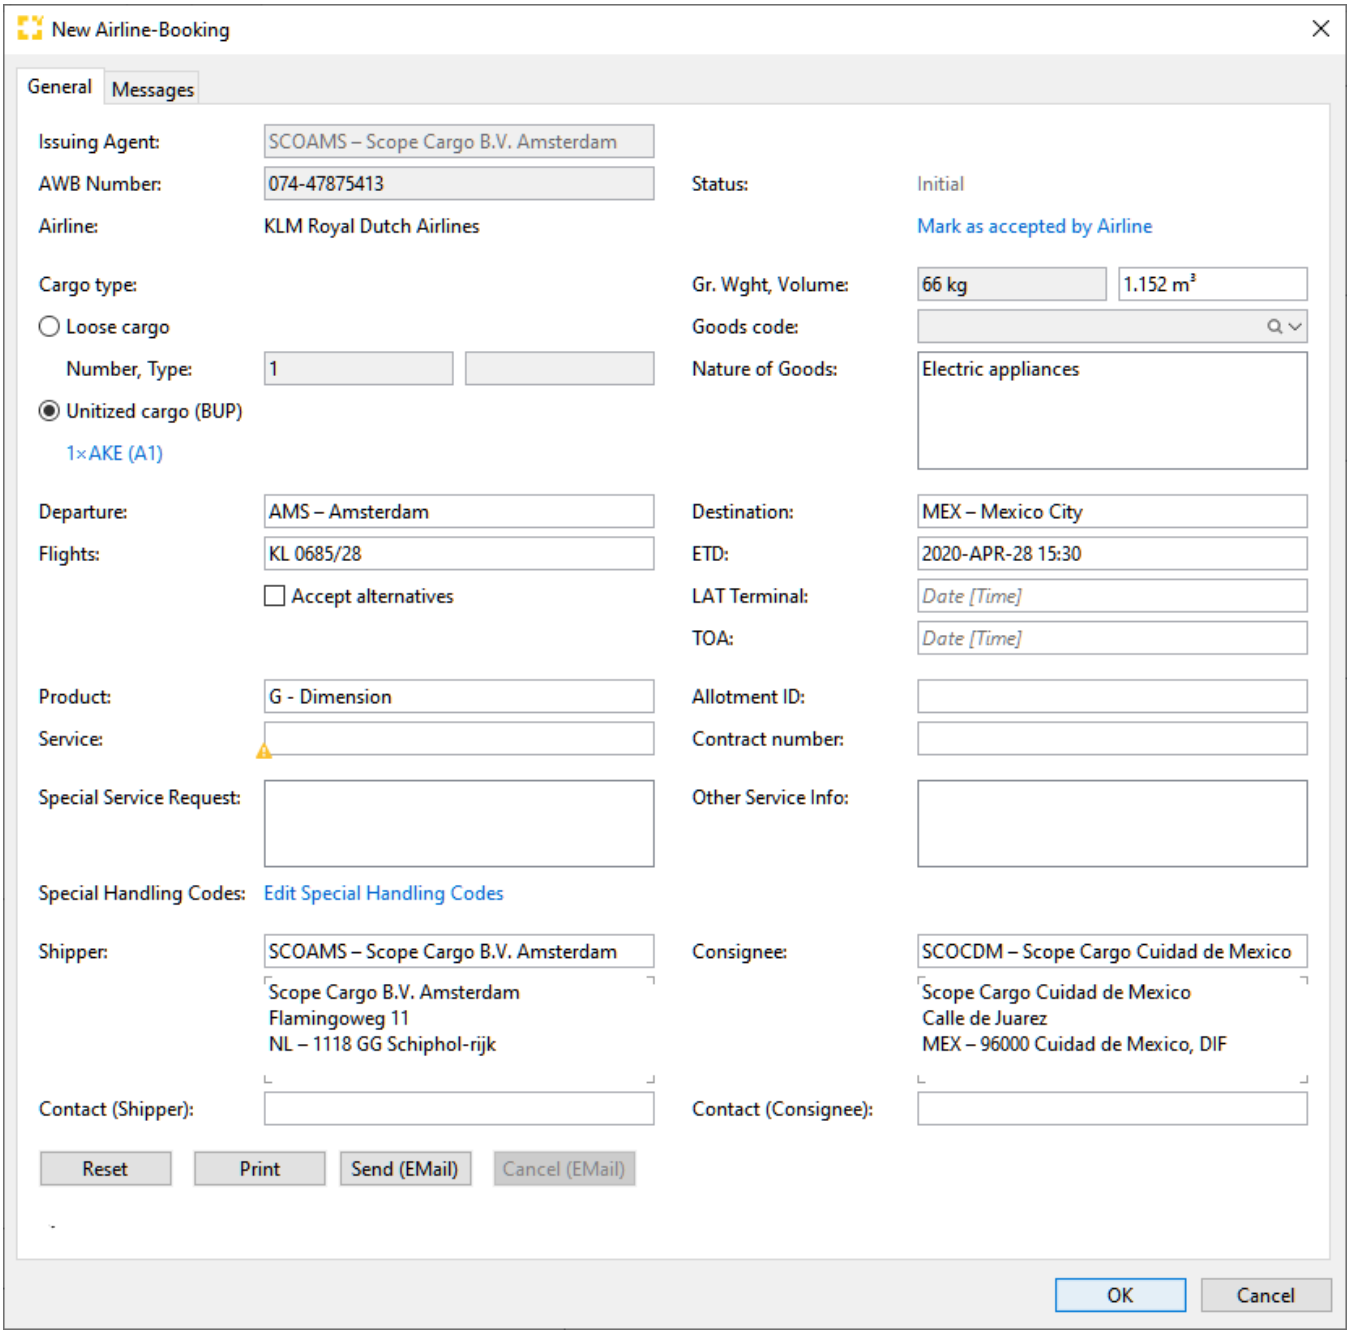
General tab - Airline booking

- Introduction
- Descripton

Introduction

The airline booking can be filled out and, depending on the set up, send as EDI, Email or printed as PDF, depending on the setup in the partner Role

Descripton



Issuing Agent

The Issuing Agent of the shipment is defaulted

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(M)AWB Number

The AWB number under which the booking is to be registered at the airline.

- The field is not available in the consol flight schedule as the number we will only be generated at the op MAWB create action
- The field will be populated and disabled when created from a shipment entry via the command bar
- The field will be empty and allow AWB generation from stock in the booking entry

Status

Under status the actual status of the airline booking is registered

Status	Description
Initial	Booking is being created and has not yet been send.
Sent	Booking has been send to the Airline.
Received	Booking has been received by the airline
Rejected	Booking has been rejected by the airline
Pending	Booking has been put on hold by the airline
Accepted	Booking has been accepted by the airline
Accepted with corrections	Booking has been accepted by the airline with corrections, i.e. flight has been set to an alternative
Cancelation sent	Cancelation request has been sent to the airline
Cancelation received	Cancelation request has been received by the airline
Cancelation accepted	Cancelation request has been accepted by the airline
Cancelation refused	Cancelation request has been refused by the airline

Cargo type

Loose cargo: Number of packages and packaging type, gross weight, volume, defaulted from the shipment
or
Unitized cargo (BUP): Type and number, weight; defaulted from the ULD tab on the shipment

Departure

Airport of departure of the shipment

Nature of goods

The description of goods, defaulted from the shipment

Goods Code (LH only)

For Lufthansa airline bookings a additional field for a nature of goods code is available to be populated and set to mandatory

Time Frame Booking (LH Only)

For Lufthansa airline bookings it is also possible to do a time frame booking, meaning that a booking is send with out a specific flight but within a certain time range

LAT (Latest Acceptance Time) only available for Time frame booking

requested last possible time at which the cargo may be delivered to the airline terminal

TOA (Time Of Arrival) only available for Time frame booking

requested time of arrival deadline at which the shipment should arrive at the airport of destination.

Flights

The desired flight(s) on which the AWB is to be booked,

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- The fight details are retrieved from the consol flight template set up.
- The fight details are defaulted from the shipment but can be update in in the booking entry, connecting flights(F2) and if active, OAG Flight schedule (F3) are available.
- The fight details can be put in here, manually or connecting flights(F2) and if active, OAG Flight schedule (F3) are also available.

Accept alternatives

Indicates that when the airline is not able to honor the booking on the requested flight, it is allowed for the airline to select and alternative flight.

Destination

Airport of destination of the shipment

Gross weight / volume

Gross weight and volume of the shipment, booking or consol flight schedule template

Allotment ID

Allotment ID agreed with the airline, under which the boooking is made, Either a allotment ID or Contract number is to be used, validition will be done that not both are populated.

Contract number

Contract agreed with the airline, under which the boooking is made, Either a allotment ID or Contract number is to be used, validition will be done that not both are populated.

Product codes

The required Product code, for the required service is to be entered here, a Codelist is available and mantained by RSI Support.
Missing products for a specific airline should be reported, the product codes available for the FFR are not linked to the Product codes on the Partner role Airline

ETD

the estimate time of departure, might be defaulted from selected / entered flight schedule.

Special service request

Special service request information can be added to the booking request

Other service information

Other relevant Service information can be added to the booking request

Special handling

Under the special handling action links, special handling codes can be entered, some airlines require SHC to be entered in combination with selected product codes.

Update from Shipment

All available details are retrieved again from the shipment.

Print

A print of an airline booking pdf can be generated and will be listed on the document tab of the relevant shipment / master / booking for emailing purposes.

Send (FFR)

Avialable depending on the set-up of the airline, when used a EDI-FFR message will be send to the airline according to the predefined route.

Send (EMAIL)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Avialable depending on the set-up of the airline, when used an email with the airline booking PDF will be send to the predefined airline email address. (in case of Consol flight scheduling it will be send direct upon creation of MAWB entries.

Cancel Airline booking

If a airline booking already has been accepted or received by the airline, a cancelation message to cancel the booking can be send.

Message Tab

On the message tab all message / prints will be tracked and displayed on this tab, together with the date / time the action took place.

Open record file

This will open and display the selected message (EDI - FFR)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

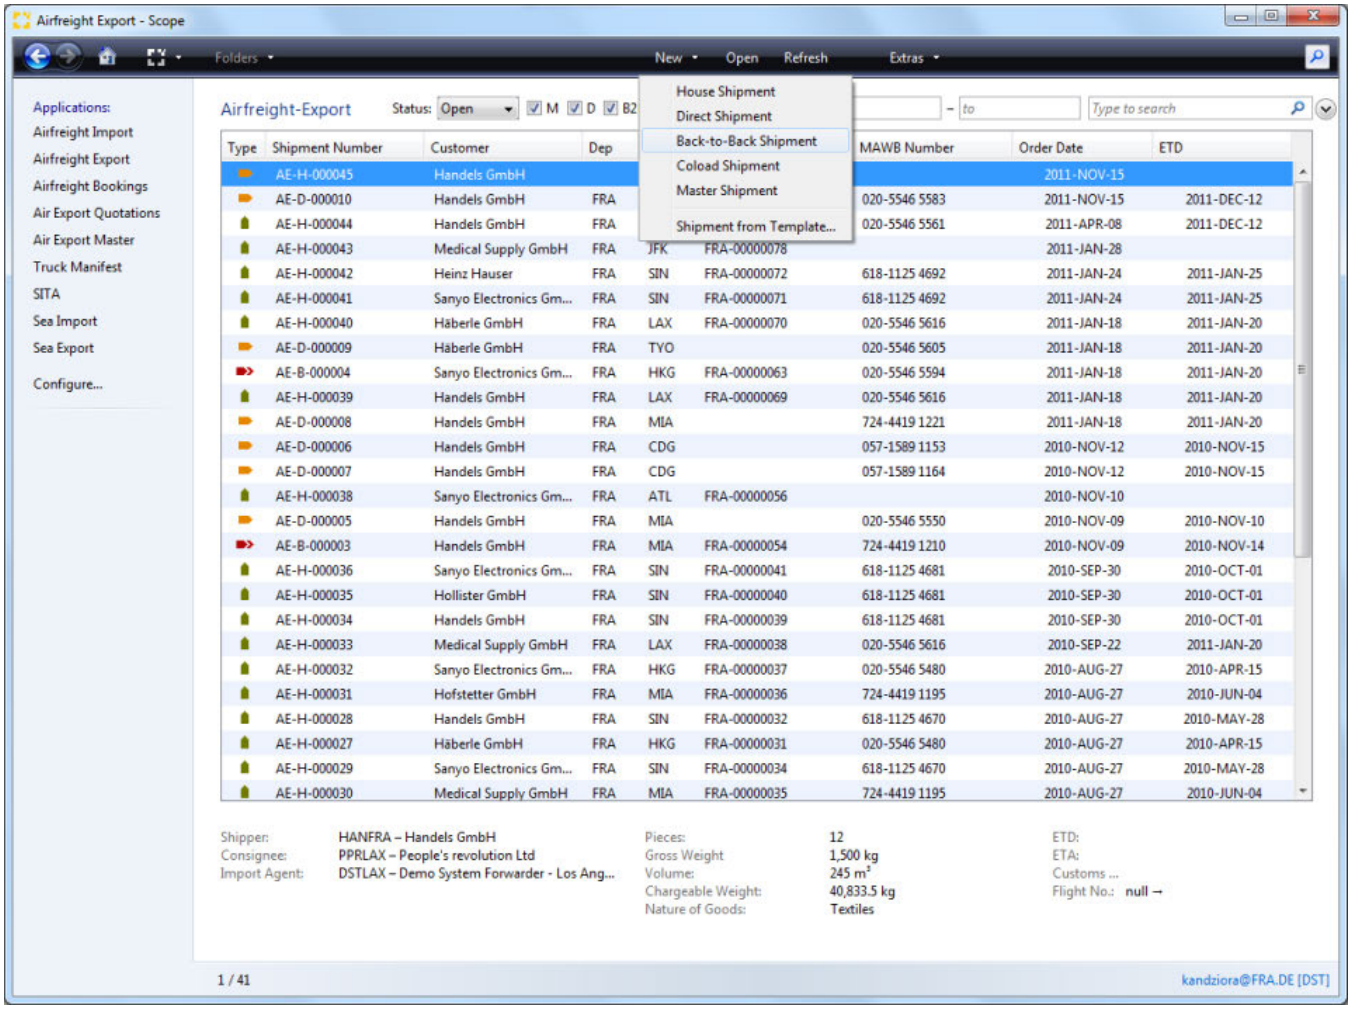
Introduction

In addition to Master, Direct, Coload and House shipments, Back-to-Back shipments may also be created within the Air Freight Export application.

A Back-to-Back shipment is actually a master single shipment, comprising a single house shipment on a single master shipment. This type of consignment is created mainly for reasons of cost. The goods could also be sent as a Direct but this would result in higher freight charges since the freight would be charged according to the official IATA rates and these are generally significantly higher than the sales rates available directly from the carrier. A Back-to-Back shipment could, in principle be created using the air import master program. However, to simplify the process the option to make a Back-to-Back shipment directly is available and this should speed the entry of the House and Master shipment data since these are very similar.

Within the Air Freight Export application, all operations related to shipment creation are carried out, this includes data collection, billing, printing of documents and cost control.

Description



With **New > Back-to-Back Shipment** a new Back-to-Back Shipment can be created.

With **Open** an existing shipment in the shipment summary can be opened. Alternatively *double click* the highlighted shipment in the shipment summary to open it.

The functions of each of the tabs within a shipment are described here:

- Documents - Back-to-Back Shipment - Airfreight Export
- E-Mail - Back-to-Back Shipment - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- General - Back-to-Back Shipment - Airfreight Export
- Jobcosting - Back-to-Back Shipment - Airfreight Export
- Tracking - Back-to-Back Shipment - Airfreight Export
- Vouchers - Back-to-Back Shipment - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

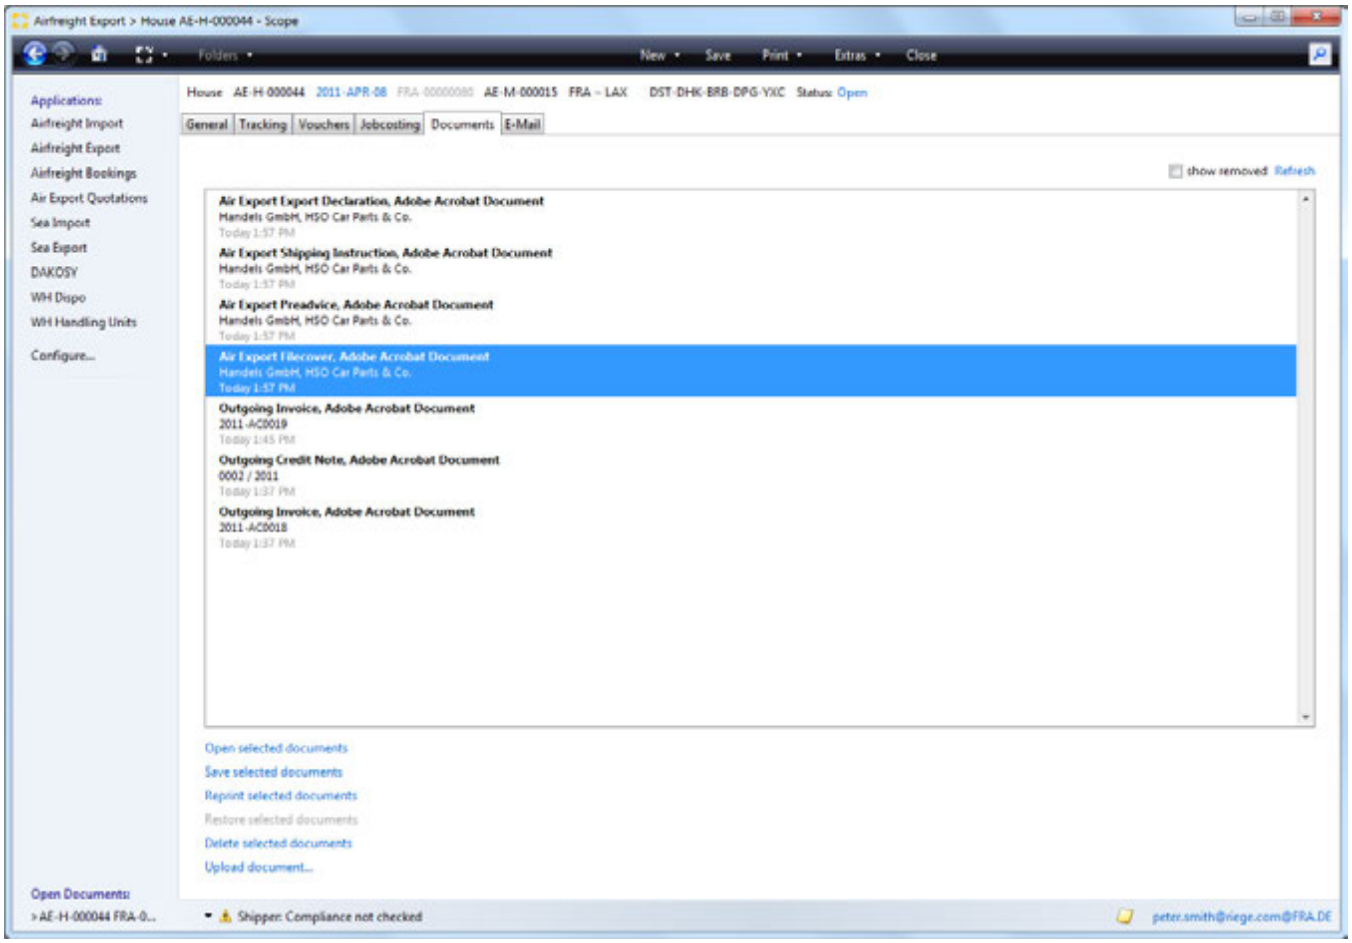
Documents - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

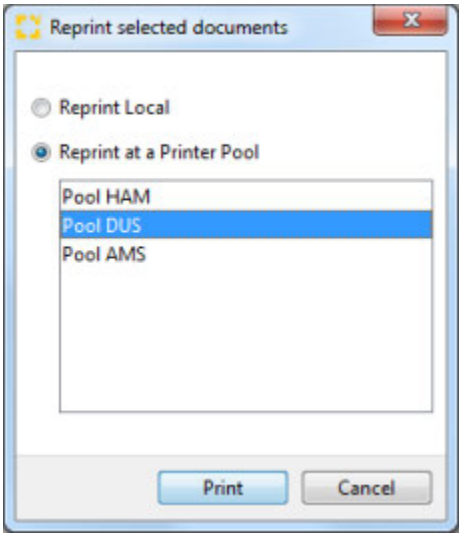
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

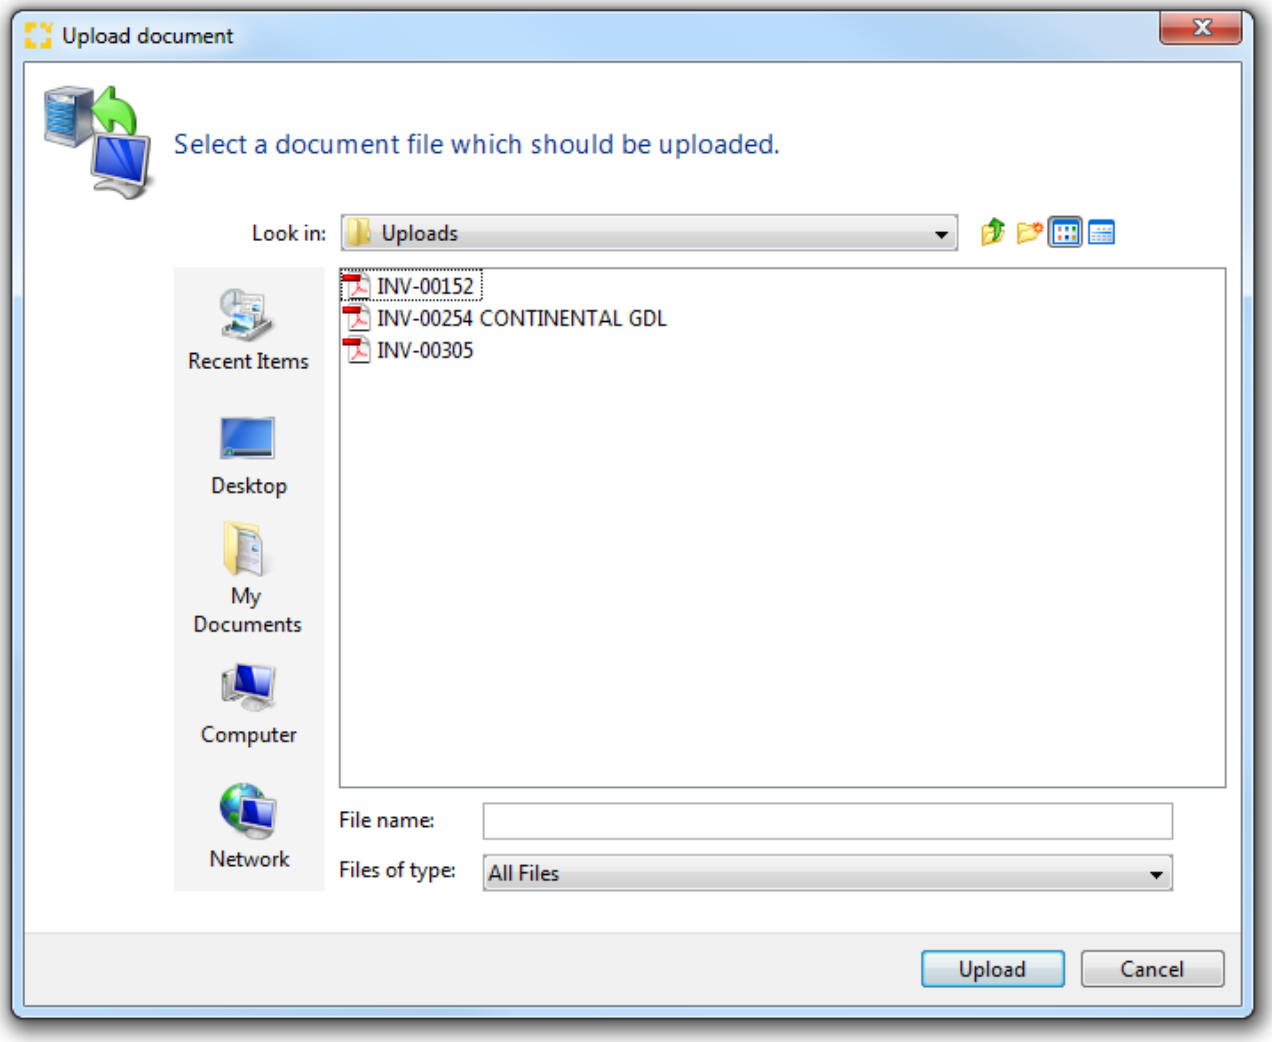
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

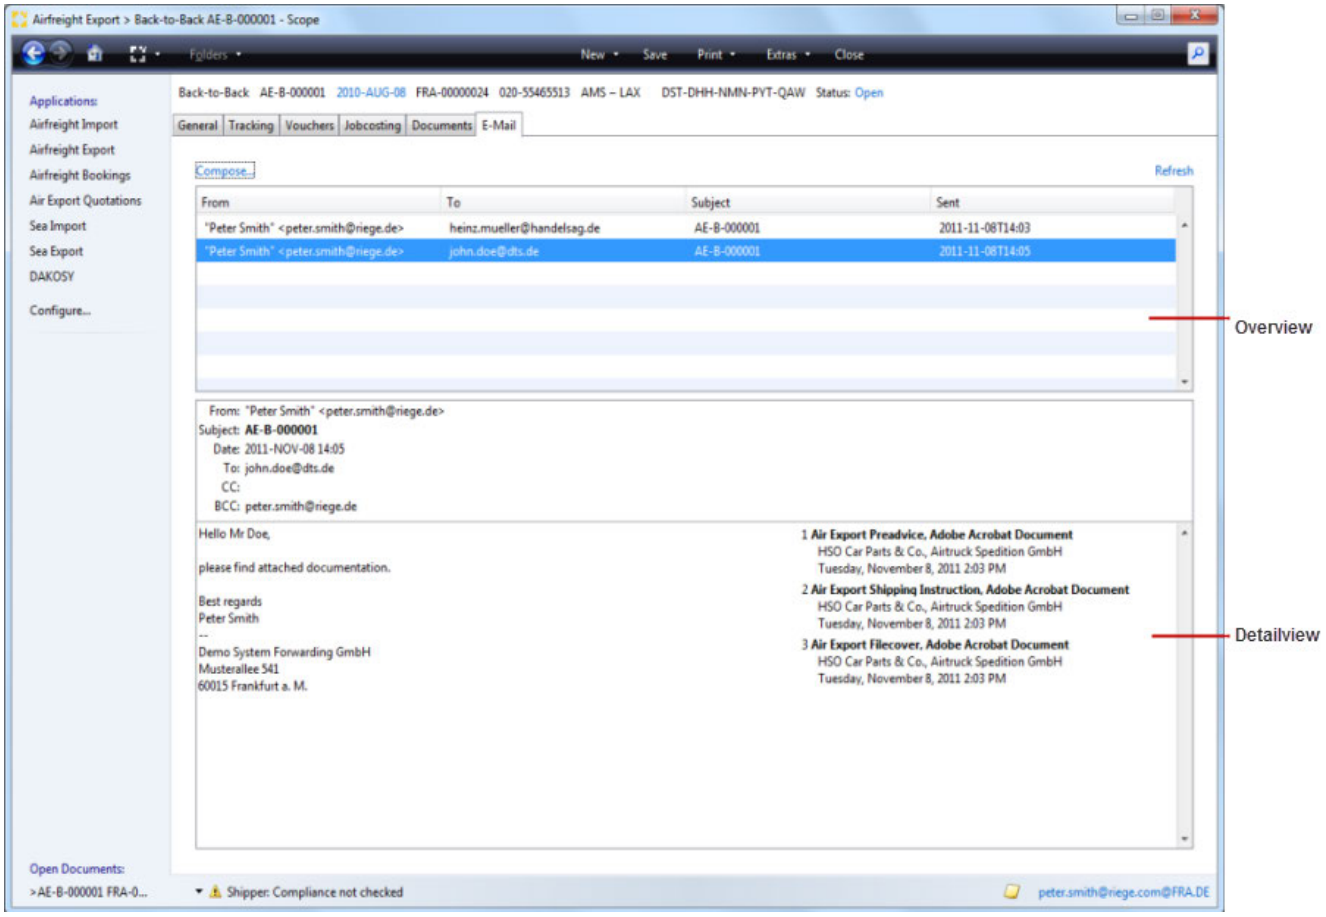
E-Mail - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

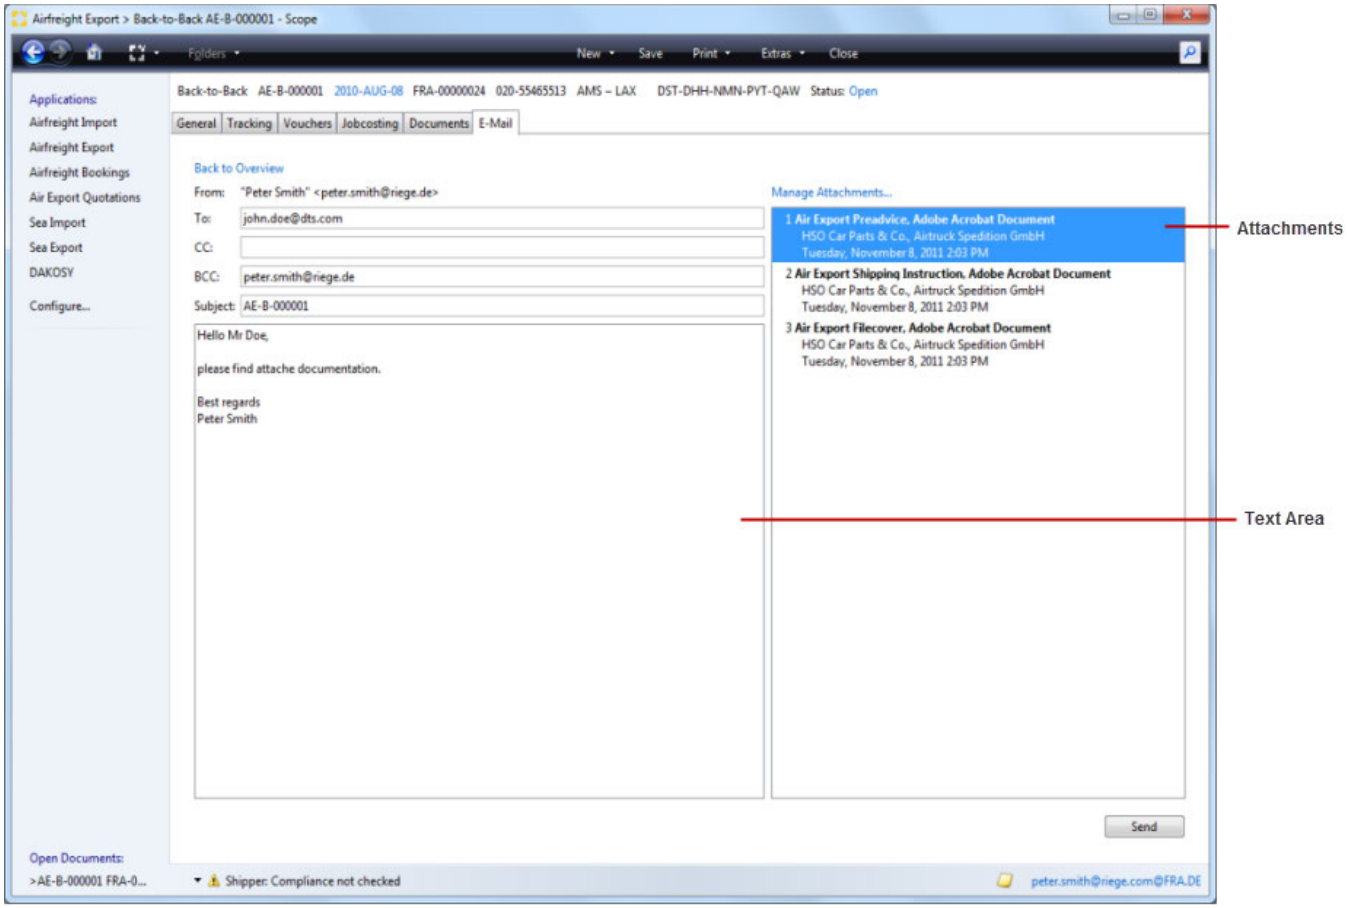
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

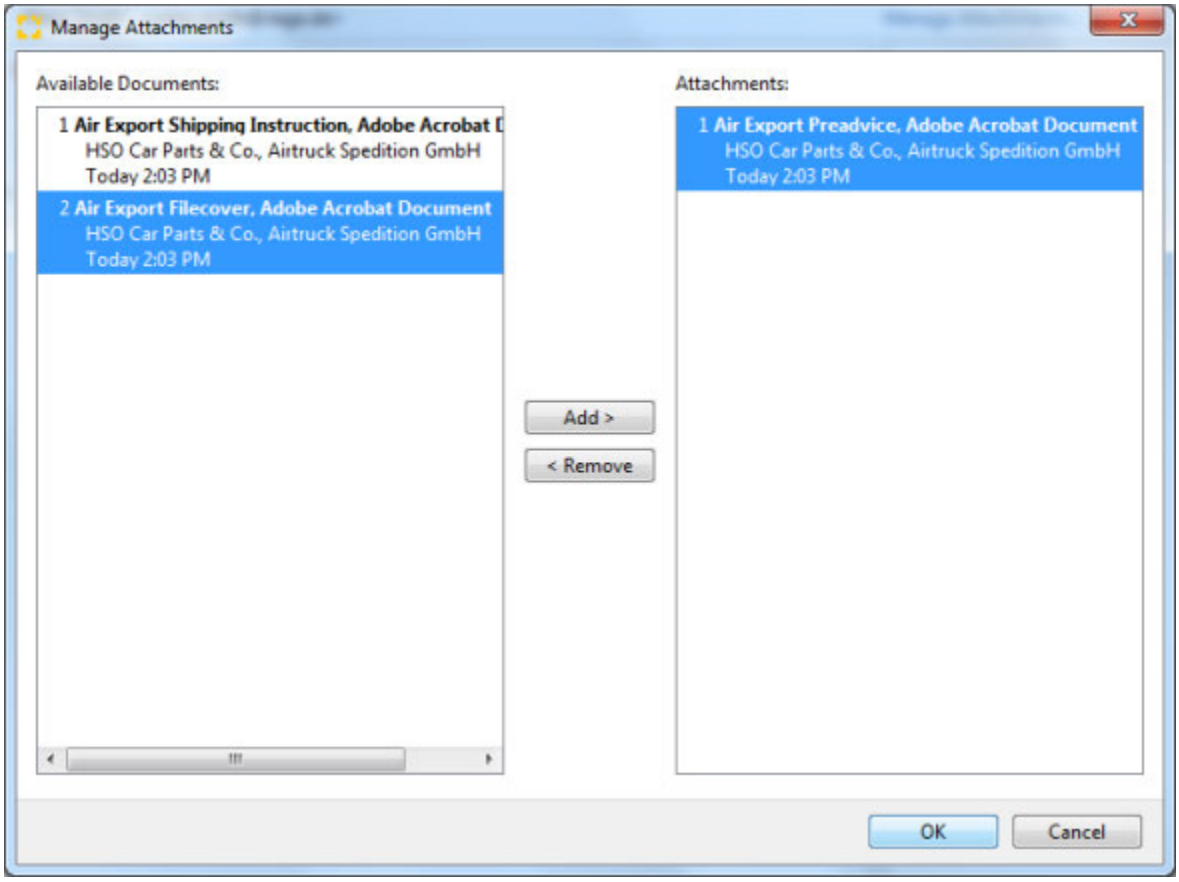
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

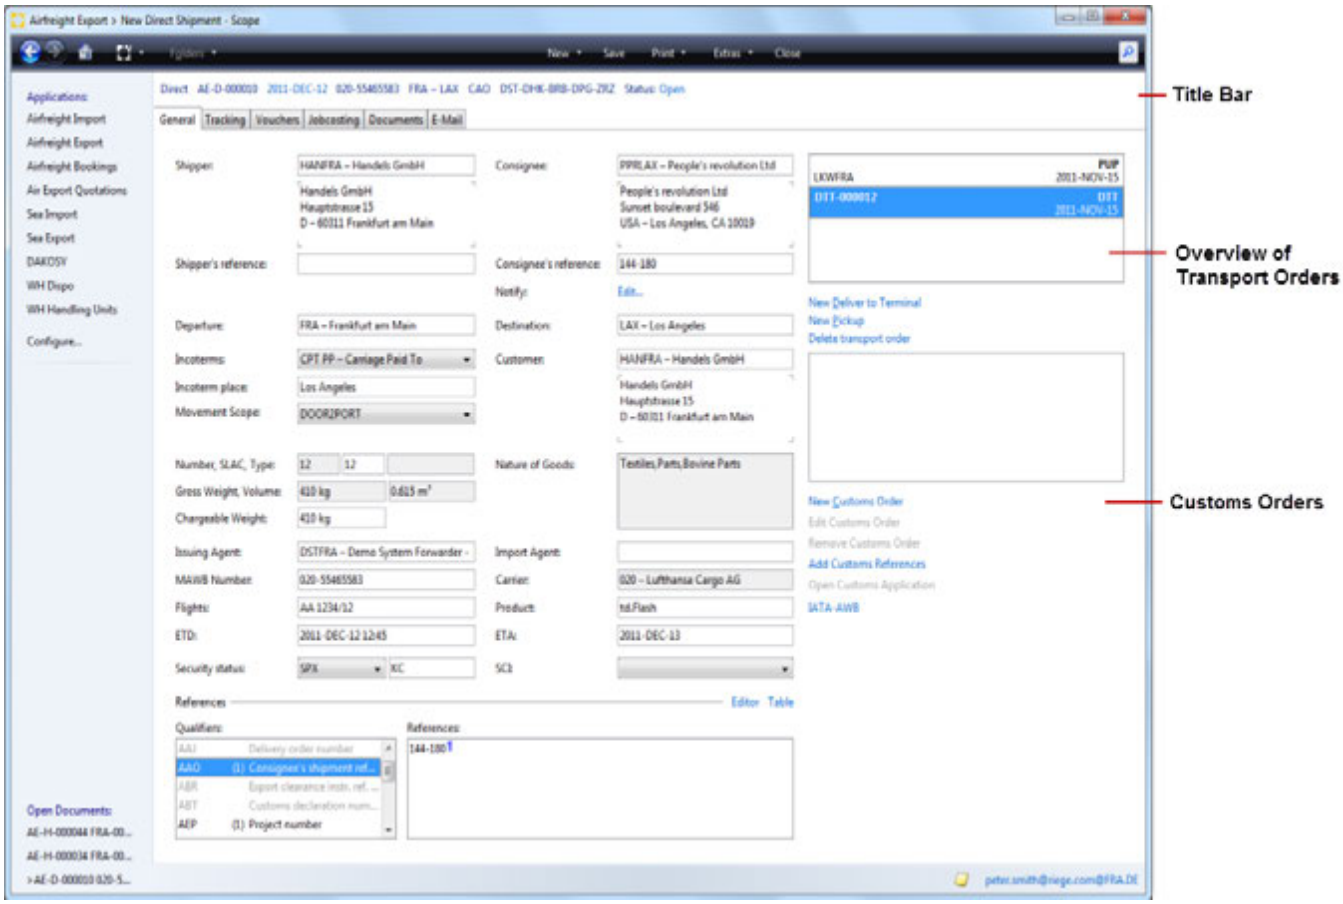
General - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

In the **General** tab, the shipment data (tracking numbers, shipper, consignee, the security status, number of packages and weight, etc.) of the recorded shipment. In addition delivery orders can be created and customs details can be entered.

Description



Saving

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Printing

By clicking on the appropriate item in the list under the Print command, the required documents are printed.
At present the following documents are available:

- File Covers
- Preadvice
- Transit document
- Export certificate
- Cargo Manifest
- Customs Manifest
- House-Labels
- Master-Labels
- Combi-Labels (waybill label with datas of Master- and House shipment)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Finish

Opens the dialog to Complete the shipment in a popup window.

Close

Title bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- **Type of shipment**
  Type of shipment. In a house shipment *Back-to-Back*
- **Shipment number**
  Assigned by the system after the shipment has been saved for the first time.
- **Service date**
  The service date of a shipment is set as follows:
  When present, ETD (Estimated Time of Departure / Expected Time of Departure)
  -otherwise
  If an air waybill has been printed, date of air waybill (AWB) printing.
  -otherwise
  The current date when the shipment is first saved.
  The date will not change unless it is clicked (popup-window) and will update/ revise the actual correct date. (This can be necessary if the shipment number contains the service/ settlement period)
- **House Air Waybill number**
  HAWB number created by the system when the shipment is first saved.
- **Master shipment number**
  Shipment number of master shipment where house shipments has been consolidated.
- **Departure airport - Destination airport**
  Departure and destination of the shipment.
- **Security advice**
  Security advice, e.g. CAO (Cargo Aircraft Only). This reference note will be displayed in special shipments, e.g. DGR (Dangerous Goods Regulation).
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Quotation**
  By clicking on this action link could open a quotation which is assigned to a shipment. If there is no quotation , the link will be deactivated.
- **Change type of shipment**
  By clicking on this action link, the user will be able to change the type of shipment.

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Incoterms

The delivery terms for the shipment

Movement Scope

Movement Scope of the shipment.

Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination for the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

3. Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Issuing Agent

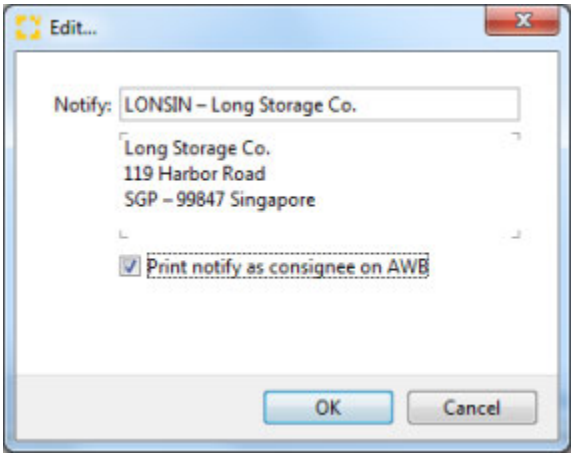
The agent who issued the bill of lading. By default, the own office is used. If required, another agent agent can be found and used with the search field .

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

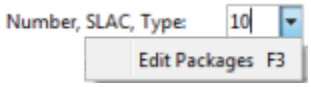
> In the master data of the partner, if the partner has the role Forwarding Customer applied, this role allows a permanent Notify Address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

3. Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages. Within the number field, press F3 or select the drop down menu for access to the package editor. The package editor allows much greater detail to be entered about individual packages.

> If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Import agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function.

The import agent depends on the destination. The field will use the following logic when presenting possible agent choices:

- If no destination has been entered, all agents are offered for selection.
- If a destination has been entered and the master data stores only one agent stored for that destination, then that agent is automatically used the import agent.
- If a destination has been entered and the master data for that destination has been assigned more than one agent, the field is not initialized. Instead, all stored agents are offered for selection.
- If a destination has been entered for which no partner has been assigned as an agent, then the field cannot be completed until an import agent has been created.

Security status

The security status of the consignment (of a shipment) according to Regulation (EC) No 300/2008. The following status are currently possible:

- not secured (NSC)
- secure for all-cargo and all-mail aircraft only (SCO)
- secure for passenger, all-cargo and all-mail aircraft (SPX)

Reason for granting the security status

If the security status of the shipment is set as "SCO" or "SPX", then the reason for granting these statuses is required as per Regulation (EC) No 300 /2008. The following status are currently possible:

- AC - Account Consignor
- HS - Handsearch
- KC - Known Consignor
- SC - Simulation Chamber
- TD - Trace Detection
- XR - Secured by XRAY

Non-secure items (not secured) do not require a reason security code. The safety data for Business or private shippers can be maintained in the partner master data.

Further information about security is available in the role descriptions RegB UAN and secure shipper.

AWB-Number

Fundamentals of AWB number

Airlines use IATA compliant tracking numbers (AWB) number. These consist of 11 Numbers. The first three digits are the airline prefix.
The remaining eight numbers are the actual bill number where the last number called the check digit which is calculated from the previous figures. The AWB number is usually represented as follows: aaa-nnnnnnnp (a prefix = / n = number / check digit p =) *Example: 020-12345675*

These AWB numbers must be allocated by the respective airline. There are three ways to enter this AWB number.

1. Manual Entry
The single number is assigned by the carrier and manually recorded here. (Rarely and only with airlines that are used sporadically.)

- The AWB number can be like a normal text box, enter manually. This is checked whether it is (correct check digit) is a valid AWB number is. The number can be entered in one piece or with a hyphen after the prefix of AWB.
  If it is a valid AWB number, the hyphen is (if not entered) and automatically adds the airline is used in the field *Carrier*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

2. Automatic reference from the number field (Pool)
The number comes from a so-called pool (number field) which has been previously assigned by the airline. (Usual proceed. Often here is 100 or more AWB number be assigned simultaneously.)

- Instead of the whole number is entered, only the prefix and leave the field. The result, an AWB number is obtained and used this airline. Instead of the prefix may also be the two-letter airline code must be entered. *Beispiel: 020 or LH*

3. Net Rate Info

- Using the context menu or by pressing F2 here, the application to be called *Net Rate Info* as a popup window. There may be a valid rate for this program are selected. Automatically an air waybill number is obtained from the appropriate pool.

The AWB-number range (pools) can be maintained in the carrier master data .

- If an AWB number has been drawn from the pool or entered manually, this number is *reserved* for a period of 30 minutes. During this time, this number can be used in any other program even if the consignment has not been saved. After saving the program, the number is flagged as used, and prevents the use of permanently into another program.
- If a number is already assigned AWB removed from the field, or replaced by another, one is automatically released and return to the number in the pool (restock). The number can then be reused in another program.

Carrier

The airline (carrier) is based on the AWB number prefix. This field can not be edited manually.

Flights

This field is for flight data. Use the dropdown menu or the F3 function key, the Flight Data Editor can be invoked to allow more detailed flight and routing data to be entered.

ETD

Estimated time of departure

reference numbers

Various reference numbers can be entered which will then be recorded in other applications for printing or electronic transmission. More detailed information about the function of the reference numbers Editor is available here .

New pick-up order

With this action, a new pick-up order for this program can be created. Clicking on this link action opens the transfer order-editor.

Transport to Terminal

This action creates a new transfer order to the terminal for this shipment. Clicking on this action link opens the transfer order-editor.

- If the agents own office is shown as the gateway then it is assumed that the transport order will be to the airport. If a remote station is shown then it is assumed that the transport order is to that remote gateway. See the chapter on *Truck Manifest* for more information.
- Existing transport orders appear in the overview of transport orders. They can be double-clicked to reopen them for editing and printing.

Delete order

This option will delete any delivery or pickup note that has already been created. The document highlighted in the pane showing existing delivery/pickup notes will be deleted. It is only possible to delete a pickup note or transport order if it has not been printed and if there are no entries in the costs and revenue section of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

House-AWB

Opens the House AWB editor to capture information relating to the house bill of lading or to edit and print existing house AWB data.

IATA-AWB

Opens the IATA-AWB Editor to capture information relating to the IATA bill of lading or to edit and print existing IATA AWB data.

New Customs Clearance

Opens the customs clearance editor for creating customs clearance.

Edit Customs Clearance

Opens the customs order editor to edit an existing customs order highlighted in the pane showing customs orders.

Delete Customs Clearance

Remove an existing customs order highlighted in the list of created customs orders.

Add Customs References

Opens the Add Customs references application. Up to 10 additional customs references may be added.

Collective customs clearance

Allows the creation of collective customs.

- For More information on individual customs applications see the chapter on customs .

Tip

With the key combination Ctrl + I or Ctrl + I, the user, what the process is currently assigned, will be displayed with e-mail address and telephone number. It is also possible to take over the operation.

Change type of shipment - General - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

This option is used when it is occasionally necessary to change a shipment from one type to another type of shipment after the shipment has been created. An example may be where a back-to-back shipment is created, but subsequently new house shipments arrive for the same destination. In this case it would be advantageous to change the back-to-back to a regular house shipment in order for it to be added to a consolidation and thus obtain better rates for the shipment.

Description

Shipments can be changed to different shipment types as per the following table:

Possible change in..	House shipment	Back-to-Back-Shipment	Direct Shipment	Master Shipment with consolidated Houses
House Shipment		✓	✓	
Back-to-Back-Shipment	✓		✓	✓
Direct Shipment	✓	✓		✓

Master shipment with consolidated houses

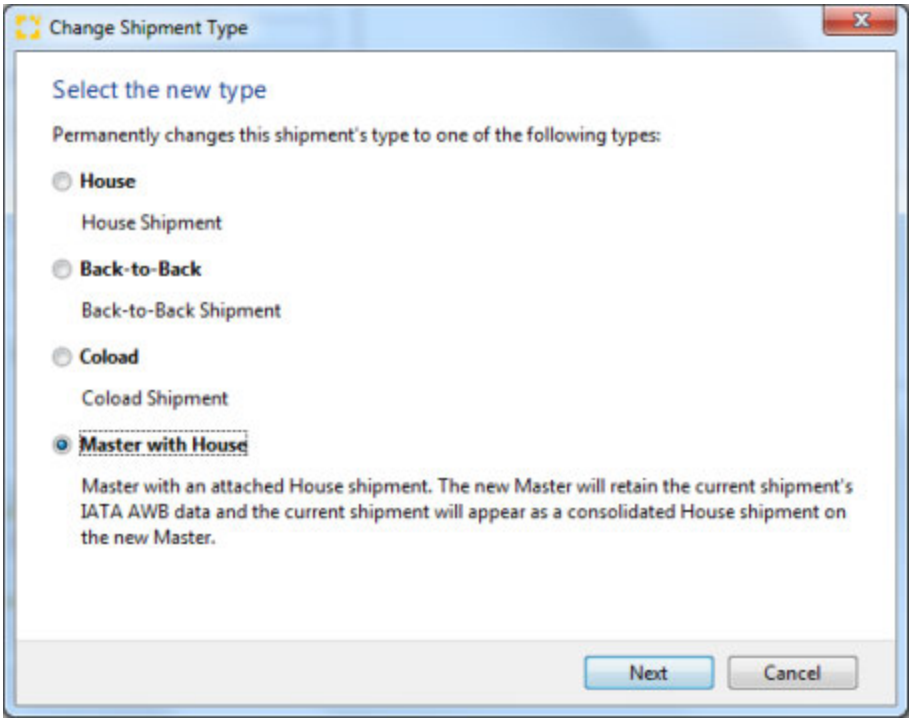
When a back-to-back shipment is changed to a regular house shipment and consolidated on a new master shipment, the IATA AWB of the new master is applied to the house shipment automatically as is all the rest of the master data that is relevant to the house.

Shipment types should not be changed in the following circumstances:

- A house shipment that is already consolidated on a master.
- Documents for the shipment have been printed.
- Vouchers have been created for the shipment.
- A master shipment cannot be changed.

After clicking on the action link to *change shipment type*, a pop-up window appears. The dialogue below shows changing a back-to-back shipment to a master shipment with houses.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Select the desired option to make the required change.

Next

Starts the preliminary examination of the proposed action.

Cancel

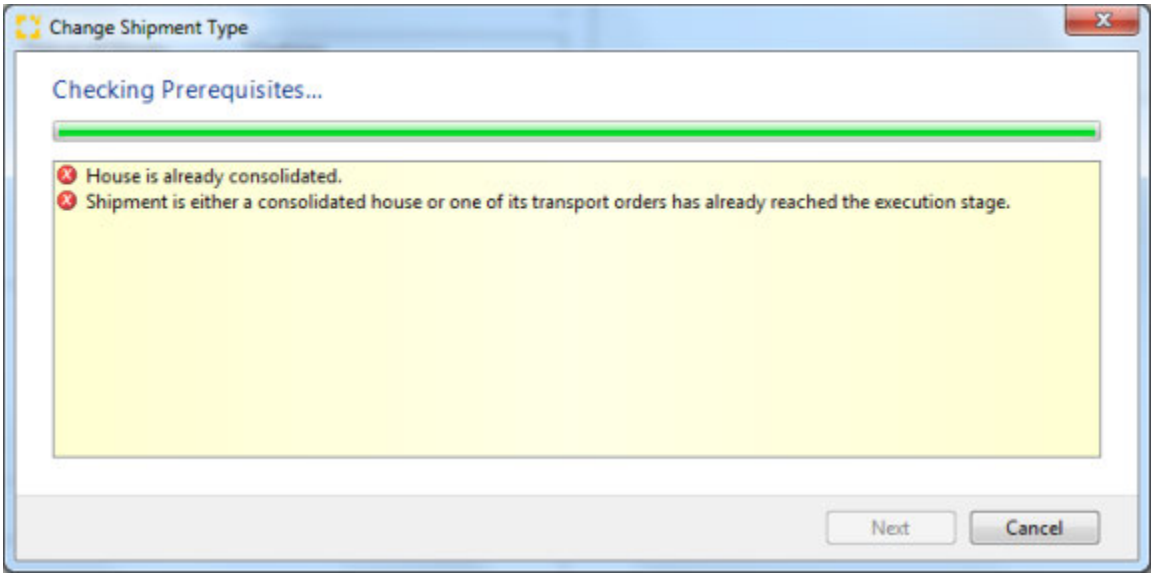
Closes the pop-up window without further action.

Preliminary

After starting the process to change the shipment type a test is carried out to determine if the change is possible.

Error during the preliminary examination.

If a problem occurs during the preliminary processes of changing the shipment type, then a pop-up window appears with error messages detailing why the change is not possible.



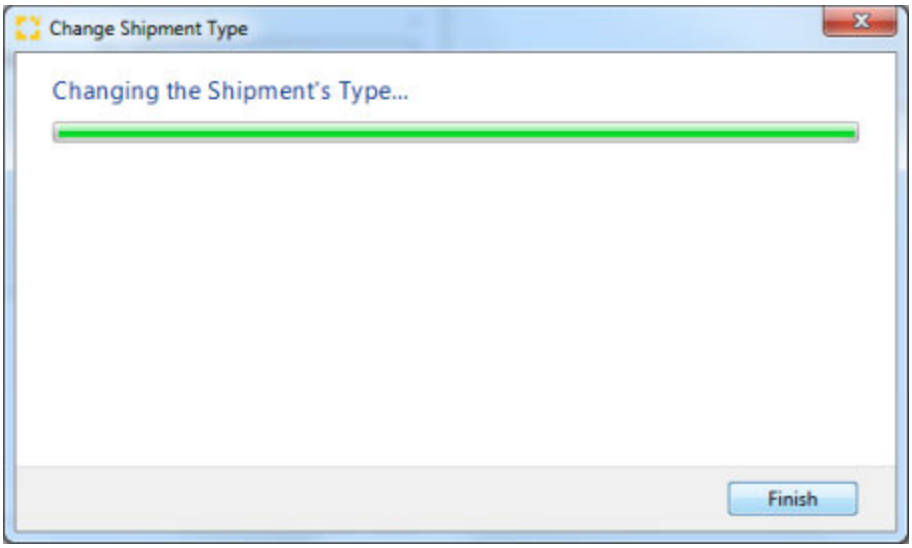
Cancel

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Closes the pop-up window without further action.

Passed preliminary investigation.

If the proposed change passes without error, the modification action is performed.



Finish

Saves the change and closed the pop-up window.

Finish - General - Back-to-Back Shipment - Airfreight Export

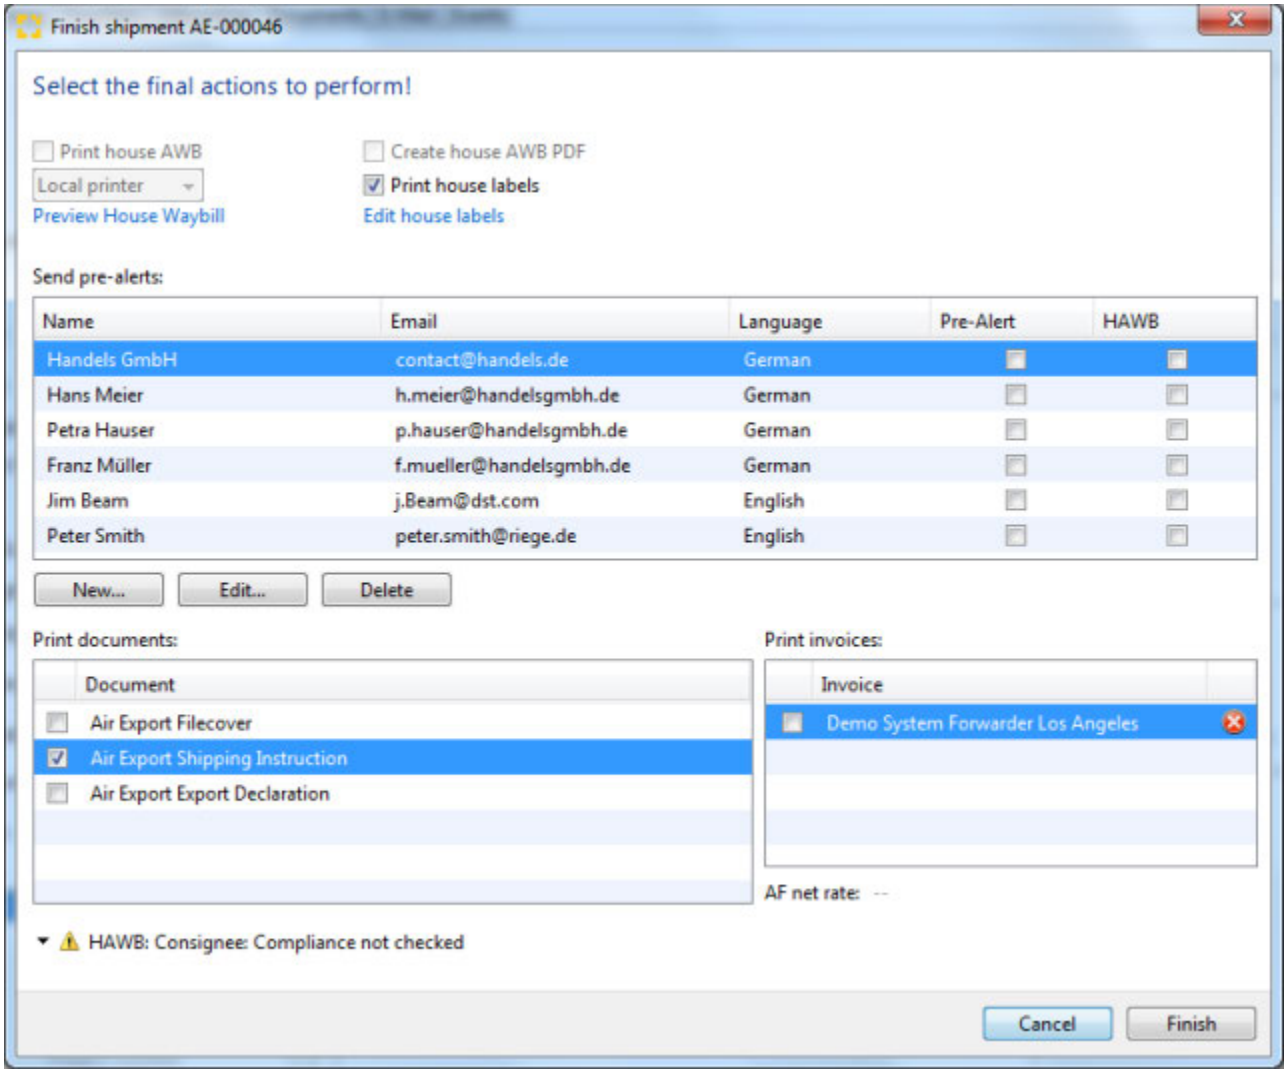
- Introduction
- Description

Introduction

In this application is a one stop screen to print AWB's, labels and manifests, and to generate prealerts.

Description

By activating the check boxes described below the corresponding actions are performed when the **Finish** button is clicked in the lower part of the screen.



Print IATA-AWB

The IATA air waybill is printed on the pre-defined default printer.

Create IATA-AWB PDF

The IATA air waybill is created as a PDF file in the *Documents* tab

> The creation of the PDF is only possible if the shipment has no validation errors. If there are errors, these are displayed at the bottom of the application window with descriptions of any errors using the icon .

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Printing Master Labels

Check the box to print the labels for the shipment.

Edit Master Labels

Opens the Label-Printing editor in a popup window where the print parameters can be edited. This action link is active only if the action *master label printing* has been activated

Printing House-AWB

Check the box to print the house air waybill. The correct print location can be controlled by selecting the correct printer from the printer drop-down list which appears below the AWB check box.

Printing location	Description
local printer	The printout is sent to the predefined default printer.
Gateway-printer	The printout is sent to the predefined default gateway-printer
both/ either	The printout is sent to predefined local and to gateway-printer.

Create House-AWB PDF

The house air waybill is created as a PDF file in the *Documents* tab

The creation of the PDF is only possible if the shipment has no validation errors. If there are errors, these are displayed at the bottom of the application window with descriptions of any errors using the icon .

Printing House-Labels

Check the box to print the labels for the shipment.

Edit House-Labels

Opens the Label-Printing editor in a popup window where the print parameters can be edited. This action link is active only if the action *house label printing* has been activated

Combined print labels

Check the box to print the combined labels for the shipment.

Edit Combi-Labels

Opens the label printing editor in order to adjust the combi label print options. This action link is only active if the *print combi labels* check box has been activated.

Advises sent by e-mail

Allows the creation of pre-advises for the shipment and a copy of the airwaybill can be included in the pre-alert e-mail. The contacts for the shipper, consignee and **import agent** will all default to the receiver-table. The names, email addresses and language for these individuals will be derived from the **C ontacts** tab of the partner.

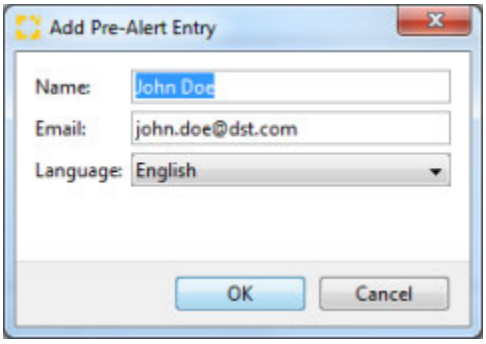
- By activating the check box *pre-alert* and / or *HAWB* the highlighted contact person will automatically receive an e-mail with the appropriate PDF document sent as an attachment.
- The sent e-mails are then listed in the *e-mail* tab

- If a partner has no check-boxes marked then **no** e-mail is sent to that contact.
- The language setting of the partner will be used to determine the correct language for the e-mail text of the pre-advises.

Add

This option will allow a further contact name and e-mail address to be added.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Remove

Removes the highlighted contact in the recipient table.

Printing documents

Airfreight Export file cover

A file cover is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export "Export certificate"

An export certificate is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export Cargo Manifest

A cargo manifest is printed on the predefined default printer and a PDF document appears as a document in the *documents tab*

Airfreight Export Customs Manifest

A customs manifest is printed on the predefined default printer and a PDF document appears as a document in the *documents tab*

Invoice Printing

The freight bill is printed on the predefined default printer and a PDF document created in the *Documents* tab.

The freight bill is printed only if:

- It is a system generated invoice (other invoices are not offered here for printout)
- It has not yet been completed and printed (Existing invoices are not offered here for printout)
- It has no validation error (Errors can be seen in the invoice where the the icon appears on the right edge of the table showing additional error information)

Cancel

Close the application without further action.

Finish

Performs the selected actions and closes the application.

House AWB - General - Back-to-Back Shipment - Airfreight Export

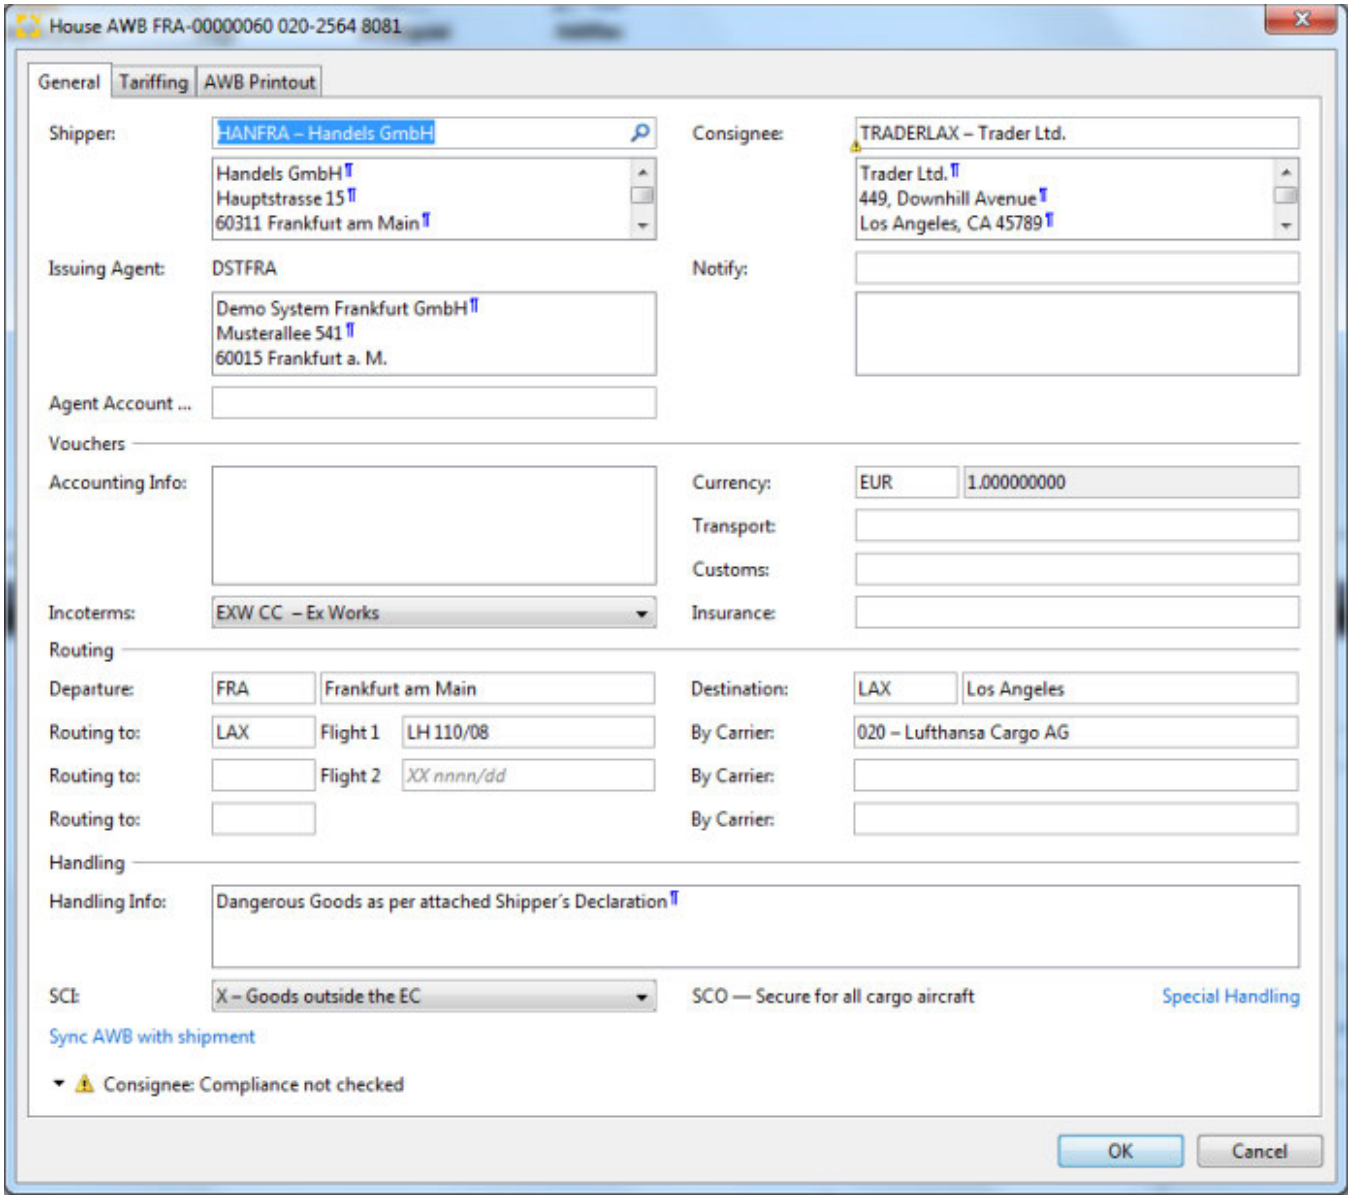
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to edit, customize and print house shipments. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be over-ridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the HAWB on screen before it is actually printed.

Description

General



Shipper / Consignee

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper and Consignee for shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Agent Account

This field is used for master, Back2Back and direct shipments for the Cass-Acount number of the agent. For a house bill of lading it has no function.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Accounting Info

This field is for any accounting information which is to print on the AWB in the accounting information box. If a notify has been entered, it will be inserted here by default. Iit is also possible to insert in the area othere addresses and predefined text blocks.

Incoterms

The incoterms are taken from the shipment editor, but can be replaced as needed by an entry from the drop down menu.

Currency / Transport / Custom / Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure / destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Routing to / Flight / Carrier

The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned they will appear blank but can be completed manually. The **Routing to** and **By Carrier** fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks .

SCI (Special Customs Information)

Select the custom status (if any) from the drop down menu.

Security Status (without field description)

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field can not be changed.

synchronize AWB with shipment

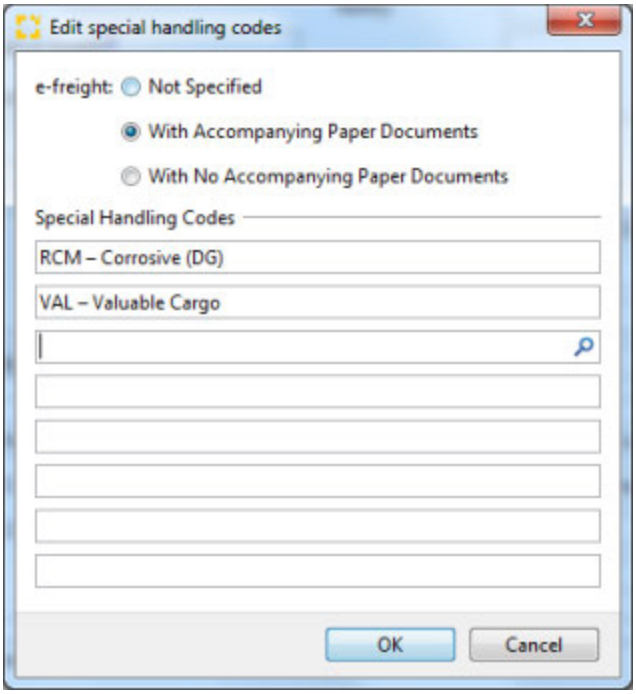
If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Any data in the AWB editor that is overwritten during synchronization with the shipment editor will be lost.

Special Handling

This action link opens the Special Handling Editor. The information inserted will be used by the handling functions of e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For more information, please contact your RSI customer support.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Not specified

Will not create a paperless AWB.

With accompanying Paper Documents

Additional paper documents such as certificates will accompany the shipment. A paperless AWB is created and sent with the EAP code.

Without accompanying Paper Documents

There are no accompanying paper documents. A paperless AWB is created and transmitted with code EAW in the FHL message.

Special Handling Codes

Extra handling codes can be recorded. A list of available codes is provided. The corresponding codes can be found using the search field.

OK

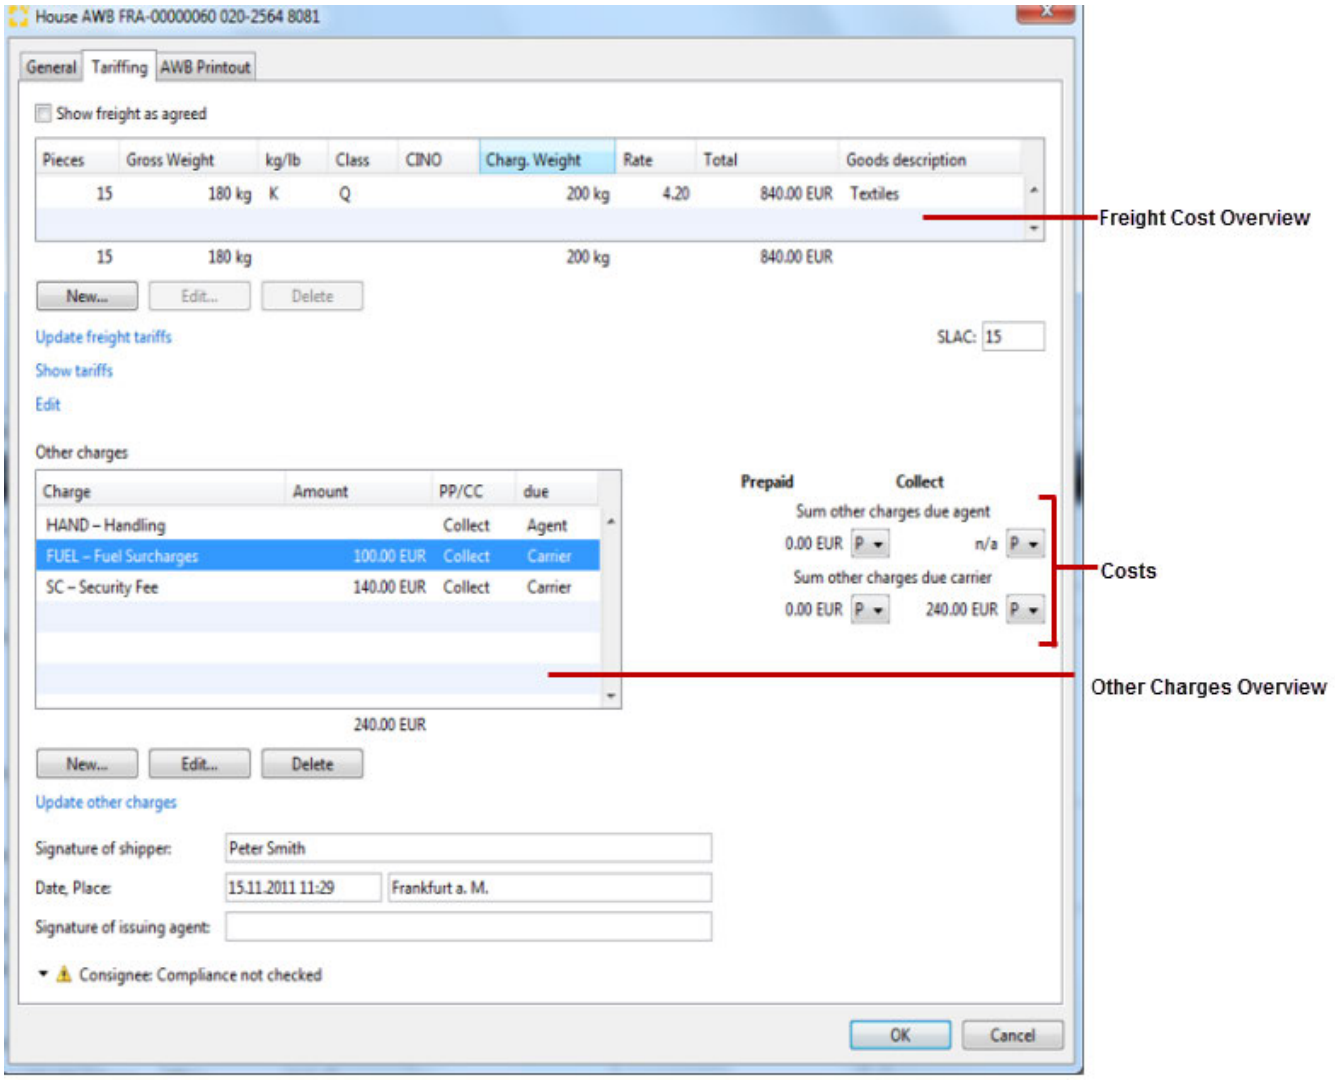
Saves the data and closes the editor.

Cancel

Closes the editor without further action.

Tariffing

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Shown freight as agreed

By checking this box, the amount of freight charges are not printed on the air waybill and are replaced with the statement *AS AGREED*.

Freight charges overview

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Advice/ Class

The Class of tariff rate applied. The available rate classes are:

rate type	rate class
Simple Rate	M, N, O, Q

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Chargeable weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

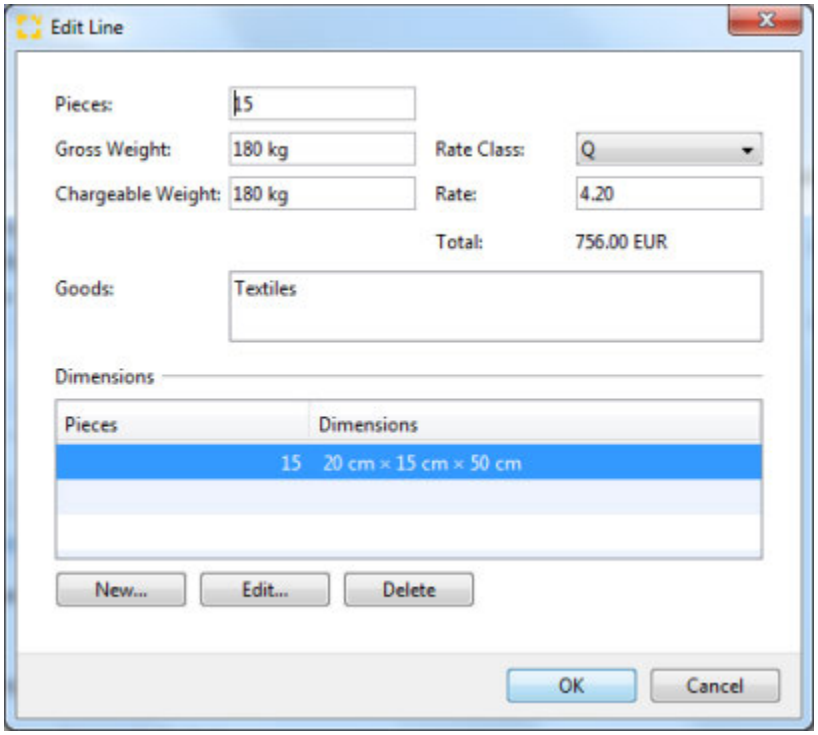
Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods

This information is defaulted from the field *description* in the shipment editor, but can be (if necessary) amended as described below.

New

This button creates a new freight cost line. First the type of rates must be selected from a pop-up window and then the freight cost line editor opens.



Pieces

Number of packages.

Gross weight

Gross weight of packages.

Chargeable Weight

chargeable weight of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Rate

Here the required airfreight rate can be entered.

Total

The total freight amount, calculated from chargeable weight and airfreight rate are displayed.

Goods

Description (contents of the packages).

Pieces / Dimensions

With *new*, a new line with the number and dimensions of packages can be entered. With *Edit* the highlighted row in the table is opened for editing. Alternatively, it can also be opened with a double click on the appropriate line. *Delete* removes a selected line.

- The data in the freight-line editor will automatically be updated with the new data entered.
- The entered number of packages and their dimensions are NOT included in the shipment editor.

Edit

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it.

- The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

Delete

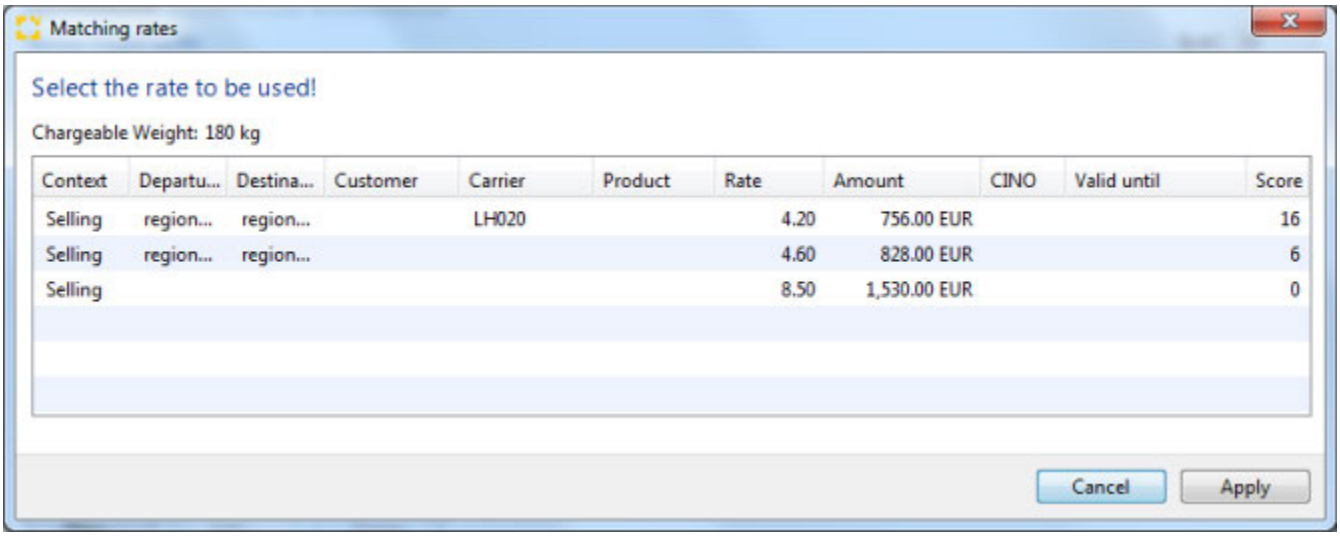
Deletes a marked line in the freight cost overview.

Update freight tariffs

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor.

Shows Tariffs

This action link will display all tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window.



Chargeable Weight

The chargeable weight will be displayed from the tariff lines.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Context

Shows the tariff context (type of tariff) to. Only *selling* tariffs are shown for house shipments.

From / To / Customer / Carrier

This information will display depending on how a tariff has been created in the master data. Departure, destination, departure country, destination country, customer, carriers may all appear if they are part of a rate the matches the current shipment.

Rate / Amount

Shows the relevant tariff stored in the airfreight rates and the calculated amount based on the chargeable weight.

CINO

Shows the corresponding tariff where a CINO-number (Commodity Item Number) is used, if available.

Valid up to

Validity date of the displayed tariff.

Score

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

OK

Uses the highlighted tariff in the overview as the tariff for the line item in the tariff editor.

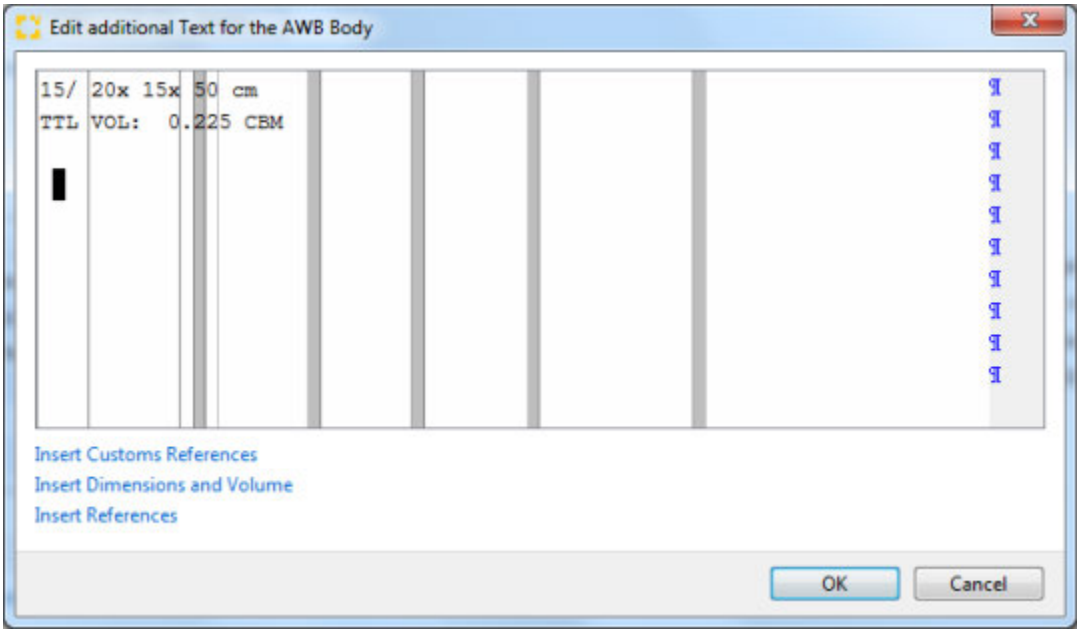
Cancel

Closes the tariff overview without further action.

> More information on tariffing is available in the section Automatic tariffing.

AWB additional text.....

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume

Adds any existing dimensions and volume at the position of the cursor.

Insert References

Opens the selection of references screen from which the desired references can be chosen and inserted at the position of the cursor.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Other Charges

All associated costs such as collection, handling, surcharges, etc. are present in the ancillary charges table. The charge types are based on the master data (activity types , master data rates)) combined with the shipment data (Incoterms , chargeable weight). Totals are therefore automatically determined and proposed for settlement.

Charge

The charge for which the amounts are calculated.

Amount

the amount of the charges. These are entered manually, or are automatically calculated from the master data

PP/CC

Depending on the incoterms selected in the general tab of the shipment this field indicates if the charge is prepaid or collect. The payment terms can be as per the following table:

Code	Designation	Explanation
PP	Prepaid	Costs are paid by the sender
CC	Collect	Costs are paid by the recipient

Due

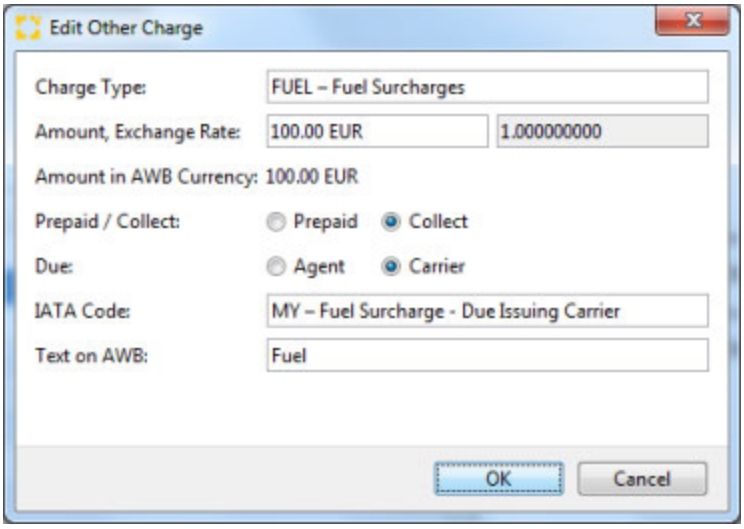
Indicates to whom the costs should be paid:

Designation	Explanation
Agent	The agent or carrier who issues the Air Waybill (PP) and who is defined as the receiving agent (import agent) or carrier (CC).
Carrier	The carrier or airline who transported the shipment

New

The button opens the **New Other Charge** editor which allows new charges to be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Charge Type

New charges can be found using the search function.

Amount, Exchange Rate

If a valid tariff has been found for the charge code, the total amount of the charge will automatically be calculated and inserted. Use the dropdown menu or the F5 function key if the tariff needs to be recalculated. The amount can also be manually entered or changed. The currency of the charge will default to the local currency but it may also be entered or changed. In the adjacent field the exchange rate for the charge will appear. If the local currency is used the rate will be 1.0000, if a foreign currency used the rate will appear automatically or can be entered or changed.

Amount in AWB Currency

If the charge has been enter in a foreign currency, this field will show the amount converted to the local currency.

Prepaid/Collect

Indicates whether the charge is prepaid or collect. The default value will be based on the inco terms (see the *general tab*) but this default can be changed.

Due

Defines if the charge is *due Agent* or *due Carrier*. The default value for charges can be stored in the air cargo master data

Text on AWB

This will be the code used on the AWB to describe the charge type. By default the first 2 digits of the IATA code are used.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Edit

Open the other charge editor to edit the highlighted charge.

Delete

Removes the highlighted ancillary charge.

Update other charges

This action link will recalculate all ancillary charges according to current tariffs.

Distribution of costs

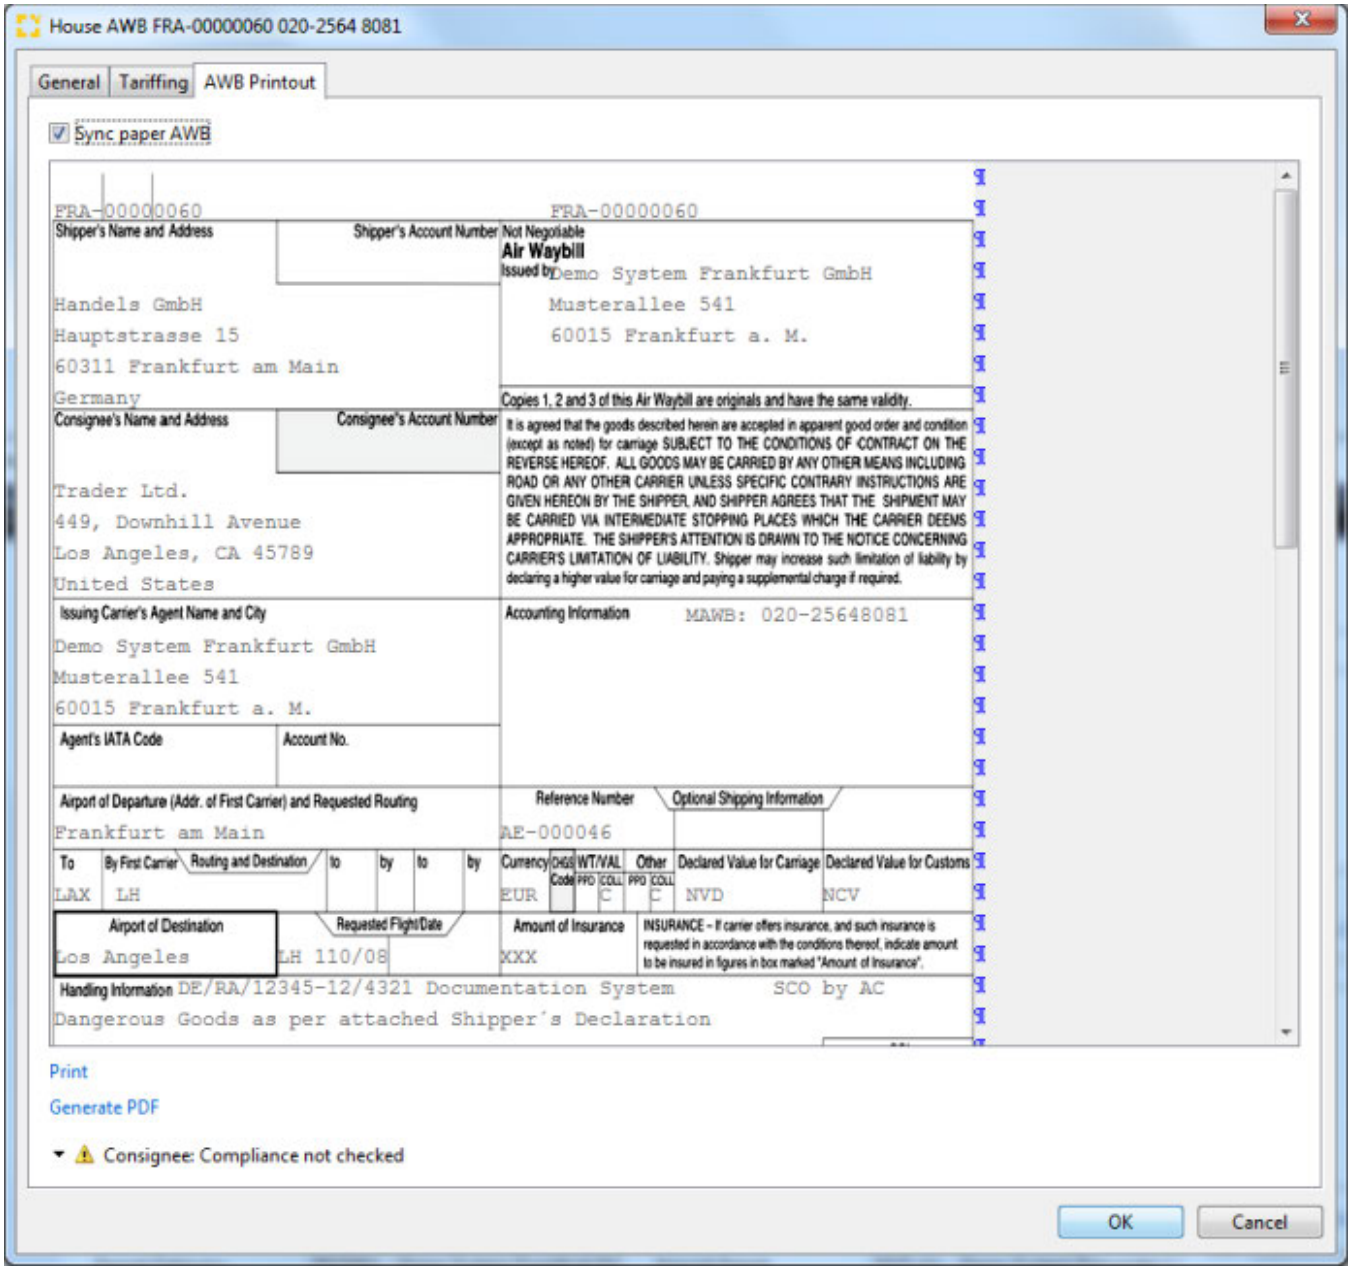
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the charges are summed into 4 separate totals; total prepaid due agent, total collect due agent, total prepaid due carrier and total collect due carrier. How the costs will be presented on the AWB can be controlled using the drop down menus which will present the option shown below:

Code	Explanation
P	Costs will be printed on the AWB
X	Costs will NOT be printed on the AWB
T	The costs will be shown only as a total on the AWB

AWB Printout

This tab provides a visual representation of the printed AWB.



Sync paper AWB

This box is checked by default and causes the AWB to be shown as per all the data entered in the *general* and *tariff* tabs. When check the representation of the AWB cannot be edited. If the box is unchecked, then the AWB may be freely edited and the text blocks can be accessed and inserted into the AWB.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the box is checked again after editing the AWB, all changes will be lost because the document will once again be regenerated according to the data stored in the *general* and *tariff* tabs.

Print

Prints the AWB exactly as it appears in the representation to the predefined printer. The document will also appear as a text document and a pdf document in the documents tab of the shipment. The pdf version may then be sent attached to an email.

Generate PDF

Only a pdf version of the document is created which also appears in the documents tab of the shipment.

Print and send FWB

Prints the AWB as described above and sends a copy to TRAXON Global Cargo Communications System in the form of an FWB.

Send FWB

Sends the shipment electronically in the form of an FWB to TRAXON Global Cargo Communications System. There is no print of the document.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

IATA-AWB - General - Back-to-Back Shipment - Airfreight Export

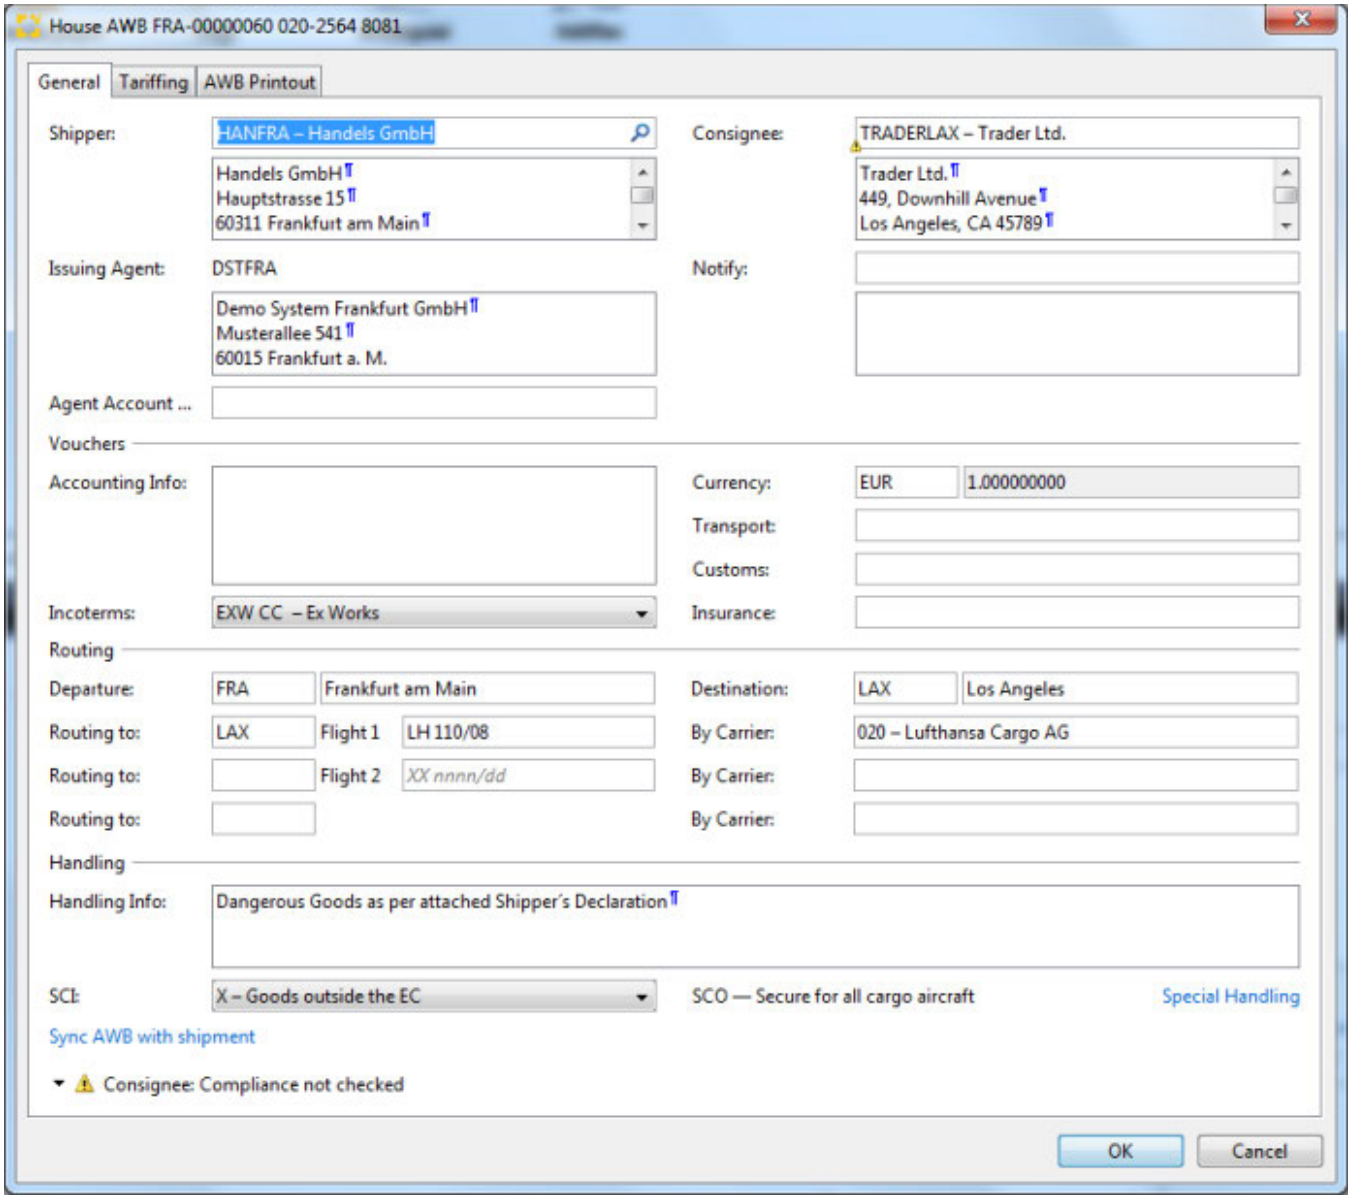
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to edit, customize and print AWBs. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be over-ridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the AWB on screen before it is actually printed.

Description

General



Shipper / Consignee

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper and Consignee for shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Agent Account

This field is used for master, Back2Back and direct shipments for the Cass-Acount number of the agent.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Accounting Info

This field is for any accounting information which is to print on the AWB in the accounting information box. If a notify has been entered, it will be inserted here by default. Iit is also possible to insert in the area othere addresses and predefined text blocks.

Incoterms

The incoterms are taken from the shipment editor, but can be replaced as needed by an entry from the drop down menu.

Currency / Transport / Custom / Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure / destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Routing to / Flight / Carrier

The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned they will appear blank but can be completed manually. The **Routing to** and **By Carrier** fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks .

SCI (Special Customs Information)

Select the custom status (if any) from the drop down menu.

Security Status (without field description)

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field can not be changed.

synchronize AWB with shipment

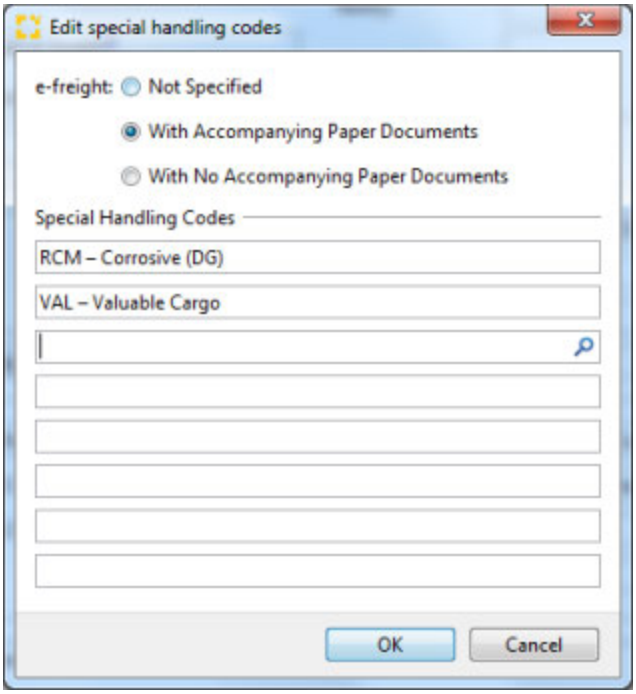
If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Any data in the AWB editor that is overwritten during synchronization with the shipment editor will be lost.

Special Handling

This action link opens the Special Handling Editor. The information inserted will be used by the handling functions of e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For more information, please contact your RSI customer support.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Not specified

Will not create a paperless AWB.

With accompanying Paper Documents

Additional paper documents such as certificates will accompany the shipment. A paperless AWB is created and sent with the EAP code.

Without accompanying Paper Documents

There are no accompanying paper documents. A paperless AWB is created and transmitted with code EAW in the FHL message.

Special Handling Codes

Extra handling codes can be recorded. A list of available codes is provided. The corresponding codes can be found using the search field.

OK

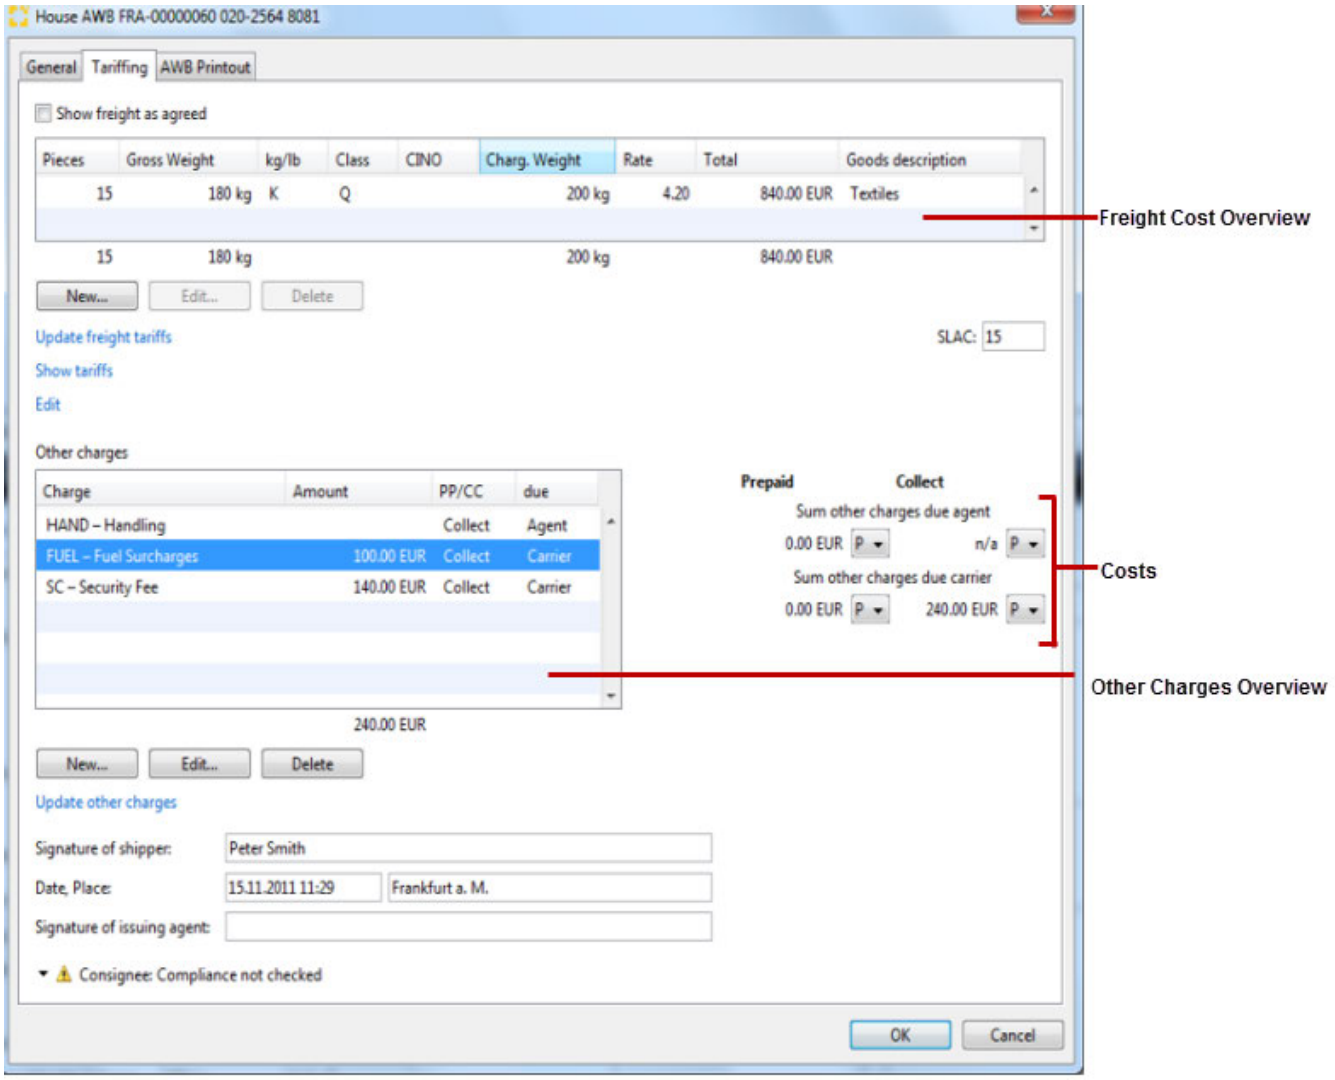
Saves the data and closes the editor.

Cancel

Closes the editor without further action.

Tariffing

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Shown freight as agreed

By checking this box, the amount of freight charges are not printed on the air waybill and are replaced with the statement *AS AGREED*.

Freight charges overview

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Advice/ Class

The Class of tariff rate applied. The available rate classes are:

rate type	rate class
Simple Rate	M, N, O, Q

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Chargeable weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

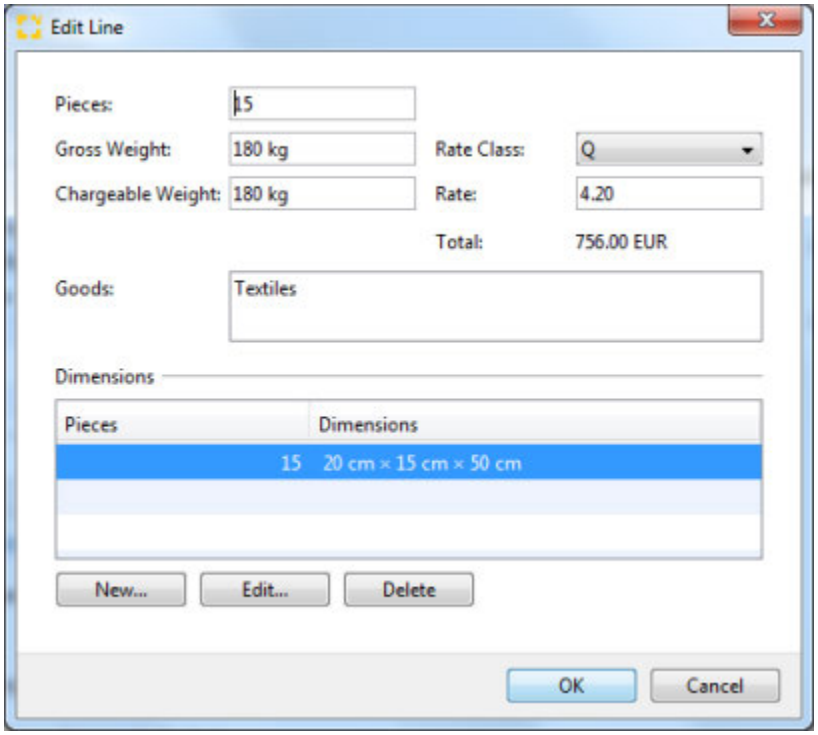
Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods

This information is defaulted from the field *description* in the shipment editor, but can be (if necessary) amended as described below.

New

This button creates a new freight cost line. First the type of rates must be selected from a pop-up window and then the freight cost line editor opens.



Pieces

Number of packages.

Gross weight

Gross weight of packages.

Chargeable Weight

chargeable weight of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Rate

Here the required airfreight rate can be entered.

Total

The total freight amount, calculated from chargeable weight and airfreight rate displayed.

Goods

Description (contents of the packages).

Pieces / Dimensions

With *new*, a new line with the number and dimensions of packages can be entered. With *Edit* the highlighted row in the table is opened for editing. Alternatively, it can also be opened with a double click on the appropriate line. *Delete* removes a selected line.

- The data in the freight-line editor will automatically be updated with the new data entered.
- The entered number of packages and their dimensions are NOT included in the shipment editor.

Edit

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it.

- The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

Delete

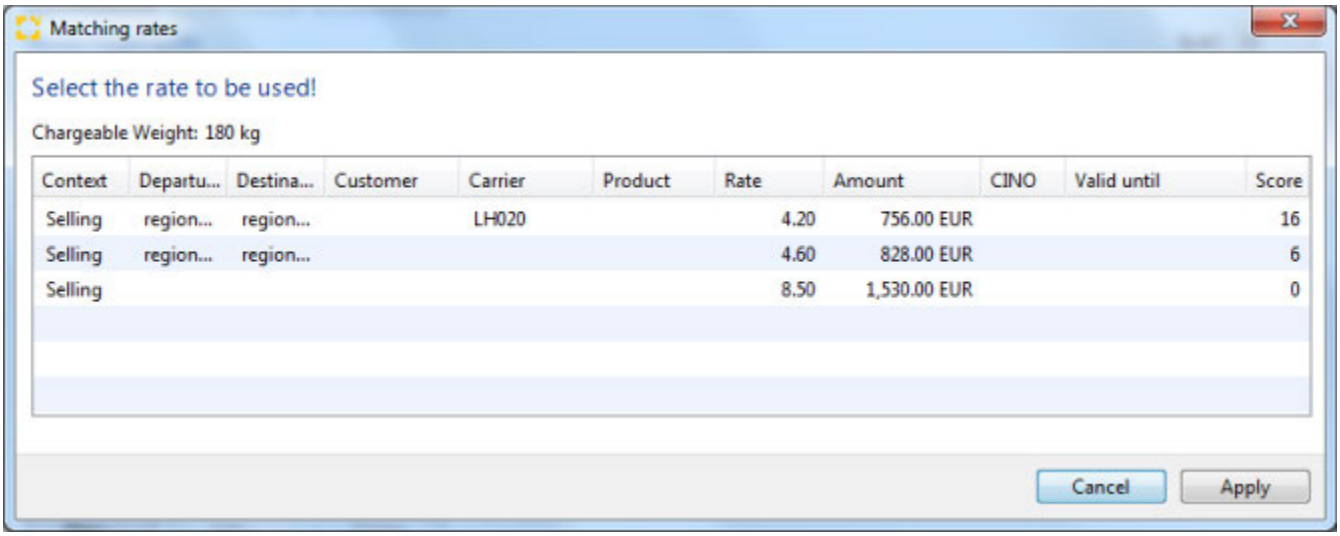
Deletes a marked line in the freight cost overview.

Update freight tariffs

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor.

Shows Tariffs

This action link will display all tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window.



Chargeable Weight

The chargeable weight will be displayed from the tariff lines.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Context

Shows the tariff context (type of tariff) to. Only *IATA* tariffs are shown for direct shipments.

From / To / Customer / Carrier

This information will display depending on how a tariff has been created in the master data. Departure, destination, departure country, destination country, customer, carriers may all appear if they are part of a rate the matches the current shipment.

Rate / Amount

Shows the relevant tariff stored in the airfreight rates and the calculated amount based on the chargeable weight.

CINO

Shows the corresponding tariff where a CINO-number (Commodity Item Number) is used, if available.

Valid up to

Validity date of the displayed tariff.

Score

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

OK

Uses the highlighted tariff in the overview as the tariff for the line item in the tariff editor.

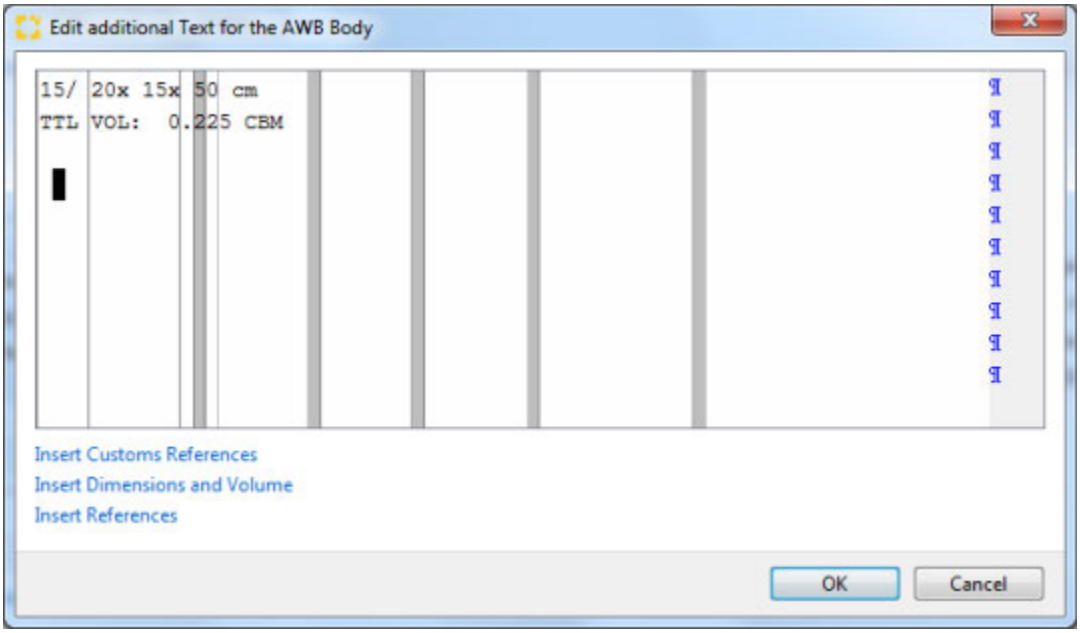
Cancel

Closes the tariff overview without further action.

> More information on tariffing is available in the section Automatic tariffing.

AWB additional text.....

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume

Adds any existing dimensions and volume at the position of the cursor.

Insert References

Opens the selection of references screen from which the desired references can be chosen and inserted at the position of the cursor.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Other Charges

All associated costs such as collection, handling, surcharges, etc. are present in the ancillary charges table. The charge types are based on the master data (activity types , master data rates)) combined with the shipment data (Incoterms , chargeable weight). Totals are therefore automatically determined and proposed for settlement.

Charge

The charge for which the amounts are calculated.

Amount

the amount of the charges. These are entered manually, or are automatically calculated from the master data

PP/CC

Depending on the incoterms selected in the general tab of the shipment this field indicates if the charge is prepaid or collect. The payment terms can be as per the following table:

Code	Designation	Explanation
PP	Prepaid	Costs are paid by the sender
CC	Collect	Costs are paid by the recipient

Due

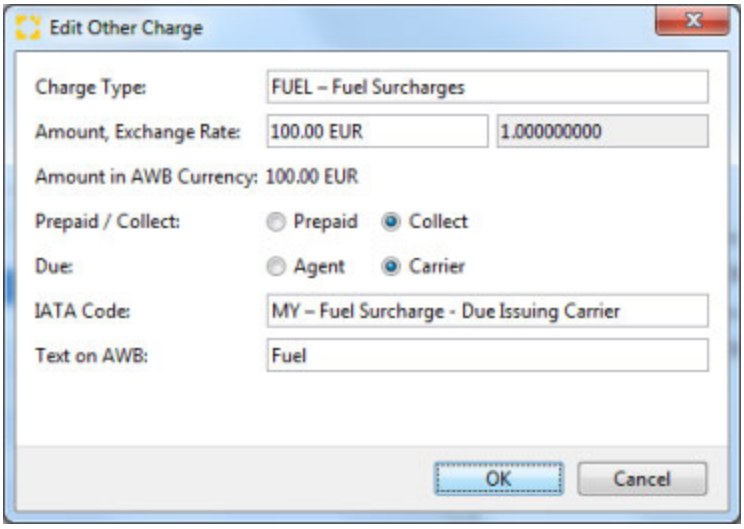
Indicates to whom the costs should be paid:

Designation	Explanation
Agent	The agent or carrier who issues the Air Waybill (PP) and who is defined as the receiving agent (import agent) or carrier (CC).
Carrier	The carrier or airline who transported the shipment

New

The button opens the **New Other Charge** editor which allows new charges to be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Charge Type

New charges can be found using the search function.

Amount, Exchange Rate

If a valid tariff has been found for the charge code, the total amount of the charge will automatically be calculated and inserted. Use the dropdown menu or the F5 function key if the tariff needs to be recalculated. The amount can also be manually entered or changed. The currency of the charge will default to the local currency but it may also be entered or changed. In the adjacent field the exchange rate for the charge will appear. If the local currency is used the rate will be 1.0000, if a foreign currency used the rate will appear automatically or can be entered or changed.

Amount in AWB Currency

If the charge has been enter in a foreign currency, this field will show the amount converted to the local currency.

Prepaid/Collect

Indicates whether the charge is prepaid or collect. The default value will be based on the inco terms (see the *general tab*) but this default can be changed.

Due

Defines if the charge is *due Agent* or *due Carrier*. The default value for charges can be stored in the air cargo master data

Text on AWB

This will be the code used on the AWB to describe the charge type. By default the first 2 digits of the IATA code are used.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Edit

Open the other charge editor to edit the highlighted charge.

Delete

Removes the highlighted ancillary charge.

Update other charges

This action link will recalculate all ancillary charges according to current tariffs.

Distribution of costs

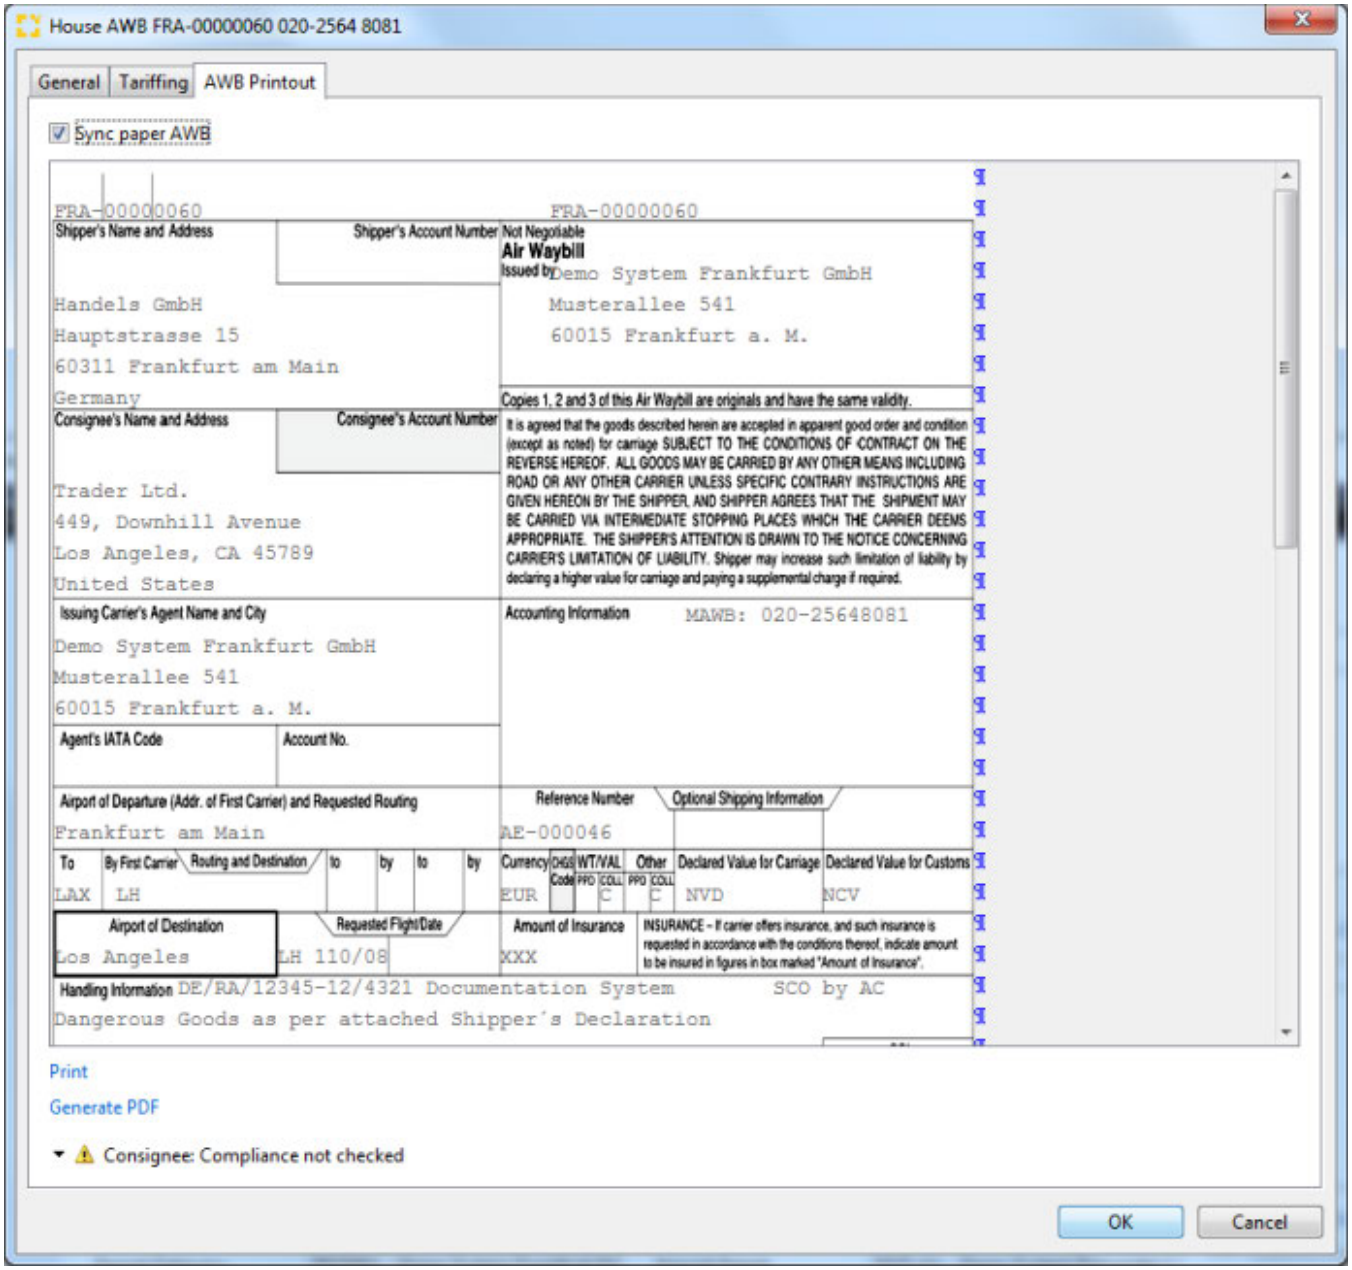
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the charges are summed into 4 separate totals; total prepaid due agent, total collect due agent, total prepaid due carrier and total collect due carrier. How the costs will be presented on the AWB can be controlled using the drop down menus which will present the option shown below:

Code	Explanation
P	Costs will be printed on the AWB
X	Costs will NOT be printed on the AWB
T	The costs will be shown only as a total on the AWB

AWB Printout

This tab provides a visual representation of the printed AWB.



Sync paper AWB

This box is checked by default and causes the AWB to be shown as per all the data entered in the *general* and *tariff* tabs. When check the representation of the AWB cannot be edited. If the box is unchecked, then the AWB may be freely edited and the text blocks can be accessed and inserted into the AWB.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the box is checked again after editing the AWB, all changes will be lost because the document will once again be regenerated according to the data stored in the *general* and *tariff* tabs.

Print

Prints the AWB exactly as it appears in the representation to the predefined printer. The document will also appear as a text document and pdf document in the documents tab of the shipment. The pdf version may then be sent attached to an email.

Generate PDF

Only a pdf version of the document is created which also appears in the documents tab of the shipment.

Print and send FWB

Prints the AWB as described above and sends a copy to TRAXON Global Cargo Communications System in the form of an FWB.

Send FWB

Sends the shipment electronically in the form of an FWB to TRAXON Global Cargo Communications System. There is no print of the document.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

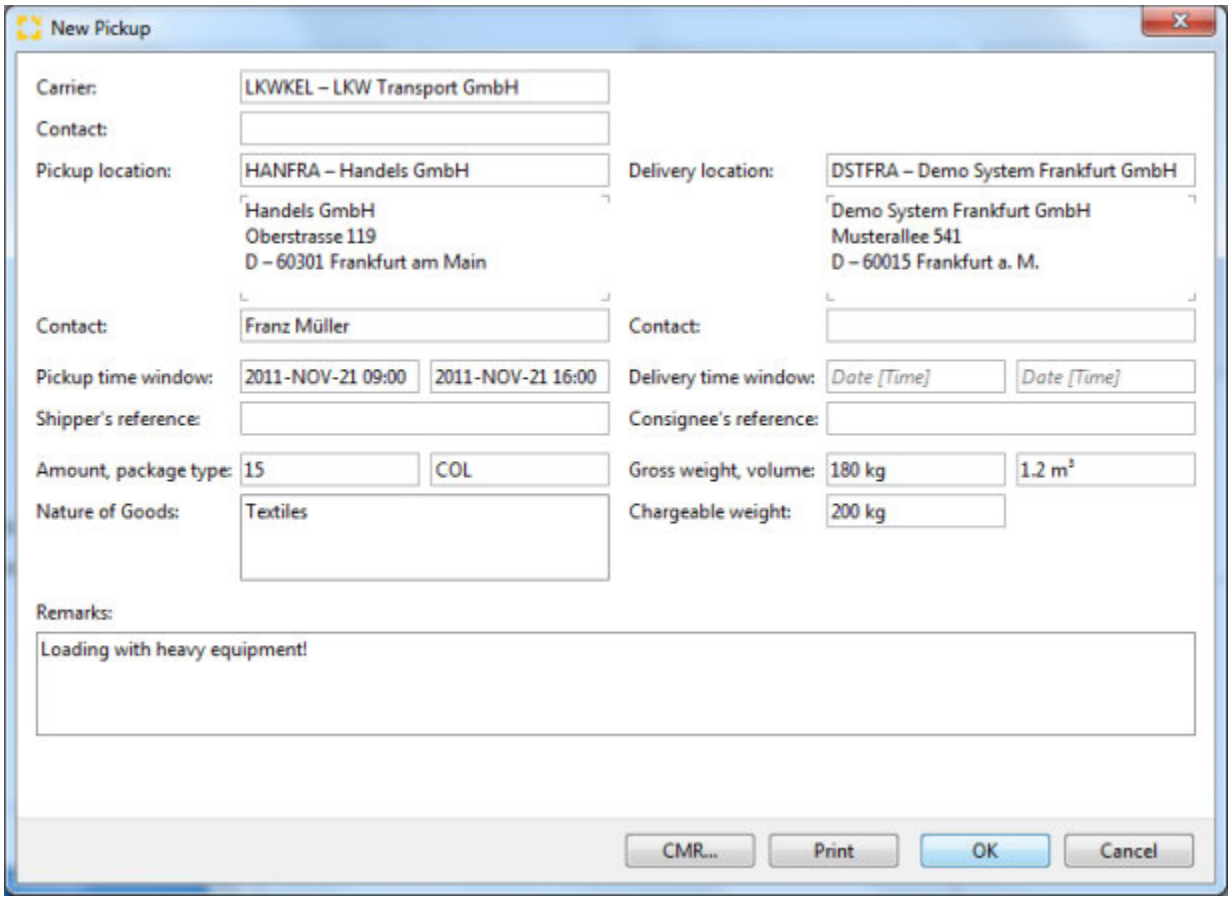
Pickup Order - General - Back-to-Back shipment - Airfreight Export

- Introduction
- Description

Introduction

Create and print pickup notes for collection of goods and delivery orders for transport of goods to the terminal. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the shipper. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Pickup time window from/to

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

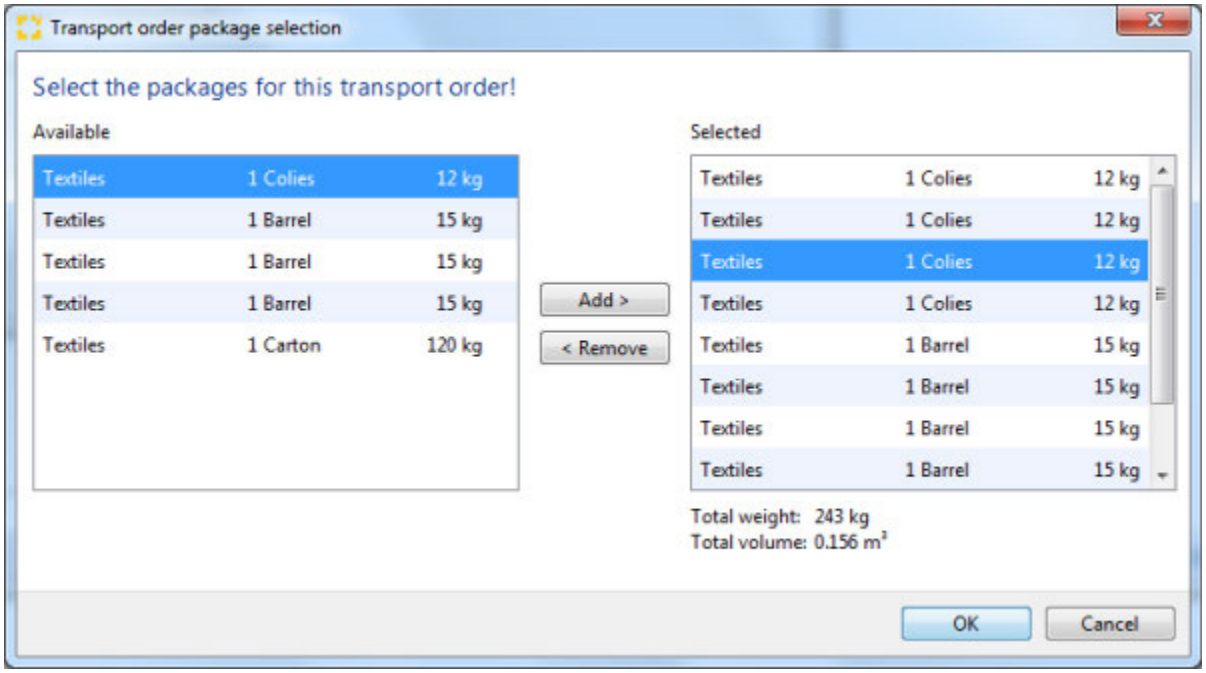
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery oder editor without taking any further action.

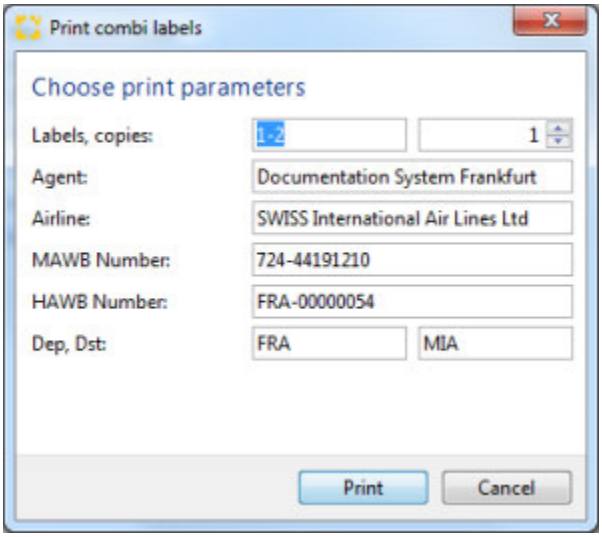
Printing Labels - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

Clicking the option label printer opens a pop-up window where the print parameters and number of printed pages can be edited. In addition, the print of the labels can be redirected to another printer-pool (e.g. another branch).

Description



Labels

Number of labels which should be printed. Individual labels can be printed or a partial set of labels may be printed.

Examples::

Entry	Quantity	Numbers
1-15	15	1-15
11	1	11
4-6	3	4-6

By default the application proposes printing the total number of labels.

Agent

The agent who issued the airwaybill. (Issuing agent)

Airline

The airline who will transport the shipment.

MAWB Number

MAWB Number of the shipment.

Departure/Destination

Place of departure and place of destination for the shipment.

Local print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Print the document on the predefined default printer.

Print to Printer-pool

Allows selection of a printer-pool from the list displayed.

Printer-pools (List)

The desired printer-pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the popup window without further action.

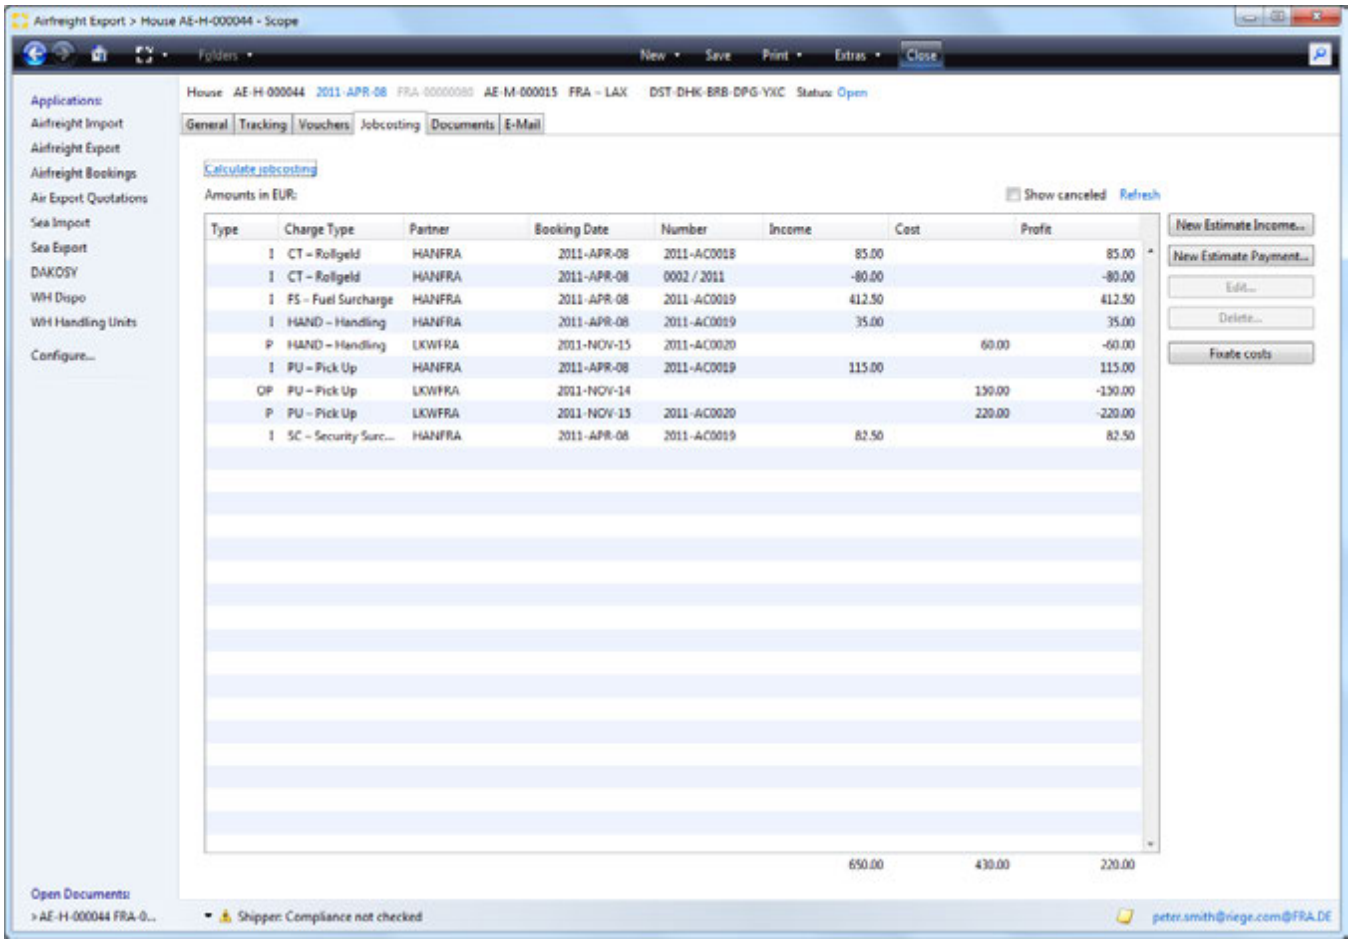
Jobcosting - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Tracking - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

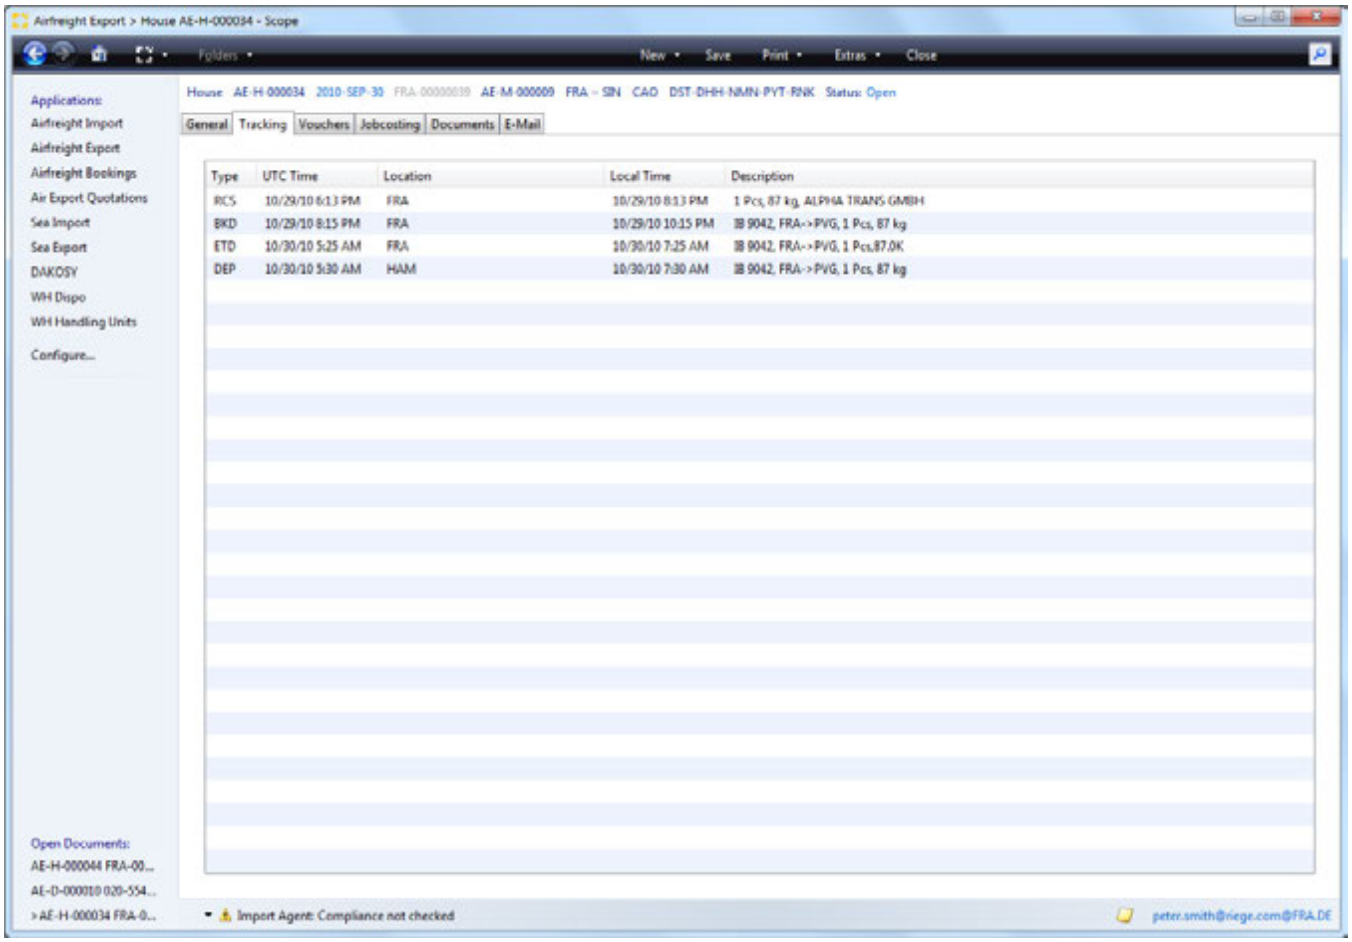
Introduction

During the life-cycle of the shipment numerous events occur and are recorded by the various parties involved with the transportation of the freight. These are called tracking events and they can be viewed using tracking tab, clicking on an idividual tracking event will present detailed tracking information. Currently, only external tracking events are available when the shipper and carrier are exchanging data using the "TRAXON" cargo communication system. Future development of the tracking tab will allow it to include events between senders and receivers. Events in the tracking tab can also be viewed via web-browser on RSI's track and trace system. Connection to external, customer-specific track & trace systems can be implemented on request.

Description

The example below shows an exchange of tracking data for a Scope system that is connected to the Traxon cargo communication system.

- When printing the IATA air waybill (master shipment, direct shipment and back-to-back) the option exists to also "Print and transmit FWB" or just "Transmt FWB". These options will automatically generate the FWB message (waybill data) and send these to the Traxon system who in turn transmit the FWB to the responsible airline. Consolidations and back-to-back shipments will also include the FHL messages (house bill of lading or manifest data).
- The corresponding events are automatically entered into the table of tracking events.
- The types of events shown will depend on the types of events supported by the responsible airline.
- Airline events are automatically entered into the table.
- The events which are recorded in a master shipment, also appear simultaneously in the house shipments consolidated on that master since these events are also relevant to the house shipments.



Main menu bar and title bar

see tab **General**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Type

Event type (see table below)

UTC time

The time of the event in UTC (Coordinated Universal Time)

Location

The place where the event has occurred. (the relevant airport IATA code may be shown)

Local time

Local time of the event (time in the time-zone in which the event occurred.)

Description

Description of the event. This example indicates how many packages, their weight, the aircraft transporting the freight. From where, to where. Numbers of packages that have arrived, the weight of the packages and at which destination.

The following events can be mapped. (Depending on the airline used)

Code	Description
RCS	Consignment received from Shipper
RCT	Consignment physically received from another airline
RCF	Consignment physically received from a flight known or not
BKD	Consignment has been booked
MAN	Consignment has been manifested
DEP	Consignment has departed
PRE	Consignment prepared for loading
TRM	Consignment is to be transferred to another carrier
TFD	Consignment has been physically transferred to another airline or surface transport party
NFD	Consignee or his agent informed of arrival of shipment
AWD	Arrival documents delivered to consignee or his agent
CCD	Consignment cleared by customs
DLV	Consignment has been physically delivered to consignee or his agent
DIS	Consignment Discrepancy
CRC	Consignment Information has been reported to Customs
DDL	Consignment has been delivered to the consignee's door
TGC	Consignment has been transferred to Customs/Government control
ARR	Consignment arrived on a flight known or not
AWR	Consignment documentation received from fleight
FOH	Consignment is on hand
FHL	Consol Manifest sent to airline
FWB	AWB sent to airline/ground handler
OSI	Other Service Information
ULD	ULD Identification
ETD	Estimates Time of Departure
ETA	Estimated Time of Arrival
FMA	Message acknowledged
FNA	Error detected in message

Incoming Invoice - Back-to-Back - House shipment - Airfreight Export

- Introduction
- Description

Introduction

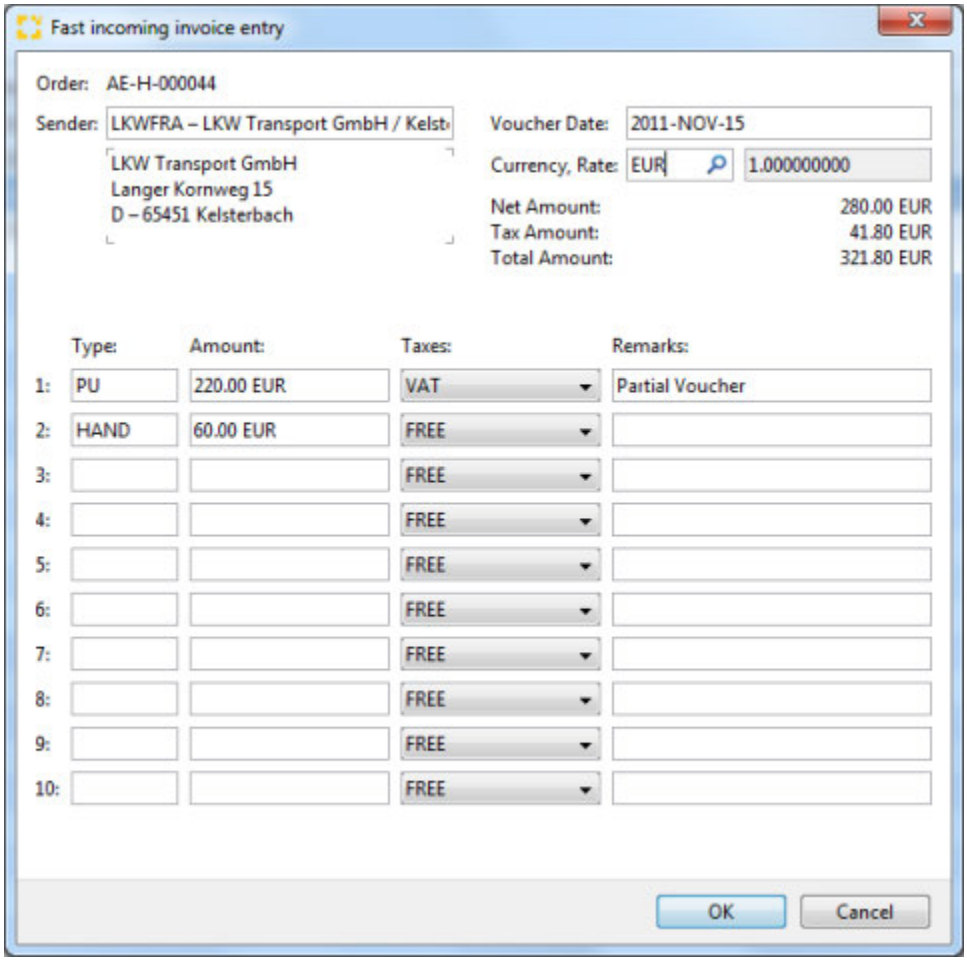
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

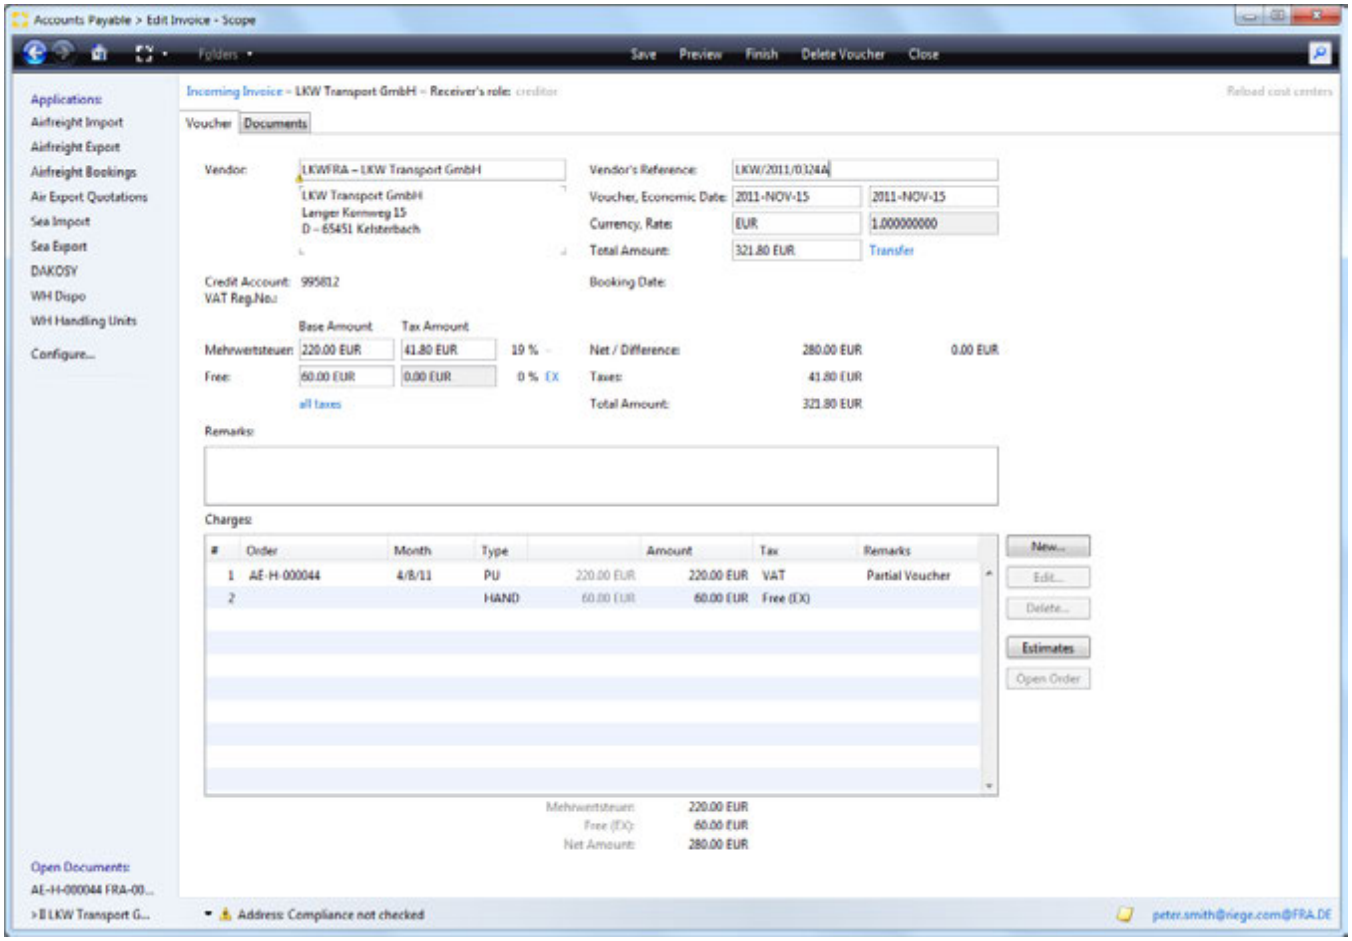
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

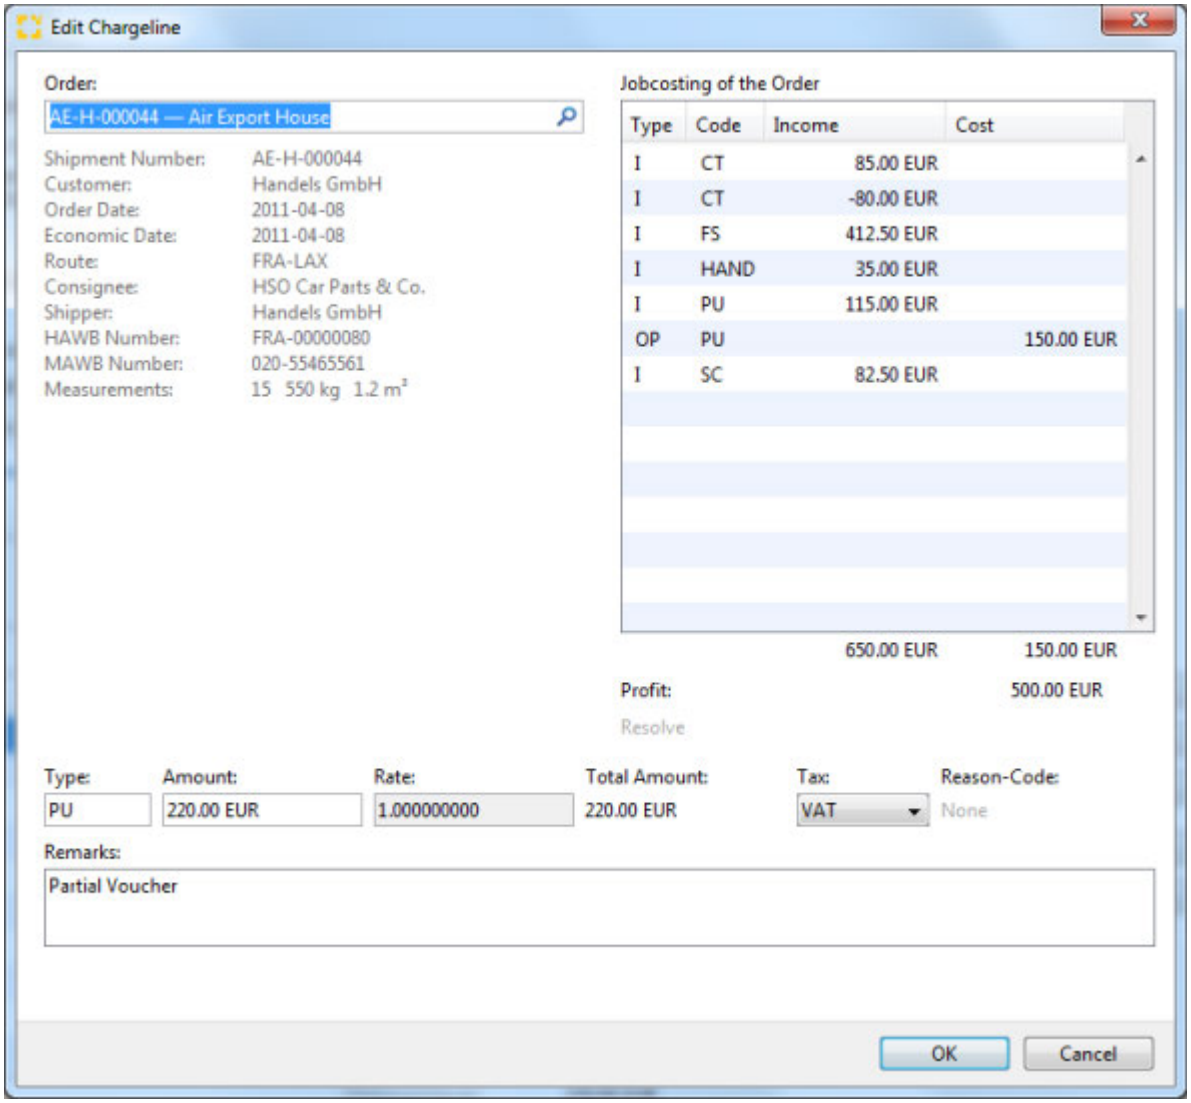
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

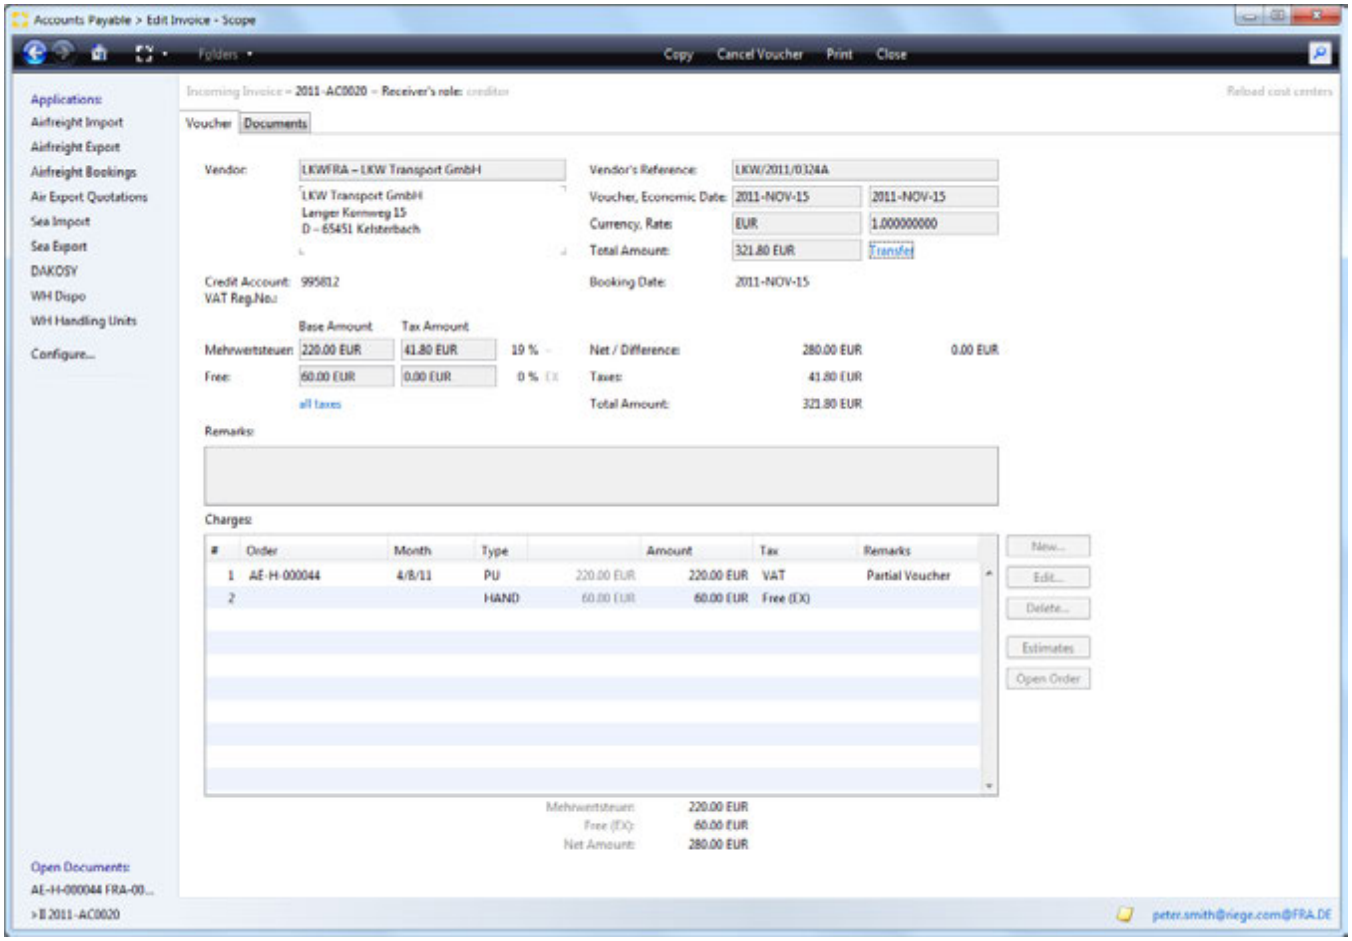
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Outgoing Voucher - Invoice - Back-to-Back Shipment - Airfreight Export

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

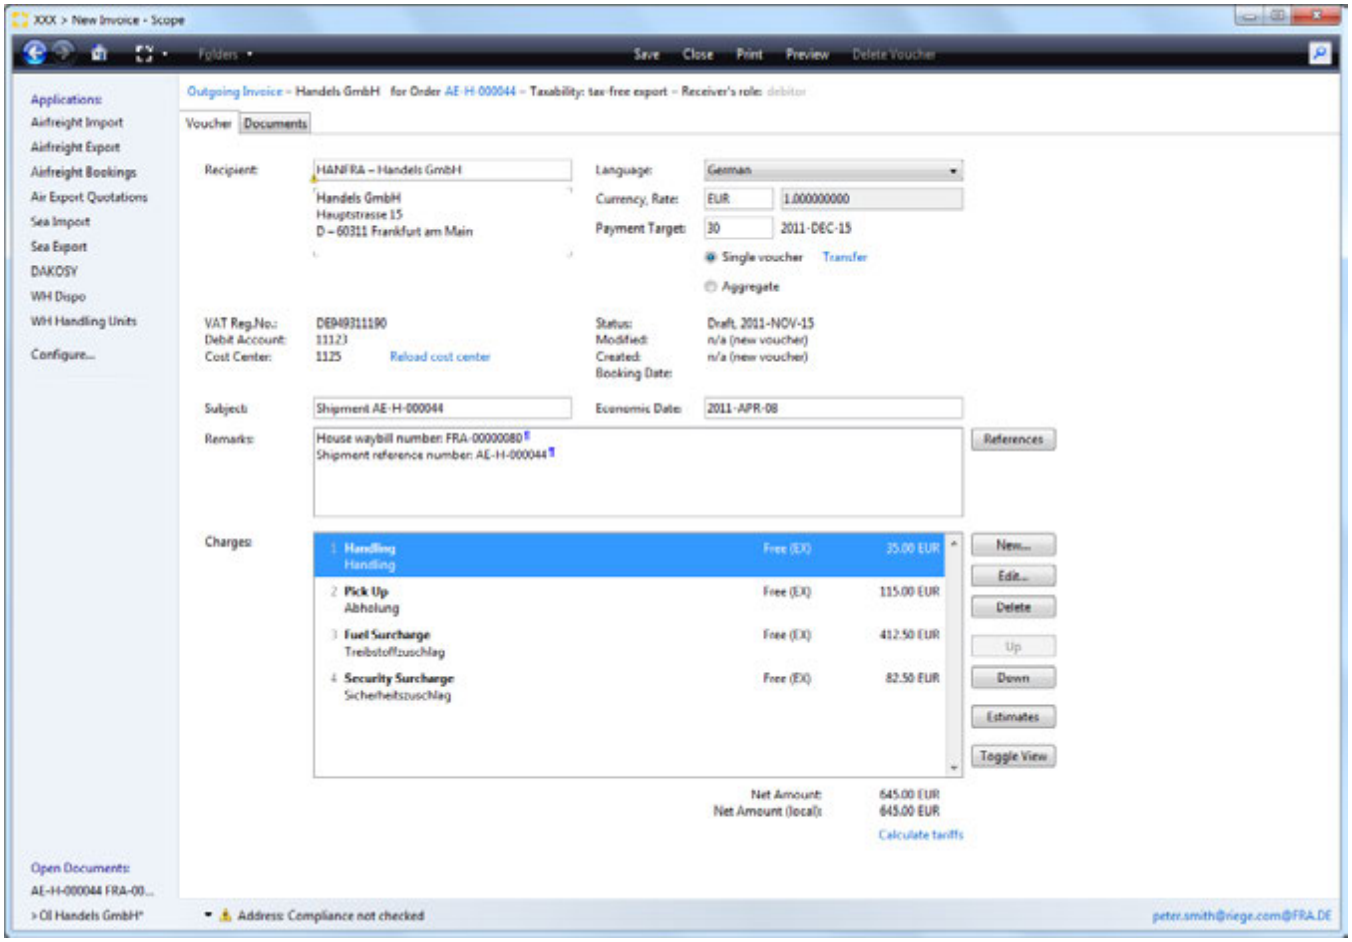
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

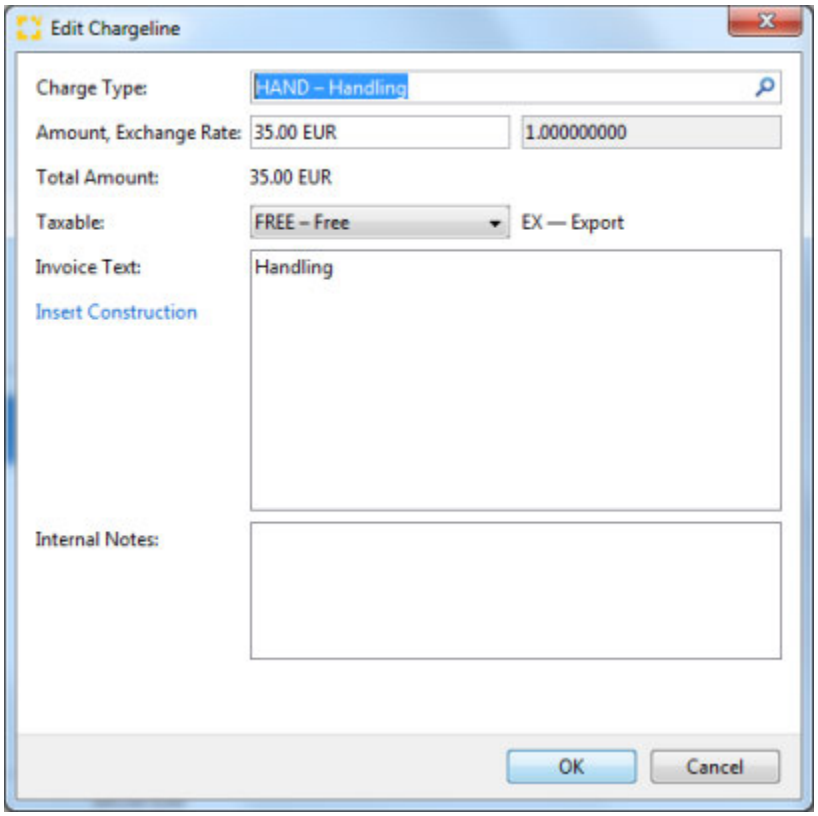
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

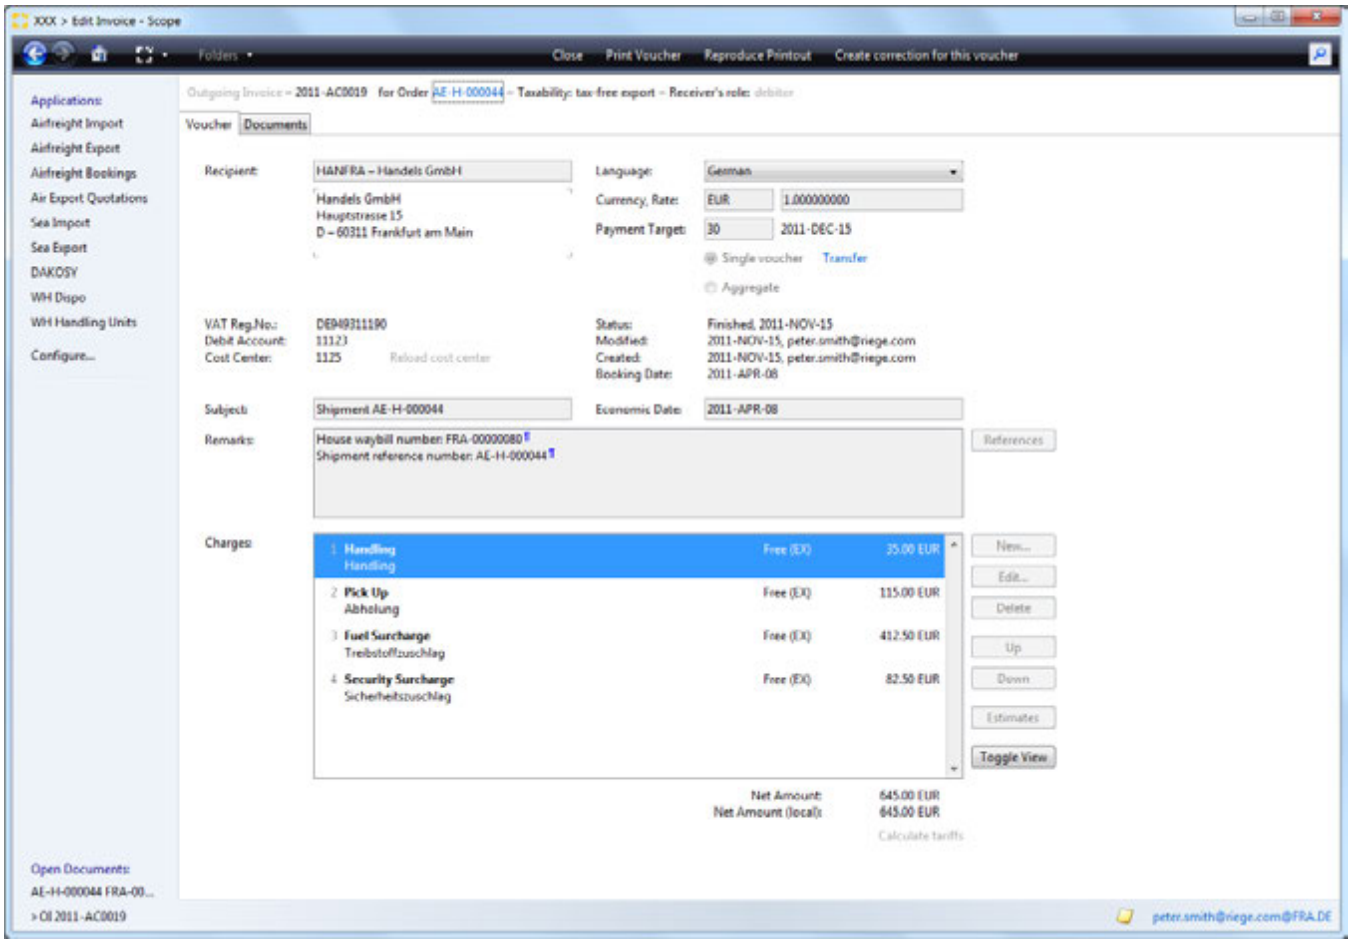
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

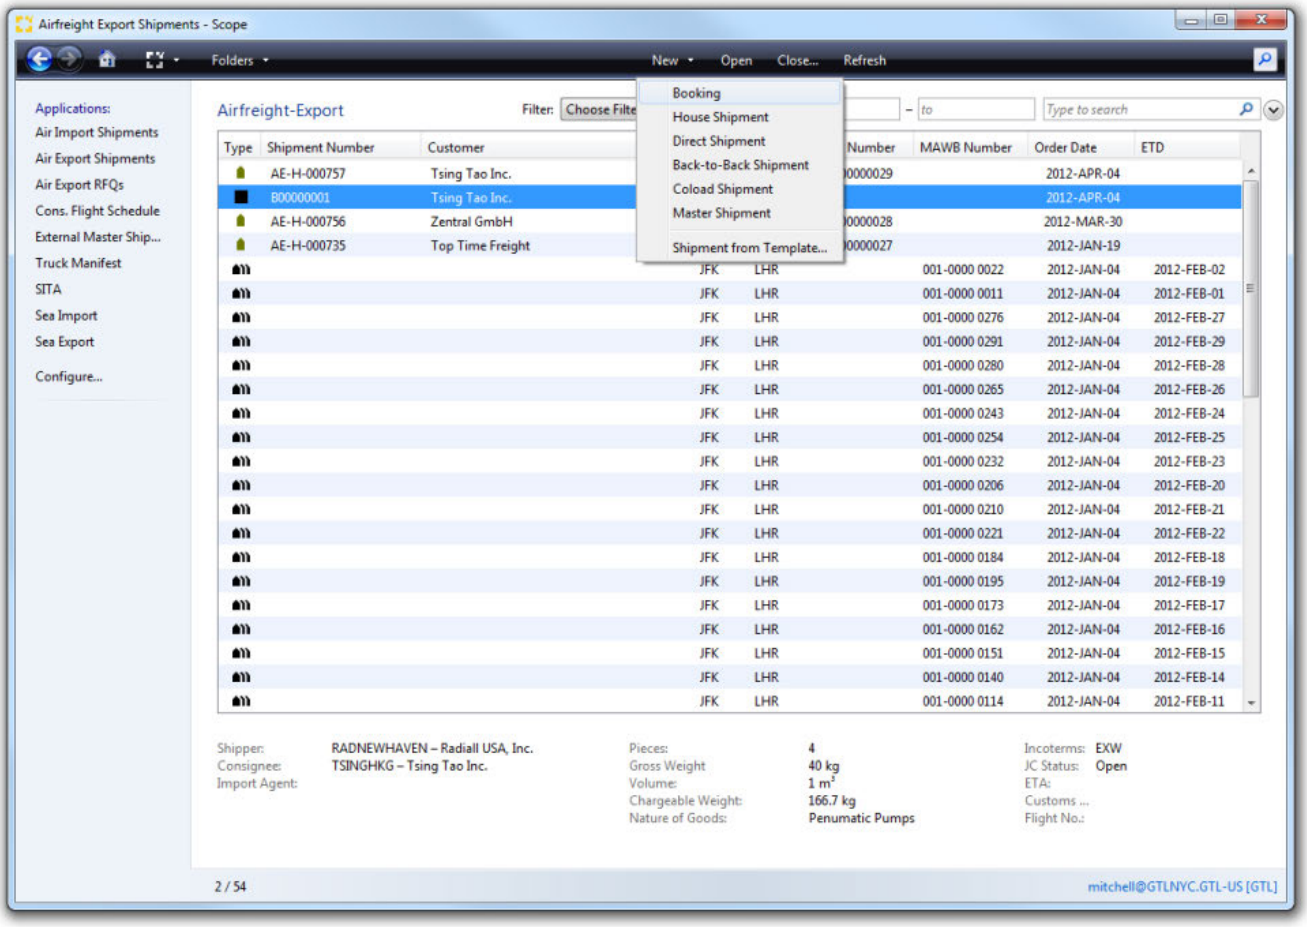
Booking - Airfreight Export

- Introduction
- Description

Introduction

Prior to creating an air export shipment, it is possible to create a booking for the shipment. In a booking the important data about the impending shipment can be collected and when the cargo is ready this booking can easily be converted into a full house, direct or house for a back-to-back shipment. A booking is usually created when incomplete details about the shipment are available or if there is some uncertainty if the shipment will materialize. A booking can also be used to quickly create a quotation.

Description



With ***New - Booking*** a new booking can be created.
With ***Open*** an existing booking highlighted in the export shipment overview can be opened. Alternatively, ***Double-click*** a booking in the list to open it.

The functions of the booking editor are described here:

- Documents - Booking - Airfreight Export
- E-Mail - Booking - Airfreight Export
- General - Booking - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

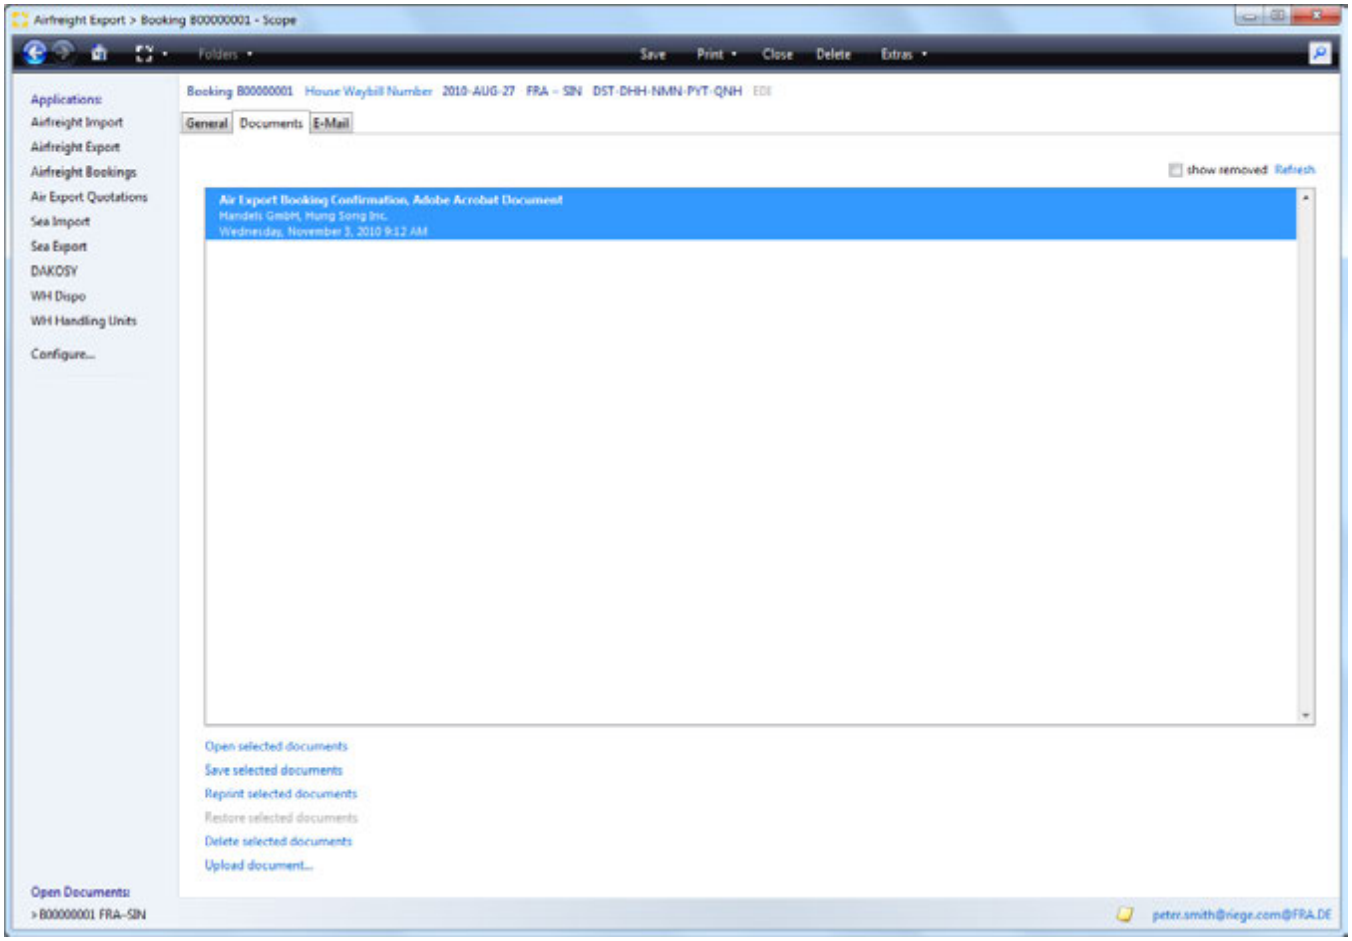
Documents - Booking - Airfreight Export

- Introduction
- Description

Introduction

All documents that have been printed for the booking will appear in the **Document** tab.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

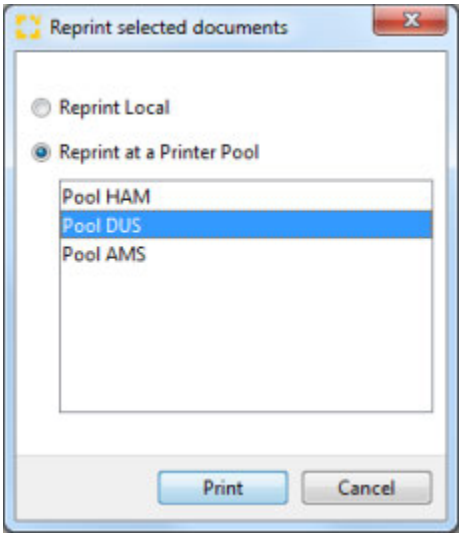
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

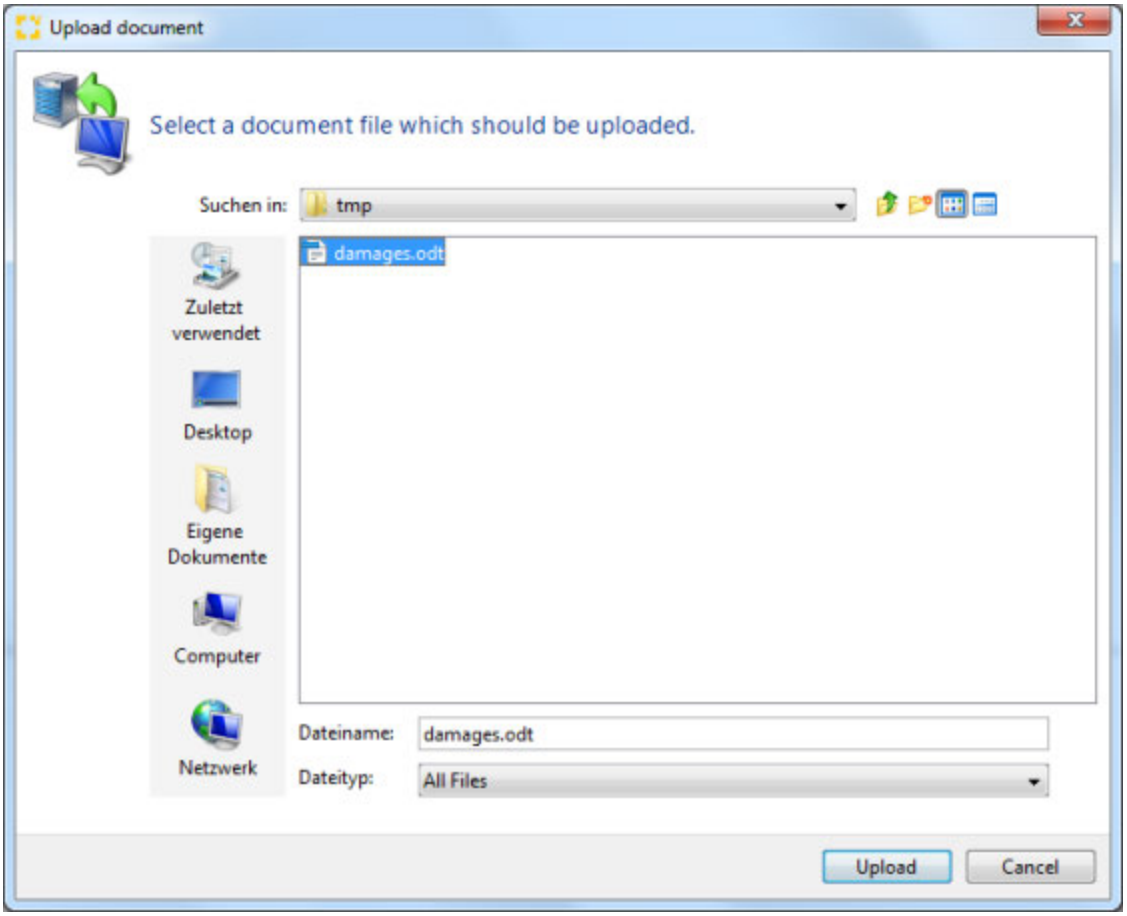
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

E-Mail - Booking - Airfreight Export

- Introduction

Introduction

On completing a booking an air export booking, the **E-Mail** tab can be used to create emails that related to the booking and to include documents related to the booking as attachments in the email. The complete description of this function is described in the E-Mail page.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

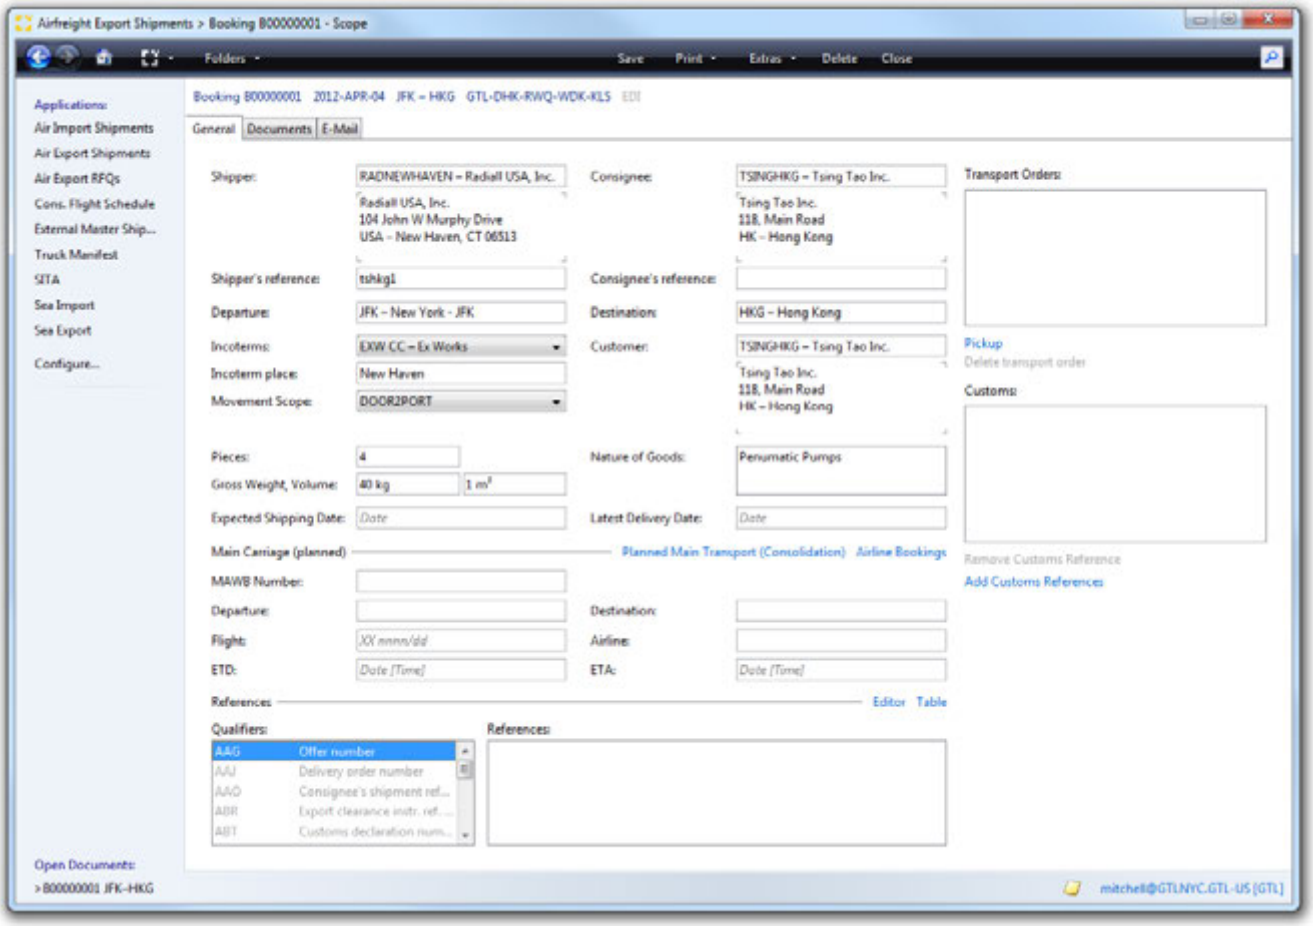
General - Booking - Airfreight Export

- Introduction
- Description
- General fields of the booking
- Main Carriage (planned)
- References

Introduction

The **General** tab stores all the important booking information such as shipper, consignee, pieces, weights and description of goods. This data can then be transformed with a mouse click into a full shipment when required.

Description



Save

The *save* option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the *Print* command , the required document can be printed.
Currently the following documents are available:

- Confirmation

Extras

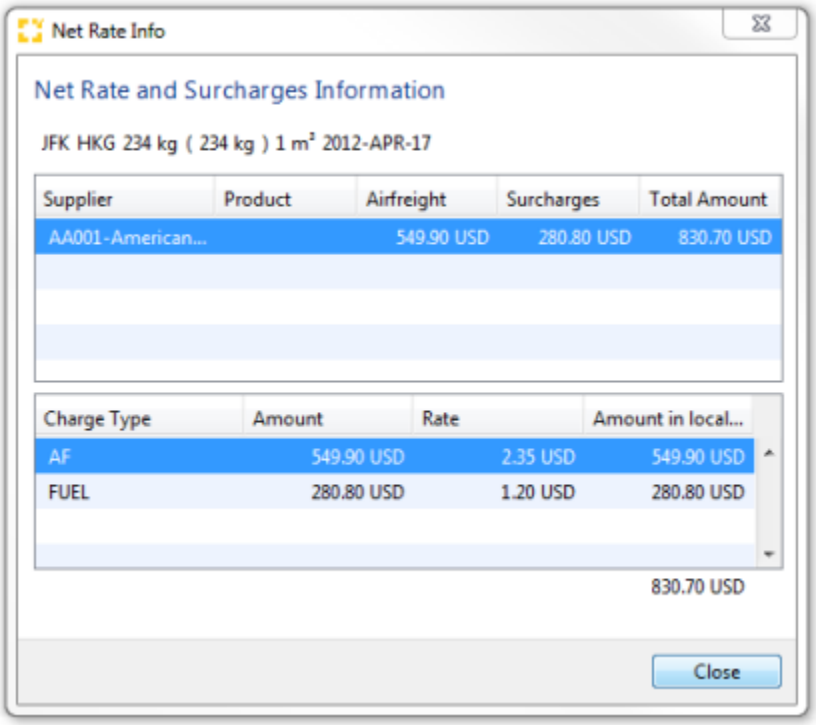
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The extras option in the title bar presents as set of additional actions that may be applied to an existing booking:

- **Netrate Info**
- **Convert to Shipment**
- **Assign to Shipment**
- **Create Quotation**

Netrate Info

The **Netrate Info** option will open a an information screen that will show any stored net rates that are valid for this shipment. These net rates are buying tariffs that are marked by the system as airfreight or related charges such as *air freight, fuel surcharges or security charges*.



Above the 2 tables, the summary of the booking is shown in the format *depart airport, destination airport, gorss weight, charge weight, volume weight and depart date*.

There are 2 tables in the net rate info screen, the upper table displays:

- **Supplier** The airline (if any) offering the net rate
- **Product**
- **Airfreight** The total airfreight cost
- **Surcharges** The totals of other charges associated with the net rate such as *fuel- and/or _security fees*
- **Total** The grand total of airfreight and associated other charges

The lower table shows the individual charges that make up the total net rate shown in the upper table. As net rates in the upper table are highlighted the lower table displays the individual charges of the net rate:

- **Charge type** The charge code for the charge
- **Amount** The total amount of the charge in the currency used when the tariff was created
- **Rate** The rate amount used to calculate the tariff.
- **Amount in local currency** The total amount calculated by converting the total of the tariff to the local currency.

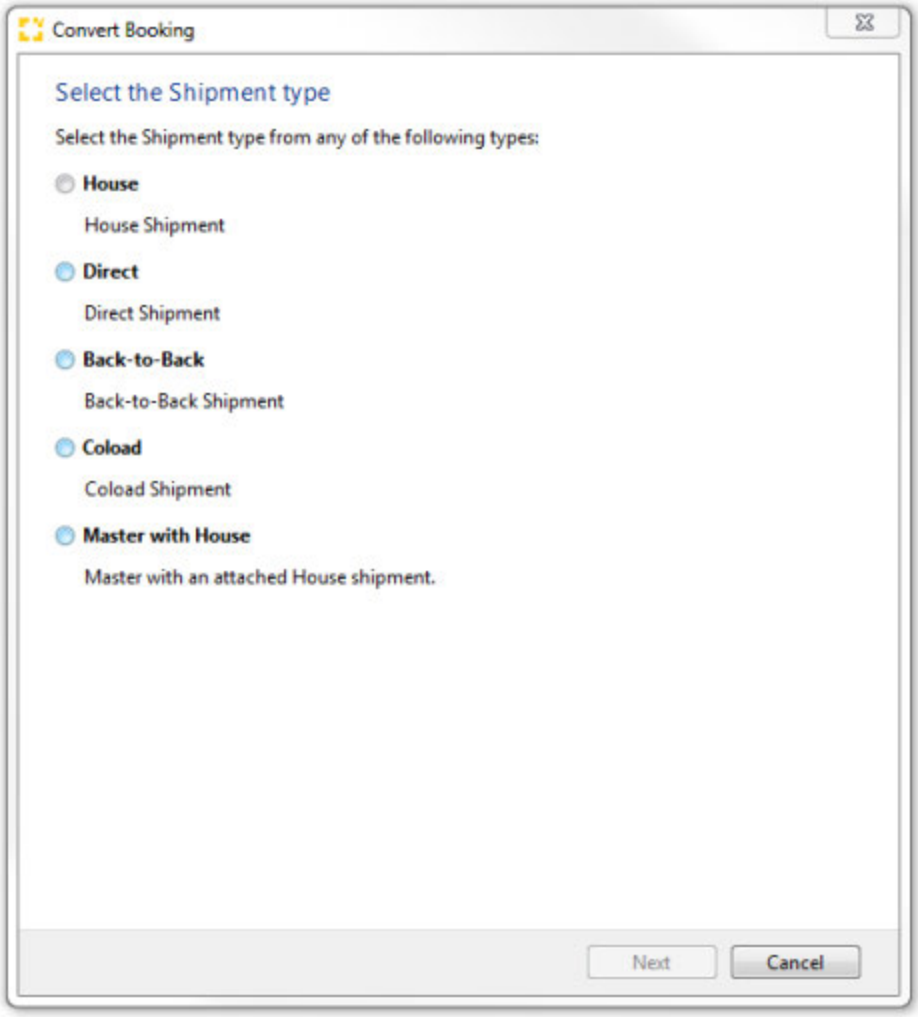
Close

The close option will close the Net Rate Info window and return to the booking.

Convert to Shipment

Select this option if the booking is to be converted to a real shipment. This option will produce a window where the type of shipment can be chosen:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Select the shipment type from any of the following types:

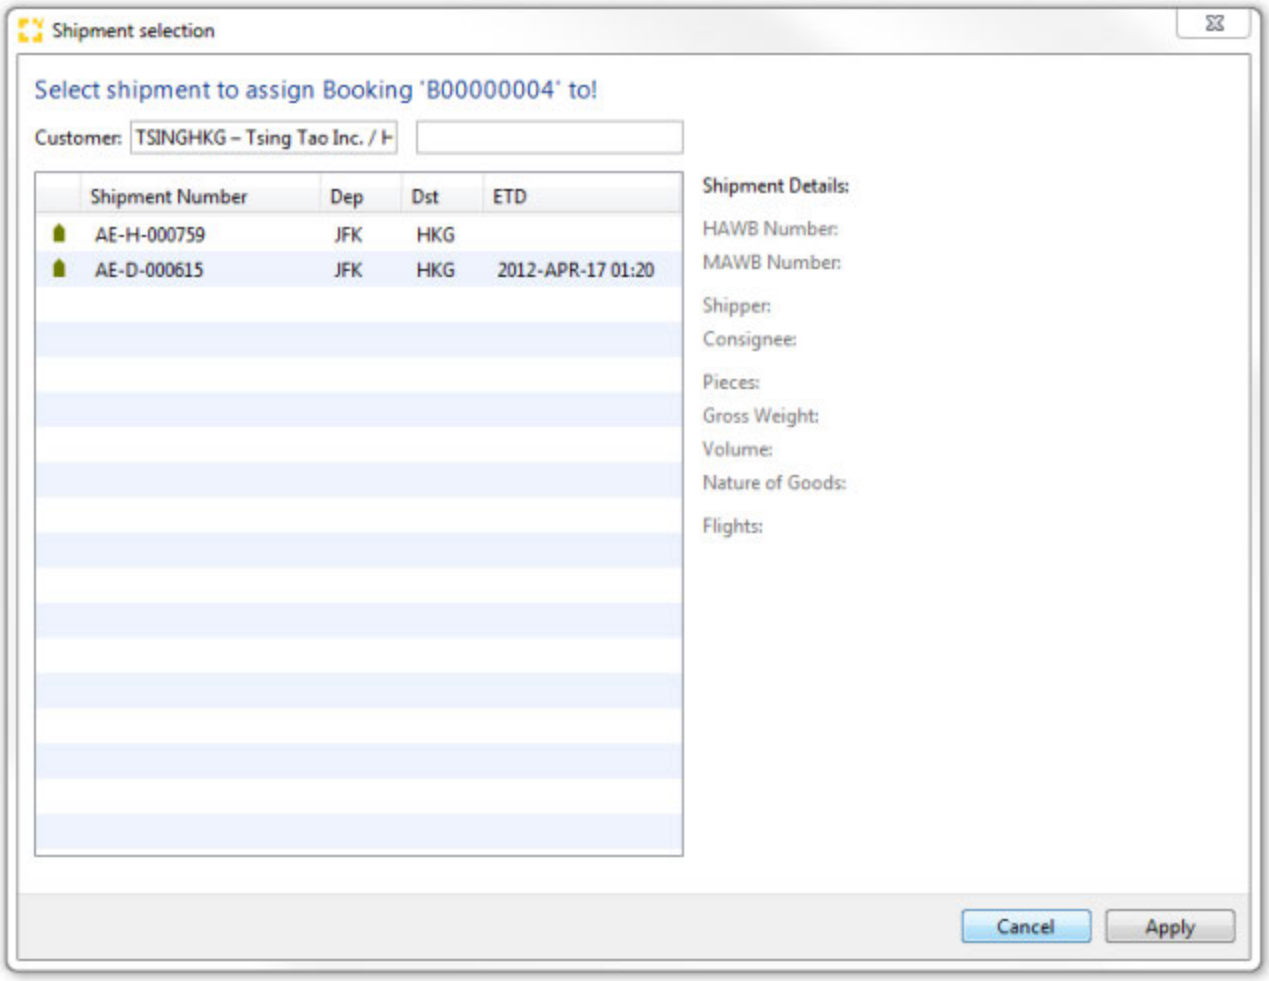
- House
- Direct
- Back-to-Back
- Coload
- Master with House This option will automatically generate a master shipment with the booking attached to it as a house shipment.

> ⚠ Once a booking is converted into a full shipment is is no longer visible as a booking in the list of export shipments. If a shipment was created from a booking, the original booking can still be viewed using the *show booking* option in the *Extras* menu of the shipment. This original booking information cannot be changed or deleted.

Assign to Shipment

Occasionally it may be preferable to take a booking and add it to an existing shipment instead of creating a new and separate shipment for the cargo. In these circumstance the *Assign to Shipment* option can be selected. An information screen will appear:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Customer

The name of the customer to whom the booking belongs

Table valid shipments

In the table a listing of shipments will appear that match the details of the booking and therefore the booking may be assigned to any of these shipments.

Cancel

This option will cancel the *assign* operation and return to the booking

Apply

The booking will be assigned to the shipment highlighted in the table of available shipments. The pieces, weights and dimensions of the booking will be added to those of the selected shipment and the application will exit the booking and open the selected shipment so that it can be completed.

Create Quotation

This option is used when the booking is to be the basis of a quotation. This means that both the details of the cargo can be stored in the booking and the price offered to the customer for the booking can also be be stored. Selecting this option starts the quotation application with all the details from the booking already in place and only the financial details of the quotation need to be completed.

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Delete

Deletes the booking if required.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Title Bar

The following information and actions appear in the title bar for a booking. Blue text indicates that the text has an action link and offers further activities.

- **Type**
  The *type* will always be displayed as a *booking*.
- **Booking number**
  Assigned by the system when the booking is saved for the first time.
- **Date**
  The date the booking was first saved.
- **Departure airport - Destination airport**
  Departure and destination of the booking.
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the booking is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Quotation**
  If a quotation has been created for the booking then the action link will display the text *View quote*. If no quotation has been created then the action link will display the text *Create quotation*. Clicking this action link will open the quotation editor.

General fields of the booking

Shipper

Shipper for the booking. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Shipper's reference

References issued by the shipper that should be associated with the booking may be typed in the shipper's reference field. If there are multiple references, these can be separated with a comma for ease of entry. Any references entered here will automatically also appear in the references section of the booking as a consignors reference.

Consignee

Consignee for the booking. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee's reference

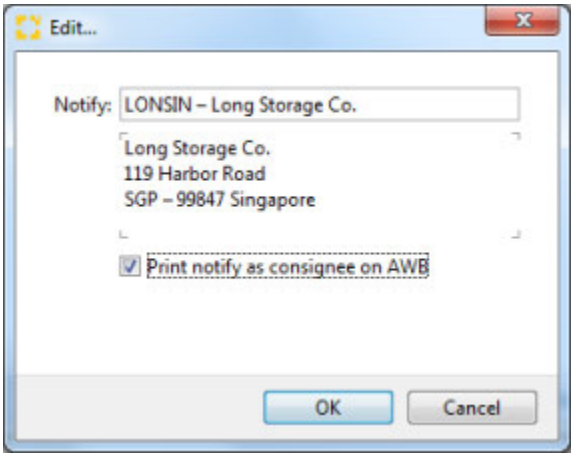
References issued by the consignee that should be associated with the booking may be typed in the consignee's reference field. If there are multiple references, these can be separated with a comma for ease of entry. Any references entered here will automatically also appear in the references section of the booking as a consignee's reference.

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

> In the master data of the (partner), if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Departure

Airport of departure of the booking. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the booking. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Incoterms

The delivery terms for the booking.

Incoterms Place

The place name referenced by the incoterms.

Movement Scope

Movement Scope of the booking.

Customer

Generally the customer is the business partner who is responsible for generating the booking and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Pieces

Total number of packages in the booking.

Within the pieces field, press F3 or select the drop down menu for access to the package editor. The package editor allows much greater detail to be entered about individual packages.

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

the description of the goods.

Expected date of shipment

The Date the goods are planned to be shipped.

Latest Delivery

The latest delivery date for the goods to the warehouse. This can be no later than the expected ship date.

Transport Orders

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The **Transport Orders** window will display any pick up notes that have been created for the booking. The pickup note number and the date that it was created will be displayed. These existing pickup notes can be opened by highlighting and double clicking them.

Pickup

This action link will enable a new pick-up note for the shipment to be created. Clicking the link will open the pick-up note editor.

Delete transport order

This option will be active if pickup notes have been created for the booking. This action link will delete the pickup note highlighted in the pane showing existing pickup notes.

Customs

The **Customs** window will display any customs references that have been created for the booking.

Add Customs references

Opens the Add Customs references application. Up to 10 additional customs references may be added.

Main Carriage (planned)

The planned main carriage area of the booking allows planned master details to be entered manually or the action link *Airline Bookings* will transform the screen and allow a master AWB to be selected from the pool of MAWB's for the selected airline. Both options are described in detail below:

Planned Main Transport (Consolidation)

MAWB Number

Enter the planned MAWB number in the format *nnn-nnnnnnnn*.

Departure

Airport of departure of the master shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the master shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Flight

Enter the flight data for the master shipment. Use the drop-down menu or press F3 to access the flight data editor. This allows detailed flight and routing data to be entered.

Airline

The name of the airline for the master shipment.

ETD

Estimated time of departure of the master shipment.

ETA

Estimated time of arrival of the master shipment.

References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

Coload Shipment - Airfreight Export

- Introduction
- Description

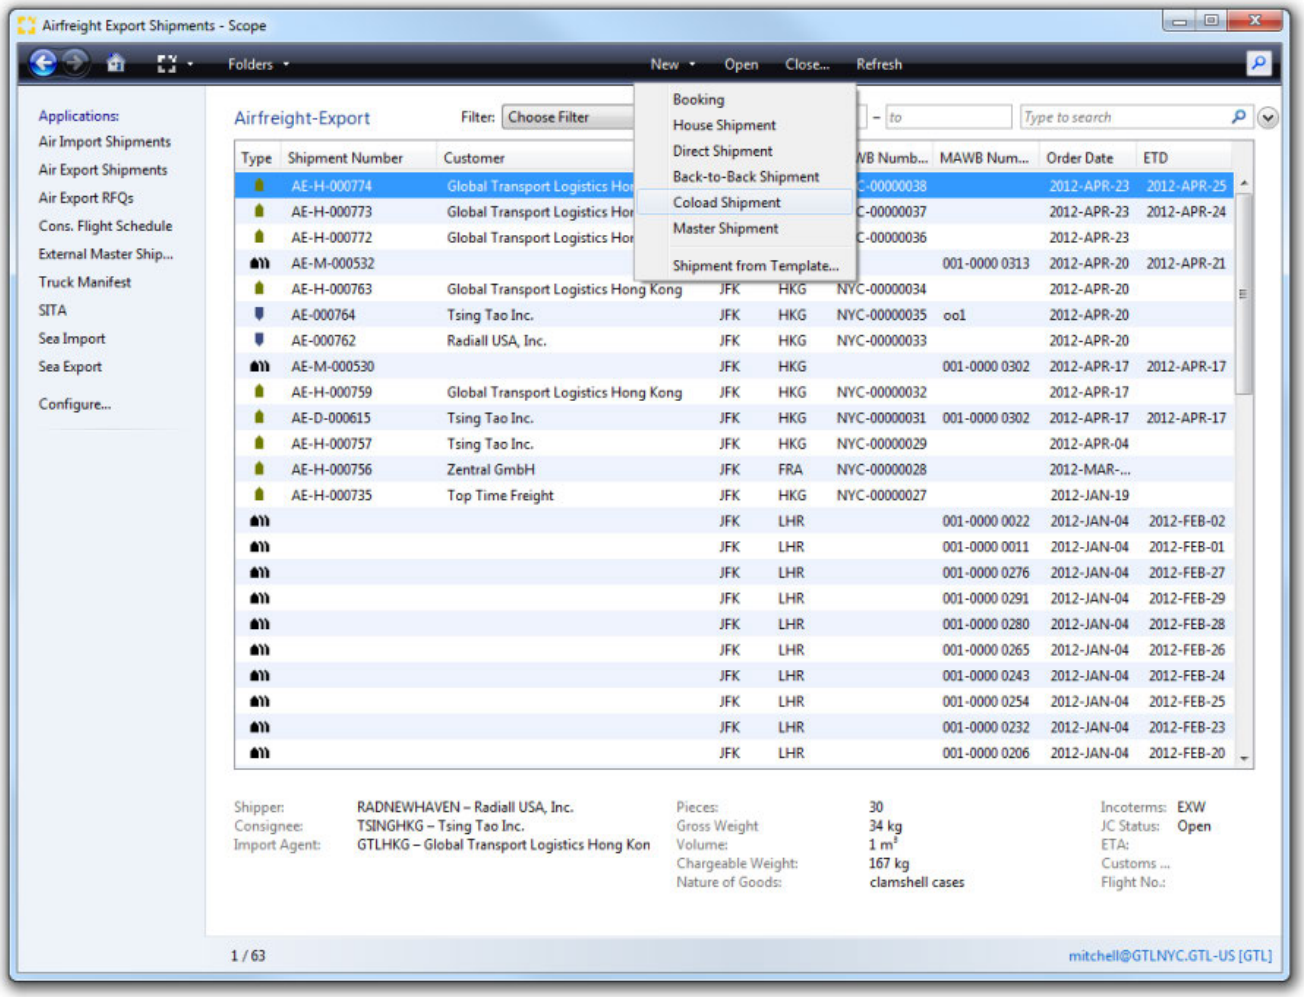
Introduction

Coload shipments are created within air freight exports in addition to Consolidated, HouseDirect, Back2Back shipments and Bookings. A Coload shipment is very similar to a House but cannot be combined with other shipments into a Consolidated shipment. Coload shipments are usually created by smaller forwarders when they do not have sufficient cargo to build their own consolidation and instead they had the shipment over to another forwarder for consolidation outside of their own network. This means they only create the house details for the shipment and the master details are supplied by the Agent who receives the coload and actually creates the consolidation.

The name Coload shipment derives from the fact that the shipment is not shipped as "in-house cargo" but is added to the load (coloaded) with the cargo of an out of network agent. The airline (carrier) is not involved at this level of transportation.

The following operations can be handled in this application: data entry, invoices for the house airwaybill (HAWB), printing of documents, costs, revenues and delivery notes.

Description



Select ***New - Coload shipment*** to create a new coload shipment.
Select ***Open*** to open an existing coload shipment highlighted in the overview. Alternatively the coload shipment can also be ***Double Clicked*** and this will open the shipment in the full shipment editor.

The function of each program editor is described here:

- Documents - Coload Shipment - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- E-Mail - Coload Shipment - Airfreight Export
- General - Coload Shipment - Airfreight Export
- Jobcosting - Coload Shipment - Airfreight Export
- Tracking - Coload Shipment - Airfreight Export
- Vouchers - Coload Shipment - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

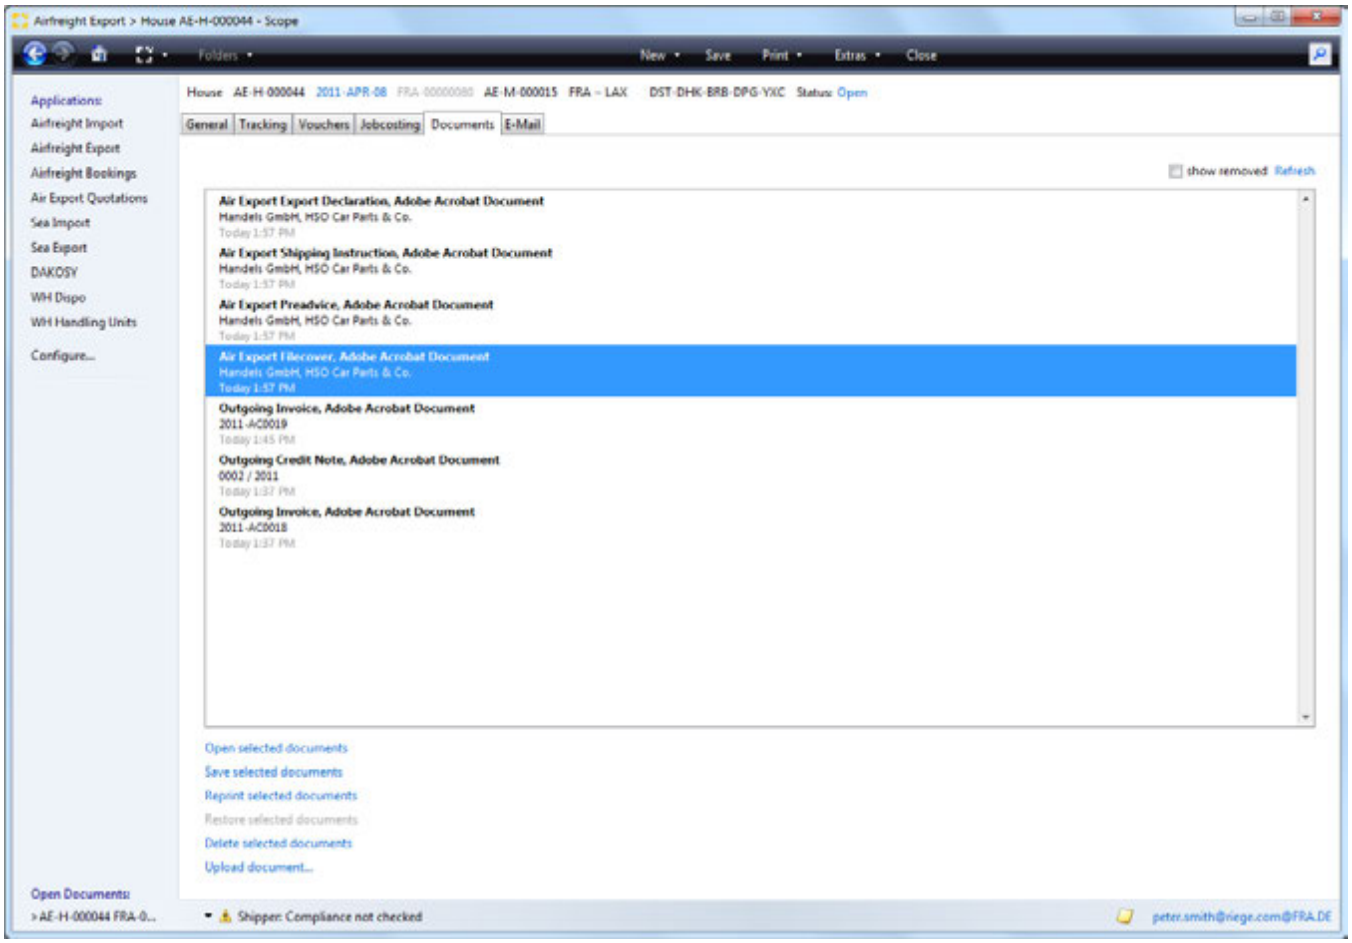
Documents - Coload Shipment - Airfreight Export

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

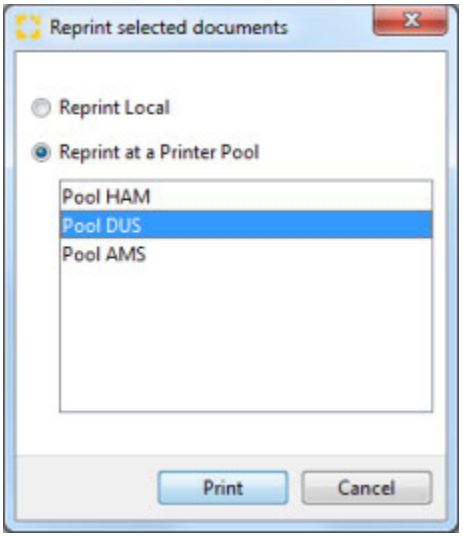
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

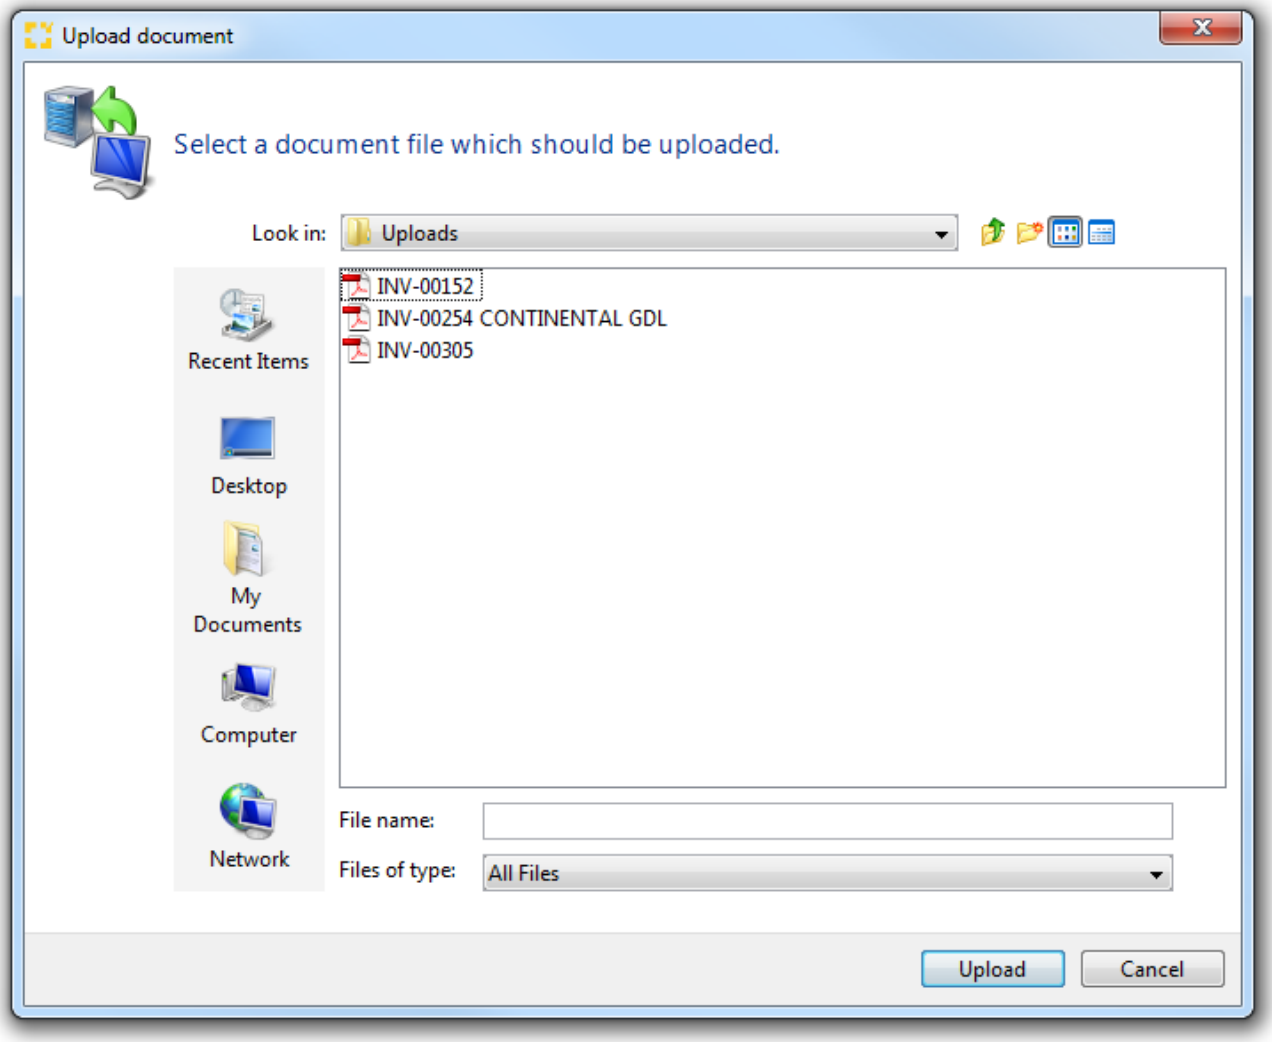
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

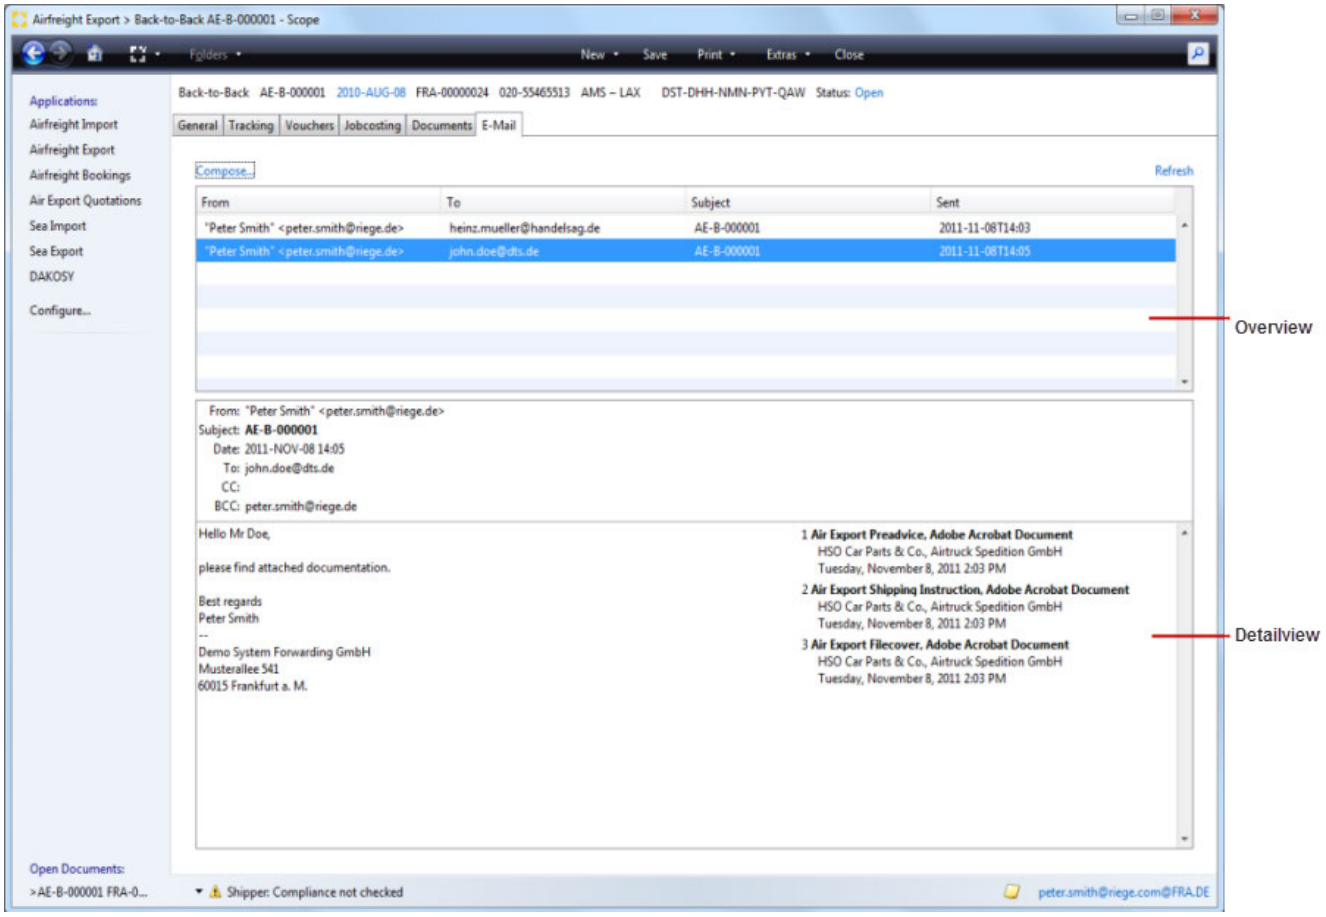
E-Mail - Coload Shipment - Airfreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

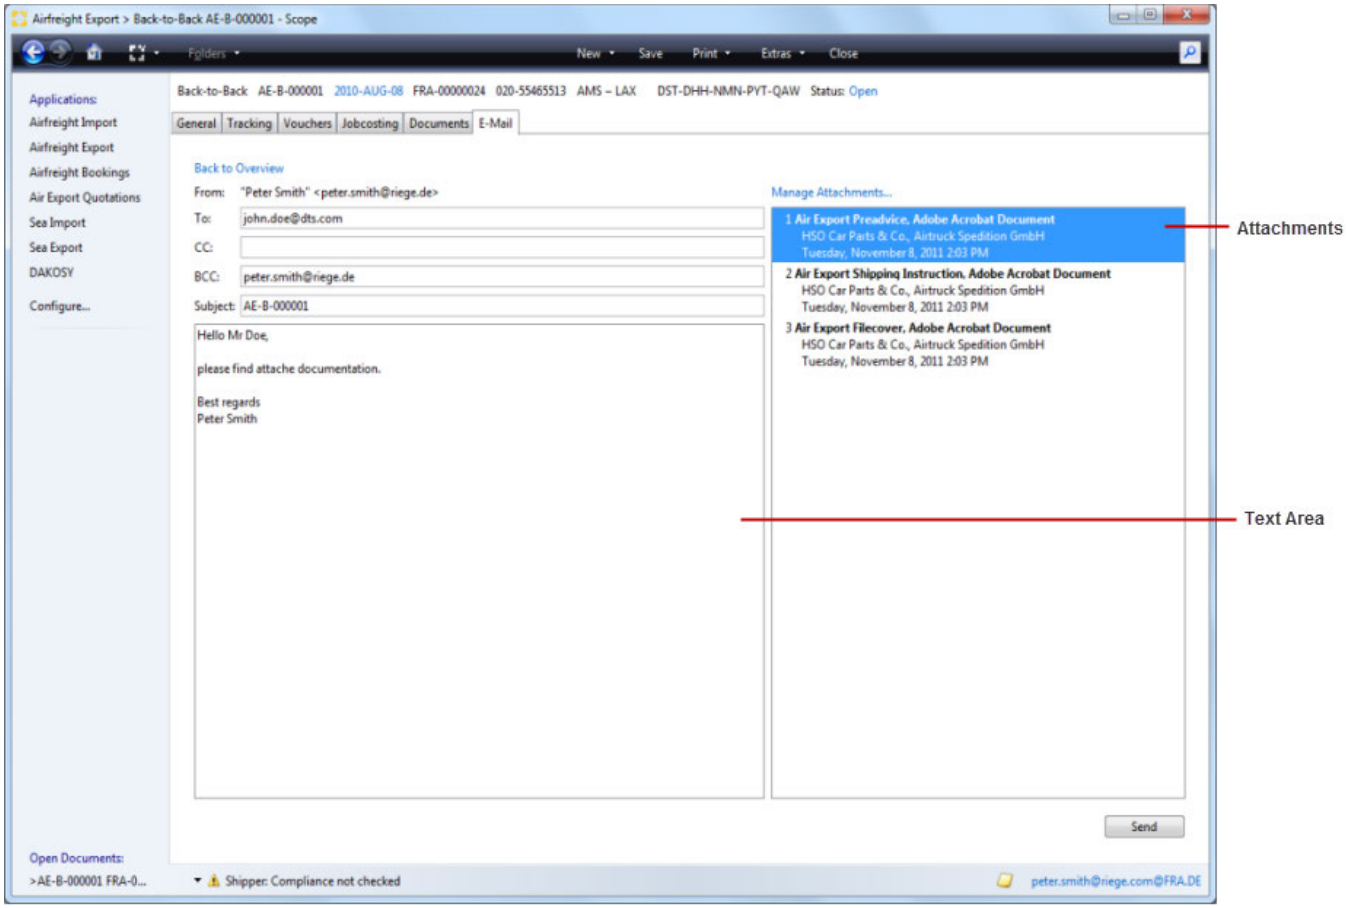
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

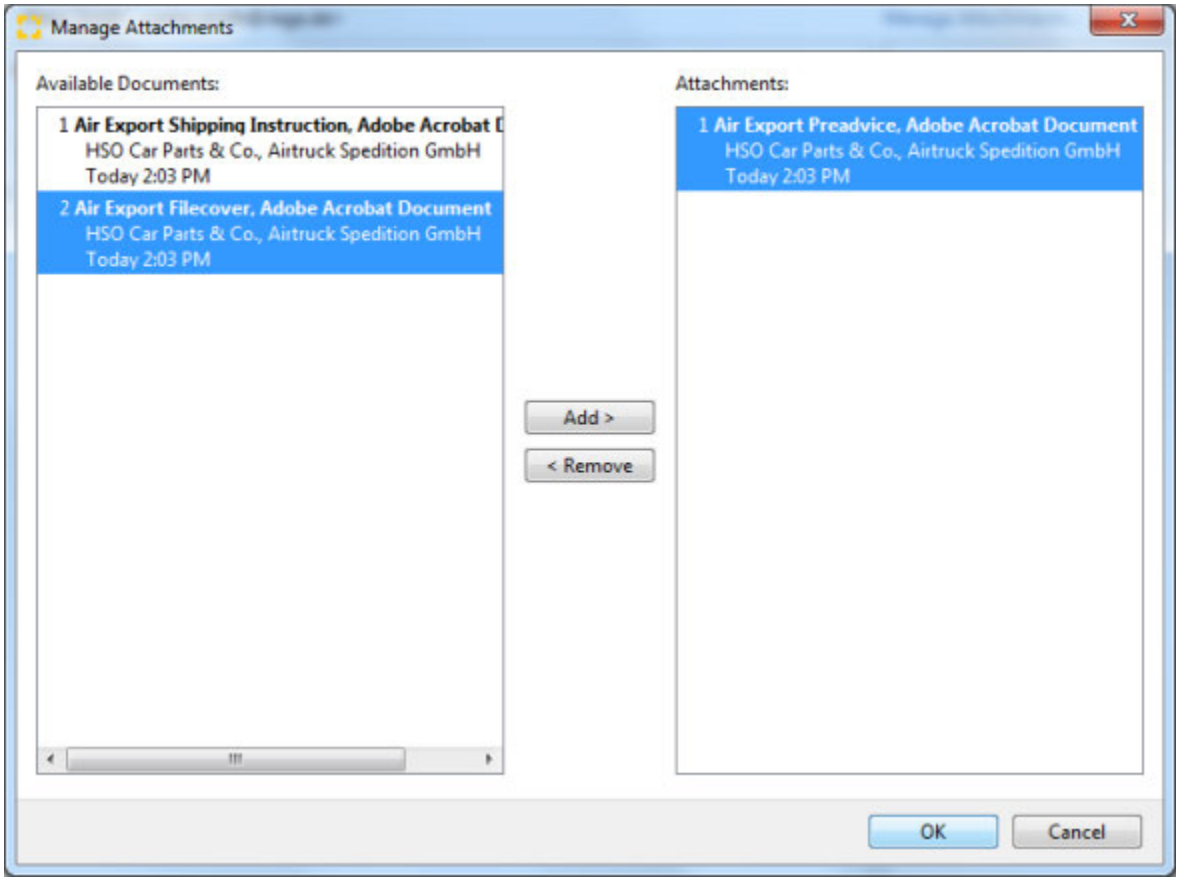
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

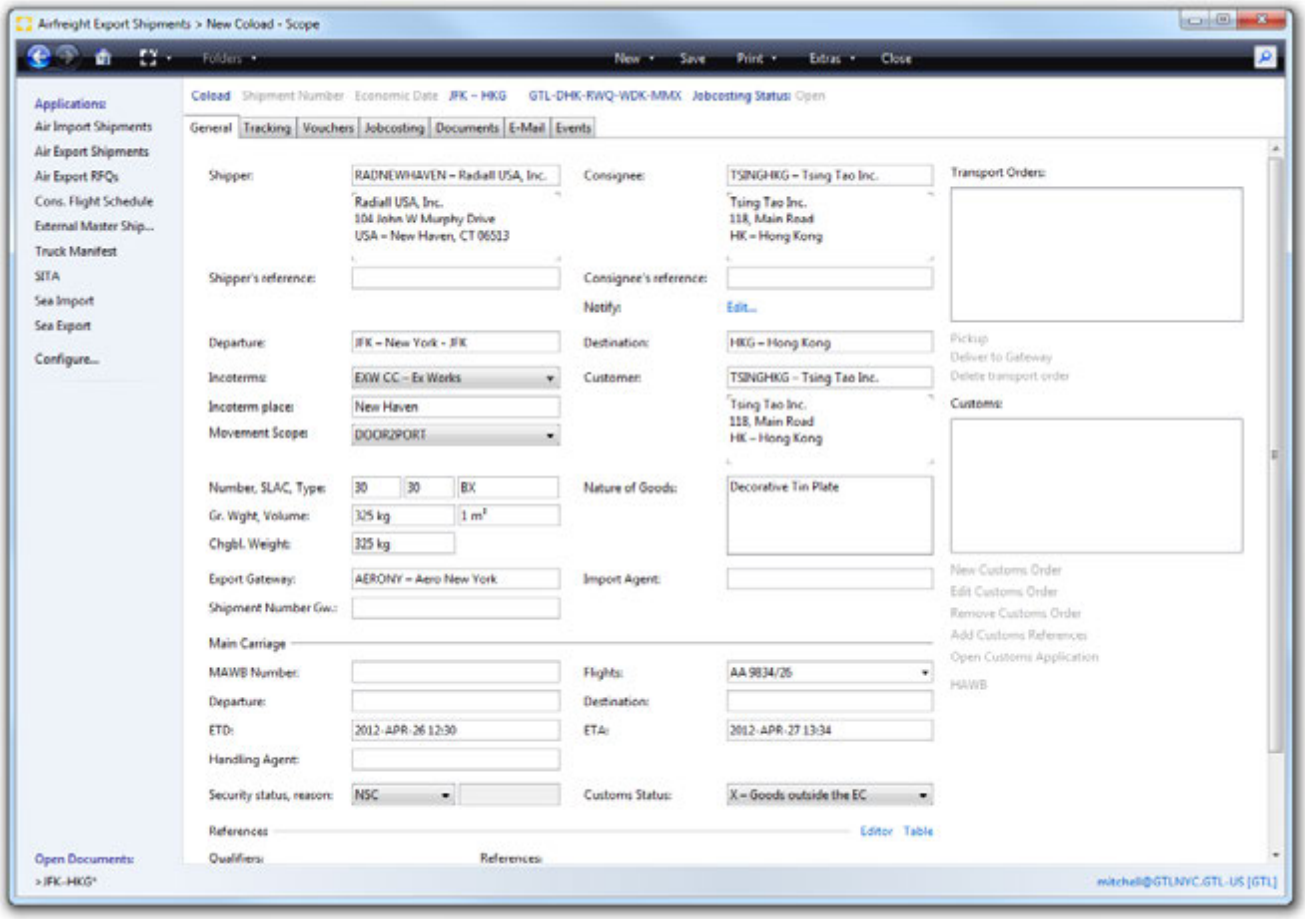
General - Coload Shipment - Airfreight Export

- Introduction
- Description
- General Fields
- Main Carriage
- References

Introduction

The general tab of the coload air export shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



New

The *new* option presents quick access to a set of applications that are also available within the general tab of the coload shipment:

- Pickup
- Deliver to Gateway
- New Customs Order

Save

The *save* option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

By clicking on the appropriate item in the list under the print command , the required documents can be printed.
Currently the following documents are available:

- File cover
- Preadvice
- Shipping Instruction
- Export Declaration
- House-Labels

Extras

Offers the following extra actions:

- **Finish** Opens popup-window to finish the shipment.
- **Compliance Check** Opens the Compliance Check application where one or multiple addresses in the coload shipment can be checked against the terror list.
- **Show Bookings** If bookings have been used to create this coload shipment, this feature will be active. It will show in a **Bookings Information** window all the bookings used to created this coload shipment.
- **Consolidate Bookings** If bookings are to be added to this shipment, this function will display available bookings and allow their selection.
- **Show Quotation** If a quotation has been used for this shipment, this function will display the quotation.
- **Create Template** Opens popup-window to create template for shipments.
- **Change shipment type** Opens a pop-up window to change the type of the shipment.

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- **Type of shipment**
  Type of shipment and for a colaod shipment this will show *Coload*
- **Shipment number**
  Assigned by the system after the shipment has been saved for the first time.
- **Service date**
  The service date of a shipment is set as follows:
  When present, ETD (Estimated Time of Departure / Expected Time of Departure)
  -otherwise
  If an air waybill has been printed, date of air waybill (AWB) printing.
  -otherwise
  The current date when the shipment is first saved.
  The date will not change unless it is clicked (popup-window) and will update/ revise the actual correct date. (This can be necessary if the shipment number contains the service/ settlement period)
- **Departure airport - Destination airport**
  Departure and destination of the shipment.
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Jobcosting Status**
  If the shipment has not been billed the status is shown as *open*. If if has been billed it will be shown as *billed*.

General Fields

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where among other things, a new partner may be created or an existing partner may be edited.

Shipper's reference

References issued by the shipper that should be associated with the booking may be typed in the shipper's reference field. If there are multiple references, these can be separated with a comma for ease of entry. Any references entered here will automatically also appear in the references section of the booking as a consignors reference.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where among other things, a new partner may be created or an existing partner may be edited.

Consignee's reference

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

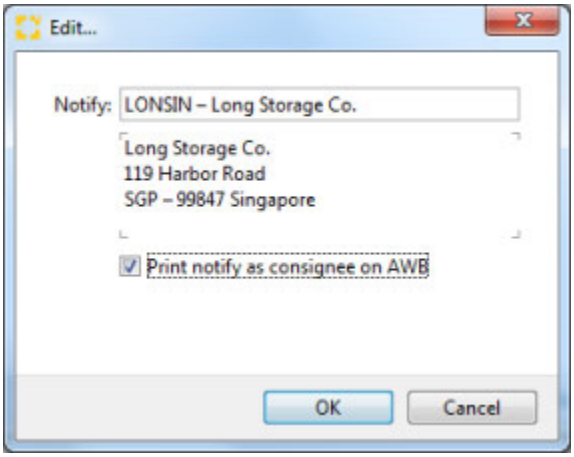
References issued by the consignee that should be associated with the booking may be typed in the consignee's reference field. If there are multiple references, these can be separated with a comma for ease of entry. Any references entered here will automatically also appear in the references section of the booking as a consignee's reference.

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

> In the master data of the (partner), if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Incoterms

The delivery terms for the shipment

Incoterms Place

The place name referenced by the incoterms.

Movement Scope

Movement Scope of the shipment.

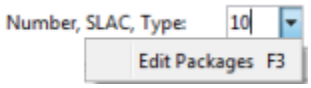
Customer

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages. Within the number field, press F3 or select the drop down menu for access to the package editor. The package editor allows much greater detail to be entered about individual packages.

If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

SLAC

The shippers load and count of the packages. This number must be the same as or greater than the total number of packages.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Export-Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Import agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function.

The import agent depends on the destination. The field will use the following logic when presenting possible agent choices:

- If no destination has been entered, all agents are offered for selection.
- If a destination has been entered and the master data stores only one agent stored for that destination, then that agent is automatically used the import agent.
- If a destination has been entered and the master data for that destination has been assigned more than one agent, the field is not initialized. Instead, all stored agents are offered for selection.
- If a destination has been entered for which no partner has been assigned as an agent, then the field cannot be completed until an import agent has been created.

Shipment Number Gw

The shipment number issued by the agent who will consolidate the coload shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Main Carriage

MAWB Number

The MAWB number for the coload shipment issued by the agent who consolidates the shipment.

Flights

The flight details for the coload shipment issued by the agent who consolidates the shipment.

Departure

Airport of departure of the master shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the master shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

ETD

Estimated time of departure of the master shipment.

ETA

Estimated time of arrival of the master shipment.

Handling Agent

The non-network agent responsible for consolidating and dispatching the cargo. The desired business partnerpartner may be found with the search field field function.

Security status

The security status of the consignment (of a shipment) according to Regulation (EC) No 300/2008. The following status are currently possible:

- not secured (NSC)
- secure for all-cargo and all-mail aircraft only (SCO)
- secure for passenger, all-cargo and all-mail aircraft (SPX)

Reason for granting the security status

If the security status of the shipment is set as "SCO" or "SPX", then the reason for granting these statuses is required as per Regulation (EC) No 300 /2008. The following status are currently possible:

- AC - Account Consignor
- HS - Handsearch
- KC - Known Consignor
- SC - Simulation Chamber
- TD - Trace Detection
- XR - Secured by XRAY

Non-secure items (not secured) do not require a reason security code. The safety data for Business or private shippers can be maintained in the partner master data.

Further information about security is available in the role descriptions RegB UAN and secure shipper.

Customs Status

Select the custom status (if any) from the drop down menu.

References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

New pick-up

This action link will enable a new pick-up note for the shipment to be created. Clicking the link will open the pick-up note editor.

New delivery to gateway

this action link will allow a transport order to be created in order to haul the goods to the gateway. Clicking the link opens the gateway delivery order application.

- If the agents own office is shown as the gateway then it is assumed that the transport order will be to the airport. If a remote station is shown then it is assumed that the transport order is to that remote gateway. See the chapter on truck manifests for more information.
- Existing transport orders appear in the overview of transport orders. They can be double-clicked to reopen them for editing and printing.

Delete transport order

This option will delete any delivery or pickup note that has already been created. The document highlighted in the pane showing existing delivery/pickup notes will be deleted. It is only possible to delete a pickup note or transport order if it has not been printed and if there are no entries in the costs and revenue section of the shipment.

New Customs order

Opens the customs order editor to create new customs orders.

Edit Customs order

Opens the customs order editor to edit an existing customs order highlighted in the pane showing customs orders.

Remove Customs order

Remove an existing customs order highlighted in the list of created customs orders.

Add Customs references

Opens the Add Customs references application. Up to 10 additional customs references may be added.

- More information on individual customs applications see the chapter on Customs.

Tip

Use the key combination **Ctrl + I** to see details about the user session including email address and phone number. It is also possible to take over the session from the existing user.

HAWB

Opens the house AWB editor to capture information relating to the house bill of lading or to edit and print existing house AWB data.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

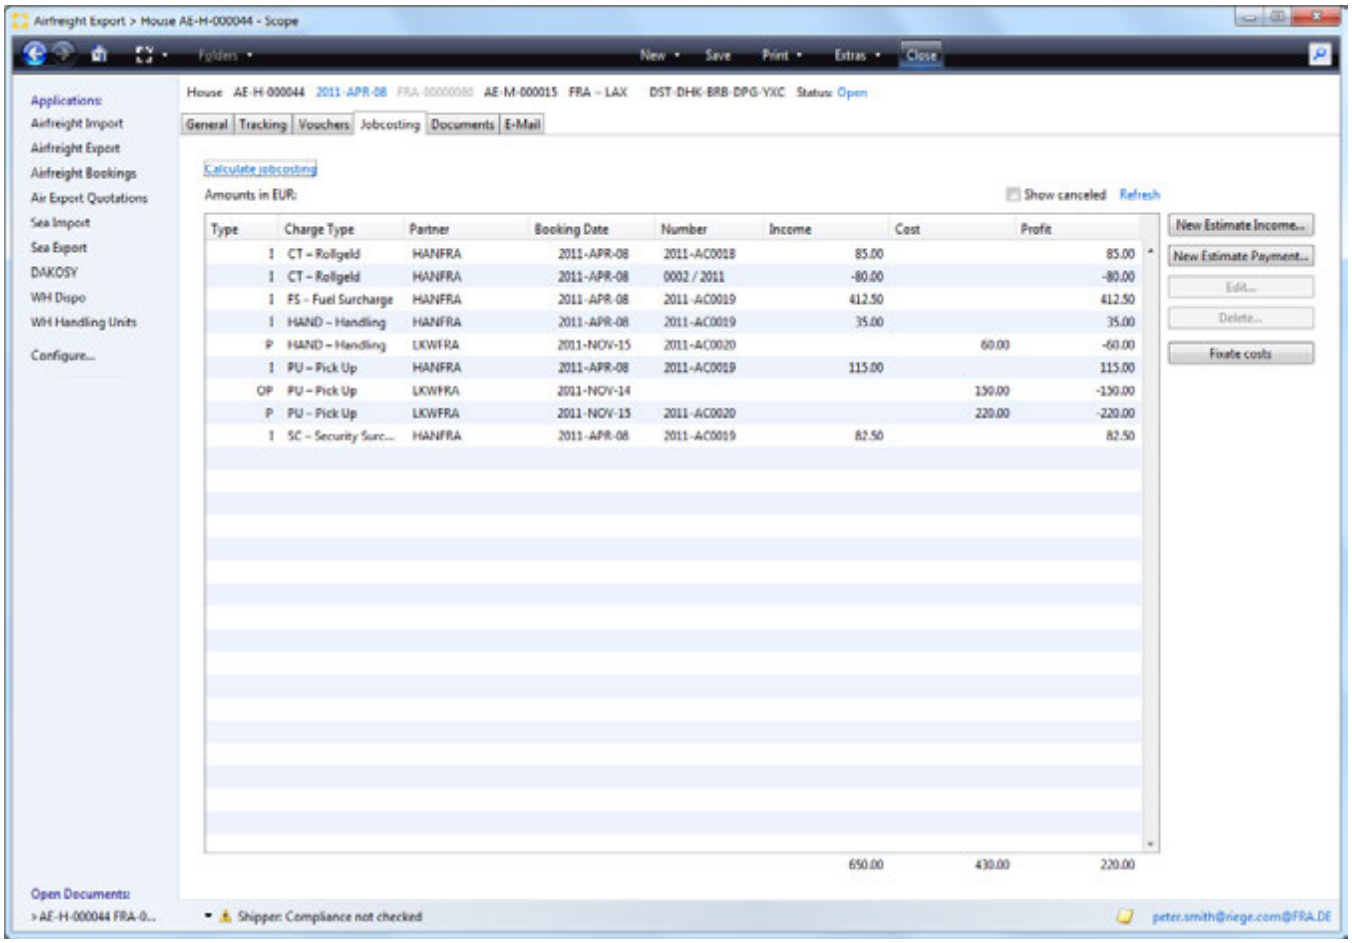
Jobcosting - Coload Shipment - Airfreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

> ⚠ Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

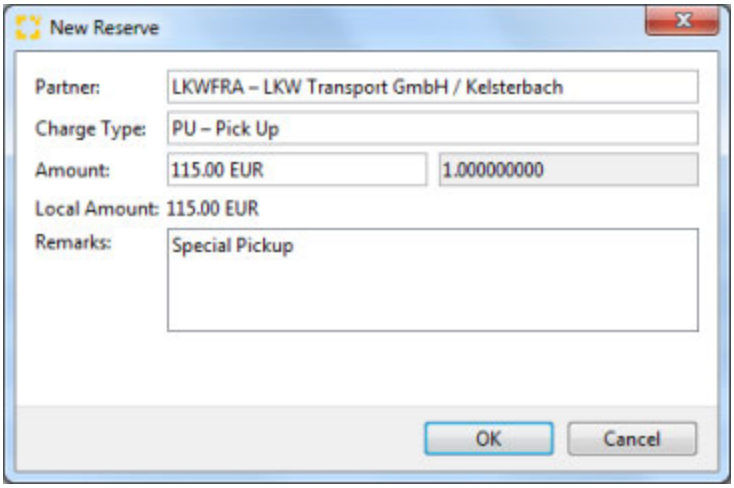
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Tracking - Coload Shipment - Airfreight Export

- Introduction
- Description

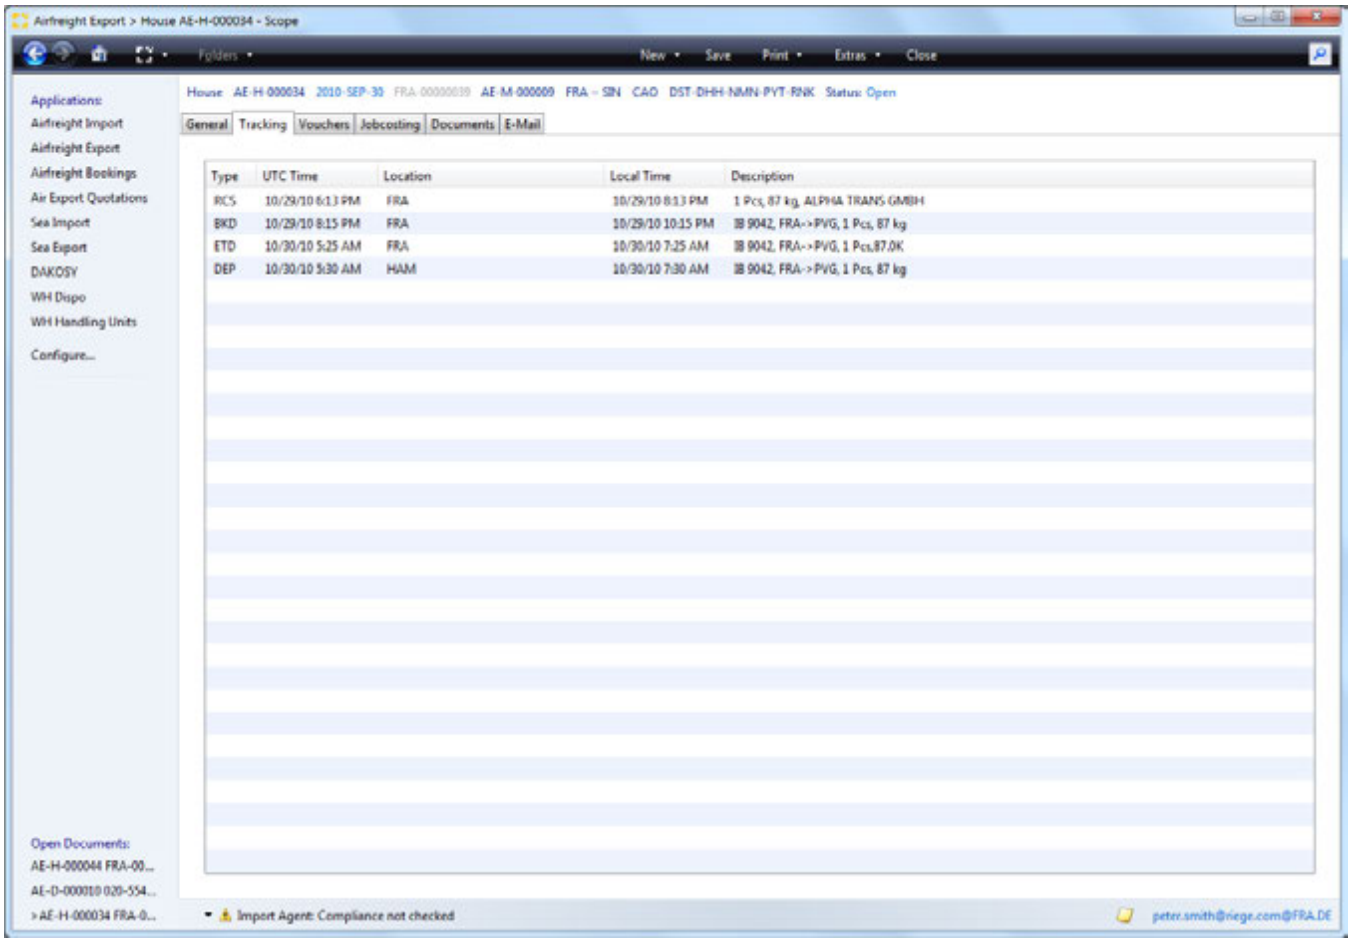
Introduction

During the life-cycle of the shipment numerous events occur and are recorded by the various parties involved with the transportation of the freight. These are called tracking events and they can be viewed using tracking tab, clicking on an idividual tracking event will present detailed tracking information. Currently, only external tracking events are available when the shipper and carrier are exchanging data using the "TRAXON" cargo communication system. Future development of the tracking tab will allow it to include events between senders and receivers. Events in the tracking tab can also be viewed via web-browser on RSI's track and trace system. Connection to external, customer-specific track & trace systems can be implemented on request.

Description

The example below shows an exchange of tracking data for a Scope system that is connected to the Traxon cargo communication system.

- When printing the IATA air waybill (master shipment, direct shipment and back-to-back) the option exists to also "Print and transmit FWB" or just "Transmt FWB". These options will automatically generate the FWB message (waybill data) and send these to the Traxon system who in turn transmit the FWB to the responsible airline. Consolidations and back-to-back shipments will also include the FHL messages (house bill of lading or manifest data).
- The corresponding events are automatically entered into the table of tracking events.
- The types of events shown will depend on the types of events supported by the responsible airline.
- Airline events are automatically entered into the table.
- The events which are recorded in a master shipment, also appear simultaneously in the house shipments consolidated on that master since these events are also relevant to the house shipments.



Main menu bar and title bar

see tab **General**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Type

Event type (see table below)

UTC time

The time of the event in UTC (Coordinated Universal Time)

Location

The place where the event has occurred. (the relevant airport IATA code may be shown)

Local time

Local time of the event (time in the time-zone in which the event occurred.)

Description

Description of the event. This example indicates how many packages, their weight, the aircraft transporting the freight. From where, to where. Numbers of packages that have arrived, the weight of the packages and at which destination.

The following events can be mapped. (Depending on the airline used)

Code	Description
RCS	Consignment received from Shipper
RCT	Consignment physically received from another airline
RCF	Consignment physically received from a flight known or not
BKD	Consignment has been booked
MAN	Consignment has been manifested
DEP	Consignment has departed
PRE	Consignment prepared for loading
TRM	Consignment is to be transferred to another carrier
TFD	Consignment has been physically transferred to another airline or surface transport party
NFD	Consignee or his agent informed of arrival of shipment
AWD	Arrival documents delivered to consignee or his agent
CCD	Consignment cleared by customs
DLV	Consignment has been physically delivered to consignee or his agent
DIS	Consignment Discrepancy
CRC	Consignment Information has been reported to Customs
DDL	Consignment has been delivered to the consignee's door
TGC	Consignment has been transferred to Customs/Government control
ARR	Consignment arrived on a flight known or not
AWR	Consignment documentation received from fleight
FOH	Consignment is on hand
FHL	Consol Manifest sent to airline
FWB	AWB sent to airline/ground handler
OSI	Other Service Information
ULD	ULD Identification
ETD	Estimates Time of Departure
ETA	Estimated Time of Arrival
FMA	Message acknowledged
FNA	Error detected in message

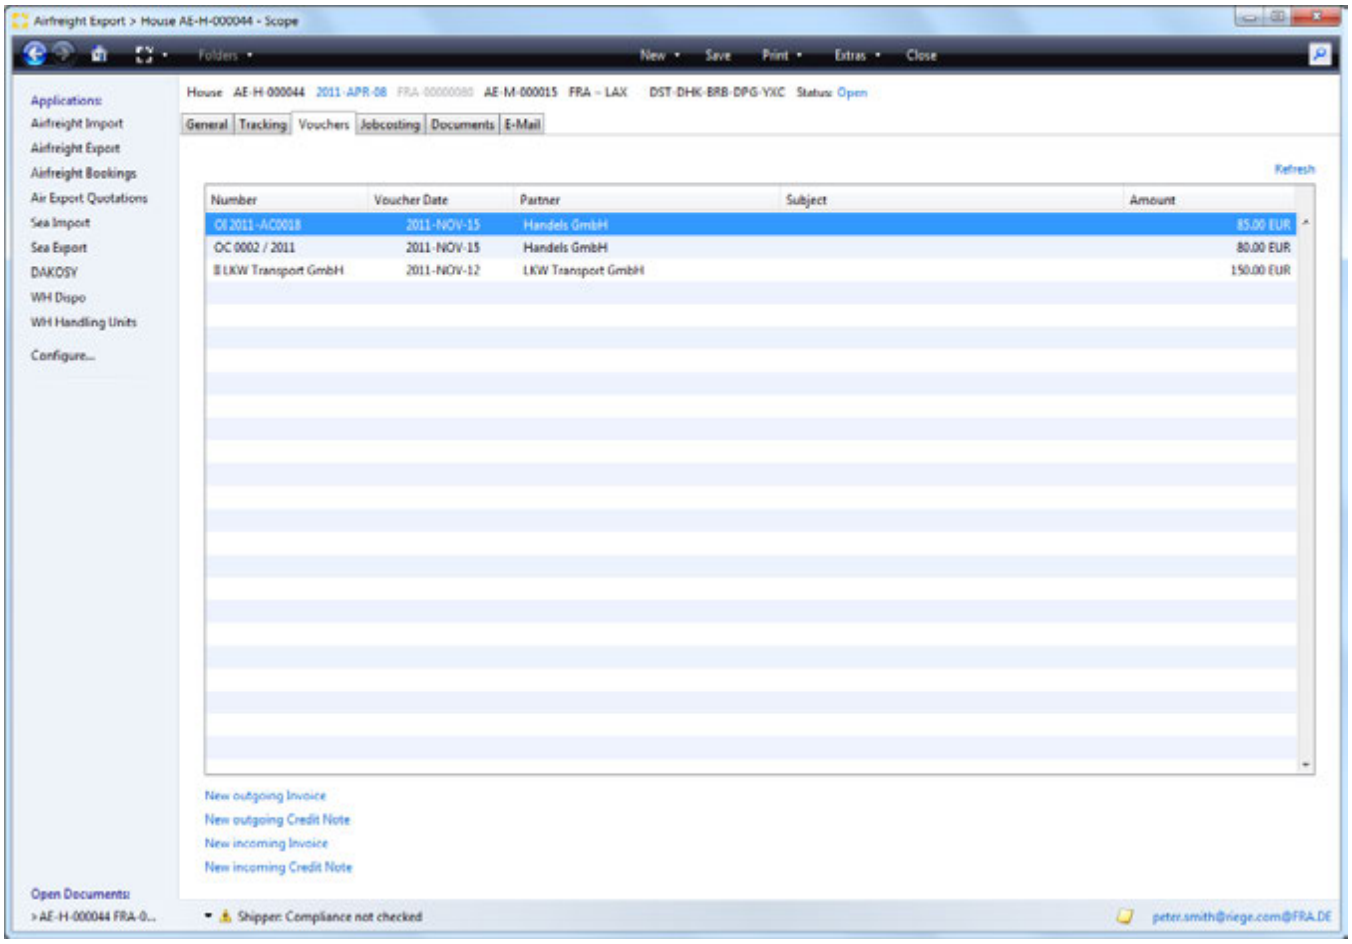
Vouchers - Coload Shipment - Airfreight Export

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Tab **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

New Outgoing Credit Note

Direct Shipment - Airfreight Export

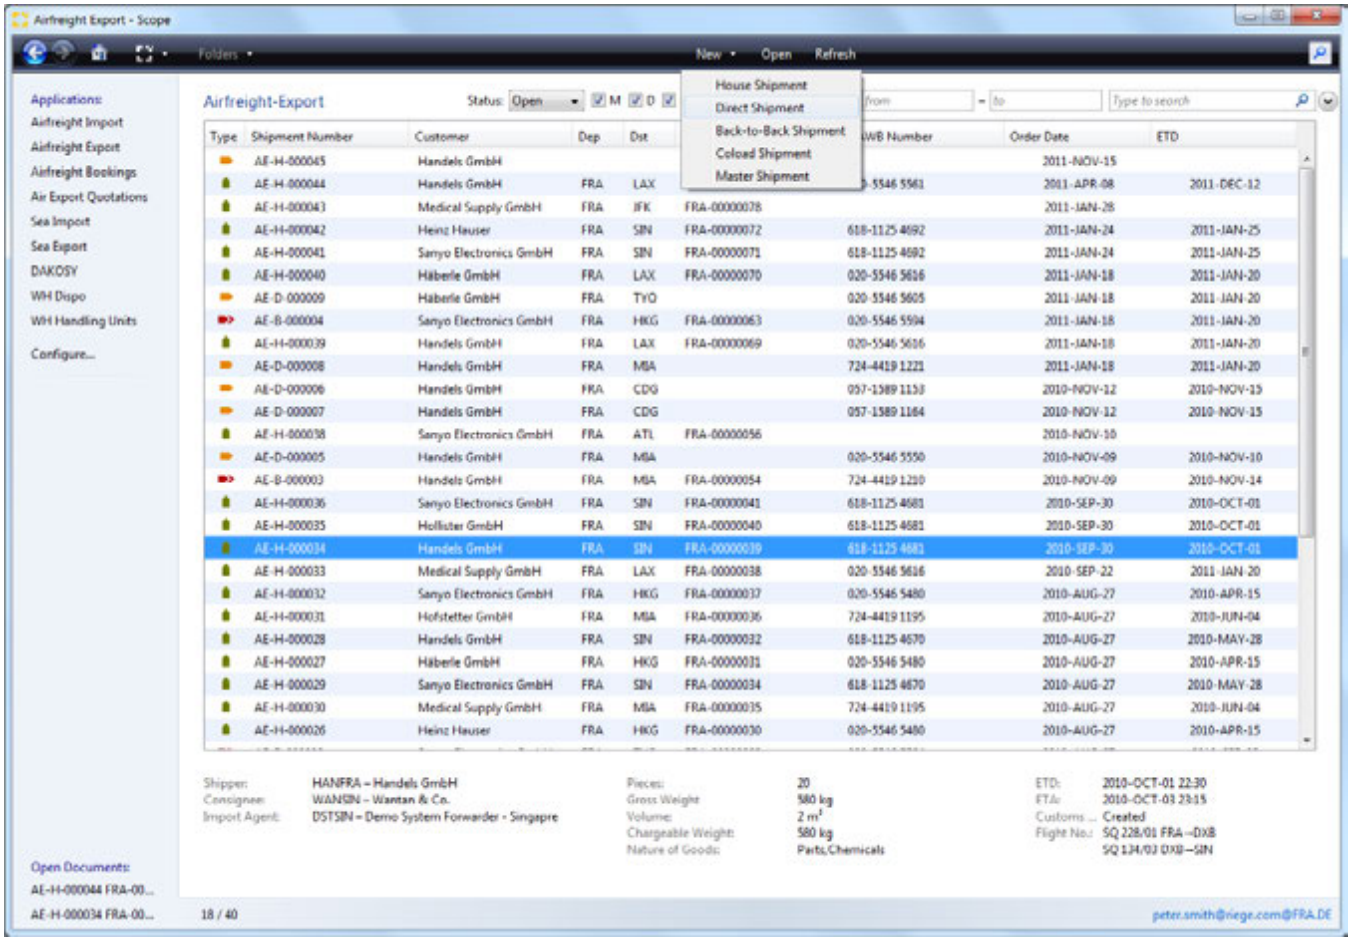
- Introduction
- Description

Introduction

Air freight exports include master , back-to-back, house shipments and direct shipments. Direct shipments as their name suggests are consigned directly from the sender to the receiver. It may also be a shipment from a sender to a foreign agent with a separate receiver who is generally the notify party. These shipments will be charged according to the official IATA tariff, as a result they are usually expensive but also tend to be the fastest form of air export transport via commercial airlines. In contrast to the other shipment types, a direct shipment requires on a single air waybill (AWB) number.

This application enables all direct shipment operations to be carried out; data entry, billing, printing of documents and calculation of costs and revenues for the shipment.

Description



With ***New - Direct Shipment*** , a new direct shipment can be created.
An existing direct shipment can be opened by highlighting the desired shipment in the shipment overview and selecting **Open** or by double clicking the shipment.

The functions of each shipment editors are described here:

- Documents - Direct Shipment - Airfreight Export
- E-Mail - Direct Shipment - Airfreight Export
- General - Direct Shipment - Airfreight Export
- Jobcosting - Direct shipment - Airfreight Export
- Tracking - Direct Shipment - Airfreight Export
- Vouchers - Direct Shipment - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

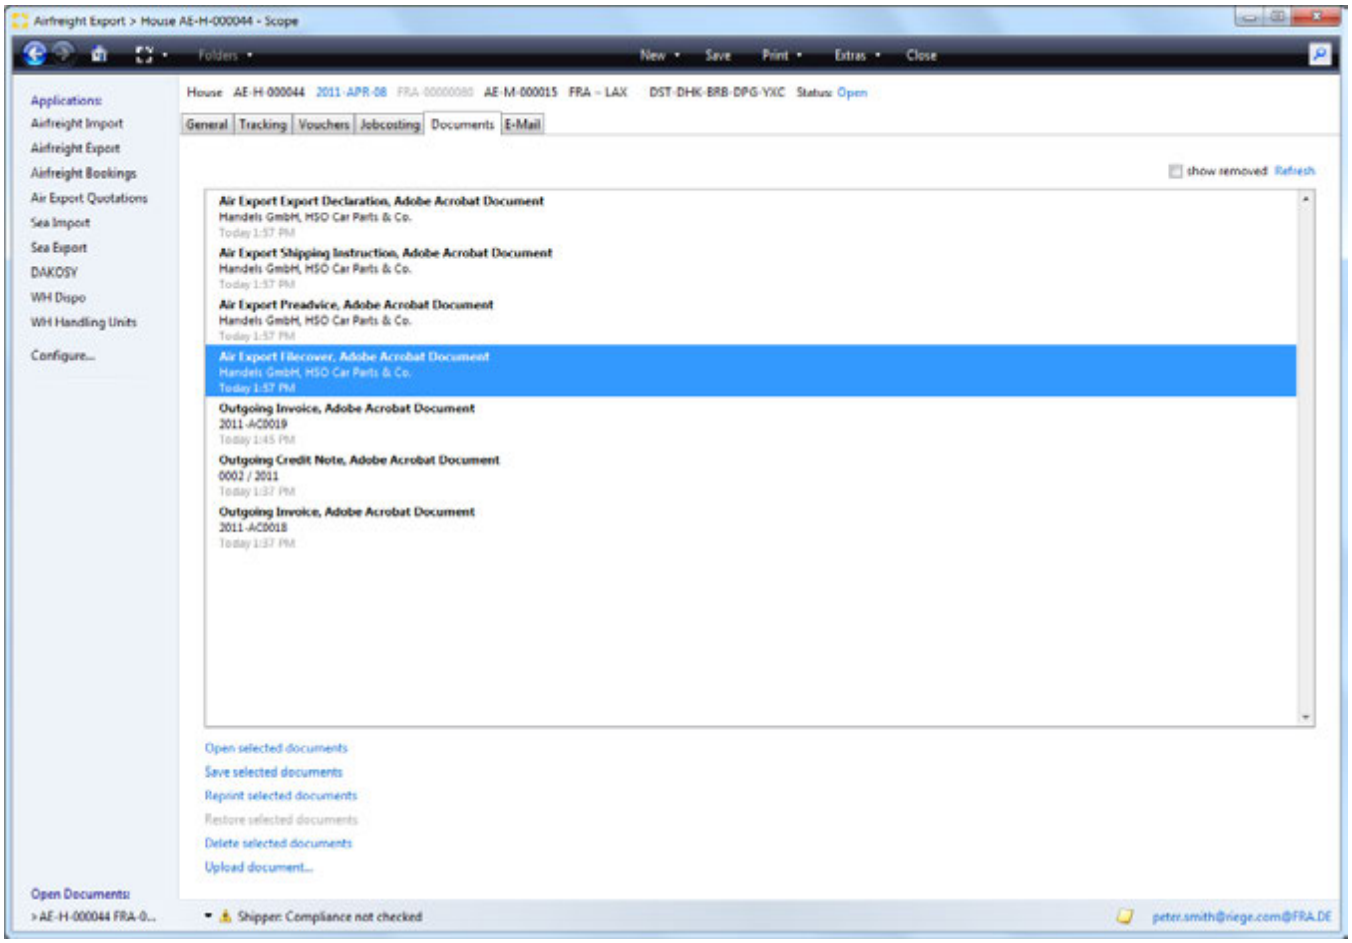
Documents - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

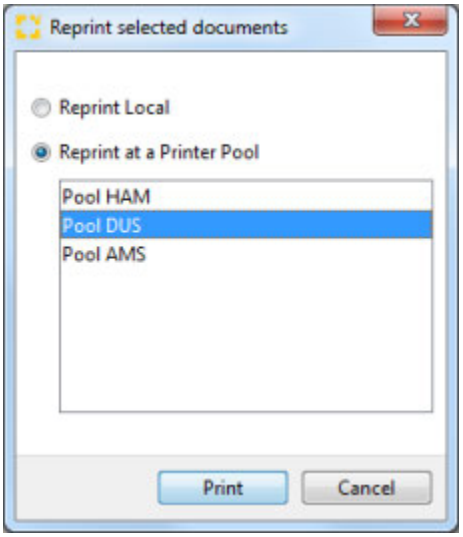
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

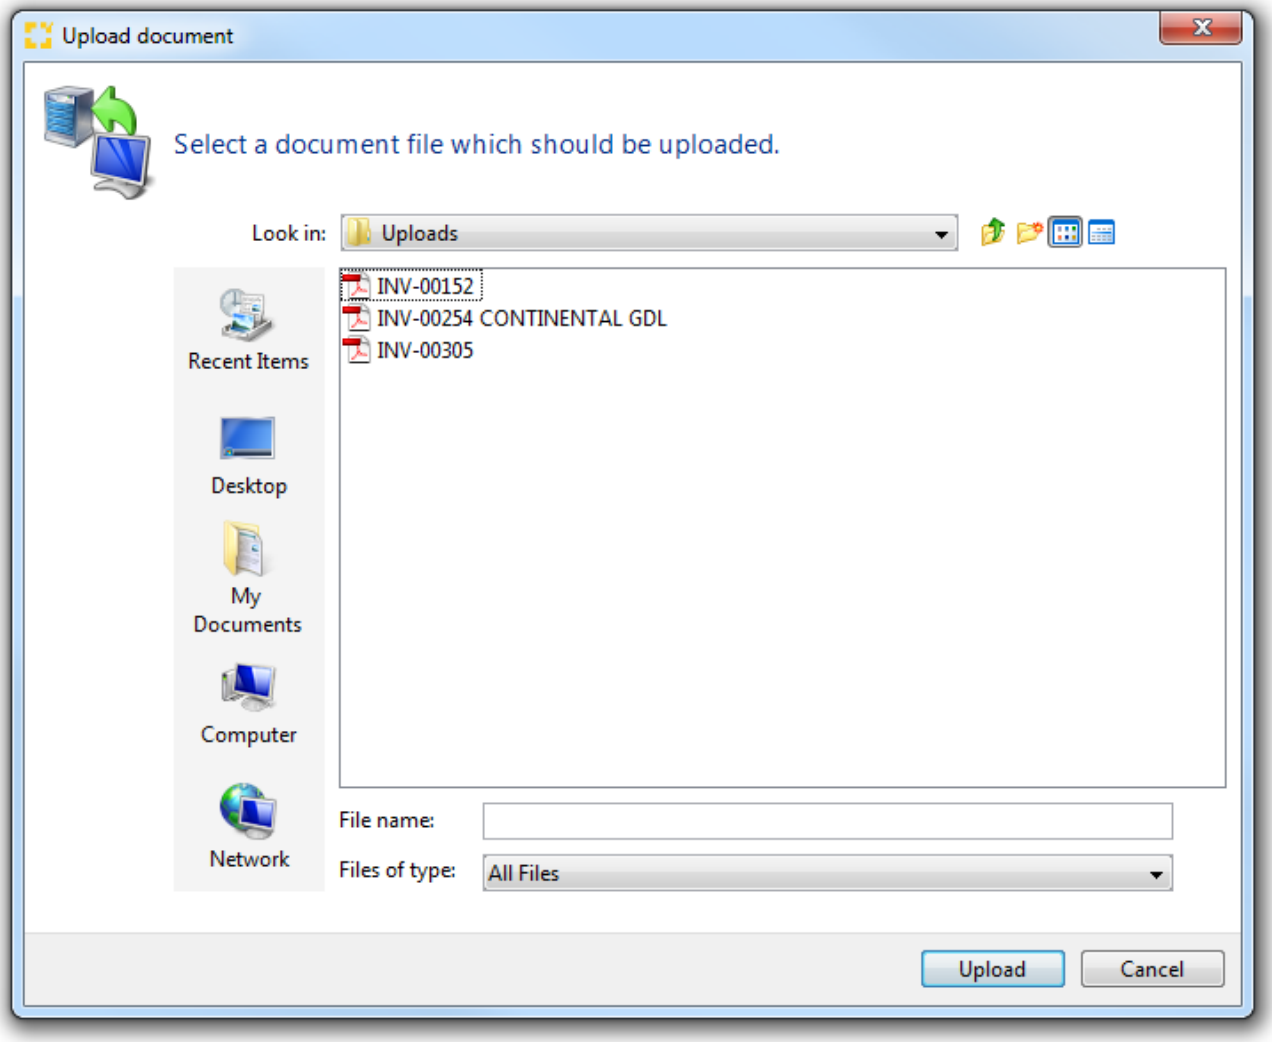
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

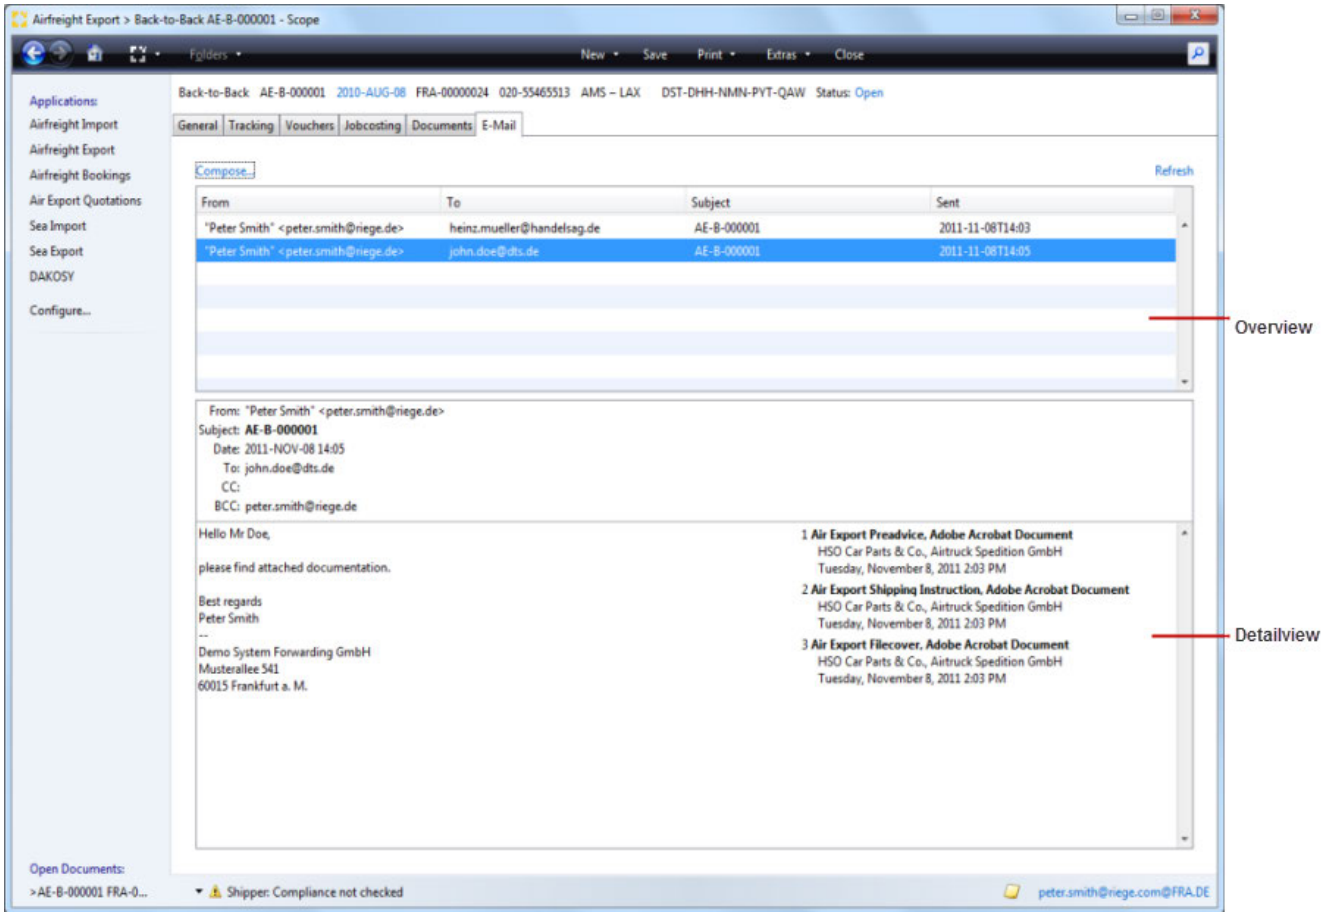
E-Mail - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

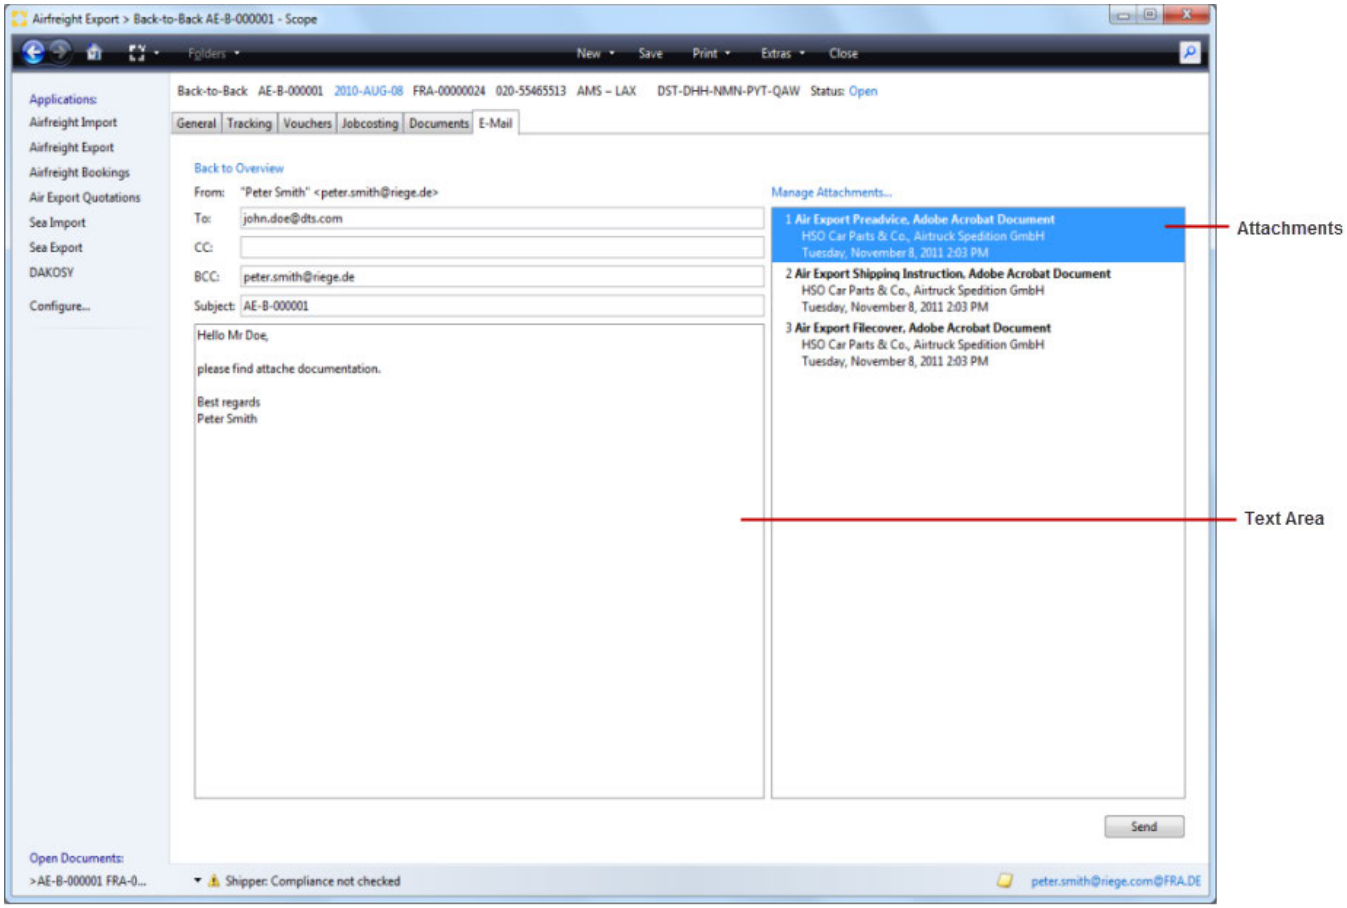
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

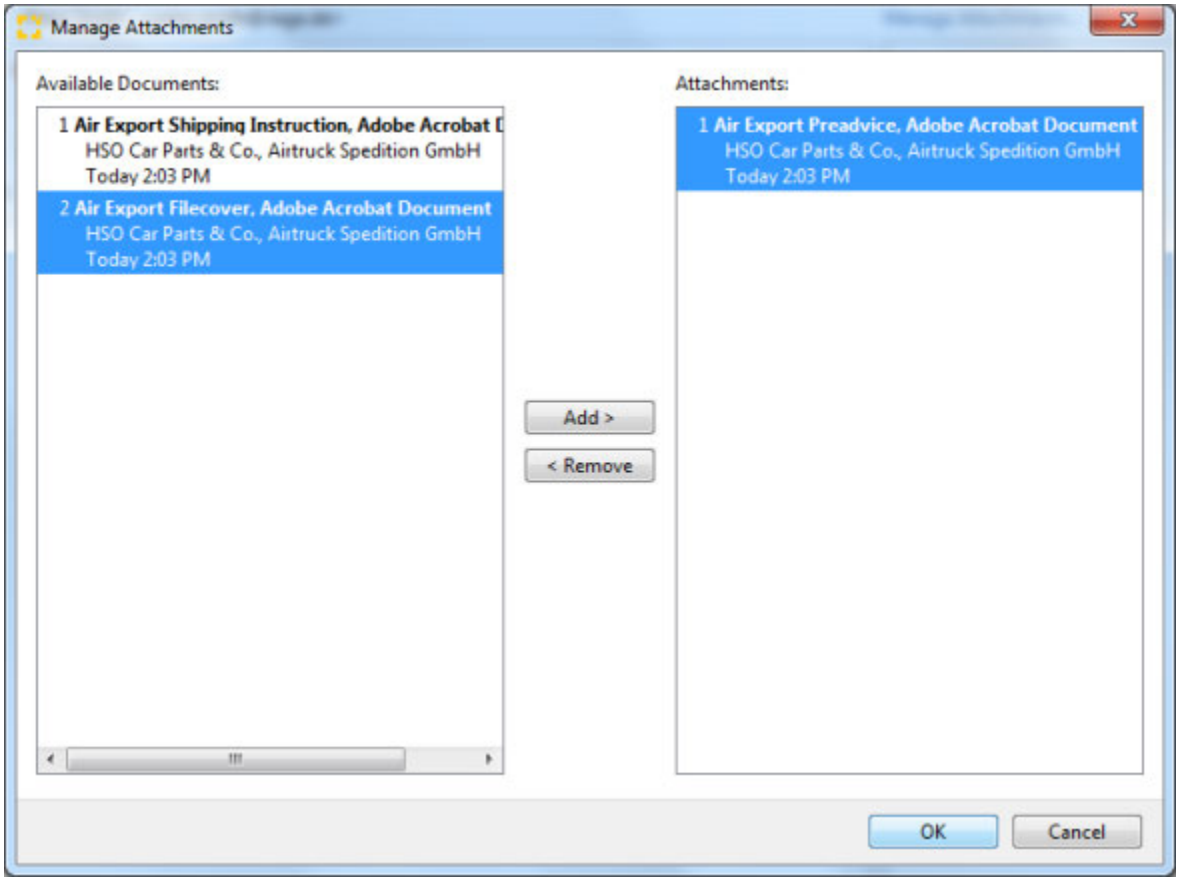
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

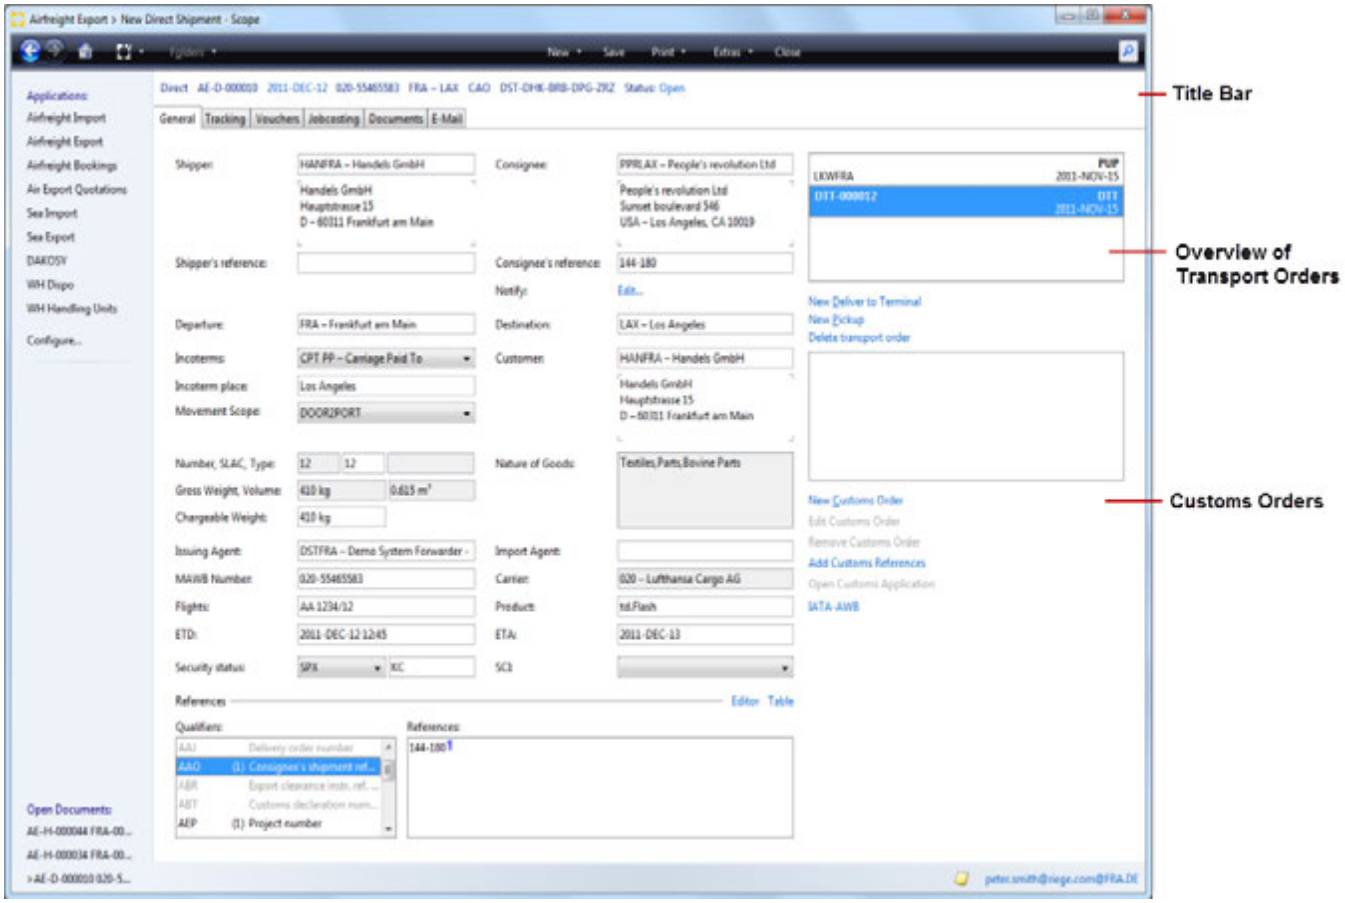
General - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

The general tab of the air export shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.
Currently the following documents are available:

- File cover
- Advice of Departure
- Release Note (or certificate of shipment)
- Certificate of Export
- Master Labels (waybill labels)

Extras

Offers the following extra actions:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Airline Booking
- Show Quotation
- Finish, opens popup-window to finish the shipment.
- Create Template, opens popup-window to create template for shipments.
- Change shipment type, opens a pop-up window to change the type of the shipment.

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Creating a template

Opens a pop-up window to create a new shipment template.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- **Type of shipment**
  Type of shipment. For a direct shipment this is *Direct*
- **Shipment number**
  Assigned by the system after the shipment has been saved for the first time.
- **Service date**
  The service date of a shipment is set as follows:
  When present, ETD (Estimated Time of Departure / Expected Time of Departure)
  -otherwise
  If an air waybill has been printed, date of air waybill (AWB) printing.
  -otherwise
  The current date when the shipment is first saved.
  The date will not change unless it is clicked (popup-window) and will update/ revise the actual correct date. (This can be necessary if the shipment number contains the service/ settlement period)
- **Air Waybill number**
  Air Waybill number entered or pulled from the pool of Air Waybill numbers.
- **Departure airport - Destination airport**
  Departure and destination of the shipment.
- **Security advice**
  Security advice, e.g. CAO (Cargo Aircraft Only). This reference note will be displayed in special shipments, e.g. DGR (Dangerous Goods Regulation).
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Quotation**
  By clicking on this action link could open a quotation which is assigned to a shipment. If there is no quotation, the link will be deactivated.
- **Change type of shipment**
  By clicking on this action link, the user will be able to change the type of shipment.

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Incoterms

The delivery terms for the shipment

Movement Scope

Movement Scope of the shipment.

Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic f ull text search that will display all matching airports.

Shipper

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Issuing Agent

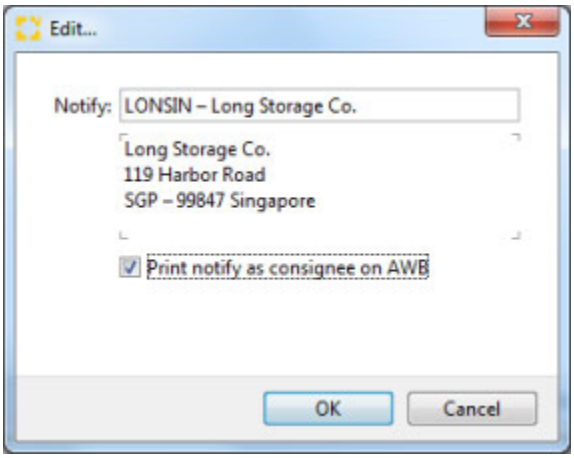
The Agent who issues the bill of lading. By default the local office is used. Using the field search function an alternative Agent may be found and selected for the shipment.

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

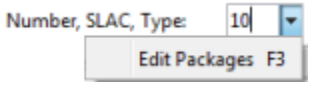
> In the master data of the (partner), if the partner has the role Forwarding Customerapplied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages. Within the number field, press F3 or select the drop down menu for access to the package editor. The package editor allows much greater detail to be entered about individual packages.

> If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Import agent

The station that will receive the cargo at the arrival airport. The field search function can be used to locate an alternative agent.

The Import agent available at the destination will vary according to the following:

- If no destination has been entered, then all agentsare offered for selection
- If a destination is entered and the master data for that destination has only one agent assigned to it, then that agent will be used as the import agent for the shipment.
- If a destination has more than one agent assigned by the master data then the field will be blank but it is only possible to select one of the assigned agents.
- If a destination is assigned where no agent has been assigned in the master data, then it is not possible to select an agent until an agent is assigned in the master data

Security status

The security status of the consignment (of a shipment) according to Regulation (EC) No 300/2008. The following status are currently possible:

- not secured (NSC)
- secure for all-cargo and all-mail aircraft only (SCO)
- secure for passenger, all-cargo and all-mail aircraft (SPX)

Reason for granting the security status

If the security status of the shipment is set as "SCO" or "SPX", then the reason for granting these statuses is required as per Regulation (EC) No 300 /2008. The following status are currently possible:

- AC - Account Consignor
- HS - Handsearch
- KC - Known Consignor
- SC - Simulation Chamber
- TD - Trace Detection
- XR - Secured by XRAY

Non-secure items (not secured) do not require a reason security code. The safety data for Business or private shippers can be maintained in the partner master data.

Further information about security is available in the role descriptions RegB UAN and secure shipper.

AWB-Number

Fundamentals of the AWB-Nummer

Airlines use IATA compliant tracking numbers (AWB) numbers. These consist of 11 numbers. The first three numbers are referred to as a prefix, and also indicate the airline. The remaining 8 numbers are the actual bill number where the last number is a check digit which is calculated from the previous figures. The AWB number is usually represented as follows: aaa-nnnnnnnp (a prefix = / n = number / check digit p =) Example: 020-12345675

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

AWB These numbers must be allocated by the respective airline. There are three ways to enter this one AWB number.

1. Manual Input

- A single MAWB number assigned by the carrier may be manually input. (This should only be required for airlines that are rarely used.)
  Enter the AWB number in the manner of a normal text box. The number will be automtically be checked to ensure it is valid (correct check digit). The number can be entered with or without a hyphen after the prefix of AWB. For valid AWB numbers the hyphen will automatically be added if not already present and the prefix will be used to determine the airline used in the "Carrier" field.

2. Automatic MAWB number from the pool

- MAWB numbers can be pulled automatically if they have been stored in a pool of AWB numbers that have been assigned to the airline. (Usually batches of 100 or more AWB numbers are assigned to a carrier).
  To pull from the pool, instead of inserting the whole MAWB number, only the prefix is entered and then exit the field. The result is the system will pull the next available AWB number from the pool of the relevant airline. The two-letter airline code may also be used, example: 020 or LH.

3. Net Rate Info

- Using the context menu or pressing *F2* here will launch the net rate info as a pop-up window. If a valid net-rate exists and is selected, the next air waybill number for the airline associated with the net-rate will automatically be called.

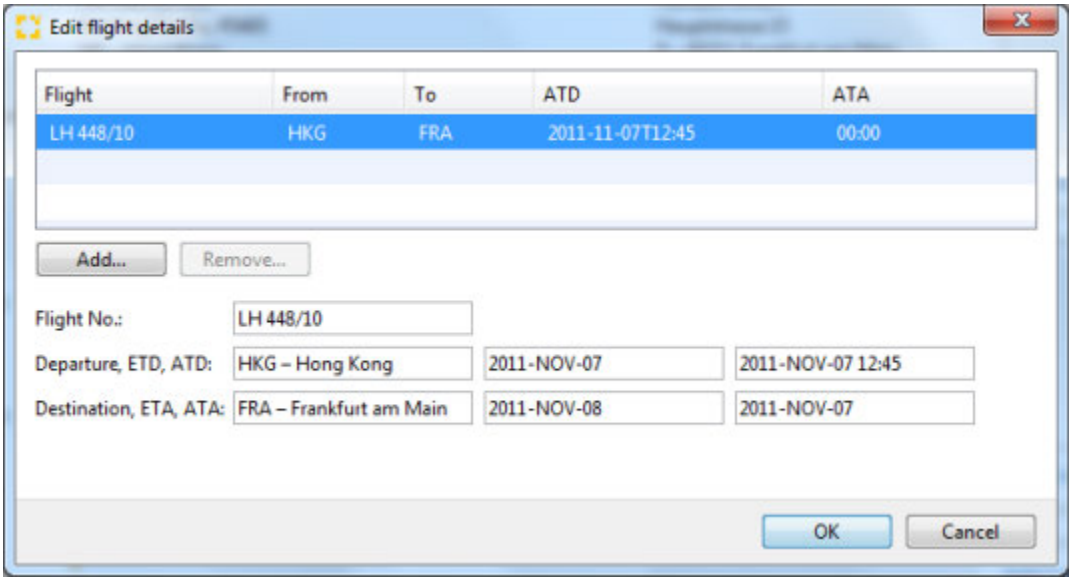
AWB-number pools must be maintained in the master carrier data

- If an AWB number has been drawn from the pool or entered manually, this number is "reserved" for a period of 30 minutes. During this time, this number may be used in any other program while the shipment remains unsaved. As soon as the shipment is saved, the number is permanently marked as "used" and cannot be used in any other shipment.
- If a MAWB number is removed from the field, or replaced by another MAWB number, the original number is automatically released and returned to the pool of MAWB numbers (restock). The number can then be reused in another shipment.

Carrier

This field will display the name of the carrier based on the MAWB number selected. This field cannot be edited.

Flights



Enter the flight data for the shipment. Use the drop-down menu or press F3 to access the flight data editor. This allows detailed flight and routing data to be entered.

ETD

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Estimated time of departure

References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

New Pickup

This action link will enable a new pick-up note for the shipment to be created. Clicking the link will open the pick-up note editor.

New delivery to gateway

this action link will allow a transport order to be created in order to haul the goods to the gateway. Clicking the link opens the gateway delivery order application.

- If the agents own office is shown as the gateway then it is assumed that the transport order will be to the airport. If a remote station is shown then it is assumed that the transport order is to that remote gateway. See the chapter on *truck manifests* for more information.
- Existing transport orders appear in the overview of transport orders. They can be double-clicked to reopen them for editing and printing.

Delete transport order

This option will delete any delivery or pickup note that has already been created. The document highlighted in the pane showing existing delivery/pickup notes will be deleted. It is only possible to delete a pickup note or transport order if it has not been printed and if there are no entries in the costs and revenue section of the shipment.

IATA-AWB

Opens the IATA AWB editor to enter information about the freight bill and to print the IATA AWB.

New Customs order

Opens a Customs order editor to create a new customs order

Edit Customs order

Opens the customs order editor to edit an existing customs order highlighted in the pane showing customs orders.

Remove Customs order

Remove an existing customs order highlighted in the list of created customs orders.

Add Customs references

Opens the Add Customs references application. Up to 10 additional customs references may be added.

Collective customs

Allows the creation of collective customs

- More information on individual customs applications see the chapter on Customs.

Tip

Change Shipment Type - General - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

This option is used when it is occasionally necessary to change a shipment from one type to another type of shipment after the shipment has been created. An example may be where a back-to-back shipment is created, but subsequently new house shipments arrive for the same destination. In this case it would be advantageous to change the back-to-back to a regular house shipment in order for it to be added to a consolidation and thus obtain better rates for the shipment.

Description

Shipments can be changed to different shipment types as per the following table:

Possible change in..	House shipment	Back-to-Back-Shipment	Direct Shipment	Master Shipment with consolidated Houses
House Shipment		✓	✓	
Back-to-Back-Shipment	✓		✓	✓
Direct Shipment	✓	✓		✓

Master shipment with consolidated houses

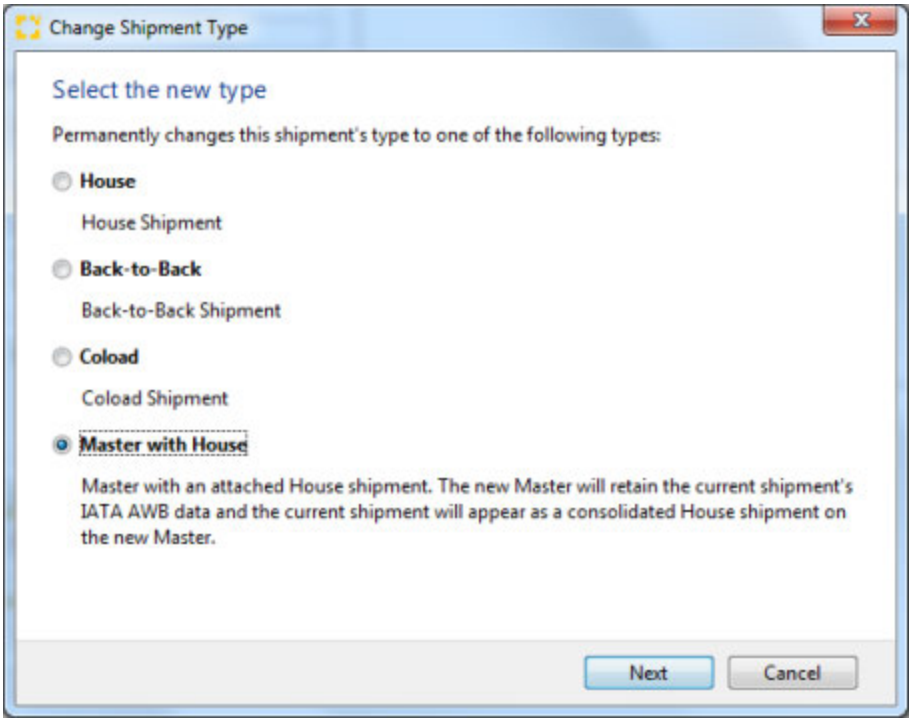
When a back-to-back shipment is changed to a regular house shipment and consolidated on a new master shipment, the IATA AWB of the new master is applied to the house shipment automatically as is all the rest of the master data that is relevant to the house.

Shipment types should not be changed in the following circumstances:

- A house shipment that is already consolidated on a master.
- Documents for the shipment have been printed.
- Vouchers have been created for the shipment.
- A master shipment cannot be changed.

After clicking on the action link to *change shipment type*, a pop-up window appears. The dialogue below shows changing a back-to-back shipment to a master shipment with houses.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Select the desired option to make the required change.

Next

Starts the preliminary examination of the proposed action.

Cancel

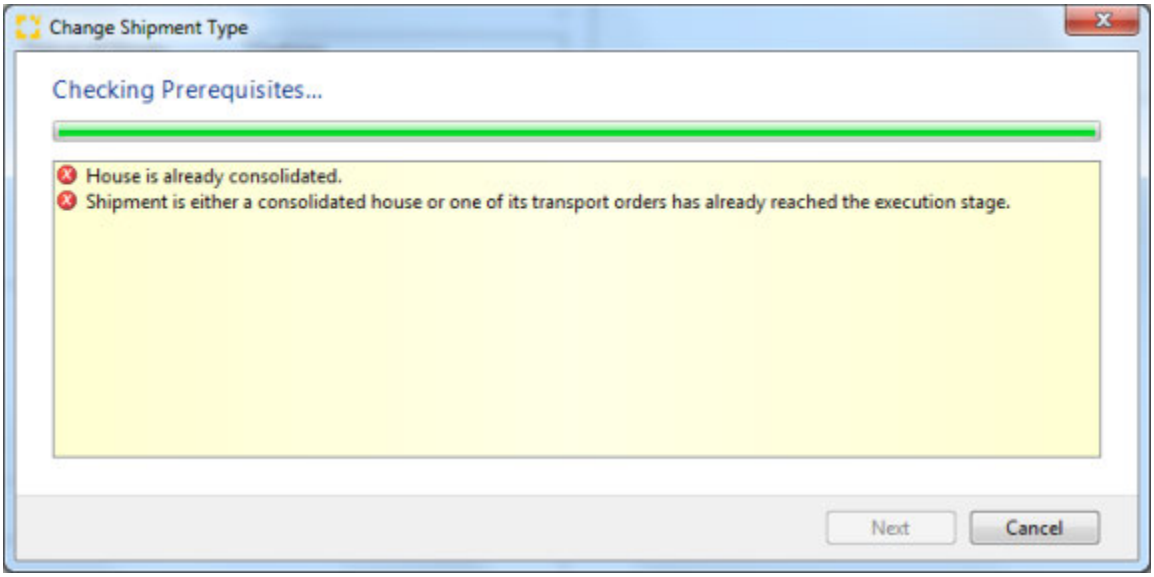
Closes the pop-up window without further action.

Preliminary

After starting the process to change the shipment type a test is carried out to determine if the change is possible.

Error during the preliminary examination.

If a problem occurs during the preliminary processes of changing the shipment type, then a pop-up window appears with error messages detailing why the change is not possible.



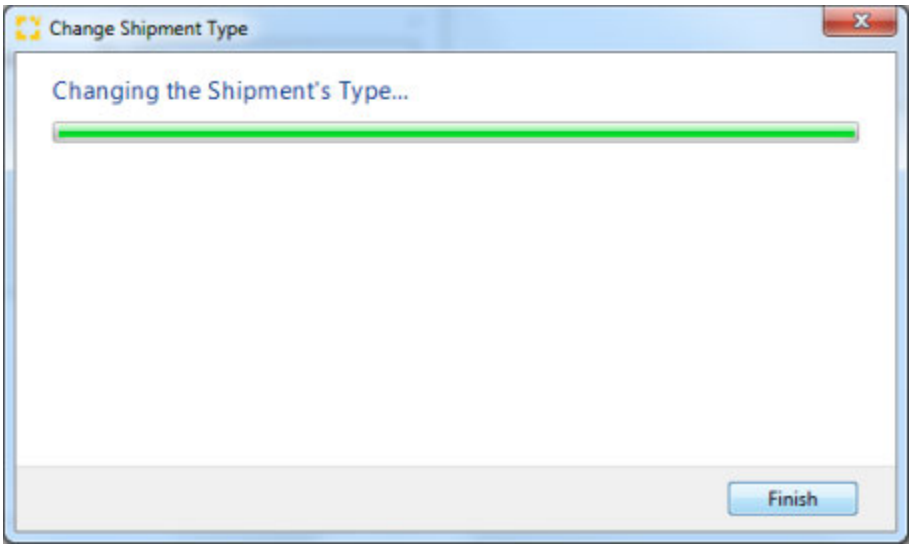
Cancel

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Closes the pop-up window without further action.

Passed preliminary investigation.

If the proposed change passes without error, the modification action is performed.



Finish

Saves the change and closed the pop-up window.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Finish - General - Direct shipment - Airfreight Export

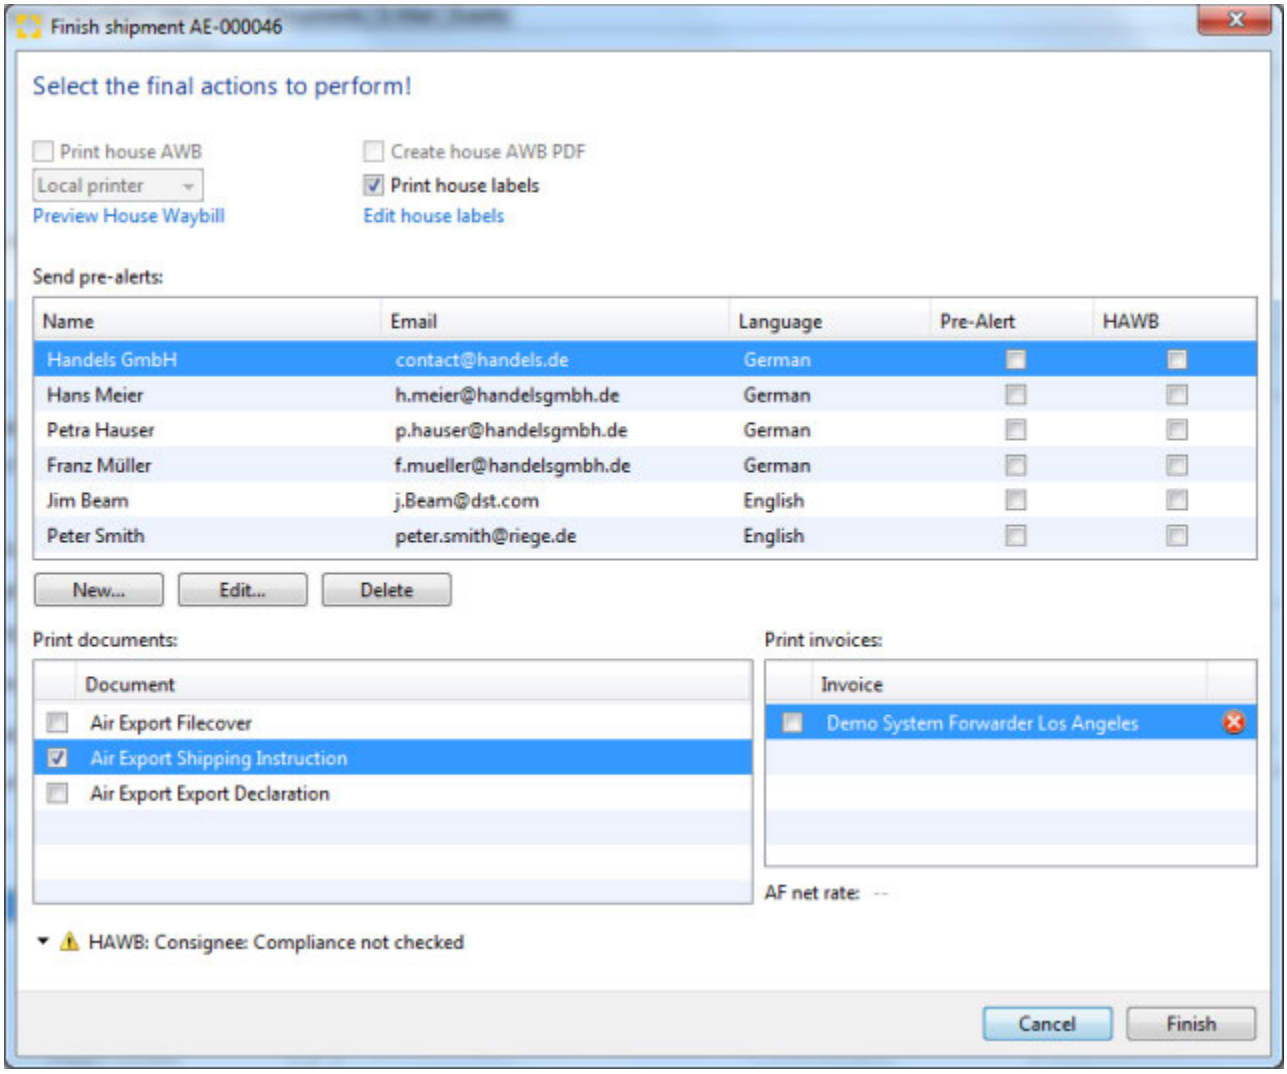
- Introduction
- Description

Introduction

In this application is a one stop screen to print AWB's, labels and manifests, and to generate prealerts.

Description

By activating the check boxes described follow below, the corresponding actions are preformed when the **Finish** button is clicked in the lower part of the screen.



Printing IATA-AWB

Check the box to print the IATA air waybill.

Create IATA-AWB PDF

The IATA air waybill is created as a PDF file in the *Documents* tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The creation of the PDF is only possible if the shipment has no validation errors. If there are errors, these are displayed at the bottom of the application window with descriptions of any errors using the icon .

Printing Master Labels

Check the box to print the labels for the shipment.

Edit Master Labels

Opens the Label-Printing editor in a popup window where the print parameters can be edited. This action link is active only if the action *master label printing* has been activated

Send Pre-alerts

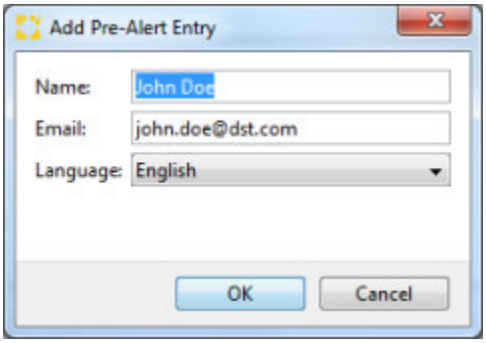
Allows the creation of pre-advices for the shipment and a copy of the airwaybill can be included in the pre-alert e-mail. The contacts for the shipper, consignee and **import agent** will all default to the receiver-table. The names, email addresses and language for these individuals will be derived from the **C ontacts** tab of the partner.

- By activating the check box *pre-alert* and / or *AWB* the highlighted contact person will automatically receive an e-mail with the appropriate PDF document sent as an attachment.
- The sent e-mails are then listed in the *e-mail* tab

- If a partner has no check-boxes marked then **no** e-mail is sent to that contact.
- The language setting of the partner will be used to determine the correct language for the e-mail text of the pre-advices.

New

The **New** button allows additional contact names and e-mail address to be added. The name, e-mail address and language are all inserted manually.



Delete

Removes the selected contact from the recipients table.

Printing documents

Airfreight Export file cover

A file cover is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export shipment advices

A shipment advice is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export "Export certificate"

An export certificate is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Invoice Printing

The freight bill is printed on the predefined default printer and a PDF document created in the *Documents* tab.

The freight bill is printed only if:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- It is a system generated invoice (other invoices are not offered here for printout)
- It has not yet been completed and printed (Existing invoices are not offered here for printout)
- It has no validation error (Errors can be seen in the invoice where the the icon  appears on the right edge of the table showing additional error information)

AF-reserves

Here any airfreight accrued liabilities (AF) are shown. Click on the action link to open the accrued liabilities editor and the estimate can be revised as necessary.

Cancel

Close the application without further action.

Finish

Performs the selected actions and closes the application.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

IATA-AWB - General - Direct Shipment - Airfreight Export

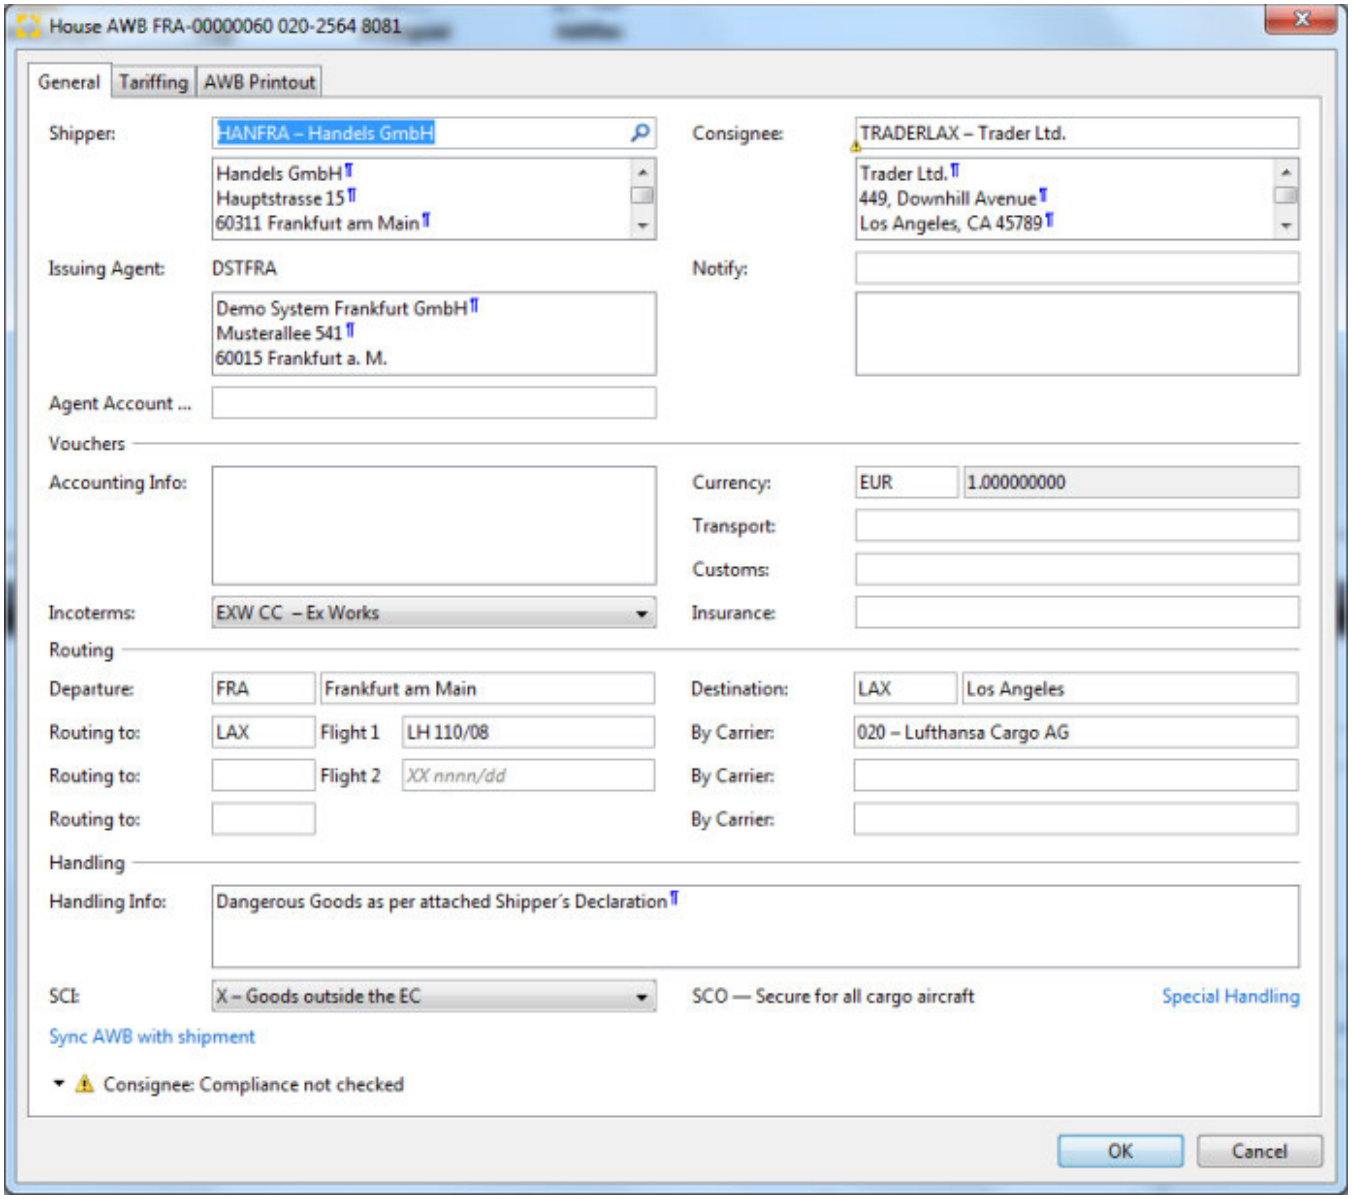
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to edit, customize and print AWBs. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be over-ridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the AWB on screen before it is actually printed.

Description

General



Shipper / Consignee

Shipper and Consignee for shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Agent Account

This field is used for master, Back2Back and direct shipments for the Cass-Acount number of the agent.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Accounting Info

This field is for any accounting information which is to print on the AWB in the accounting information box. If a notify has been entered, it will be inserted here by default. Iit is also possible to insert in the area othere addresses and predefined text blocks.

Incoterms

The incoterms are taken from the shipment editor, but can be replaced as needed by an entry from the drop down menu.

Currency / Transport / Custom / Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure / destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Routing to / Flight / Carrier

The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned they will appear blank but can be completed manually. The **Routing to** and **By Carrier** fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks .

SCI (Special Customs Information)

Select the custom status (if any) from the drop down menu.

Security Status (without field description)

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field can not be changed.

synchronize AWB with shipment

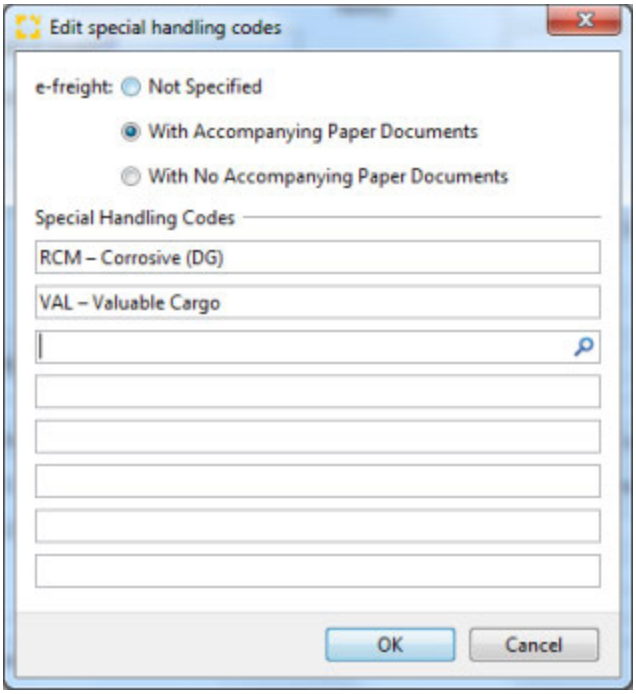
If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Any data in the AWB editor that is overwritten during synchronization with the shipment editor will be lost.

Special Handling

This action link opens the Special Handling Editor. The information inserted will be used by the handling functions of e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For more information, please contact your RSI customer support.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Not specified

Will not create a paperless AWB.

With accompanying Paper Documents

Additional paper documents such as certificates will accompany the shipment. A paperless AWB is created and sent with the EAP code.

Without accompanying Paper Documents

There are no accompanying paper documents. A paperless AWB is created and transmitted with code EAW in the FHL message.

Special Handling Codes

Extra handling codes can be recorded. A list of available codes is provided. The corresponding codes can be found using the search field.

OK

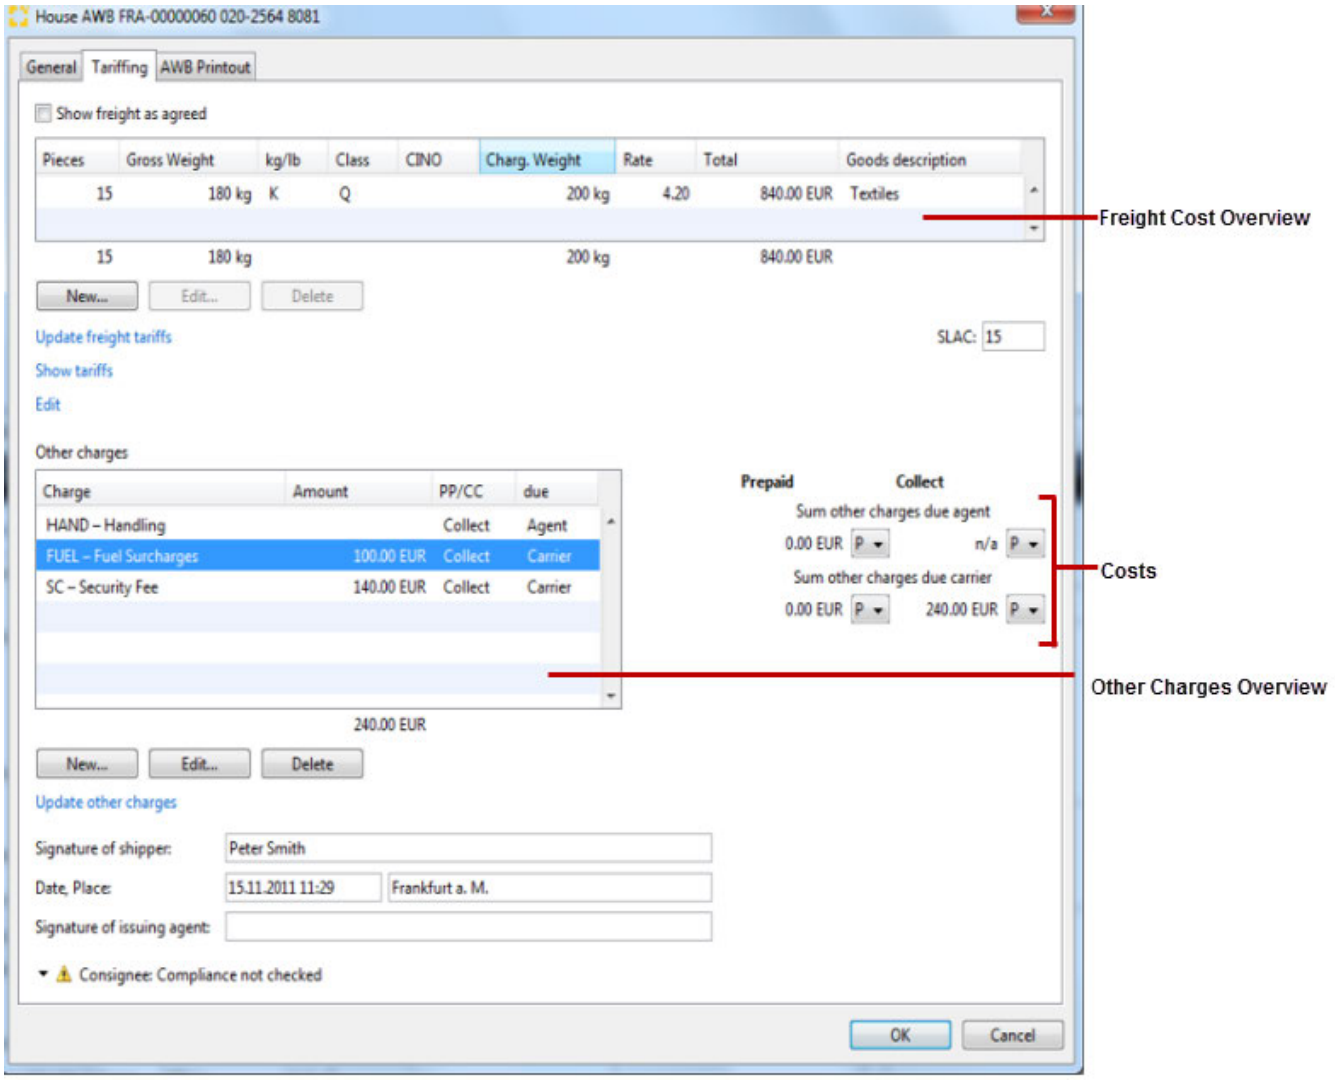
Saves the data and closes the editor.

Cancel

Closes the editor without further action.

Tariffing

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Shown freight as agreed

By checking this box, the amount of freight charges are not printed on the air waybill and are replaced with the statement *AS AGREED*.

Freight charges overview

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Advice/ Class

The Class of tariff rate applied. The available rate classes are:

rate type	rate class
Simple Rate	M, N, O, Q

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Chargeable weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

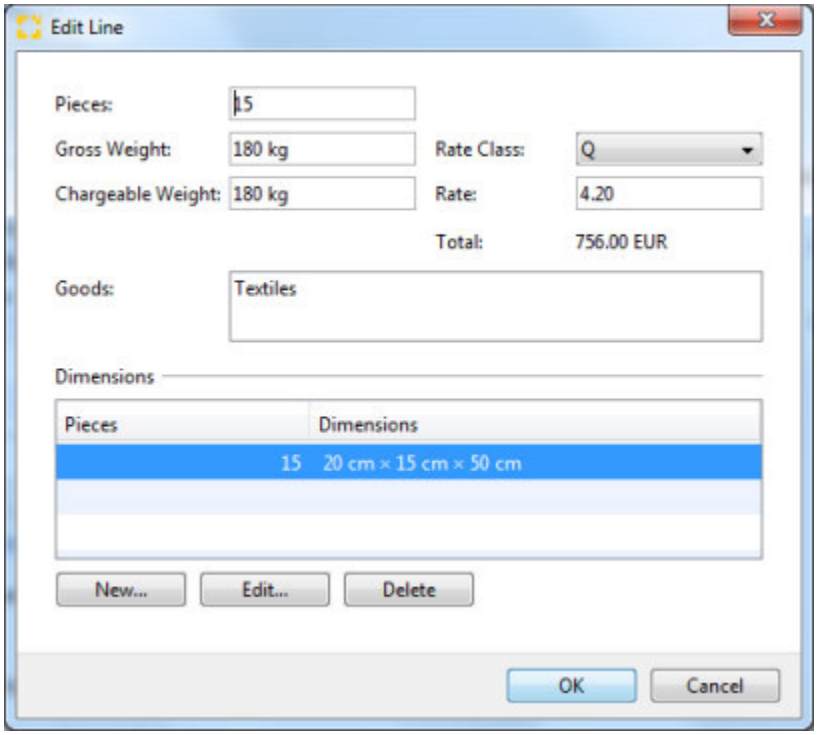
Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods

This information is defaulted from the field *description* in the shipment editor, but can be (if necessary) amended as described below.

New

This button creates a new freight cost line. First the type of rates must be selected from a pop-up window and then the freight cost line editor opens.



Pieces

Number of packages.

Gross weight

Gross weight of packages.

Chargeable Weight

chargeable weight of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Rate

Here the required airfreight rate can be entered.

Total

The total freight amount, calculated from chargeable weight and airfreight rate displayed.

Goods

Description (contents of the packages).

Pieces / Dimensions

With *new*, a new line with the number and dimensions of packages can be entered. With *Edit* the highlighted row in the table is opened for editing. Alternatively, it can also be opened with a double click on the appropriate line. *Delete* removes a selected line.

- The data in the freight-line editor will automatically be updated with the new data entered.
- The entered number of packages and their dimensions are NOT included in the shipment editor.

Edit

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it.

- The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

Delete

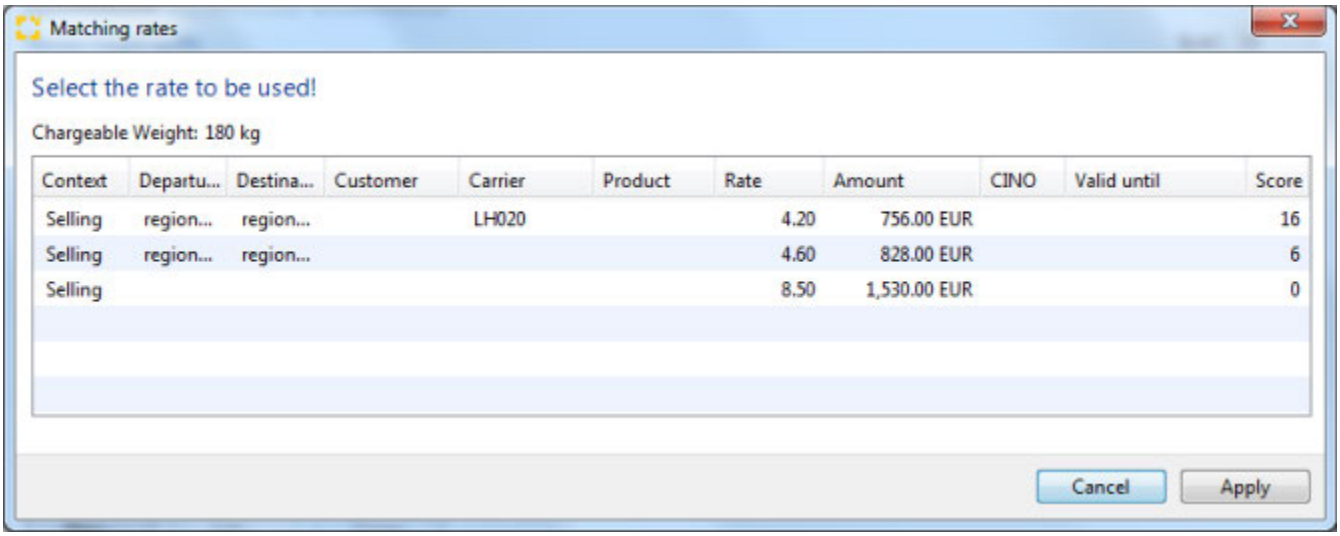
Deletes a marked line in the freight cost overview.

Update freight tariffs

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor.

Shows Tariffs

This action link will display all tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window.



Chargeable Weight

The chargeable weight will be displayed from the tariff lines.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Context

Shows the tariff context (type of tariff) to. Only *IATA* tariffs are shown for direct shipments.

From / To / Customer / Carrier

This information will display depending on how a tariff has been created in the master data. Departure, destination, departure country, destination country, customer, carriers may all appear if they are part of a rate the matches the current shipment.

Rate / Amount

Shows the relevant tariff stored in the airfreight rates and the calculated amount based on the chargeable weight.

CINO

Shows the corresponding tariff where a CINO-number (Commodity Item Number) is used, if available.

Valid up to

Validity date of the displayed tariff.

Score

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

OK

Uses the highlighted tariff in the overview as the tariff for the line item in the tariff editor.

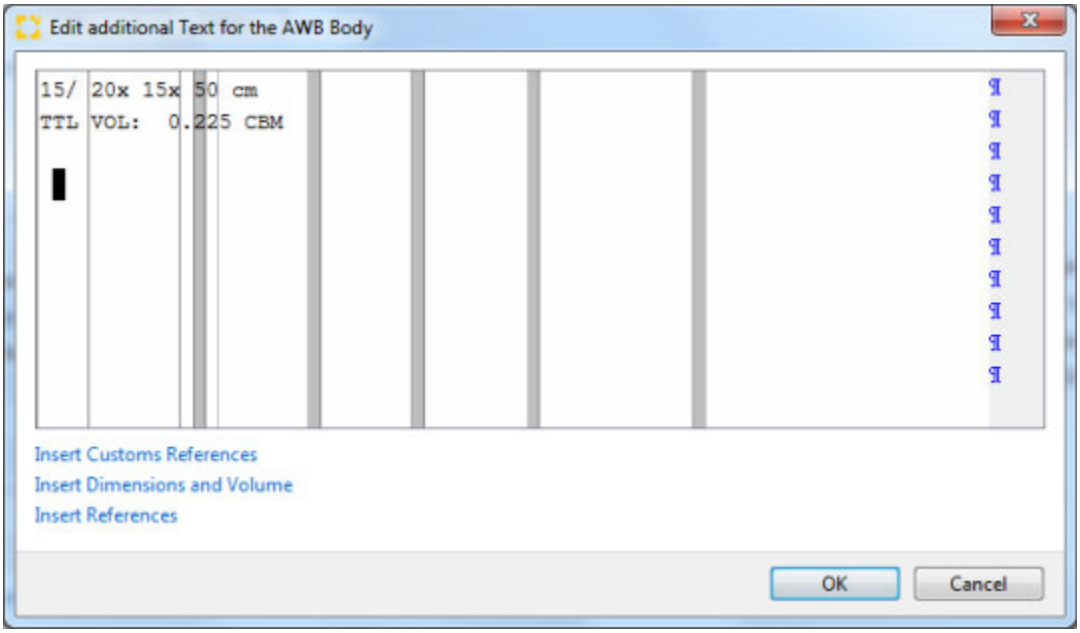
Cancel

Closes the tariff overview without further action.

> More information on tariffing is available in the section Automatic tariffing.

AWB additional text.....

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume

Adds any existing dimensions and volume at the position of the cursor.

Insert References

Opens the selection of references screen from which the desired references can be chosen and inserted at the position of the cursor.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Other Charges

All associated costs such as collection, handling, surcharges, etc. are present in the ancillary charges table. The charge types are based on the master data (activity types , master data rates)) combined with the shipment data (Incoterms , chargeable weight). Totals are therefore automatically determined and proposed for settlement.

Charge

The charge for which the amounts are calculated.

Amount

the amount of the charges. These are entered manually, or are automatically calculated from the master data

PP/CC

Depending on the incoterms selected in the general tab of the shipment this field indicates if the charge is prepaid or collect. The payment terms can be as per the following table:

Code	Designation	Explanation
PP	Prepaid	Costs are paid by the sender
CC	Collect	Costs are paid by the recipient

Due

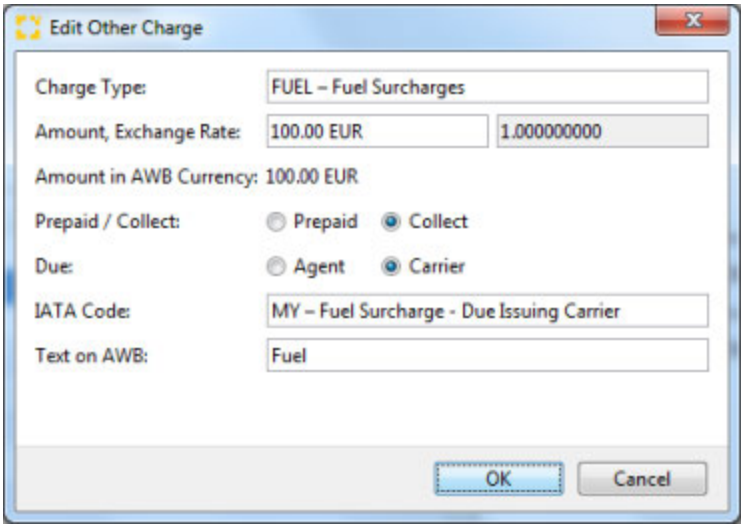
Indicates to whom the costs should be paid:

Designation	Explanation
Agent	The agent or carrier who issues the Air Waybill (PP) and who is defined as the receiving agent (import agent) or carrier (CC).
Carrier	The carrier or airline who transported the shipment

New

The button opens the **New Other Charge** editor which allows new charges to be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Charge Type

New charges can be found using the search function.

Amount, Exchange Rate

If a valid tariff has been found for the charge code, the total amount of the charge will automatically be calculated and inserted. Use the dropdown menu or the F5 function key if the tariff needs to be recalculated. The amount can also be manually entered or changed. The currency of the charge will default to the local currency but it may also be entered or changed. In the adjacent field the exchange rate for the charge will appear. If the local currency is used the rate will be 1.0000, if a foreign currency used the rate will appear automatically or can be entered or changed.

Amount in AWB Currency

If the charge has been enter in a foreign currency, this field will show the amount converted to the local currency.

Prepaid/Collect

Indicates whether the charge is prepaid or collect. The default value will be based on the inco terms (see the *general tab*) but this default can be changed.

Due

Defines if the charge is *due Agent* or *due Carrier*. The default value for charges can be stored in the air cargo master data

Text on AWB

This will be the code used on the AWB to describe the charge type. By default the first 2 digits of the IATA code are used.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Edit

Open the other charge editor to edit the highlighted charge.

Delete

Removes the highlighted ancillary charge.

Update other charges

This action link will recalculate all ancillary charges according to current tariffs.

Distribution of costs

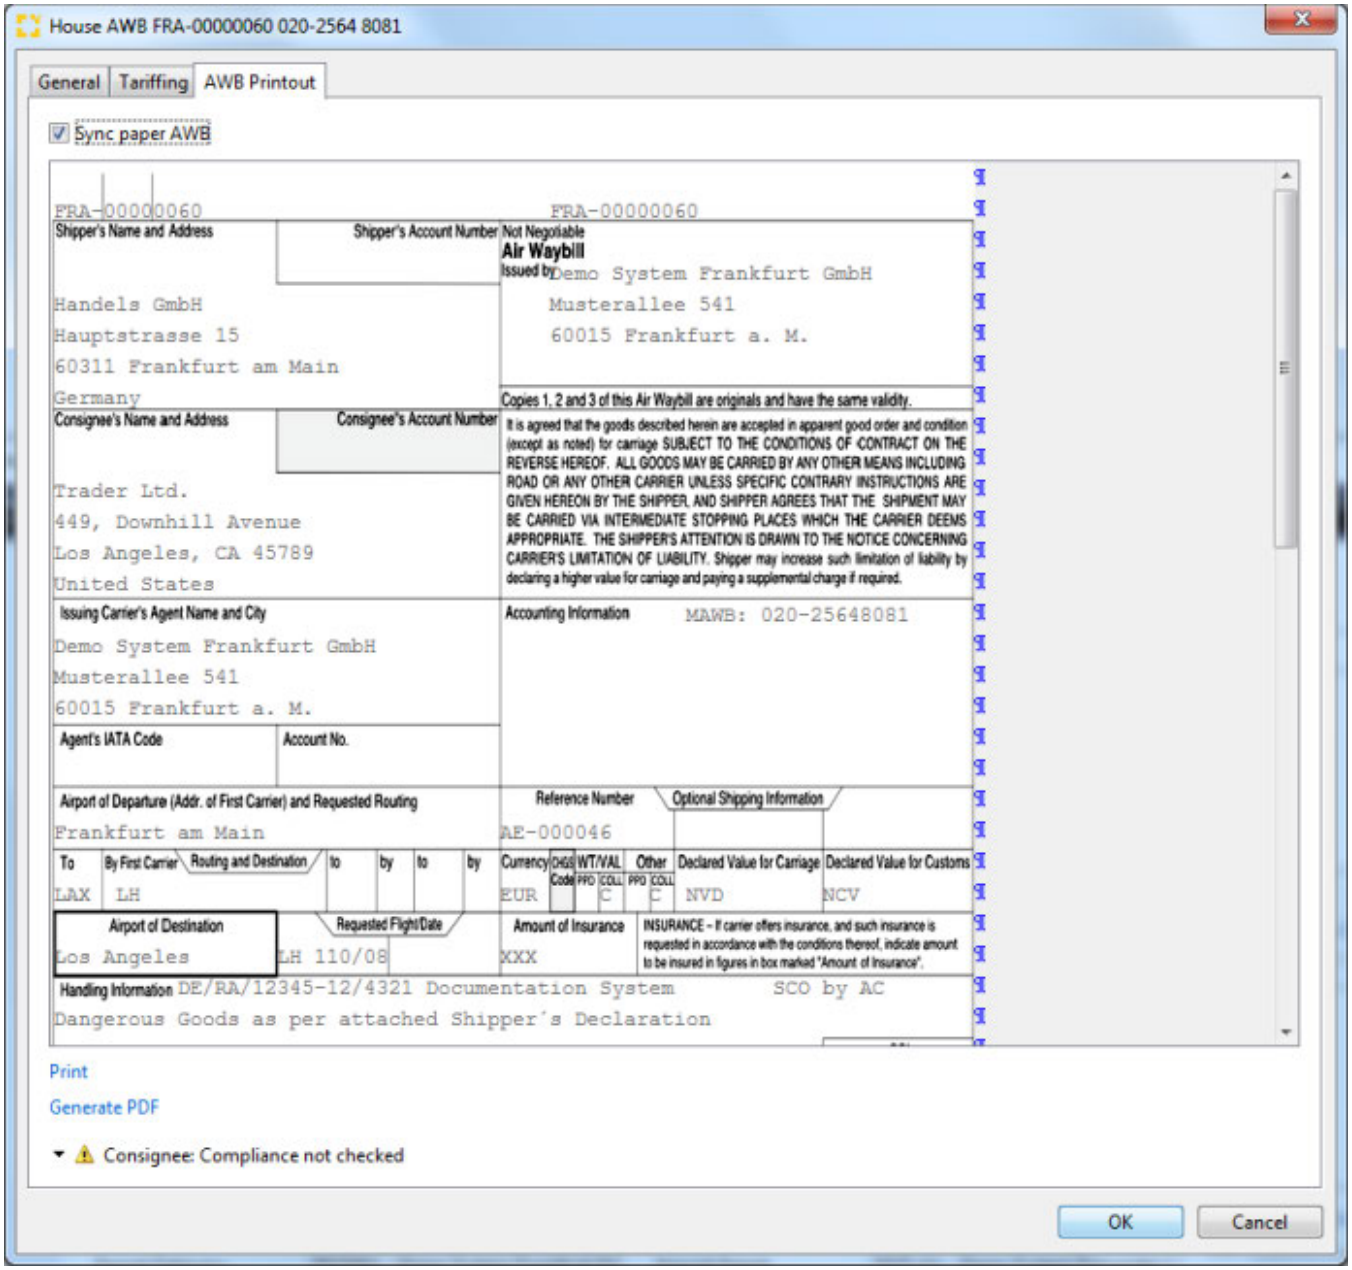
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the charges are summed into 4 separate totals; total prepaid due agent, total collect due agent, total prepaid due carrier and total collect due carrier. How the costs will be presented on the AWB can be controlled using the drop down menus which will present the option shown below:

Code	Explanation
P	Costs will be printed on the AWB
X	Costs will NOT be printed on the AWB
T	The costs will be shown only as a total on the AWB

AWB Printout

This tab provides a visual representation of the printed AWB.



Sync paper AWB

This box is checked by default and causes the AWB to be shown as per all the data entered in the *general* and *tariff* tabs. When check the representation of the AWB cannot be edited. If the box is unchecked, then the AWB may be freely edited and the text blocks can be accessed and inserted into the AWB.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the box is checked again after editing the AWB, all changes will be lost because the document will once again be regenerated according to the data stored in the *general* and *tariff* tabs.

Print

Prints the AWB exactly as it appears in the representation to the predefined printer. The document will also appear as a text document and pdf document in the documents tab of the shipment. The pdf version may then be sent attached to an email.

Generate PDF

Only a pdf version of the document is created which also appears in the documents tab of the shipment.

Print and send FWB

Prints the AWB as described above and sends a copy to TRAXON Global Cargo Communications System in the form of an FWB.

Send FWB

Sends the shipment electronically in the form of an FWB to TRAXON Global Cargo Communications System. There is no print of the document.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

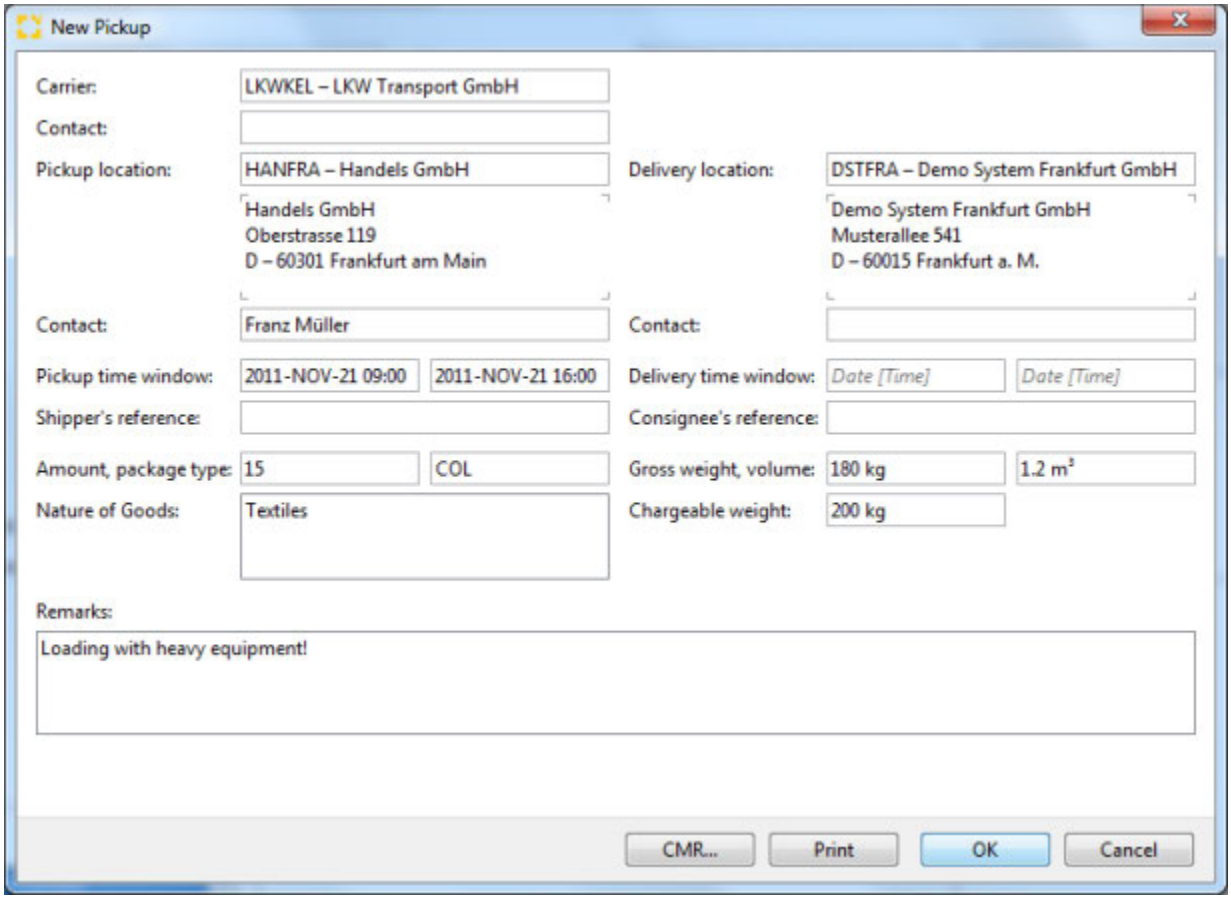
Pickup Order - General - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

Create and print pickup notes for collection of goods and delivery orders for transport of goods to the terminal. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the shipper. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

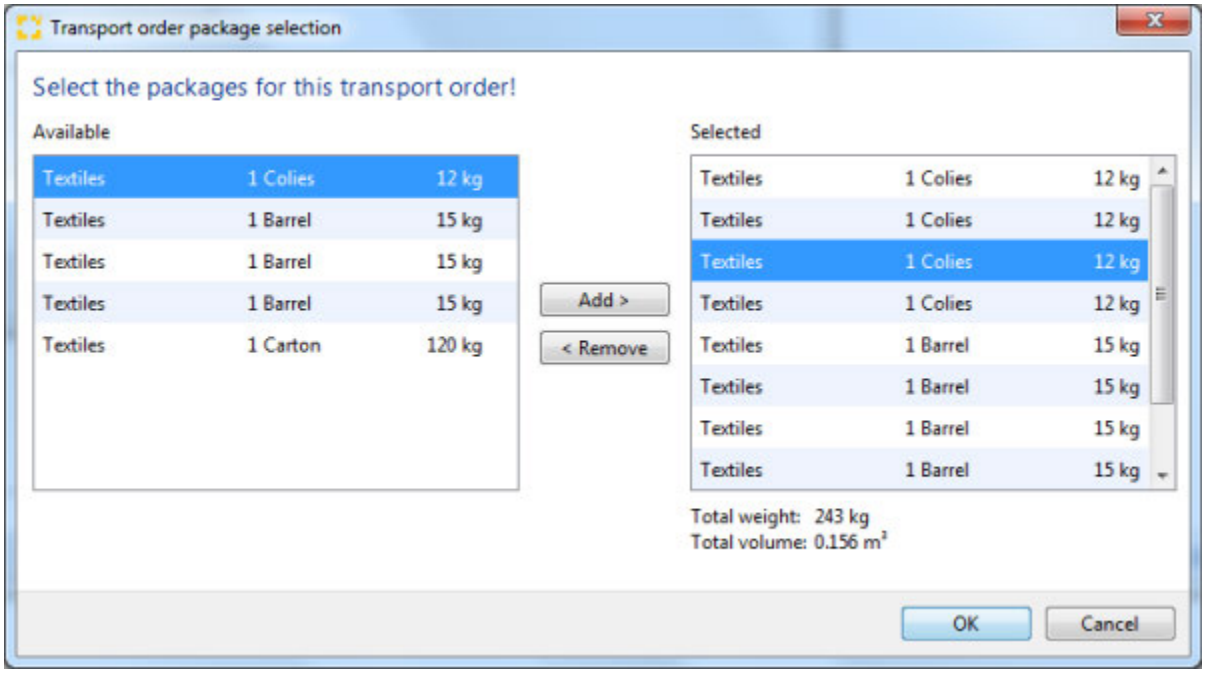
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery oder editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

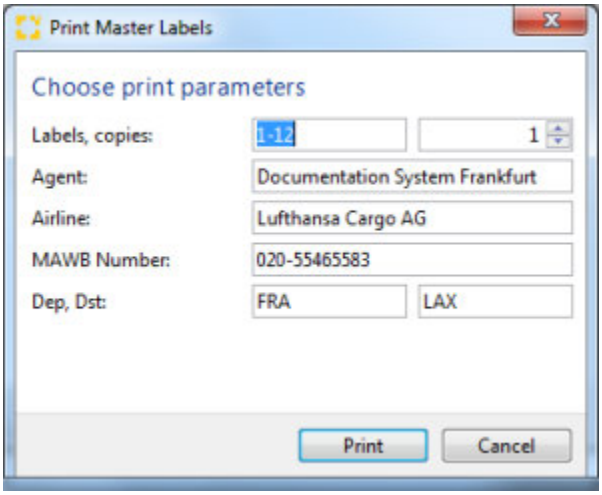
Print Labels - General - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

Clicking the option *Print... Master labels* opens a pop-up window where the print parameters and number of printed pages can be edited. In addition, the printing of the labels can be redirected to another printer-pool (e.g. another branch).

Description



Labels / Copies

Number of labels to be printed. Individual labels can be printed or a partial set of labels may be printed.

Examples:

Entry	Quantity	Numbers
1-15	15	1-15
11	1	11
4-6	3	4-6

By default the application proposes printing the total number of labels.

Agent

The agent who issued the airwaybill. (Issuing agent)

Airline

The airline who will transport the shipment.

Handling Agent

The cargo handling agent at the terminal who will receive the cargo prior to loading on the aircraft.

MAWB Number

MAWB Number of the shipment.

Departure/Destination

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Place of departure and place of destination for the shipment.

Output

Print local

The option *Print local* will print to the locally attached printer.

Print to Printer-pool

Allows selection of a printer-pool from the list displayed.

Printer-pools (List)

The desired printer-pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the popup window without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

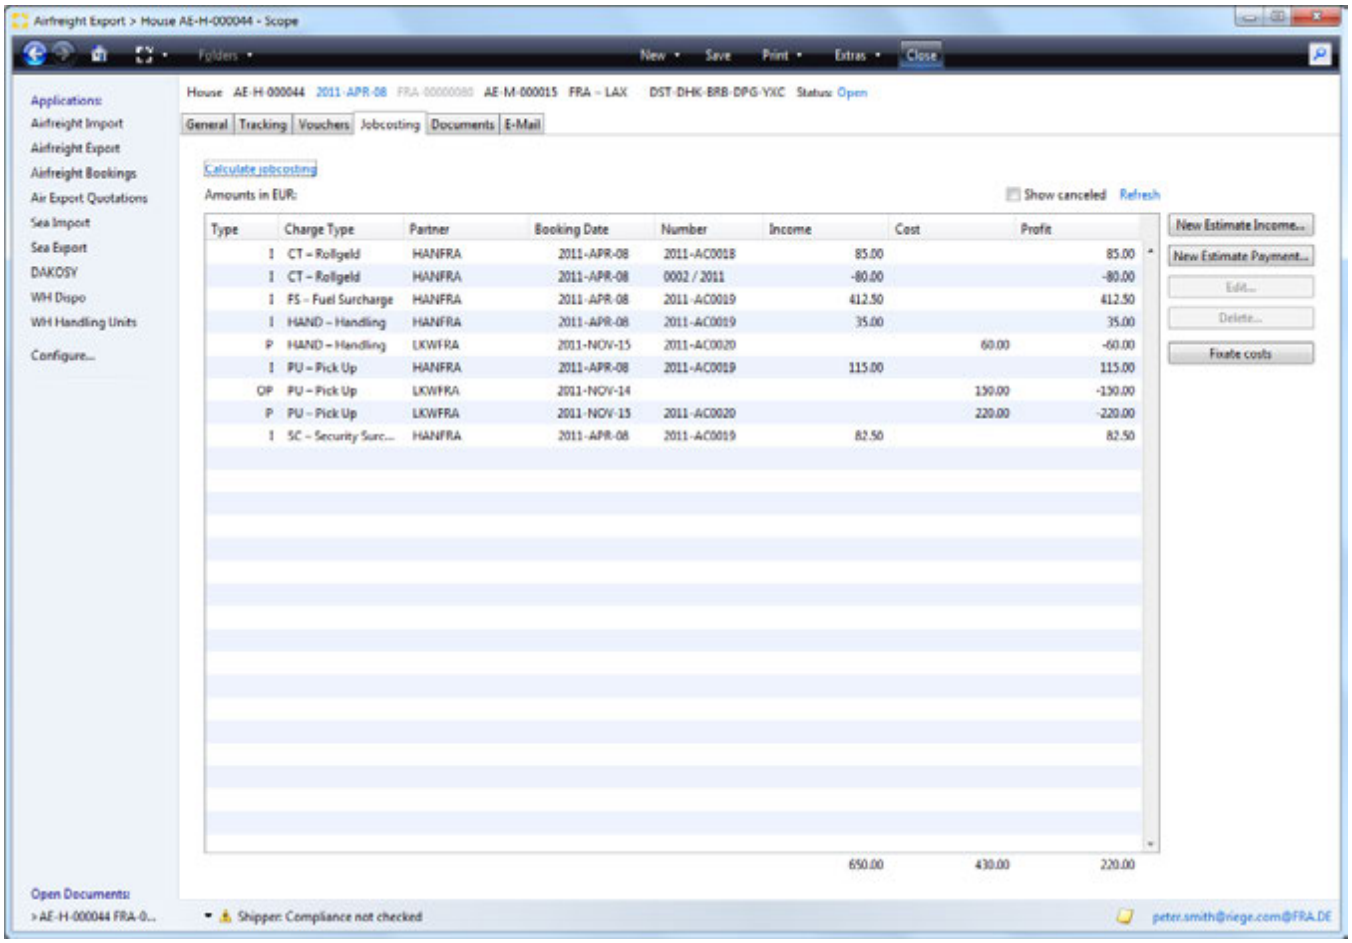
Jobcosting - Direct shipment - Airfreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

> ⚠ Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

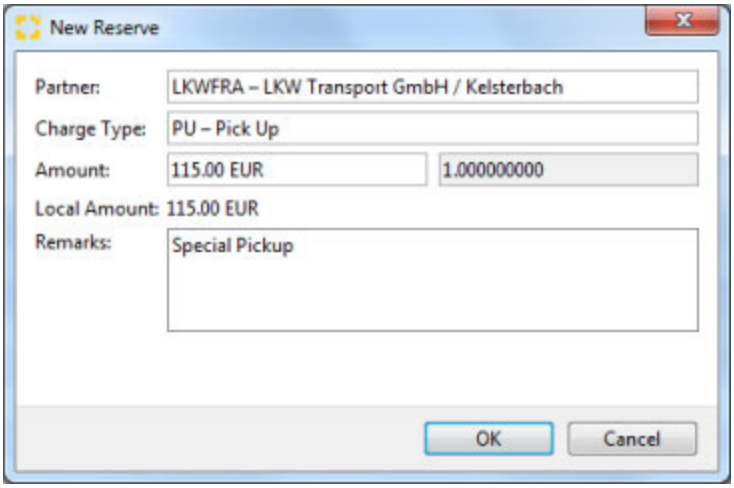
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Tracking - Direct Shipment - Airfreight Export

- Introduction
- Description

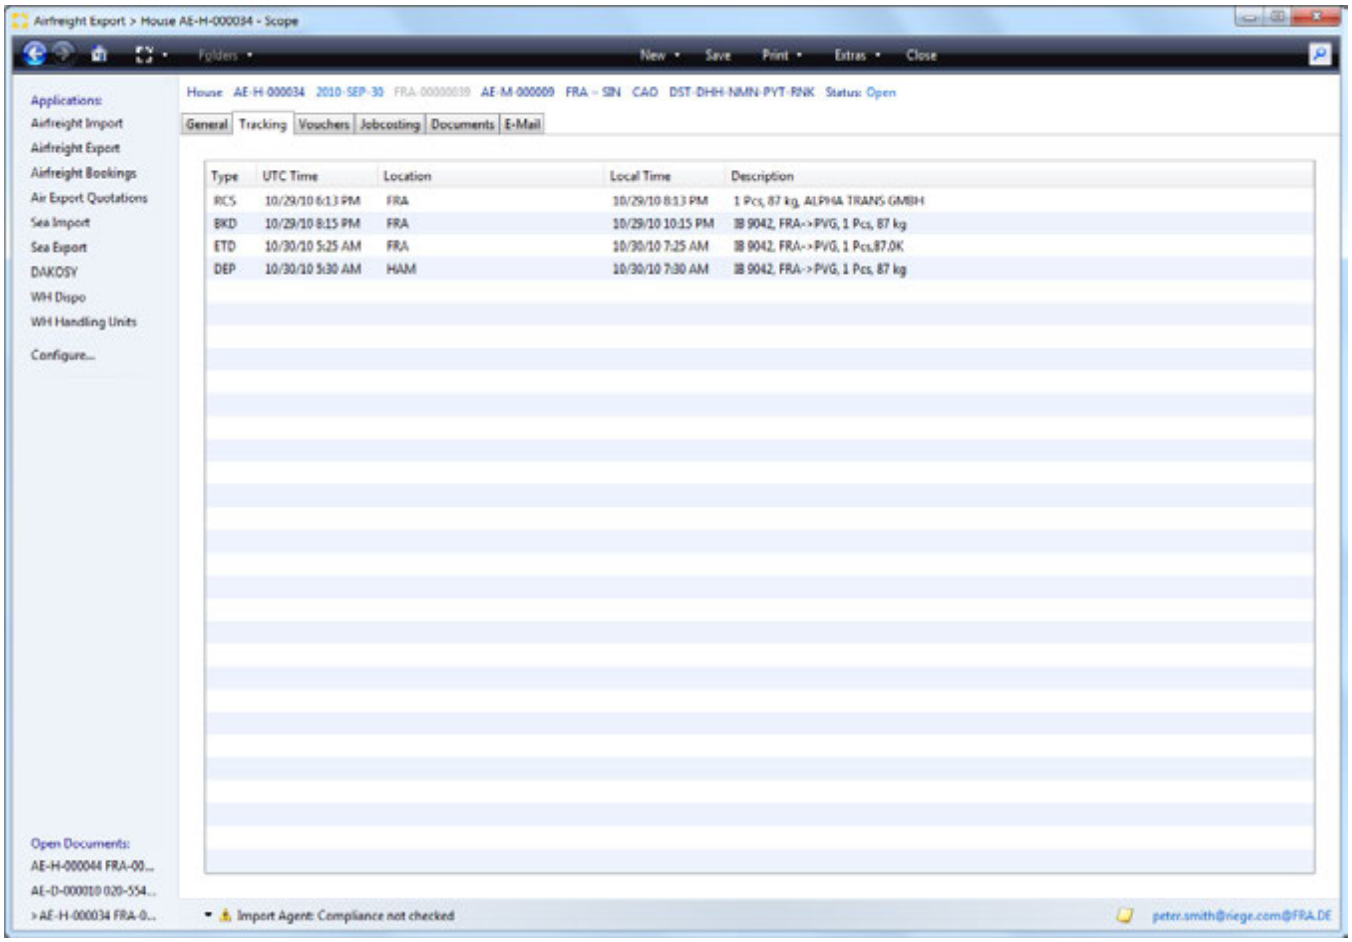
Introduction

During the life-cycle of the shipment numerous events occur and are recorded by the various parties involved with the transportation of the freight. These are called tracking events and they can be viewed using tracking tab, clicking on an idividual tracking event will present detailed tracking information. Currently, only external tracking events are available when the shipper and carrier are exchanging data using the "TRAXON" cargo communication system. Future development of the tracking tab will allow it to include events between senders and receivers. Events in the tracking tab can also be viewed via web-browser on RSI's track and trace system. Connection to external, customer-specific track & trace systems can be implemented on request.

Description

The example below shows an exchange of tracking data for a Scope system that is connected to the Traxon cargo communication system.

- When printing the IATA air waybill (master shipment, direct shipment and back-to-back) the option exists to also "Print and transmit FWB" or just "Transmt FWB". These options will automatically generate the FWB message (waybill data) and send these to the Traxon system who in turn transmit the FWB to the responsible airline. Consolidations and back-to-back shipments will also include the FHL messages (house bill of lading or manifest data).
- The corresponding events are automatically entered into the table of tracking events.
- The types of events shown will depend on the types of events supported by the responsible airline.
- Airline events are automatically entered into the table.
- The events which are recorded in a master shipment, also appear simultaneously in the house shipments consolidated on that master since these events are also relevant to the house shipments.



Main menu bar and title bar

see tab **General**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Type

Event type (see table below)

UTC time

The time of the event in UTC (Coordinated Universal Time)

Location

The place where the event has occurred. (the relevant airport IATA code may be shown)

Local time

Local time of the event (time in the time-zone in which the event occurred.)

Description

Description of the event. This example indicates how many packages, their weight, the aircraft transporting the freight. From where, to where. Numbers of packages that have arrived, the weight of the packages and at which destination.

The following events can be mapped. (Depending on the airline used)

Code	Description
RCS	Consignment received from Shipper
RCT	Consignment physically received from another airline
RCF	Consignment physically received from a flight known or not
BKD	Consignment has been booked
MAN	Consignment has been manifested
DEP	Consignment has departed
PRE	Consignment prepared for loading
TRM	Consignment is to be transferred to another carrier
TFD	Consignment has been physically transferred to another airline or surface transport party
NFD	Consignee or his agent informed of arrival of shipment
AWD	Arrival documents delivered to consignee or his agent
CCD	Consignment cleared by customs
DLV	Consignment has been physically delivered to consignee or his agent
DIS	Consignment Discrepancy
CRC	Consignment Information has been reported to Customs
DDL	Consignment has been delivered to the consignee's door
TGC	Consignment has been transferred to Customs/Government control
ARR	Consignment arrived on a flight known or not
AWR	Consignment documentation received from fleight
FOH	Consignment is on hand
FHL	Consol Manifest sent to airline
FWB	AWB sent to airline/ground handler
OSI	Other Service Information
ULD	ULD Identification
ETD	Estimates Time of Departure
ETA	Estimated Time of Arrival
FMA	Message acknowledged
FNA	Error detected in message

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

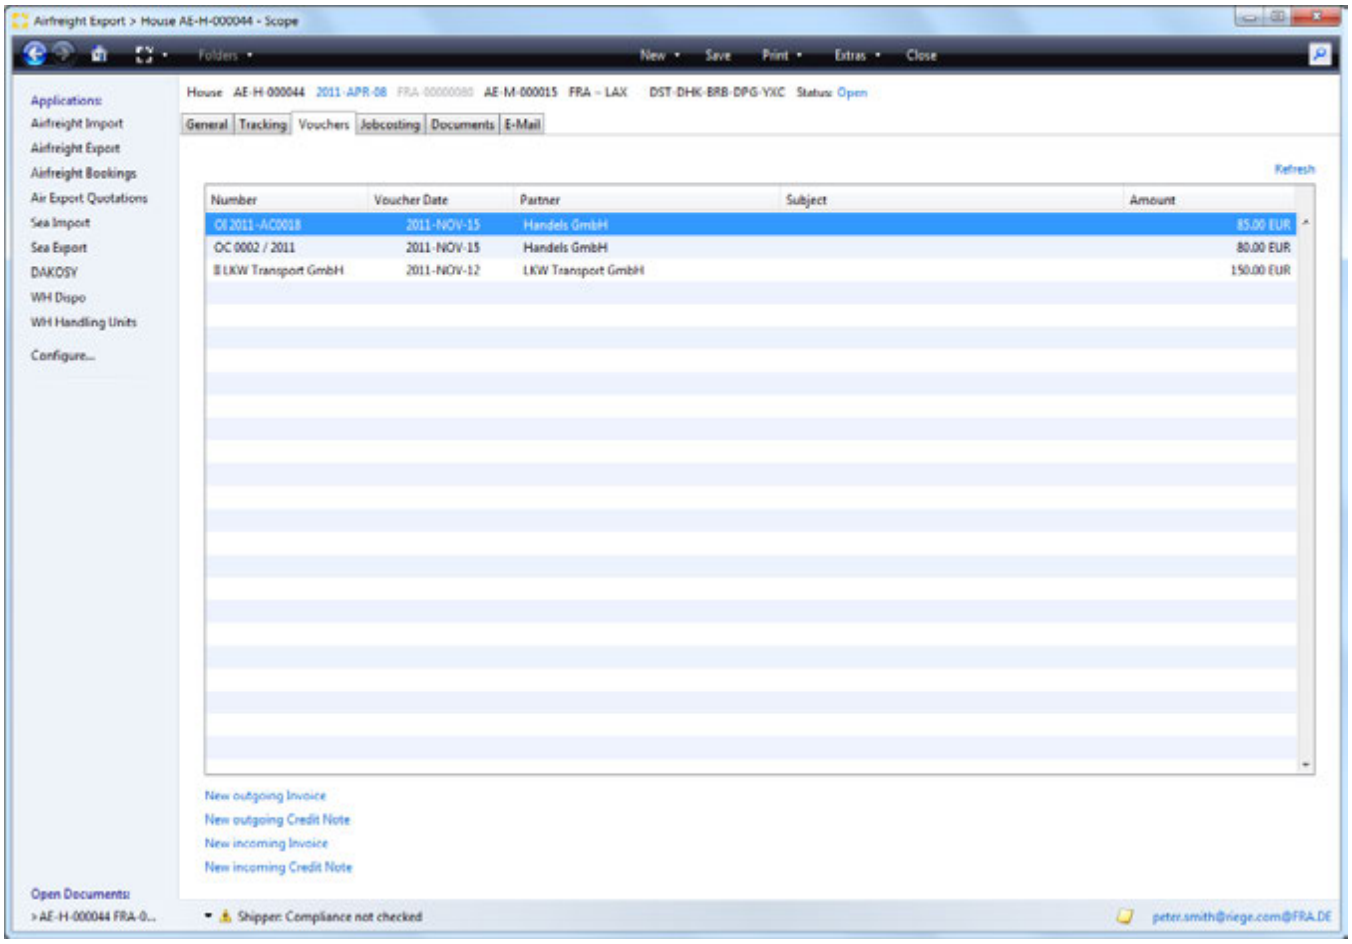
Vouchers - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Tab **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

New Outgoing Credit Note

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Refresh

refreshes the list of vouchers.

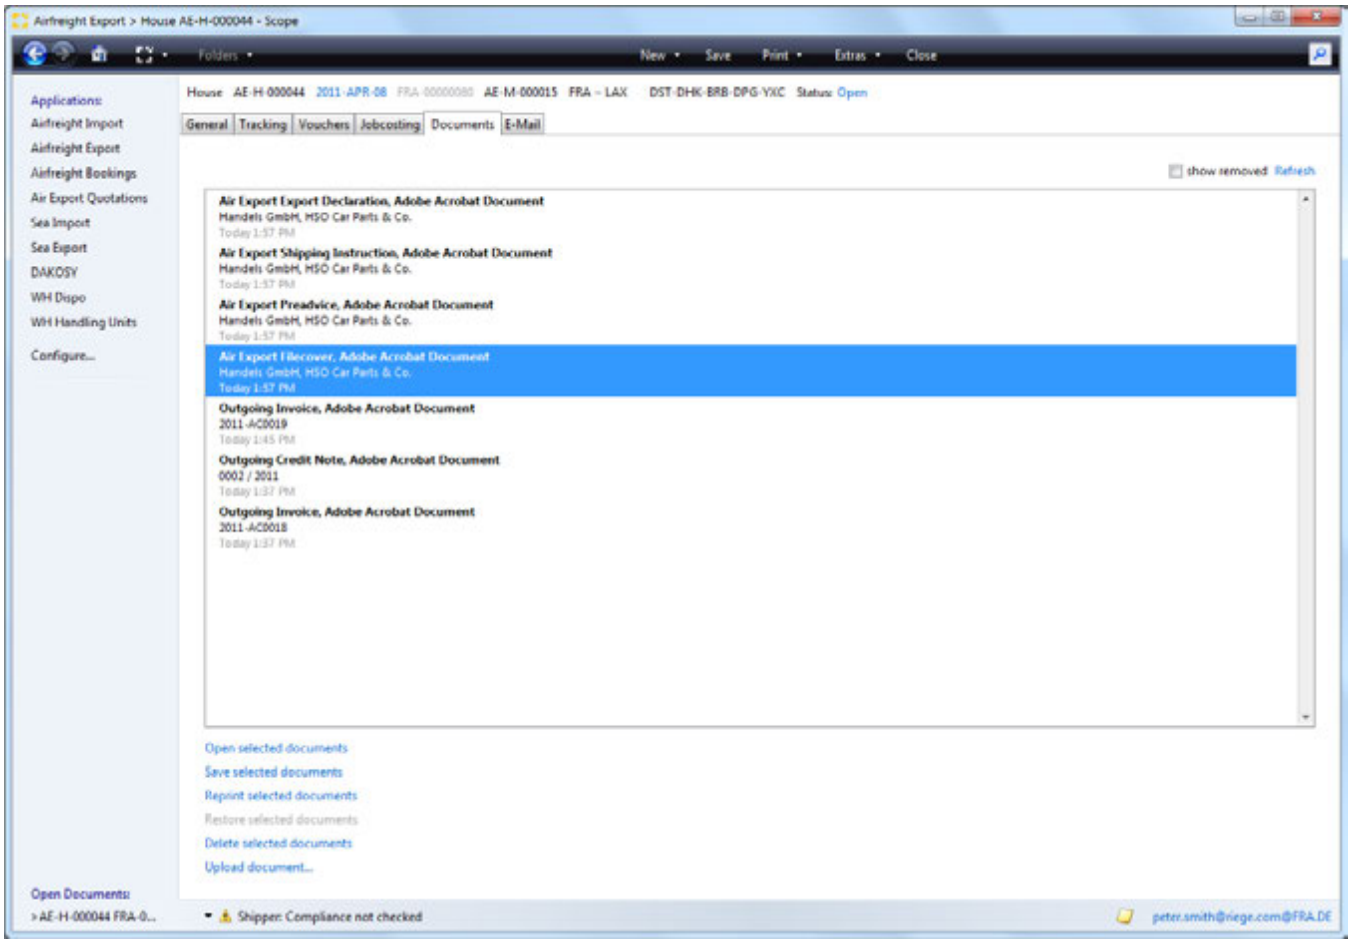
Documents - Billing - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

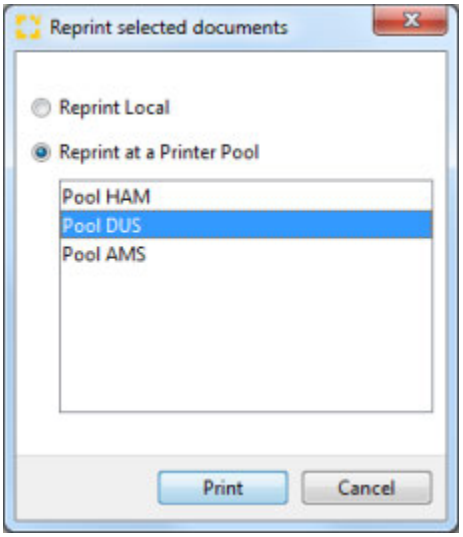
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

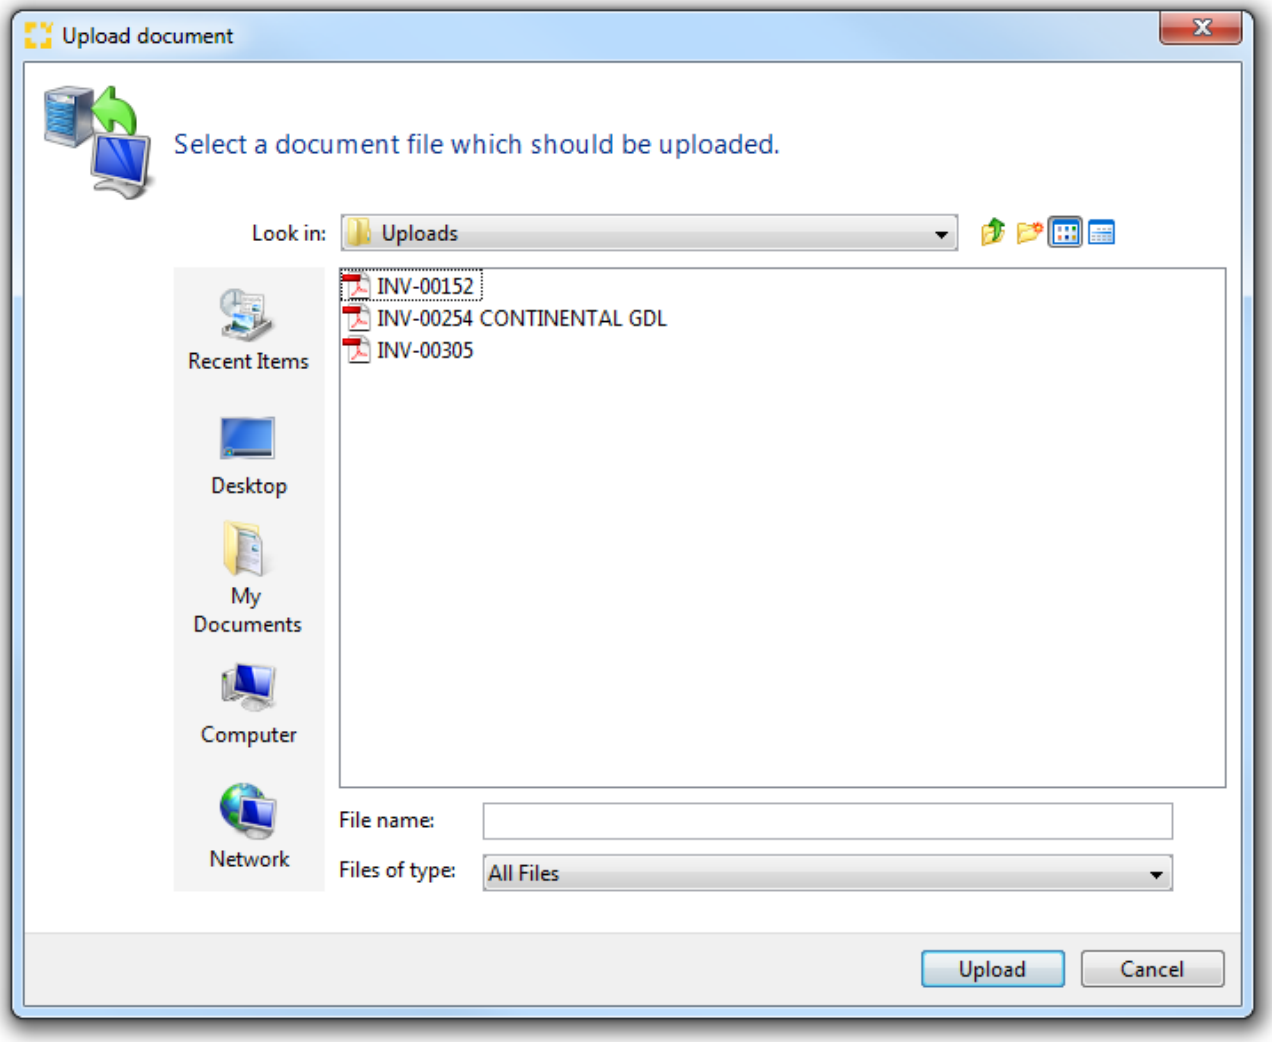
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Billing - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

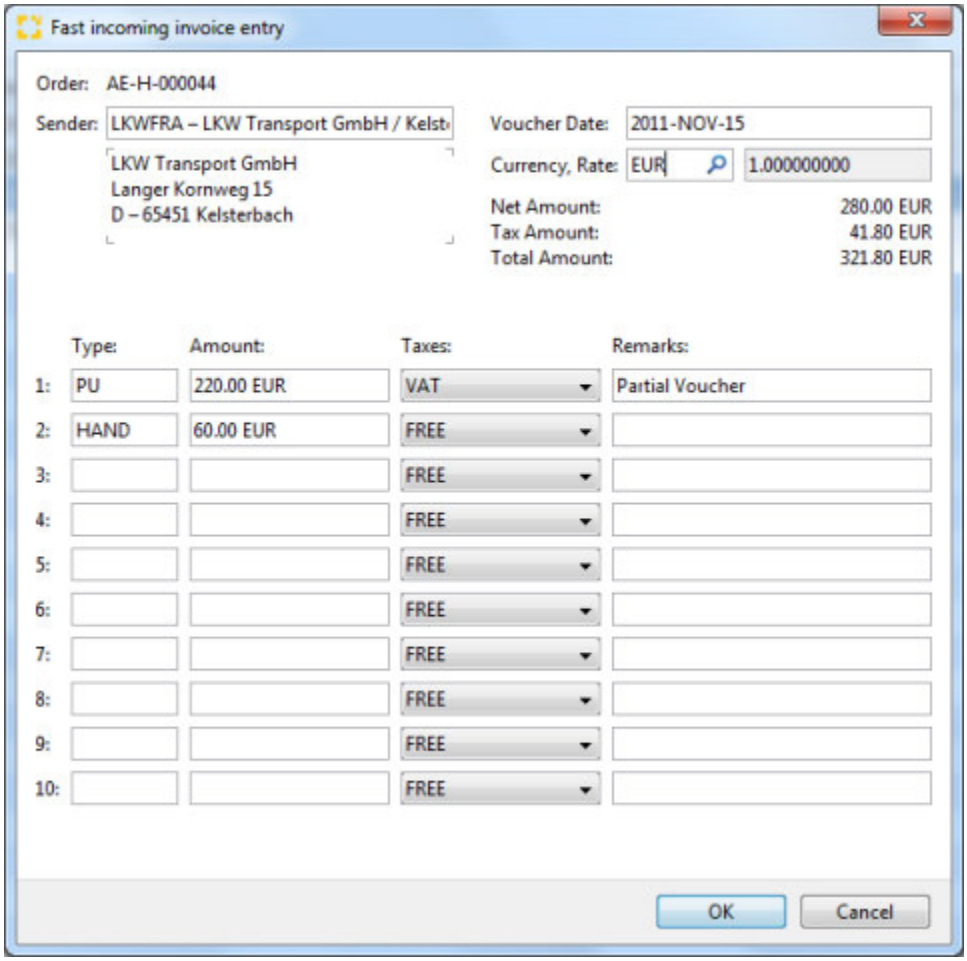
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

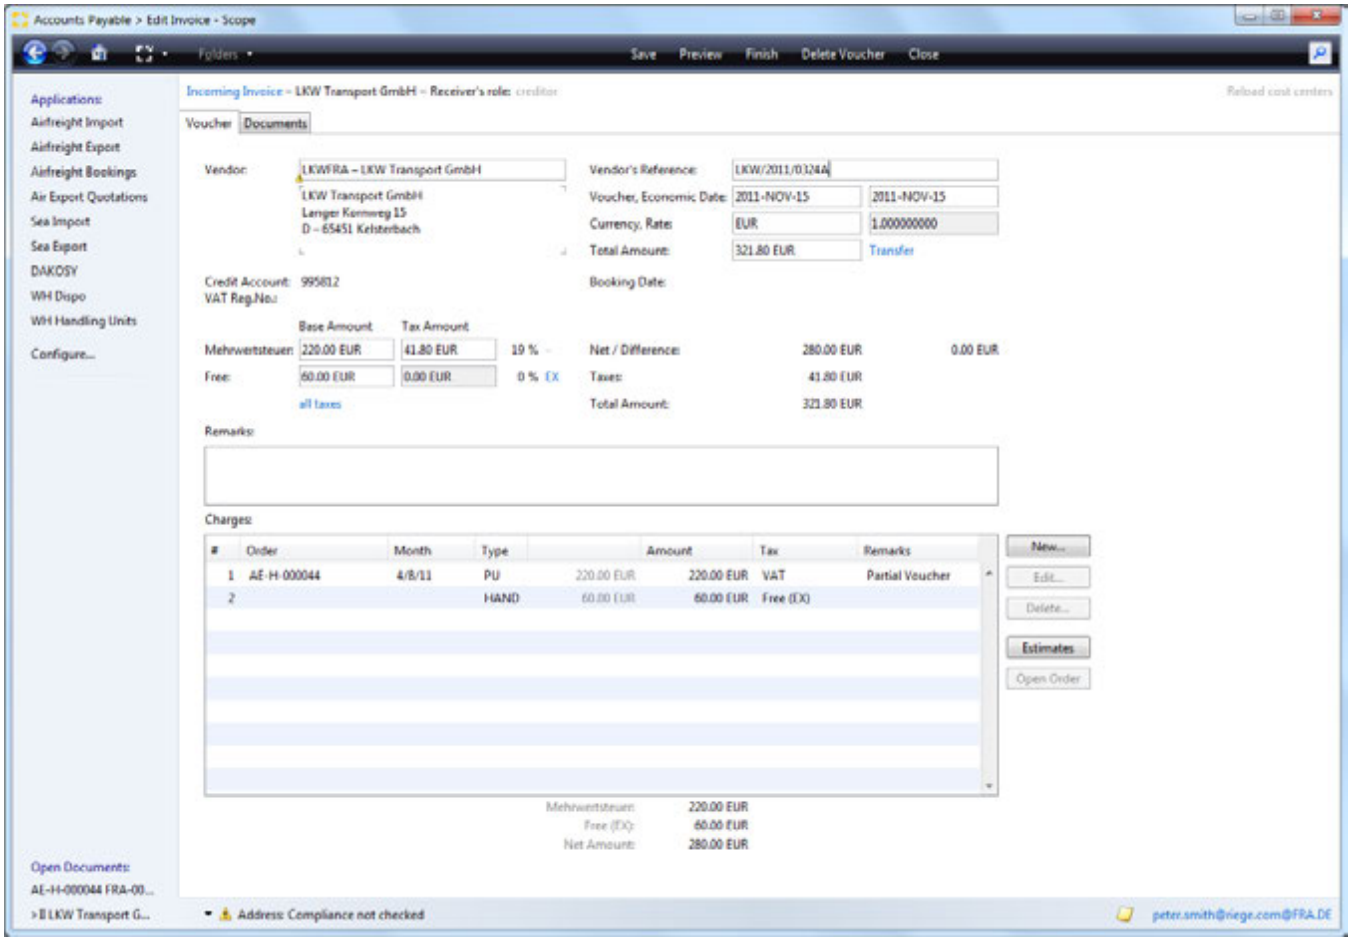
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

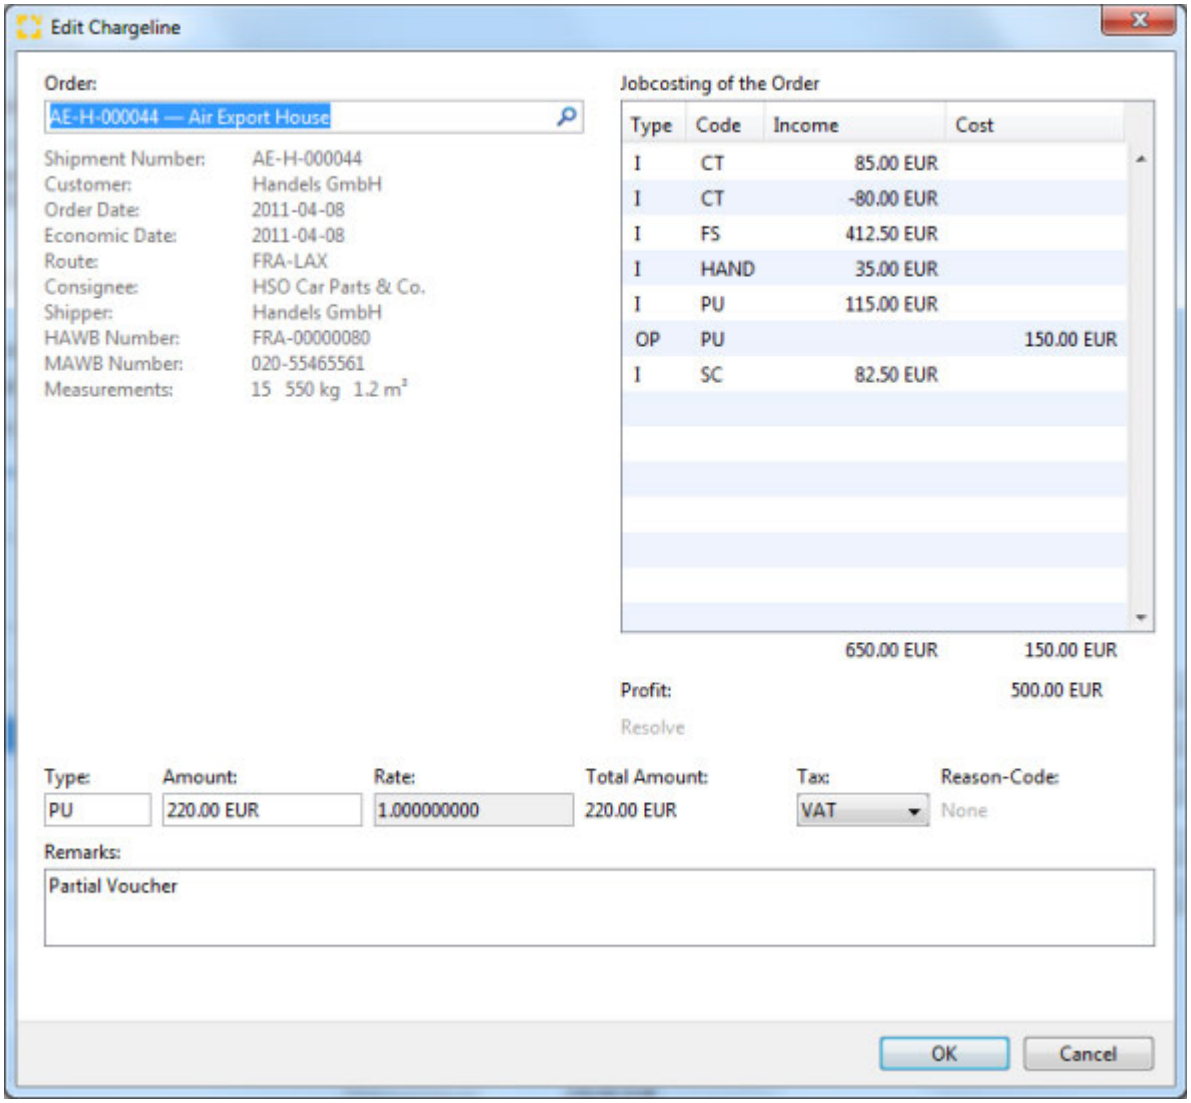
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

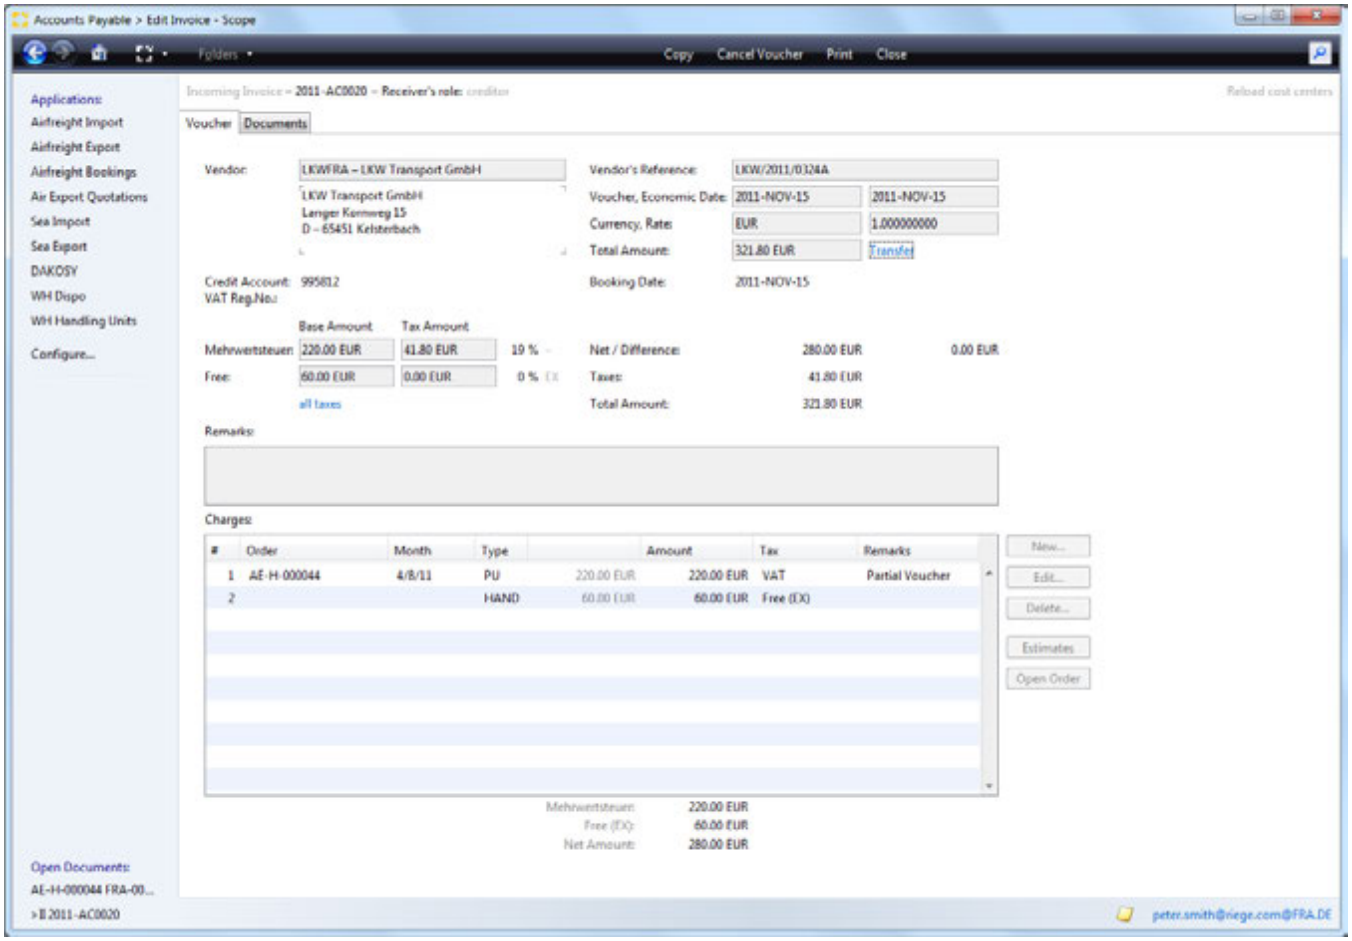
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Outgoing Voucher - General - Direct Shipment - Airfreight Export

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

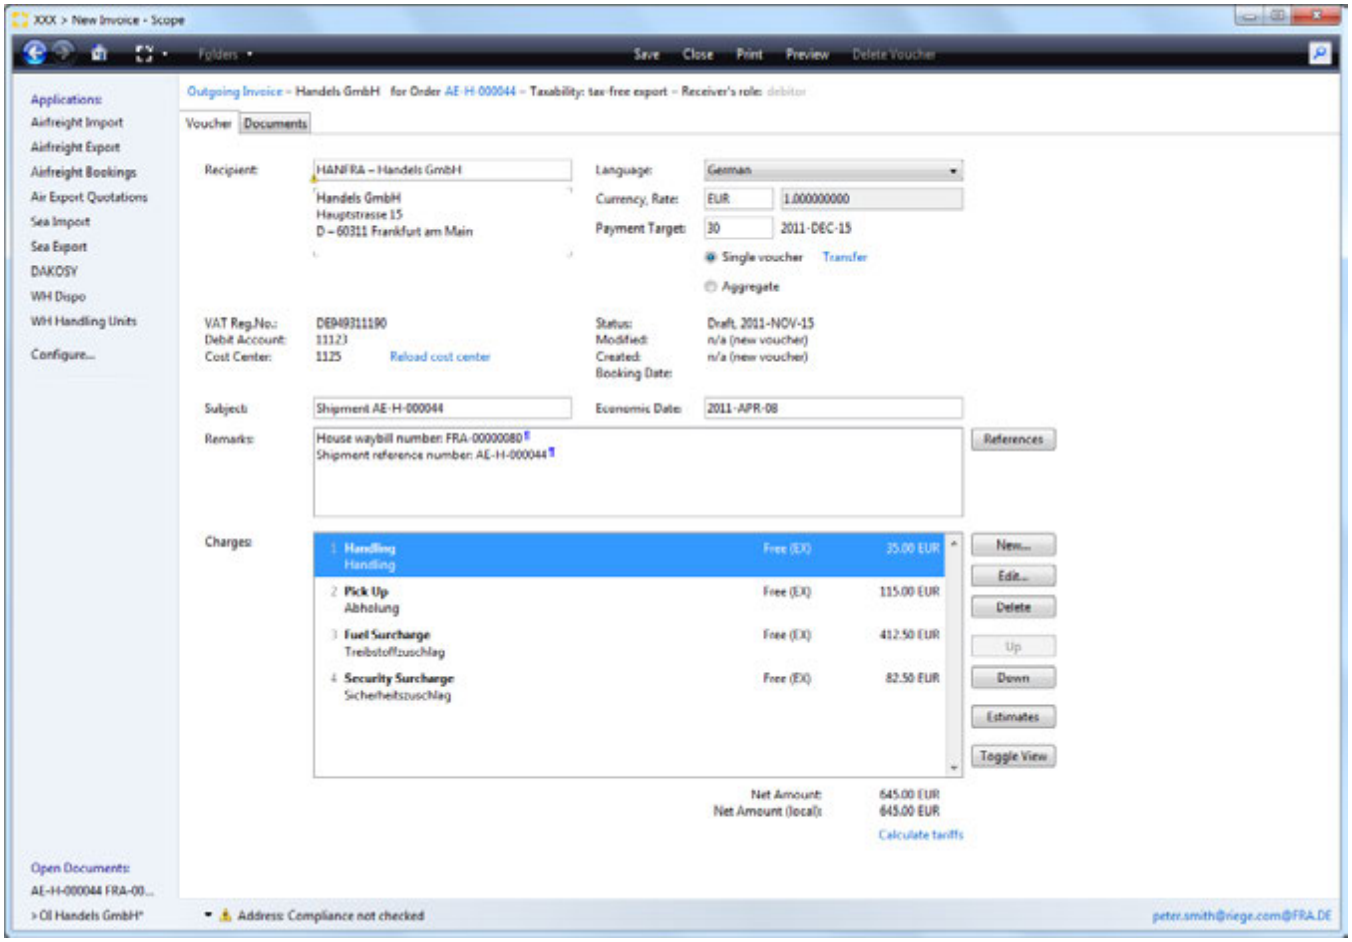
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

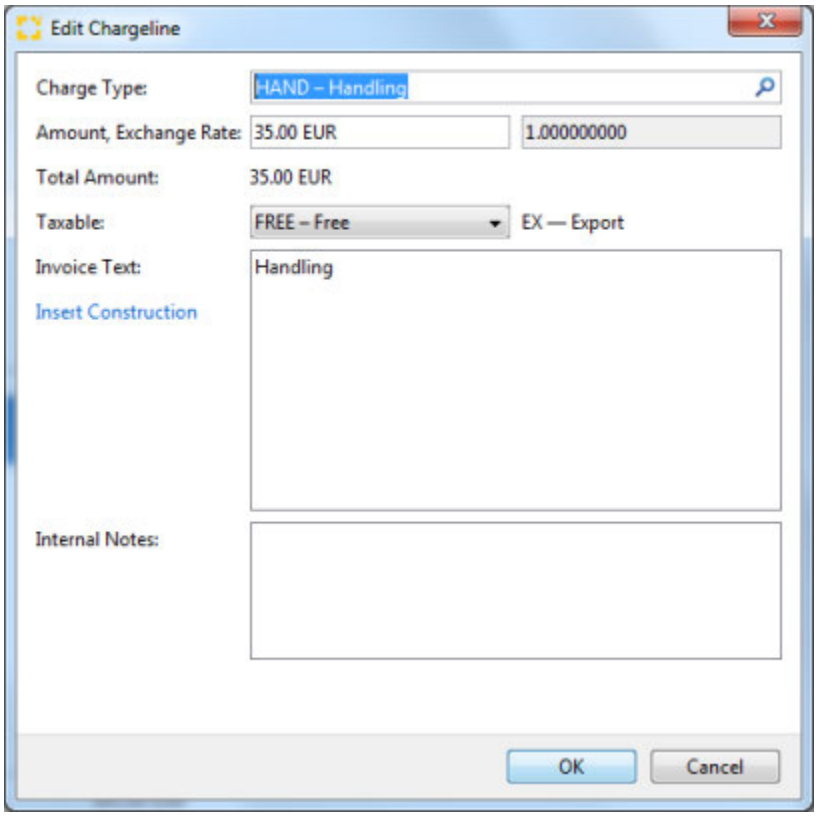
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

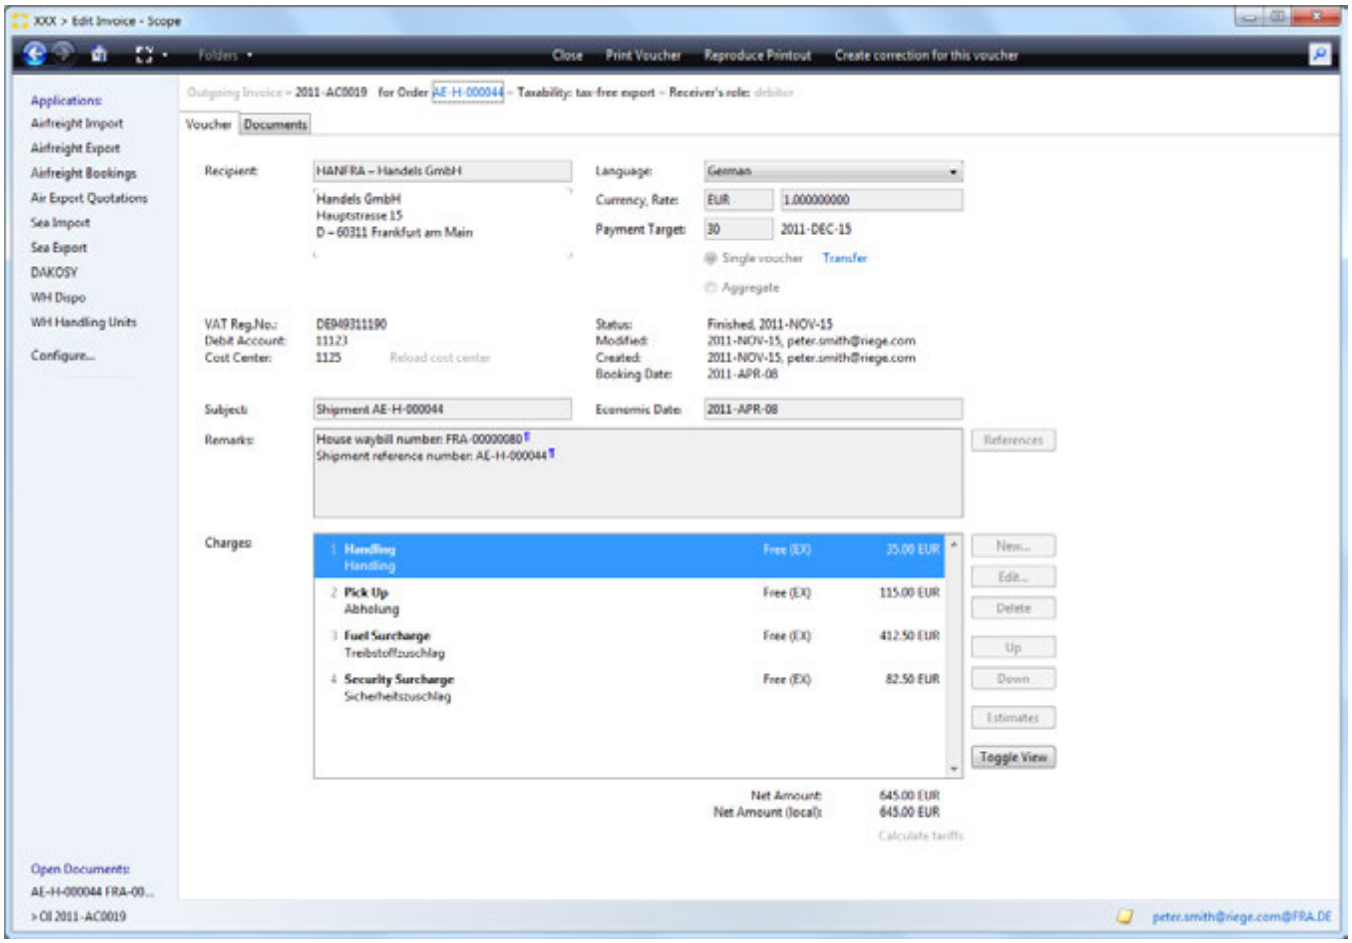
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

e-freight

- Introduction
- Description
  - Master Data
    - Master Data Partner
      - Shipper
      - Agent
    - Master Data Airline and Routing
  - Working with e-freight
    - IATA-AWB Editor
    - e-AWB
    - Printing Docs

Introduction

E-freight and e-AWB are parts of the future trends in the airfreight sector and gain in importance for working with airfreight carriers. Scope supports both e-freight and e-AWB.

Description

Master Data

For using e-freight in Scope it is possible to set up Master Data for different items:

1) Master Data Partner

2) Master Data Airline and Routing

If Master Data is not set up, it is still possible to switch AWB to e-freight in the AWB-Editor (e-AWB). Master data maintenance facilitates the user's handling, so new shipments are automatically e-freight.

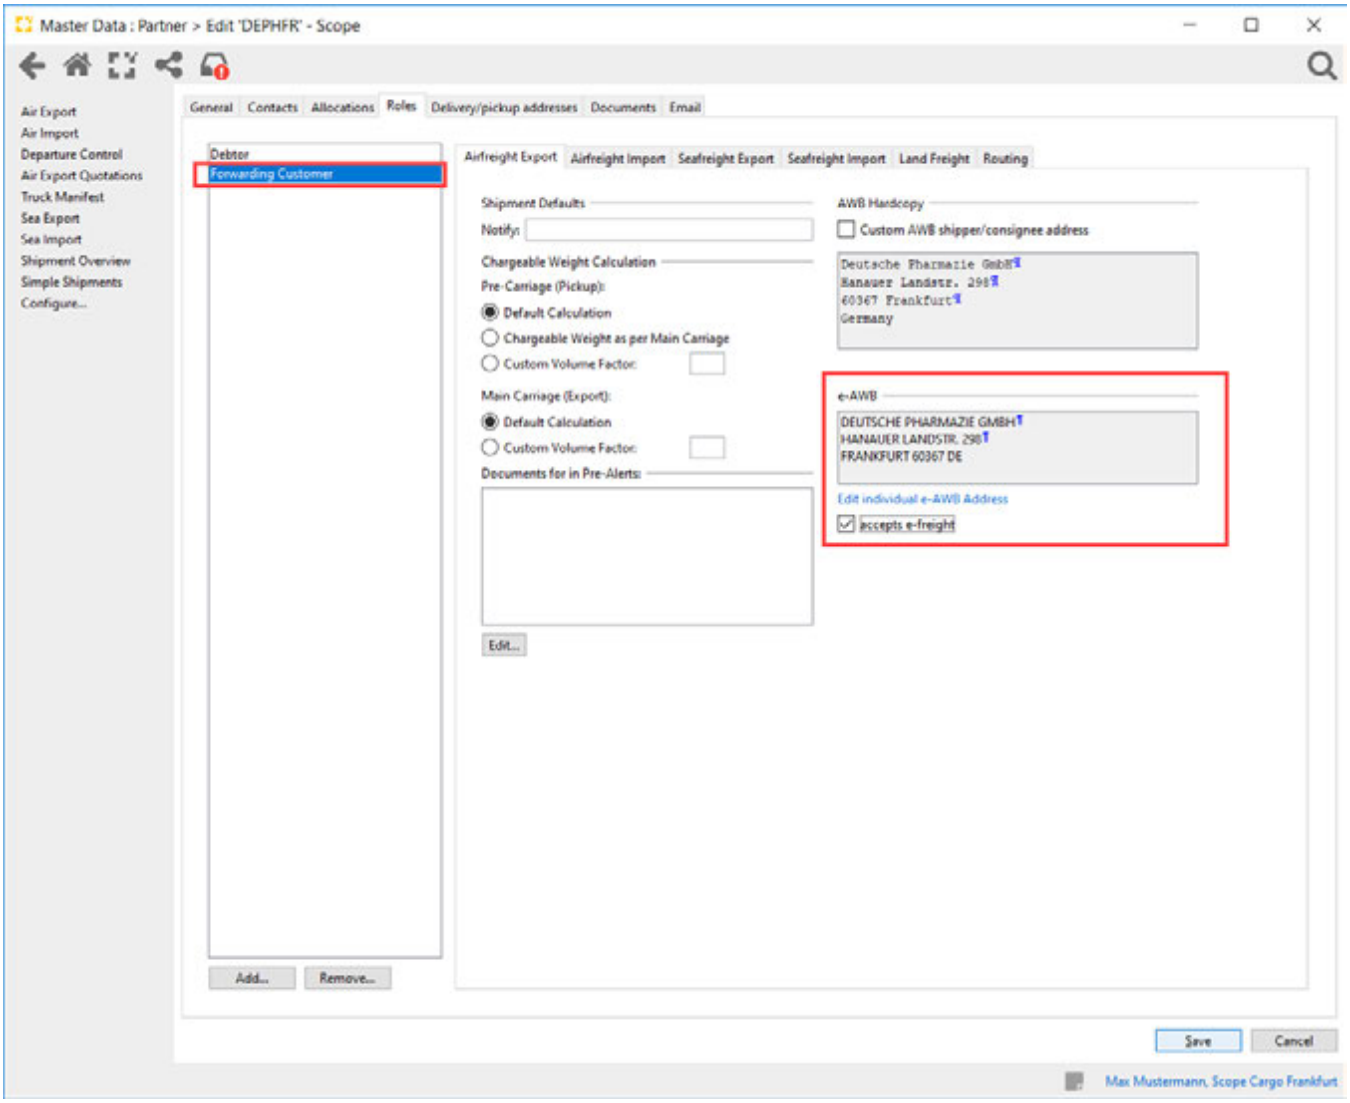
Master Data Partner

To adjust roles of partners for e-freight, e.g. shipper or agents you have to switch to *Master Data - Partners.*

Shipper

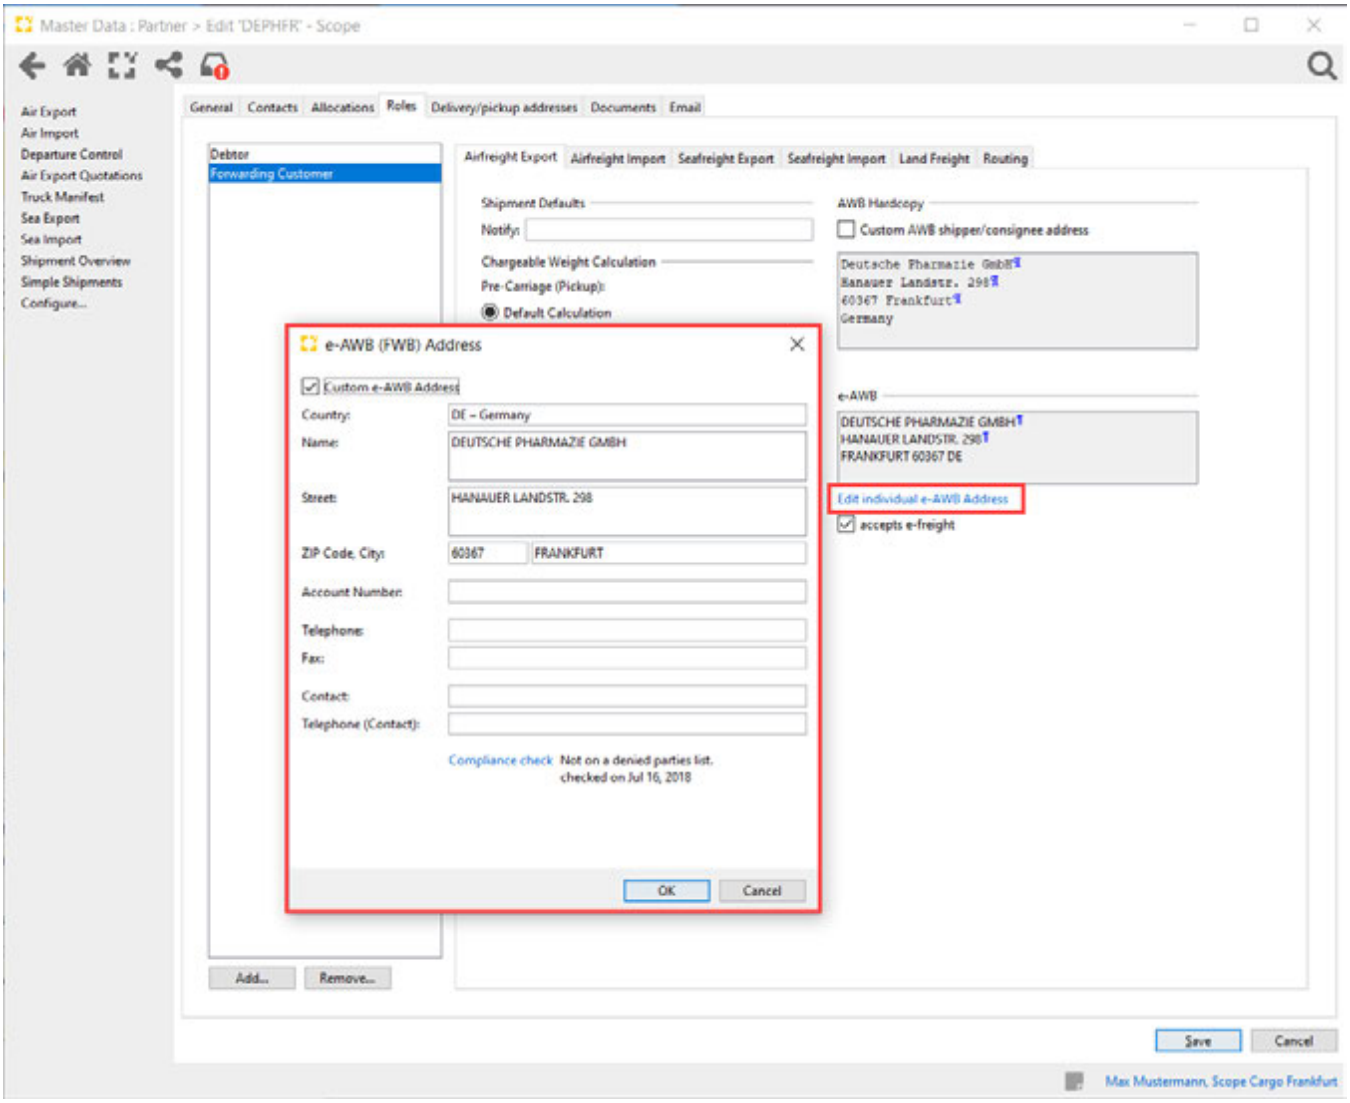
Shipper needs to be set up with role "Forwarding customer". At tab Airfreight Export you have to select "accepts e-freight"

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Please note that e-AWB only accepts capital letters and no special signs. Only characters like A-Z", "0-9", "-"(hyphen), "."(period), " "(space) are allowed. If company address contains illegal characters they won't be shown at e-AWB. You can adjust company address by selecting action link "Edit individual e-AWB-Address".

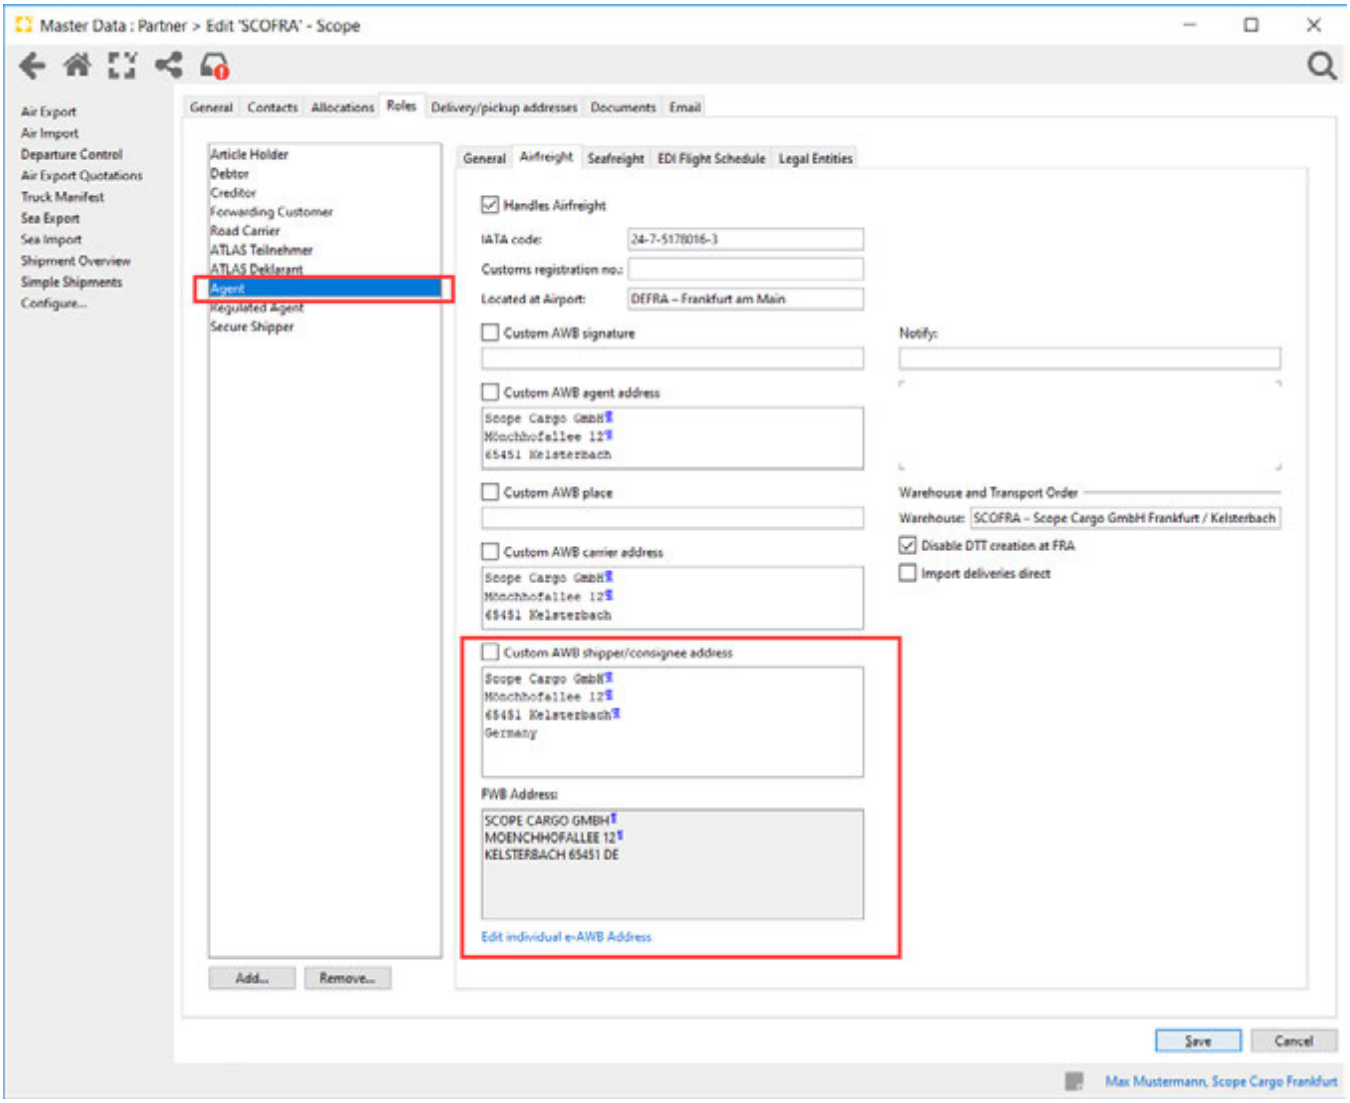
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Agent

For Partners which are selected as role Agent you can adjust e-freight parameters as well. Please note above mentioned requirements for e-AWB-Adress. Adjustments can be done by choosing *"Edit individual e-AWB-Address".*

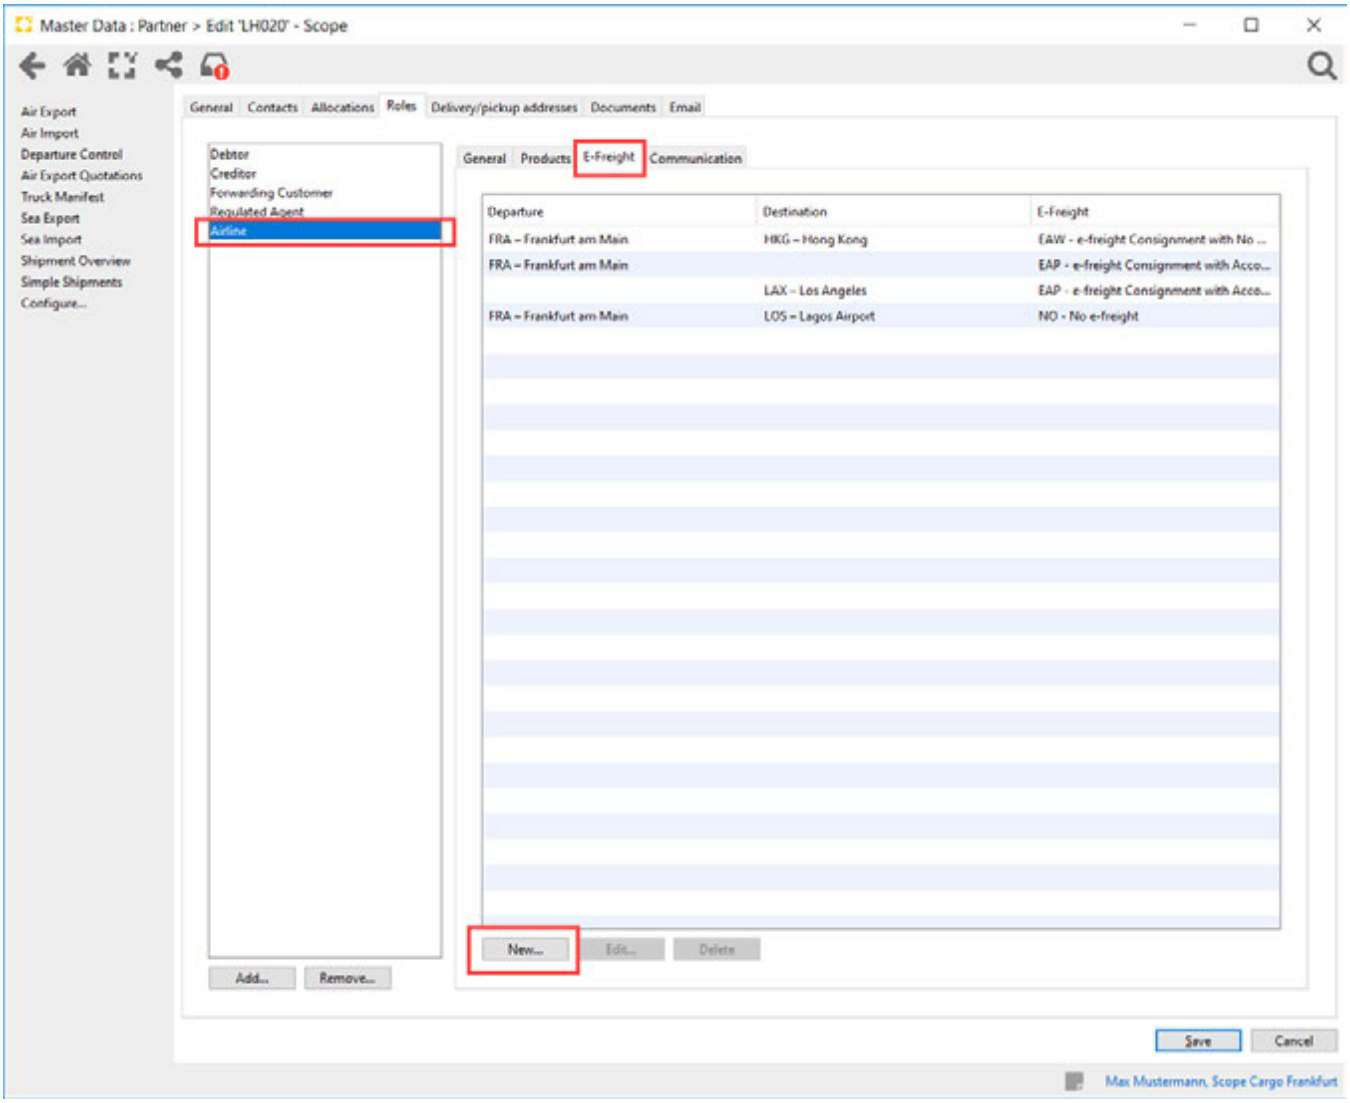
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Master Data Airline and Routing

Master Data for airline carrier can be set up by Master Data - Partners - Role Airline at tab E-Freight.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

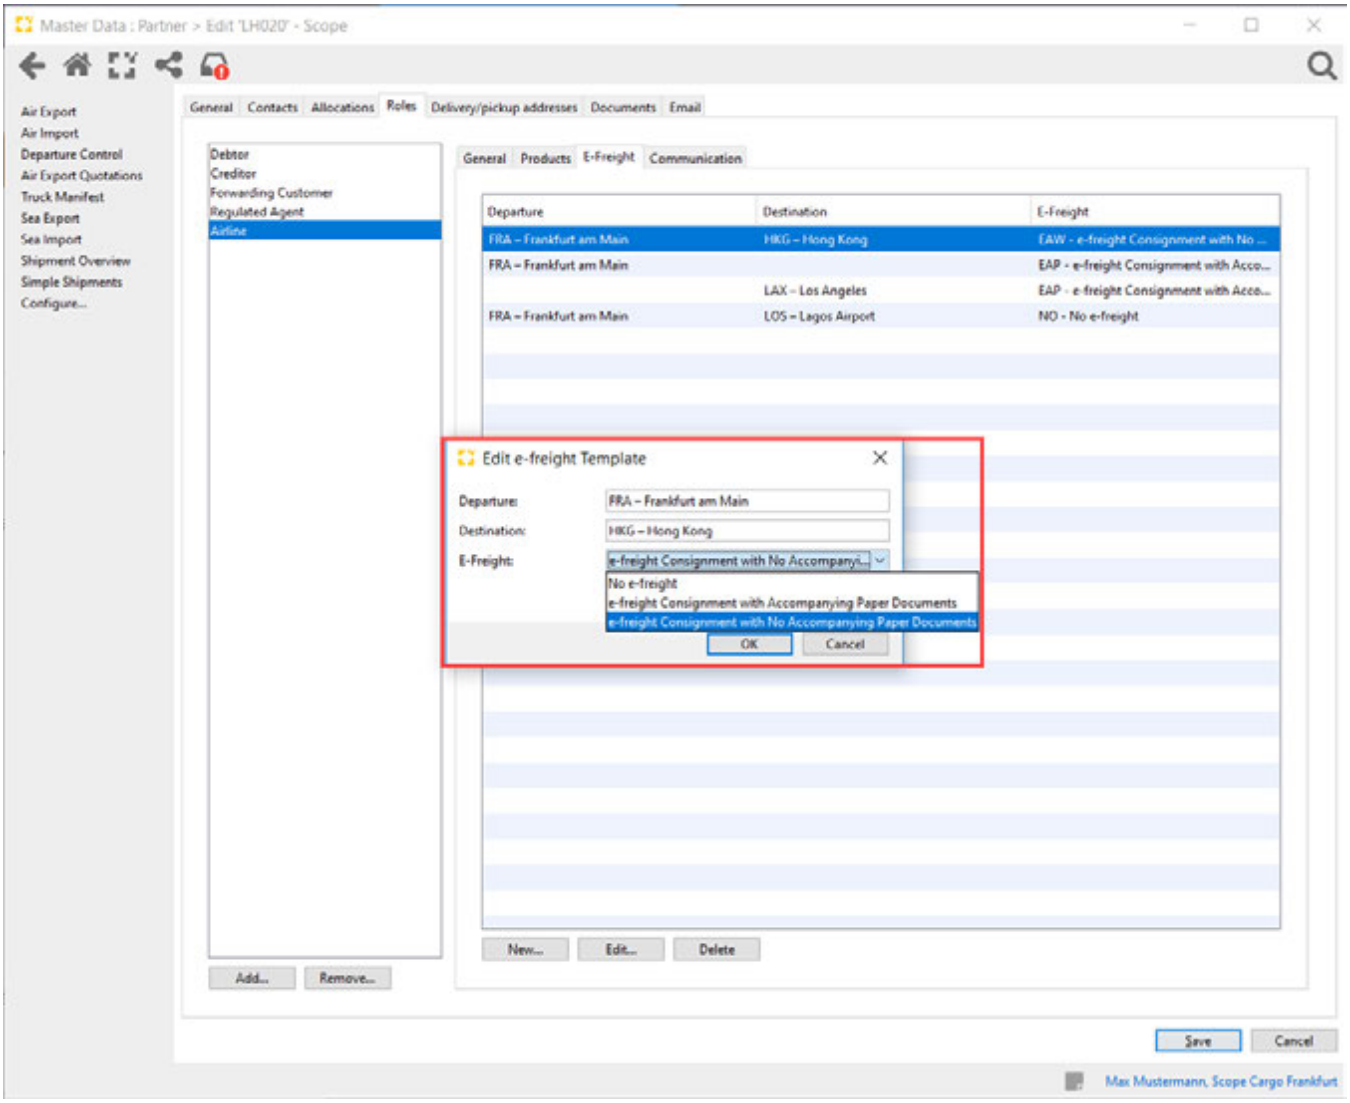


For setup routing you can choose these parameters:

Departure	Destination	Description
✓	✓	e-freight applies to all flights between named departure/country and destination/country
✓	✗	e-freight applies to all flights from named departure/country, destination mutable
✗	✓	e-freight applies to all flights to named destination/country, departure mutable
✗	✗	e-freight generally applies to all flights

For setup e-Freight you can choose these parameters:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



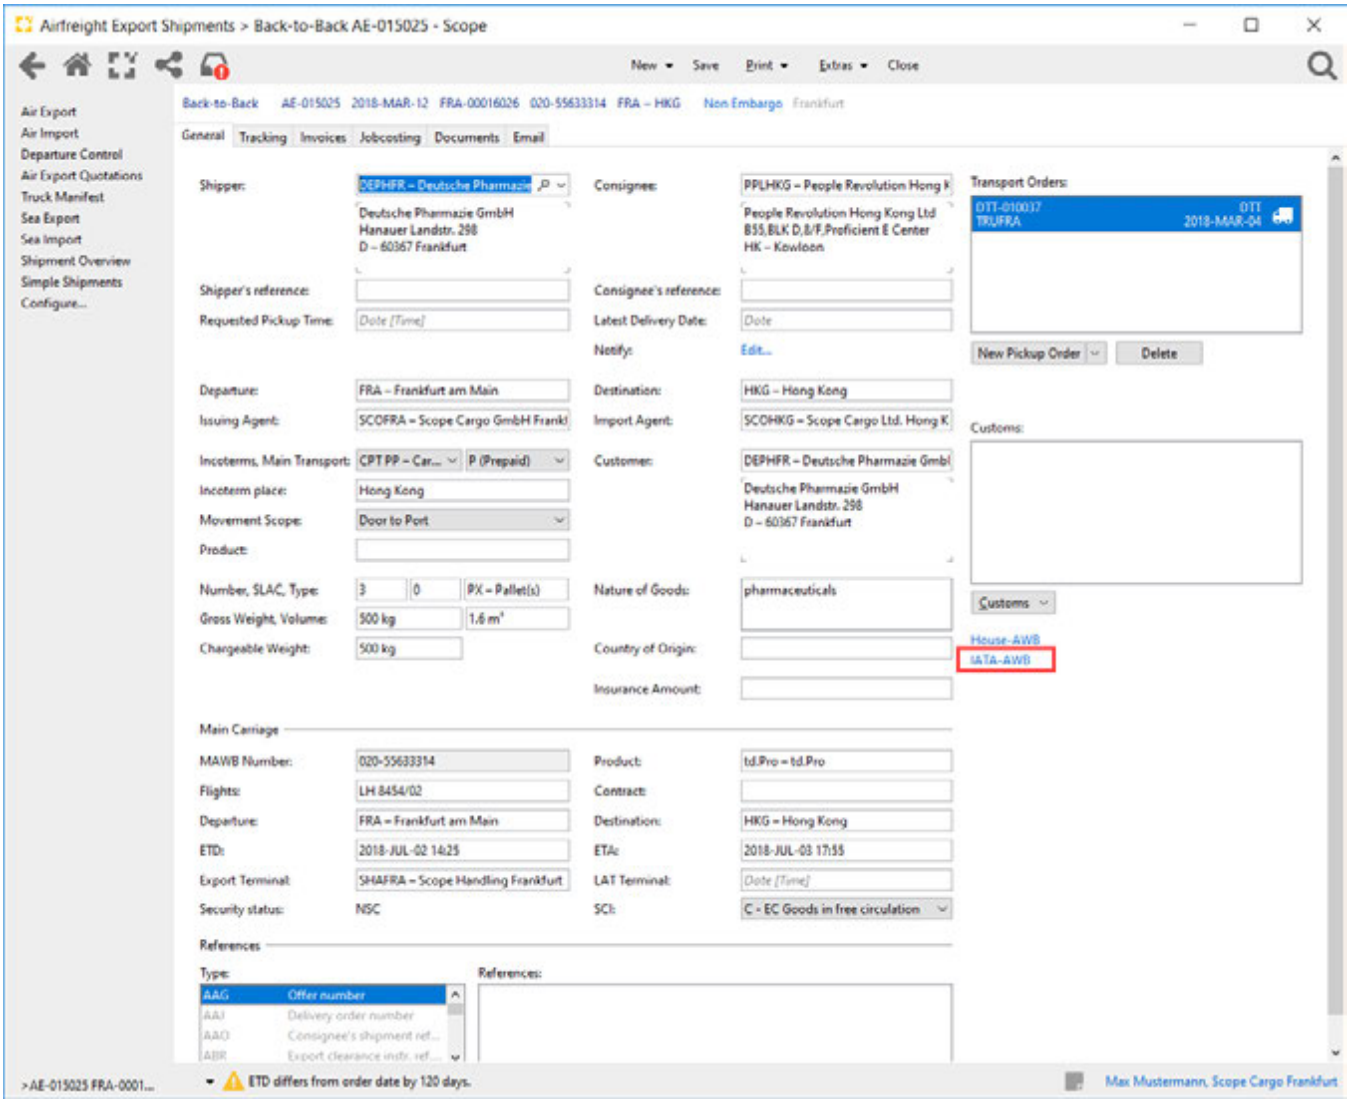
e-freight	content	description
NO	no e-freight	e-freight is not used on this routing
EAP	e-freight Consignment with Accompanying Paper Documents	e-freight is used on this routing, accompanying paper documents (e-Pouch) can be created
EAW	e-freight Consignment with No Accompanying Paper Documents	e-freight is used on this routing, no accompanying paper documents (e-Pouch) can be created

Working with e-freight

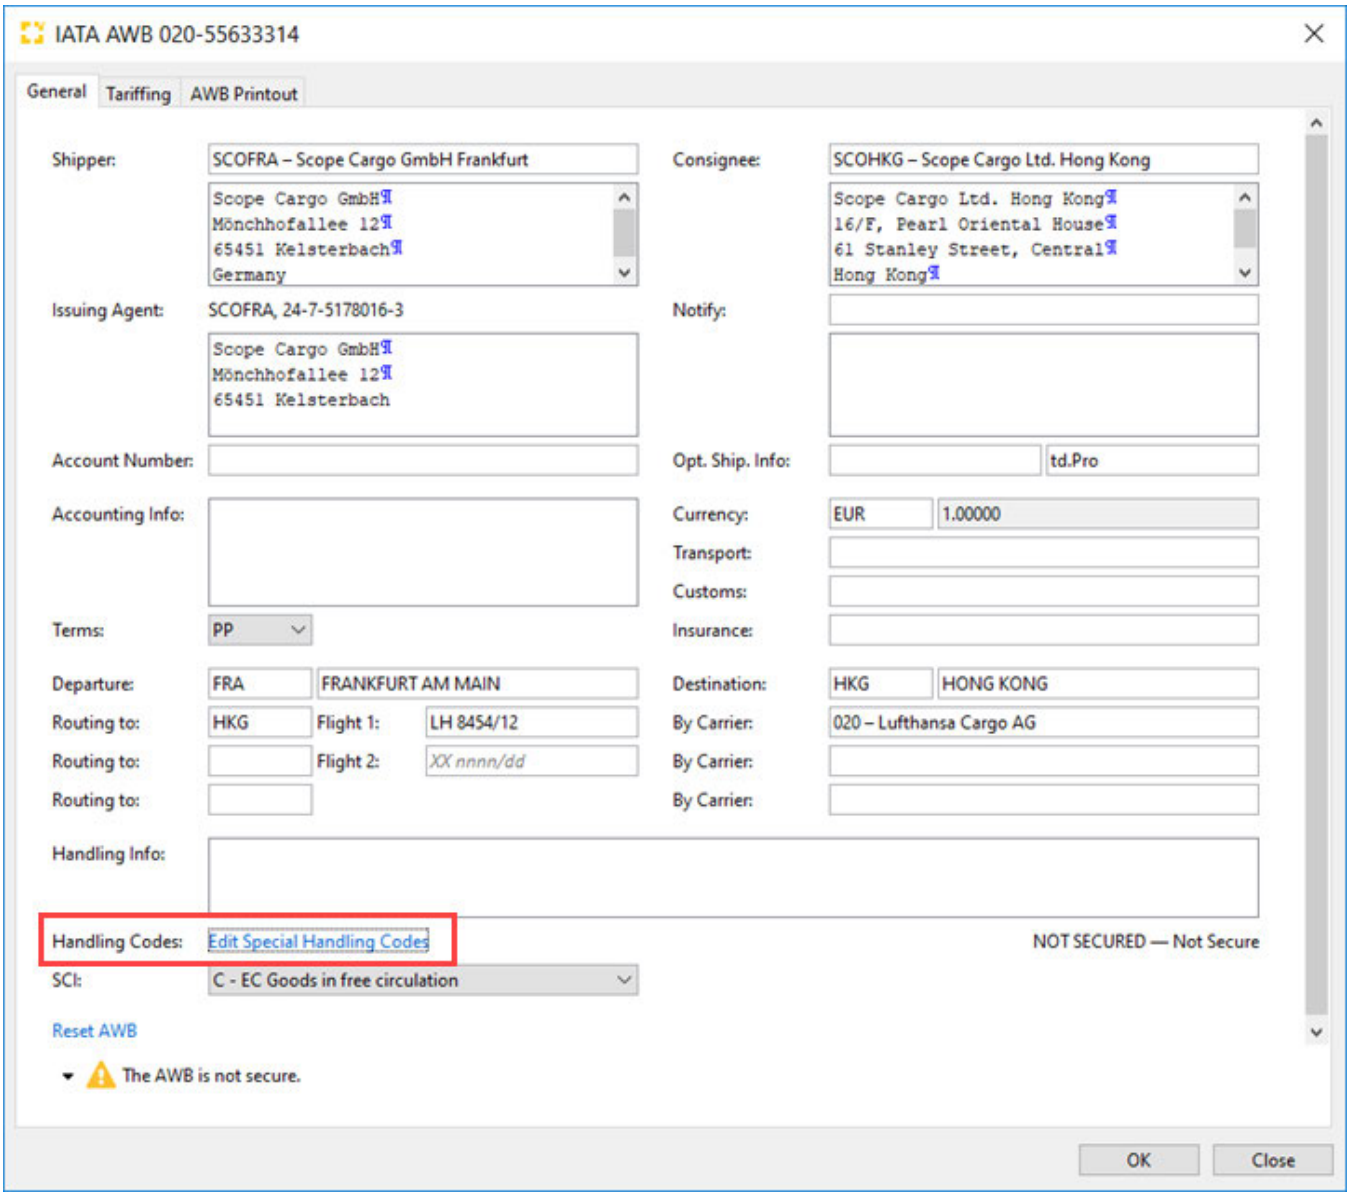
IATA-AWB Editor

To choose e-freight for shipments you have to switch to IATA-AWB-Editor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



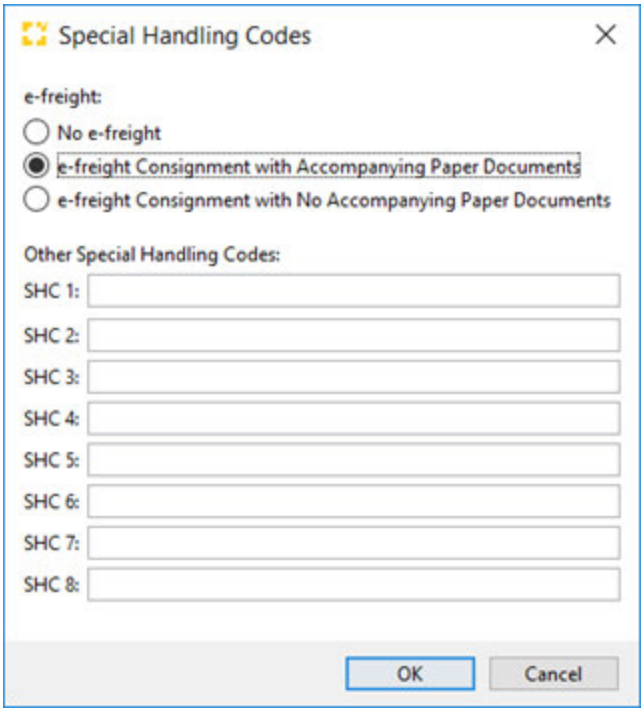
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Type of e-freight can be selected at Handling Codes (no e-freight / e-freight Consignment with Accompanying Paper Documents / e-freight Consignment with No Accompanying Paper Documents). Addtionally you can choose other Special Handling Codes which will be transfered as well.

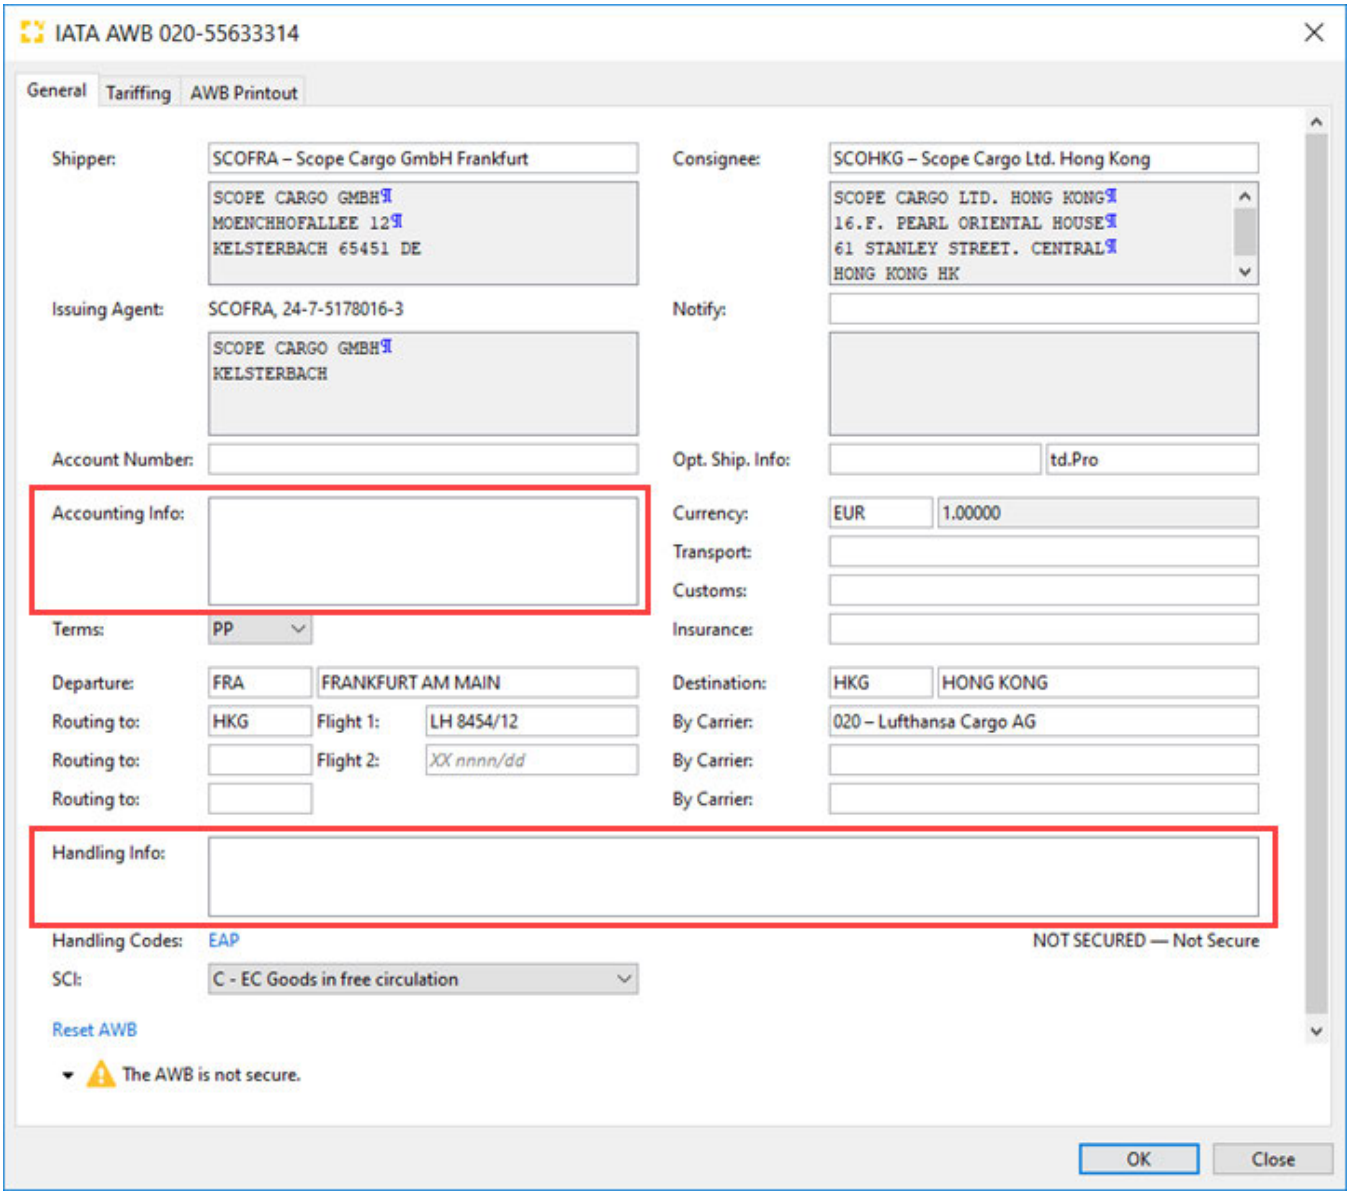
If you have set up Master Data of airline, Scope will use them as entered.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



e-freight	content	description
NO	no e-freight	Addresses can be edited in tab General and in tab AWB printout.
EAP	e-freight Consignment with Accompanying Paper Documents	Adresses cannot be edited (big letters, no illegal characters). It is not possible to edit at tab AWB printout because these data will not be transfered by using e-freight. Furher information can be insert at "Accounting Info", "Handling Information" or by using Special Handling Codes.
EAW	e-freight Consignment with No Accompanying Paper Documents	Adresses cannot be edited (big letters, no illegal characters). It is not possible to edit at tab AWB printout because these data will not be transfered by using e-freight. Furher information can be insert at "Accounting Info", "Handling Information" or by using Special Handling Codes.

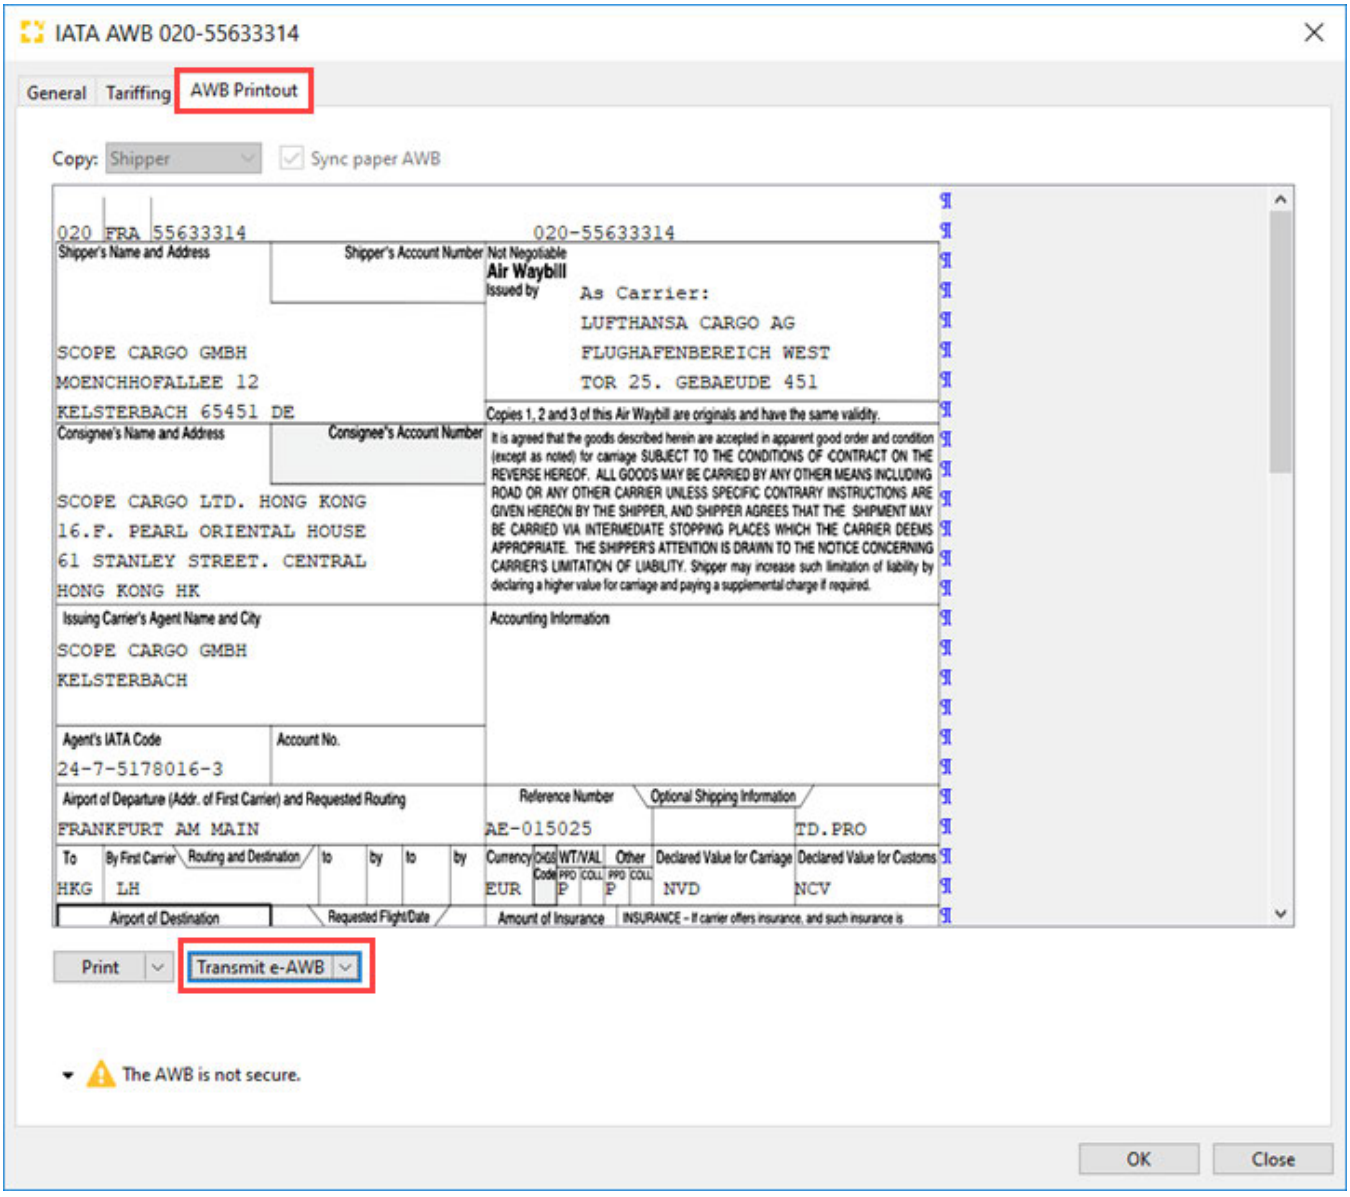
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



e-AWB

For sending e-AWB switch to tab AWB printout or to function "Finish" at menu "Extras"

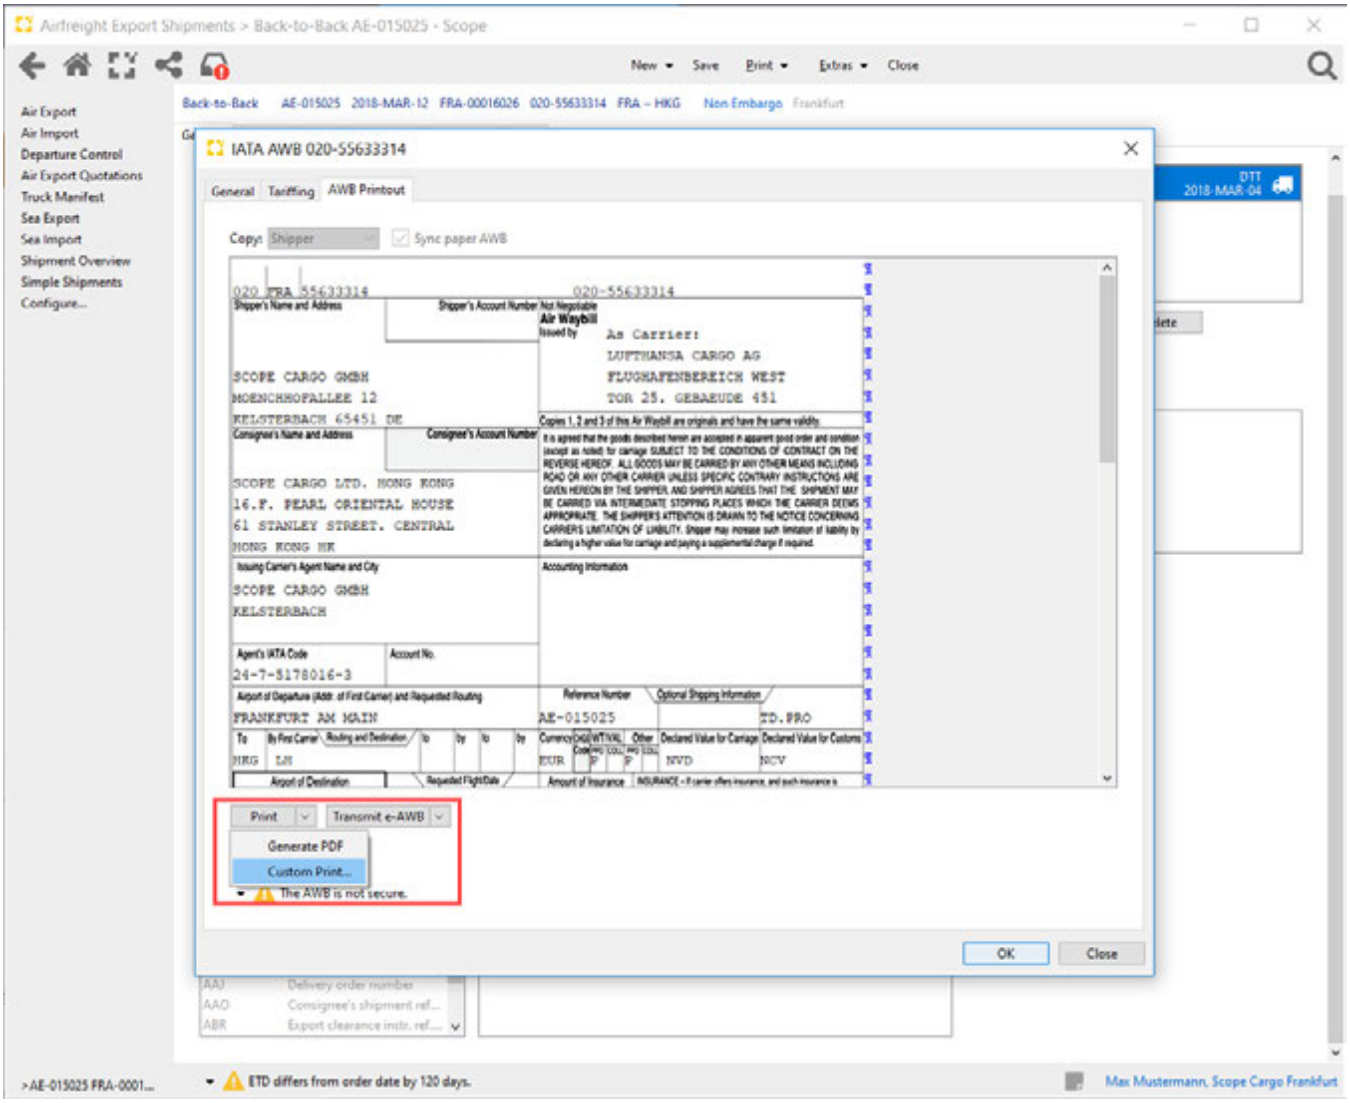
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



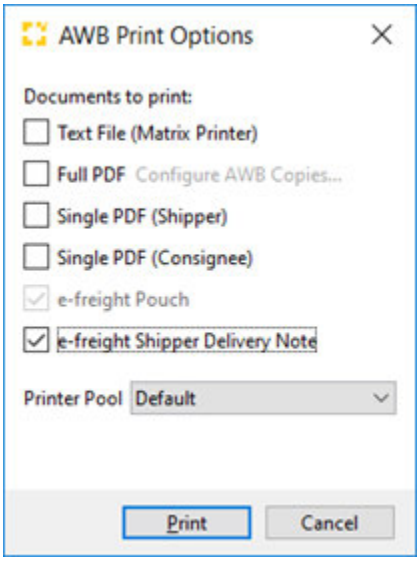
Printing Docs

Printing of Delivery Note (EAW) or Delivery Note + E-Pouch-Label (EAP) is possible by using button Print - Custom Print at tab AWB printout.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



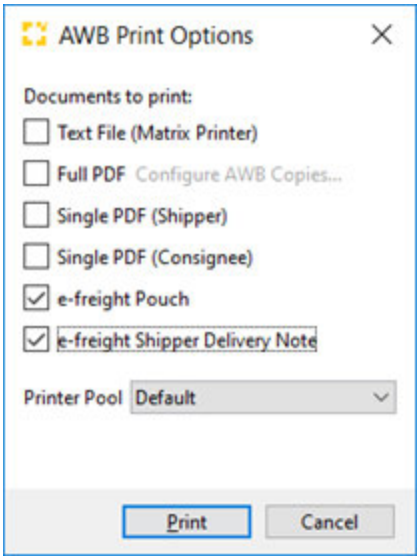
By choosing e-freight (EAW) only Delivery Note will be printed (e.g. proof of delivery at airport)



By choosing (EAP) Delivery Note and e-Pouch will be printed. E-Pouch can printed as PDF file or as Label (for label printer).

For adjusting parameter at e-Pouch please contact your Riege Support Team.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

House Shipment - Airfreight Export

- Introduction
- Description

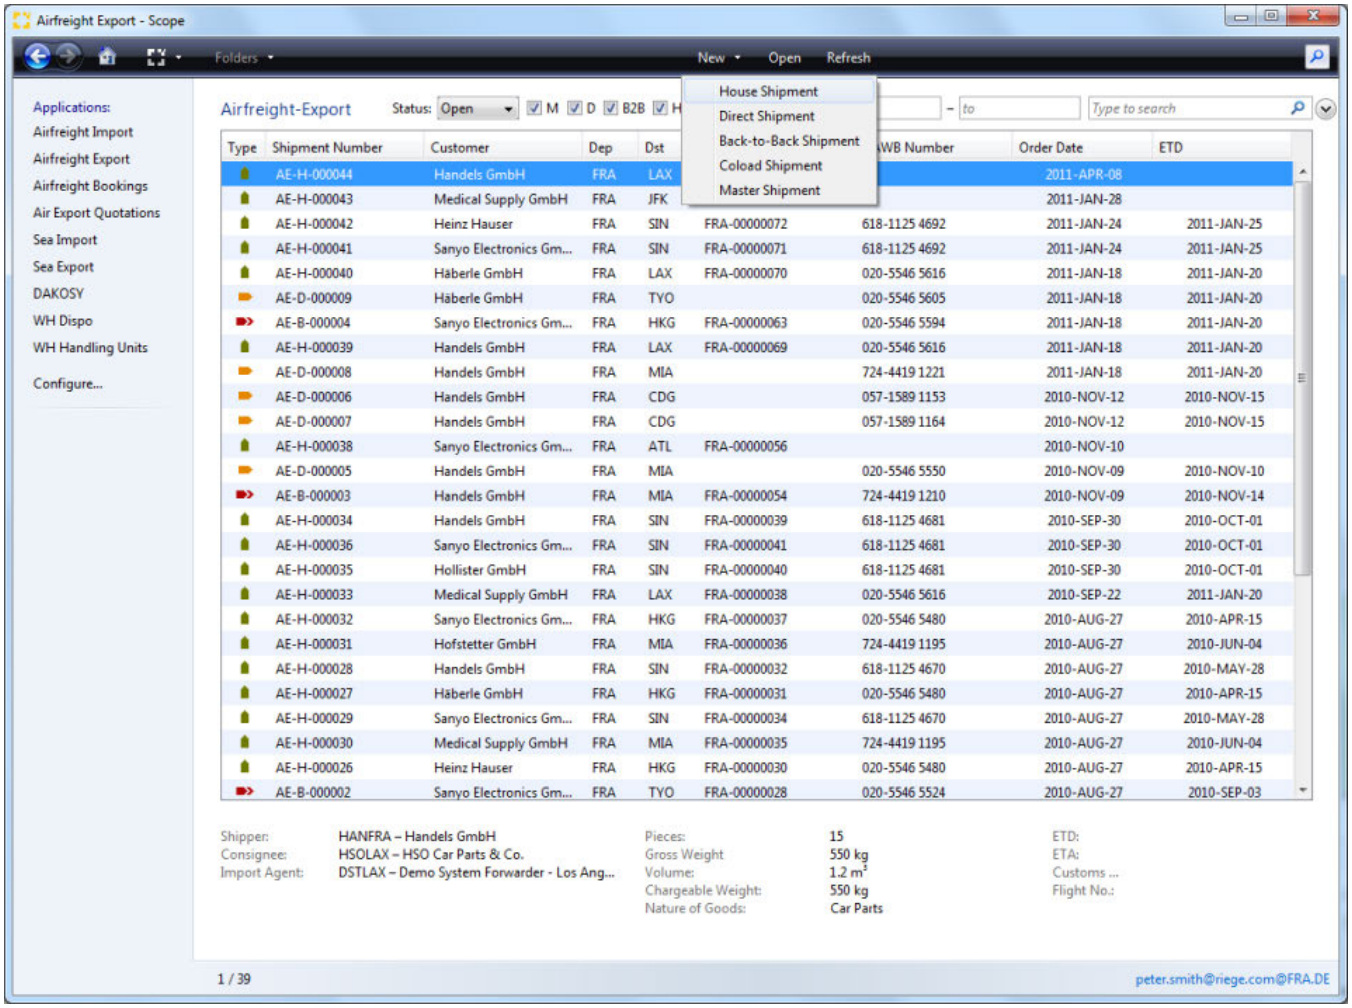
Introduction

House shipments are created within air freight exports in addition to Consolidated, Direct and Back2Back. A House shipment can be combined with other shipments into a Consolidated shipment. A House shipment is usually between the original shipper and the final consignee, in contrast a consolidated shipment - where multiple single House shipments were combined - is typically from the Export Agent to the Import Agent.
The goal of creating house shipments is to consolidate multiple house shipments under a single master shipment, because the greater the combined total weight/volume of the shipments, the more favorable the rates for air transport costs.

The name House shipment derives from the fact that the shipment is an "in-house transport" and will be processed between shipper and agents and consignee. The airline (carrier) is not involved at this level of transportation.

The following operations can be handled in this application: data entry, invoices for the house airwaybill (HAWB), printing of documents, costs, revenues and delivery notes.

Description



Select ***New - House shipment*** to create a new house shipment.
Select ***Open*** to open an existing shipment highlighted in the overview. Alternatively the shipment can also be ***Double Clicked*** and this will open the shipment in the full shipment editor.

The function of each program editor is described here:

- Billing - House shipment - Airfreight Export
- Documents - House shipment - Airfreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- E-Mail - House Shipment - Airfreight Export
- General - House Shipment - Airfreight Export
- Jobcosting - House Shipment - Airfreight Export
- Tracking - House shipment - Air Freight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

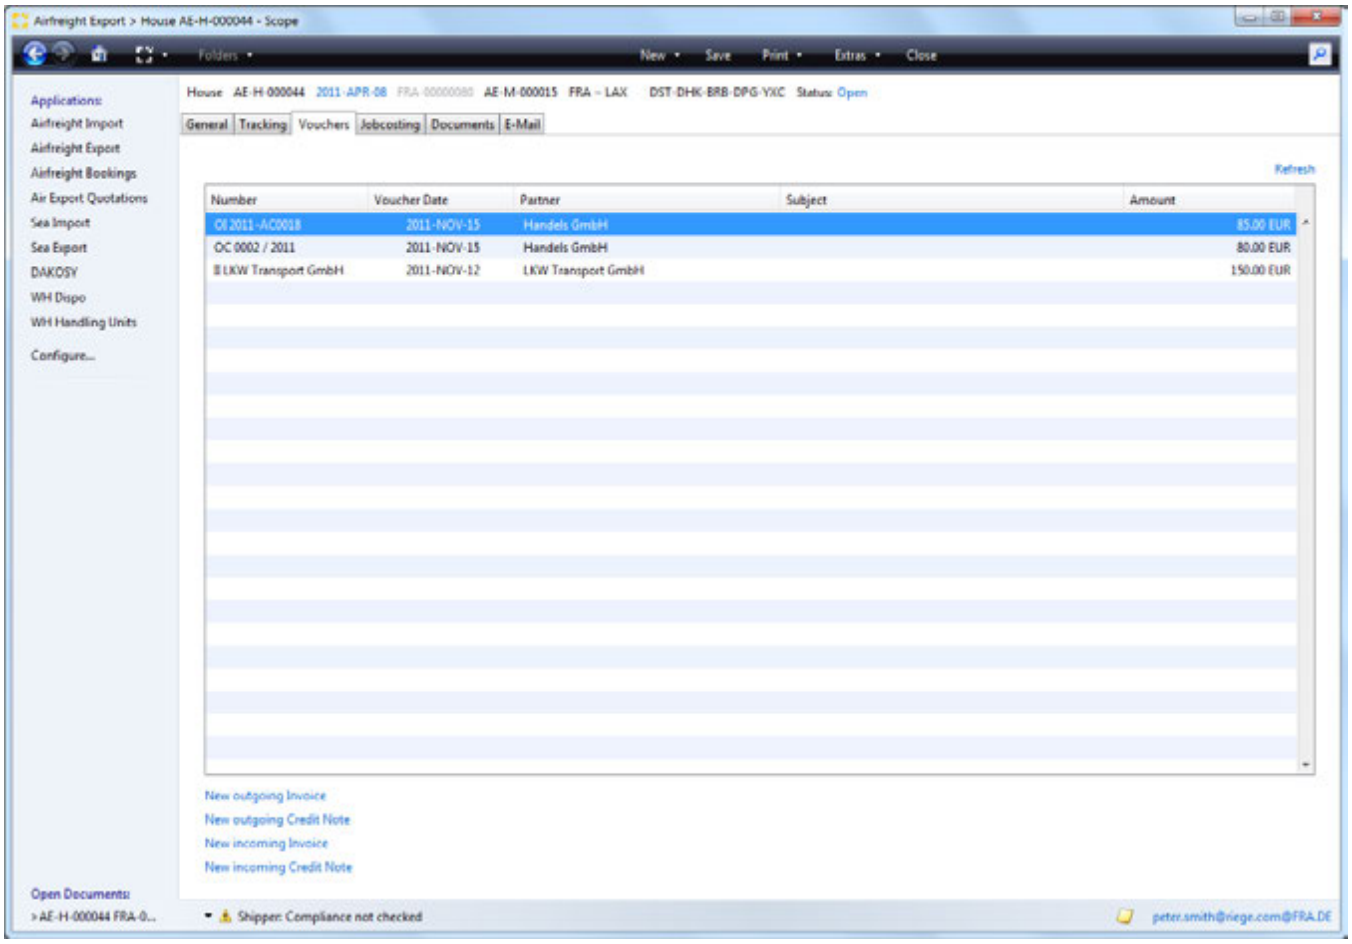
Billing - House shipment - Airfreight Export

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Tab **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

New Outgoing Credit Note

Incoming Invoice - Billing - House shipment - Airfreight Export

- Introduction
- Description

Introduction

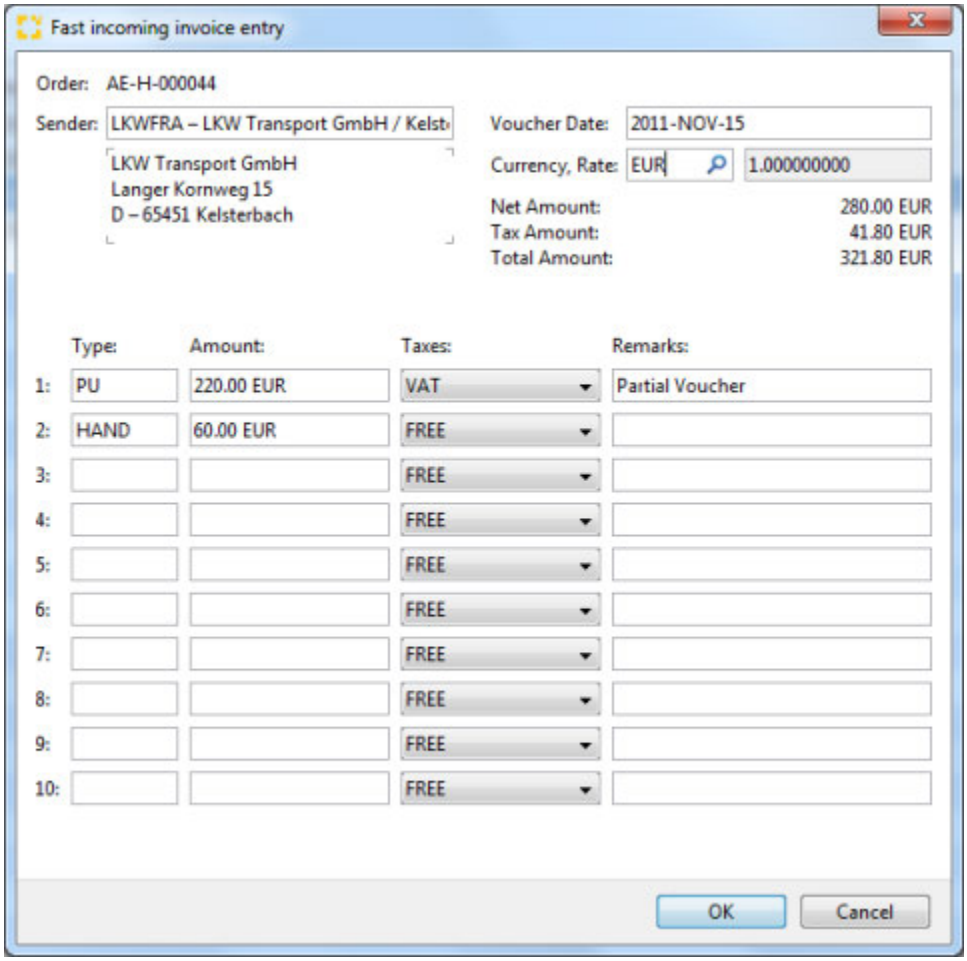
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

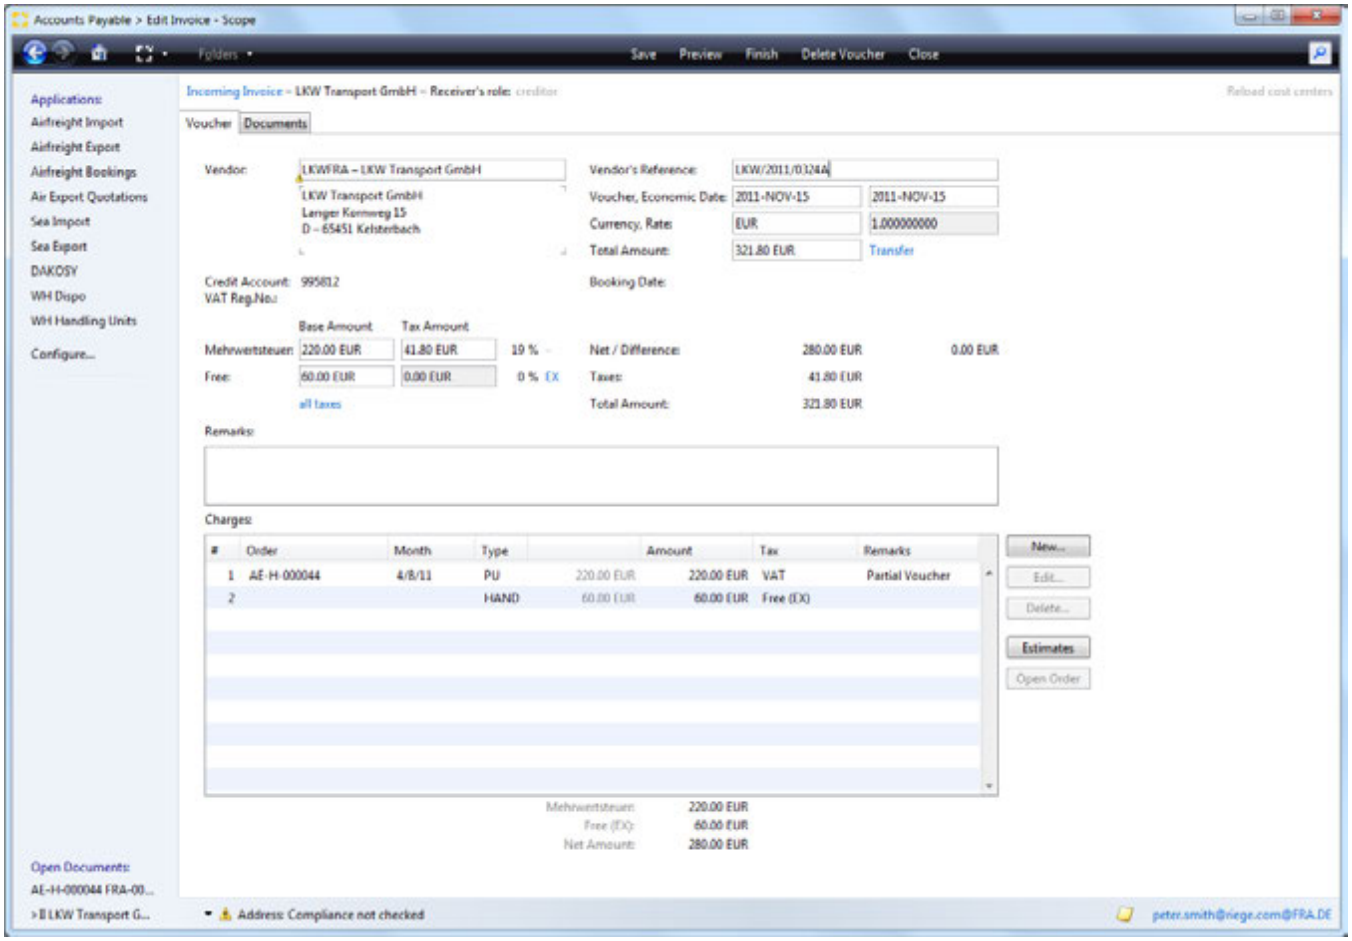
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

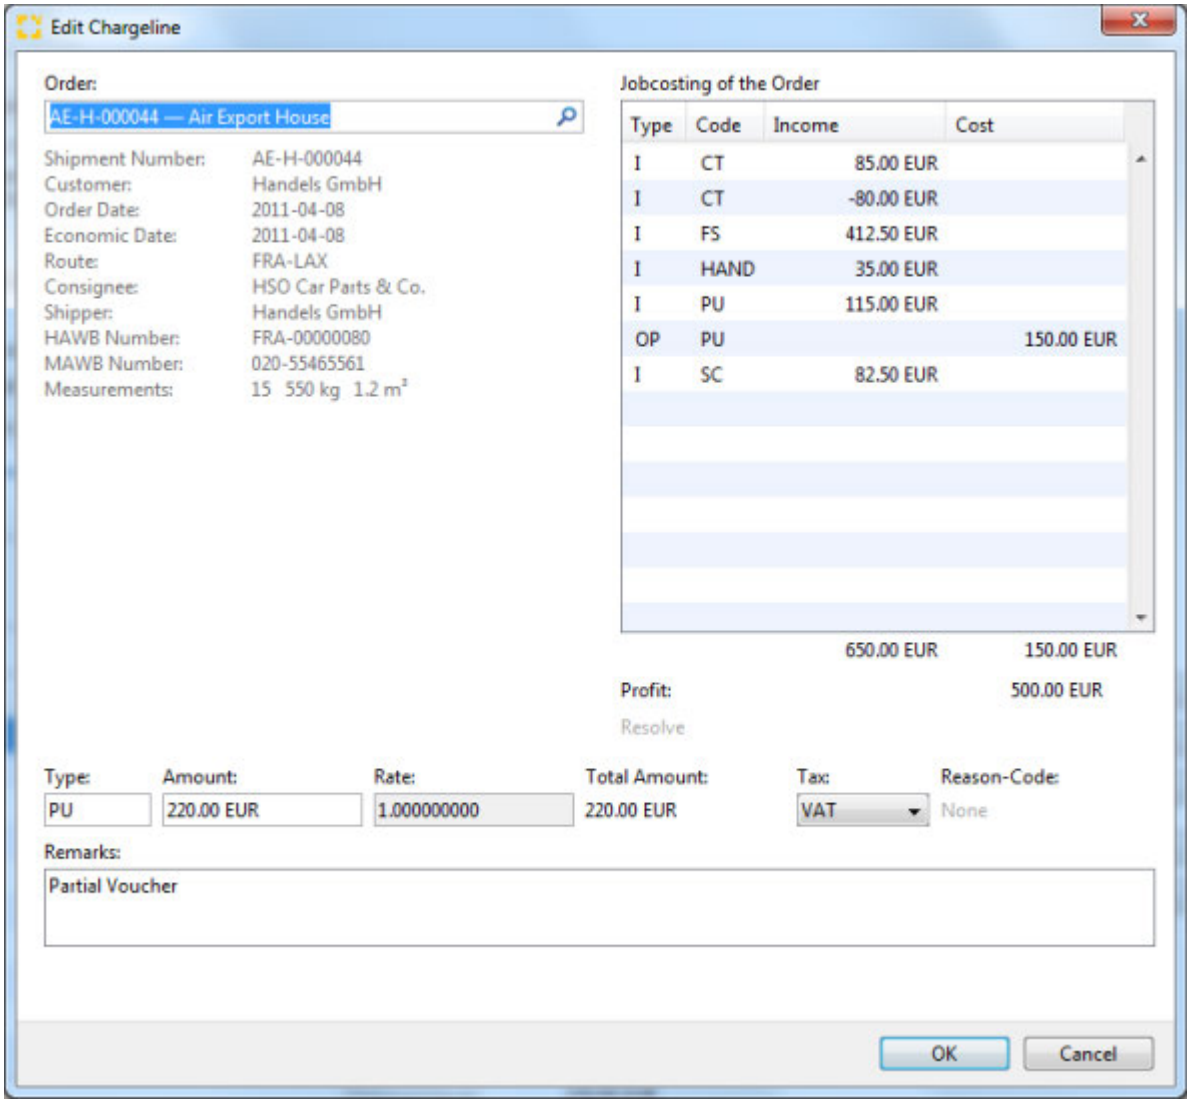
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

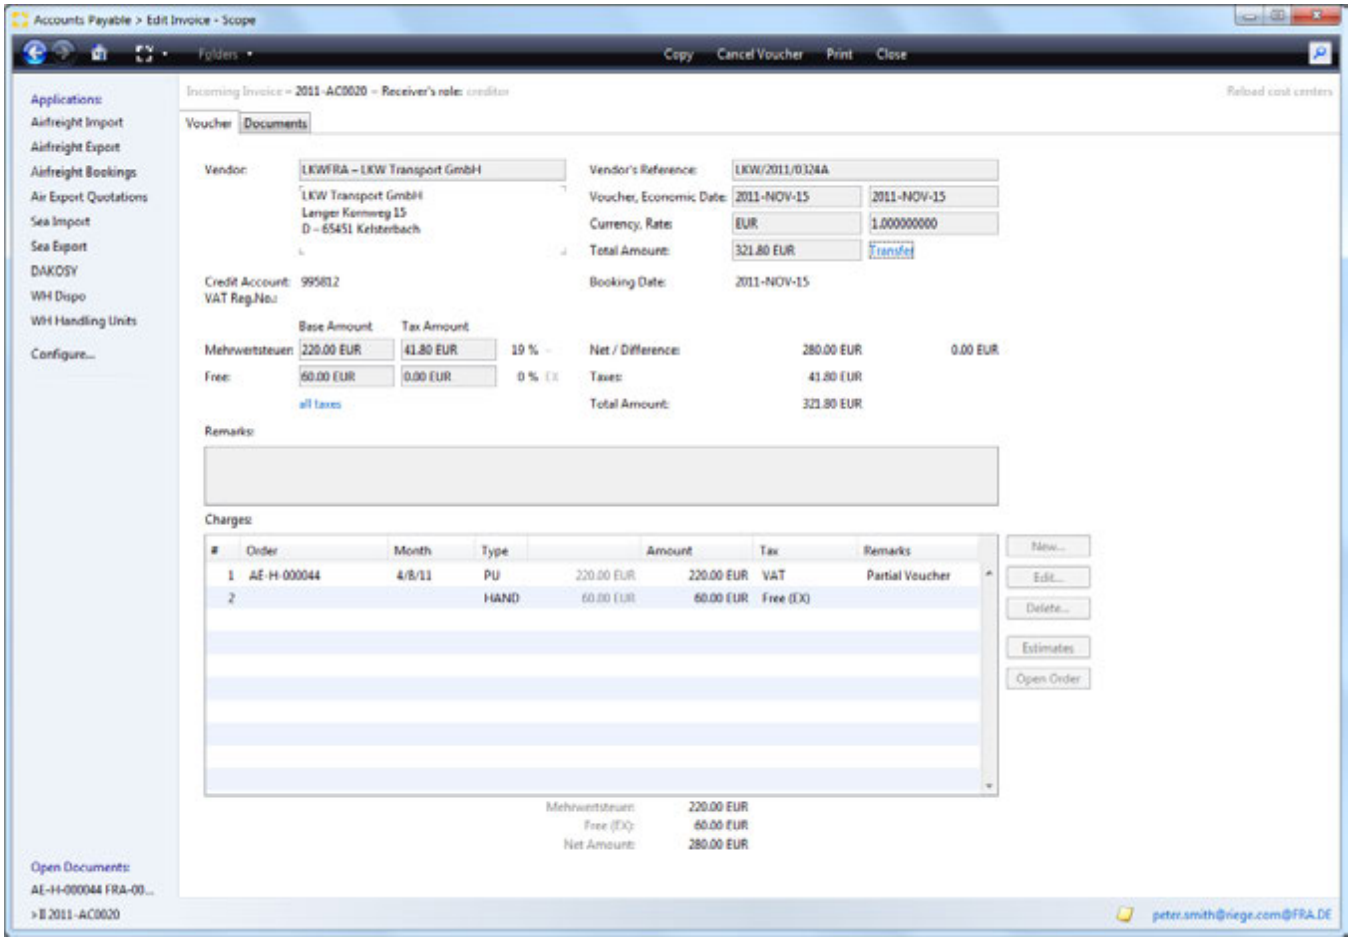
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Outgoing Voucher - Invoice - House Shipment - Airfreight Export

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

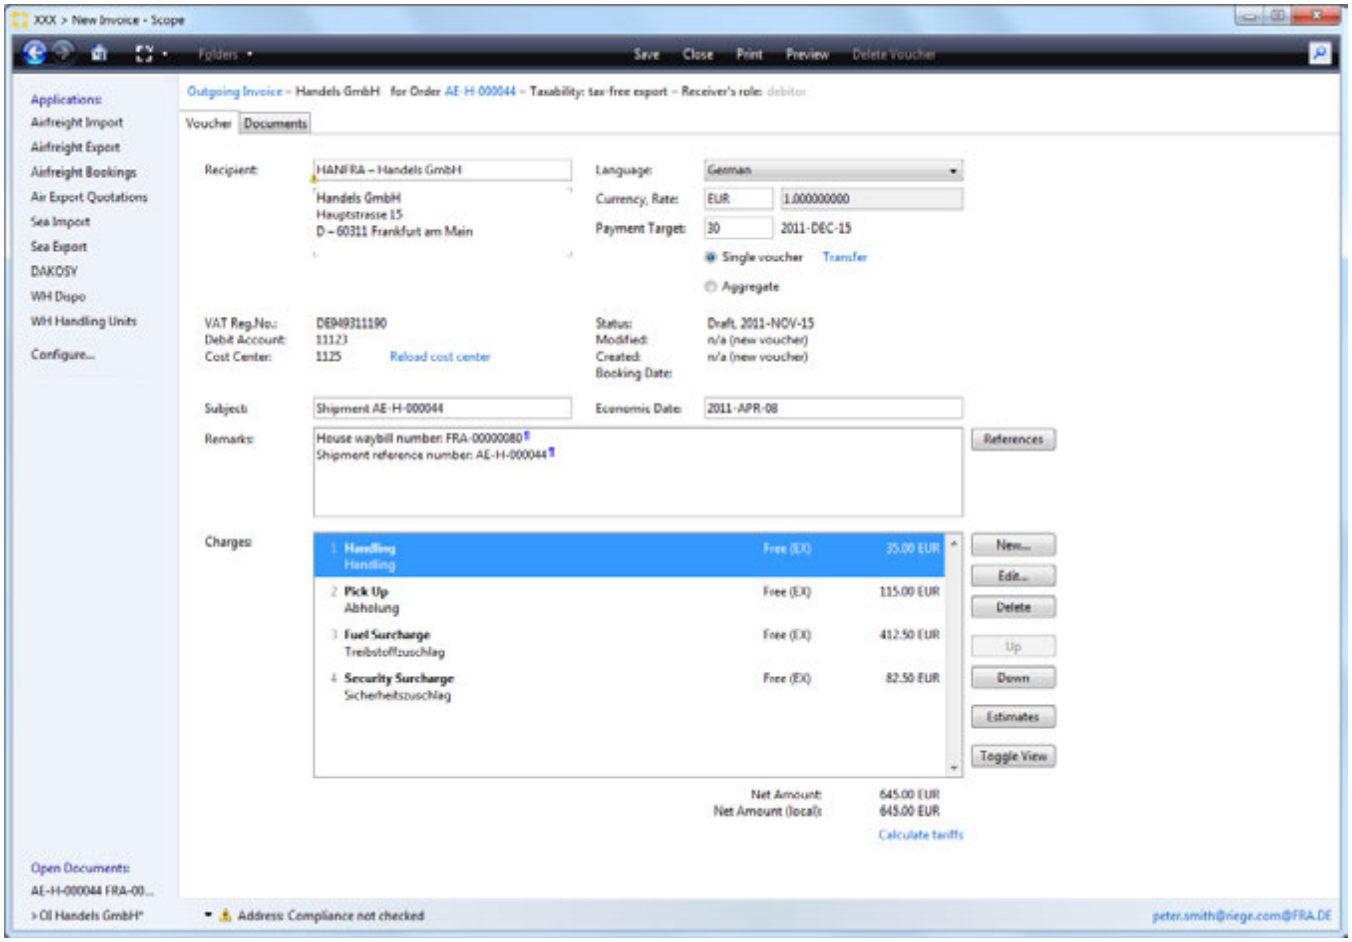
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

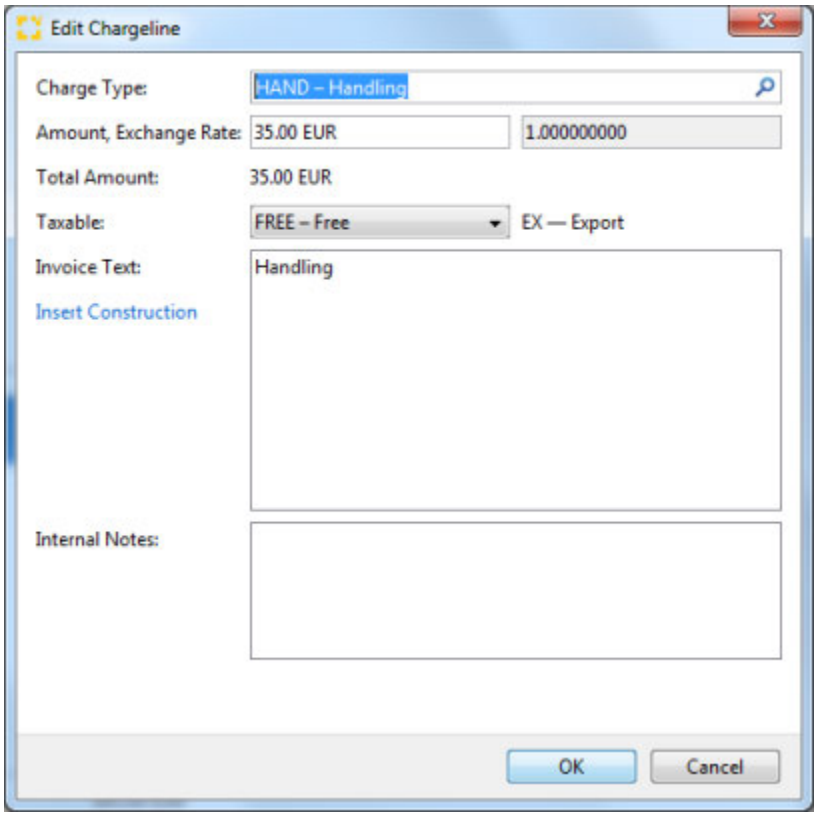
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

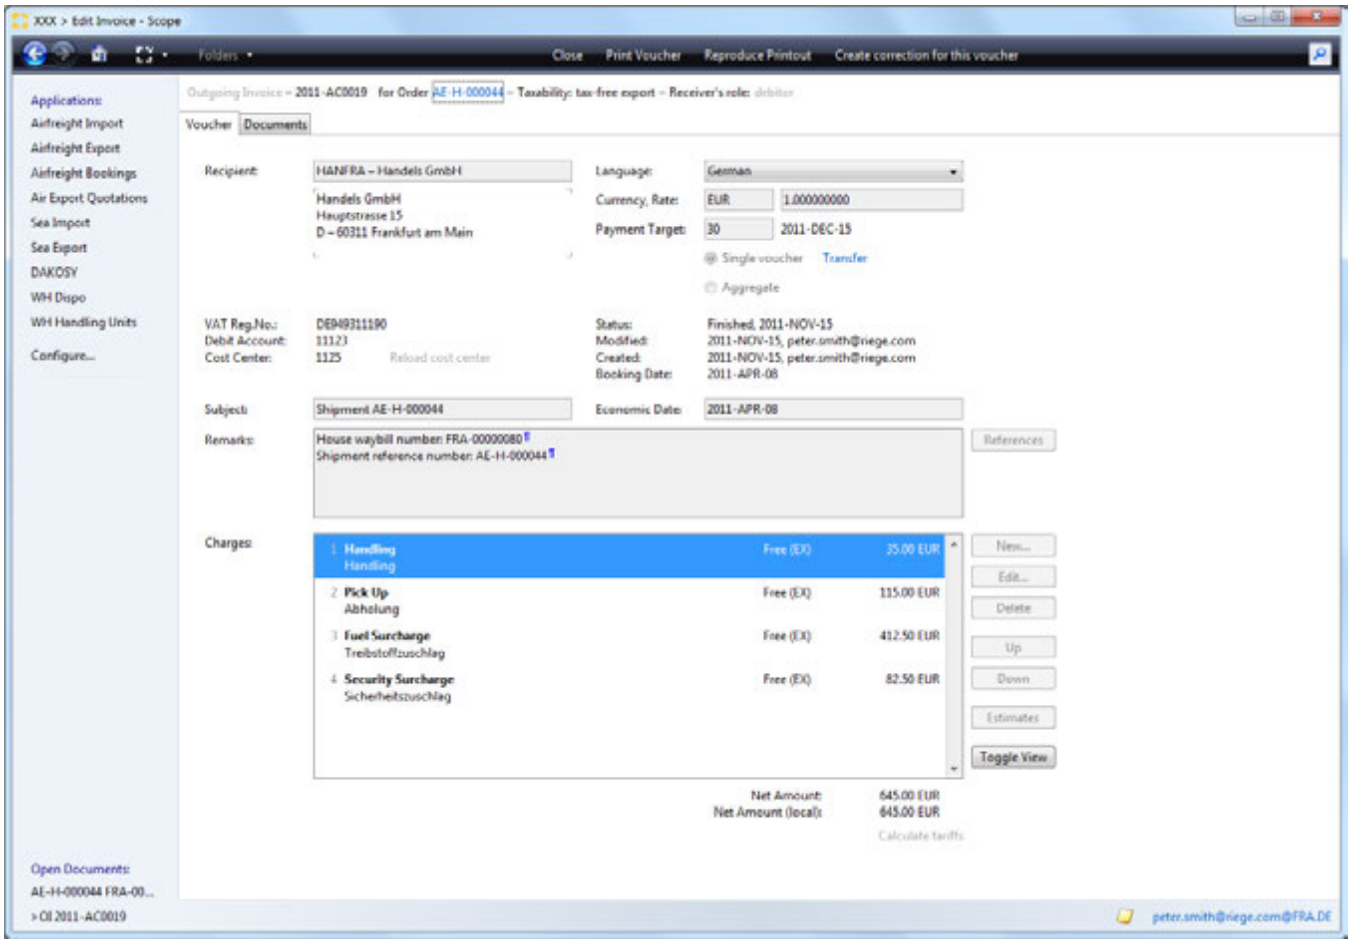
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

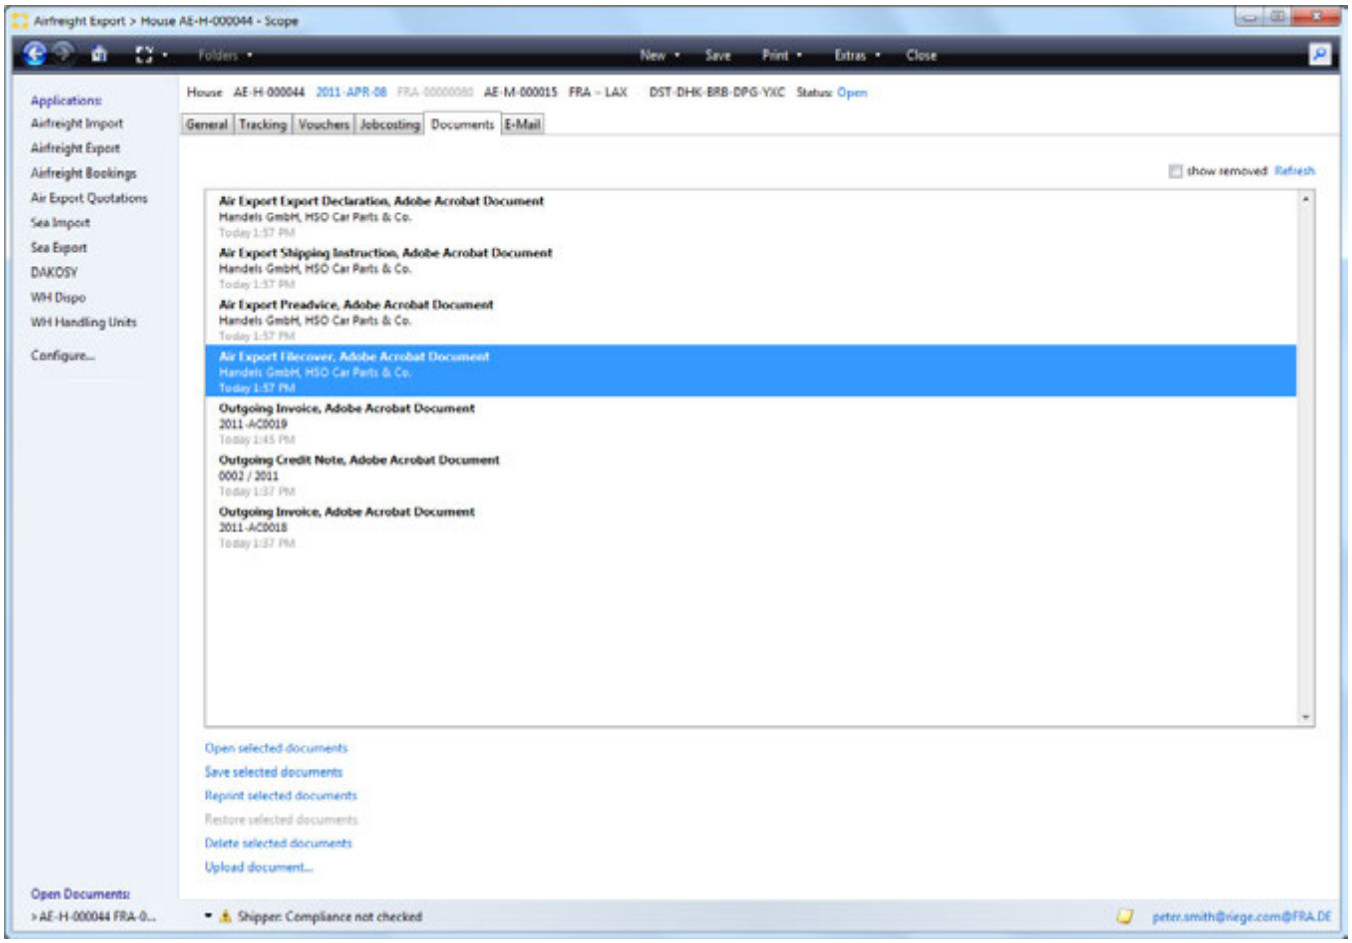
Documents - House shipment - Airfreight Export

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

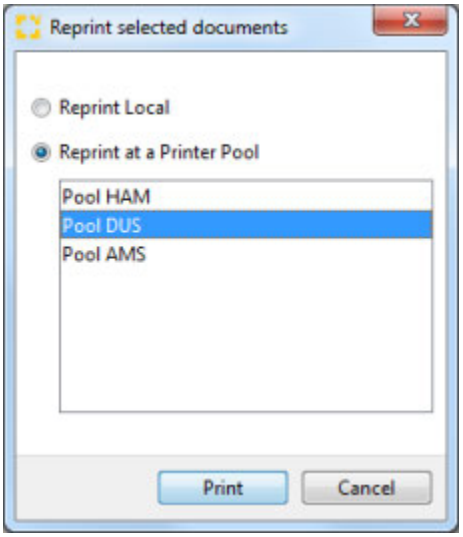
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

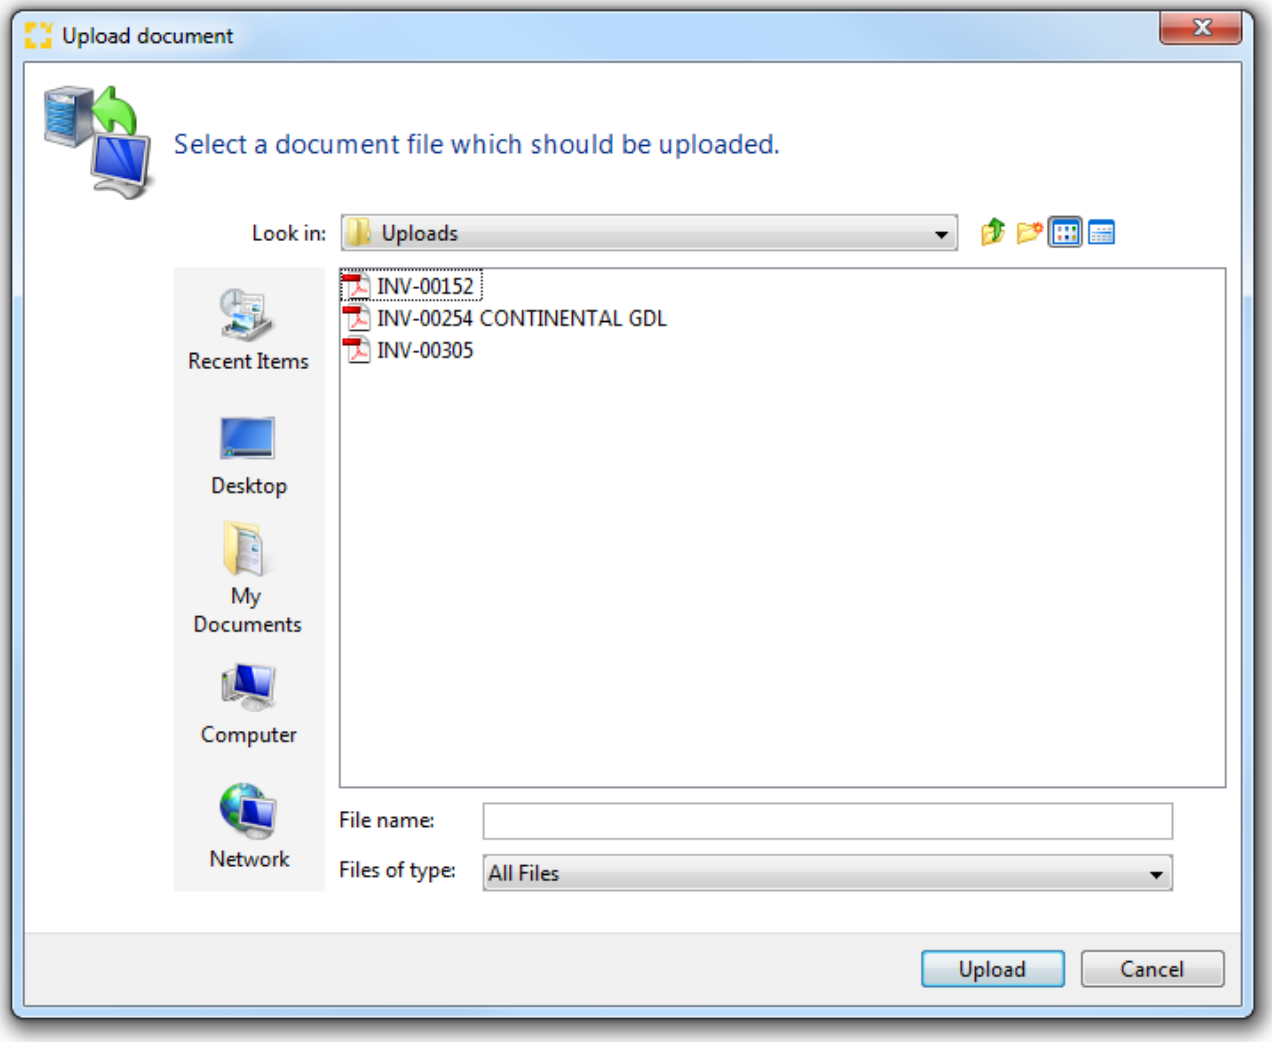
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

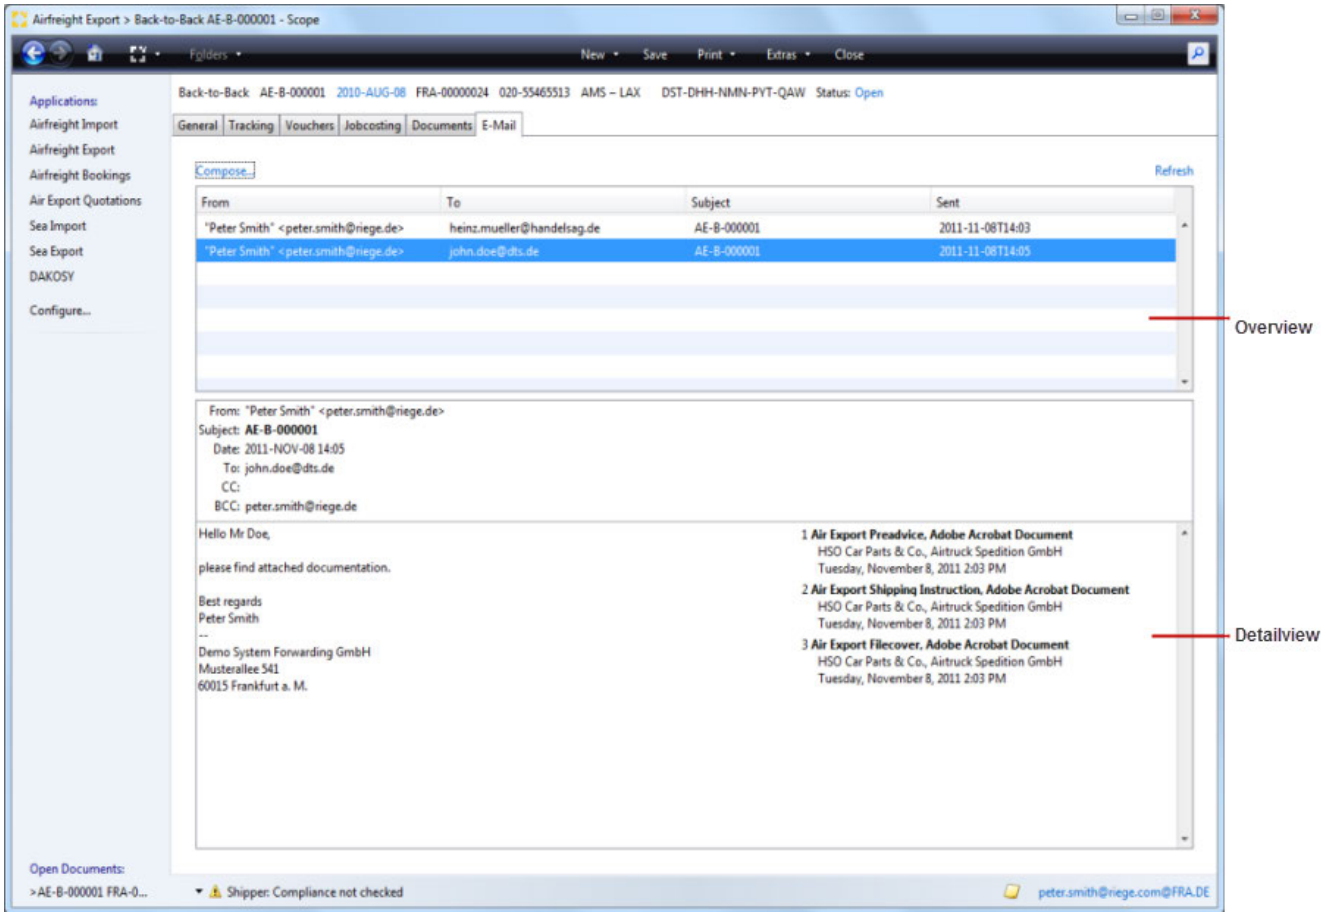
E-Mail - House Shipment - Airfreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

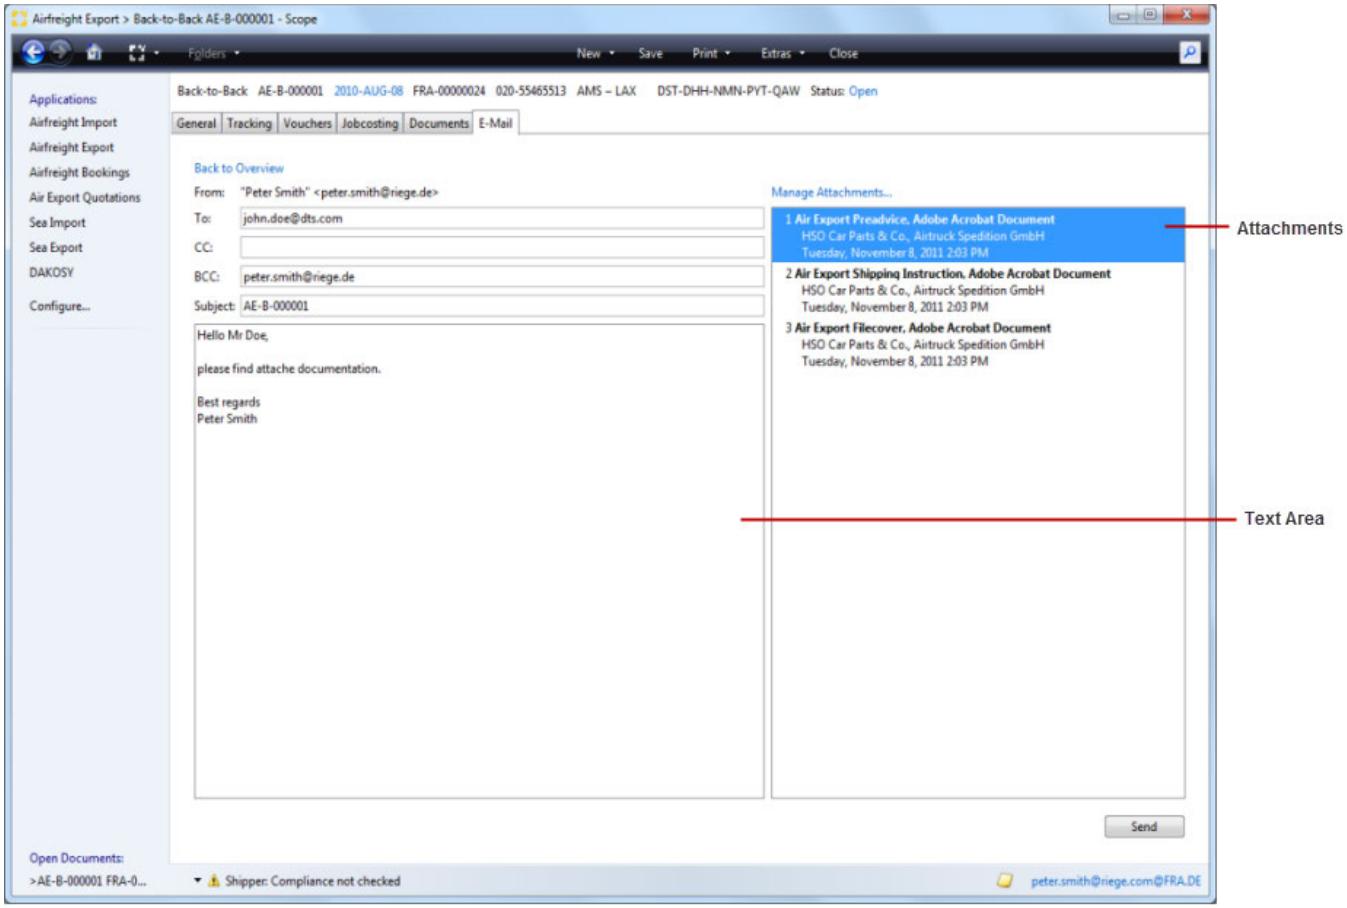
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

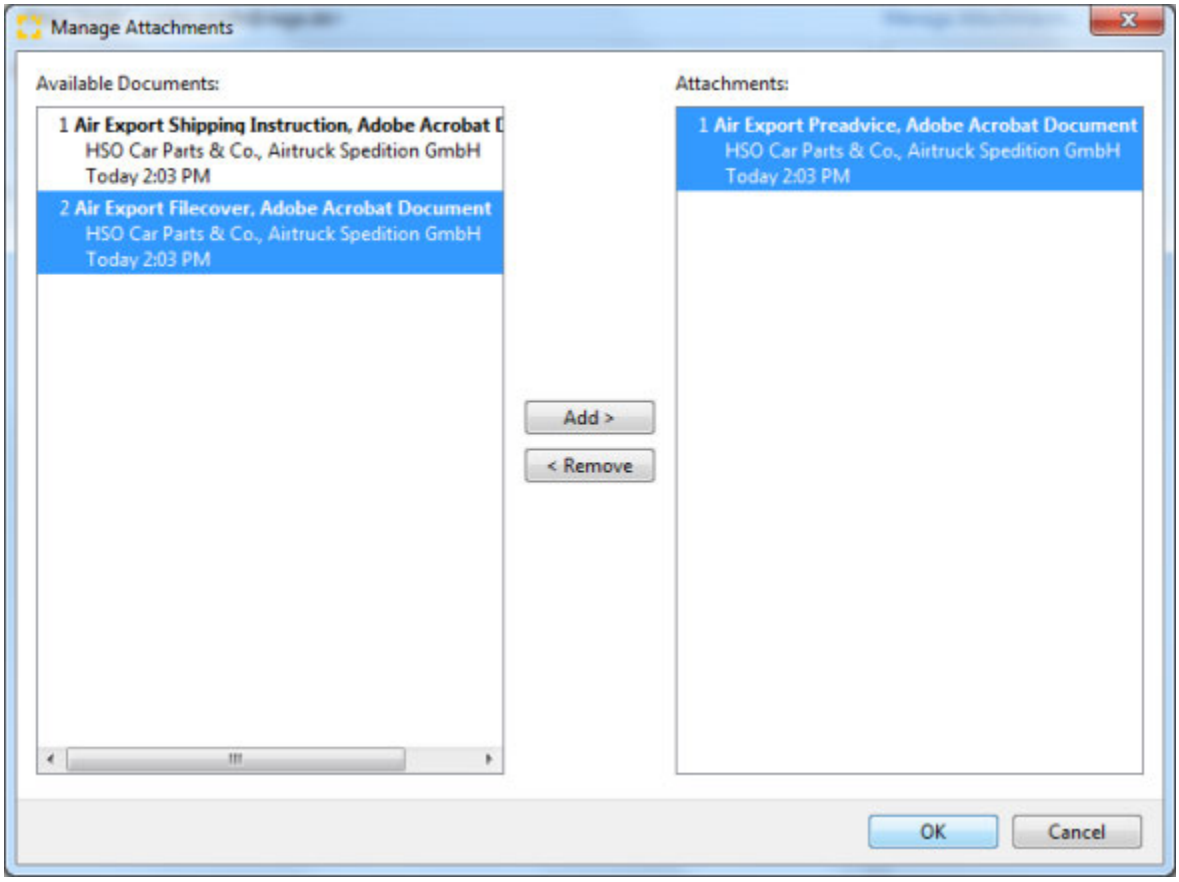
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

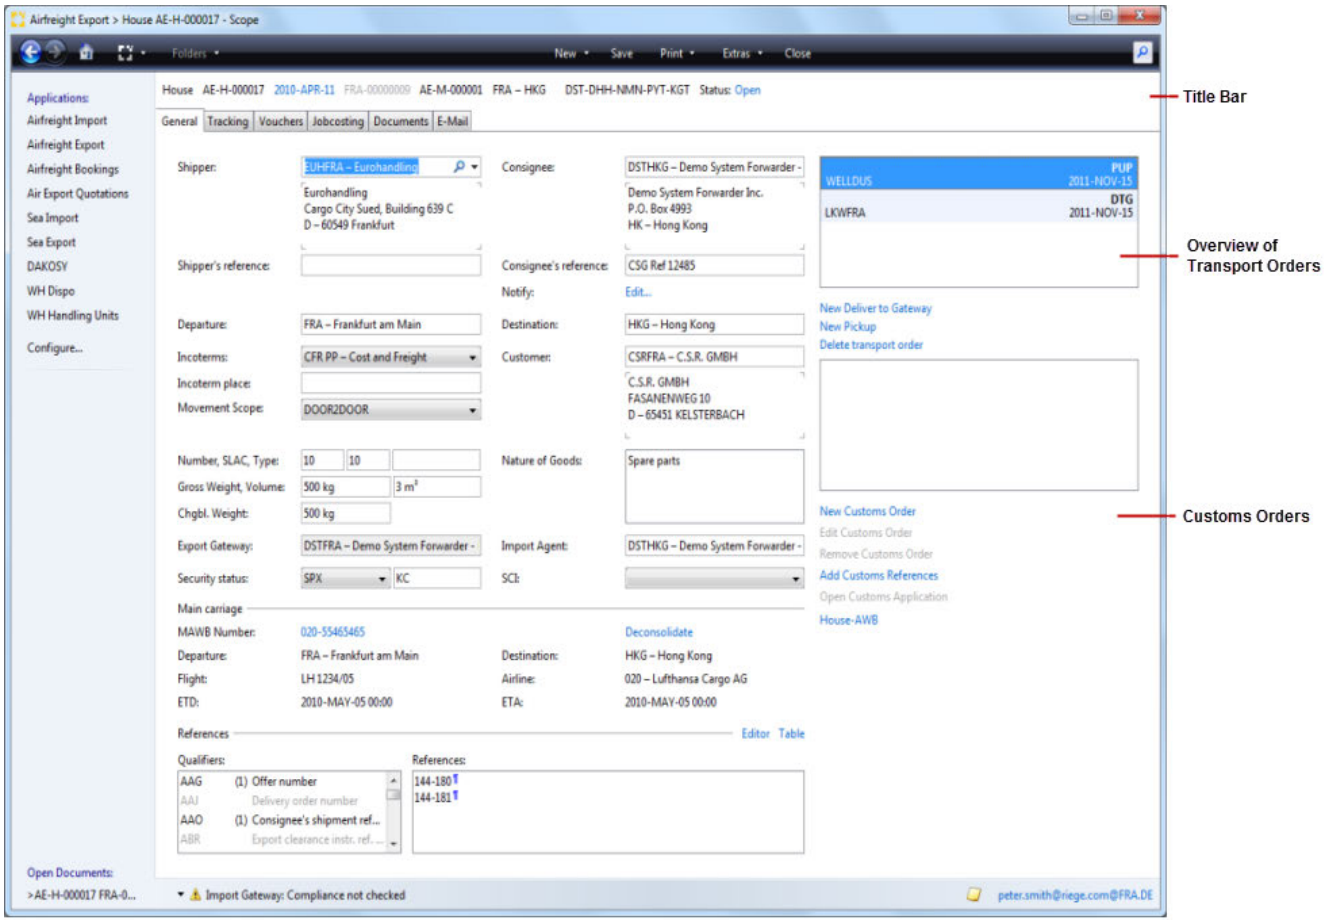
General - House Shipment - Airfreight Export

- Introduction
- Description
- General Fields
- Main Carriage (planned)
- References

Introduction

The general tab of the air export shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



Save

The *save* option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.
Currently the following documents are available:

- File cover
- Advice of Departure
- Release Note (or certificate of shipment)
- Certificate of Export
- House-Labels

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Extras

Offers the following extra actions:

- Finish, opens popup-window to finish the shipment.
- Create Template, opens popup-window to create template for shipments.
- Change shipment type, opens a pop-up window to change the type of the shipment.

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- **Type of shipment**
  Type of shipment. In a house shipment it´s *house*
- **Shipment number**
  Assigned by the system after the shipment has been saved for the first time.
- **Service date**
  The service date of a shipment is set as follows:
  When present, ETD (Estimated Time of Departure / Expected Time of Departure)
  -otherwise
  If an air waybill has been printed, date of air waybill (AWB) printing.
  -otherwise
  The current date when the shipment is first saved.
  The date will not change unless it is clicked (popup-window) and will update/ revise the actual correct date. (This can be necessary if the shipment number contains the service/ settlement period)
- **Air Waybill number**
  HAWB number created by the system when the shipment is first saved.
- **Consolidated shipment number**
  Shipment number of master shipment where house shipments has been consolidated.
- **Departure airport - Destination airport**
  Departure and destination of the shipment.
- **Security advice**
  Security advice, e.g. CAO (Cargo Aircraft Only). This reference note will be displayed in special shipments, e.g. DGR (Dangerous Goods Regulation).
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Quotation**
  By clicking on this action link could open a quotation which is assigned to a shipment. If there is no quotation, the link will be deactivated.
- **Change type of shipment**
  By clicking on this action link, the user will be able to change the type of shipment.

General Fields

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Incoterms

The delivery terms for the shipment

Incoterms Place

The place name referenced by the incoterms.

Movement Scope

Movement Scope of the shipment.

Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where among other things, a new partner may be created or an existing partner may be edited.

Consignee

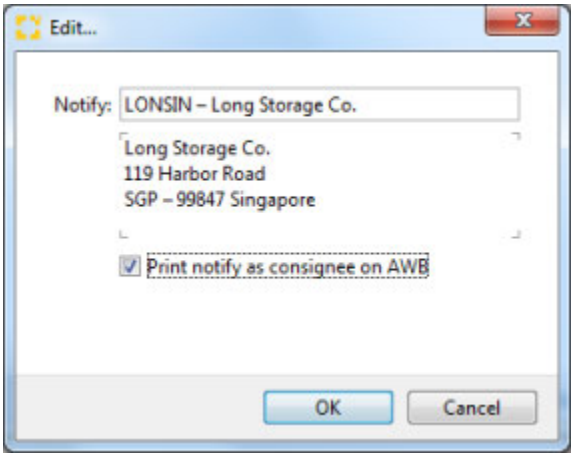
Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where among other things, a new partner may be created or an existing partner may be edited.

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

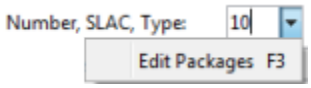
> In the master data of the (partner), if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages. Within the number field, press F3 or select the drop down menu for access to the package editor. The package editor allows much greater detail to be entered about individual packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

SLAC

The shippers load and count of the packages. This number must be the same as or greater than the total number of packages.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Security status

The security status of the consignment (of a shipment) according to Regulation (EC) No 300/2008. The following status are currently possible:

- not secured (NSC)
- secure for all-cargo and all-mail aircraft only (SCO)
- secure for passenger, all-cargo and all-mail aircraft (SPX)

Reason for granting the security status

If the security status of the shipment is set as "SCO" or "SPX", then the reason for granting these statuses is required as per Regulation (EC) No 300/2008. The following status are currently possible:

- AC - Account Consignor
- HS - Handsearch
- KC - Known Consignor
- SC - Simulation Chamber
- TD - Trace Detection
- XR - Secured by XRAY

Non-secure items (not secured) do not require a reason security code. The safety data for Business or private shippers can be maintained in the partner master data.

Further information about security is available in the role descriptions RegB UAN and secure shipper.

Manifest information

Additional data to be printed on cargo and Customs manifests that relate to this house shipment. It is possible to select from predefined text blocks

Export-Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Import agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function.

The import agent depends on the destination. The field will use the following logic when presenting possible agent choices:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- If no destination has been entered, all agents are offered for selection.
- If a destination has been entered and the master data stores only one agent stored for that destination, then that agent is automatically used the import agent.
- If a destination has been entered and the master data for that destination has been assigned more than one agent, the field is not initialized. Instead, all stored agents are offered for selection.
- If a destination has been entered for which no partner has been assigned as an agent, then the field cannot be completed until an import agent has been created.

Main Carriage (planned)

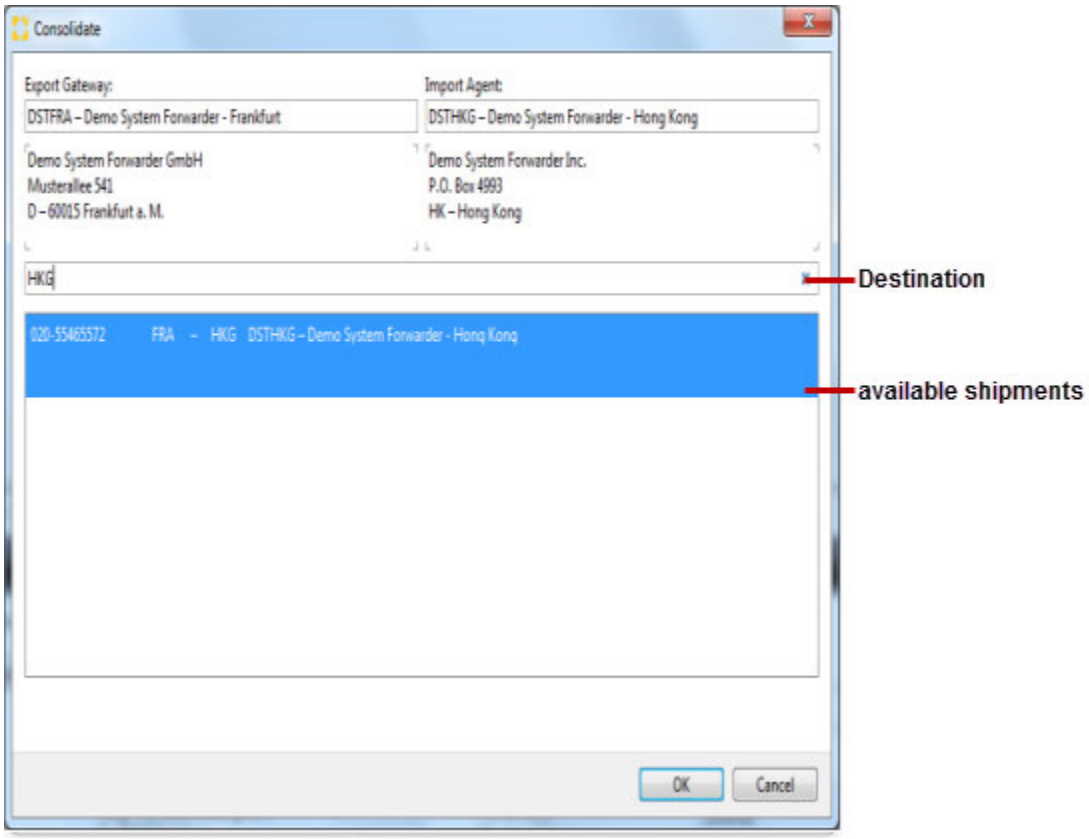
MAWB Number: MAWB No. Flight date / consolidate / Deconsolidate

This area of the house shipments allows the house to be be consolidated on a master shipment or deconsolidated if already assigned to an open master shipment. If the house has already been consolidated then the master shipment can be opened directly at this point to complete the consolidation. Alternatively it is possible to exit the house shipment and complete the consolidation or deconsolidate in the master shipment application.

If the "consolidate" option is taken, a consolidation application appears and whose operation is described below:

1st option Consolidation

A single house shipment can be consolidated on a master with this application.



Export Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent agent may be found with the search field field function. Normally the agent who creates house shipment is also the export gateway.

Import agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Consolidations

Based on the information in the fields **export gateway**, **destination** and **import agent**, all available open consolidations that match these criteria will be displayed. If no import agent or destination is input, then all open masters are visible. Completing both or either of the import agent and destination fields will narrow the list of available masters. When the correct master is highlighted, click **OK** to confirm consolidation of the house on that master.

OK

Confirms the selection and closes the editor.

Cancel

closes the editor without further action.

2nd option. MAWB Number and Flight data

If the house is already consolidated then the MAWB number and flight details will appear instead of the **consolidate** option. This link can be clicked to relaunch the consolidation application and adjustments to the consolidation details can be made.

3rd option. Deconsolidate

If this action link appears it will allow the house shipment to be deconsolidated from a master.

References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

New pick-up

This action link will enable a new pick-up note for the shipment to be created. Clicking the link will open the pick-up note editor.

New delivery to gateway

this action link will allow a transport order to be created in order to haul the goods to the gateway. Clicking the link opens the gateway delivery order application.

- If the agents own office is shown as the gateway then it is assumed that the transport order will be to the airport. If a remote station is shown then it is assumed that the transport order is to that remote gateway. See the chapter on truck manifests for more information.
- Existing transport orders appear in the overview of transport orders. They can be double-clicked to reopen them for editing and printing.

Delete transport order

This option will delete any delivery or pickup note that has already been created. The document highlighted in the pane showing existing delivery/pickup notes will be deleted. It is only possible to delete a pickup note or transport order if it has not been printed and if there are no entries in the costs and revenue section of the shipment.

House-AWB

Opens the house AWB editor to capture information relating to the house bill of lading or to edit and print existing house AWB data.

New Customs order

Opens the customs order editor to create new customs orders.

Edit Customs order

Opens the customs order editor to edit an existing customs order highlighted in the pane showing customs orders.

Remove Customs order

Remove an existing customs order highlighted in the list of created customs orders.

Add Customs references

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens the Add Customs references application. Up to 10 additional customs references may be added.

Collective customs

Allows the creation of collective customs

- More information on individual customs applications see the chapter on Customs.

Tipp

Use the key combination **Ctrl + I** to see details about the user session including email address and phone number. It is also possible to take over the session from the existing user.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Change type of shipment - General - House Shipment - Airfreight Export

- Introduction
- Description

Introduction

This option is used when it is occasionally necessary to change a shipment from one type to another type of shipment after the shipment has been created. An example may be where a back-to-back shipment is created, but subsequently new house shipments arrive for the same destination. In this case it would be advantageous to change the back-to-back to a regular house shipment in order for it to be added to a consolidation and thus obtain better rates for the shipment.

Description

Shipments can be changed to different shipment types as per the following table:

Possible change in..	House shipment	Back-to-Back-Shipment	Direct Shipment	Master Shipment with consolidated Houses
House Shipment		✓	✓	
Back-to-Back-Shipment	✓		✓	✓
Direct Shipment	✓	✓		✓

Master shipment with consolidated houses

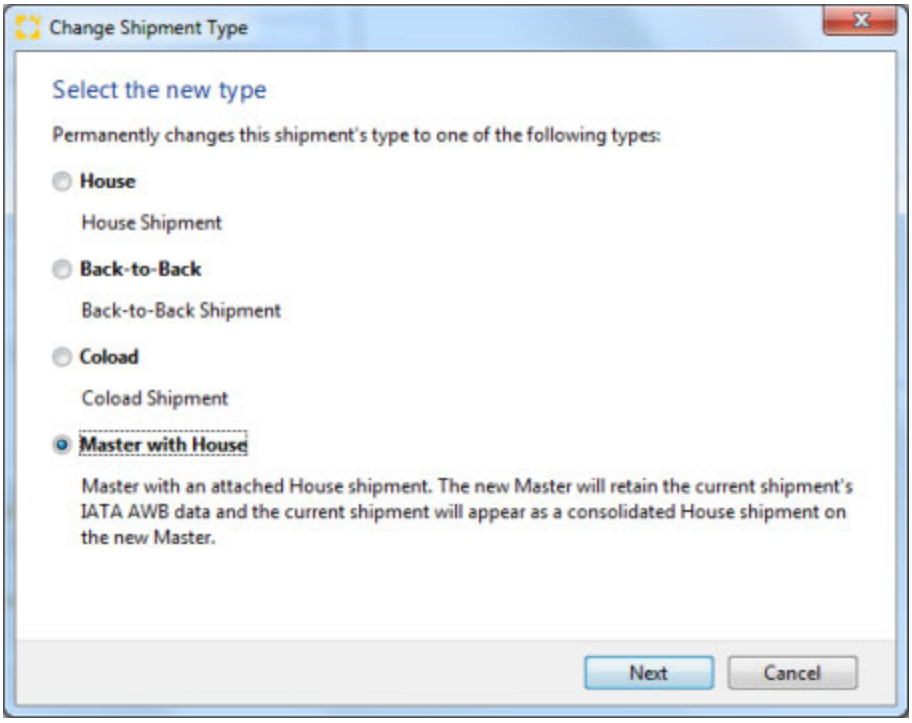
When a back-to-back shipment is changed to a regular house shipment and consolidated on a new master shipment, the IATA AWB of the new master is applied to the house shipment automatically as is all the rest of the master data that is relevant to the house.

Shipment types should not be changed in the following circumstances:

- A house shipment that is already consolidated on a master.
- Documents for the shipment have been printed.
- Vouchers have been created for the shipment.
- A master shipment cannot be changed.

After clicking on the action link to *change shipment type*, a pop-up window appears. The dialogue below shows changing a back-to-back shipment to a master shipment with houses.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Select the desired option to make the required change.

Next

Starts the preliminary examination of the proposed action.

Cancel

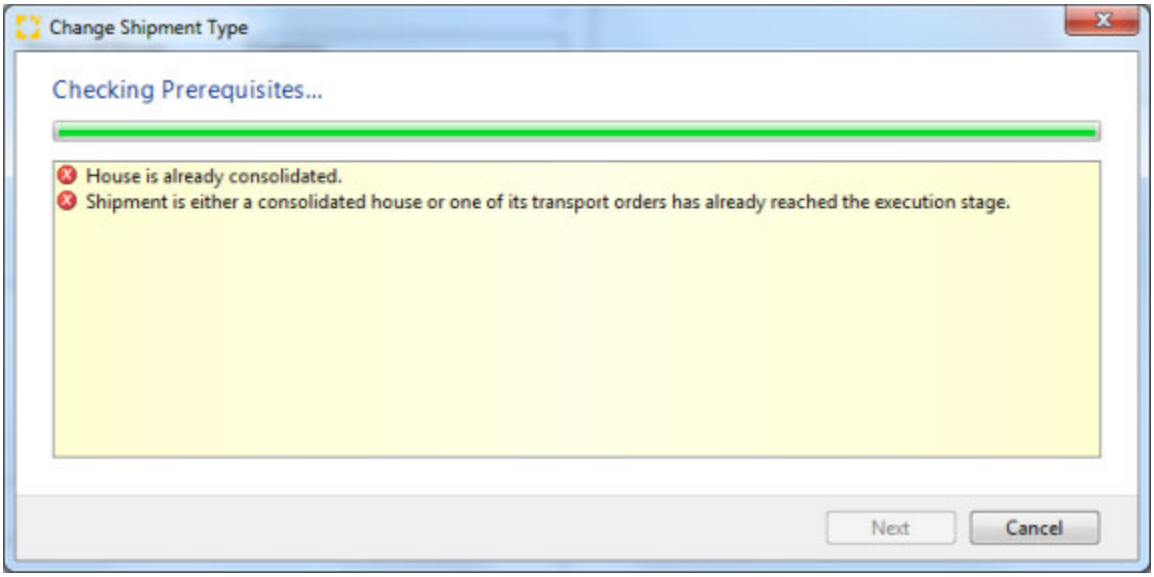
Closes the pop-up window without further action.

Preliminary

After starting the process to change the shipment type a test is carried out to determine if the change is possible.

Error during the preliminary examination.

If a problem occurs during the preliminary processes of changing the shipment type, then a pop-up window appears with error messages detailing why the change is not possible.



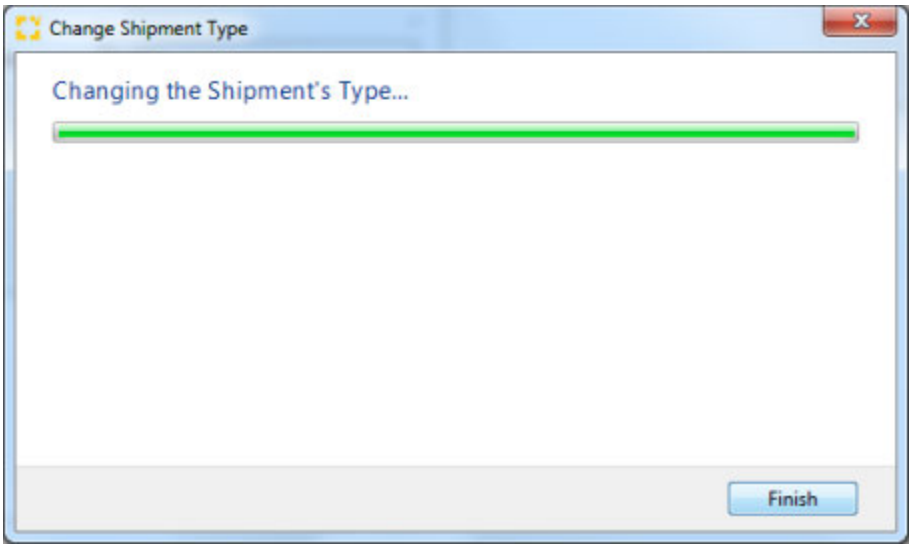
Cancel

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Closes the pop-up window without further action.

Passed preliminary investigation.

If the proposed change passes without error, the modification action is performed.



Finish

Saves the change and closed the pop-up window.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Finish - General - House shipment - Airfreight export

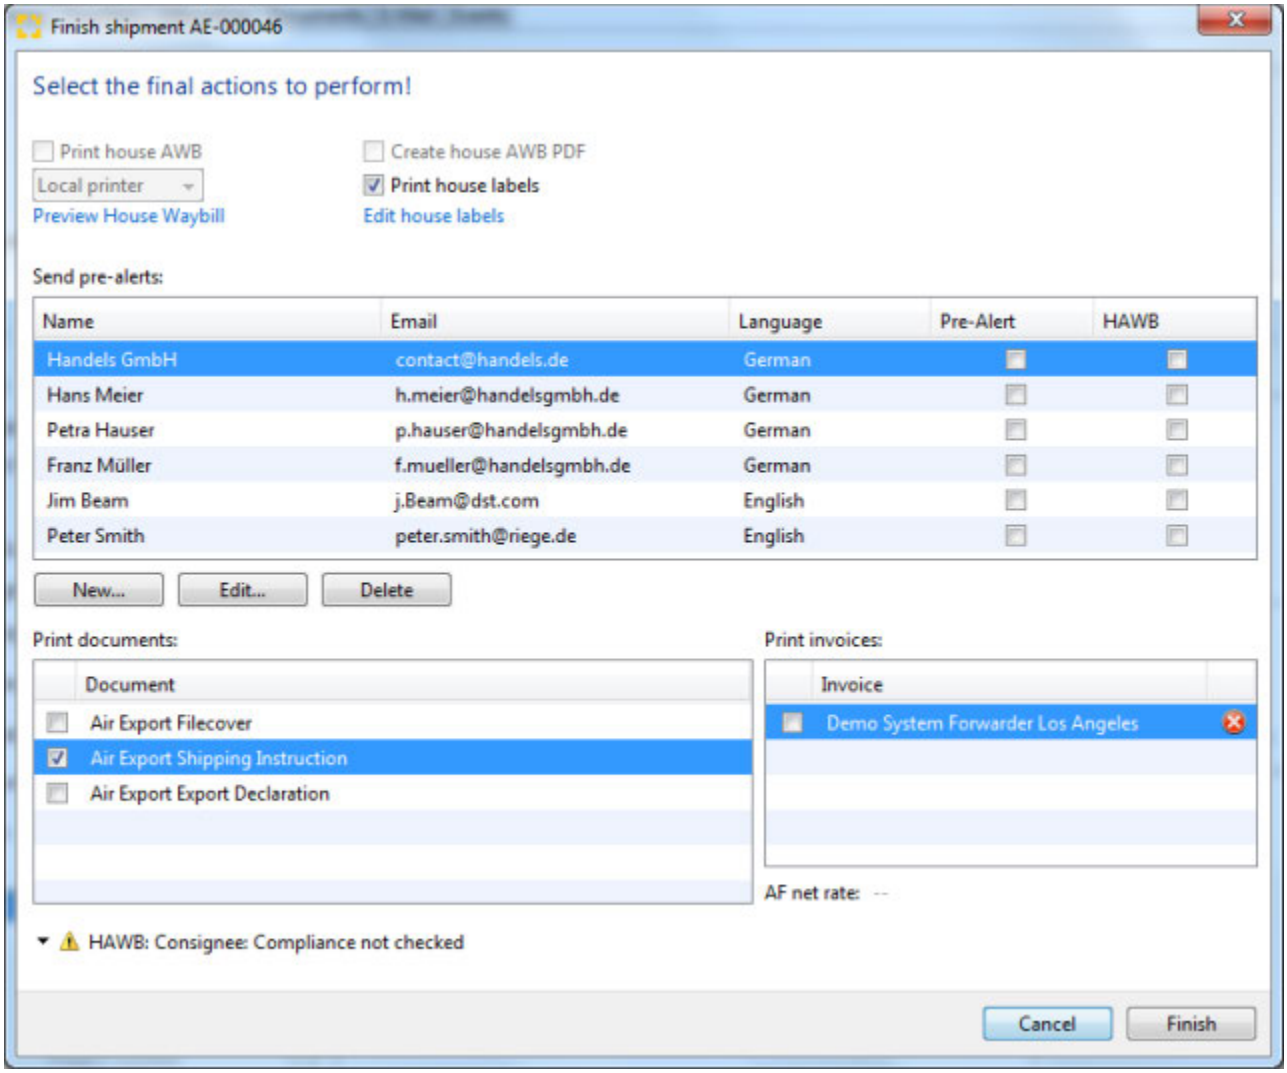
- Introduction
- Description

Introduction

In this application is a one stop screen to print AWB's, labels and manifests, and to generate prealerts.

Description

By activating the check boxes described below the corresponding actions are performed when the **Finish** button is clicked in the lower part of the screen.



Printing House-AWB

Check the box to print the house air waybill. The correct print location can be controlled by selecting the correct printer from the printer drop-down list which appears below the AWB check box.

Printing location	Description
local printer	The printout is sent to the predefined default printer.
Gateway-printer	The printout is sent to the predefined default gateway-printer
both/ either	

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

	The printout is sent to predefined local and to gateway-printer.

Create House-AWB PDF

The house air waybill is created as a PDF file in the *Documents* tab

> The creation of the PDF is only possible if the shipment has no validation errors. If there are errors, these are displayed at the bottom of the application window with descriptions of any errors using the icon .

Printing House-Labels

Check the box to print the labels for the shipment.

Edit House-Labels

Opens the Label-Printing editor in a popup window where the print parameters can be edited. This action link is active only if the action *house label printing* has been activated

Advises sent by e-mail

Allows the creation of pre-advises for the shipment and a copy of the airwaybill can be included in the pre-alert e-mail. The contacts for the shipper, consignee and **import agent** will all default to the receiver-table. The names, email addresses and language for these individuals will be derived from the **C ontacts** tab of the partner.

- By activating the check box *pre-alert* and / or *HAWB* the highlighted contact person will automatically receive an e-mail with the appropriate PDF document sent as an attachment.
- The sent e-mails are then listed in the *e-mail* tab

> - If a partner has no check-boxes marked then **no** e-mail is sent to that contact.
> - The language setting of the partner will be used to determine the correct language for the e-mail text of the pre-advises.

New

The **New** button allows additional contact names and e-mail address to be added. The name, e-mail address and language are all inserted manually.

Delete

Removes the selected contact from the recipients table.

Printing documents

Airfreight Export file cover

A file cover is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export shipment advises

A shipment advise is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export "Export certificate"

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

An export certificate is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Invoice Printing

The freight bill is printed on the predefined default printer and a PDF document created in the *Documents* tab.

The freight bill is printed only if:

- It is a system generated invoice (other invoices are not offered here for printout)
- It has not yet been completed and printed (Existing invoices are not offered here for printout)
- It has no validation error (Errors can be seen in the invoice where the the icon  appears on the right edge of the table showing additional error information)

AF-reserves

Here any airfreight accrued liabilities (AF) are shown. Click on the action link to open the accrued liabilities editor and the estimate can be revised as necessary.

Cancel

Close the application without further action.

Finish

Performs the selected actions and closes the application.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

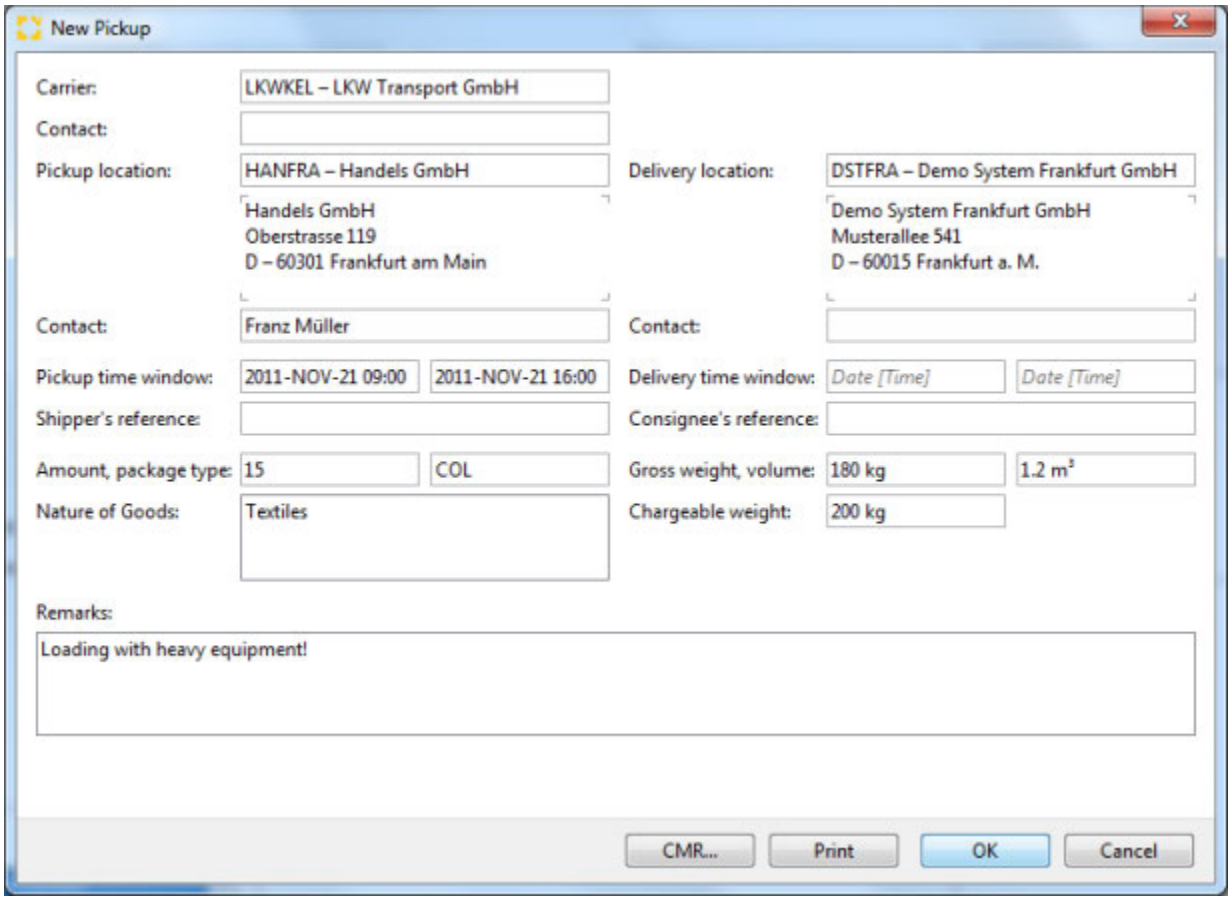
Gateway Delivery - General - House Shipment - Airfreight Export

- Introduction
- Description

Introduction

Create and print a delivery order for transport of the cargo from the satellite office to the export gateway.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired carrier using the search field.

Contact (Carrier)

The **contact name** for the carrier may be entered or selected from the list of contacts for this partner.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the current branch.

Contact (Pickup location)

The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Delivery Location

The address of the gateway to which the consignment is to be delivered. The desired partner can be located with the search field.

Contact (Delivery Location)

The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Pickup time window from/to

The pick up window (Date / Time|Date and time - Field types - User desktop - General]), in which the consignment is to be picked up.

Delivery time window from /to

The delivery window (Date / Time|Date and time - Field types - User desktop - General]), in which the consignment is to be delivered.

Shippers reference

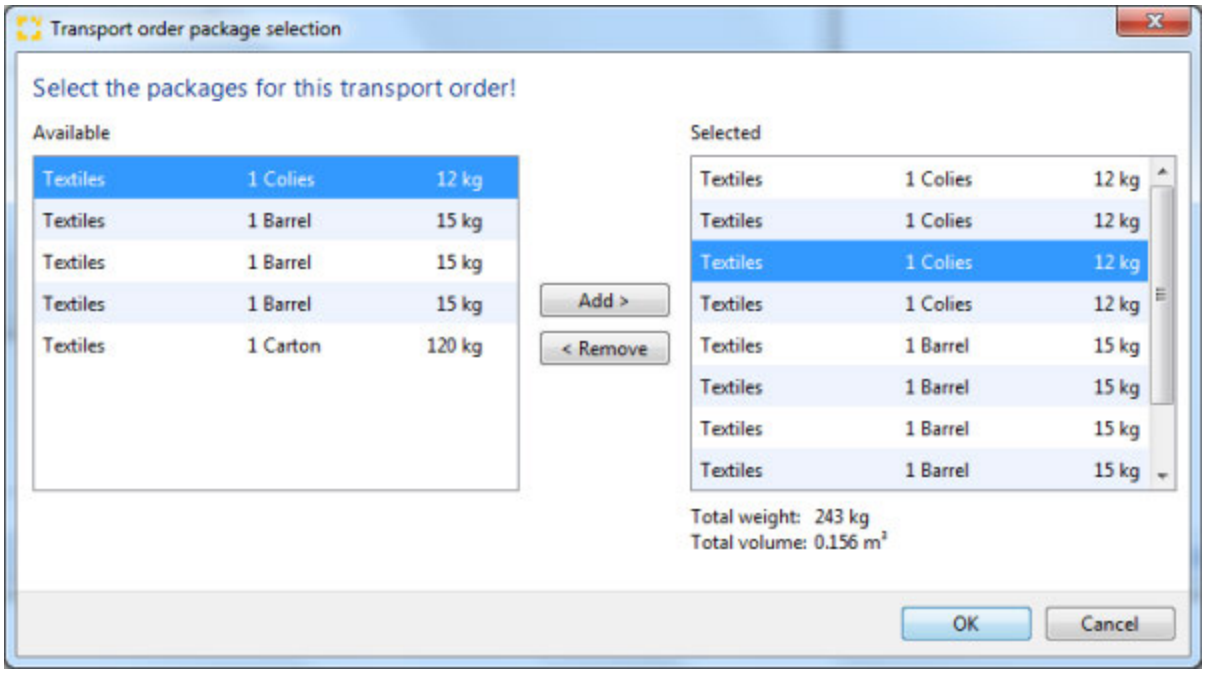
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this gateway delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Nature of Goods

A description of the goods. The *Nature of Goods* from the General tab of the shipment will appear by default and can be adjusted as required.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Remarks

Comments or instructions entered in this field will be printed on the gateway delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the gateway delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the gateway delivery order editor.

Cancel

Close the gateway delivery order editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

House-AWB - General - House shipment - Airfreight export

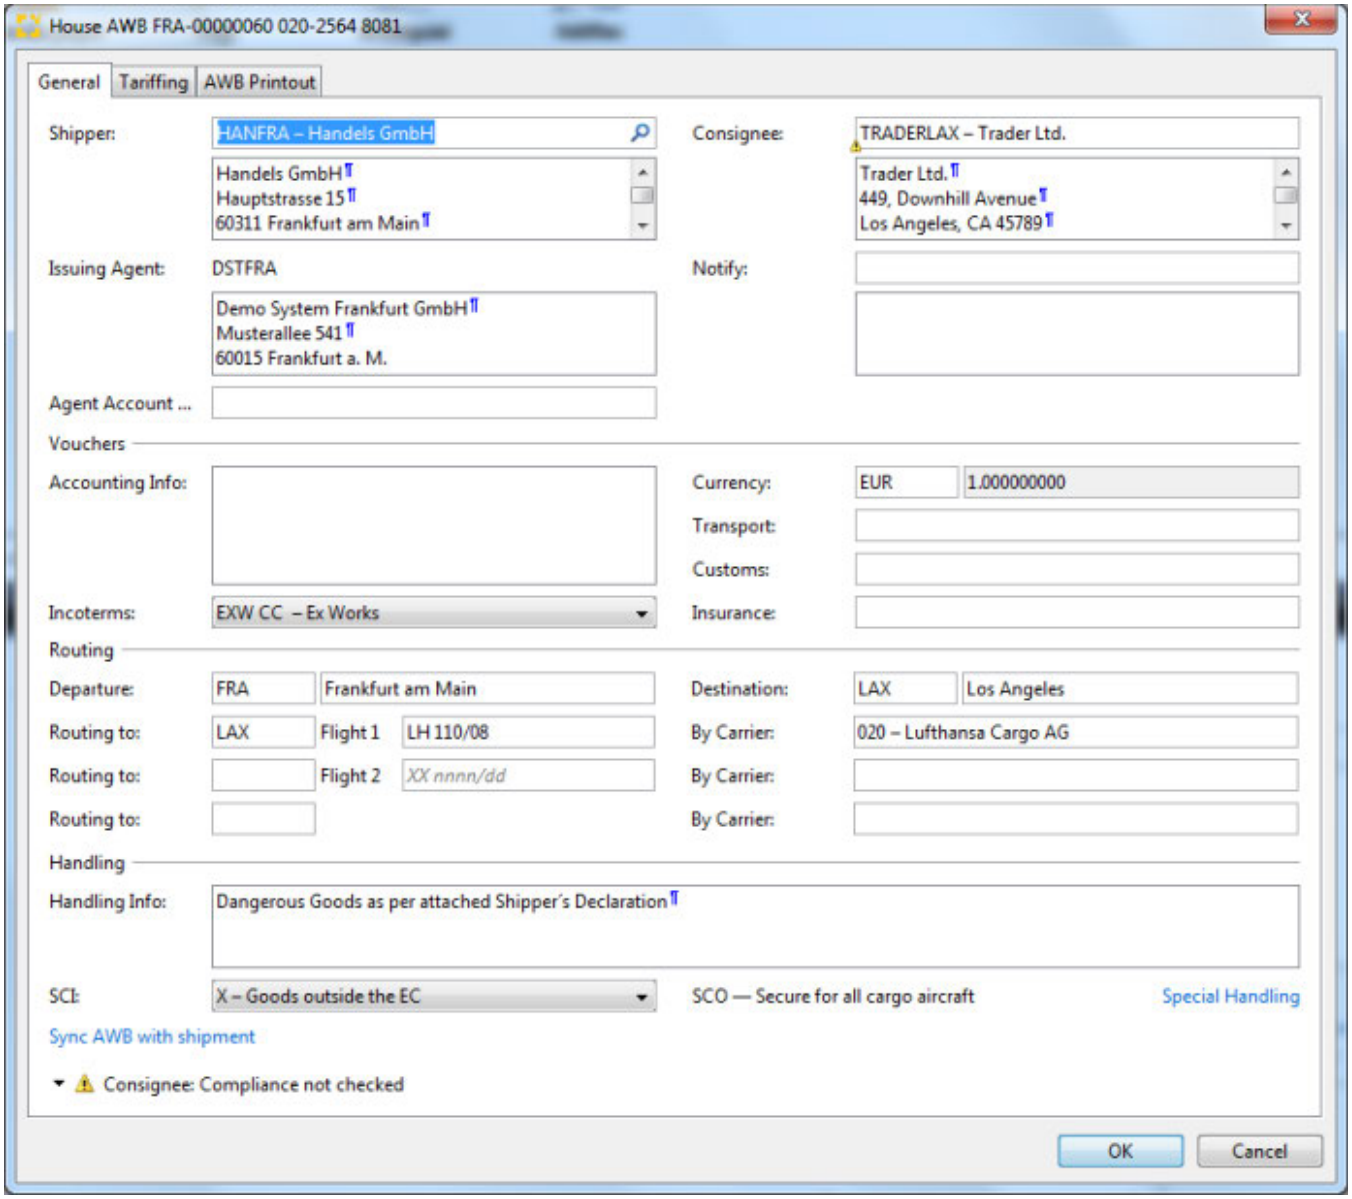
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to edit, customize and print house AWBs. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be over-ridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the HAWB on screen before it is actually printed.

Description

General



Shipper / Consignee

Shipper and Consignee for the shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Agent Account

This field is used for master, Back2Back and direct shipments for the Cass-Acount number of the agent. For a house bill of lading it has no function.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Accounting Info

This field is for any accounting information which is to print on the AWB in the accounting information box. If a notify has been entered, it will be inserted here by default. Iit is also possible to insert in the area othere addresses and predefined text blocks.

Incoterms

The incoterms are taken from the shipment editor, but can be replaced as needed by an entry from the drop down menu.

Currency / Transport / Custom / Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure / destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Routing to / Flight / Carrier

The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned they will appear blank but can be completed manually. The **Routing to** and **By Carrier** fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks .

SCI (Special Customs Information)

Select the custom status (if any) from the drop down menu.

Security Status (without field description)

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field can not be changed.

synchronize AWB with shipment

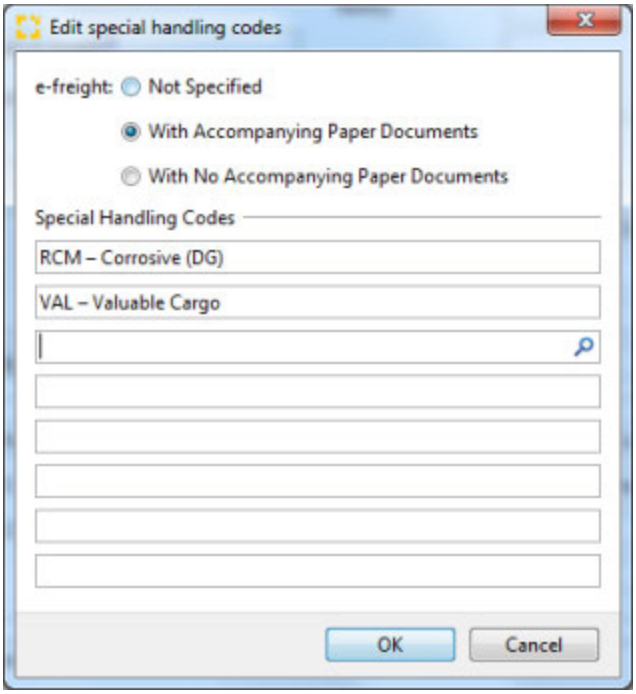
If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Any data in the AWB editor that is overwritten during synchronization with the shipment editor will be lost.

Special Handling

This action link opens the Special Handling Editor. The information inserted will be used by the handling functions of e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For more information, please contact your RSI customer support.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Not specified

Will not create a paperless AWB.

With accompanying Paper Documents

Additional paper documents such as certificates will accompany the shipment. A paperless AWB is created and sent with the EAP code.

Without accompanying Paper Documents

There are no accompanying paper documents. A paperless AWB is created and transmitted with code EAW in the FHL message.

Special Handling Codes

Extra handling codes can be recorded. A list of available codes is provided. The corresponding codes can be found using the search field.

OK

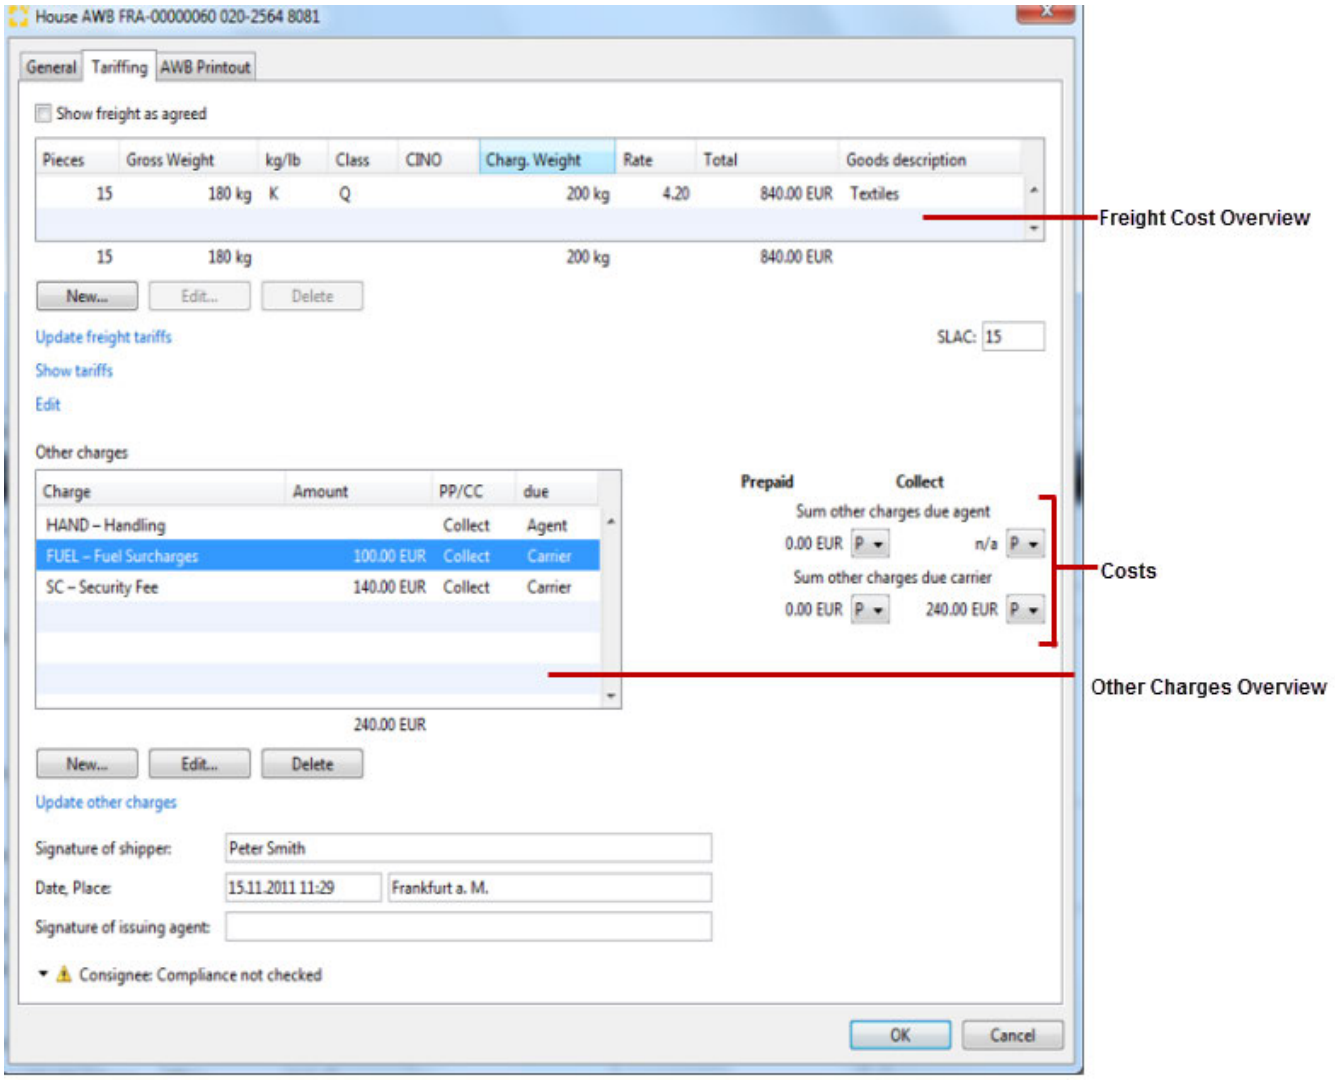
Saves the data and closes the editor.

Cancel

Closes the editor without further action.

Tariffing

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Shown freight as agreed

By checking this box, the amount of freight charges are not printed on the air waybill and are replaced with the statement *AS AGREED*.

Freight charges overview

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Advice/ Class

The Class of tariff rate applied. The available rate classes are:

rate type	rate class
Simple Rate	M, N, O, Q

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Chargeable weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

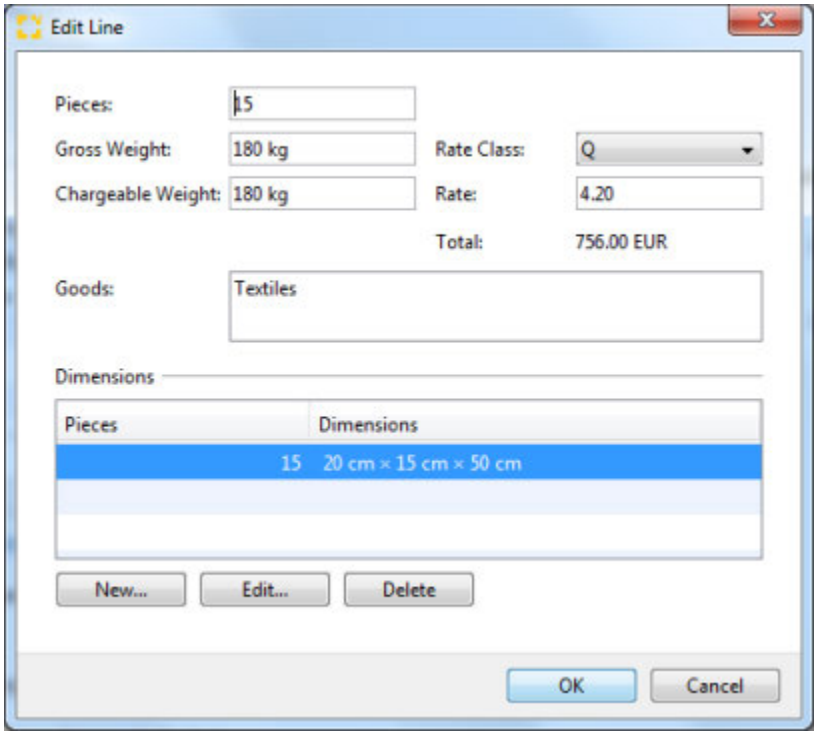
Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods

This information is defaulted from the field *description* in the shipment editor, but can be (if necessary) amended as described below.

New

This button creates a new freight cost line. First the type of rates must be selected from a pop-up window and then the freight cost line editor opens.



Pieces

Number of packages.

Gross weight

Gross weight of packages.

Chargeable Weight

chargeable weight of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Rate

Here the required airfreight rate can be entered.

Total

The total freight amount, calculated from chargeable weight and airfreight rate are displayed.

Goods

Description (contents of the packages).

Pieces / Dimensions

With *new*, a new line with the number and dimensions of packages can be entered. With *Edit* the highlighted row in the table is opened for editing. Alternatively, it can also be opened with a double click on the appropriate line. *Delete* removes a selected line.

- The data in the freight-line editor will automatically be updated with the new data entered.
- The entered number of packages and their dimensions are NOT included in the shipment editor.

Edit

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it.

- The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

Delete

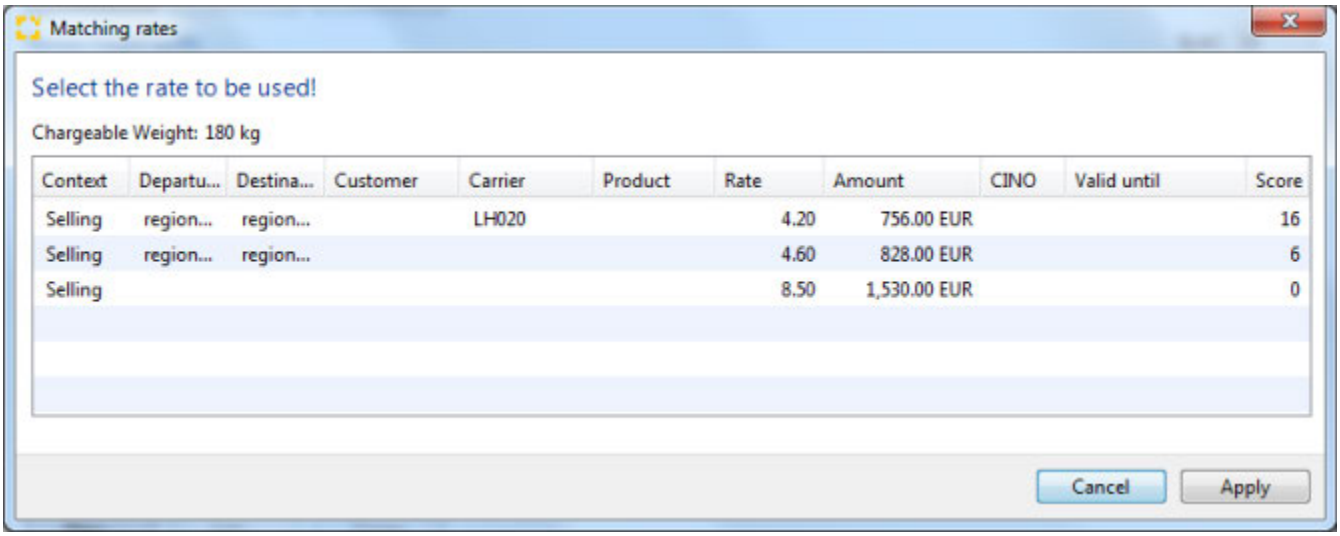
Deletes a marked line in the freight cost overview.

Update freight tariffs

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor.

Shows Tariffs

This action link will display all tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window.



Chargeable Weight

The chargeable weight will be displayed from the tariff lines.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Context

Shows the tariff context (type of tariff) to. Only *selling* tariffs are shown for house shipments.

From / To / Customer / Carrier

This information will display depending on how a tariff has been created in the master data. Departure, destination, departure country, destination country, customer, carriers may all appear if they are part of a rate the matches the current shipment.

Rate / Amount

Shows the relevant tariff stored in the airfreight rates and the calculated amount based on the chargeable weight.

CINO

Shows the corresponding tariff where a CINO-number (Commodity Item Number) is used, if available.

Valid up to

Validity date of the displayed tariff.

Score

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

OK

Uses the highlighted tariff in the overview as the tariff for the line item in the tariff editor.

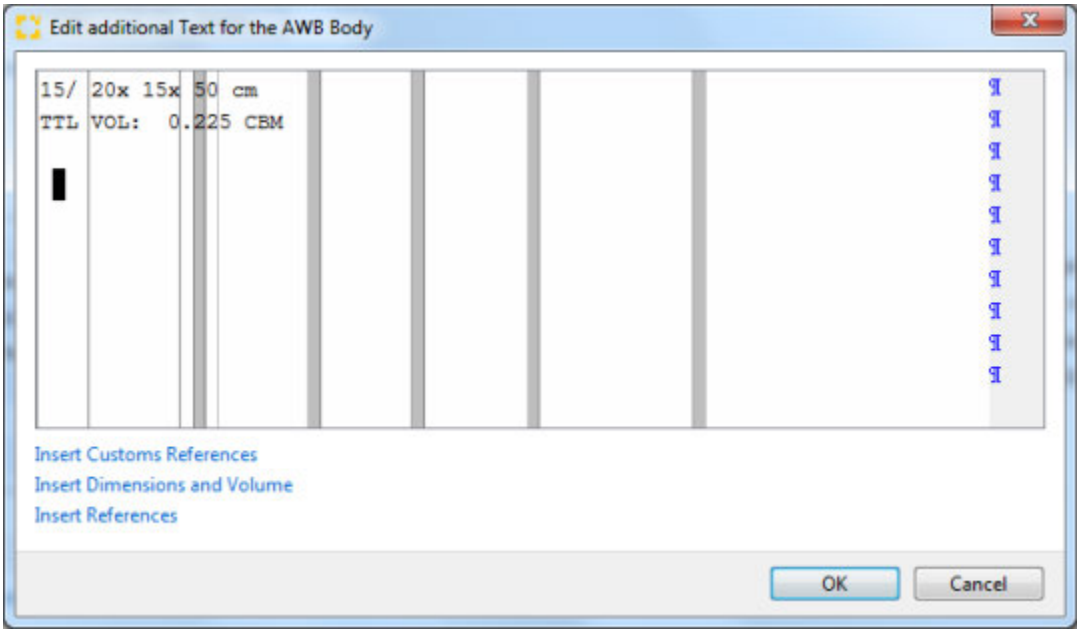
Cancel

Closes the tariff overview without further action.

> More information on tariffing is available in the section Automatic tariffing.

AWB additional text.....

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume

Adds any existing dimensions and volume at the position of the cursor.

Insert References

Opens the selection of references screen from which the desired references can be chosen and inserted at the position of the cursor.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Other Charges

All associated costs such as collection, handling, surcharges, etc. are present in the ancillary charges table. The charge types are based on the master data (activity types , master data rates)) combined with the shipment data (Incoterms , chargeable weight). Totals are therefore automatically determined and proposed for settlement.

Charge

The charge for which the amounts are calculated.

Amount

the amount of the charges. These are entered manually, or are automatically calculated from the master data

PP/CC

Depending on the incoterms selected in the general tab of the shipment this field indicates if the charge is prepaid or collect. The payment terms can be as per the following table:

Code	Designation	Explanation
PP	Prepaid	Costs are paid by the sender
CC	Collect	Costs are paid by the recipient

Due

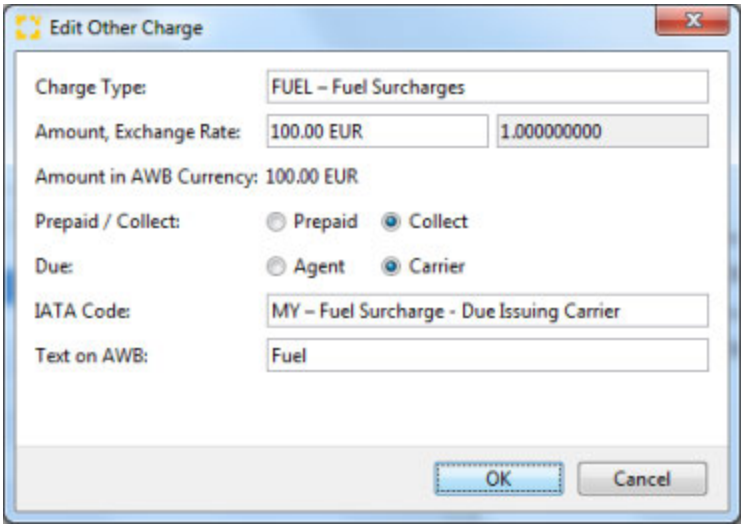
Indicates to whom the costs should be paid:

Designation	Explanation
Agent	The agent or carrier who issues the Air Waybill (PP) and who is defined as the receiving agent (import agent) or carrier (CC).
Carrier	The carrier or airline who transported the shipment

New

The button opens the **New Other Charge** editor which allows new charges to be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Charge Type

New charges can be found using the search function.

Amount, Exchange Rate

If a valid tariff has been found for the charge code, the total amount of the charge will automatically be calculated and inserted. Use the dropdown menu or the F5 function key if the tariff needs to be recalculated. The amount can also be manually entered or changed. The currency of the charge will default to the local currency but it may also be entered or changed. In the adjacent field the exchange rate for the charge will appear. If the local currency is used the rate will be 1.0000, if a foreign currency used the rate will appear automatically or can be entered or changed.

Amount in AWB Currency

If the charge has been enter in a foreign currency, this field will show the amount converted to the local currency.

Prepaid/Collect

Indicates whether the charge is prepaid or collect. The default value will be based on the inco terms (see the *general tab*) but this default can be changed.

Due

Defines if the charge is *due Agent* or *due Carrier*. The default value for charges can be stored in the air cargo master data

Text on AWB

This will be the code used on the AWB to describe the charge type. By default the first 2 digits of the IATA code are used.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Edit

Open the other charge editor to edit the highlighted charge.

Delete

Removes the highlighted ancillary charge.

Update other charges

This action link will recalculate all ancillary charges according to current tariffs.

Distribution of costs

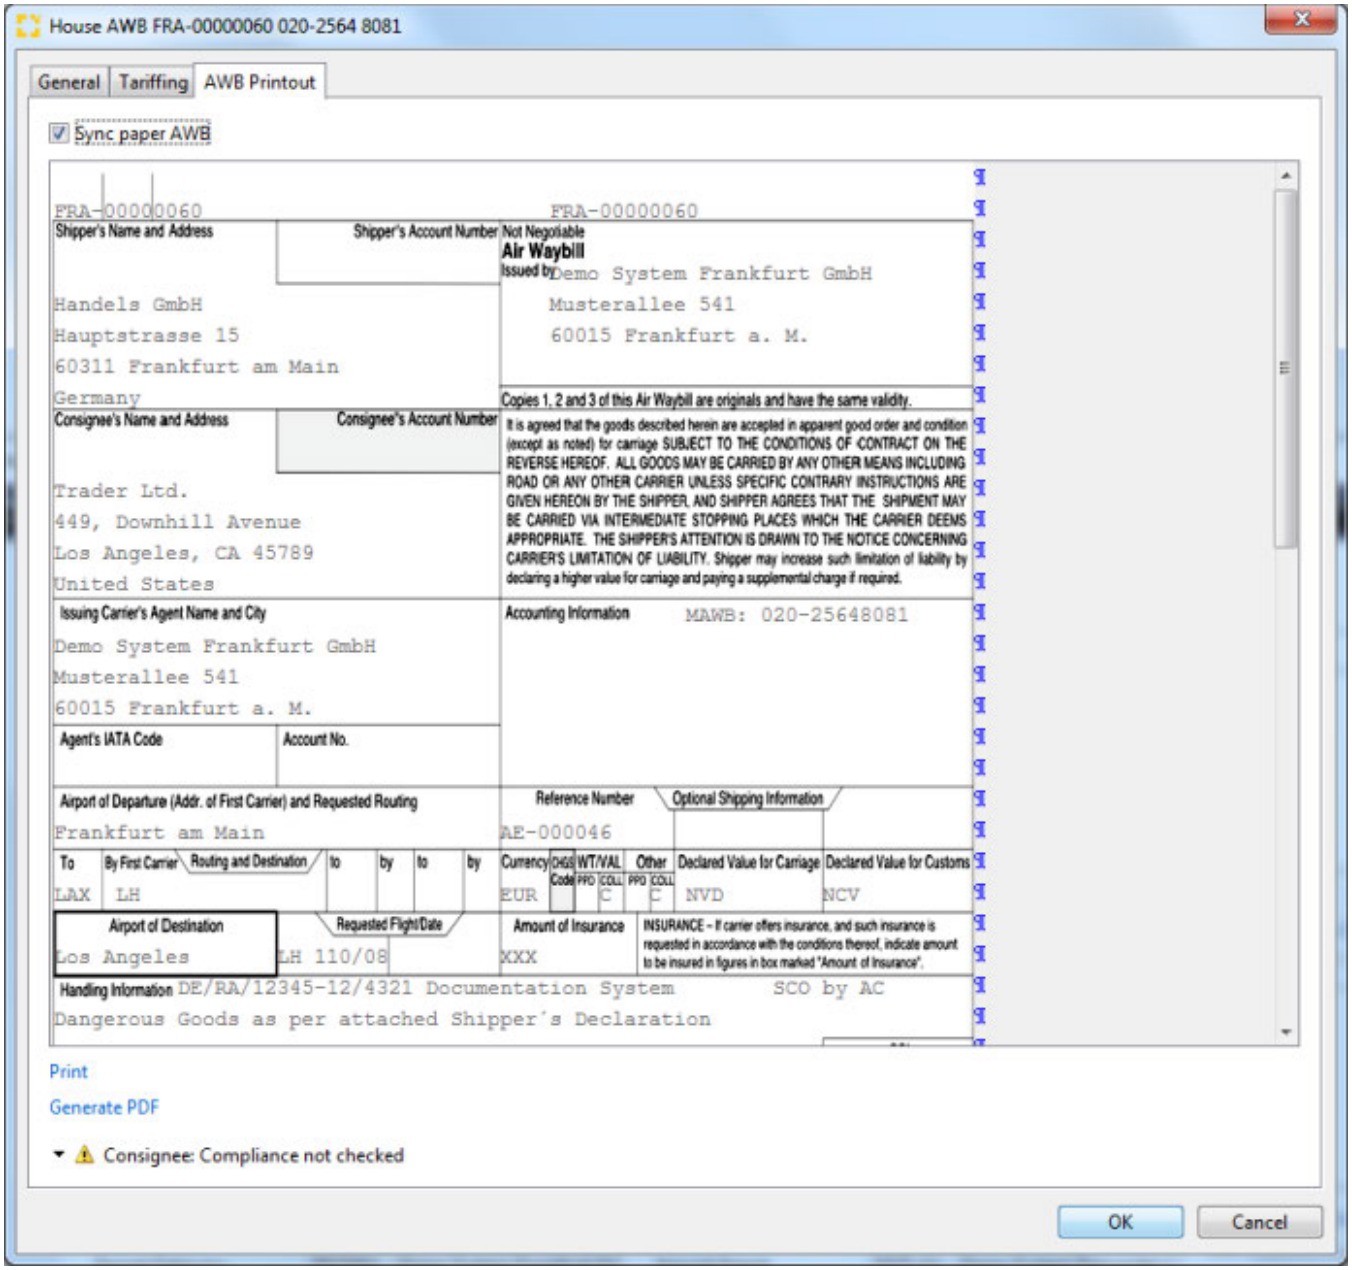
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the charges are summed into 4 separate totals; total prepaid due agent, total collect due agent, total prepaid due carrier and total collect due carrier. How the costs will be presented on the AWB can be controlled using the drop down menus which will present the option shown below:

Code	Explanation
P	Costs will be printed on the AWB
X	Costs will NOT be printed on the AWB
T	The costs will be shown only as a total on the AWB

AWB Printout

This tab provides a visual representation of the printed AWB.



Sync paper AWB

This box is checked by default and causes the AWB to be shown as per all the data entered in the *general* and *tariff* tabs. When check the representation of the AWB cannot be edited. If the box is unchecked, then the AWB may be freely edited and the text blocks can be accessed and inserted into the AWB.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the box is checked again after editing the AWB, all changes will be lost because the document will once again be regenerated according to the data stored in the *general* and *tariff* tabs.

Print

Prints the AWB exactly as it appears in the representation to the predefined printer. The document will also appear as a text document and pdf document in the documents tab of the shipment. The pdf version may then be sent attached to an email.

Generate PDF

Only a pdf version of the document is created which also appears in the documents tab of the shipment.

Print and send FWB

Prints the AWB as described above and sends a copy to TRAXON Global Cargo Communications System in the form of an FWB.

Send FWB

Sends the shipment electronically in the form of an FWB to TRAXON Global Cargo Communications System. There is no print of the document.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

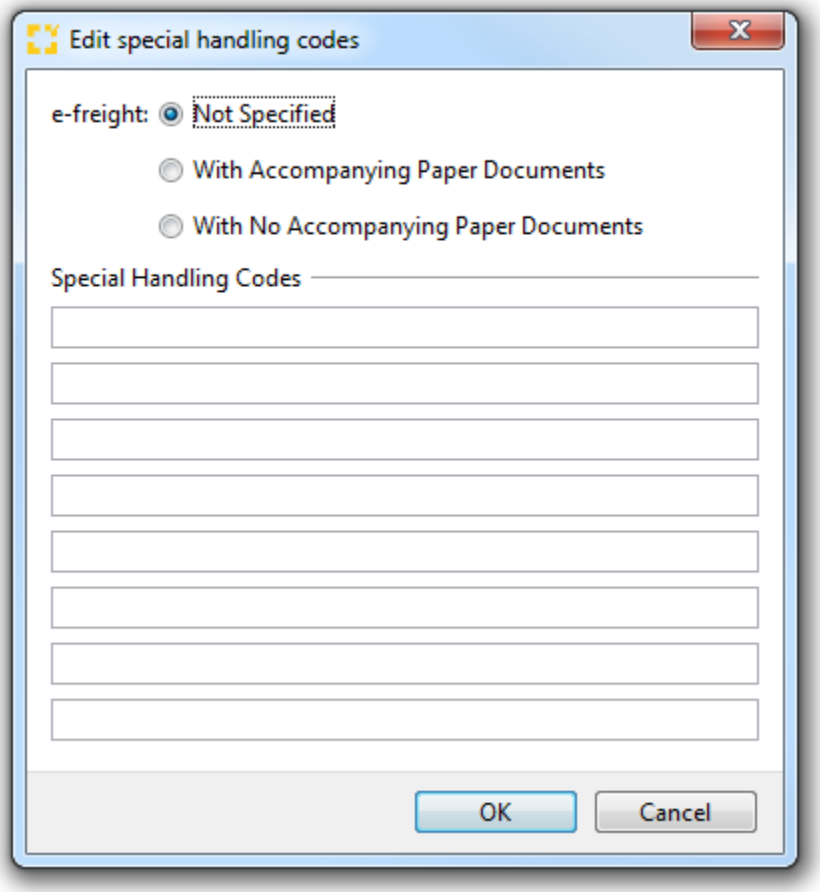
Special Handling - Airfreight Export

- Introduction
- Description

Introduction

The special handling option allows entry of information required if the shipment is to be transmitted electronically to a carrier who offers *e-freight* and paperless bills of lading. Not all carriers support this option, please contact your RSI sales representative for more information about *e-freight*.

Description



Not specified

A paperless AWB will not be created.

With Accompanying Paper Documents

Additional documents such as export certificates will accompany the shipment. A paperless AWB is created and transmitted withe EAP code.

With No Accompanying Paper Documents

The shipment has no accompanying documents. A paperless AWB is created and transmitted withe DRC code.

Special Handling Codes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Additional handling codes may be included. These are search fields. Begin typing the code to see a full list of codes.

OK

Save the e-freight information and exits the editor.

Cancel

Closes the editor without saving

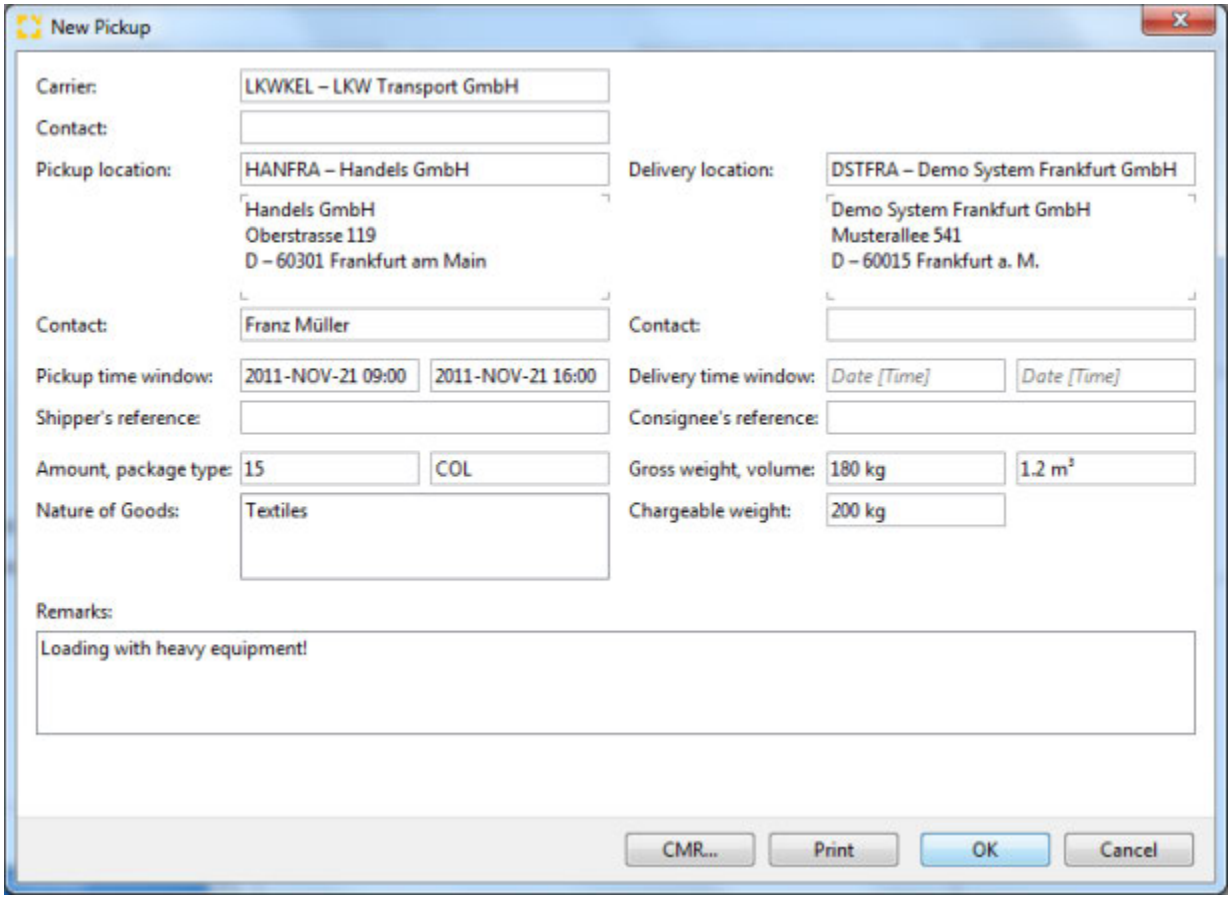
Pickup Order - General - House shipment - Airfreight Export

- Introduction
- Description

Introduction

Create and print pickup notes for collection of goods and delivery orders for transport of goods to the terminal. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the shipper. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

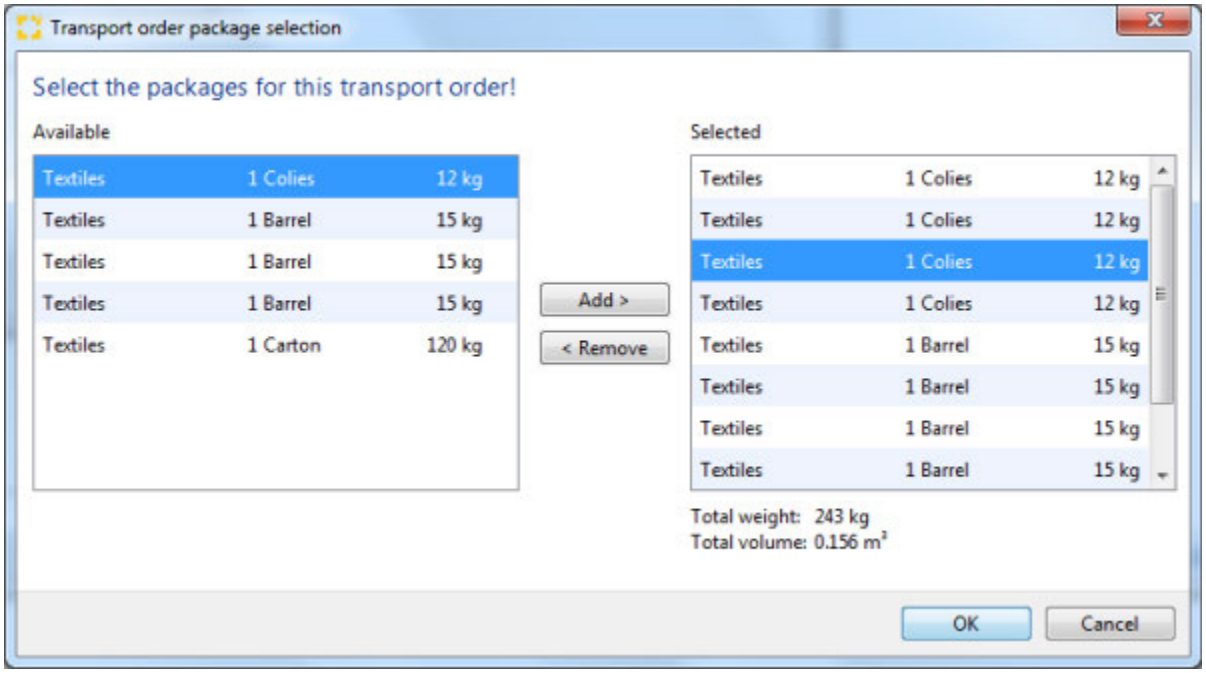
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery oder editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

CMR - Pickup Order - General - House Shipment - Airfreight Export

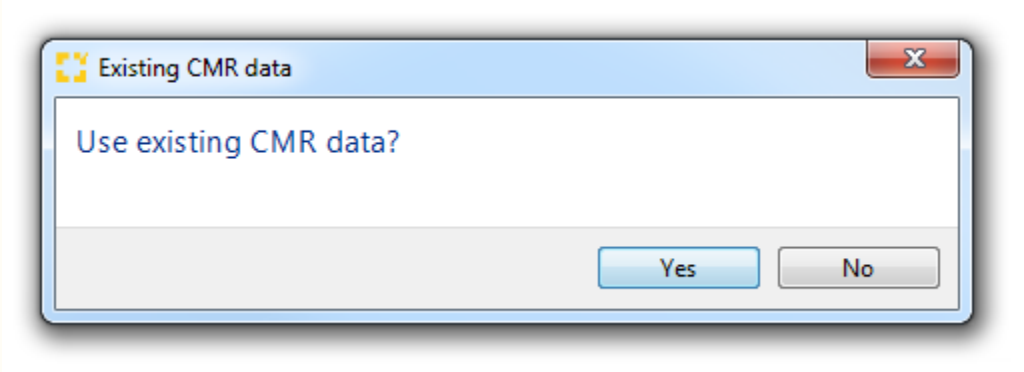
- Introduction
- Description

Introduction

The CMR editor is used to create a CMR waybill according to the Convention on the Contract for the International Carriage of Goods by Road. These may be printed and stored as PDF copies.

Description

When a CMR has already been printed, on selecting the *CMR* option a dialogue will appear asking if existing CMR data should be used.



Yes

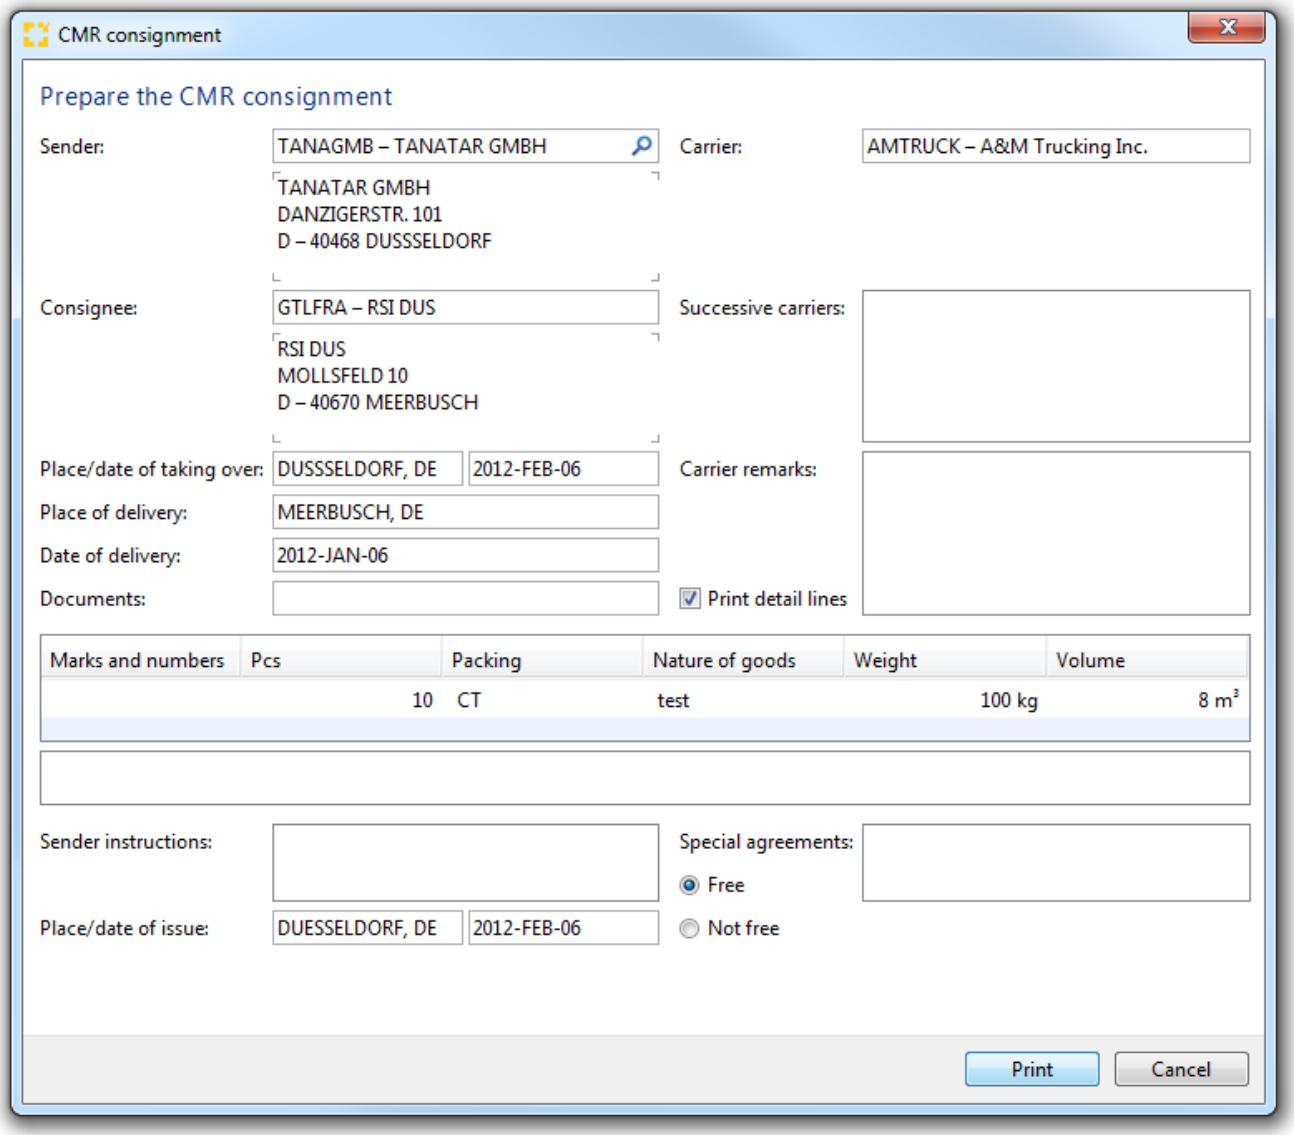
Opens the existing CMR in the editor.

No

Creates a new CMR.

CMR Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Sender

This is the sender of the shipment. This is a search field that can be used to locate the correct partner.

Carrier

The carrier who will transport the shipment. This is a search field that can be used to locate the correct carrier.

Consignee

The recipient of the shipment. This is a search field that can be used to locate the correct partner.

Successive Carriers

A free text area where the names of carriers who will transport the goods subsequent to the first carrier may be recorded.

Place of Pickup

The location where the goods will be picked up. This will default to the city and state of the sender.

Date of Pickup

The date when the goods are to be picked up. This is a date field .

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Place of Delivery

The city where the and state where the goods will be delivers. This will default to the city and state of the consignee.

Date of delivery

The date the goods are to be delivered. This is a date field .

Documents

Any documents included with the shipment should be listed here.

Carrier remarks

Any remarks from the carrier.

Print detail lines

The details of the cargo are shown in a summary table, being the marks and numbers, the number of pieces, packing type, nature of goods, weight and volume. If these are to print on the CMR then the *Print details lines* box should be checked.

Remarks

The shipment number appears in the general remarks area below the detail line. Further remarks may be added.

Sender Instructions

Special instructions from the sender may be recorded here.

Special Agreements

If special arrangements have been made, these may be recorded here.

Place (of issue)

The place where the CMR is issued.

Date of issue

The date the CMR is issued. This is a date field .

Free/Not free

Payment instructions for the CMR:

- Free = The sender has paid the freight charges.
- Not free = The recipient must pay the freight charges.

Print

Prints the CMR documents. PDF copies of these documents will appear in the *documents* tab of shipments. The Editor is then closed and the data is stored.

The following PDF documents are created:

- CMR 1 (Sender)
- CMR 2 (Receiver)
- CMR 3 (Carrier)
- CMR 4 (Carrier)

Example CMR consignment note

Cancel

Closes the CMR editor without further action.

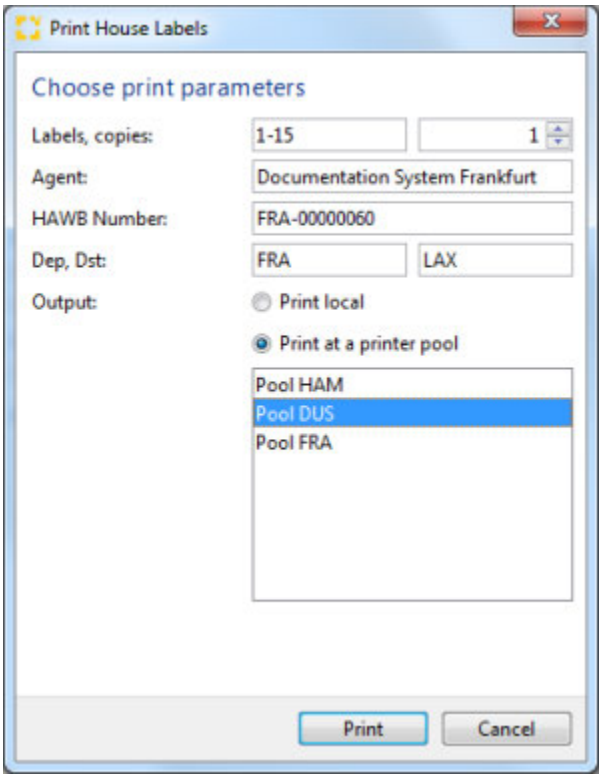
Printing labels - General - House shipment - Airfreight export

- Introduction
- Description

Introduction

Clicking the option **label printer** opens a pop-up window where the print parameters and number of printed pages can be edited. In addition, the print of the labels can be redirected to another printer-pool (e.g. another branch).

Description



Labels

Number of labels which should be printed. Individual labels can be printed or a partial set of labels may be printed.

Examples::

Entry	Quantity	Numbers
1-15	15	1-15
11	1	11
4-6	3	4-6

By default the application proposes printing the total number of labels.

Agent

The agent who issued the airwaybill. (Issuing agent)

HAWB-Number

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

HAWB-Number of the shipment.

Departure/Destination

Place of departure and place of destination for the shipment.

Local print

Print the document on the predefined default printer.

Print to Printer-pool

Allows selection of a printer-pool from the list displayed.

Printer-pools (List)

The desired printer-pool can be selected from the list. Documents can be set to print to particular printers automatically.

Printing

Print the document to the selected printer.

Cancel

Cancel the popup window without further action.

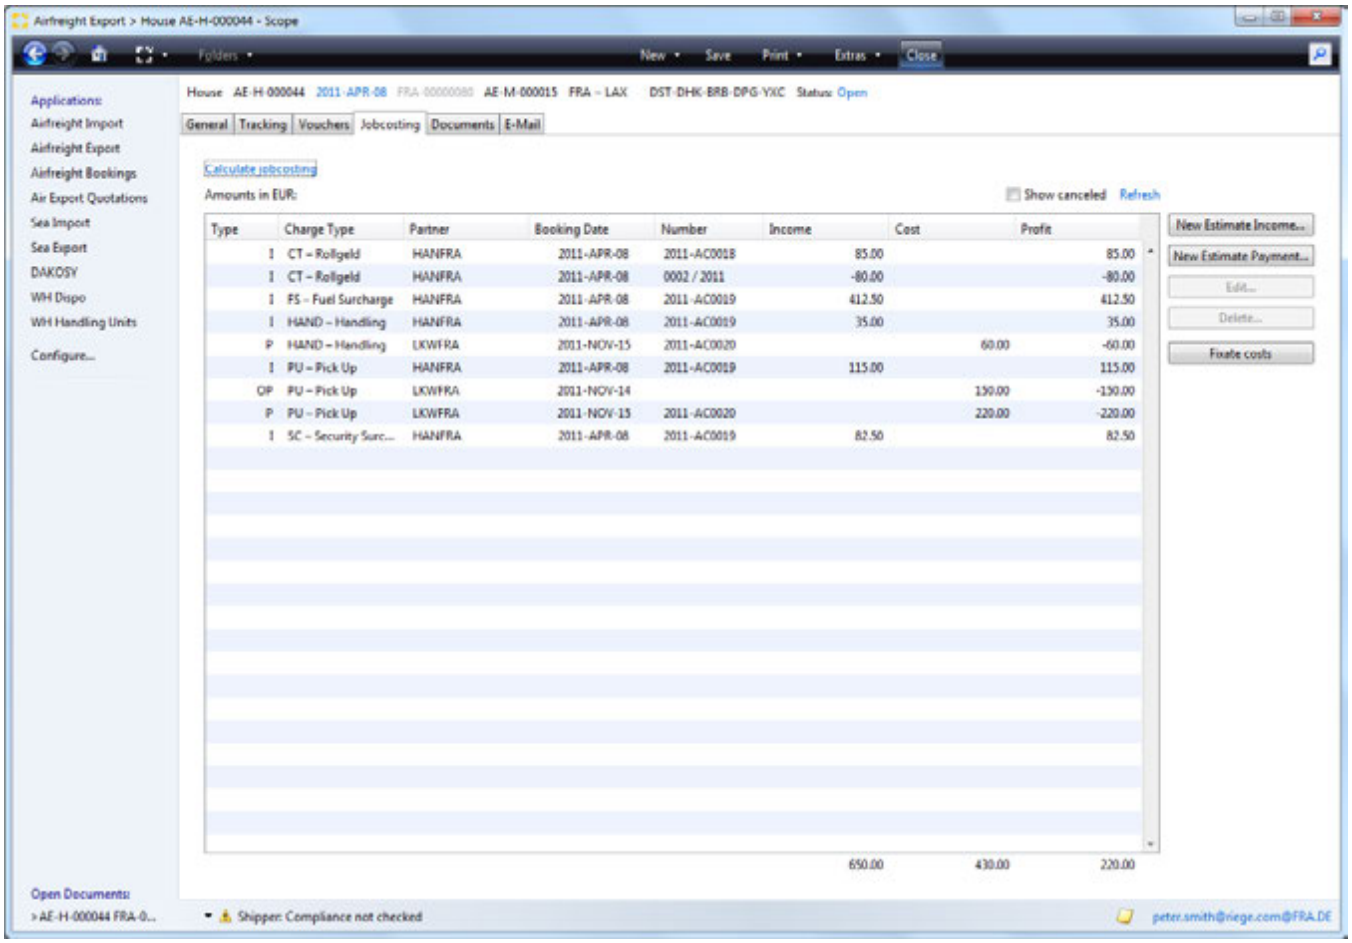
Jobcosting - House Shipment - Airfreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

> ⚠ Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

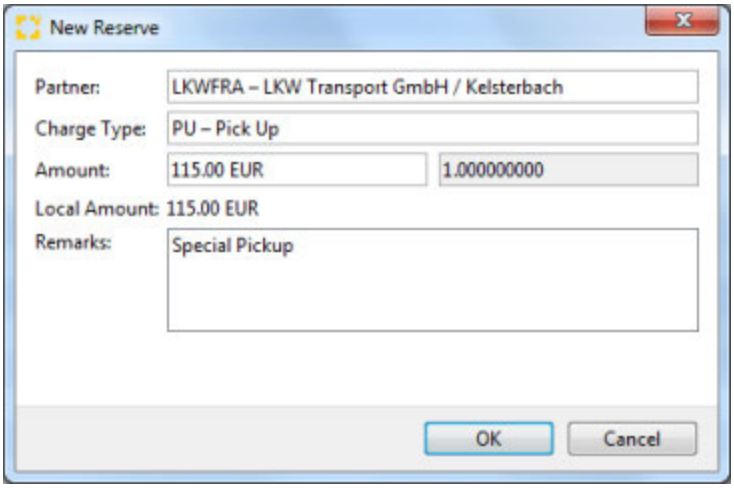
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Tracking - House shipment - Air Freight Export

- Introduction
- Description

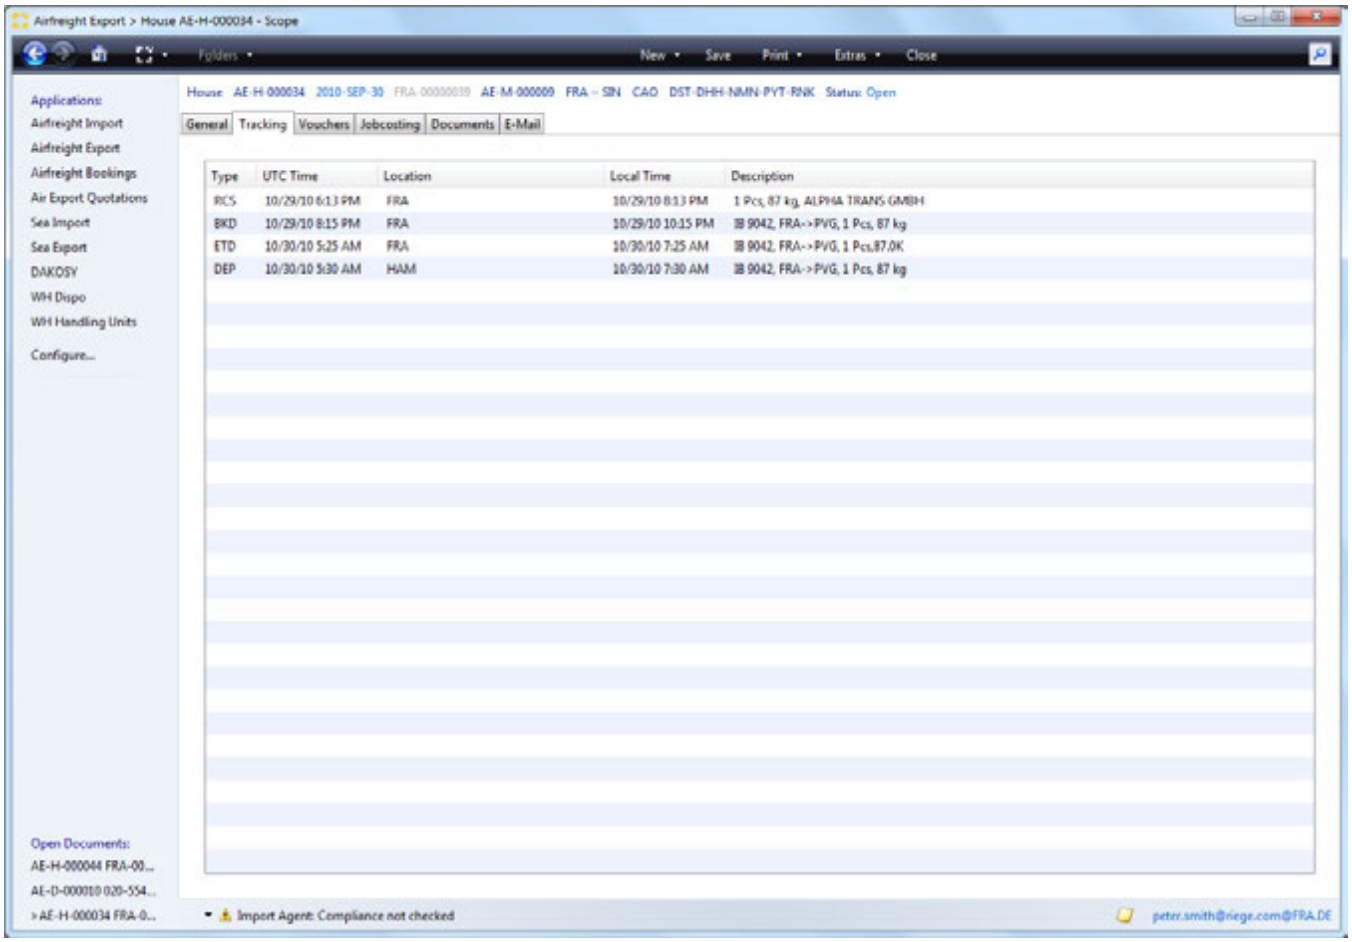
Introduction

During the life-cycle of the shipment numerous events occur and are recorded by the various parties involved with the transportation of the freight. These are called tracking events and they can be viewed using tracking tab, clicking on an idividual tracking event will present detailed tracking information. Currently, only external tracking events are available when the shipper and carrier are exchanging data using the "TRAXON" cargo communication system. Future development of the tracking tab will allow it to include events between senders and receivers. Events in the tracking tab can also be viewed via web-browser on RSI's track and trace system. Connection to external, customer-specific track & trace systems can be implemented on request.

Description

The example below shows an exchange of tracking data for a Scope system that is connected to the Traxon cargo communication system.

- When printing the IATA air waybill (master shipment, direct shipment and back-to-back) the option exists to also "Print and transmit FWB" or just "Transmt FWB". These options will automatically generate the FWB message (waybill data) and send these to the Traxon system who in turn transmit the FWB to the responsible airline. Consolidations and back-to-back shipments will also include the FHL messages (house bill of lading or manifest data).
- The corresponding events are automatically entered into the table of tracking events.
- The types of events shown will depend on the types of events supported by the responsible airline.
- Airline events are automatically entered into the table.
- The events which are recorded in a master shipment, also appear simultaneously in the house shipments consolidated on that master since these events are also relevant to the house shipments.



Main menu bar and title bar

see tab **General**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Type

Event type (see table below)

UTC time

The time of the event in UTC (Coordinated Universal Time)

Location

The place where the event has occurred. (the relevant airport IATA code may be shown)

Local time

Local time of the event (time in the time-zone in which the event occurred.)

Description

Description of the event. This example indicates how many packages, their weight, the aircraft transporting the freight. From where, to where. Numbers of packages that have arrived, the weight of the packages and at which destination.

The following events can be mapped. (Depending on the airline used)

Code	Description
RCS	Consignment received from Shipper
RCT	Consignment physically received from another airline
RCF	Consignment physically received from a flight known or not
BKD	Consignment has been booked
MAN	Consignment has been manifested
DEP	Consignment has departed
PRE	Consignment prepared for loading
TRM	Consignment is to be transferred to another carrier
TFD	Consignment has been physically transferred to another airline or surface transport party
NFD	Consignee or his agent informed of arrival of shipment
AWD	Arrival documents delivered to consignee or his agent
CCD	Consignment cleared by customs
DLV	Consignment has been physically delivered to consignee or his agent
DIS	Consignment Discrepancy
CRC	Consignment Information has been reported to Customs
DDL	Consignment has been delivered to the consignee's door
TGC	Consignment has been transferred to Customs/Government control
ARR	Consignment arrived on a flight known or not
AWR	Consignment documentation received from fleight
FOH	Consignment is on hand
FHL	Consol Manifest sent to airline
FWB	AWB sent to airline/ground handler
OSI	Other Service Information
ULD	ULD Identification
ETD	Estimates Time of Departure
ETA	Estimated Time of Arrival
FMA	Message acknowledged
FNA	Error detected in message

Super House Shipment - Air Freight Export

- Introduction
- Description

Introduction

The application Super House Shipment enables the consolidation of regular House shipments to a Super House Shipment. There may be multiple reasons for creating a Super House, like one shipper to many consignees (shipper consolidation), or many shippers to one consignee (consignee consolidation), or many shippers to many consignees. The purpose of a super house shipment is to combine House shipments in such a way that the quantity (weight / volume) enables cost-effective transportation for your customer.

Description

With the program action *New* in the Airfreight Export Shipments home view the input dialog for the *Super House Shipment* can be opened.

Save

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

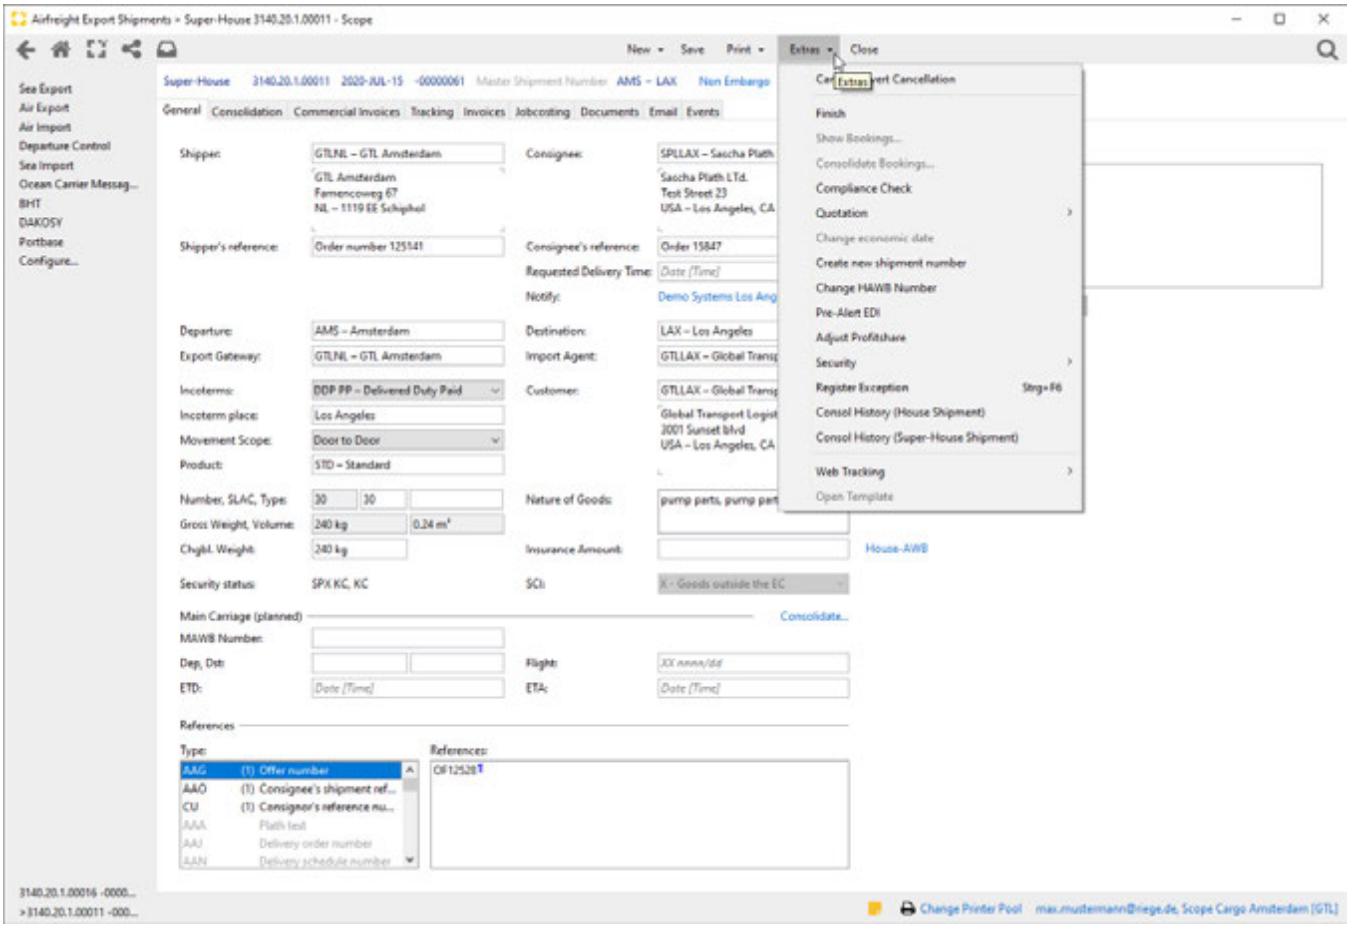
The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case, then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command, the required documents can be printed. Currently the following documents are available:

- File cover
- Preadvice
- Shipping Instruction
- Booking Confirmation for customer, for shipper
- Export Declaration
- Super-House Manifest
- Labels House, Shipment
- Claim Notification
- Certificate of Origin
- Quality Report

Extras



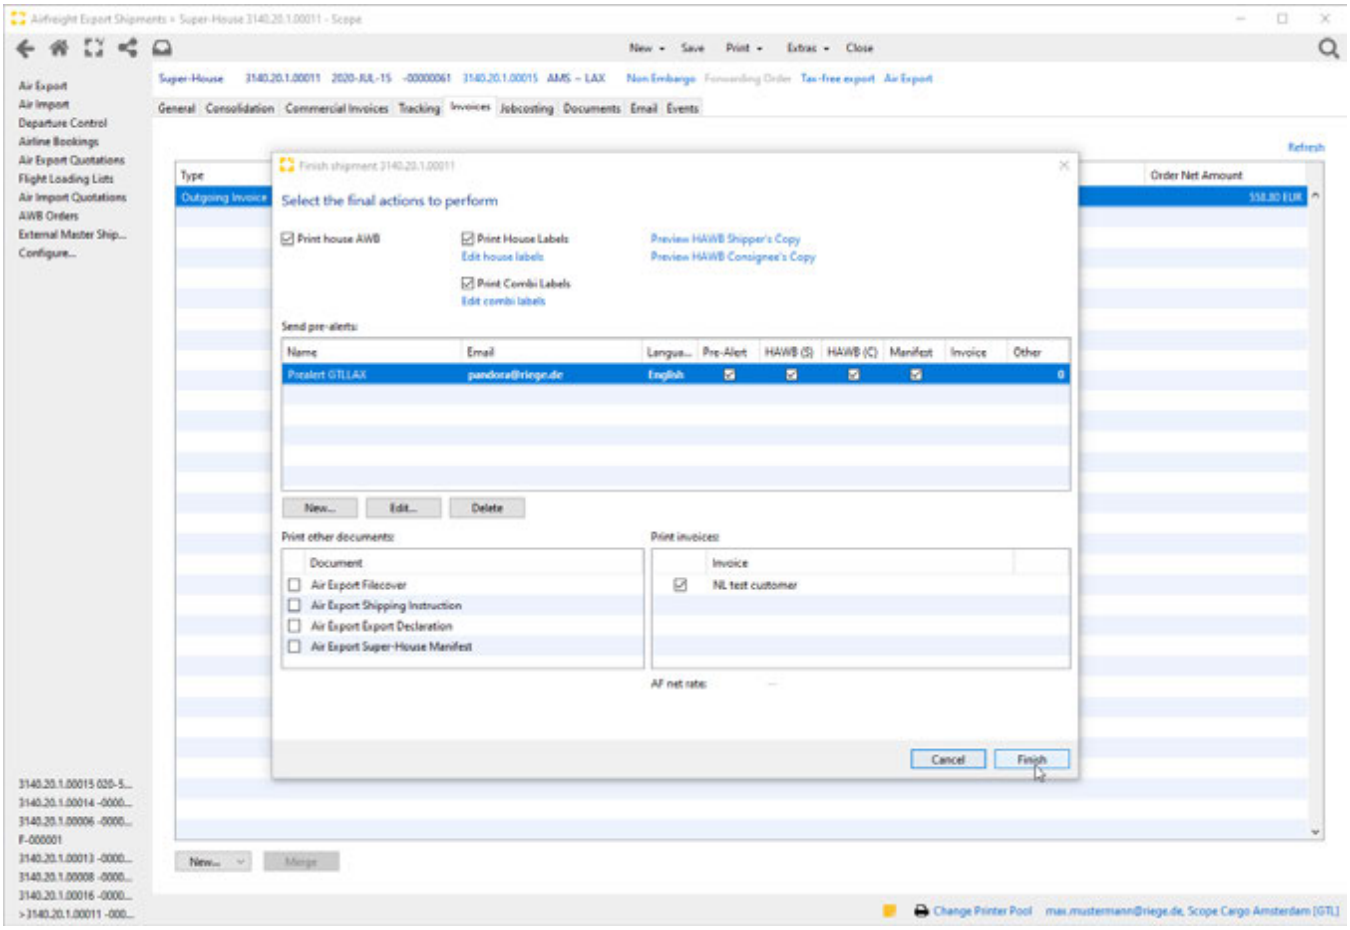
- Cancel/Revert Cancellation

This function cancels a shipment or cancels the cancellation of a shipment. See details here Cancel/Revert Cancellation

- Finish

This function will open the screen *Finish Shipment* to select the final actions to perform to finish the shipment. See also here Finish - General - House shipment - Airfreight export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Show Bookings...

If a booking was created for a shipment data can be opened with this program action.

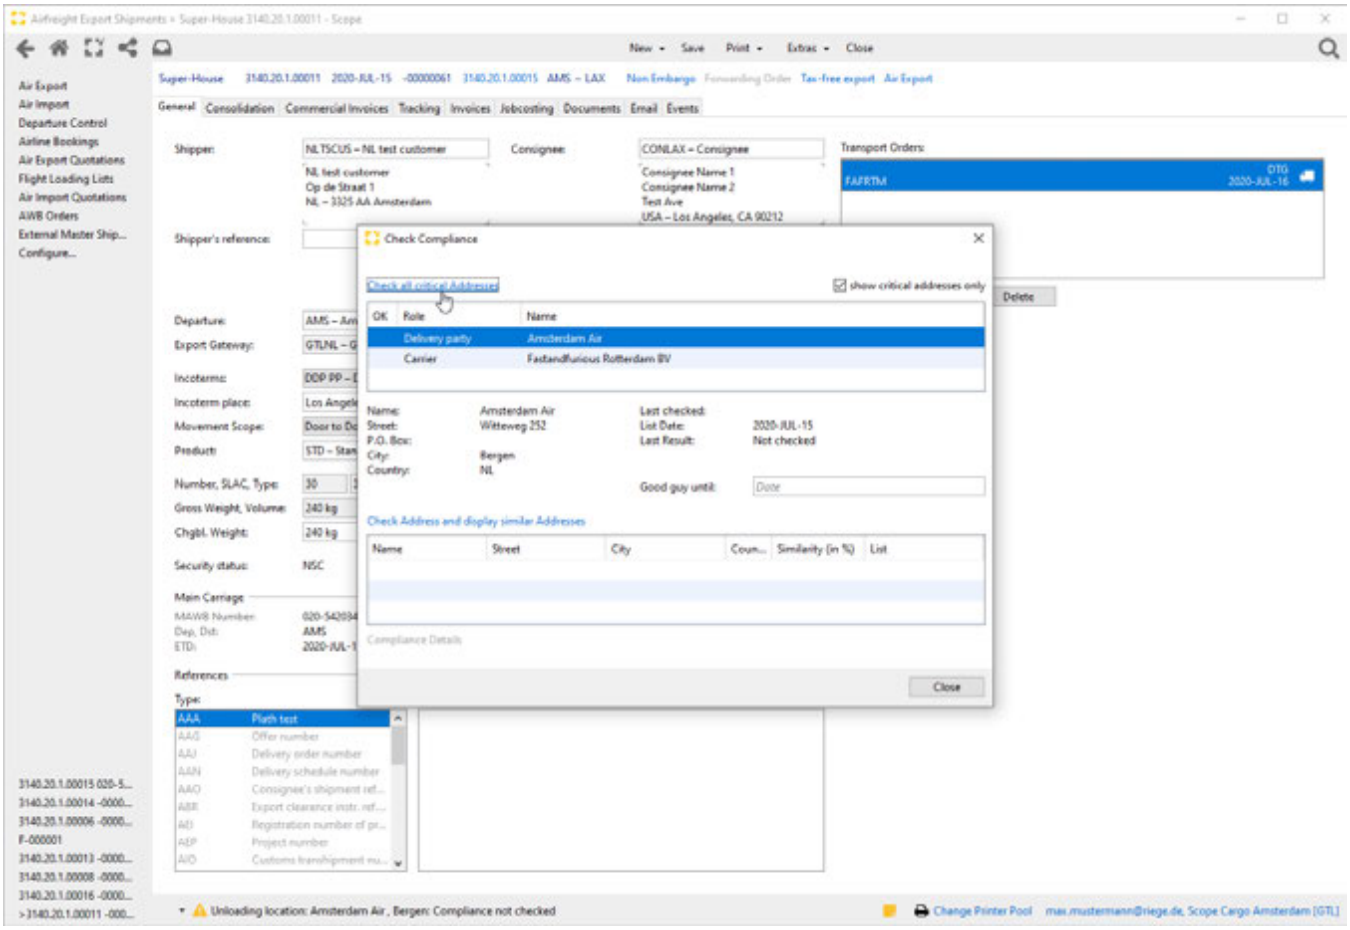
- Consolidate Bookings...

Consolidates bookings created for a shipment.

- Compliance Check

Opens the *Check Compliance* Screen. In this Screen all critical addresses related to the shipment will be displayed and can be checked.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



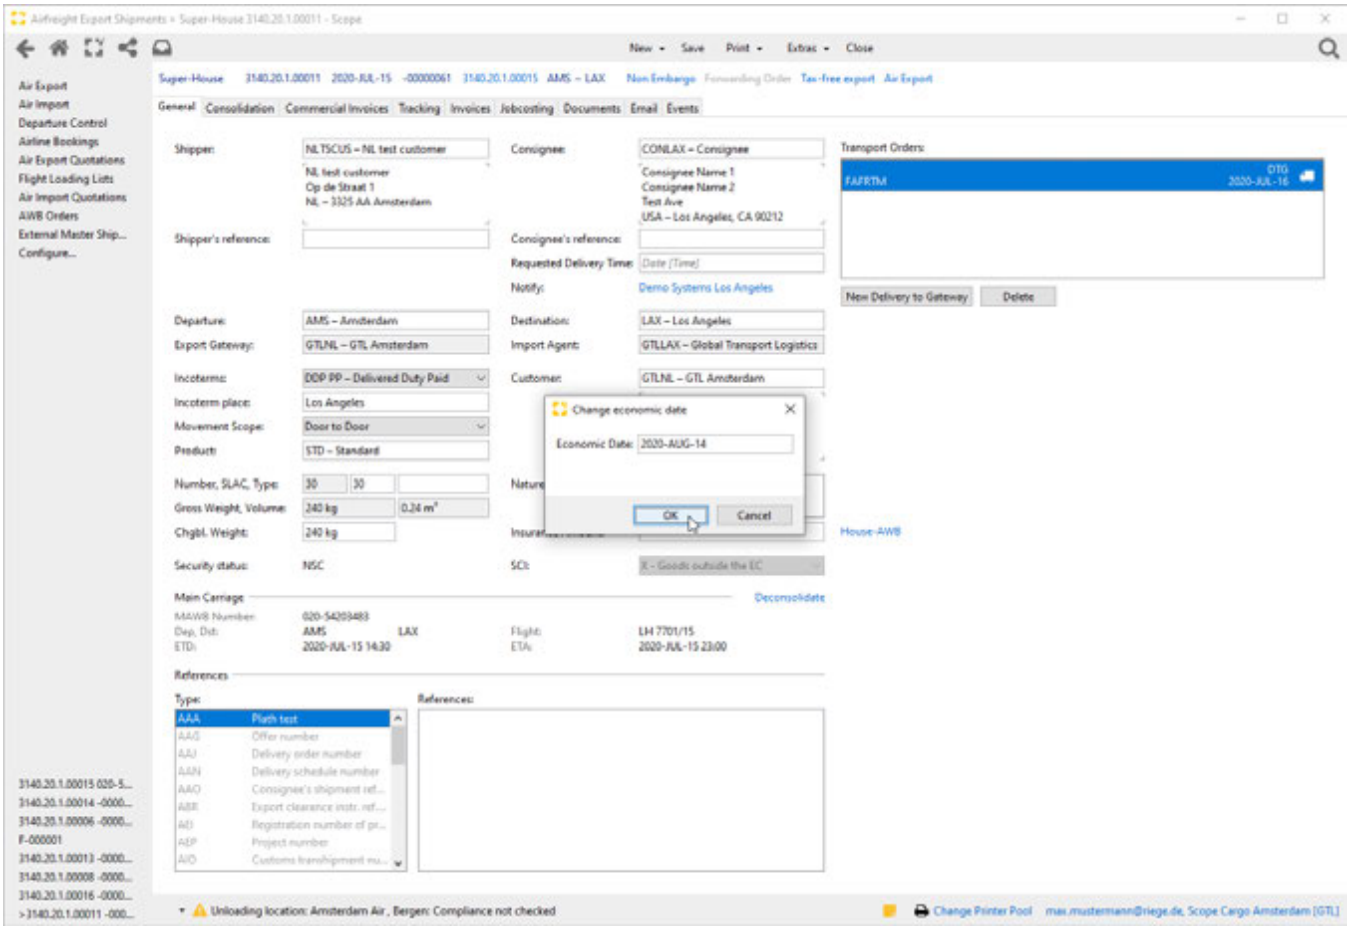
- Quotation

This function can Show, Link or Unlink a quotation for the shipment.

- Change economic date

This function opens the screen economic date, where the economic date can be changed.

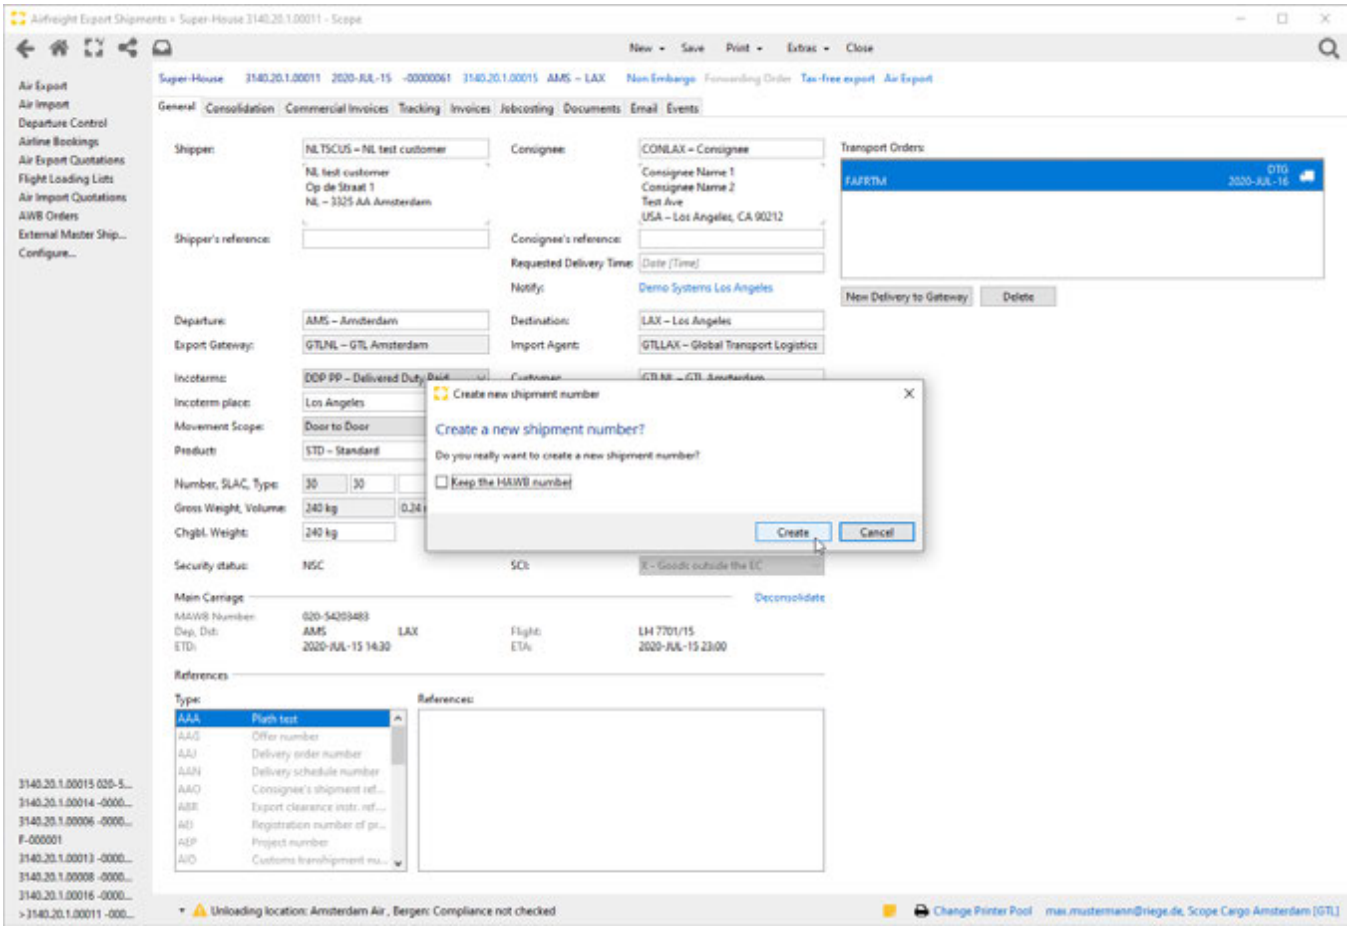
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Create new shipment number

This program action opens the screen *Create new shipment number.* With the button *Create* a new shipment number will be generated; if the flag Keep the HAWB Number is ticked, HAWB Number will stay the same. See also Change type of shipment - General - House Shipment - Airfreight Export

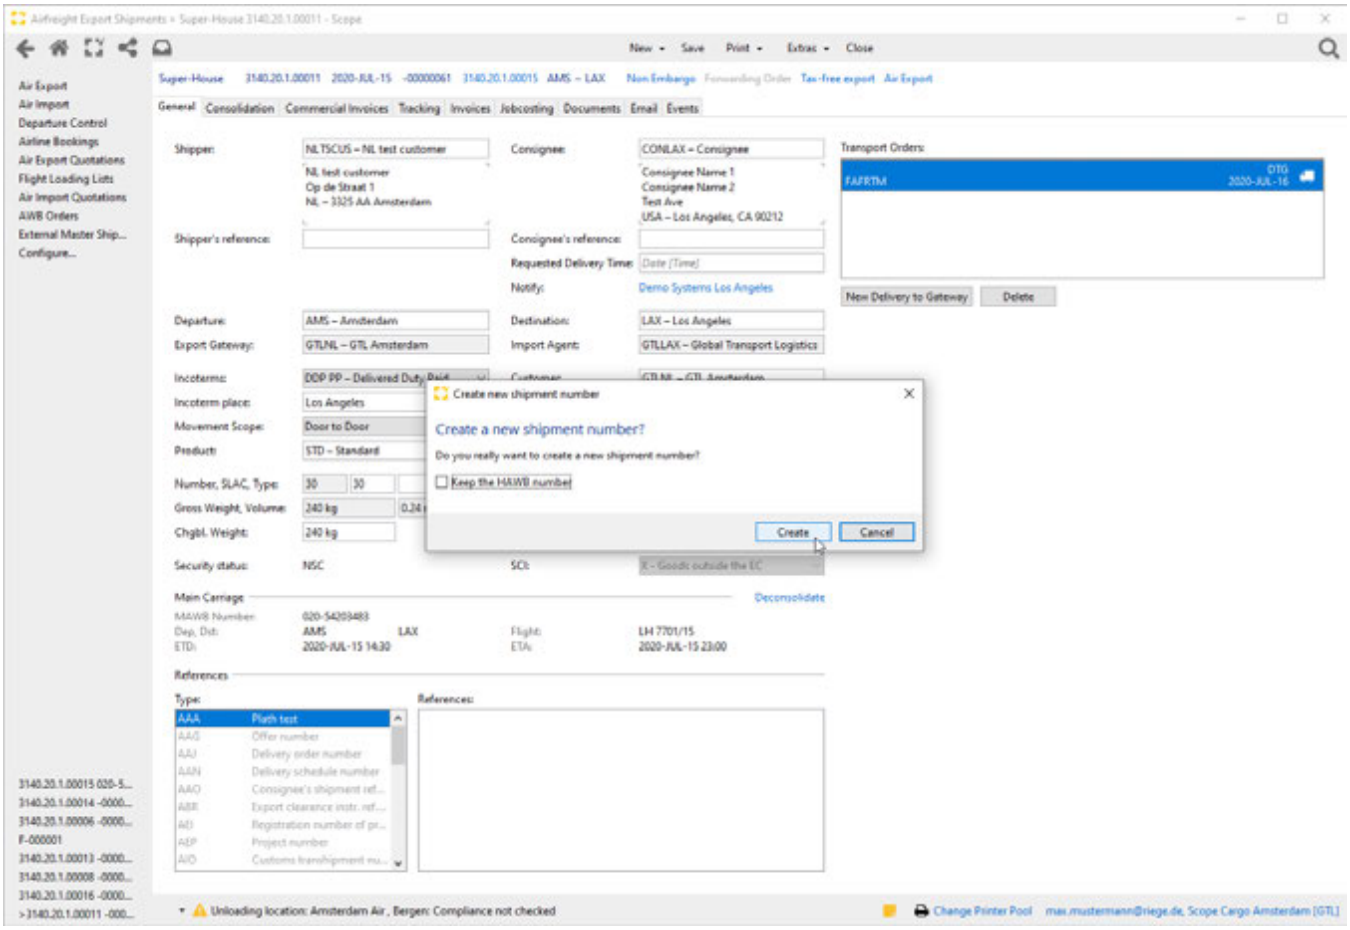
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change HAWB number

This program action opens the screen *Change HAWB number.* As soon as the data of a new shipment are saved, Scope automatically generates a HAWB number. This can be changed by the user if necessary.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



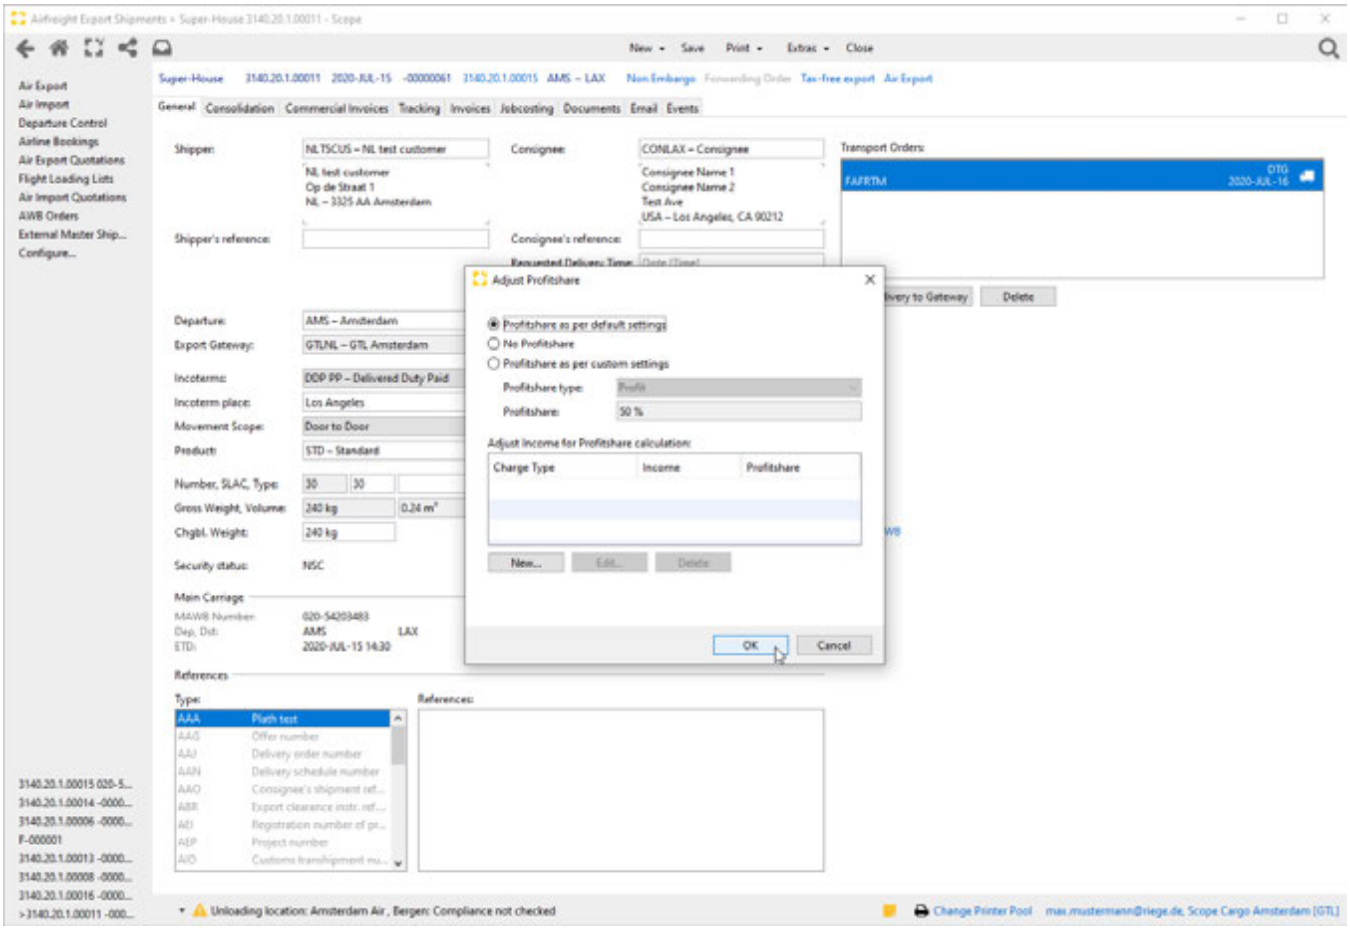
- Pre-Alert EDI

This function is used for generating the Pre-Alert-XML. Therefore, the import agent must have a valid EDI profile assigned.

- Adjust Profit Share

This function allows to adjust the set Profit Share.

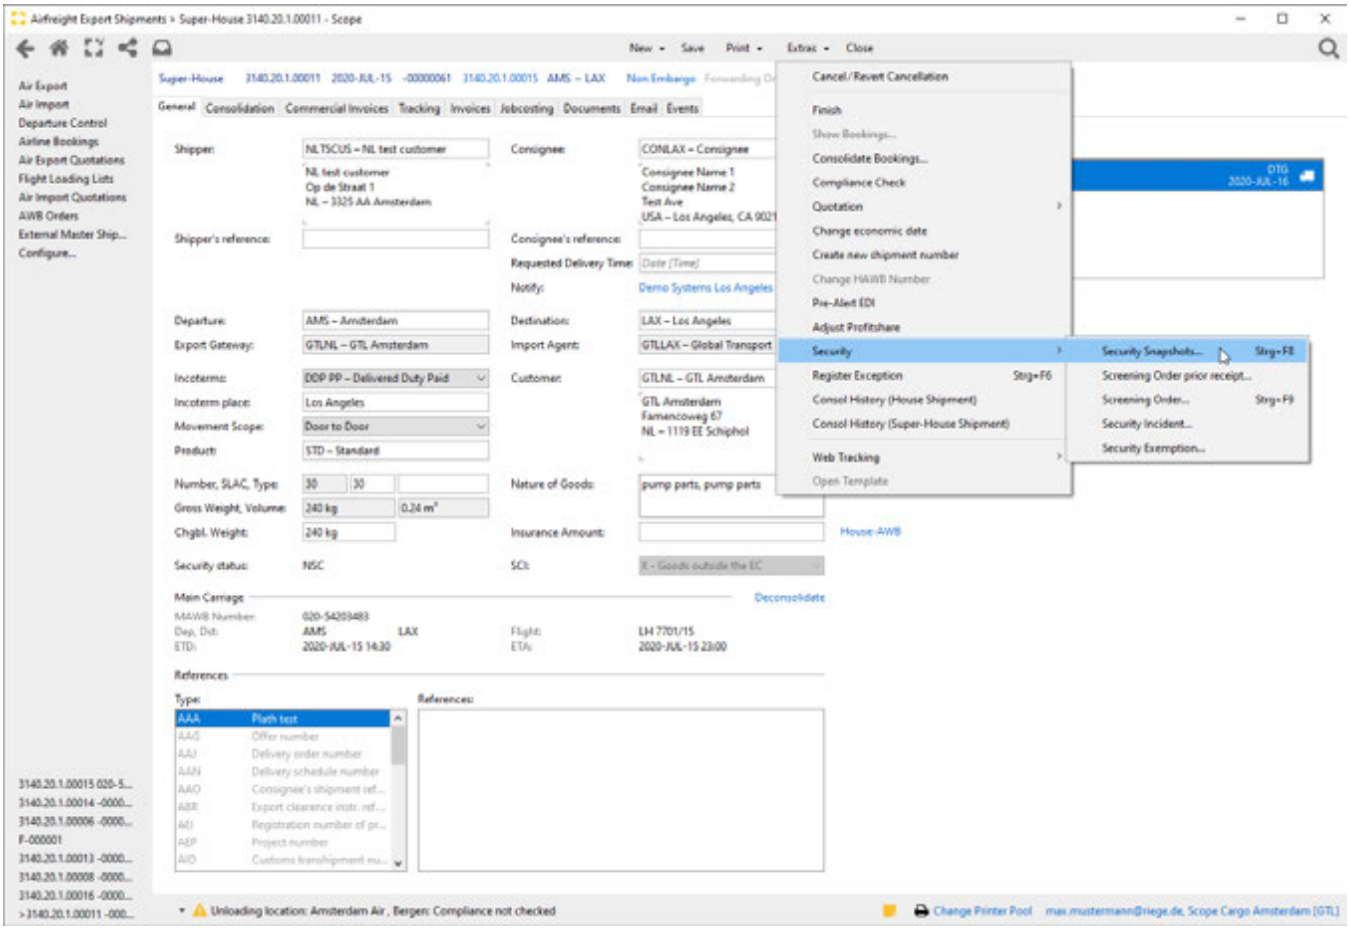
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Security

Opens a variety of functions to handle an air freight shipment regarding airfreight security. See the detailed description in chapter Air Freight Security.

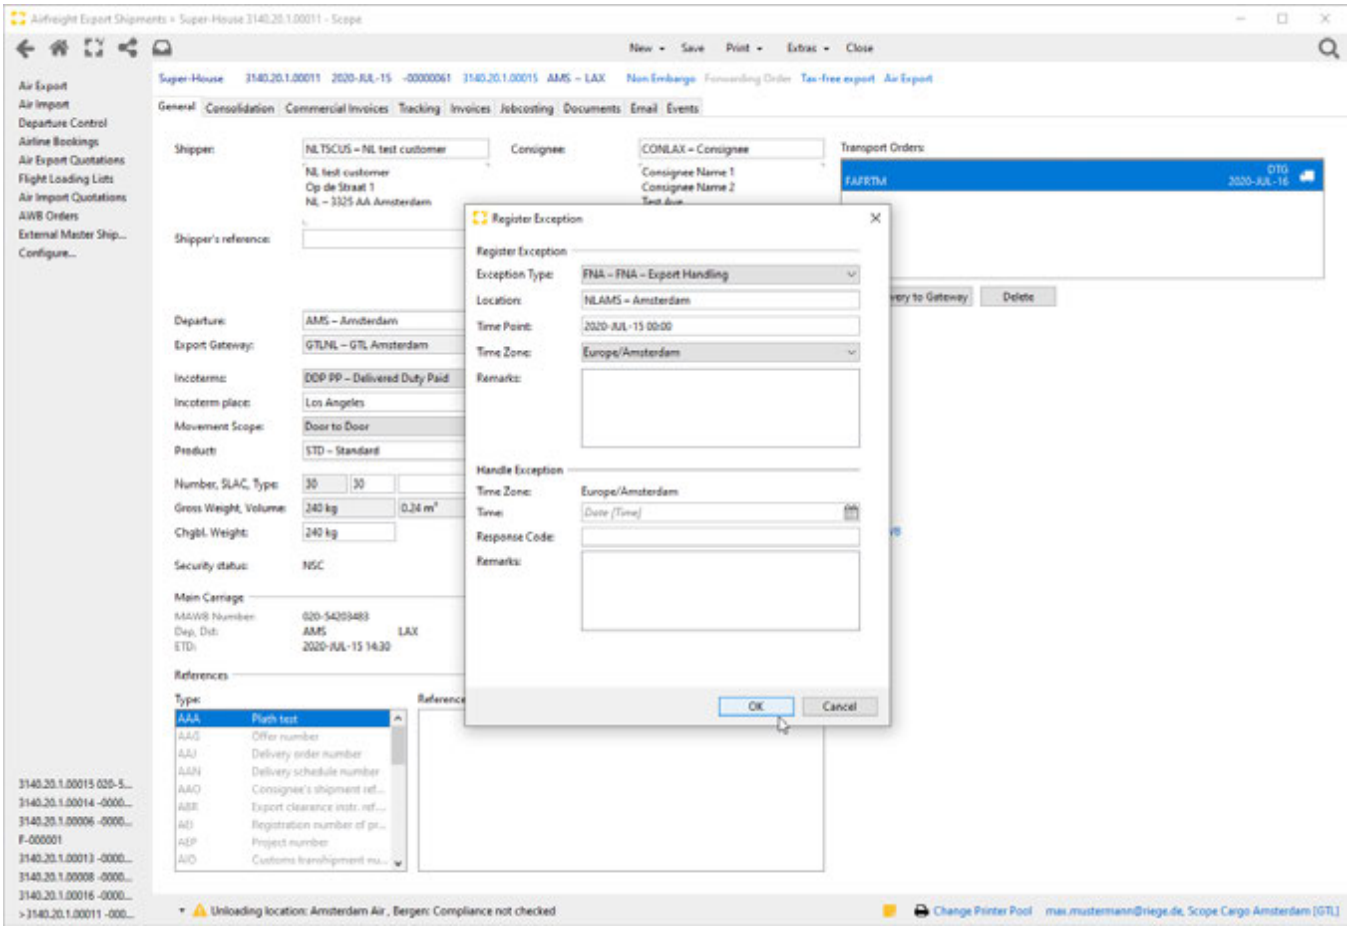
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Register Exception

With this action, exceptions can be created. These represent additional information about the milestones.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



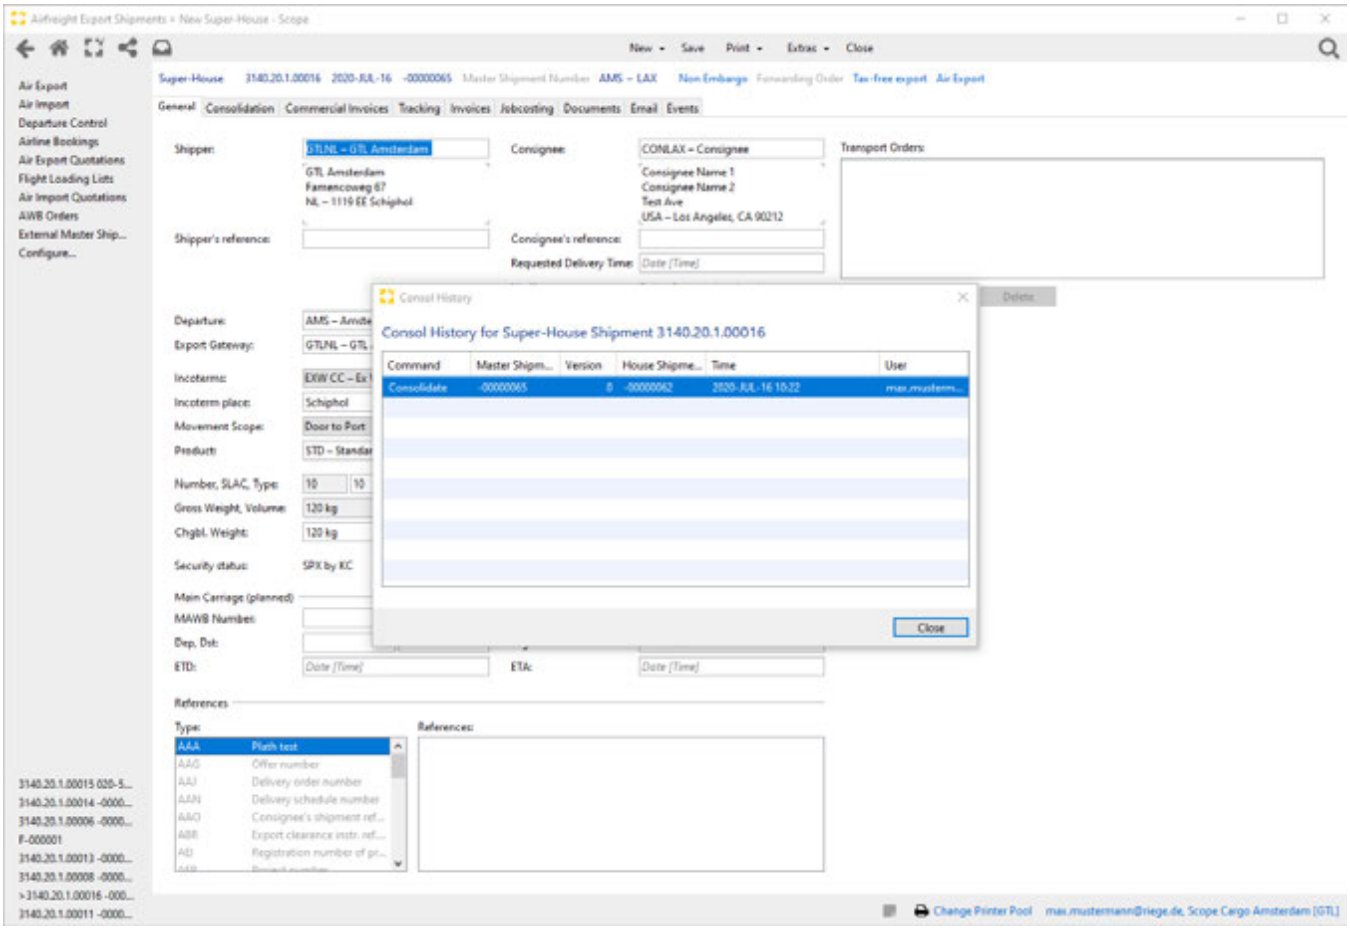
- Consol History (House Shipment)

shows the logged actions on the Consol regarding the House-Shipment

- Consol History (Super-House Shipment)

shows the logged actions on the Consol regarding the Super-House-Shipment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Web Tracking

Via web tracking, a URL can be copied, or a program can be opened directly in anonymized web tracking.

- Open Template

opens the template that created the shipment

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- Type of shipment
  Type of shipment. This is Super-House
- Shipment number
  Assigned by the system after the shipment has been saved for the first time.
- Economic date
  The date can be changed via Extras - Change economic date.
- Air Waybill number
  Super-House Air Waybill number created by Scope when shipment has been saved for the first time.
- Master Shipment Number
  Shipment number of master shipment where Sub-house shipments has been consolidated.
- Departure airport - Destination airport
  Departure and destination of the shipment.
- Non Embargo, Approve Embargo
  Embargo Status set due to destination
- Forwarding Order
  Link to a connected Forwarding Order
- Taxability (e.g. "tax-free Export")
  Actionlink indicates the Taxability type and can also be used to change to a new taxability type
- Cost Center (e.g. Air Export)
  By clicking on this action link, the user will be able to change the Cost Center of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Field Description

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Shipper`s reference

Shipper´s reference can be entered here

Consignee`s reference

Consignee`s reference can be entered here

Requested Delivery Time

A requested delivery time can be entered here

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify. If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

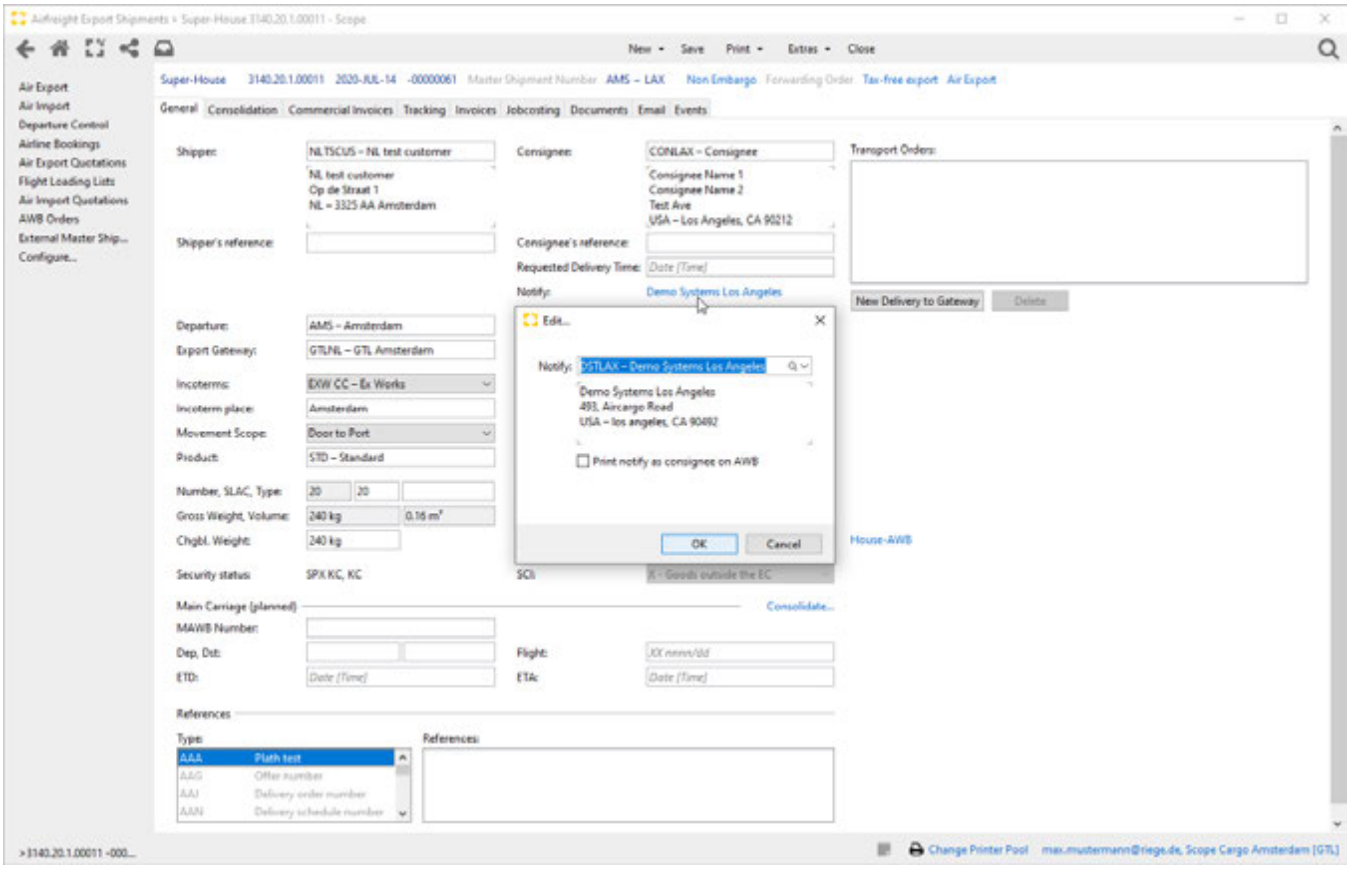
Edit Notify

With this action link the editor to add a notify address can be opened. The notify address can be located by using the search field. The context menu of the Partner field provides options for new document addresses to be created or existing document addresses may be edited. Like in the example shown below the notfiy address has already been defined once in the master data role Forwarding Customer. In the master data of the partner, if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partner is used in any shipment where this partner is the recipient (consignee). Therefore, the action link shows the first line of notify address.

Flag Print Notify as consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic field search function that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic field search function that will display all matching airports.

Export Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Import Agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function. The import agent depends on the destination. The field will use the following logic when presenting possible agent choices:

- If no destination has been entered, all agents are offered for selection.
- If a destination has been entered and the master data stores only one agent stored for that destination, then that agent is automatically used the import agent.
- If a destination has been entered and the master data for that destination has been assigned more than one agent, the field is not initialized. Instead, all stored agents are offered for selection.
- If a destination has been entered for which no partner has been assigned as an agent, then the field cannot be completed until an import agent has been created.

Incoterms

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes. The Incoterm fills the value of the fields Movement Scope and Customer automatically, as they determine which costs are charged for the sender (backward) or for the recipient (forward).

Incoterms Place

The place name referenced by the incoterms.

Customer

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Generally, the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Movement Scope

Movement Scope of the shipment.

Product

The drop-down menu will open a list of all available Products. The Products must be defined in the master data Forwarding Selling Products.

Number

Total number of packages in the consignment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super House Shipment.

SLAC

The shippers load and count of the packages. This number must be the same as or greater than the total number of packages. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super House Shipment.

TYPE

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.) Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks.. Fields will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Gross weight, volume

Total gross weight and volume of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Chargeable Weight

Total chargeable weight of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Insurance account

Amount of Insurance can be entered here.

Security Status

Security Status of the Super-House Shipment. The security status and reason for issue is determined by the status of the Sub-house shipments that are consolidated on the Super-House Shipment. The Sub-house with the lowest security status or reason for issue is used as the security status of the entire consolidated Super-House Shipment.

SCI (Special Customs Information)

Custom status is set by the Sub-house shipments that are consolidated on the Super-House Shipment.

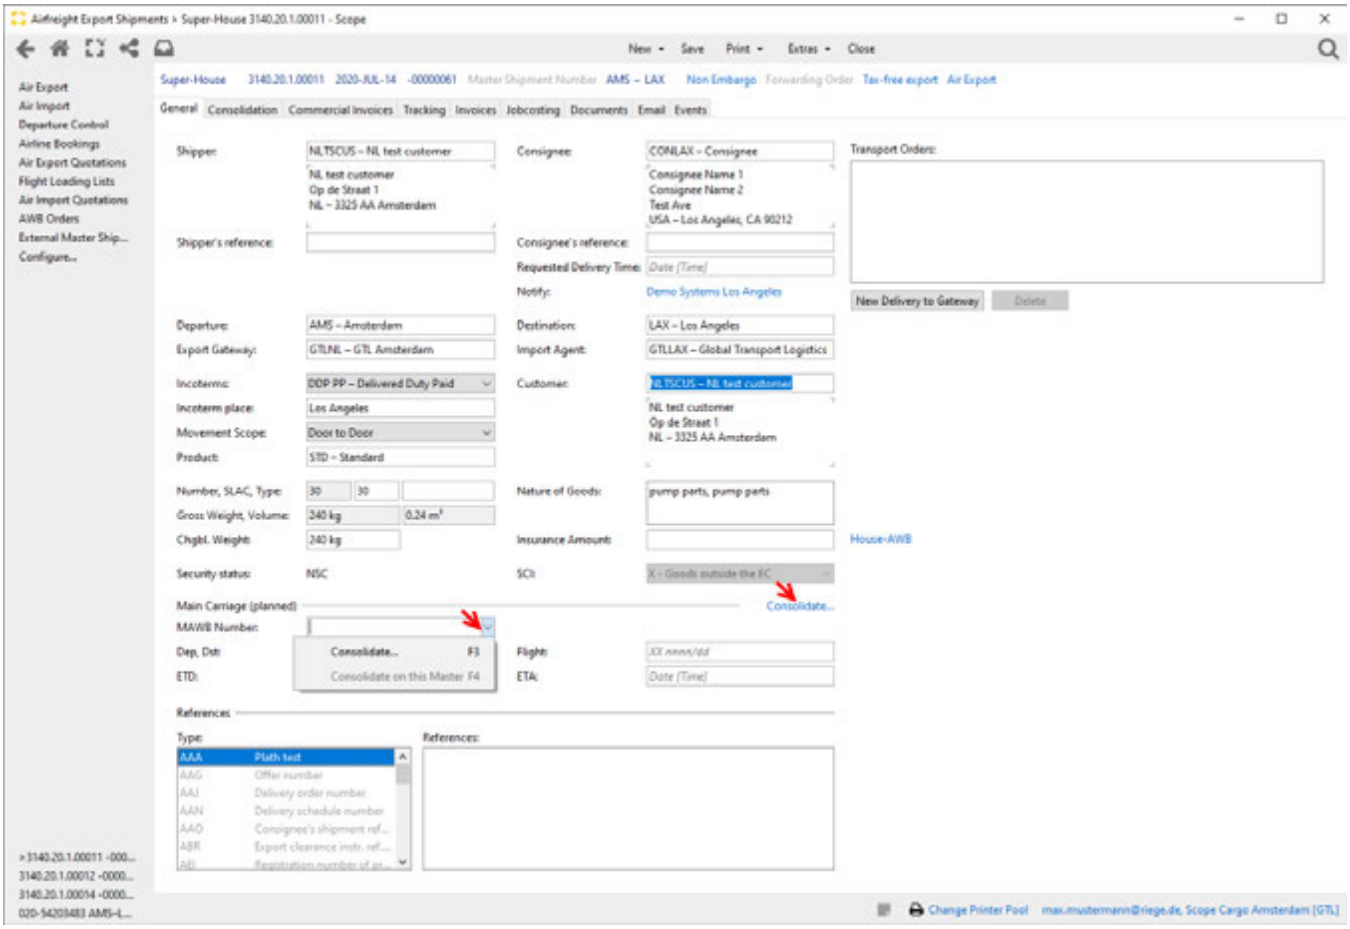
Main carriage (planned)

MAWB Number

Consolidate / Deconsolidate

This area of the Super-House shipment allows the Super-House to be consolidated on a master shipment or deconsolidated if already assigned to an open master shipment. If the Super-House has already been consolidated, then the master shipment can be opened directly at this point to complete the consolidation. Alternatively it is possible to exit the Super-House shipment and complete the consolidation or deconsolidate in the master shipment application. The input dialog can be opened by using the drop-down menu in the field MAWB Number, or by pressing F3 there, or using the corresponding Actionlink *Consolidate...* .

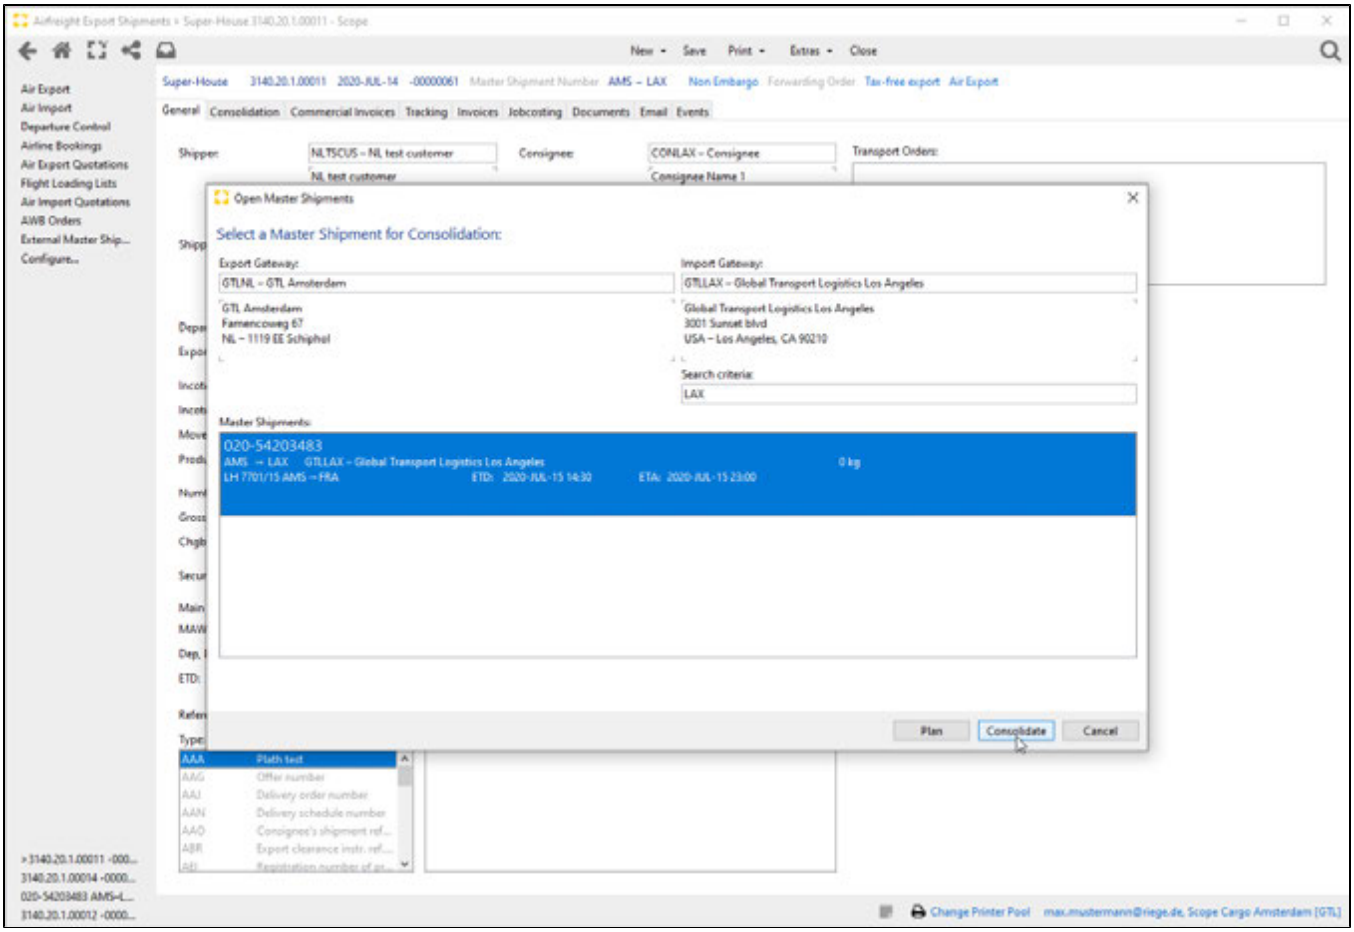
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Consolidate**

If the "consolidate" option is taken, the Open Master Shipments dialog box appears, and an available Master can be selected by choosing the button Consolidate.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Export Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Import agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function.

Destination (Search Criteria)

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic field search function that will display all matching airports.

Mater-Shipments

Based on the information in the fields **export gateway**, **destination** and **import agent**, all available open consolidations that match these criteria will be displayed. If no import agent or destination is input, then all open masters are visible. Completing both or either of the import agent and destination fields will narrow the list of available masters. When the correct master is highlighted, click on the Consolidate button will confirm consolidation of the Super-House on that master.

Plan

Selection is status planned but not yet confirmed. Actionlink to Consolidate the shipment is still be shown as Consolidate and does not change to Deconsolidate.

Consolidate

Confirms the selection and closes the editor.

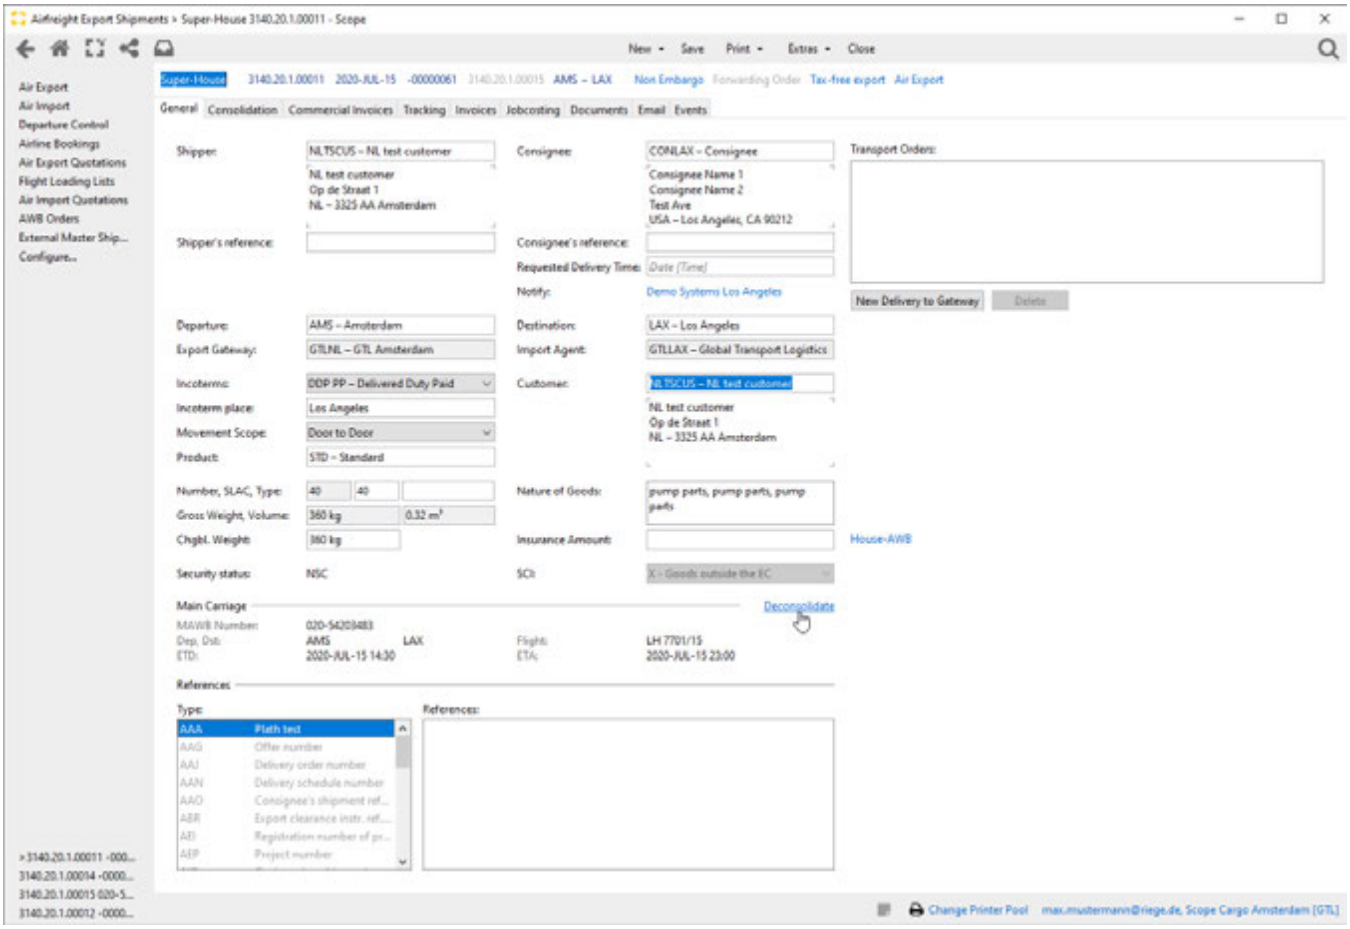
Cancel

Closes the editor without further action.

- **Deconsolidate**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the Super-House is consolidated to a Master Shipment the MAWB number and flight details will appear in the fields regarding the Main Carriage. The Actionlink shows the option *Deconsolidate* now, instead of the *Consolidate...* option. This link can be clicked to deconsolidate the shipment again. After that the Consolidate function will be active again.



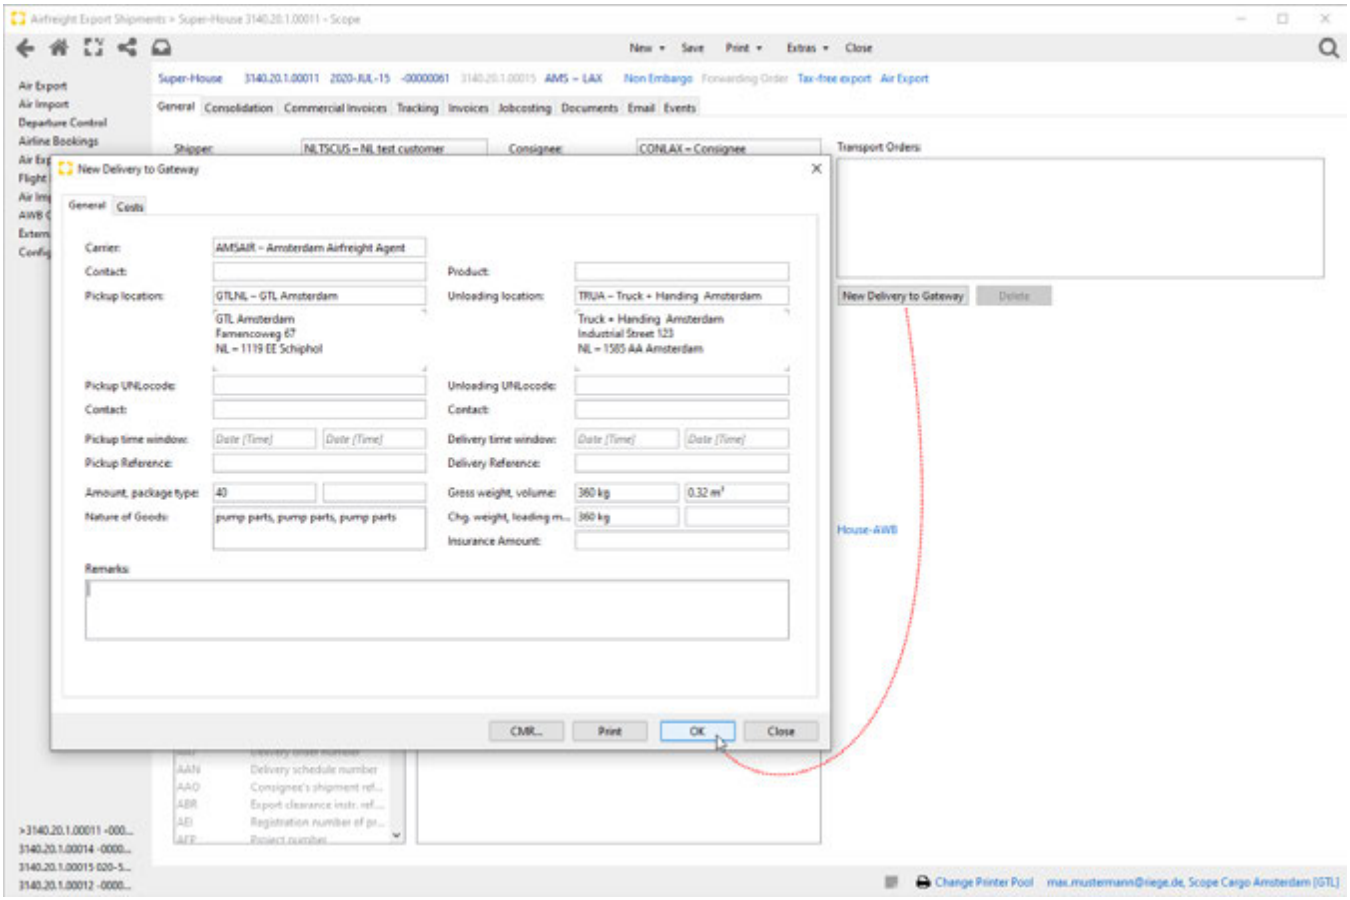
References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

Transport Orders

In this box transport orders will be shown, or can be issued by using the button *Delivery to Gateway*, or deleted by using the button *Delete*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



House-AWB

With this action link the House-AWB Editor can be opened. A more detailed description of the AWB Editor can be found here House-AWB - General - House shipment - Airfreight export.

Consignee

The Consignee address appearing in this field is taken from the field Consignee, entered in the General TAB of the Super-House. If the field is empty, all available House-Shipments will be shown for the selected direction.

Search Criteria

The destination of the available house shipments is used to match them to the destination of the Super-House shipment. The destination of the Super-House shipment is found in the General Tab.

Available House Shipments

`By default, all house shipments are displayed, that match with Search Criteria.`

- When the Consignee and destination are present, only house shipments with matching Consignee and destination will be shown as available for consolidation.
- When the Consignee is left blank, then all open House-Shipments to the destination will be shown regardless of the Consignee that may be present at the house level.
- If the destination is left blank, then all open houses that match the Consignee will be shown, regardless of the destination of the house shipments.
- if both the destination and Consignee are left blank then all open house shipments will be visible regardless of the Consignee or destination of those houses.

Chosen House Shipments

This window displays house shipments that are currently included in the Consolidation. The base of the window shows the total number of houses on the consol, their total number of pieces, gross weight, volume, and total chargeable weight.

Add

Moves the highlighted house shipment from the Available House Shipments window to the Chosen House Shipments window to indicate the house is to be included on the consol.

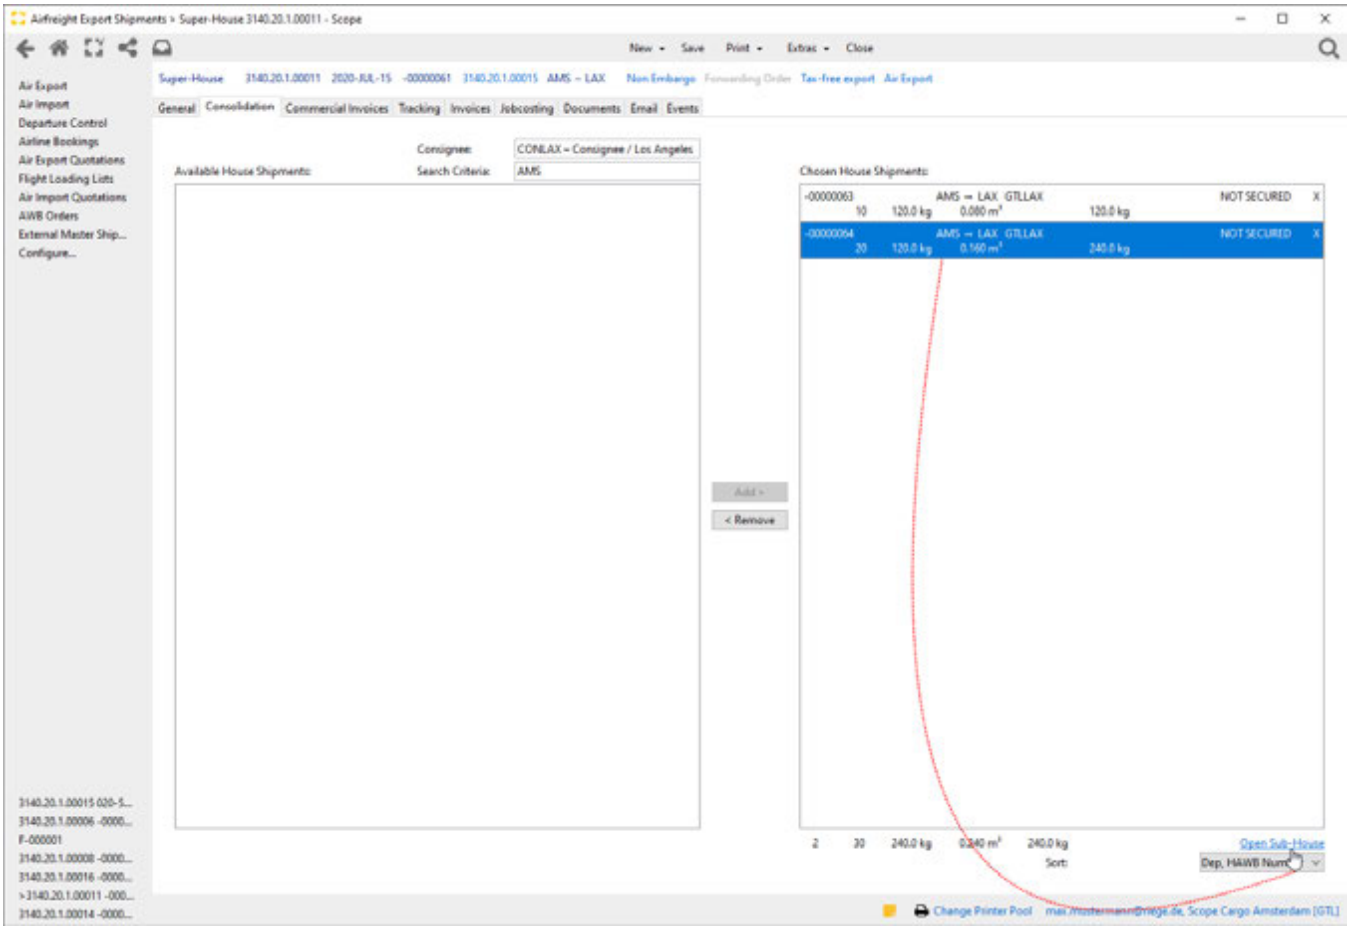
Remove

Removes the highlighted house shipment from the Chosen House Shipments window back to the Available House Shipments window to indicate the Sub-House is to be removed (deconsolidated) from the consol.

Open Sub-House

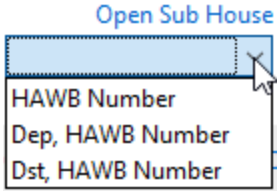
Opens the Sub-House that is marked in the table Chosen House Shipments

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Sort

The selected Sub-House shipments can be sorted using the dropdown menu.



HAWB Number

Sorting is based on house AWB numbers

Dep HAWB Number

Sorting takes place first from departure and within it according to HAWB no.

Des HAWB Number

Sorting takes place first to the destination and within it according to HAWB no.

(f) Jobcosting - Super House Shipment - Air Freight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated. See also chapter Jobcosting - Functions - General.

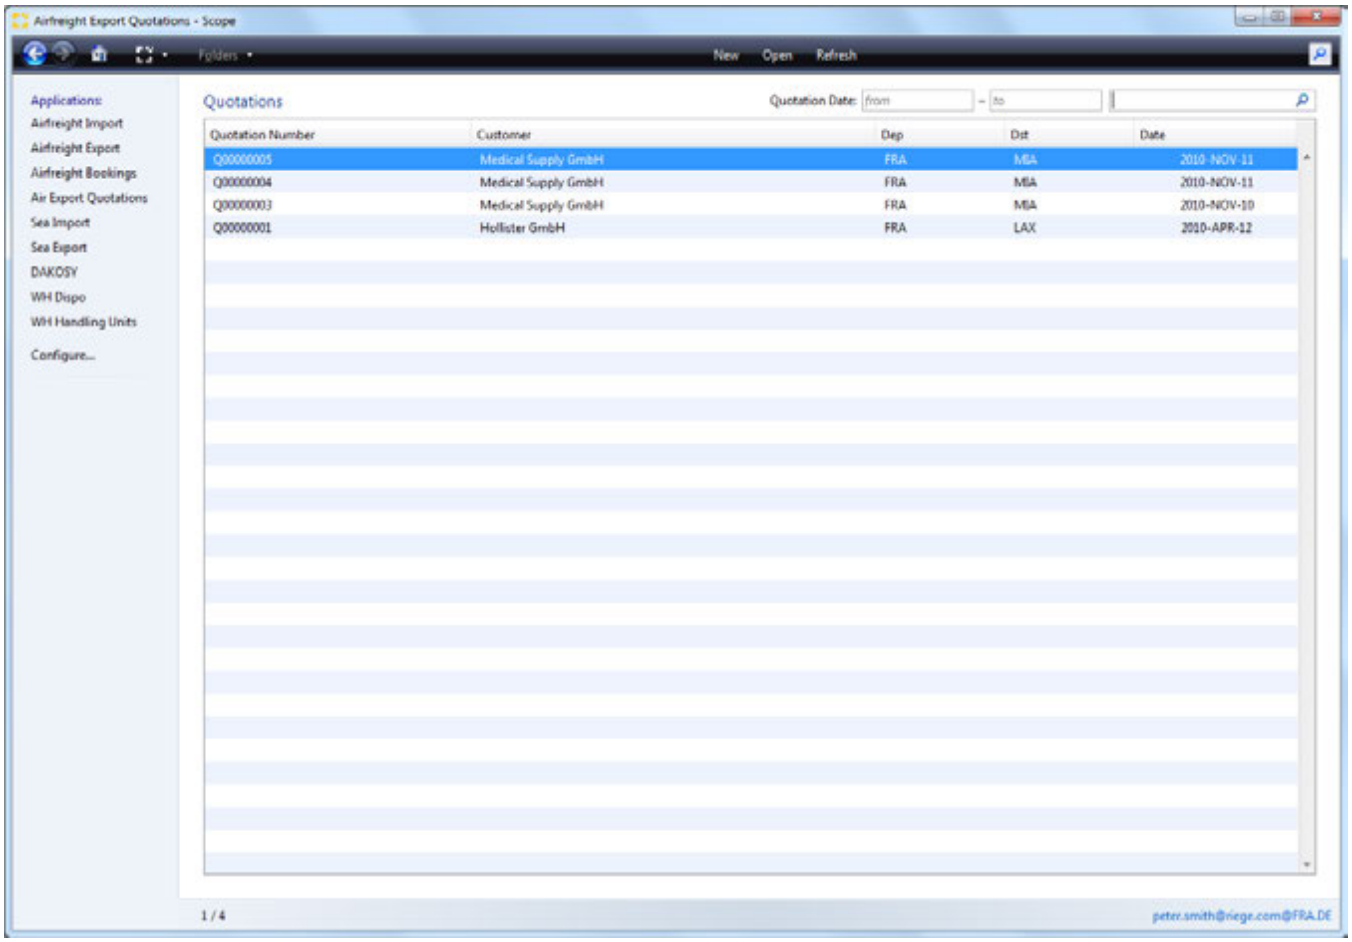
Quotation - Airfreight Export

- Introduction
- Description

Introduction

This application is used to quickly create quotations. These quotes can be used internally or issued to a customer. From the quotation application a booking can be created or a quotation can be used to directly create a house, direct or back-to-back house shipment. Where a booking, house, direct or back-to-back house shipments are being created, if the components of that shipment match an existing quotation, then a pop-up window appears and provides the option to use the quotation for the booking or shipment being constructed.

Description



With ***New - Quotation*** a new quotation can be created.
With ***Open*** the existing quotation highlighted in the index can be opened. Alternatively the quotation highlighted in the inidex can be ***Double clicked*** to open it.

The functions of the quotation editor are described here:

- Documents - Quotations - Airfreight Export
- General - Quotation - Airfreight Export
- General - Quotation - Airfreight Import

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

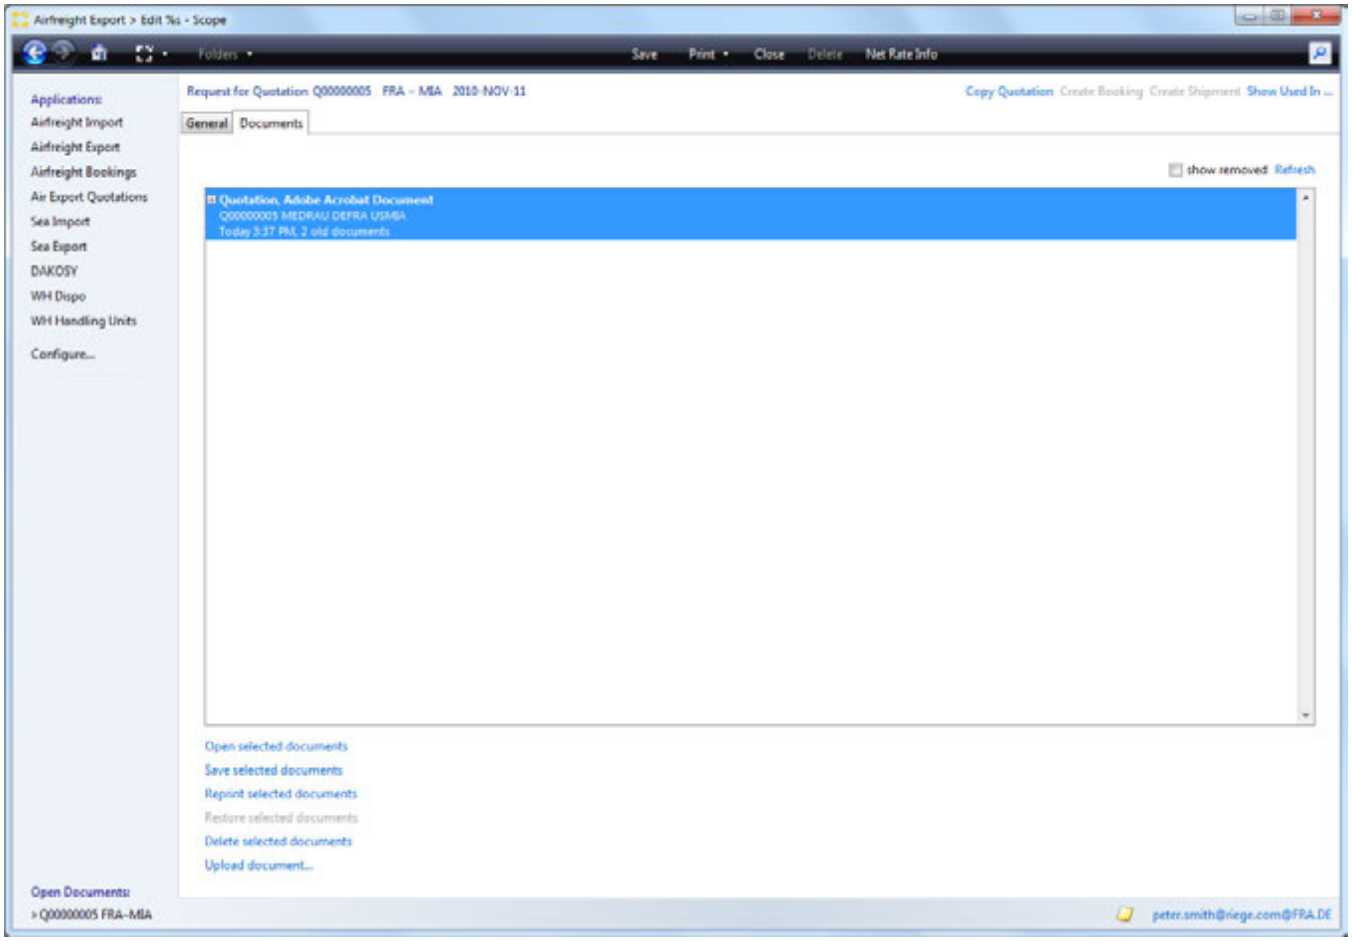
Documents - Quotations - Airfreight Export

- Introduction
- Description

Introduction

All documents that have been printed for the quotation will appear in the **Document** tab.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

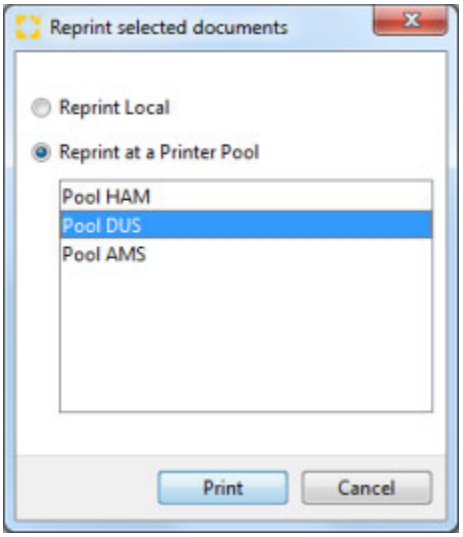
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

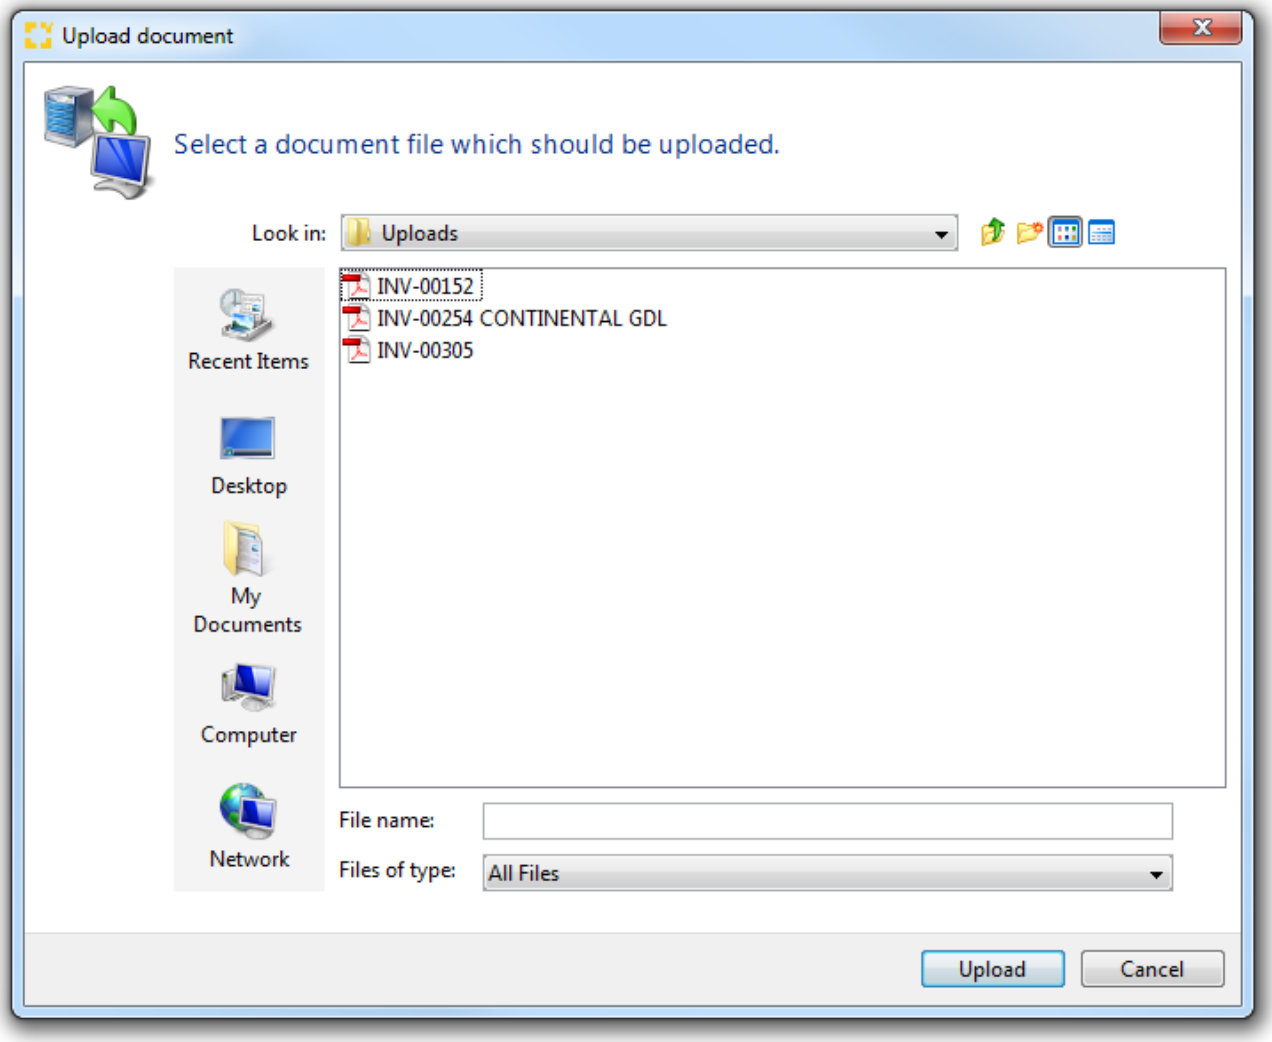
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

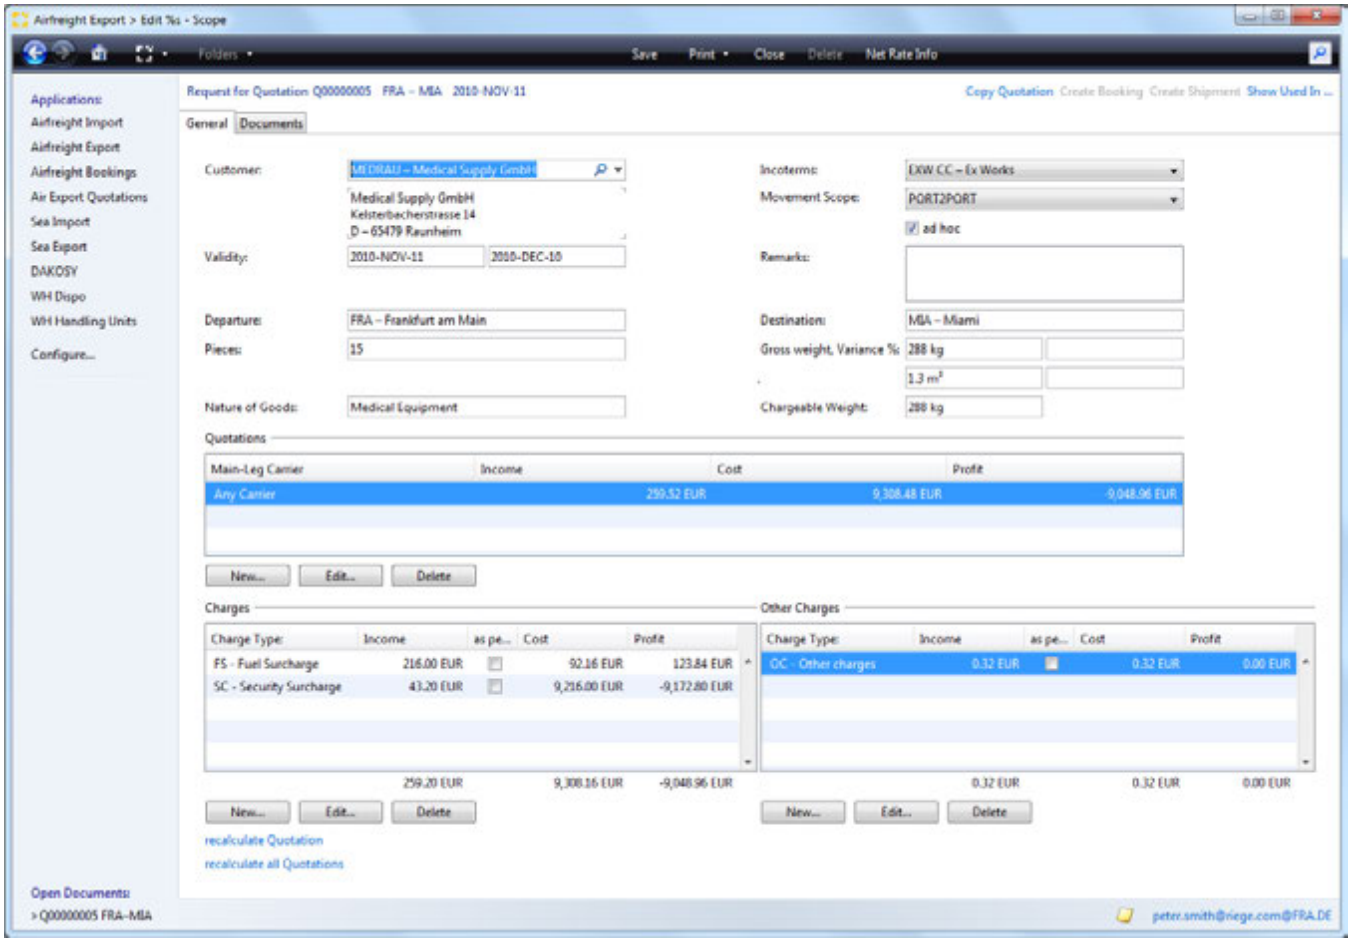
General - Quotation - Airfreight Export

- Introduction
- Description

Introduction

The **General** tab of the quotation application stores the principle information about the quote such as the customer, departure, destination, number of packages and their weights. In addition the individual costs and revenues for the quotation are stored in the **General** tab. These cost can be created on a per Carrier basis. These are usually based on the master data; activity type , charge type and tariff rates and applied according to the inco terms and charg eable weight of the shipment. Costs and revenues may be manually deleted or edited. The final quotation can be printed for the client.

Description



Save

The *save* option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.
Currently the following documents are available:

- Quotation
  (This form will not show **costs** since these are not usually shown to the customer.)

Close

Closes the current quotation. If the quotation has not been saved, a query box appear requesting confirmation.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Delete

Deletes the current quotation

> Quotations or bookings that have already been used in shipments cannot be deleted.

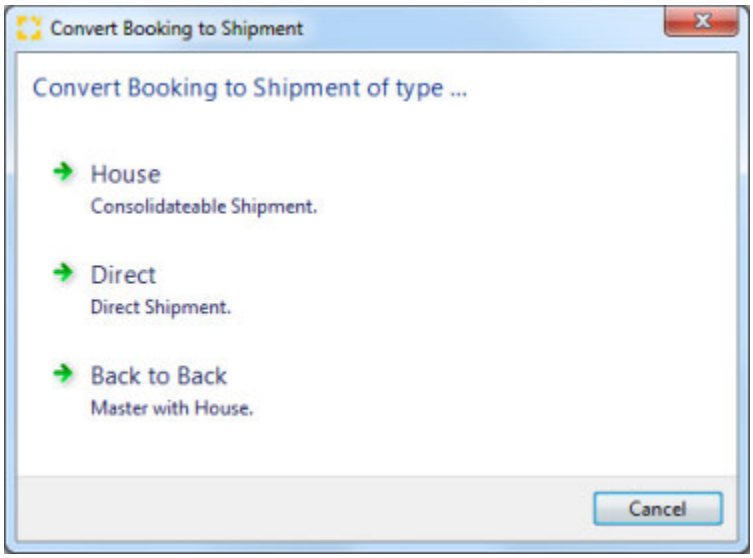
Net Rates Info

Opens the Net Rates Info application for information about available net rates and airfreight costs.

Title Bar

The following information and actions appear in the title bar for a booking. Blue text indicates that the text has an action link and offers further activities.

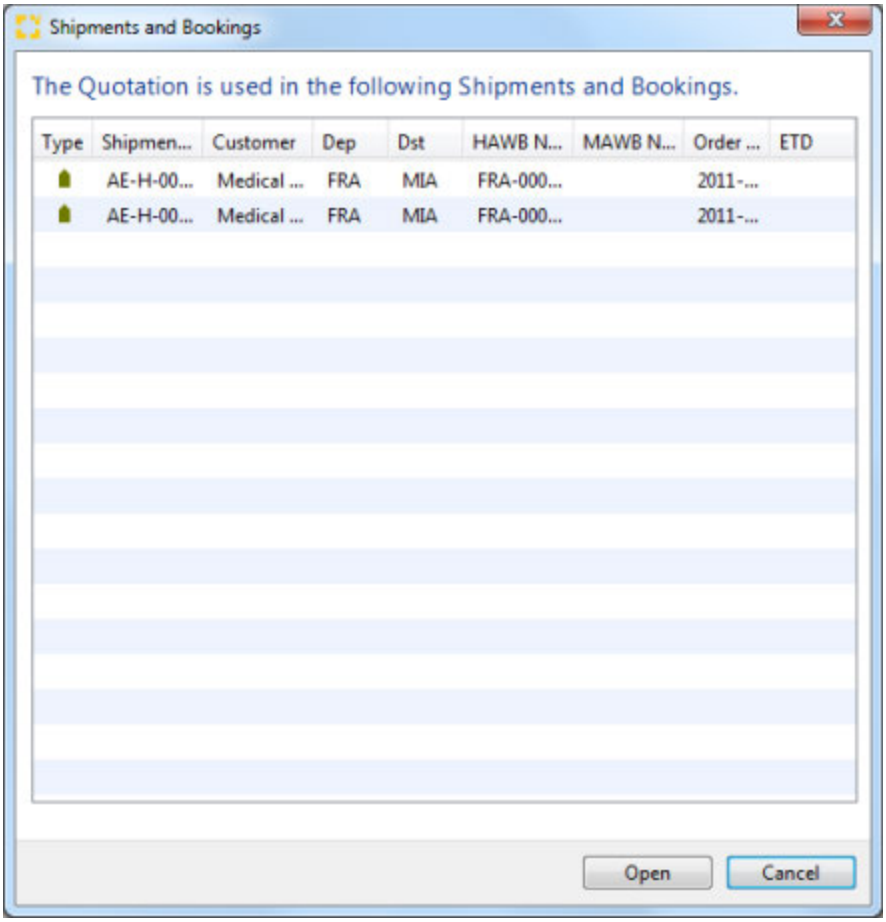
- **Type**
  The *type* will always be displayed as a *quotation*.
- **Quotation number**
  Assigned by the system when the quotation is saved for the first time.
- **Departure airport - Destination airport**
  Departure and destination applicable to the quotation.
- **Date**
  The date the quotation was first saved.
- **Quotation copy**
  Makes a copy of the current quotation.
- **Create Booking**
  Creates a new booking based on the current quotation.
- **Create Shipment**
  This action will use the current quotation to create a full shipment. On clicking this action link a pop-up window appears where the desired type of shipment can be selected. The options are house shipment, Direct shipment or House for a Back-to-Back shipment. *Cancel* will close the pop_up without further action.



> If a quotation had been created on an ad hoc basis Then the quotation can only be used once in a shipment or booking. If a shipment or booking have already been created using this quotation, then these 2 action links will be disabled.

- **Show used in...**
  Opens a pop-up window which shows bookings and shipments where this quotation has been used. The pop-up table information includes the type of shipment or booking, the shipper, departure and destination airports, the house airway bill number, the master airway bill number, the depart and destination dates. Any of these listed shipments or bookings can be opened by highlighting the shipment or booking and clicking the *Open* button. Alternatively, *double-click* the shipment or booking to open it.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Customer

Generally the customer is the business partner who is responsible for the transportation costs and to whom the quotation will be offered. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Validity

The period for which the quotation is valid. By default this period will start on the date on which the quotation was created and expire in 1 month. This default can be changed as required.

Incoterms

The delivery terms for the quotation.

Movement Scope

Movement Scope of the quotation.

ad hoc

If a quotation is only to be used once, either for a booking or a shipment, then this box should be checked. A notice to this effect will also appear on the printed quotation.

Departure

Airport of departure for the quotation. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination for the quotation. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Pieces

the number of pieces allowed for the quotation.

Gross weight, Variance %

The gross weight for the quotation and the maximum allowable deviance from this gross weight expressed as a %

Volume, Variance %

The volume for the quotation and the maximum allowable deviance from this volume expressed as a %

> In many cases, when a quotation is created, the client can only offer approximate weights and volumes for the cargo. For this reason it is possible to store a deviation from these approximate figures in % form in order to accommodate slight changes to the original figures.

Chargeable Weight

The chargeable weight of the cargo

Nature of Goods

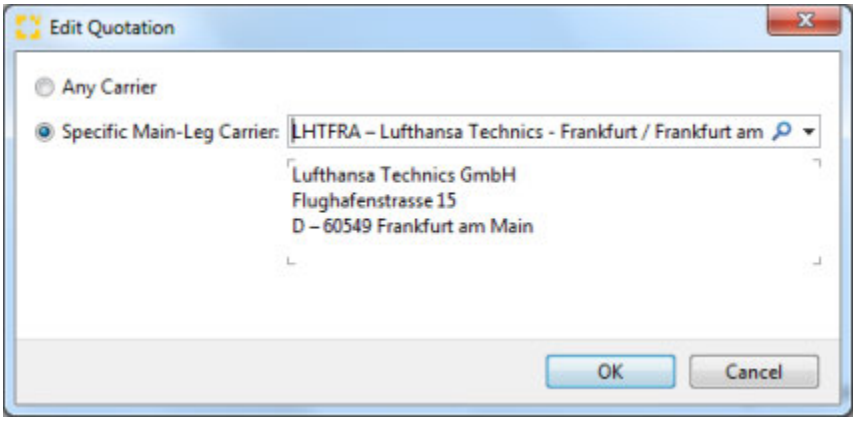
A description of the goods.

Quotations

This summary table will show carrier who have rates applicable to this quotation. The columns will show the airline name and for each airline the columns will show the total income amount, the total costs and the profit.

New

Opens a pop-up window to *edit* an existing carriers details or to add new carriers.



Any Carrier

This option indicates any carrier may be used for the quotation. In this case the automatic calculation of costs is done using the general tariff data

Specific Main-Leg Carrier

This option indicates only specific carriers may be used for the quotation. The search field can be used to locate the correct carriers. Costs are automatically calculated using the tariff rates stored for the carrier.

OK

Stores the data and closes the pop-up window in order for the quotation to be further *edited*.

Cancel

Closes the pop-up window without further action.

Edit

Opens the highlighted carrier in a pop-up window to make changes.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Delete

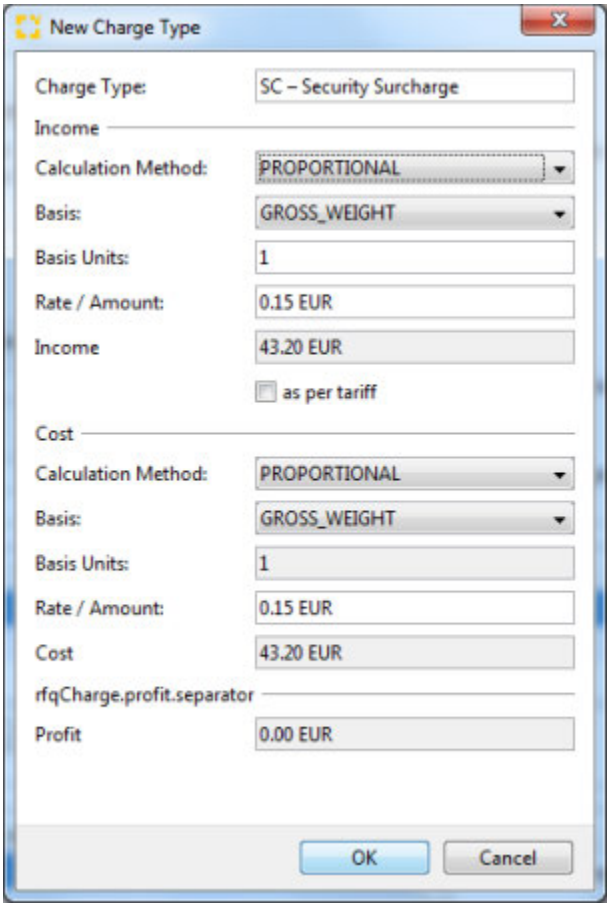
Deletes a carrier selected in the summary table.

Charges

This is a summary table of all the charges applicable for the carrier highlighted in the *Quotations* summary table.

New

Opens a pop-up *New Charge* window where an additional charge may be entered, and the income and cost for the charge may be calculated.



Charge Type

The charge type for which a calculation is being created.

Income or Cost

Calculation Method

The method by which the income or costs should be calculated.
This is a drop down field that will offer the following possibilities:

Type	Description
Fix	No calculation - a fixed amount
Proportional	Calculation based on number of units
Step	Calculation proceeds in step-wise fashion

Basis

The basis used for the calculation

Basis Units

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The units for the basis. For example if the basis is *chargeable weight*, the units for the basis would normally be *1* indicating per 1 kilo of chargeable weight.

Further information about calculation methods, basis and basis units is available under master data rates

The calculation methode, basis and basis units are only used for manual calculation. When the income and costs are calculated automatically using the tariff rates they should appear as fixed amounts.

Amount

The total of the income or cost.

OK

Stores the data and closes the pop-up edit charges pop-up window.

Cancel

Closes the pop-up window without further action.

Edit

Opens a charge highlighted in the summary table for editing. The charge type cannot be changed. Charges can only be deleted if the income and costs are to be applied to a different charge type.

Delete

Deletes the charge highlighted in the summary table

Recalculate Quotation

Recalculates the quotation for the carrier highlighted in the carrier table summary.

Recalculate all Quotations

recalculates the quotations for all carriers.

When quotations are recalculated, any manually inserted data is lost and only the master data from the master tariff rates is use to recalculate the figures.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

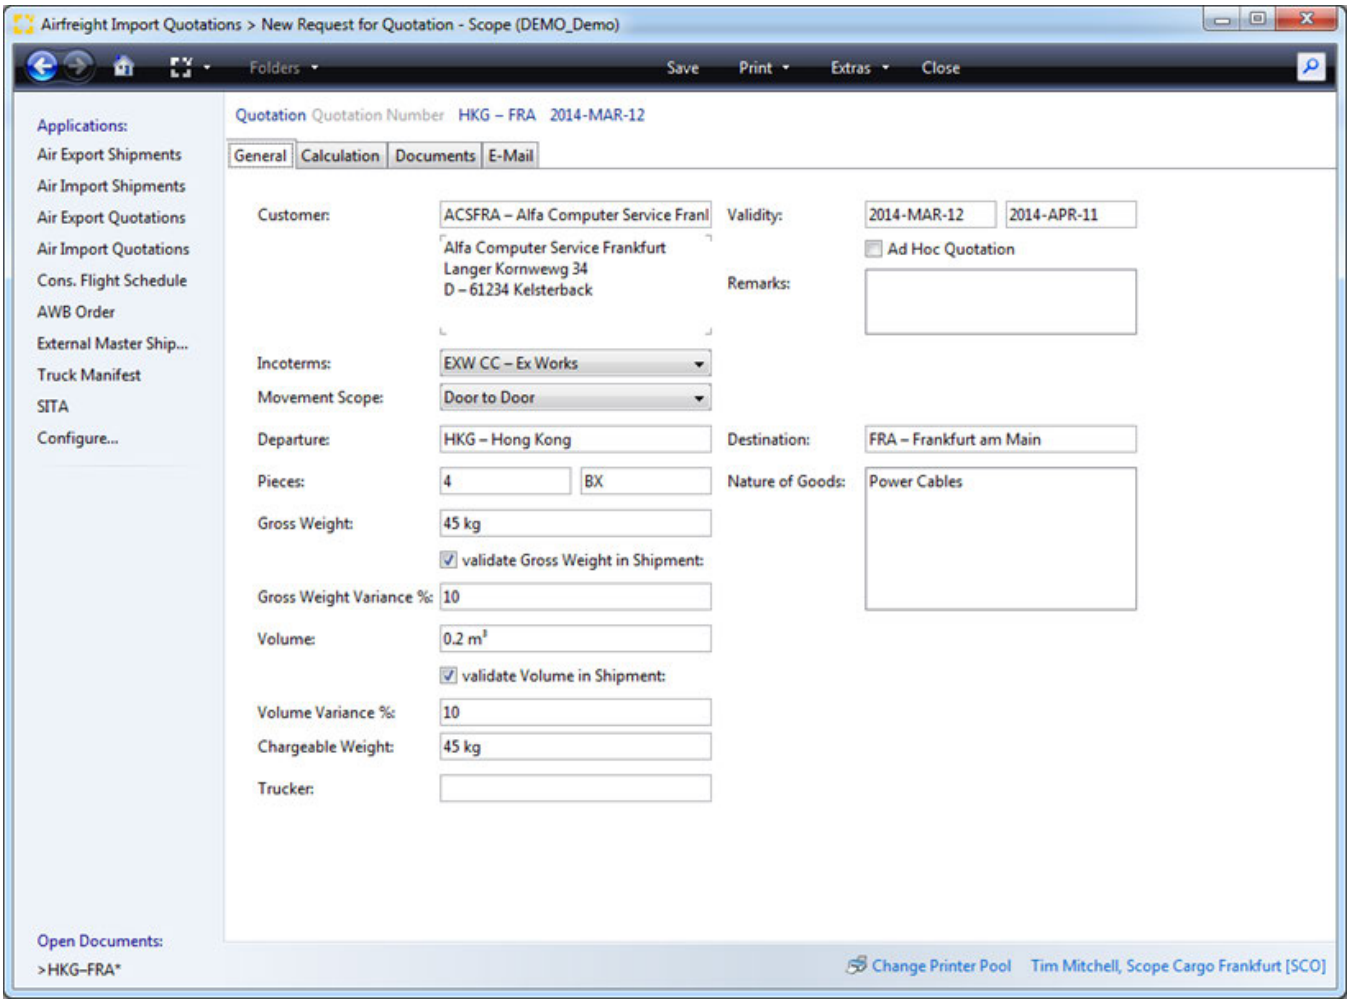
General - Quotation - Airfreight Import

- Introduction
- Description

Introduction

The **General** tab of the quotation application stores the main information about the quote such as the customer, departure, destination, number of packages and their weights.

Description



Title Bar

The following information and actions appear in the title bar for a booking. Blue text indicates that the text has an action link and offers further activities.

- **Type**
  The *type* will always be *Quotation*.
- **Quotation number**
  Assigned by the system when the quotation is saved for the first time.
- **Departure airport - Destination airport**
  Departure and destination used in the quotation.
- **Date**
  The date the quotation was first saved.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

The *save* option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. A pop-up window will appear If required items are missing and this will show the items that must be completed in order to save the quotation.

Print

By clicking on the print option a pdf version of the quotation will be produced.

Extras

Provides a set of additional options

- Show Usage...
- Copy Quotation
- Delete*
- Create Shipment

Show Usage

Opens a pop-up window which shows shipments where this quotation has been used. The pop-up table information includes the type of shipment, the shipper, departure and destination airports, the house airway bill number, the master airway bill number, the depart and destination dates. Any of these listed shipments can be opened by highlighting the shipment and clicking the *Open* button. Alternatively, *double-click* the shipment to open it.

Copy Quotation

Creates a new copy of the quote. Everything except the validity dates will be copied to the new version and new valid dates will have to be entered.

Delete

The Quote will be deleted.

> ⚠ Quotations or bookings that have already been used in shipments cannot be deleted.

Create Shipment

Uses the quotation as the basis for a new shipment. The type of shipment must be selected first and may be:

- Direct Shipment
- Back to Back - Master with House
- Coload In

> ⚠ If a quotation had been created on an ad hoc basis Then the quotation can only be used once in a shipment or booking. If a shipment or booking have already been created using this quotation, then these 2 action links will be disabled.

Close

Closes the current quotation. If the quotation has not been saved, a query box appear requesting confirmation.

Customer

Generally the customer is the business partner who is responsible for the transportation costs and to whom the quotation will be offered. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where among other things, a new partner may be created or an existing partner may be edited.

Validity

The period for which the quotation is valid. This period will depend upon whether the quote is based on a shipment Booking Date or a shipment Economic Date.

Booking Date

Validity period for the quotation is based on the booking date of the shipment

Economic Date

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Validity period for the quotation is based on the economic date of the shipment

Ad Hoc Quotation

Indicates a one-time quotation that cannot be reused in more than 1 shipment.

Sales Person

This is a search field where the name of the Salesperson responsible for the quotation can be entered.

Remarks

Addition remarks about the quotation

Currency

The currency and exchange rate to be used on the quotation

Incoterms

The delivery terms for the quotation.

Movement Scope

Movement Scope of the quotation.

Departure

Airport of departure for the quotation. The IATA-Code and the full name of the airport are displayed. Either of these can be entered as search terms to find the required airport.

Destination

Airport of destination for the quotation. The IATA-Code and the full name of the airport are displayed. Either of these can be entered as search terms to find the required airport

Pieces, Packing Type

The number of pieces allowed for the quotation followed by the packing type.

Nature of Goods

A description of the goods.

Gross weight, Variance %

The gross weight for the quotation and the maximum allowable deviance from this gross weight expressed as a %

Volume, Validate Volume, Variance %

The volume for the quotation.

If a deviation in total volume is allowed, the maximum allowable deviance can be expressed as a % of the volume.

> In many cases, when a quotation is created, the client can only offer approximate weights and volumes for the cargo. For this reason it is possible to store a deviation from these approximate figures in % form in order to accommodate slight changes to the original figures.

Chargeable Weight

The chargeable weight of the cargo. This will be defaulted using the gross weight and the volume.

Trucker

A quote may apply only when a specified trucker is used for delivery. This is a partner search field, only partners with the role Road Carrier will appear in search results.

Master Shipment - Airfreight Export

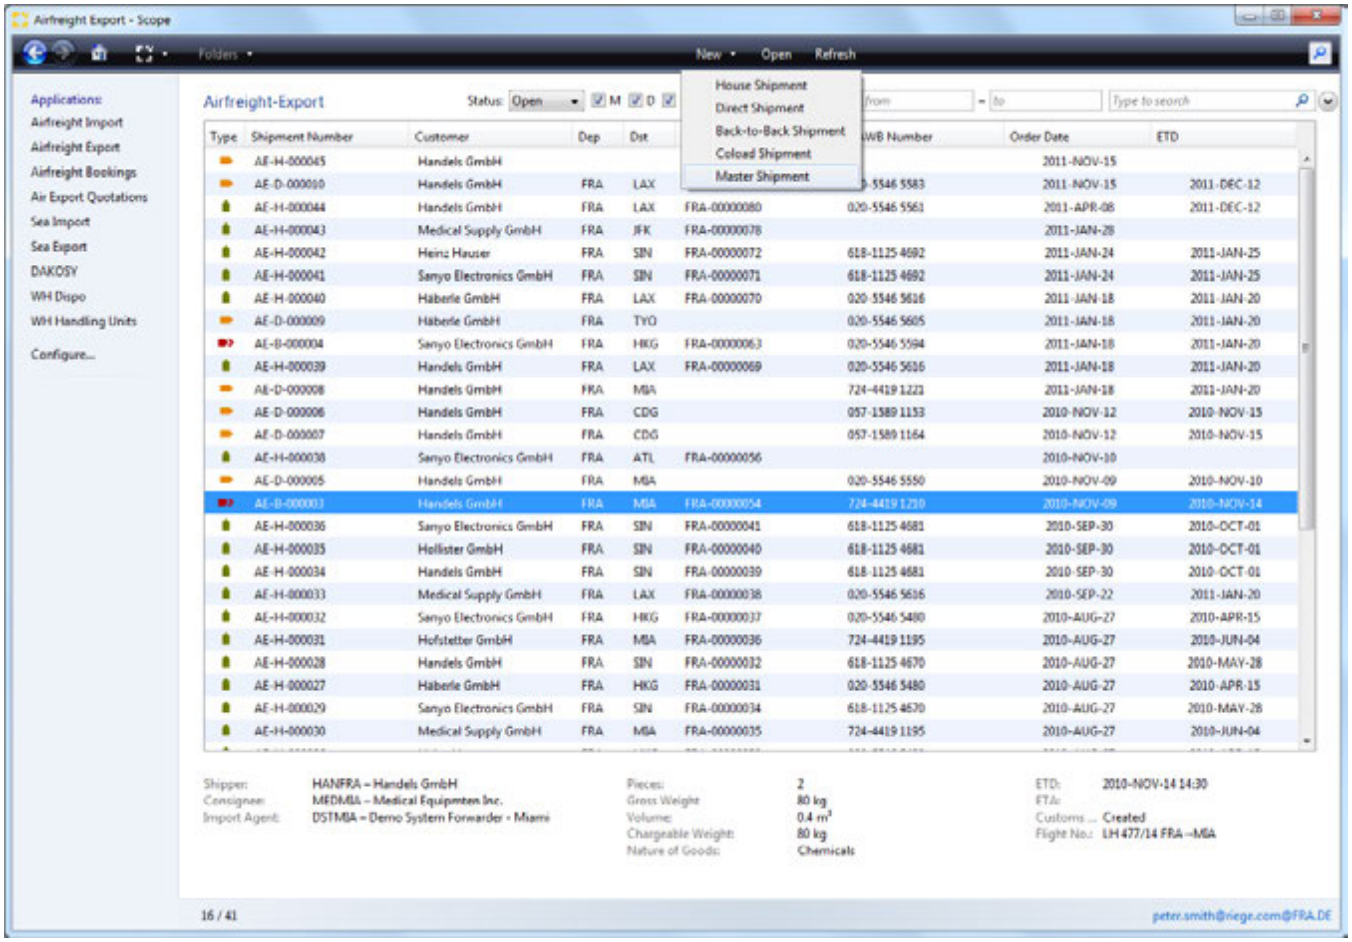
- Introduction
- Description

Introduction

In addition to house, direct and back-to-back shipments, master shipments can also be created in airfreight exports. Master shipments are also known as consolidations. A master program contains one or more house shipments and the master is usually addressed from one agent to another. These consolidated shipments are ultimately the least expensive method of shipping for the individual shippers and consignees. The duration of transportation to the final destination may well be considerable longer when compared to a direct shipment, this is because the agent needs to accumulate several shipments with the same or similar places of departure and destination in order to build a greater volume and weight which results in a lower price per chargeable kilo from the carrier (airline). Most agents offer a midweek and a weekend service consolidations. A house shipment delivered to the airline on a Thursday, for example, will wait until the weekend consolidation, shipping on a Saturday or Sunday.

In this application, all operations; data entry, billing, printing of documents and calculation of costs and revenues will be performed to create the airfreight export master or consolidations.

Description



Select ***New - Master Shipment*** to create a new master consolidation.
Select ***Open*** to open an existing master shipment that is highlighted in the overview of shipments. Alternatively ***double-click*** the highlighted master shipment to open it.

The functions of each of the shipment editors are described below:

- Billing - Master Shipment - Airfreight Export
- Consolidation - Master Shipment - Airfreight Export
- Documents - Master Shipment - Airfreight Export
- E-Mail - Master Shipment - Airfreight Export
- General - master shipment - airfreight export
- Jobcosting - Master Shipment - Airfreight Export

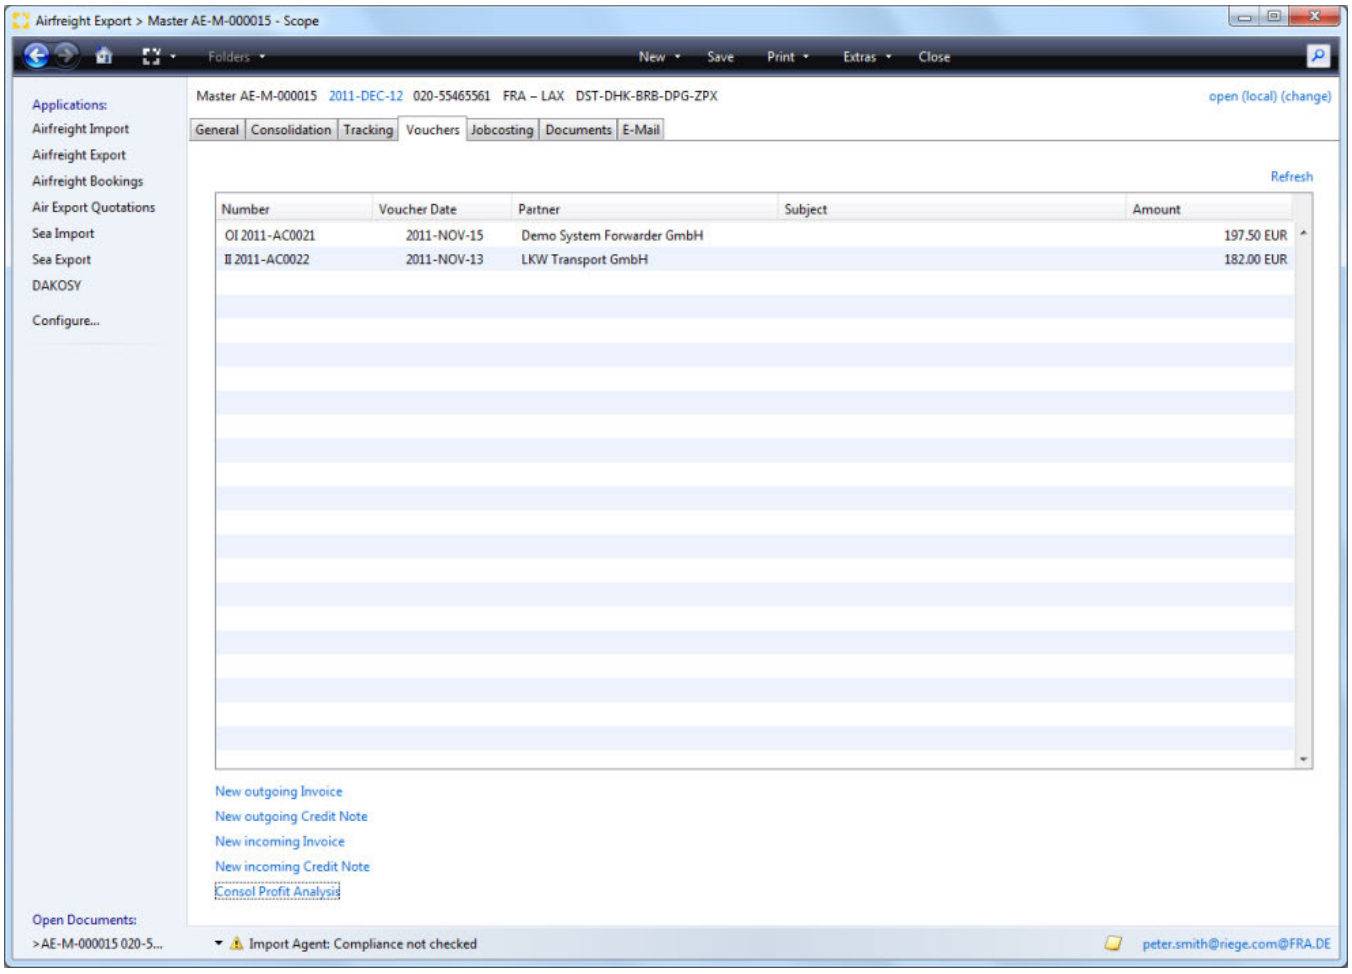
Consol Profit Analysis - General - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

The **Consol profit analysis** application automates the creation of a profit share sheet and branch billing (house billing) for a master shipment. These items are also automatically posted and printed.

Description



On launching the **Consol profit analysis** application, the following functions become available:

- Profitshare (Automatic calculation of profit share or profit sharing)
- Branch (Automatic calculation of branch invoices or house invoices)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

1. Profitshare - Consol Profit Analysis - General - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

Air freight consolidations often involve a **profit share** arrangement that is agreed between the sending agent and the receiving agent in order to distribute any profits made on the consolidation. The sum agreed can be part of the profit, part of the turnover or a fixed amount and is paid by the sending agent to the receiving agent. In some cases the entire consolidation or some shipments on the consolidation may represent a loss and in these cases these losses also must be distributed between the agents. The usual arrangement is to share 50% of the profits or losses. The **Profitshare** application calculates these figures using all the figures from the house and the master to arrive at the correct amounts. On completion of the calculation it is possible within the **Profits hare** application to issue the appropriate invoice or credit note. These vouchers will be created according to the setup of the receiving agent in the partner maintenance and may include a consol profit analysis sheet. To further automate the process of setting up profit share arrangements between agents, a CP A template can be created and applied to receiving agents as necessary. The calculation of profitshare can then take place automatically based on the settings in this template.

Description

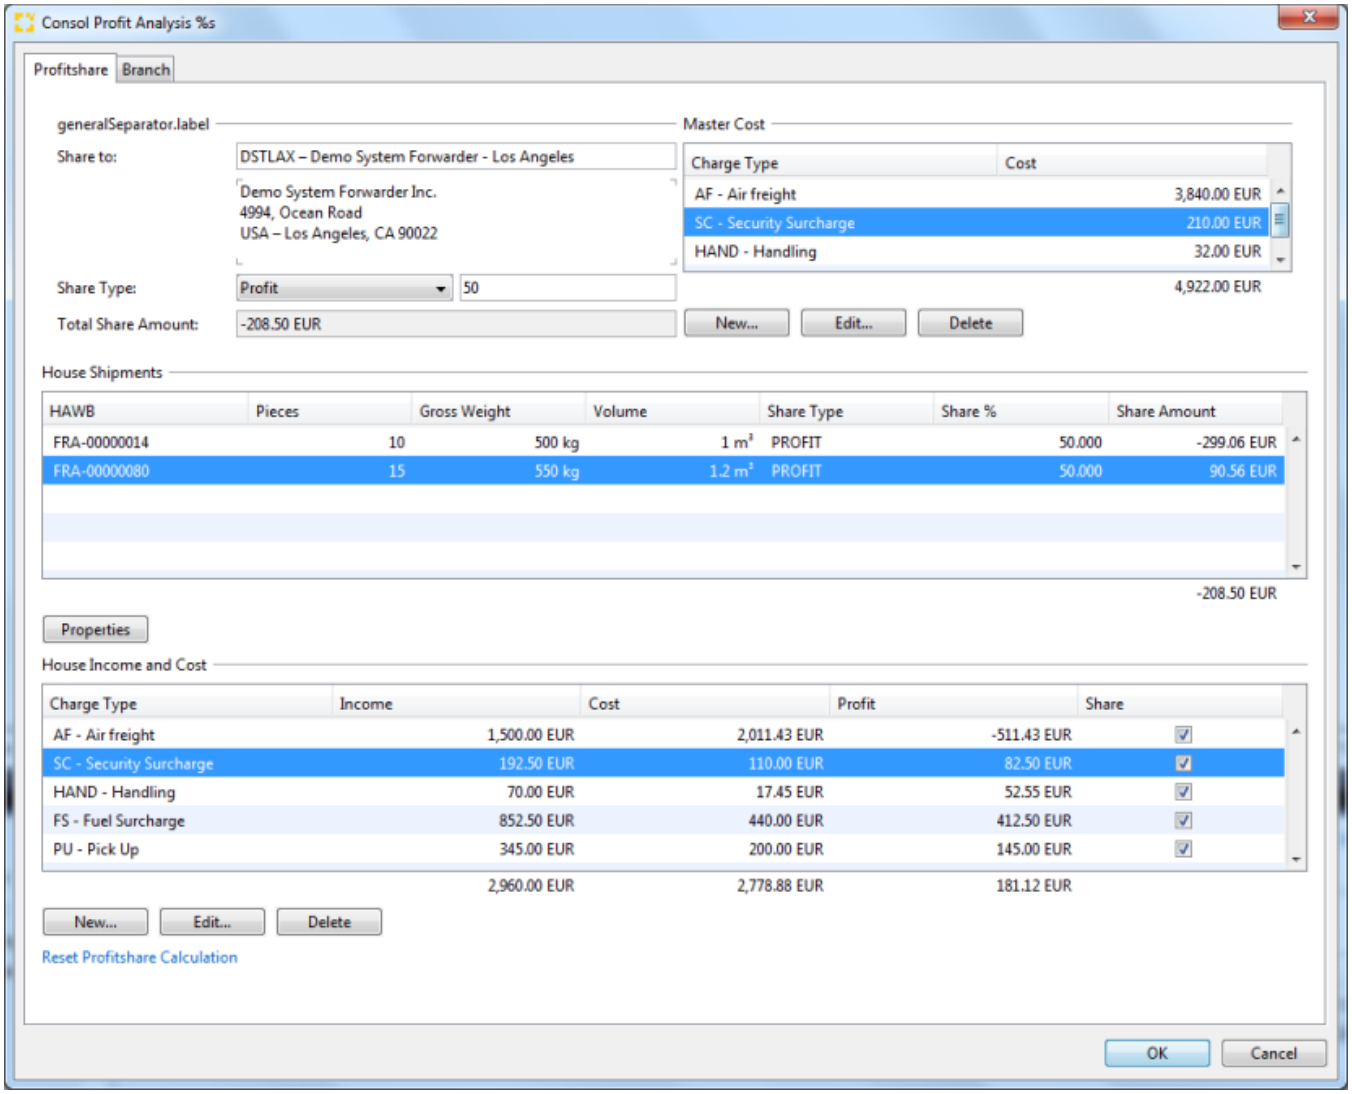
When the application is launched it checks if a CPA template is present in the receiving agents master data.

- If a CPA template is present in the receiving agents master data, then this will be used.
- If a CPA template is *not+ present in the receiving agents master data, but a default CPA template CPA Templates is present, then this default will be used
- If no CPA template of any kind is present, then no data will appear in the **profitshare** tab.

The data that appears can be overridden if required, it may be edited, removed or new data added.

- The Jobcosting of the house shipments must be complete before automatic profit share can be calculated on the consolidation.
- Due to the extensive calculations that may have to take place, depending on the number of house shipments on the consolidation, the transfer of data to the profit share screen may take some time.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



The scope profit share application includes a default CPA Template for most Agents in order for most fields to be filled in general usage. However the information below discusses each field as if it is empty.

General

This area contains the general information about the calculation.

Invoice to

The destination agent who will receive the profits. The search function of the field can be used to locate the desired agent.

Share Type

This field will display one of three possible share types used for this business partner:

Type	Description
Profit	Participation in profits
Turnover	Participation in sales
Fixed amount	Agreed fixed amount

Share

The amount of share between the parties is displayed. For *profit* or *turnover* this will appear as a set percentage. For a fixed share, the actual fixed amount will appear in the local currency. Normally profit share is a 50% profit split between the agents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Total Share Amount

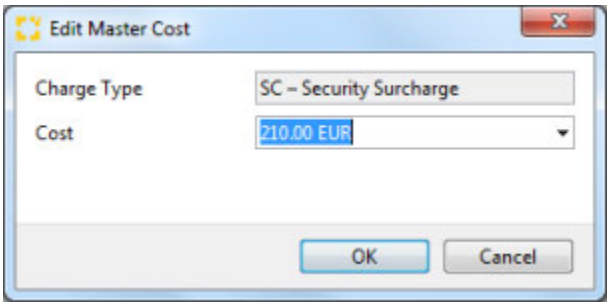
The calculated profit share of the master shipment will appear *(This figure cannot be edited)*.

Master Costs

This table shows the total costs on the master shipment. For each cost the charge type and actual cost figure are shown.

New

Opens a pop-up window in which new charges may be entered.



Charge type

Enter the kind of charge, using the field search function to find the desired charge type.

Cost

the actual cost of the charge should be entered. A calculator is available from the drop down menu.

OK

Closes the pop-up menu and transfers the data to the master shipment cost table.

Cancel

Closes the pop-up menu without further action

Edit

Opens in a pop-up window the master cost highlighted in the table. *(The charge type cannot be changed, to do this the charge should be deleted and then re-entered in the master shipment.)* The charge can also be edited by double clicking it.

Delete

Deletes the charge highlighted in the master cost table.

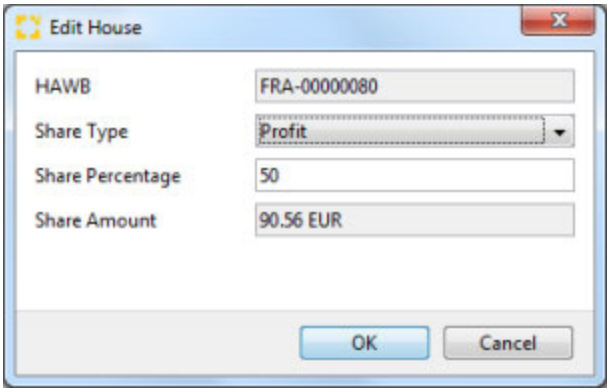
House Shipments

this summary table will show all the house shipments consolidated on this master. The table will show the air waybill number, the number of packages, gross weight, volume, share type, % share and the share amount.

Properties

This button will open in a pop-up window, the house shipment highlighted in the house summary table. The house can also be opened by double clicking it.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



HAWB

The house air waybill number. *(this field cannot be edited)*

Share Type

The type of profit share applied to this house. The share type used at the master level is used but this can be changed as desired.

Share Percentage

The share percentage used for the calculation. The share percentage used at the master level is shown but this can be changed as desired for each house.

Share Amount

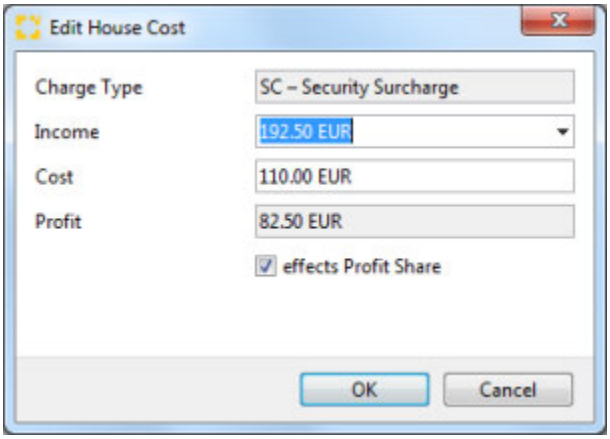
The calculated amount of the profit share on the house shipment. **These amounts are shown on the profit share statement** *(This field cannot be edited)*

House Shipment - Revenues and Costs

This summary table shows the revenues and costs of the house shipment highlighted in the house shipment's summary table. *(The columns are described by the following pop-up window that appears if a charge is to be added or edited)*.

New

Opens a pop-up window in which new costs and income can be added to the current house shipment.



Charge Type

The new charge for which costs and revenue are going to be recorded. Use the field search function to locate the desired charge type.

Revenue

The income for the charge that is being applied to the current house shipment. The field offers a calculator function.

Cost

The cost of the charge being applied to the current house shipment. The field offers a calculator function.

Profit

The calculated profit based on the income minus the cost. *(This field cannot be edited)*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Include in Profit Share.

This check-box indicates if the charge should be included in the calculated profit share.

Edit

Opens the charge highlighted in the table showing the summary of house charges. This charge can then be edited. *(It is not possible to edit the costs on a charge. To do this the charge should be deleted and re-entered)*. The charge can also be opened by double clicking it.

Delete

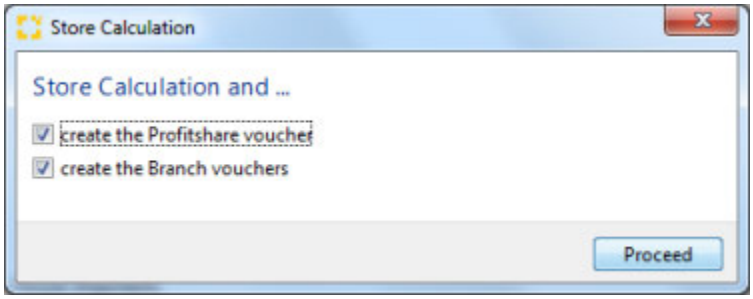
deletes the charge from the table showing the summary of house charges.

Recalculate Profitshare

This action link will restore the profit share tab to it's original condition, removing any changes made to it.

OK

Opens a pop-up window to generate the required documents for the profit share.



Generate Profitshare Voucher

Check this box to generate the profit share voucher. Generation only occurs when the *OK* button is used (see below).

Profit Share Statement

Check this box to prepare a profit share statement. Generation only occurs when the *OK* button is used (see below).

OK

Save the profitshare spreadsheet and prepare the selected documents. Closes the pop-up window and the profit share application.

Cancel

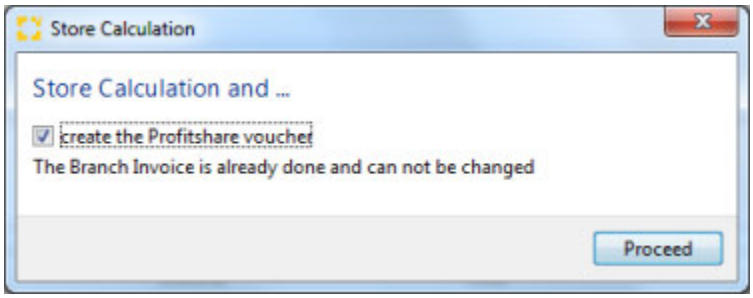
Closes the pop-up window without further action.

Cancel

Closes the pop-up window without further action.

Subsequent changes

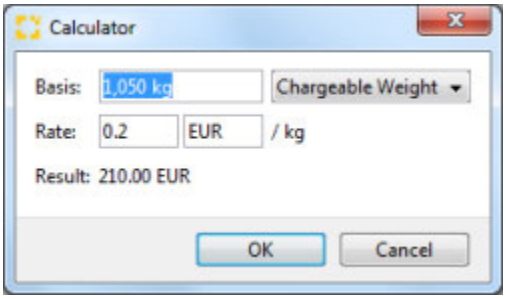
On completion including generation of all profit share documents, if a profit share calculation is re-opened and reissued, on pressing *OK* a pop-up window will appears asking if the previous profit share is to be cancelled and replaced by this new profit share.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Calculator

In most fields within the spreadsheet *Consol Profit Analysis* application a calculator can be opened with the F3 function key or by using the drop-down menu. This calculator is used for quick and easy recalculation of tariffs.



Rate

Rate per unit.

Basis

Number / amount of units.

Base Unit

The basic units can be selected from the following drop-down list:

- No. of items
- Chargeable weight
- Gross weight
- Volume
- Manual entry

Result

Calculated result

OK

Commits the calculated figure to the field where the calculator was called-up and closes the calculator.

Cancel

Closes the calculator without further action.

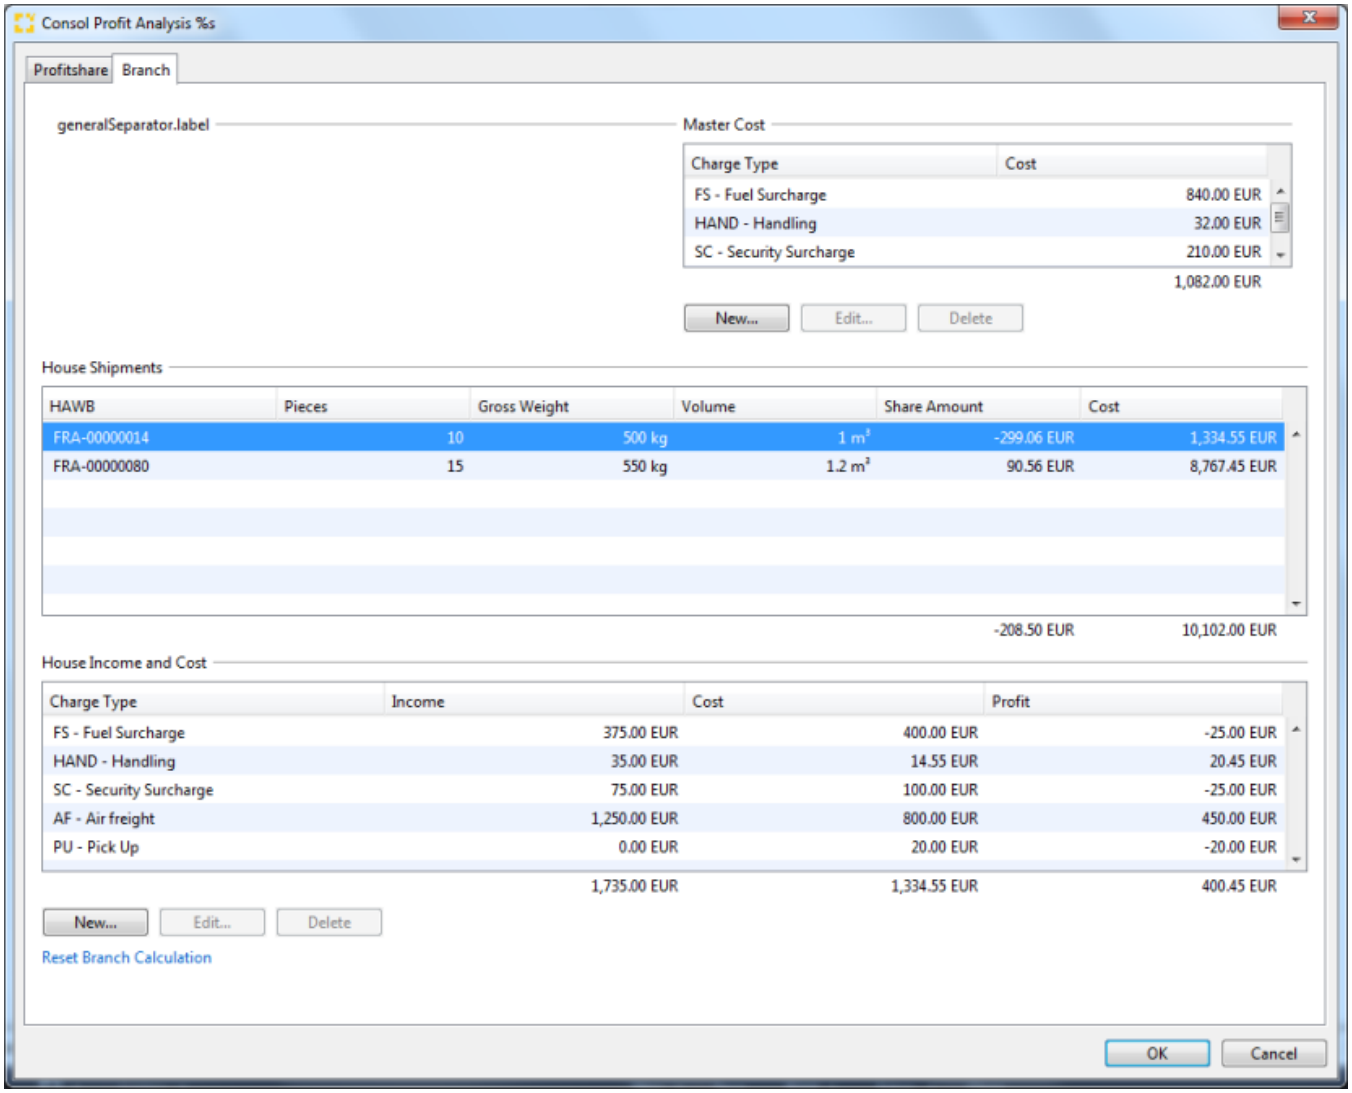
2. Branch - Consol Profit Analysis - Accounting - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

The tab **branch** relates to the branch to which the costs of the master shipment are incurred for the house shipments. This tab is used to generate documents for each branch whose house shipment may have been included on this master shipment. Any costs on the master are automatically transferred to the jobcosting of all the house shipments included in the consolidation and any billings appear in the documents tab of the master and the house shipments.

Description



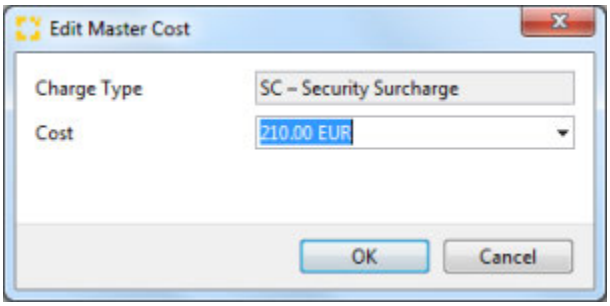
Master Costs

This table shows the total costs on the master shipment. For each cost the charge type and actual cost figure are shown.

New

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a pop-up window in which new charges may be entered.



Charge type

Enter the kind of charge, using the field search function to find the desired charge type.

Cost

the actual cost of the charge should be entered. A calculator is available from the drop down menu.

OK

Closes the pop-up menu and transfers the data to the master shipment cost table.

Cancel

Closes the pop-up menu without further action

Edit

Opens in a pop-up window the master cost highlighted in the table. *(The charge type cannot be changed, to do this the charge should be deleted and then re-entered in the master shipment.)* The charge can also be edited by double clicking it.

Delete

Deletes the charge highlighted in the master cost table.

House Shipments

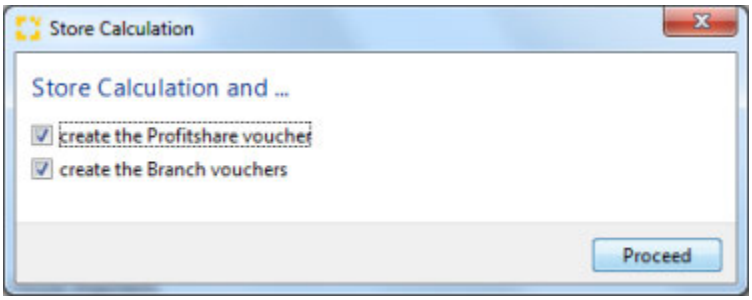
this summary table will show all the house shipments consolidated on this master. The table will show the air waybill number, the number of packages, gross weight, volume, share type, % share and the share amount. **The amounts in the *costs* column are included in the settlement.**

House Shipment - Revenues and Costs

This summary table shows the revenues and costs of the house shipment highlighted in the house shipments summary table. *(The columns are described by the following pop-up window that appears if a charge is to be added or edited)*.

New

Opens a pop-up window in which new costs and income can be added to the current house shipment.



Charge Type

The new charge for which costs and revenue are going to be recorded. Use the field search function to locate the desired charge type.

Revenue

The income for the charge that is being applied to the current house shipment. The field offers a calculator function.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cost

The cost of the charge being applied to the current house shipment. The field offers a calculator function.

Profit

The calculated profit based on the income minus the cost. *(This field cannot be edited)*.

Edit

Opens a charge highlighted in the table showing the summary of house charges. This charge can then be edited. *(It is not possible to edit the costs on a charge. To do this the charge should be deleted and re-entered)*. The charge can also be opened by double clicking it.

Delete

deletes the charge from the table showing the summary of house charges.

Recalculate houses

This action link will remove any changes made to the calculation and restore the original state of the calculation.

OK

Opens a pop-up window to create the documents.

Generate Profitshare Voucher

Check this box to generate the profit share voucher. Generation only occurs when the *OK* button is used (see below).

Profit Share Statement

Check this box to prepare a profit share statement. Generation only occurs when the *OK* button is used (see below).

OK

Cancel

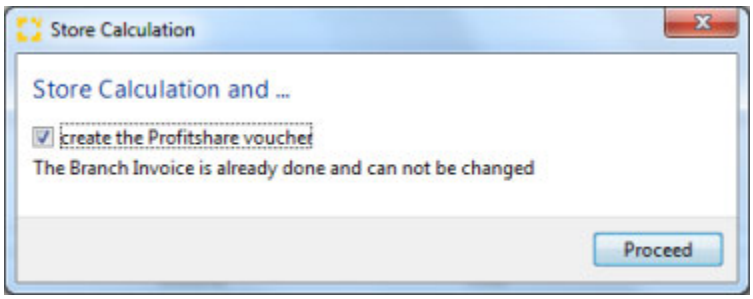
Closes the pop-up window without further action.

Cancel

Closes the pop-up window without further action.

Subsequent changes

On completion including generation of all profit share documents, if a profit share calculation is re-opened and reissued, on pressing *OK* a pop-up window will appear asking if the previous profit share is to be cancelled and replaced by this new profit share.



An existing invoice (house invoices) that has been printed, cannot be changed. If appropriate another invoice or credit note can be generated in the billing |SCOPEEN:Accounting - General - Master Shiment - Airfreight Export]application.

Incoming Invoice - Billing - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

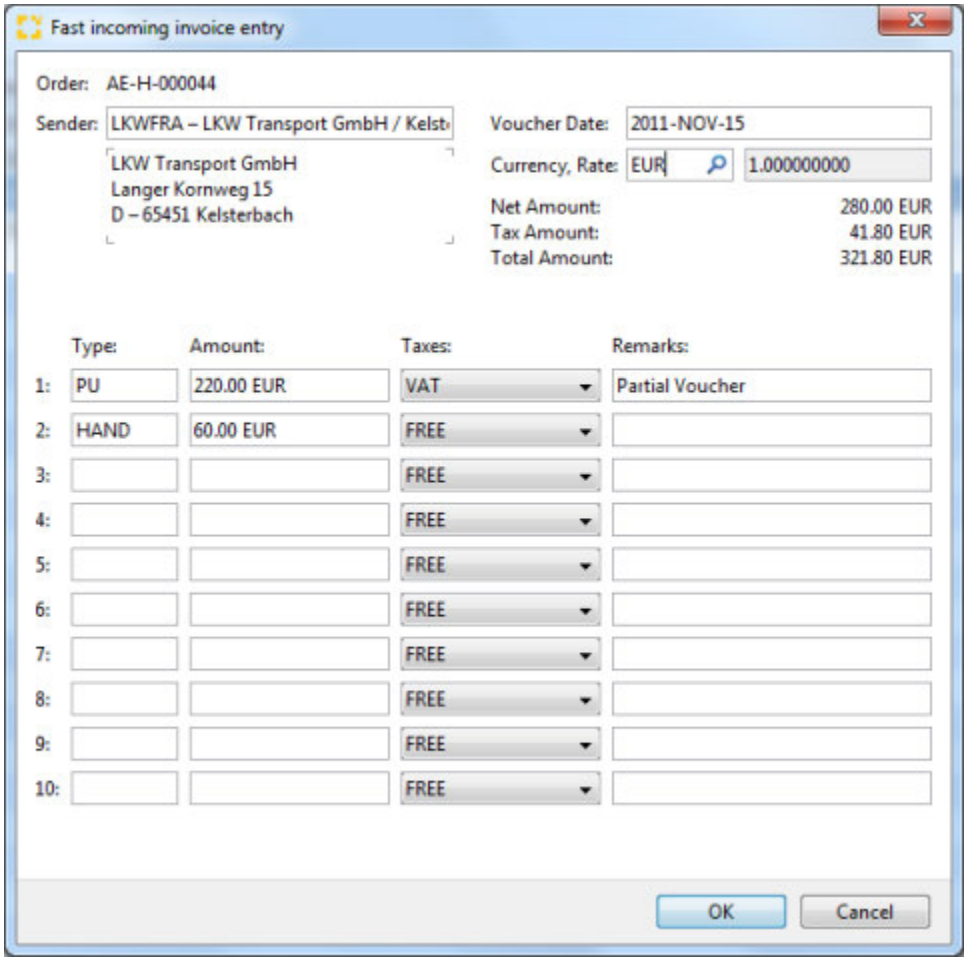
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

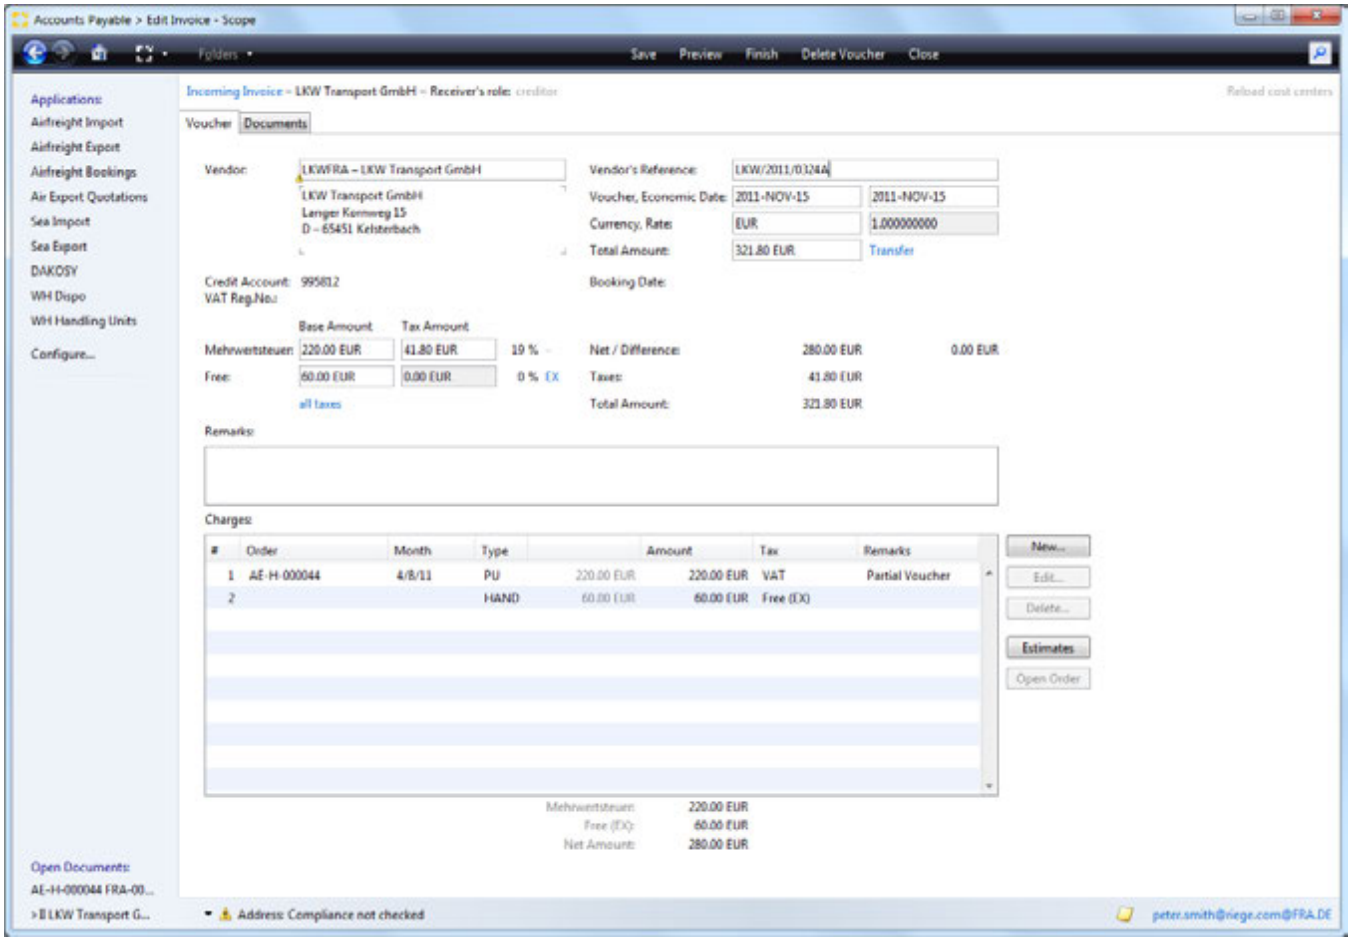
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

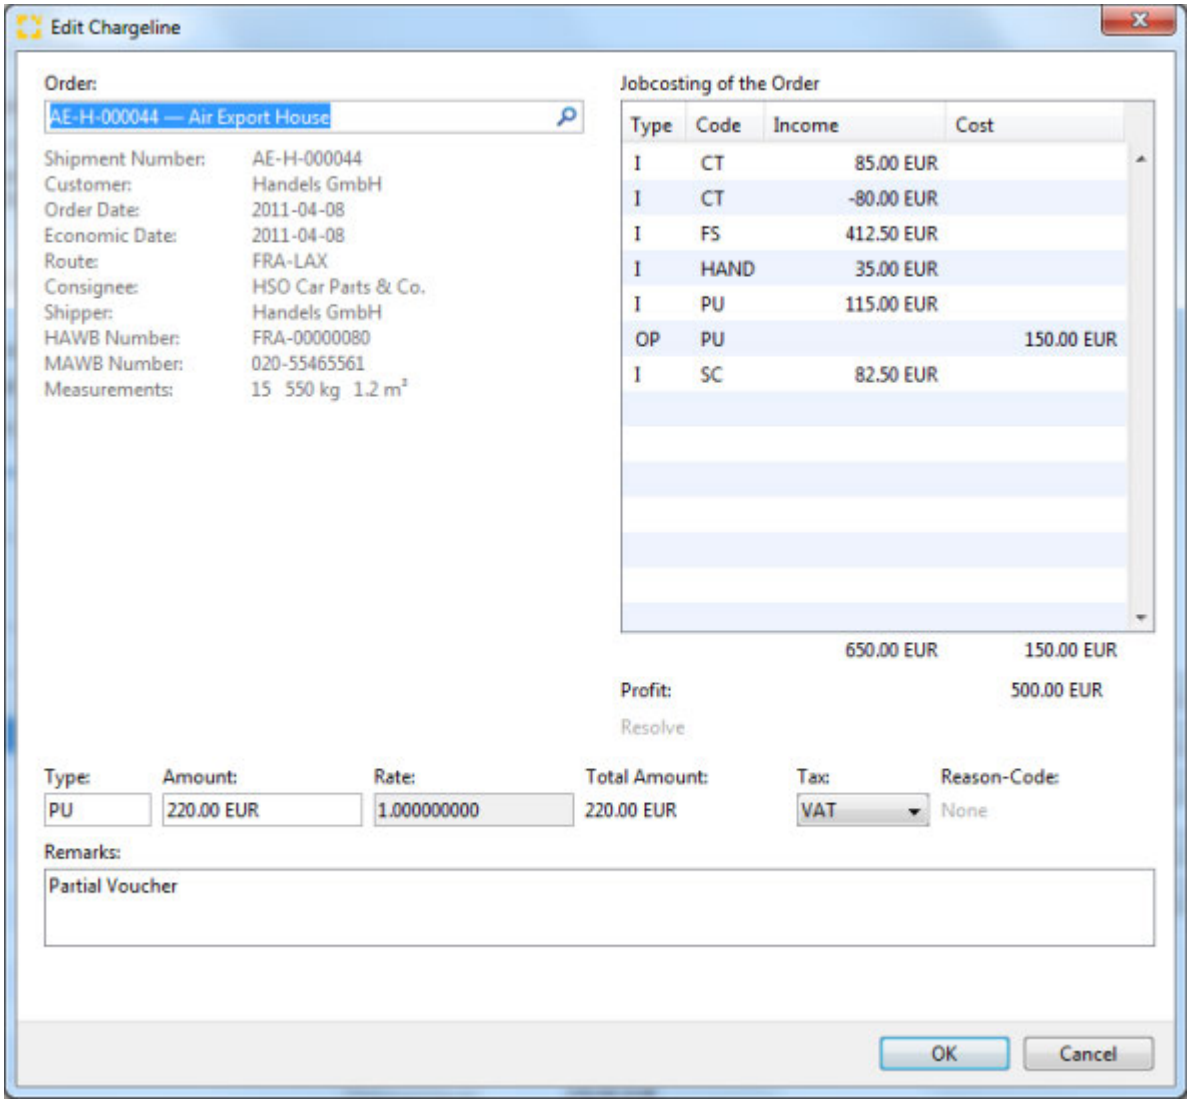
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

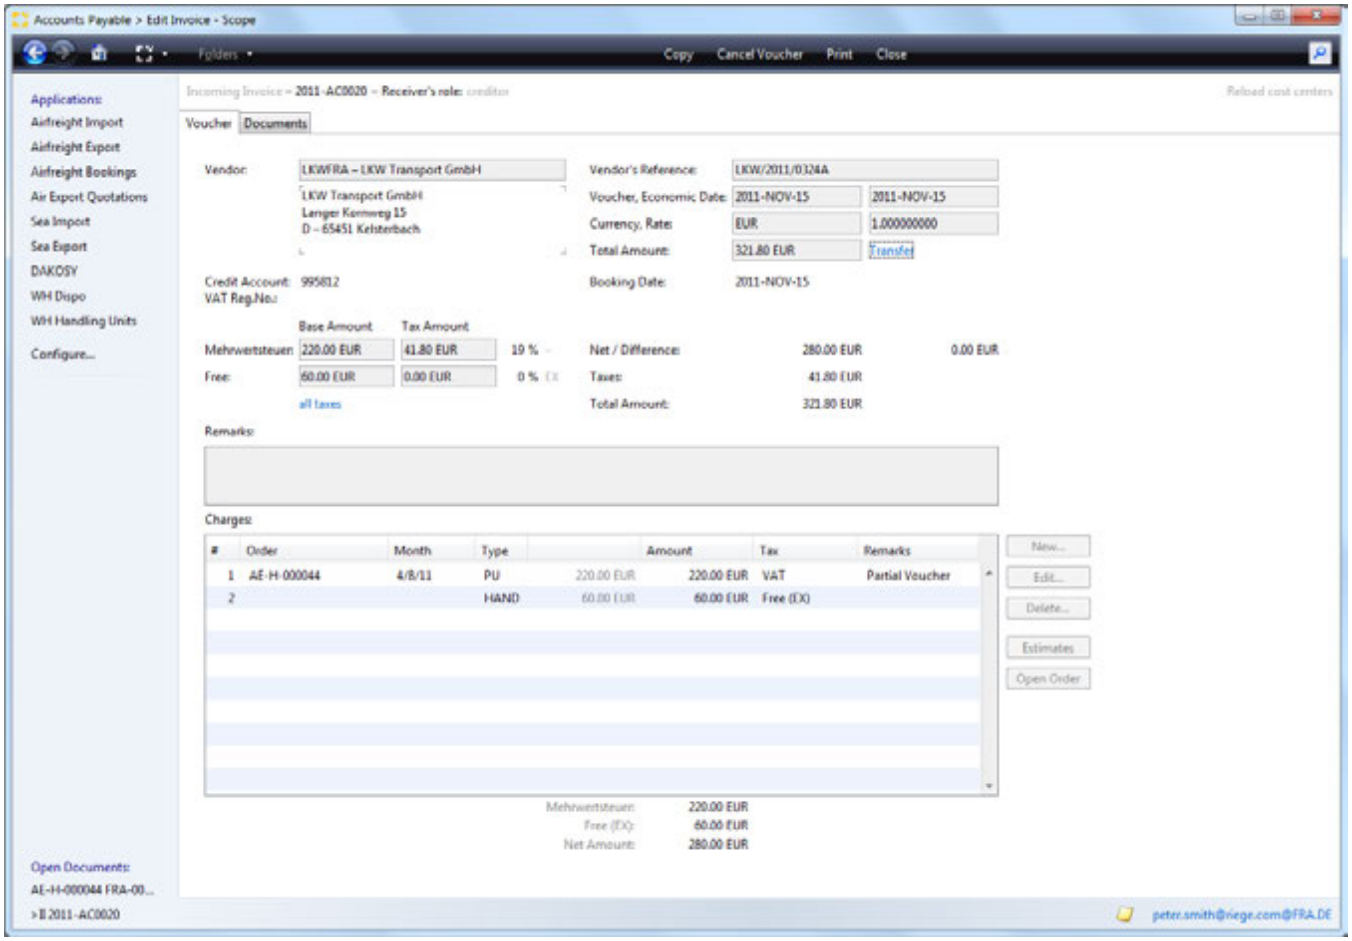
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Outgoing Voucher - Invoice - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

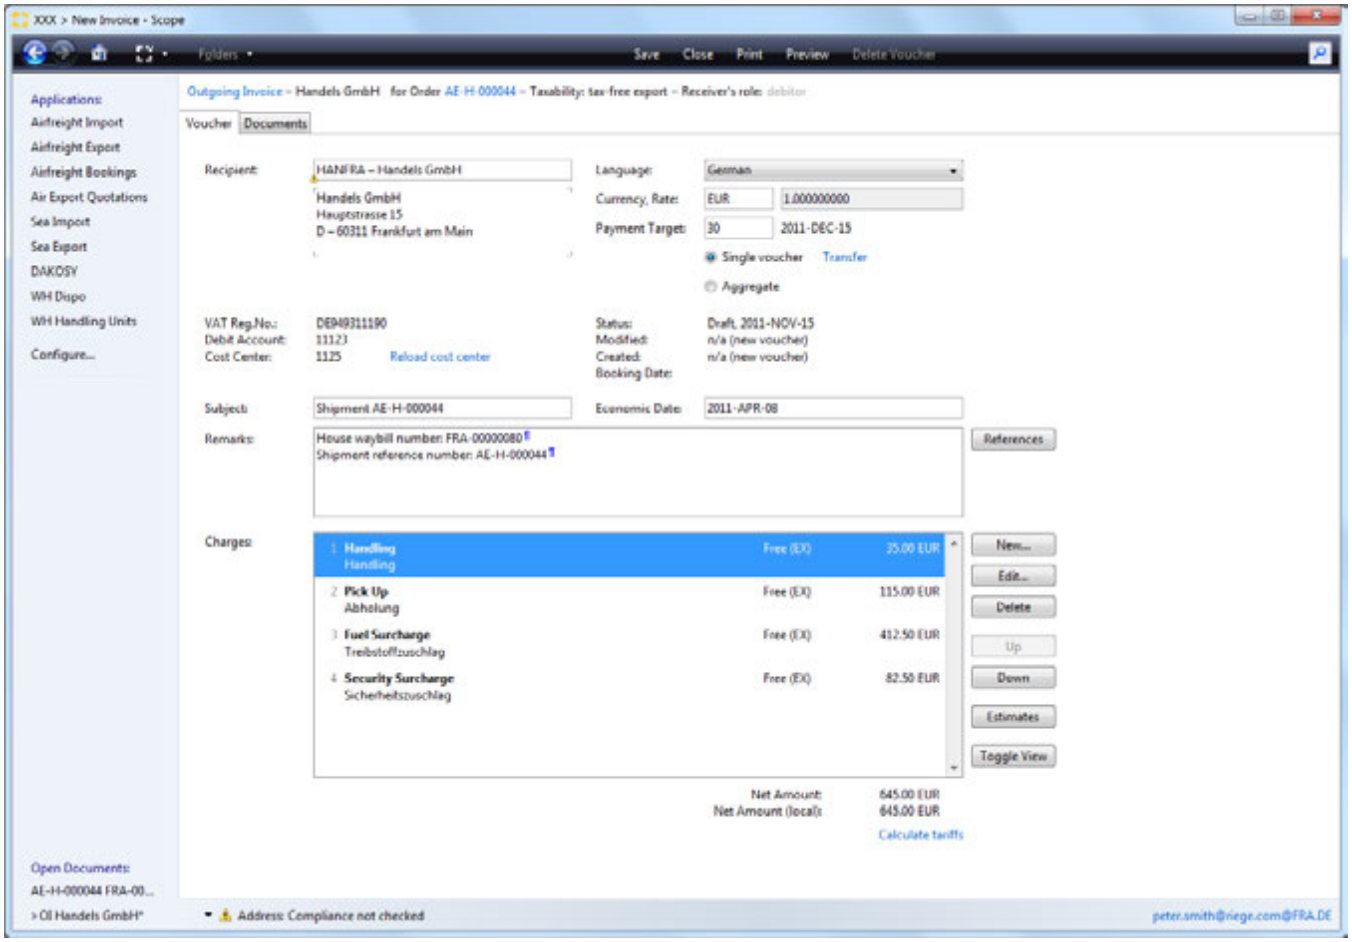
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

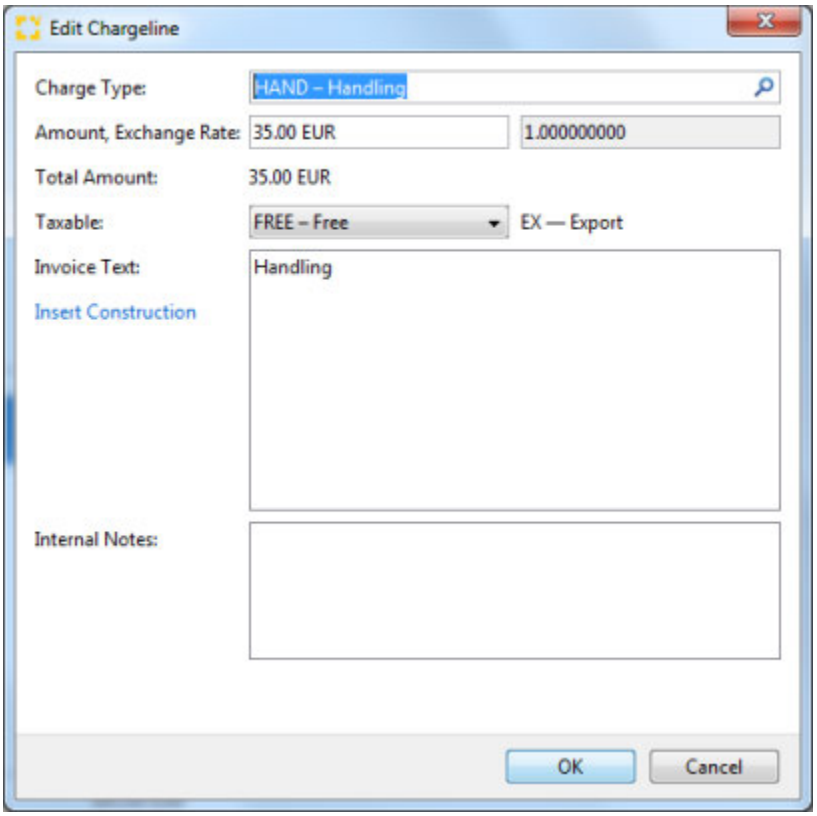
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

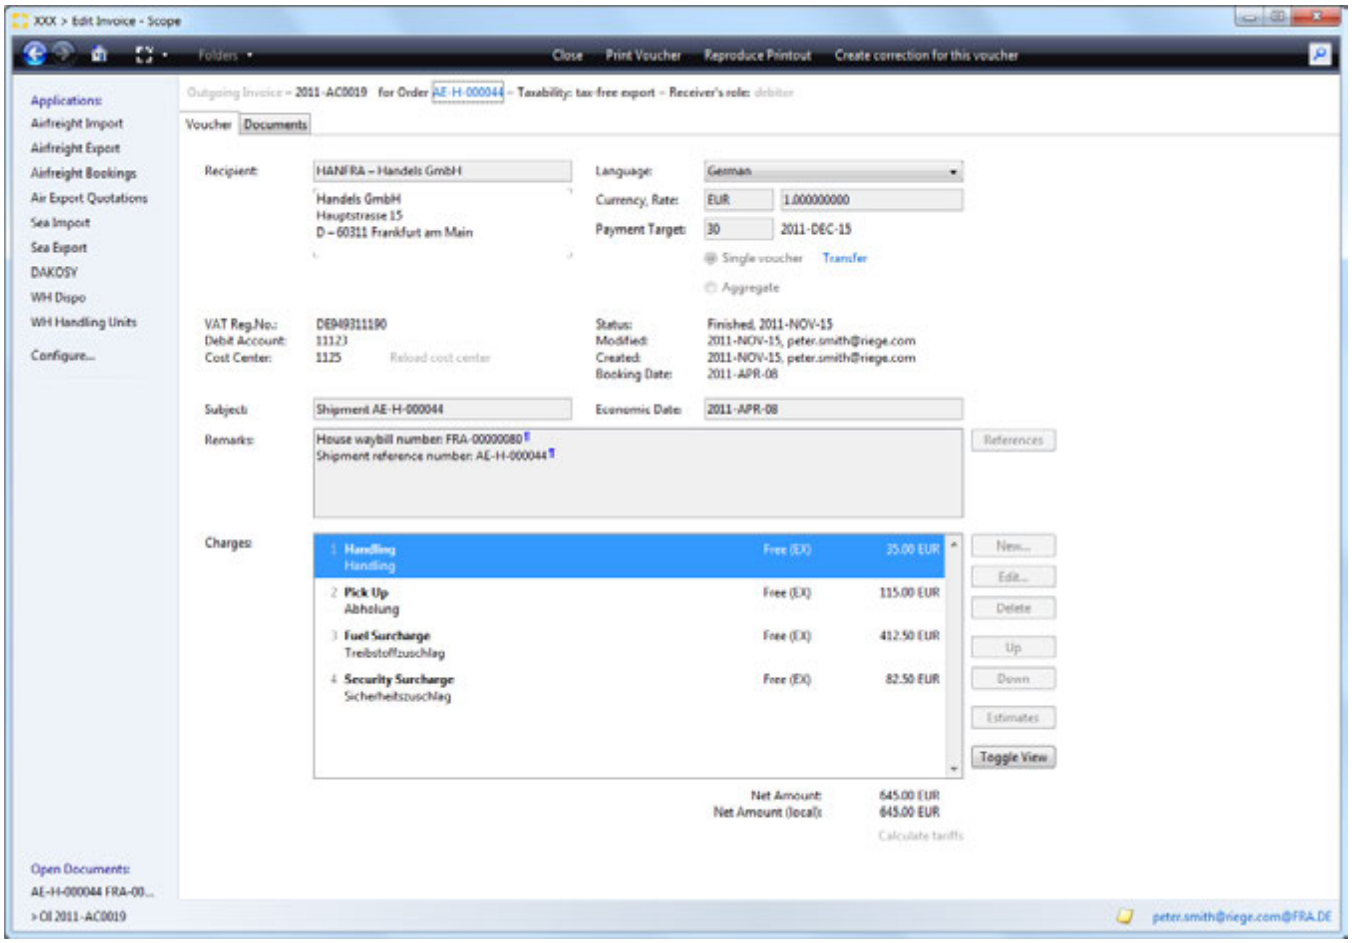
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

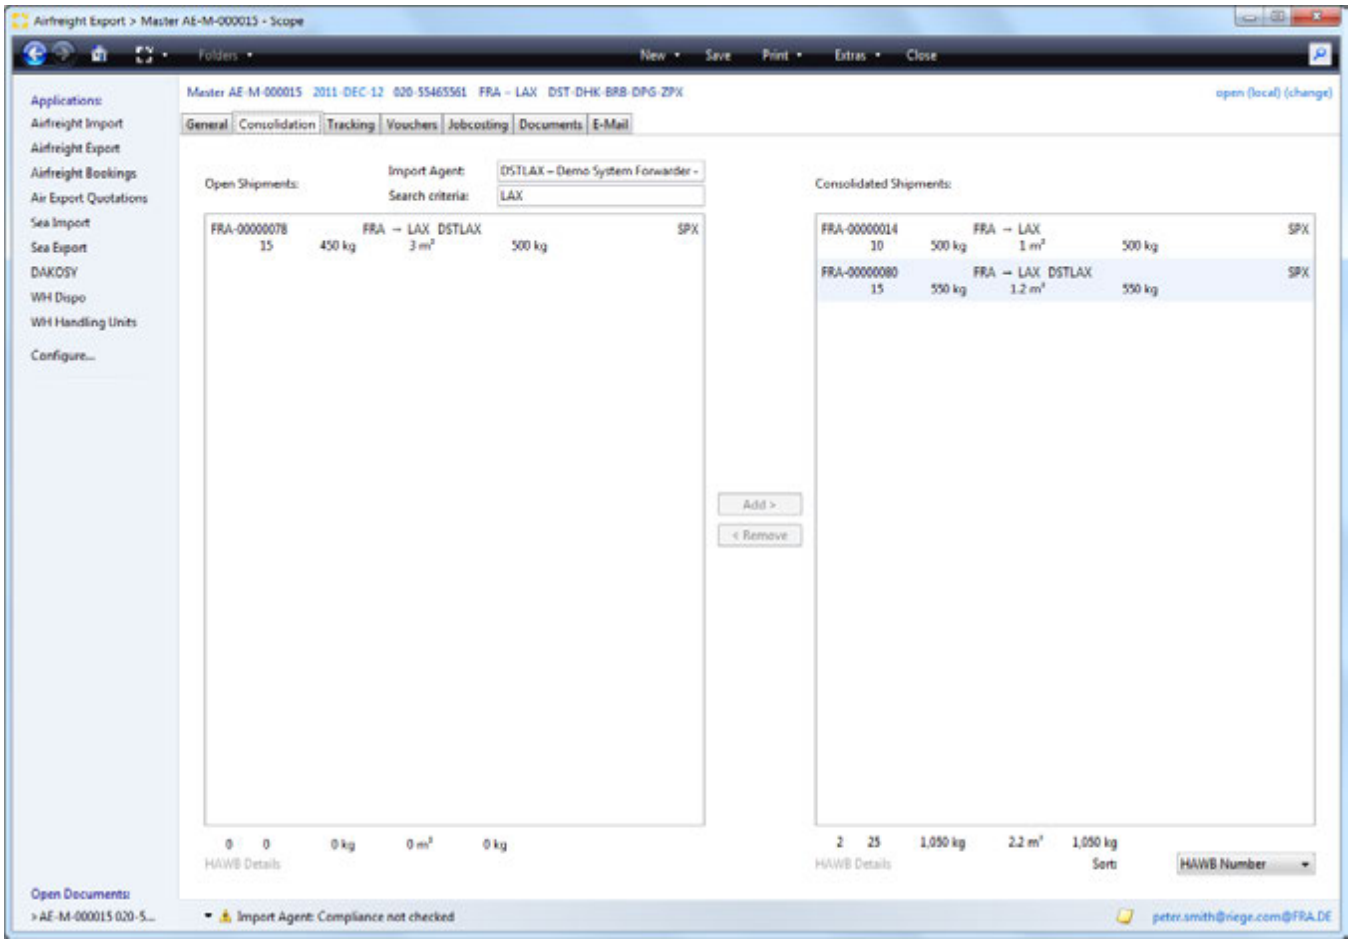
Consolidation - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

The **Consolidation** tab presents a view of all available house shipments that are ready to be consolidated. These can be easily added to or removed from the master shipment, ensuring a fast, flexible approach to building consols.

Description



Maint Menu Bar and Title Bar

see the **General tab** .

Search Criteria

Destination (without label)

The destination of house shipments is used to match them to the destination of the consolidation. The destination of the master shipment is found in the Master General tab

Import-Agent

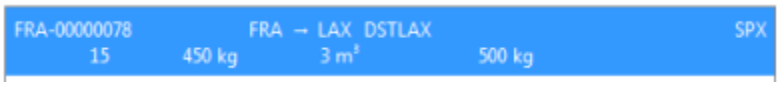
The import agent appearing in this field will be used to locate house shipments with matching import agents in order to determine which house shipments should be visible for consolidation. The default import agent that appears for the destination airport will be taken from the partner address that has the role "agent" for the master destination airport. If there is no agent establish for the destination, then the field is empty. If more than 1 agent exists for the destination, then the search function of the field can be used to search for the available agents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- When the import agent and destination are present, only house shipments with matching import agent and destinations will be shown as available for consolidation.
- When the import agent is left blank, then all open houses to the destination will be shown regardless of the import agent that may be present at the house level.
- If the destination is left blank, then all open houses that match the import agent will be shown, regardless of the destination of the house shipments.
- if both the destination and import agent are left blank then all open house shipments will be visible regardless of the import agent or destination of those houses.

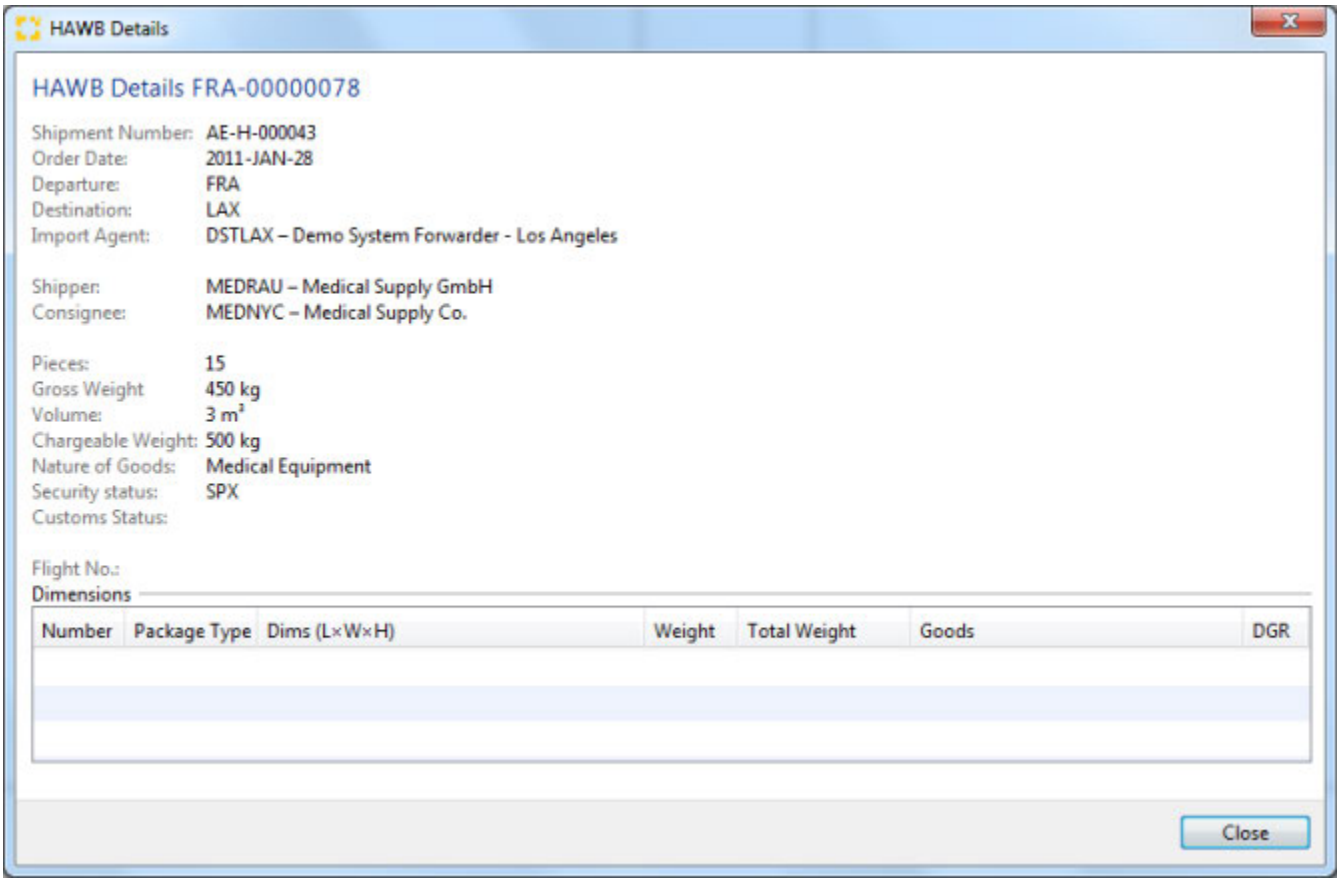
Open Shipments

This right hand pane shows all open (unconsolidated) house shipments that match the master search data. The following information about each house is shown:



HAWB Details

Opens a pop-up window where greater deatils about the highlighted house shipment can be viewed.



Close

Closes the pop-up window.

Add

Moves the highlighted house shipment from the **Open** window to the **Consolidated Shipments** window to indicate the house is to be included on the consol.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Remove

removes the highlighted house shipment from the **Consolidated Shipments** window back to the **Open** window to the to indicate the house is to be removed (deconsolidated) from the consol.

Consolidated Shipments

This window displays house shipments that are currently included in the consolidation for the master. The base of the window shows the total number of house on the consol, their total number of pieces, gross weight, volume and total chargeable weight.

Up

Moves the house shipment highlighted in the **Consolidated Shipments** field up the list.

Down

Moves the house shipment highlighted in the **Consolidated Shipments** field down the list.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

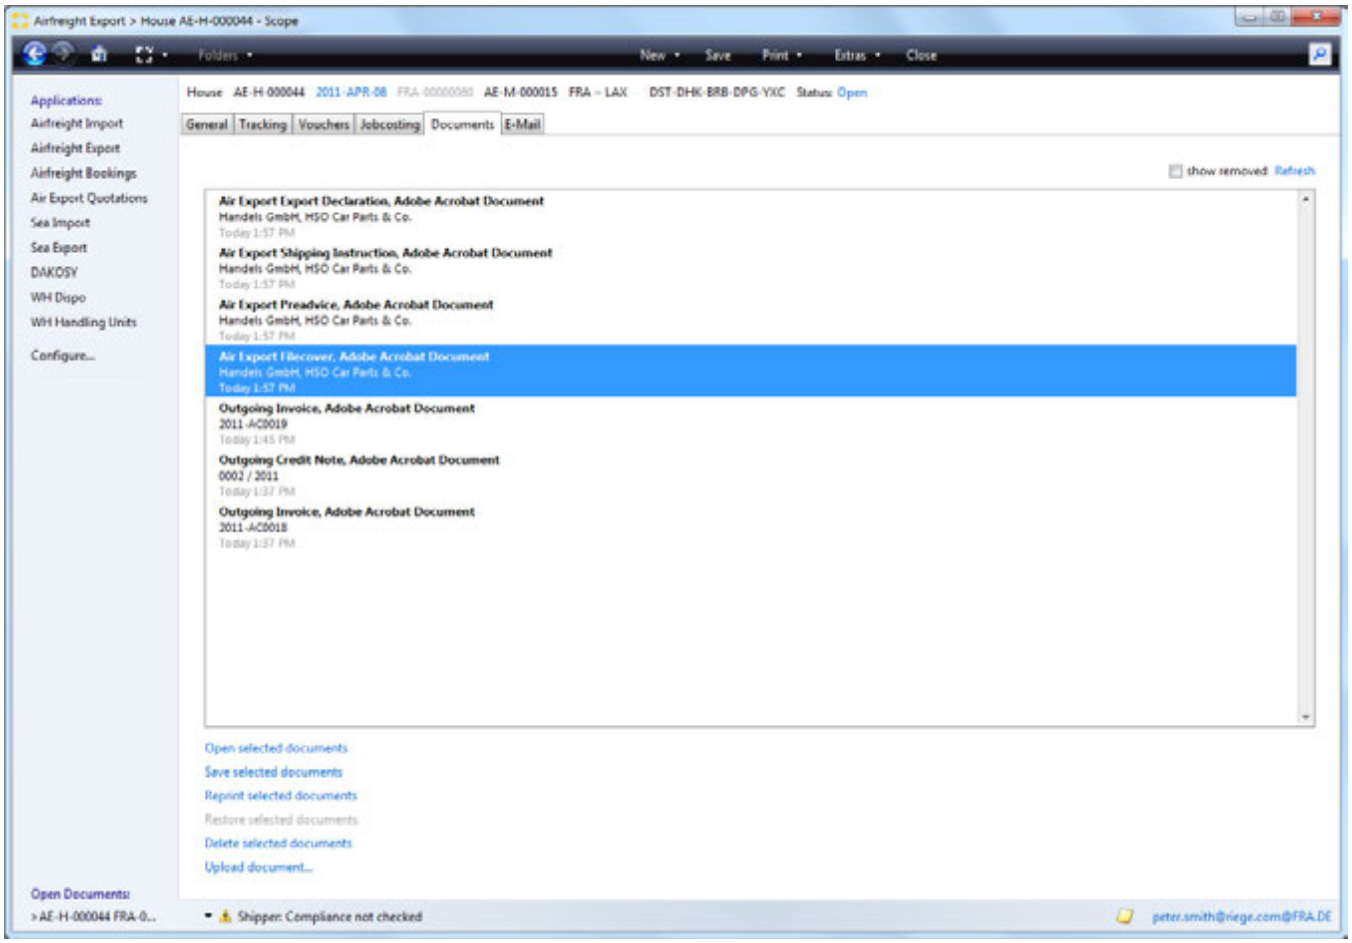
Documents - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

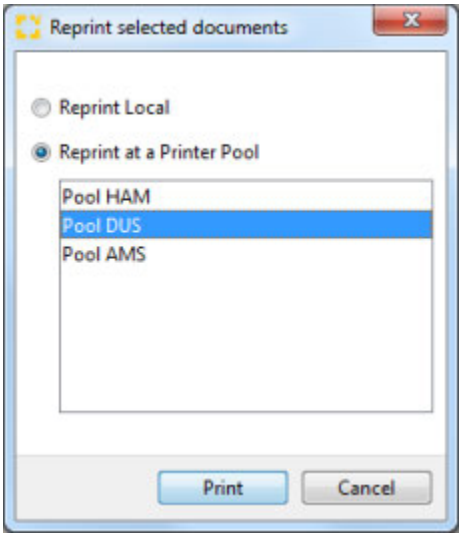
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

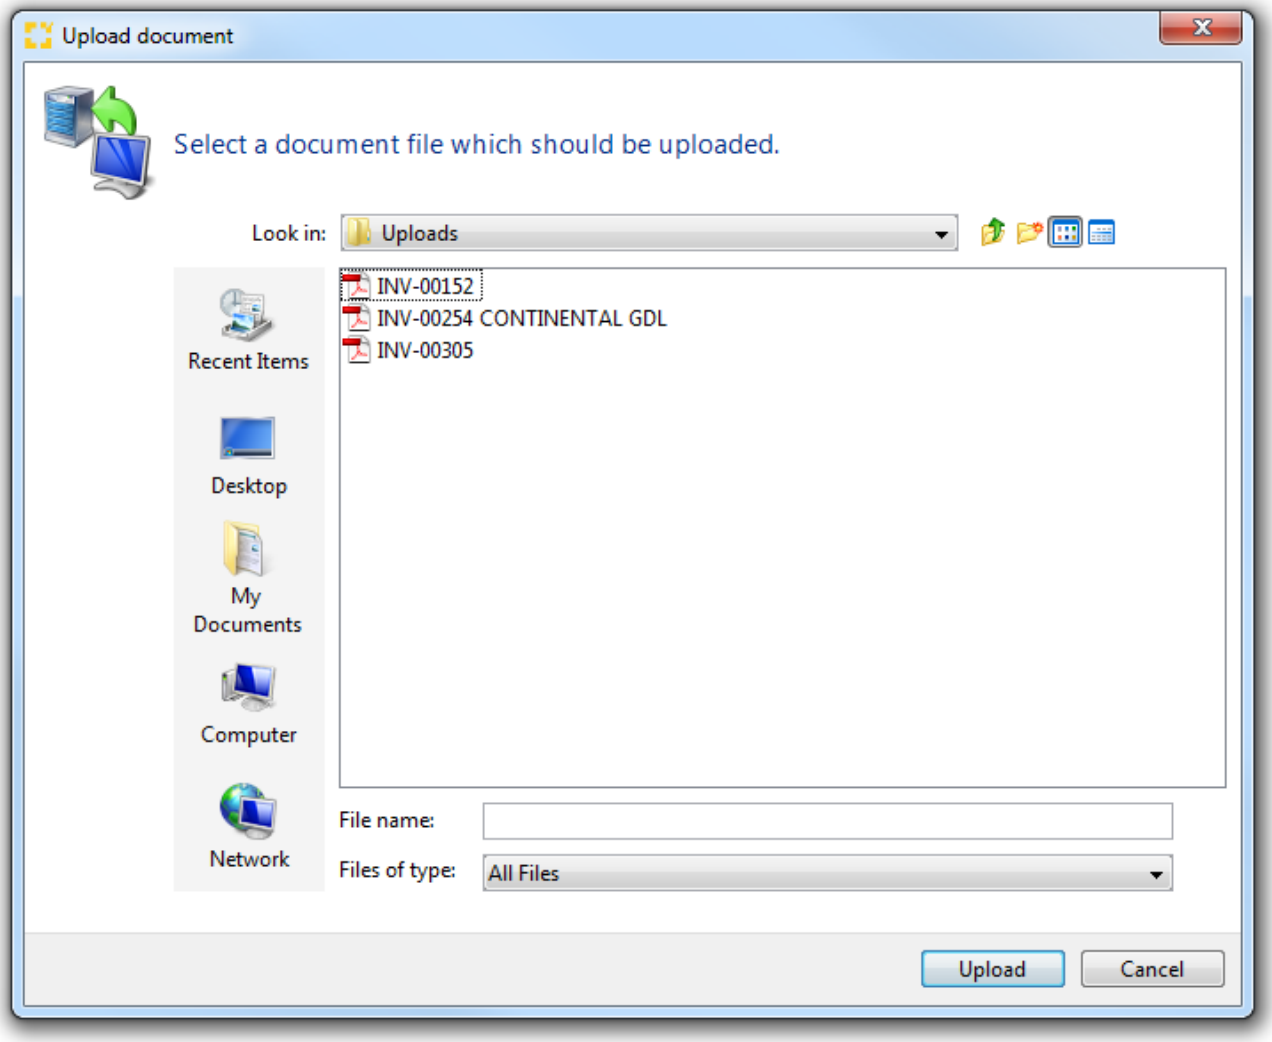
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

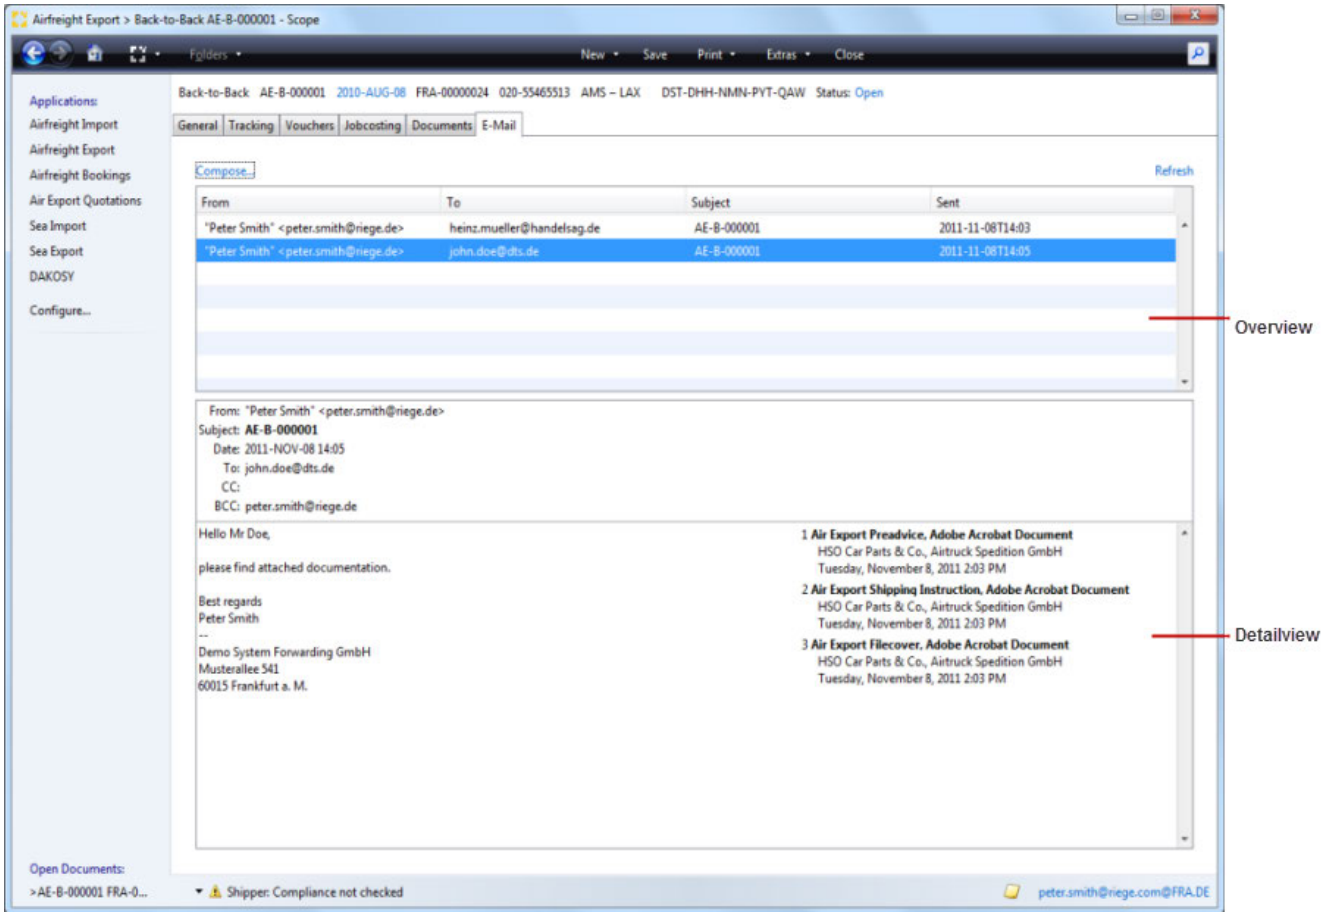
E-Mail - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

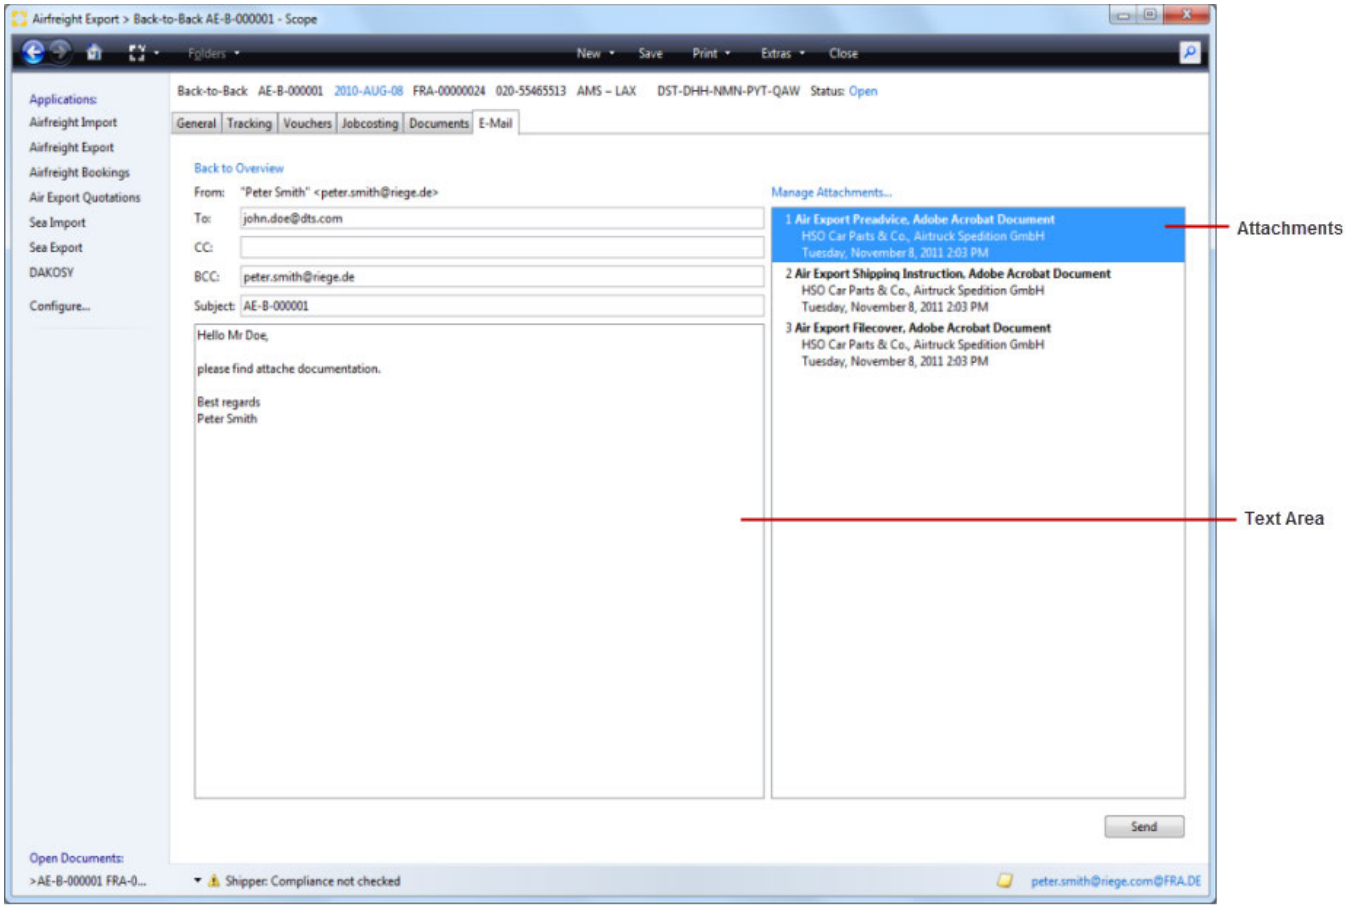
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

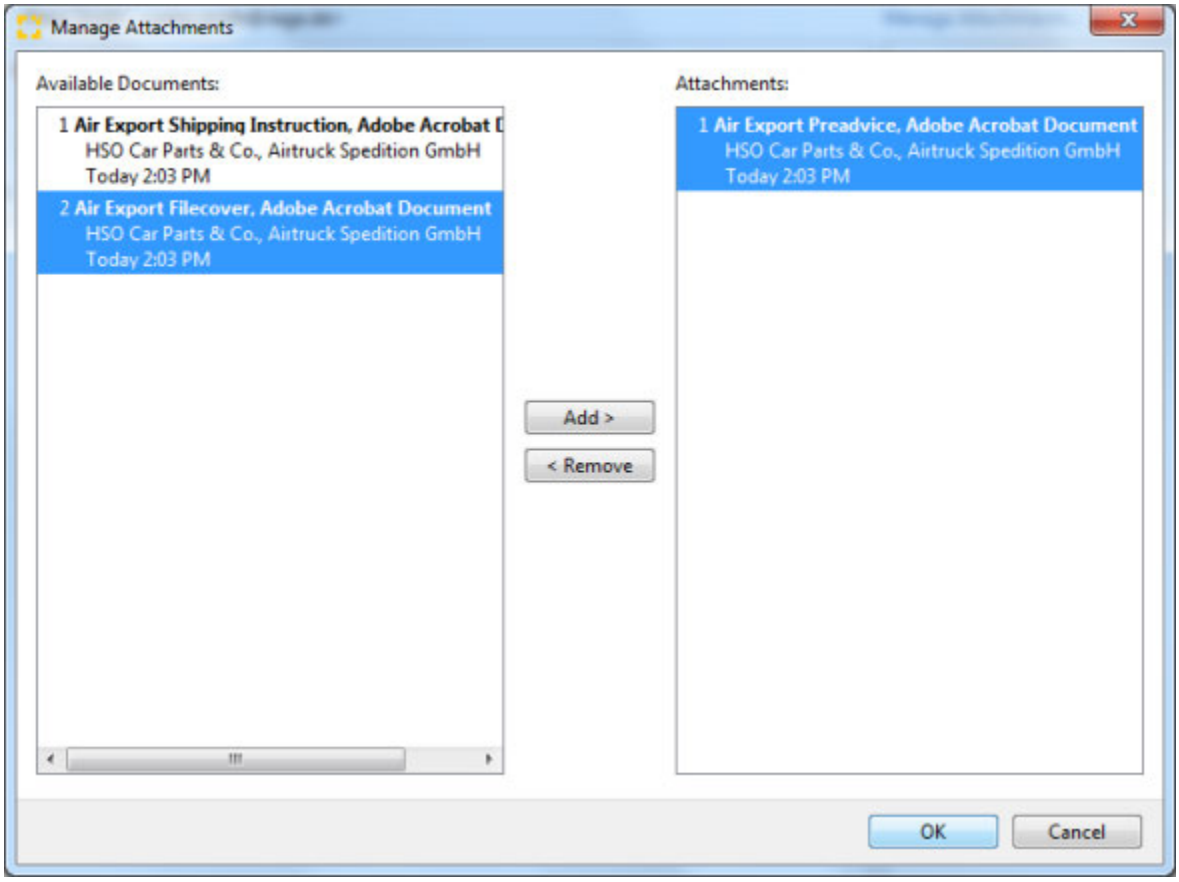
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

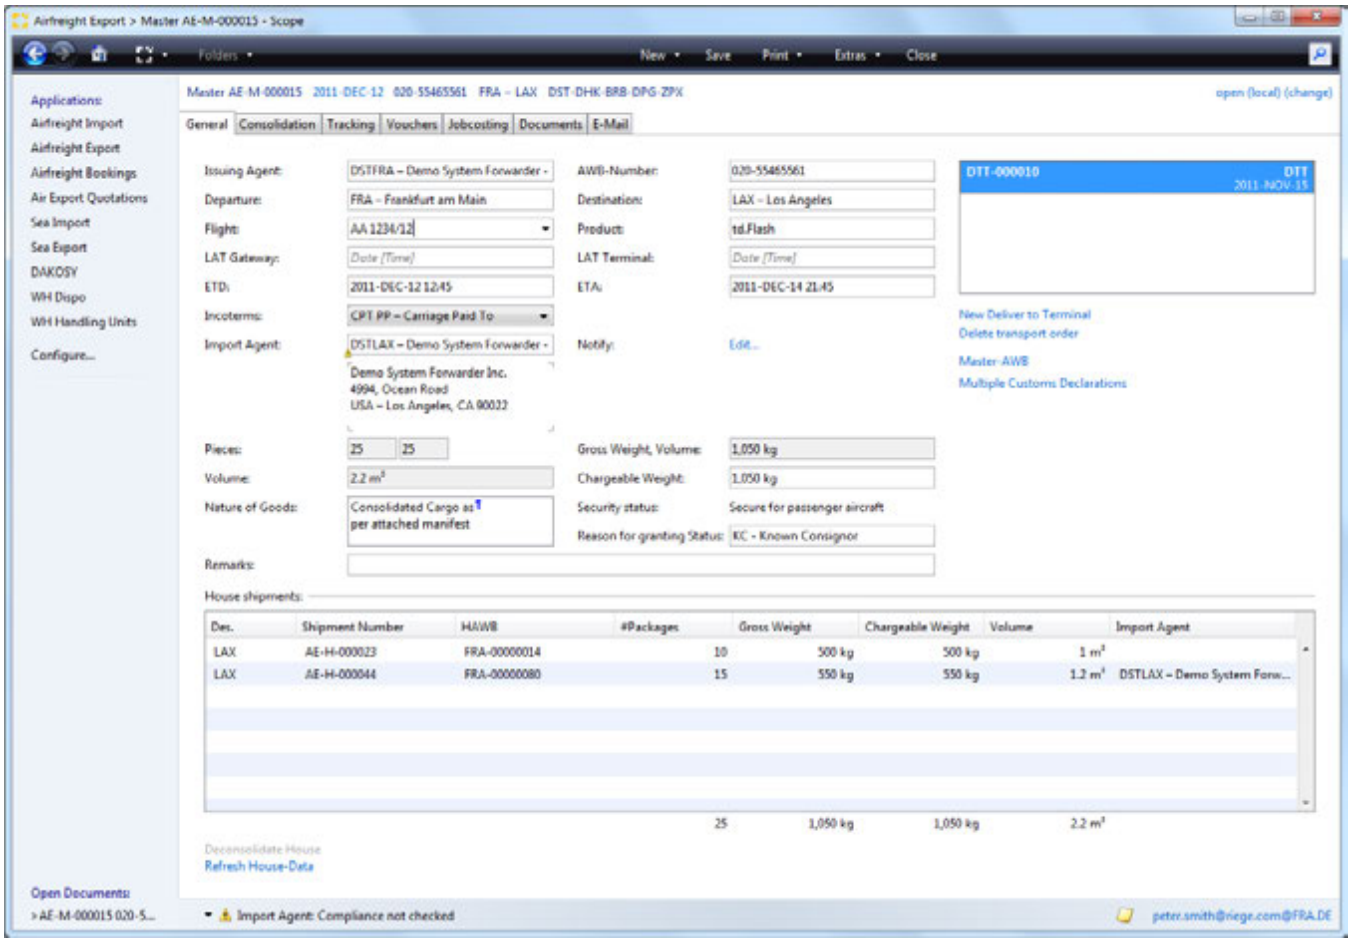
General - master shipment - airfreight export

- Introduction
- Description

Introduction

the **General** tab is where the main data entry for the master shipment takes place. This includes AWB numbers, sender, recipient, number of pieces, volume and weight.

Description



Save

Selecting the save option from the title bar will save data that has been entered. Saving is only possible if all mandatory fields have been completed. If a mandatory field has not been completed there will be a validation error. This is indicated by the presence of the validation error symbol with an accompanying message describing the validation error.

Print

The print option on the menu bar will present a list of various documents for the shipment that may be printed. These are:

- File Covers
- Pre-advise
- Cargo Manifest
- Customs Manifest
- MRN Manifest
- Master Labels

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Combi Labels (labels with data from the master and house shipments)

Finish

Opens a dialogue in a popup window to finish the shipment.

Close

Closes the shipment. If the data has not been saved a query box appears to confirm if the shipment should really be closed since any new data will be lost.

Title Bar

The following information about the shipment appears as the title bar above the shipment details:

- **Shipment type**
  For a master shipment this will indicate *Master*.
- **Shipment number**
  This is assigned upon the consolidation of the first house shipment to the master shipment. Prior to consolidation the master shipment can be found and recognized by means of the AWB number.
- **Service date**
  The service date for the shipment is created as follows:
  If available the ETD (estimated delivery date) of the shipment
  -else
  The date the AWB was was printed, if available.
  -else
  The date the shipment was first saved.
  Clicking on this date will update it to the current date as long as no outgoing invoice or credit note has been created for the shipment. After updating the service date a dialogue window may pop-up which allows the shipment number to also be changed. This may be necessary where the shipment number also stores the service date.
- **Master-Waybill Number**
  The Master-AWB Number for the shipment.
- **Airport of Departure - Destination Airport**
  Departure und Destination of the shipment.
- **USI-Number**
  A unique shipment identifier for the shipment created automatically when the shipment is first saved.
- **Status**
  This shows the status of the shipment. This action link can be clicked to change the status. The following statuses are possible:

Status	Description
open	additionalhouse shipments may be consolidated on this master shipment
Locally open	Only house shipment created in the local branch may be added to this consolidation.
Closed	House shipments may not be added to this consolidation.

These restrictions only apply from the perspective of house shipments. From the perspective of the master shipment, further house shipments may be added.

Issuing Agent

The Agent who issues the bill of lading. By default the local office is used. Using the field search function an alternative Agent may be found and selected for the shipment.

AWB-Number

Fundamentals of the AWB-Number

Airlines use IATA compliant tracking numbers (AWB) numbers. These consist of 11 numbers. The first three numbers are referred to as a prefix, and also indicate the airline. The remaining 8 numbers are the actual bill number where the last number is a check digit which is calculated from the previous figures. The AWB number is usually represented as follows: aaa-nnnnnnnp (a prefix = / n = number / check digit p =) Example: 020-12345675

AWB These numbers must be allocated by the respective airline. There are three ways to enter this one AWB number.

1. Manual Input

- A single MAWB number assigned by the carrier may be manually input. (This should only be required for airlines that are rarely used.)
  Enter the AWB number in the manner of a normal text box. The number will be automtically be checked to ensure it is valid (correct check digit). The number can be entered with or without a hyphen after the prefix of AWB. For valid AWB numbers the hyphen will automatically be added if not already present and the prefix will be used to determine the airline used in the "Carrier" field.

2. Automatic NAWB number from the pool

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- MAWB numbers can be pulled automatically if they have been stored in a pool of AWB numbers that have been assigned to the airline. (Usually batches of 100 or more AWB numbers are assigned to a carrier).
  To pull from the pool, instead of inserting the whole MAWB number, only the prefix is entered and then exit the field. The result is the system will pull the next available AWB number from the pool of the relevant airline. The two-letter airline code may also be used, example: 020 or LH.

3. Net Rate Info

- Using the context menu or pressing *F2* here will launch the net rate info as a pop-up window. If a valid net-rate exists and is selected, the next air waybill number for the airline associated with the net-rate will automatically be called.

AWB-number pools must be maintained in the master carrier data

- If an AWB number has been drawn from the pool or entered manually, this number is "reserved" for a period of 30 minutes. During this time, this number may be used in any other program while the shipment remains unsaved. As soon as the shipment is saved, the number is permanently marked as "used" and cannot be used in any other shipment.
- If a MAWB number is removed from the field, or replaced by another MAWB number, the original number is automatically released and returned to the pool of MAWB numbers (restock). The number can then be reused in another shipment.

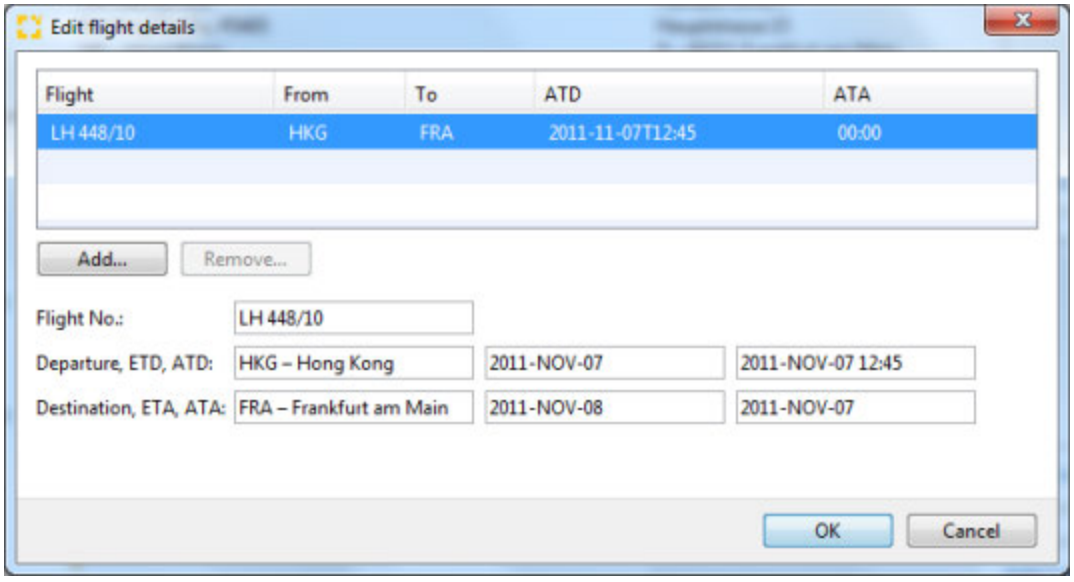
Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic full text search that will display all matching airports.

Flights



Enter the flight data for the shipment. Use the drop-down menu or press F3 to access the flight data editor. This allows detailed flight and routing data to be entered.

ETD

Estimated time of departure

Incoterms

The delivery terms for the shipment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Import agent

The station that will receive the cargo at the arrival airport. The field search function can be used to locate an alternative agent.

The Import agent available at the destination will vary according to the following:

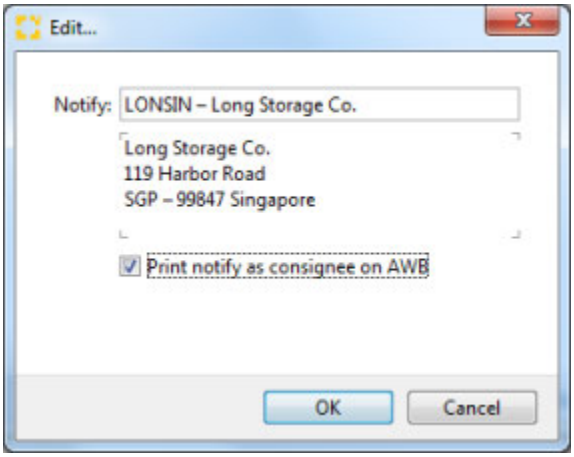
- If no destination has been entered, then all agentsare offered for selection
- If a destination is entered and the master data for that destination has only one agent assigned to it, then that agent will be used as the import agent for the shipment.
- If a destination has more than one agent assigned by the master data then the field will be blank but it is only possible to select one of the assigned agents.
- If a destination is assigned where no agent has been assigned in the master data, then it is not possible to select an agent until an agent is assigned in the master data

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

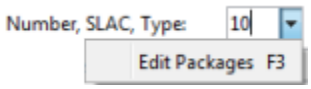
In the master data of the (partner), if the partner has the role Forwarding Customerapplied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Number

Total number of packages on the shipment. This total is calculated from total packages on each house shipment. As further house shipments are consolidated on the master, this total number of packages will increase. This field cannot be edited.



Gross weight

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Total gross weight of the packages on the shipment. This total is calculated from total gross weight of the packages on each house shipment. As further house shipments are consolidated on the master, this total gross weight will increase. This field cannot be edited.

Chargeable Weight

Total chargeable weight of the packages on the shipment. This total is calculated from total chargeable weightof the packages on each house shipment. As further house shipments are consolidated on the master, this total chargeable weight will increase. This field can be edited if necessary.

Nature of Goods

The description of the goods on the consolidation. This will default to the description *Consolidated Cargo as per attached manifest*. This description can be changed if necessary.

Security status

The security status of the consignment (of a shipment) according to Regulation (EC) No 300/2008. The field cannot be edited.

Reason for granting the security status

Reason for granting the security status is determined in accordance with Regulation (EC) No 300/2008. The field cannot be edited.

- The security status and reason for issue is determined by the statuses of the house shipments that are consolidated on the master. The house with the lowest security status or reason for issue is used as the security status of the entire consol.
- If an insecure house shipment is detected when opening the Master AWB editor, then an appropriate warning is provided to avoid incurring unnecessary costs.

Further information about security is available in the role descriptions RegB UAN and secure shipper.

Deadline

The last permissible date and time for delivery of the consignment to the gateway. If the consol flight schedule has been used, then this date is taken from the flight plan.

LAT (latest acceptance time)

The last permissible date for delivery of the shipment to the airline terminal. If the consol flight schedule has been used, then this date is taken from the flight plan.

Remarks

This is a free text field used for internal information about the shipment and is not printed on documents. If the consol flight schedule has been used, then the remarks from the corresponding flight plan are inserted.

House Shipments

All of the currently consolidated house shipments will appear in this summary table together with their destination, shipment number, HAWB number, number of packages, gross weight, volume and import agent. Any house shipment summary line can be double-clicked to open the house in the corresponding House shipment application.

Deconsolidate House

This action link will deconsolidate the house shipment currently highlighted in the summary table of house shipments.

Update House Shipments

This action link will automatically recalculate all the data from the assembled house shipment. Normally this is done automatically, but occasionally it may be necessary to update the data with this manual option.

Master AWB

Opens the IATA AWBMaster AWB - General - Master Shipment - Airfreight Export editor in order to add and edit data on the airway bill and to print the airway bill.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Multiple Customs Declarations

This action link allows creation of multiple customs declarations.

More information on customs applications is available in the chapter on Customs.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Finish - General - Master Shipment - Airfreight Export

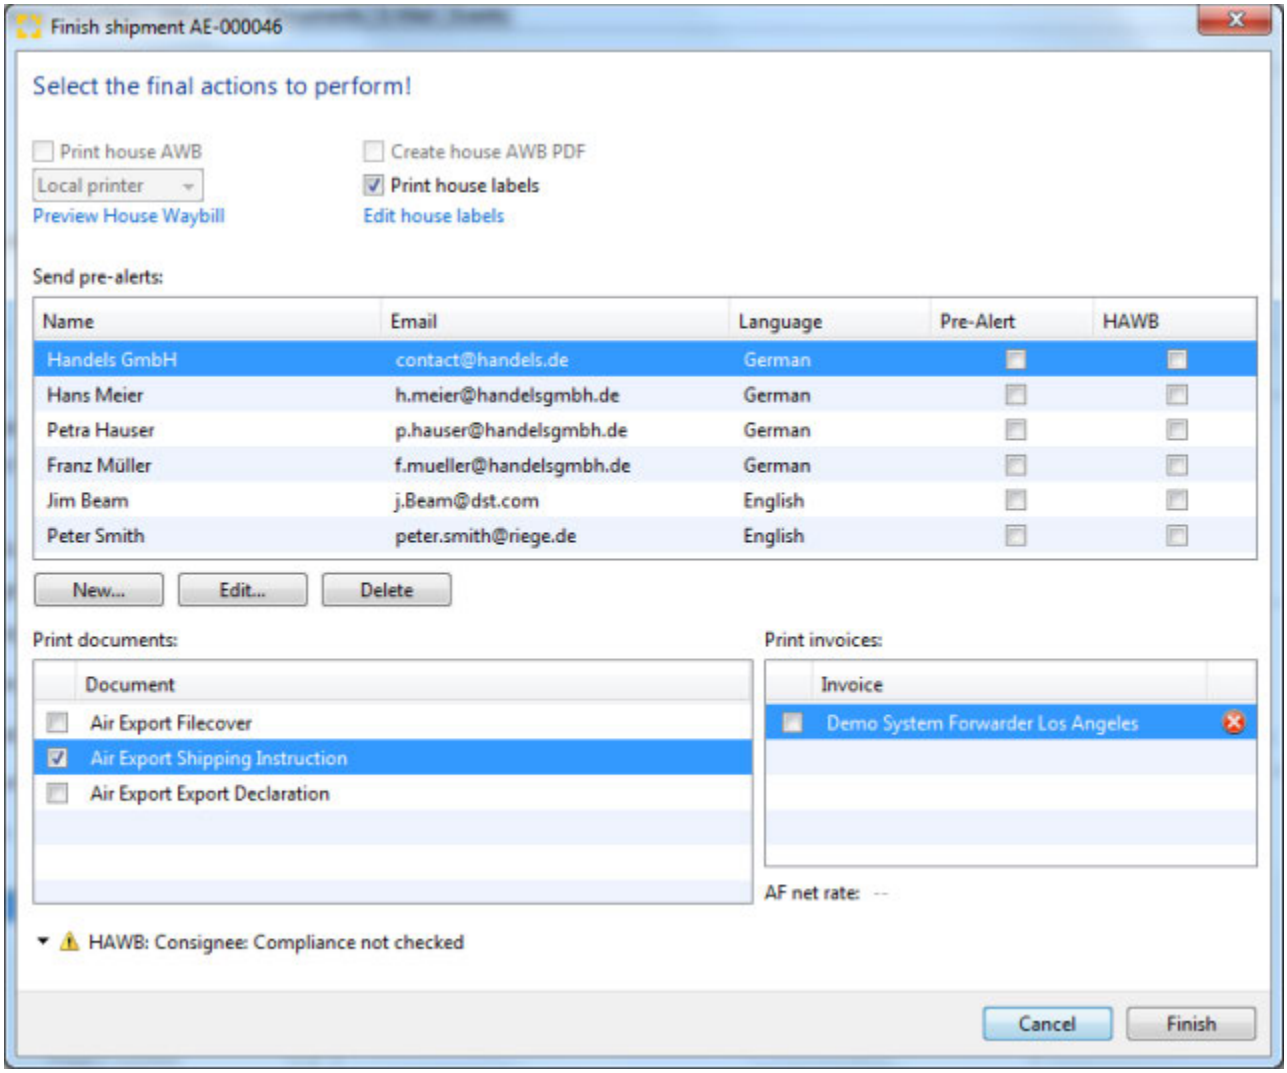
- Introduction
- Description

Introduction

In this application, all actions can be performed in one step to complete a shipment including printing the labels and associated documents and transmitting pre-advices via e-mail.

Description

By activating the check boxes described the corresponding actions are selected. After clicking the button *Finish* , the selected actions are carried out.



Print IATA-AWB

The IATA airway bill is printed on the pre-defined default printer.

Creat IATA-AWB PDF

The IATA airway bill is created as a PDF file in the *Documents* tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The creation of the PDF is only possible if the shipment contains no validation errors. If errors exist these will be displayed at the bottom of the application window with the symbol .

Print Master-Labels

The master labels can be printed for shipment.

Edit Master-Labels

Opens the Label-Printing editor in a popup window where the print parameters can be edited. This action link is active only if the action *master label printing* has been activated.

Print Combi labels

Combined labels can be printed for shipment.

Edit Combi labels

Opens the Label-Printing editor in a popup window where the print parameters can be edited. This action link is active only if the action *combined label printing* has been activated.

Send pre-alerts

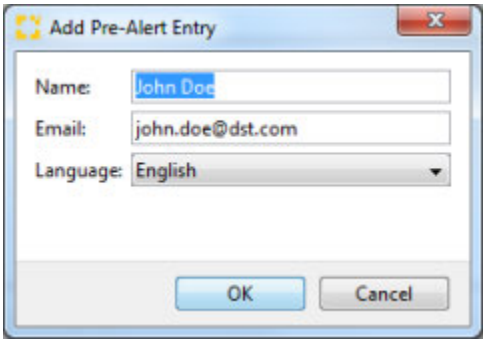
Allows the creation of pre-advises for the shipment and a copy of the airwaybill can be included in the pre-alert e-mail. The contacts for the shipper, consignee and **import agent** will all default to the consignee. The names, email addresses and language for these individuals will be derived from the **Cont acts** tab of the partner.

- By activating the check box *pre-alert* and / or *HAWB* the highlighted contact person will automatically receive an e-mail with the appropriate PDF document sent as an attachment.
- The sent e-mails are then listed in the *e-mail* tab

- If a partner has no check-boxes marked then **no** e-mail is sent to that contact.
- The language setting of the partner will be used to determine the correct language for the e-mail text of the pre-advises.

New

This option will allow a further contact name and e-mail address to be added.



Edit

Opens the contact highlighted in a list for further editing.

Delete

Removes the highlighted contact in the recipient table.

Print documents

A list of documents that can be printed. Use the check-box next to each document to confirm the document should be printed.

Available documents:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Airfreight Export master file cover

A file cover is printed on the predefined default printer and a PDF document created in the *Documents* tab.

Airfreight Export Cargo Manifest

A cargo manifest is printed on the predefined default printer and a PDF document appears as a document in the *documents tab*

Airfreight Export Customs Manifest

A customs manifest is printed on the predefined default printer and a PDF document appears as a document in the *documents tab*

Airfreight Export MRN Manifest

A manifesto is printed on the MRN predefined standard printer and a PDF document created in the *Documents tab* tab.

Print Invoices

The freight bill is printed on the predefined default printer and a PDF document created in the *Documents* tab.

The freight bill is printed only if:

- It is a system generated invoice (other invoices are not offered here for printout)
- It has not yet been completed and printed (Existing invoices are not offered here for printout)
- It has no validation error (Errors can be seen in the invoice where the the icon appears on the right edge of the table showing additional error information)

Cancel

Close the application without further action.

Finish

Performs the selected actions and closes the application.

Master AWB - General - Master Shipment - Airfreight Export

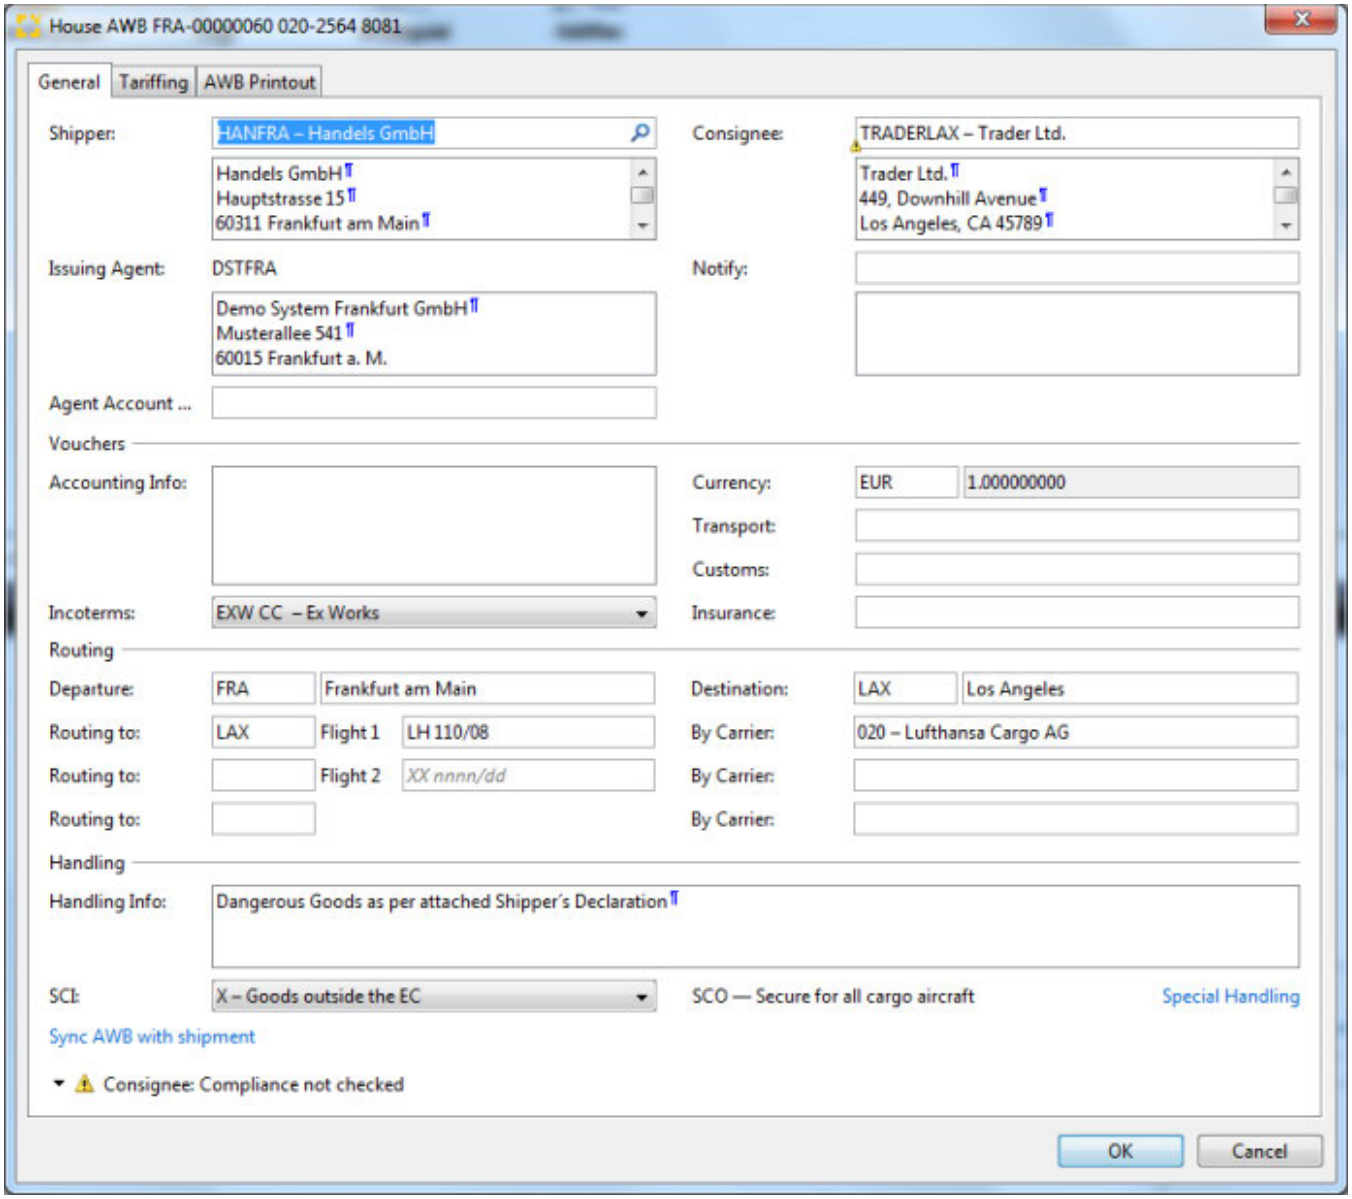
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to edit, customize and print AWBs. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be over-ridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the AWB on screen before it is actually printed.

Description

General



Shipper / Consignee

Shipper and Consignee for shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Agent Account

This field is used for master, Back2Back and direct shipments for the Cass-Acount number of the agent.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Accounting Info

This field is for any accounting information which is to print on the AWB in the accounting information box. If a notify has been entered, it will be inserted here by default. Iit is also possible to insert in the area othere addresses and predefined text blocks.

Incoterms

The incoterms are taken from the shipment editor, but can be replaced as needed by an entry from the drop down menu.

Currency / Transport / Custom / Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure / destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Routing to / Flight / Carrier

The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned they will appear blank but can be completed manually. The **Routing to** and **By Carrier** fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks .

SCI (Special Customs Information)

Select the custom status (if any) from the drop down menu.

Security Status (without field description)

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field can not be changed.

synchronize AWB with shipment

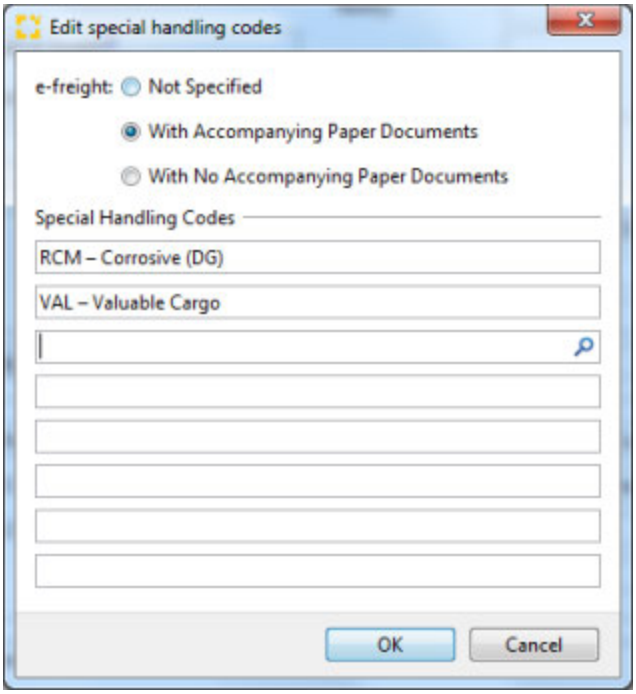
If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Any data in the AWB editor that is overwritten during synchronization with the shipment editor will be lost.

Special Handling

This action link opens the Special Handling Editor. The information inserted will be used by the handling functions of e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For more information, please contact your RSI customer support.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Not specified

Will not create a paperless AWB.

With accompanying Paper Documents

Additional paper documents such as certificates will accompany the shipment. A paperless AWB is created and sent with the EAP code.

Without accompanying Paper Documents

There are no accompanying paper documents. A paperless AWB is created and transmitted with code EAW in the FHL message.

Special Handling Codes

Extra handling codes can be recorded. A list of available codes is provided. The corresponding codes can be found using the search field.

OK

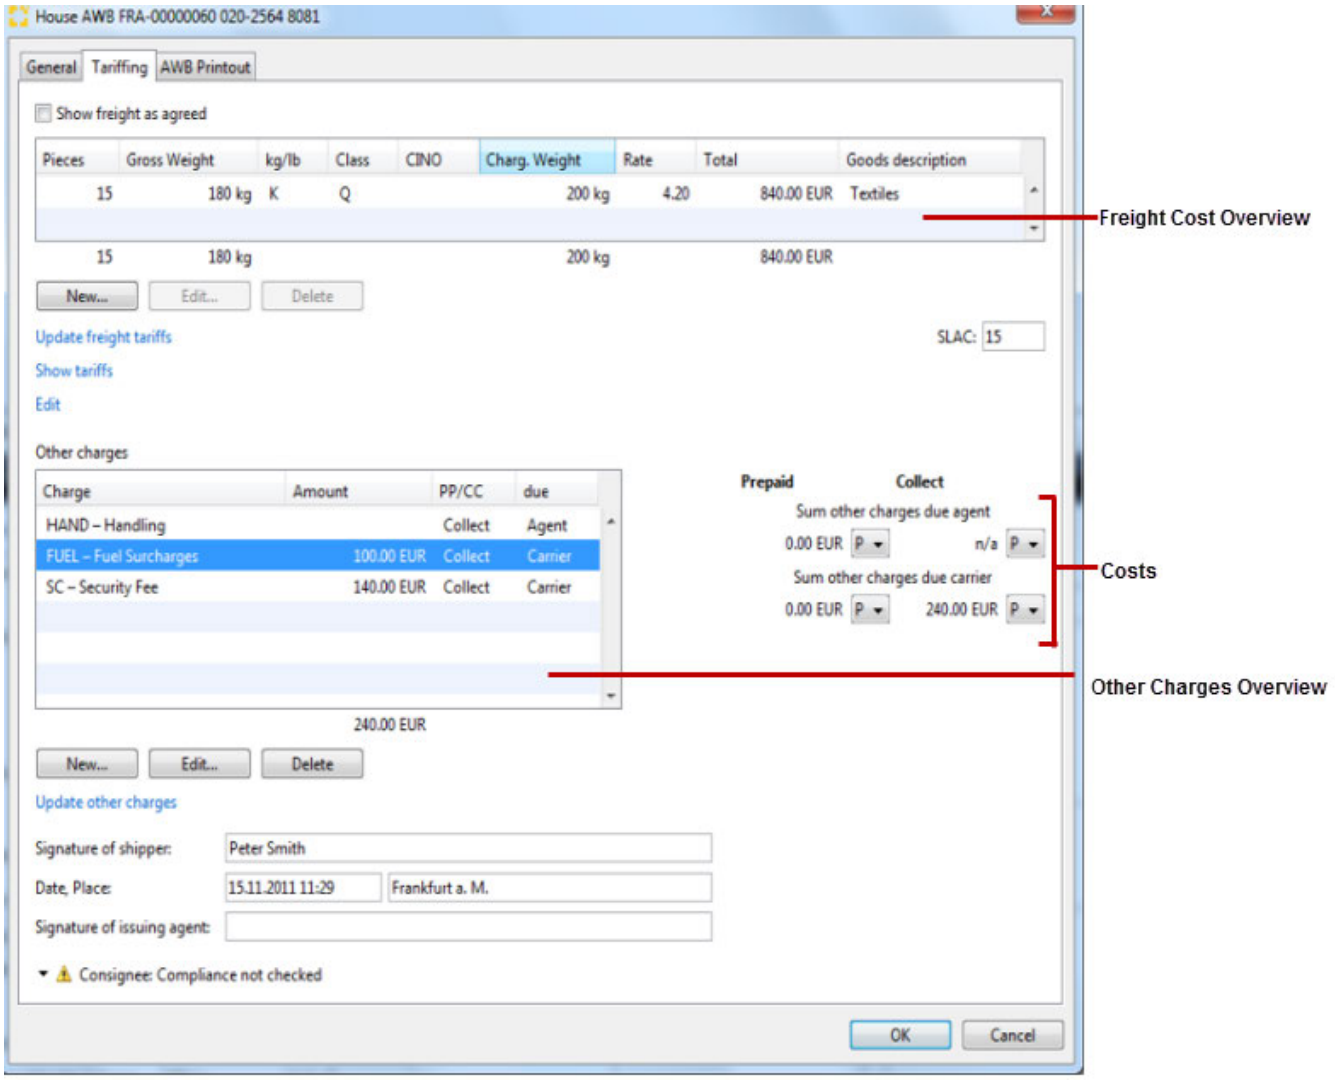
Saves the data and closes the editor.

Cancel

Closes the editor without further action.

Tariffing

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Shown freight as agreed

By checking this box, the amount of freight charges are not printed on the air waybill and are replaced with the statement *AS AGREED*.

Freight charges overview

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Advice/ Class

The Class of tariff rate applied. The available rate classes are:

rate type	rate class
Simple Rate	M, N, O, Q

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Chargeable weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

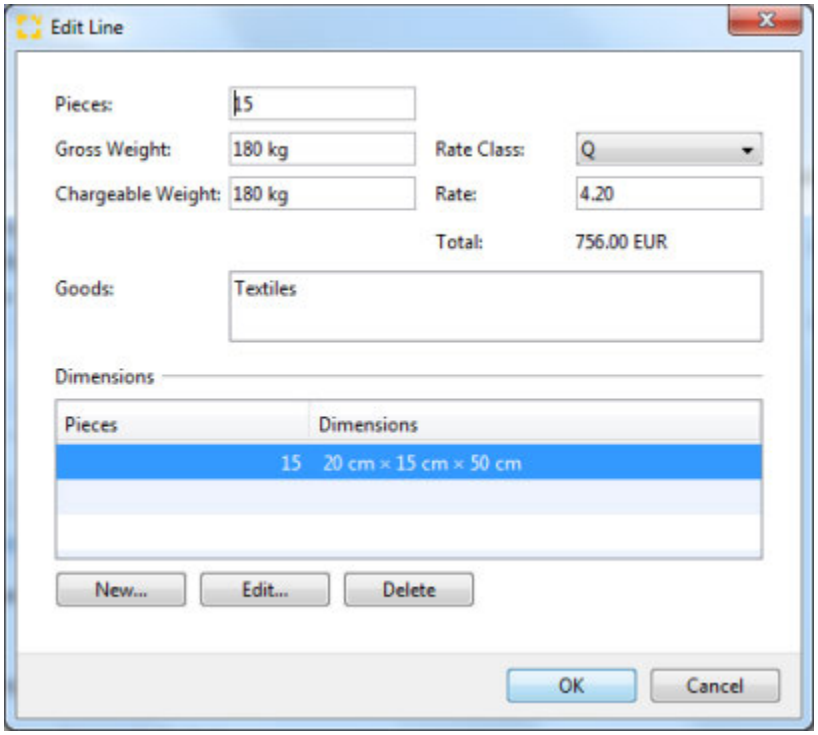
Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods

This information is defaulted from the field *description* in the shipment editor, but can be (if necessary) amended as described below.

New

This button creates a new freight cost line. First the type of rates must be selected from a pop-up window and then the freight cost line editor opens.



Pieces

Number of packages.

Gross weight

Gross weight of packages.

Chargeable Weight

chargeable weight of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Rate

Here the required airfreight rate can be entered.

Total

The total freight amount, calculated from chargeable weight and airfreight rate displayed.

Goods

Description (contents of the packages).

Pieces / Dimensions

With *new*, a new line with the number and dimensions of packages can be entered. With *Edit* the highlighted row in the table is opened for editing. Alternatively, it can also be opened with a double click on the appropriate line. *Delete* removes a selected line.

- The data in the freight-line editor will automatically be updated with the new data entered.
- The entered number of packages and their dimensions are NOT included in the shipment editor.

Edit

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it.

- The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

Delete

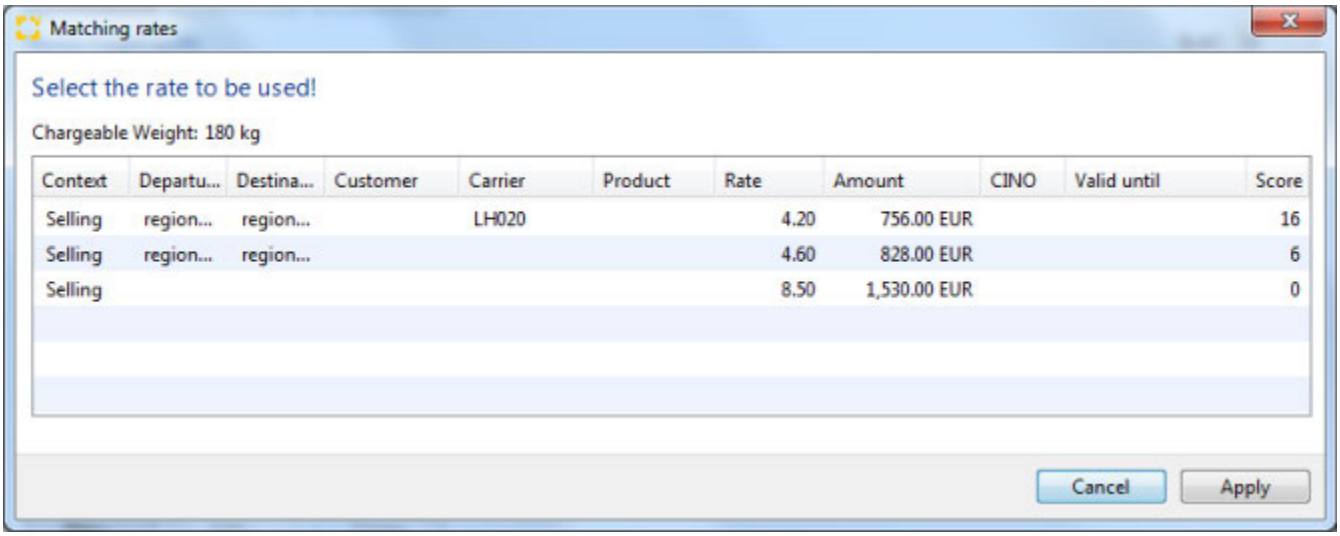
Deletes a marked line in the freight cost overview.

Update freight tariffs

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor.

Shows Tariffs

This action link will display all tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window.



Chargeable Weight

The chargeable weight will be displayed from the tariff lines.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Context

Shows the tariff context (type of tariff) to. Only *IATA* tariffs are shown for direct shipments.

From / To / Customer / Carrier

This information will display depending on how a tariff has been created in the master data. Departure, destination, departure country, destination country, customer, carriers may all appear if they are part of a rate the matches the current shipment.

Rate / Amount

Shows the relevant tariff stored in the airfreight rates and the calculated amount based on the chargeable weight.

CINO

Shows the corresponding tariff where a CINO-number (Commodity Item Number) is used, if available.

Valid up to

Validity date of the displayed tariff.

Score

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

OK

Uses the highlighted tariff in the overview as the tariff for the line item in the tariff editor.

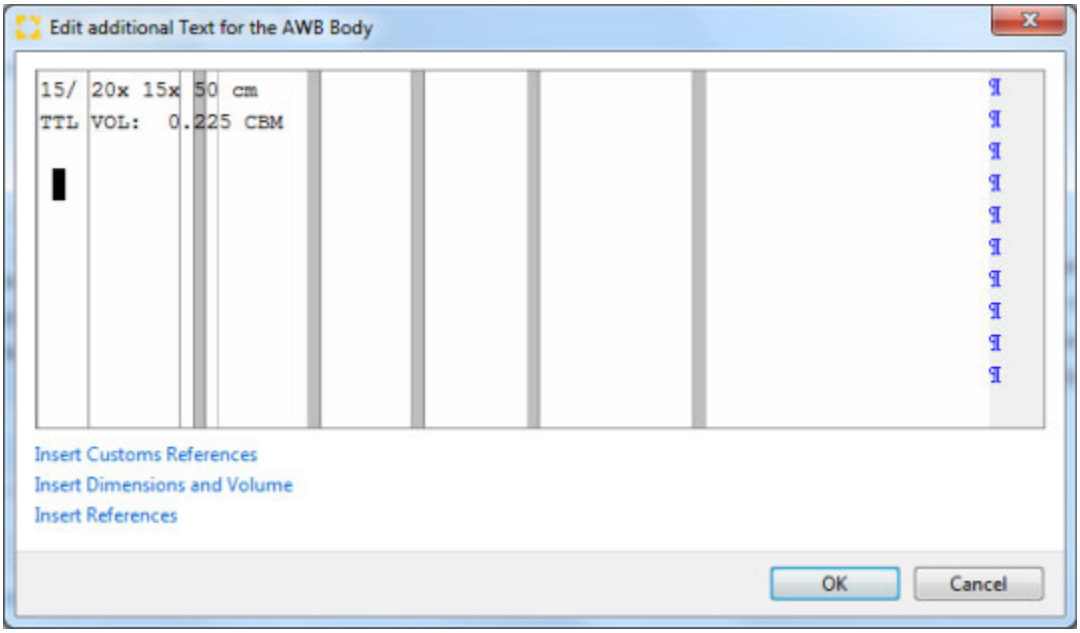
Cancel

Closes the tariff overview without further action.

> More information on tariffing is available in the section Automatic tariffing.

AWB additional text.....

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume

Adds any existing dimensions and volume at the position of the cursor.

Insert References

Opens the selection of references screen from which the desired references can be chosen and inserted at the position of the cursor.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Other Charges

All associated costs such as collection, handling, surcharges, etc. are present in the ancillary charges table. The charge types are based on the master data (activity types , master data rates)) combined with the shipment data (Incoterms , chargeable weight). Totals are therefore automatically determined and proposed for settlement.

Charge

The charge for which the amounts are calculated.

Amount

the amount of the charges. These are entered manually, or are automatically calculated from the master data

PP/CC

Depending on the incoterms selected in the general tab of the shipment this field indicates if the charge is prepaid or collect. The payment terms can be as per the following table:

Code	Designation	Explanation
PP	Prepaid	Costs are paid by the sender
CC	Collect	Costs are paid by the recipient

Due

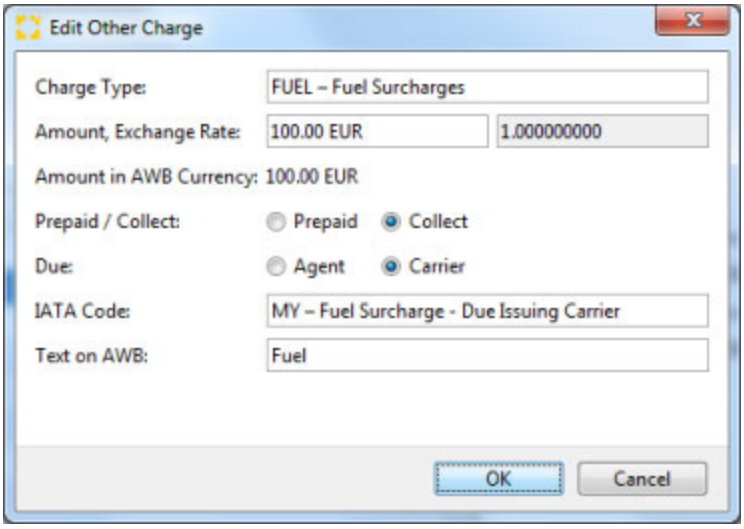
Indicates to whom the costs should be paid:

Designation	Explanation
Agent	The agent or carrier who issues the Air Waybill (PP) and who is defined as the receiving agent (import agent) or carrier (CC).
Carrier	The carrier or airline who transported the shipment

New

The button opens the **New Other Charge** editor which allows new charges to be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Charge Type

New charges can be found using the search function.

Amount, Exchange Rate

If a valid tariff has been found for the charge code, the total amount of the charge will automatically be calculated and inserted. Use the dropdown menu or the F5 function key if the tariff needs to be recalculated. The amount can also be manually entered or changed. The currency of the charge will default to the local currency but it may also be entered or changed. In the adjacent field the exchange rate for the charge will appear. If the local currency is used the rate will be 1.0000, if a foreign currency used the rate will appear automatically or can be entered or changed.

Amount in AWB Currency

If the charge has been enter in a foreign currency, this field will show the amount converted to the local currency.

Prepaid/Collect

Indicates whether the charge is prepaid or collect. The default value will be based on the inco terms (see the *general tab*) but this default can be changed.

Due

Defines if the charge is *due Agent* or *due Carrier*. The default value for charges can be stored in the air cargo master data

Text on AWB

This will be the code used on the AWB to describe the charge type. By default the first 2 digits of the IATA code are used.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Edit

Open the other charge editor to edit the highlighted charge.

Delete

Removes the highlighted ancillary charge.

Update other charges

This action link will recalculate all ancillary charges according to current tariffs.

Distribution of costs

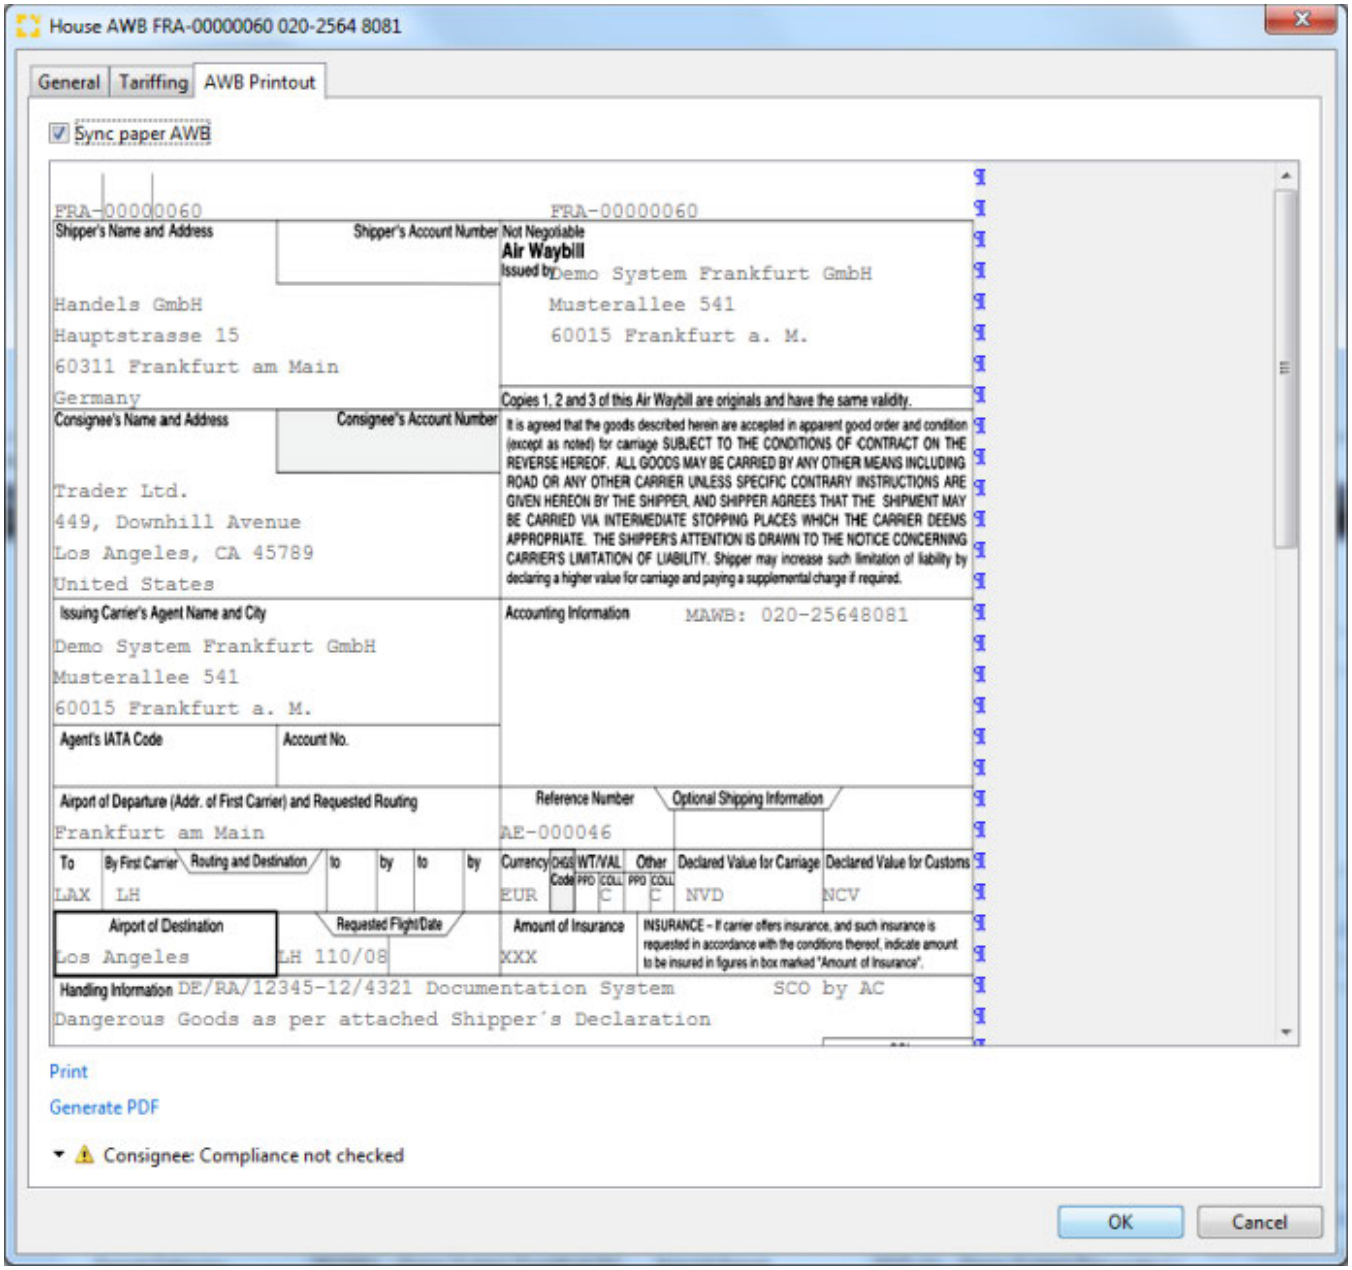
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the charges are summed into 4 separate totals; total prepaid due agent, total collect due agent, total prepaid due carrier and total collect due carrier. How the costs will be presented on the AWB can be controlled using the drop down menus which will present the option shown below:

Code	Explanation
P	Costs will be printed on the AWB
X	Costs will NOT be printed on the AWB
T	The costs will be shown only as a total on the AWB

AWB Printout

This tab provides a visual representation of the printed AWB.



Sync paper AWB

This box is checked by default and causes the AWB to be shown as per all the data entered in the *general* and *tariff* tabs. When check the representation of the AWB cannot be edited. If the box is unchecked, then the AWB may be freely edited and the text blocks can be accessed and inserted into the AWB.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the box is checked again after editing the AWB, all changes will be lost because the document will once again be regenerated according to the data stored in the *general* and *tariff* tabs.

Print

Prints the AWB exactly as it appears in the representation to the predefined printer. The document will also appear as a text document and pdf document in the documents tab of the shipment. The pdf version may then be sent attached to an email.

Generate PDF

Only a pdf version of the document is created which also appears in the documents tab of the shipment.

Print and send FWB

Prints the AWB as described above and sends a copy to TRAXON Global Cargo Communications System in the form of an FWB.

Send FWB

Sends the shipment electronically in the form of an FWB to TRAXON Global Cargo Communications System. There is no print of the document.

OK

Stores the data and closes the editor.

Cancel

Closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

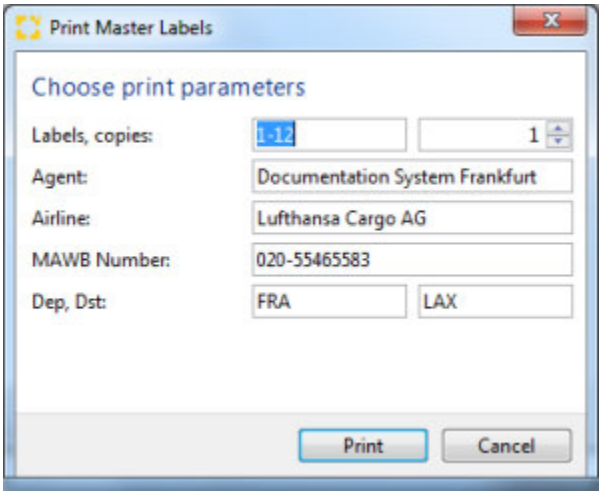
Printing Labels - General - Consolidated shipment - Airfreight Export

- Introduction
- Description

Introduction

Clicking the option *Print... Master labels* opens a pop-up window where the print parameters and number of printed pages can be edited. In addition, the printing of the labels can be redirected to another printer-pool (e.g. another branch).

Description



Labels / Copies

Number of labels to be printed. Individual labels can be printed or a partial set of labels may be printed.

Examples:

Entry	Quantity	Numbers
1-15	15	1-15
11	1	11
4-6	3	4-6

By default the application proposes printing the total number of labels.

Agent

The agent who issued the airwaybill. (Issuing agent)

Airline

The airline who will transport the shipment.

Handling Agent

The cargo handling agent at the terminal who will receive the cargo prior to loading on the aircraft.

MAWB Number

MAWB Number of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Departure/Destination

Place of departure and place of destination for the shipment.

Output

Print local

The option *Print local* will print to the locally attached printer.

Print to Printer-pool

Allows selection of a printer-pool from the list displayed.

Printer-pools (List)

The desired printer-pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the popup window without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

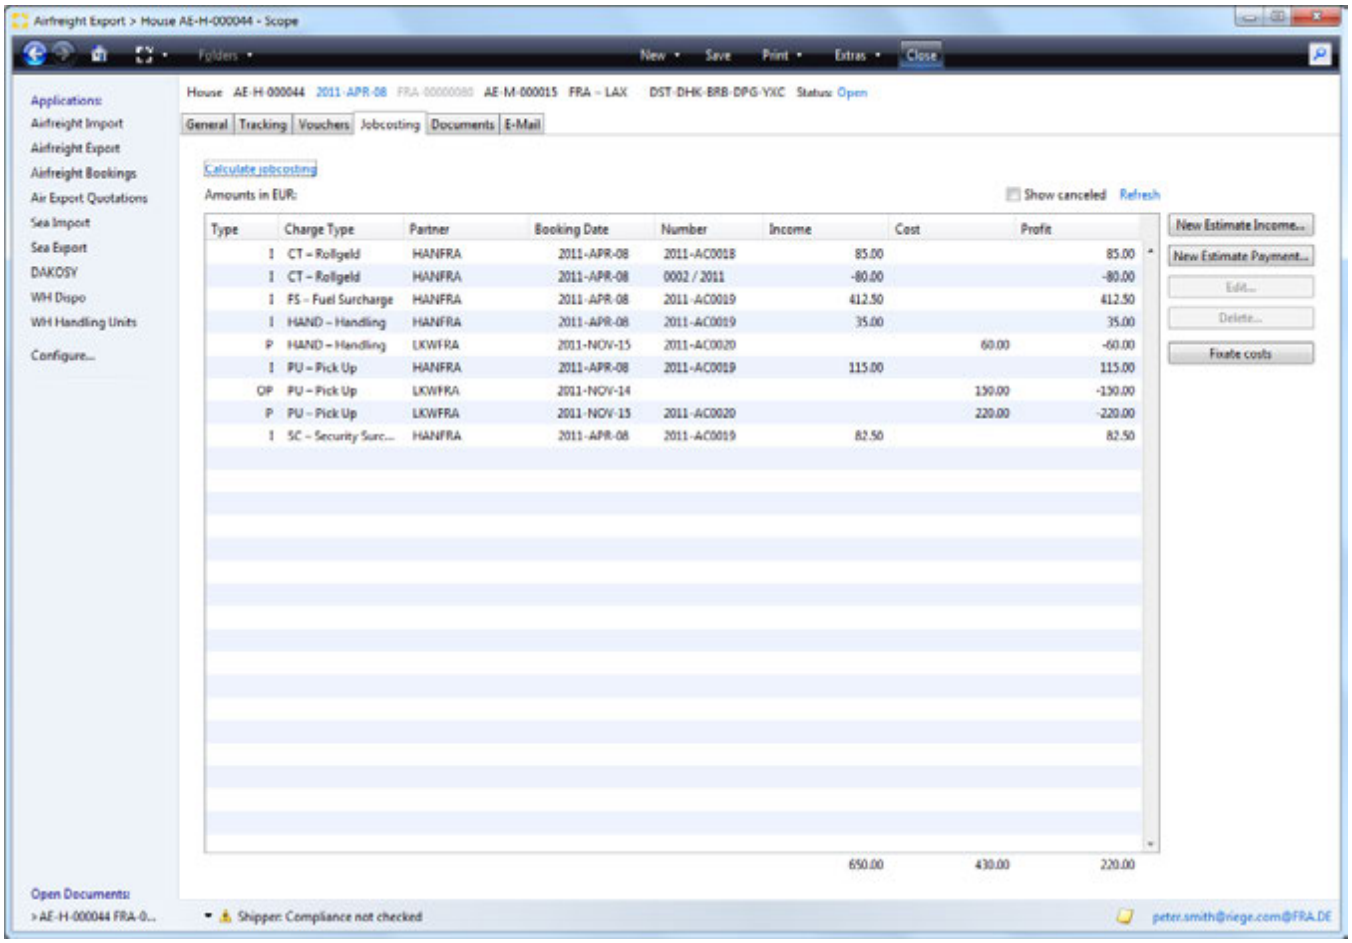
Jobcosting - Master Shipment - Airfreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Compute Breakdown

The button will recalculate the breakdown of all master to charges to the house shipments on the consolidation. Normally this action occurs automatically, but this button can be used to force the process.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

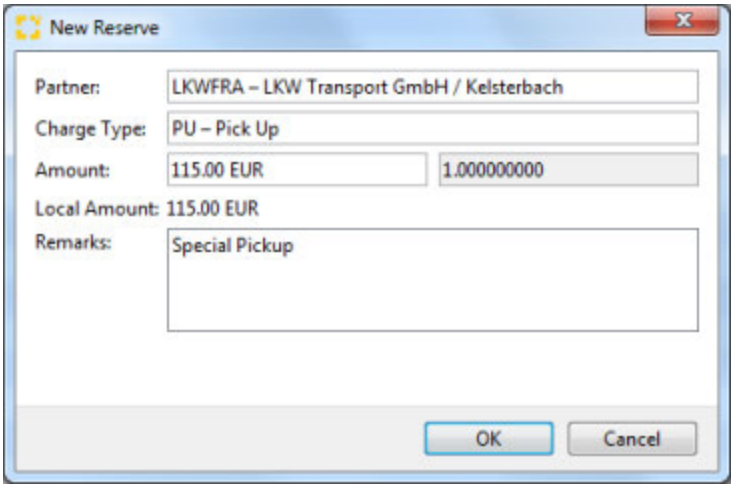
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Tracking - Master Shipment - Airfreight Export

- Introduction
- Description

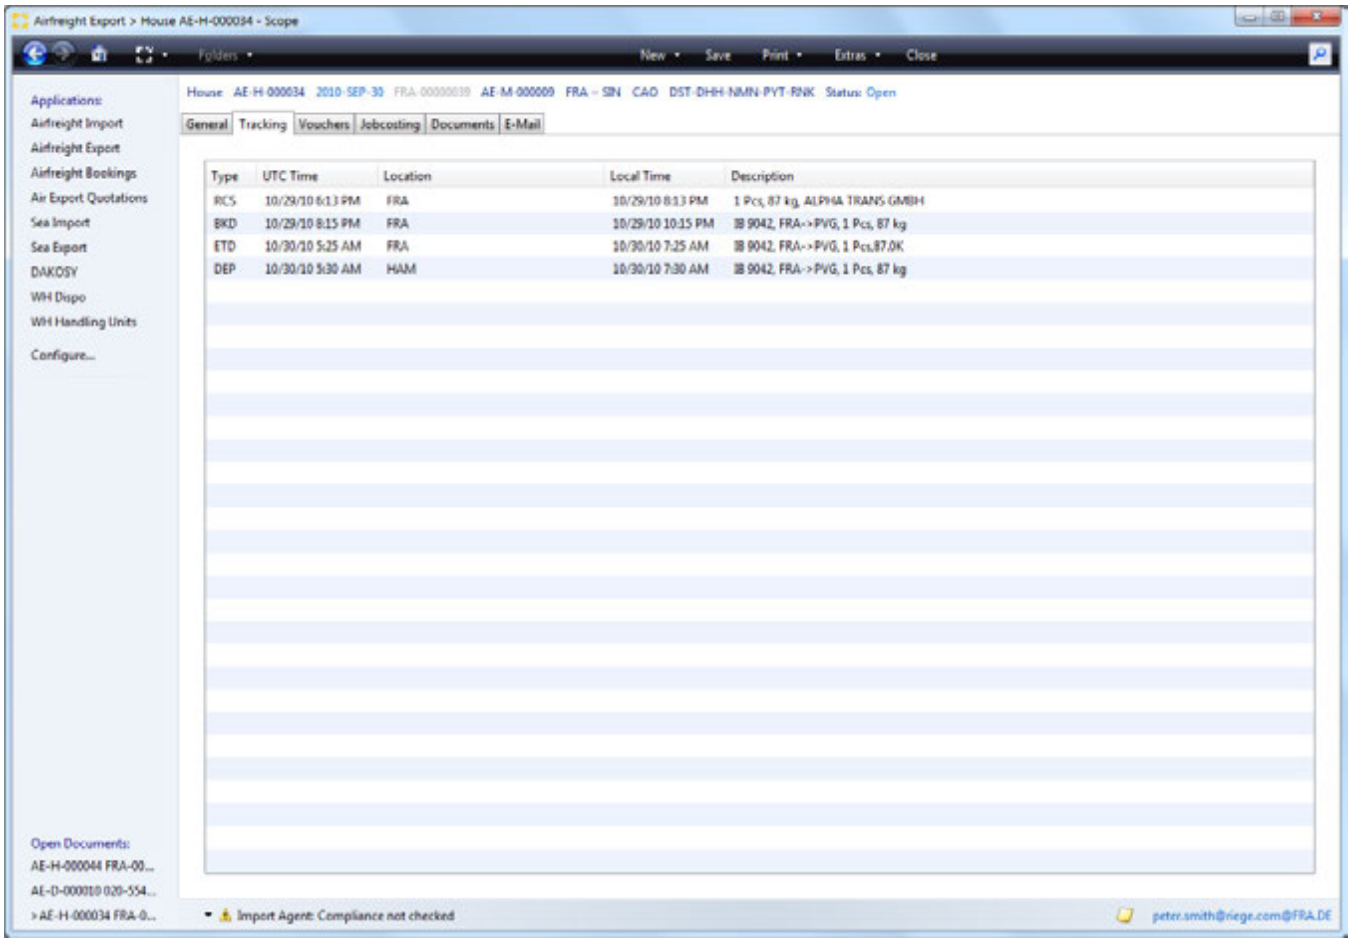
Introduction

During the life-cycle of the shipment numerous events occur and are recorded by the various parties involved with the transportation of the freight. These are called tracking events and they can be viewed using tracking tab, clicking on an idividual tracking event will present detailed tracking information. Currently, only extrenal tracking events are available when the shipper and carrier are exchanging data using the "TRAXON" cargo communication system. Future development of the tracking tab will allow it to include events between senders and receivers. Events in the tracking tab can also be viewed via web-browser on RSI's track and trace system. Connection to external, customer-specific track & trace systems can be implemented on request.

Description

The example below shows an exchange of tracking data for a Scope system that is connected to the Traxon cargo communication system.

- When printing the IATA air waybill (master shipment, direct shipment and back-to-back) the option exists to also "Priint and tranmit FWB" or just "Transmt FWB". These options will automatically generate the FWB message (waybill data) and send these to the Traxon system who in turn transmits the FWB to the responsible airline. Consolidations and back-to-back shipments will also include the FHL messages (house bill of lading or manifest data).
- The corresponding events are automatically entered into the table of tracking events.
- The types of events shown will depend on the types of events supported by the responsible airline.
- Airline events are automatically entered into the table.
- The events which are recorded in a master shipment, also appear simultaneously in the house shipments consolidated on that master since these events are also relevant to the house shipments.



Main menu bar and title bar

see tab **General**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Type

Event type (see table below)

UTC time

The time of the event in UTC (Coordinated Universal Time)

Location

The place where the event has occurred. (the relevant airport IATA code may be shown)

Local time

Local time of the event (time in the time-zone in which the event occurred.)

Description

Description of the event. This example indicates how many packages, their weight, the aircraft transporting the freight. From where, to where. Numbers of packages that have arrived, the weight of the packages and at which destination.

The following events can be mapped. (Depending on the airline used)

Code	Description
RCS	Consignment received from Shipper
RCT	Consignment physically received from another airline
RCF	Consignment physically received from a flight known or not
BKD	Consignment has been booked
MAN	Consignment has been manifested
DEP	Consignment has departed
PRE	Consignment prepared for loading
TRM	Consignment is to be transferred to another carrier
TFD	Consignment has been physically transferred to another airline or surface transport party
NFD	Consignee or his agent informed of arrival of shipment
AWD	Arrival documents delivered to consignee or his agent
CCD	Consignment cleared by customs
DLV	Consignment has been physically delivered to consignee or his agent
DIS	Consignment Discrepancy
CRC	Consignment Information has been reported to Customs
DDL	Consignment has been delivered to the consignee's door
TGC	Consignment has been transferred to Customs/Government control
ARR	Consignment arrived on a flight known or not
AWR	Consignment documentation received from fleight
FOH	Consignment is on hand
FHL	Consol Manifest sent to airline
FWB	AWB sent to airline/ground handler
OSI	Other Service Information
ULD	ULD Identification
ETD	Estimates Time of Departure
ETA	Estimated Time of Arrival
FMA	Message acknowledged
FNA	Error detected in message

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

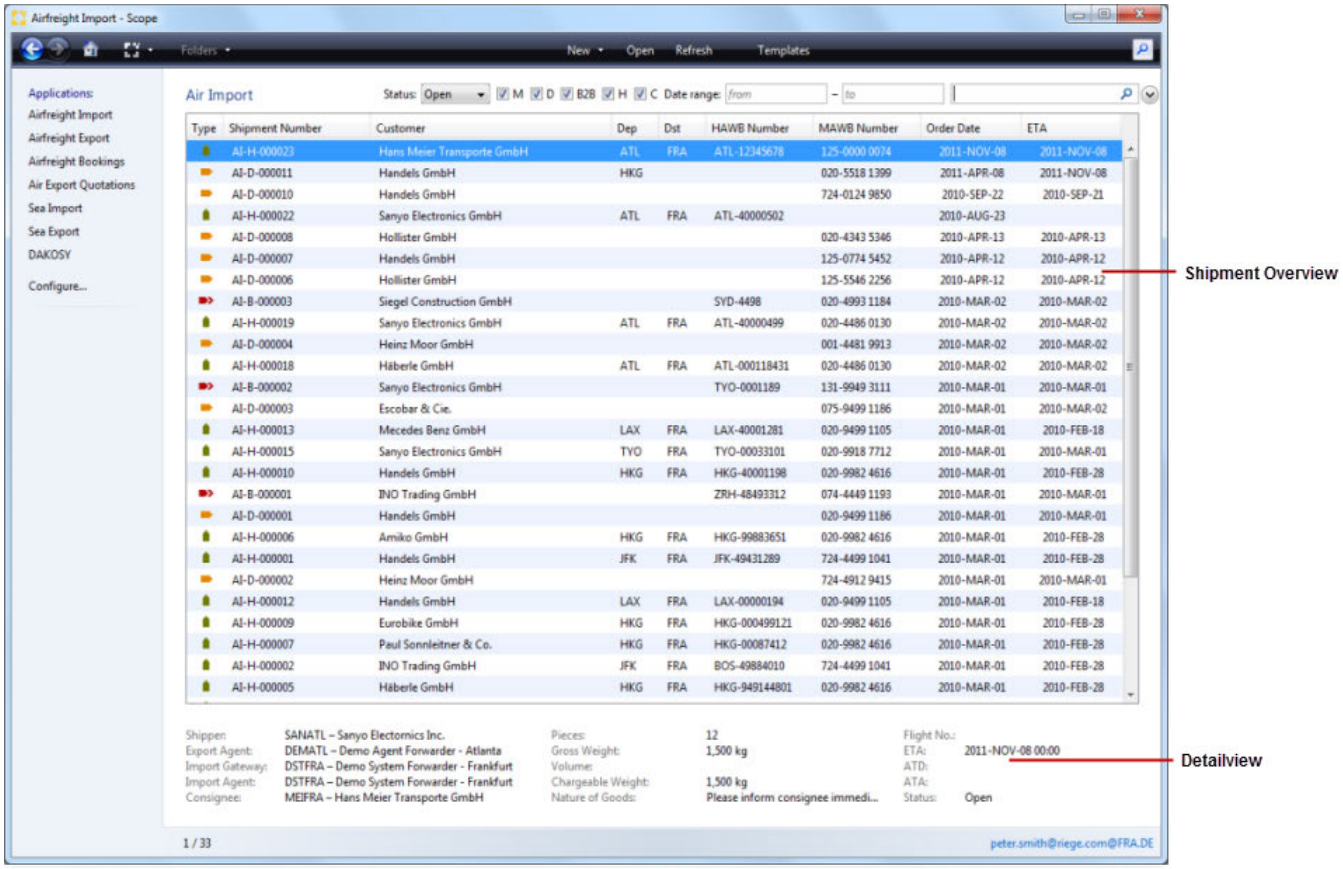
Air Freight Import

- Introduction
- Description

Introduction

The airfreight import module enables creation of Master, House, Direct, Back-to-Back and Coload air import shipments. Within these applications are all the function necessary to create transport orders, calculate income and revenue, and produce all required import documents.

Description



Shipment overview

the shipment overview displays all current shipments. Any of these shipments may be opened by *double clicking* them or using the *open* option in the main menu.

The shipment types are indicated in the overview using the symbols shown below:

- House Shipment
- Direct Shipment
- Back-to-Back Shipment
- Coload Shipment
- Master Shipment

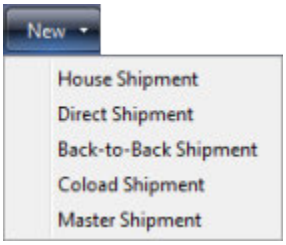
Detail section

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The lower pane displays the most important information about the shipment highlighted in the overview table.

New

The *New* option in the main menu allows creation of new Master, House, Direct, Back-to-Back and Coload shipments.



Open

Open the shipment highlighted in the overview. It is also possible to open a shipment in the list by *double clicking* it.

Update

Updates the list of shipments.

Search options

Hide types

By enabling or disabling check boxes above the shipment list, various types of shipment can be hidden or displayed:

Type	Description
M	Master (Consolidations)
D	Direct Shipments
B2B	Back-to-Back Shipments
H	House Shipments
C	Coload Shipments

Date Range from / to

Including a date range will limit the list of shipments to those whose service date falls within the date range.

Keyword search

Entering a keyword in the [search field|Full Text Search - Field Types - User Interface - General will filter the list of displayed shipments to those that match the keyword in the search field.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Back-to-Back Shipment - Airfreight Import

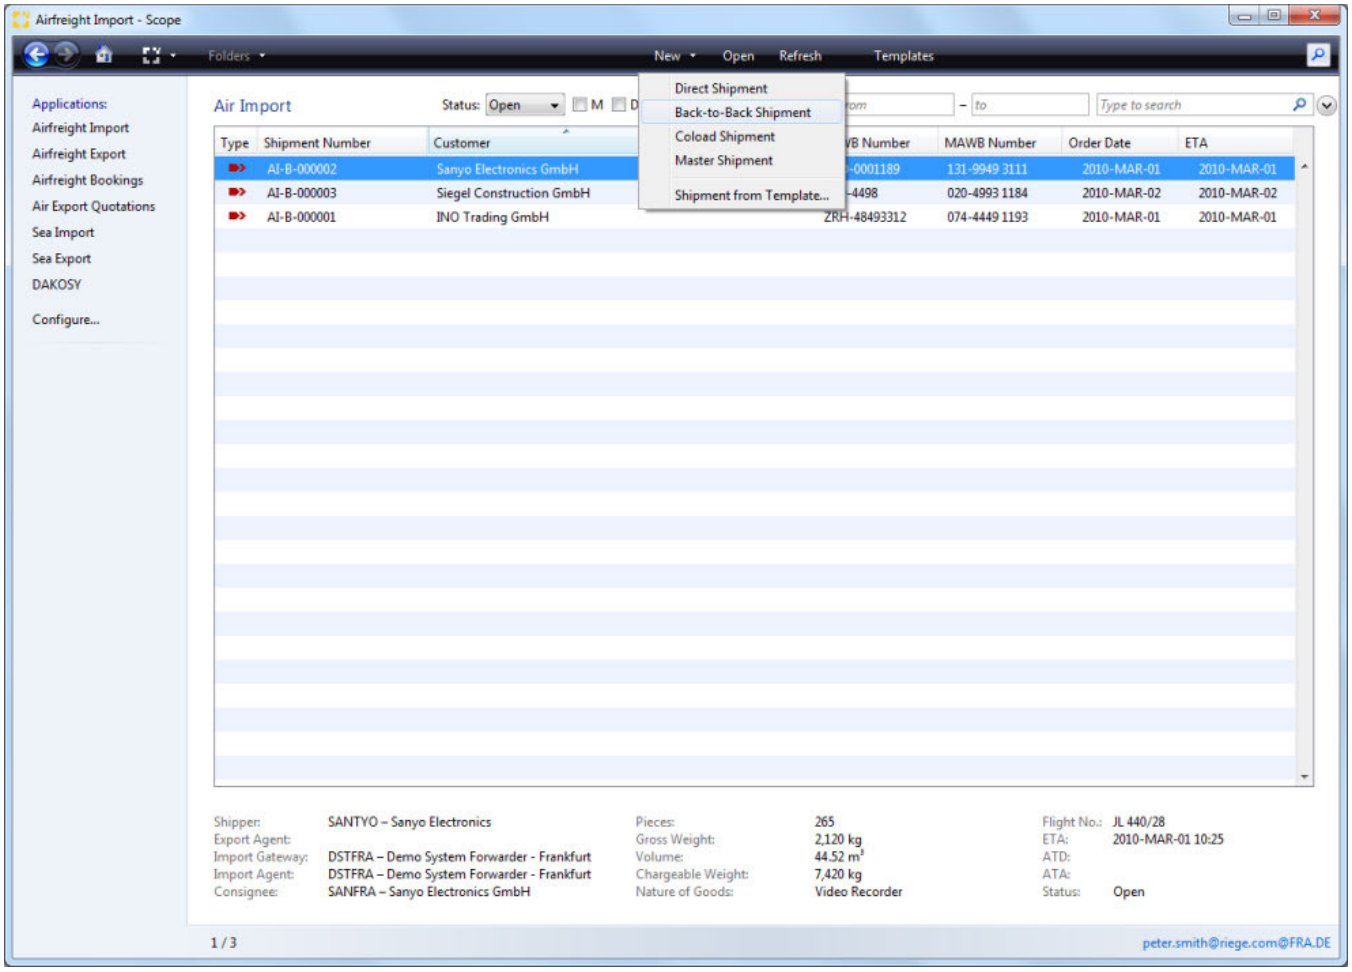
- Introduction
- Description

Introduction

In addition to air freight import related Consolidated, Direct, Coload and House shipments, back-to-back shipments may also be created. This is actually a consolidated single shipment, comprising a single house shipment on a single master shipment. This type of consignment is created mainly for reasons of cost. The goods could also be sent as a Direct but this would result in higher freight charges since the freight would be charged according to the official IATA rates and these are generally are significantly higher than in the sales rates available directly from the carrier. A back-to-back shipment could, in principle be created using the air import consolidation program. However, to simplify the process the option to make a back-to-back shipment directly is available which will speed the entry of the house and master shipment data since these are very similar.

Within the airfreight import application, all operations related to shipment creation are carried out, this includes data collection, billing, printing of documents and cost control.

Description



With ***New - Back-to-Back-Shipment*** a new Back-to-Back Shipment can be created.
With ***Open*** an existing shipment in the shipment summary can be opened. Alternatively ***Double click*** the highlighted shipment in the shipment summary to open it.

The functions of each of the tabs with a shipment are described here:

- Billing - Back-to-Back Shipment - Airfreight Import
- Documents - Back-to-Back Shipment - Airfreight Import
- E-Mail - Back-to-Back shipment - Airfreight Import
- General - Back-to-Back Shipment - Airfreight Import
- Jobcosting - Back-toBack Shipment - Airfreight Import

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

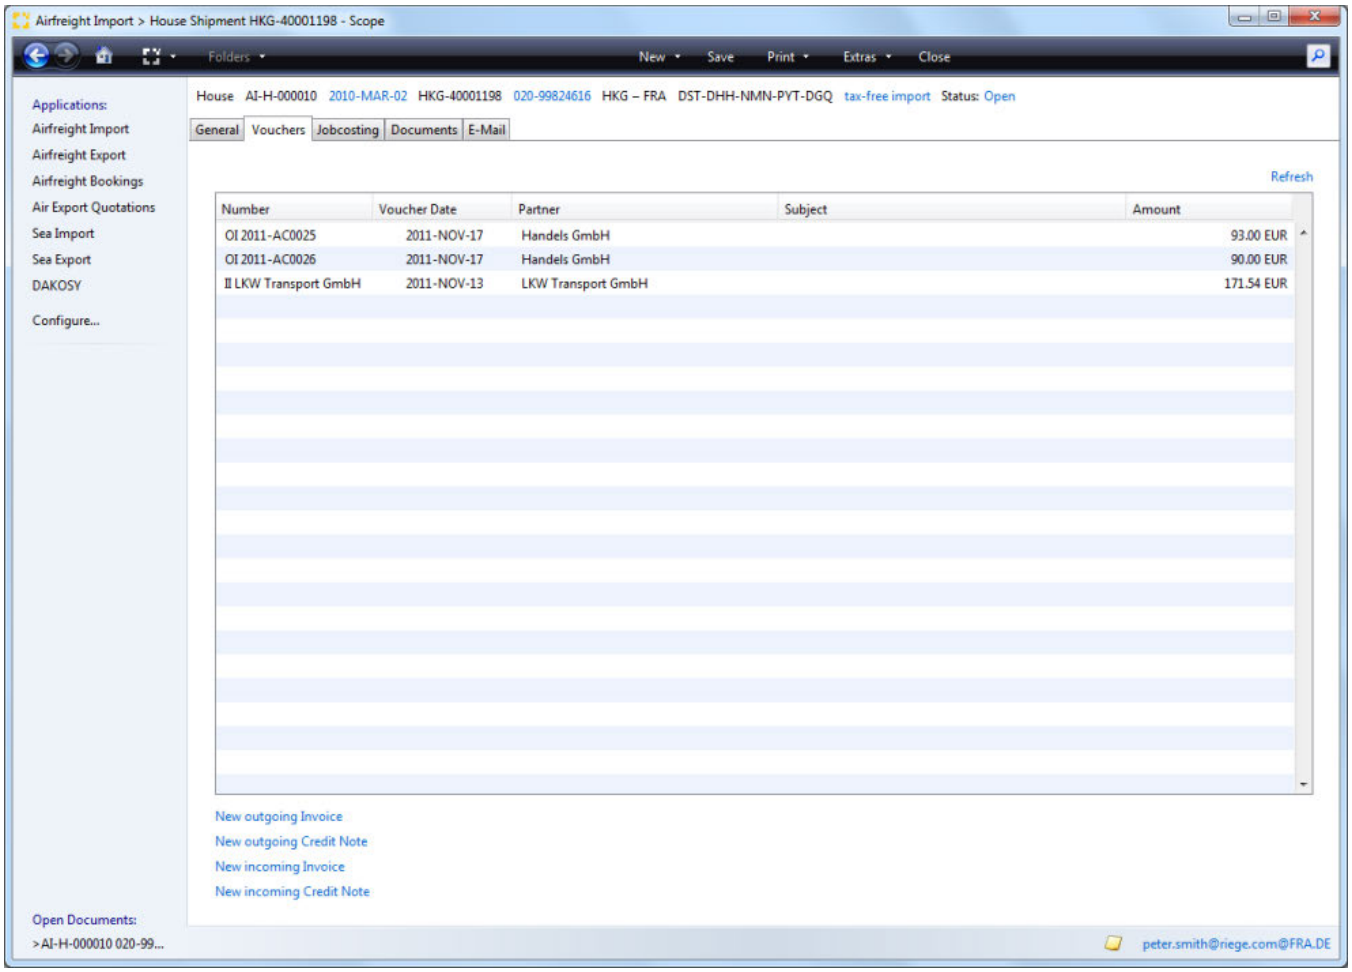
Billing - Back-to-Back Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Rider **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Outgoing Credit Note

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Refresh

refreshes the list of vouchers.

Table columns

Number

The number of the document is fixed and will be prefixed with a code indicating the type of voucher.

Voucher Code	Description
OI	Outgoing Invoice
OC	Outgoing Credit note
II	Incoming invoice
IC	Incoming credit note

Voucher Date

The date the voucher was created.

Partner

The party to whom the voucher was issued.

Subject

The subject of the voucher

Amount

the total amount of the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Billing - Back-to-Back Shipment - Airfreight Import

- Introduction
- Description

Introduction

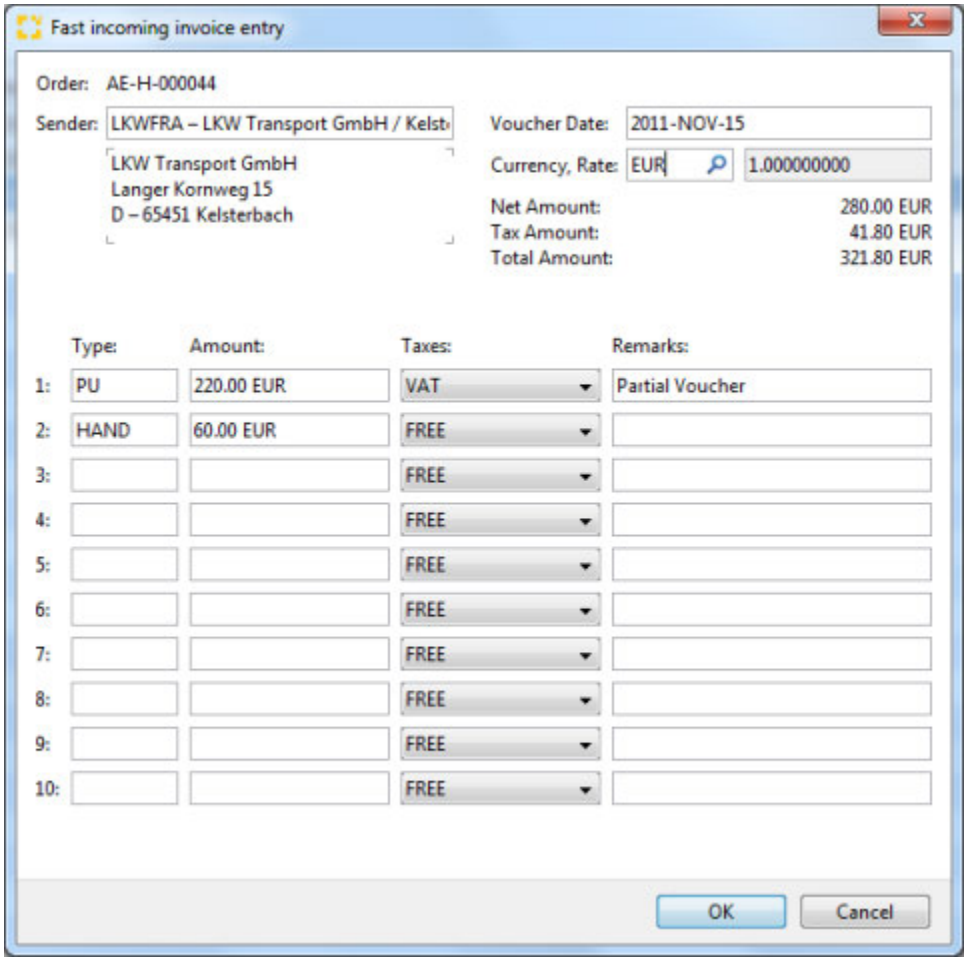
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

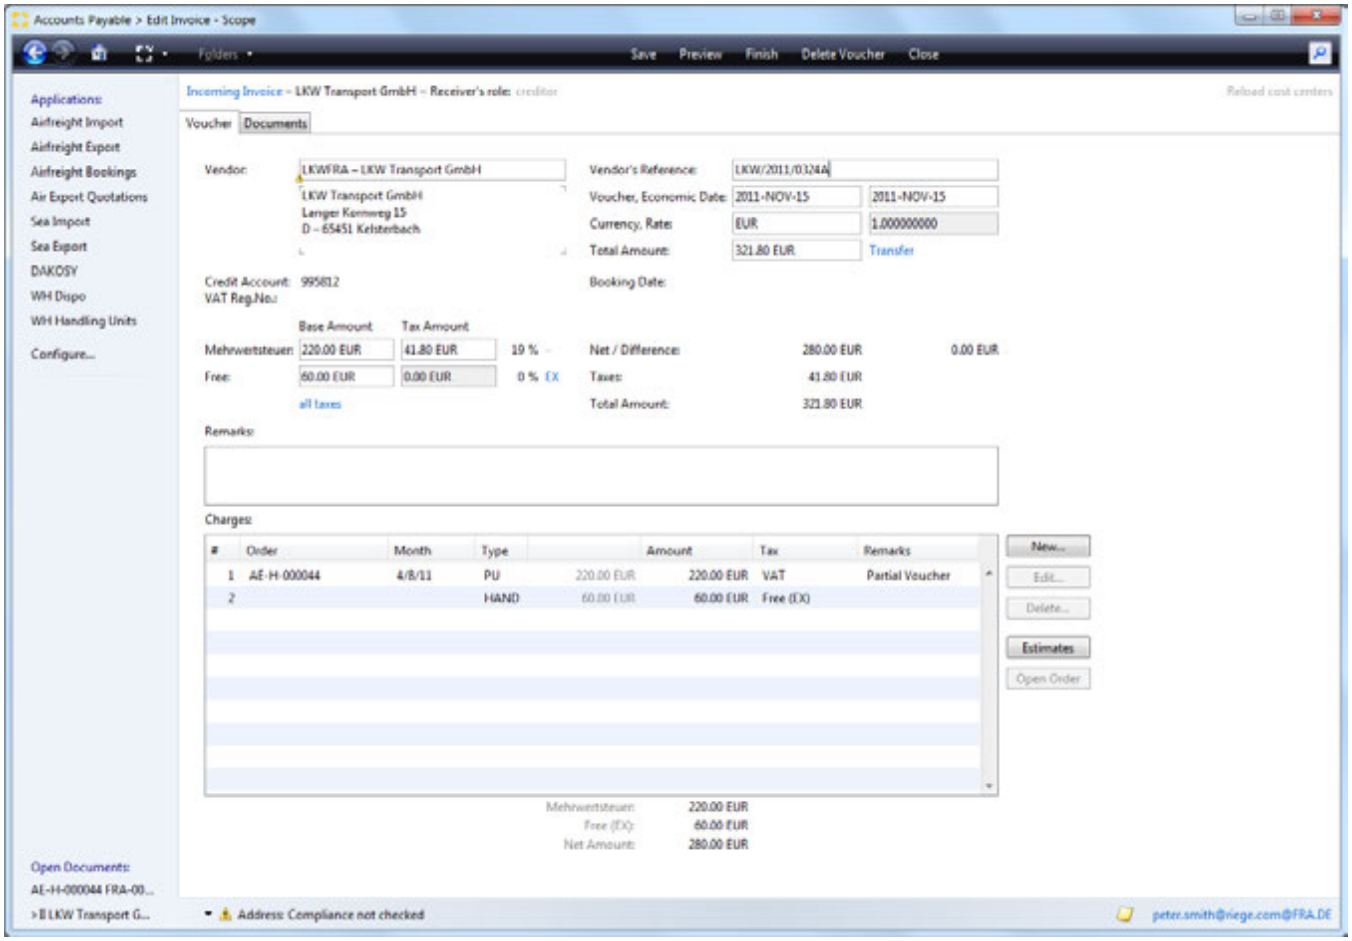
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

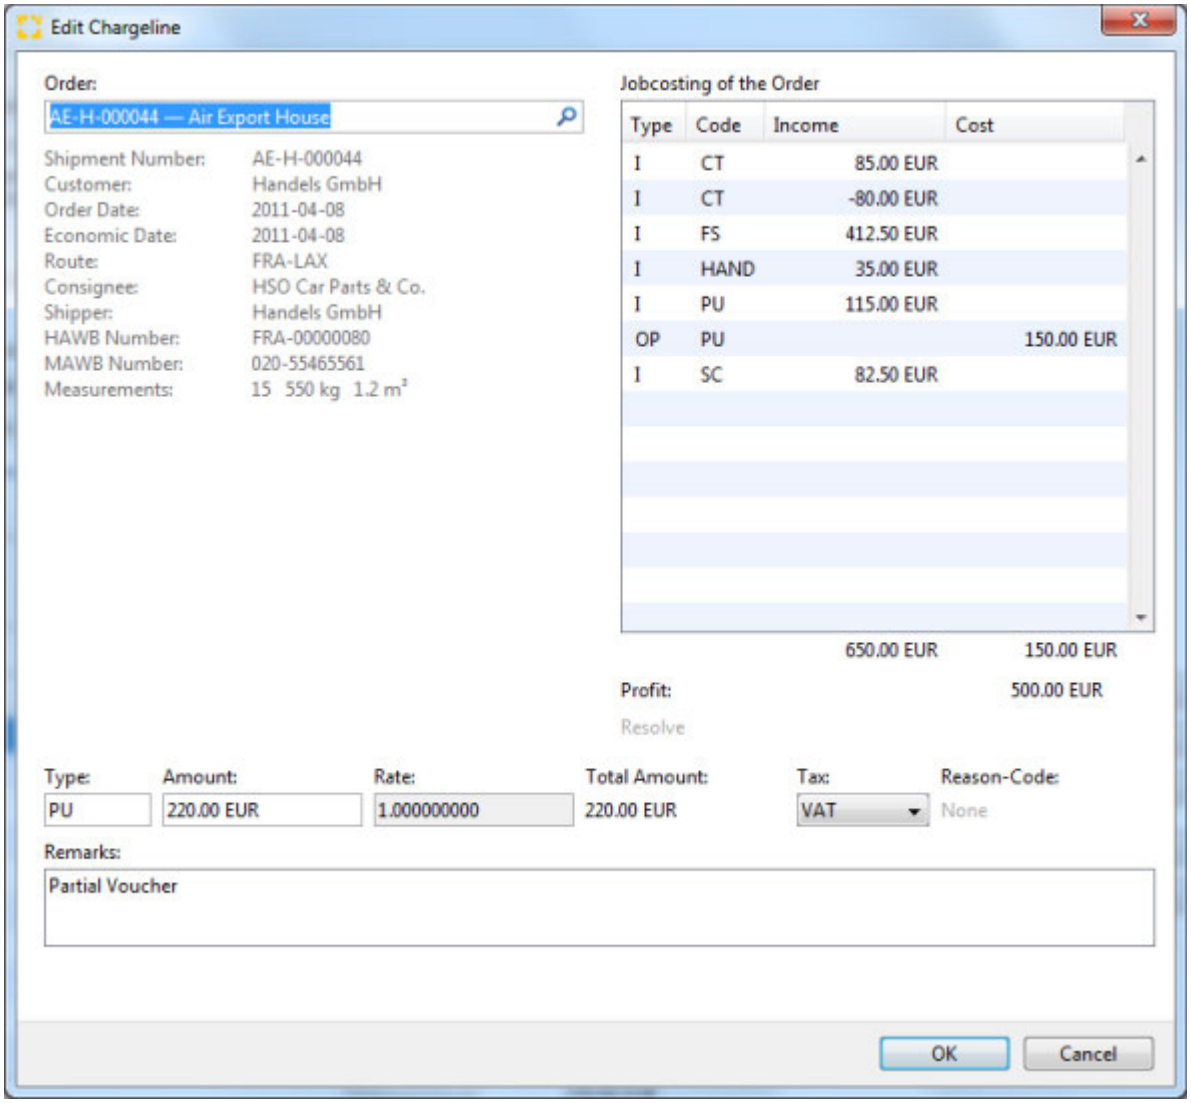
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

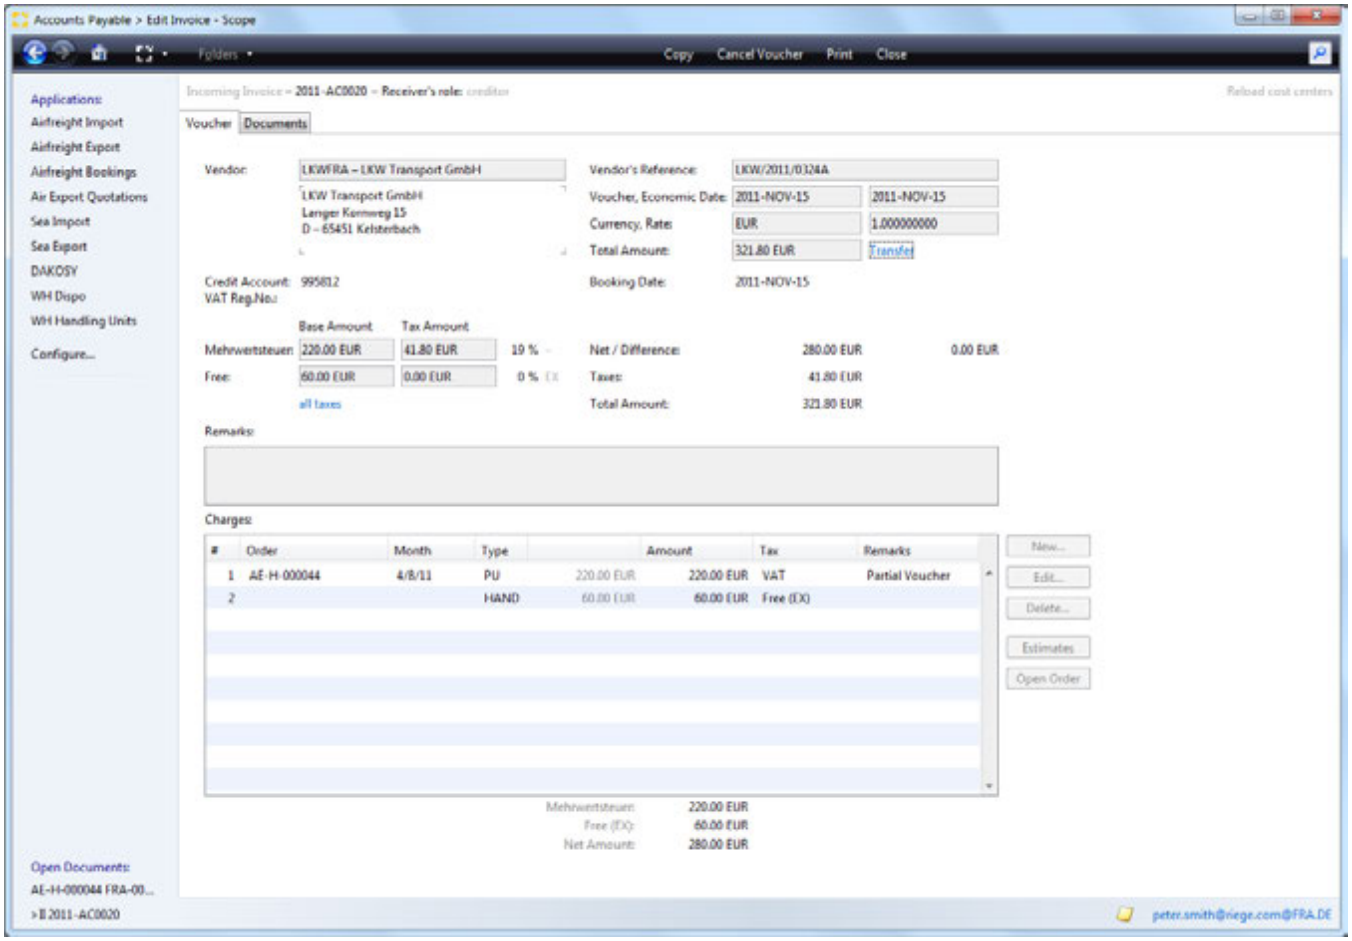
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Outgoing Document - Invoice - Back-toBack Shipment - Airfreight Import

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

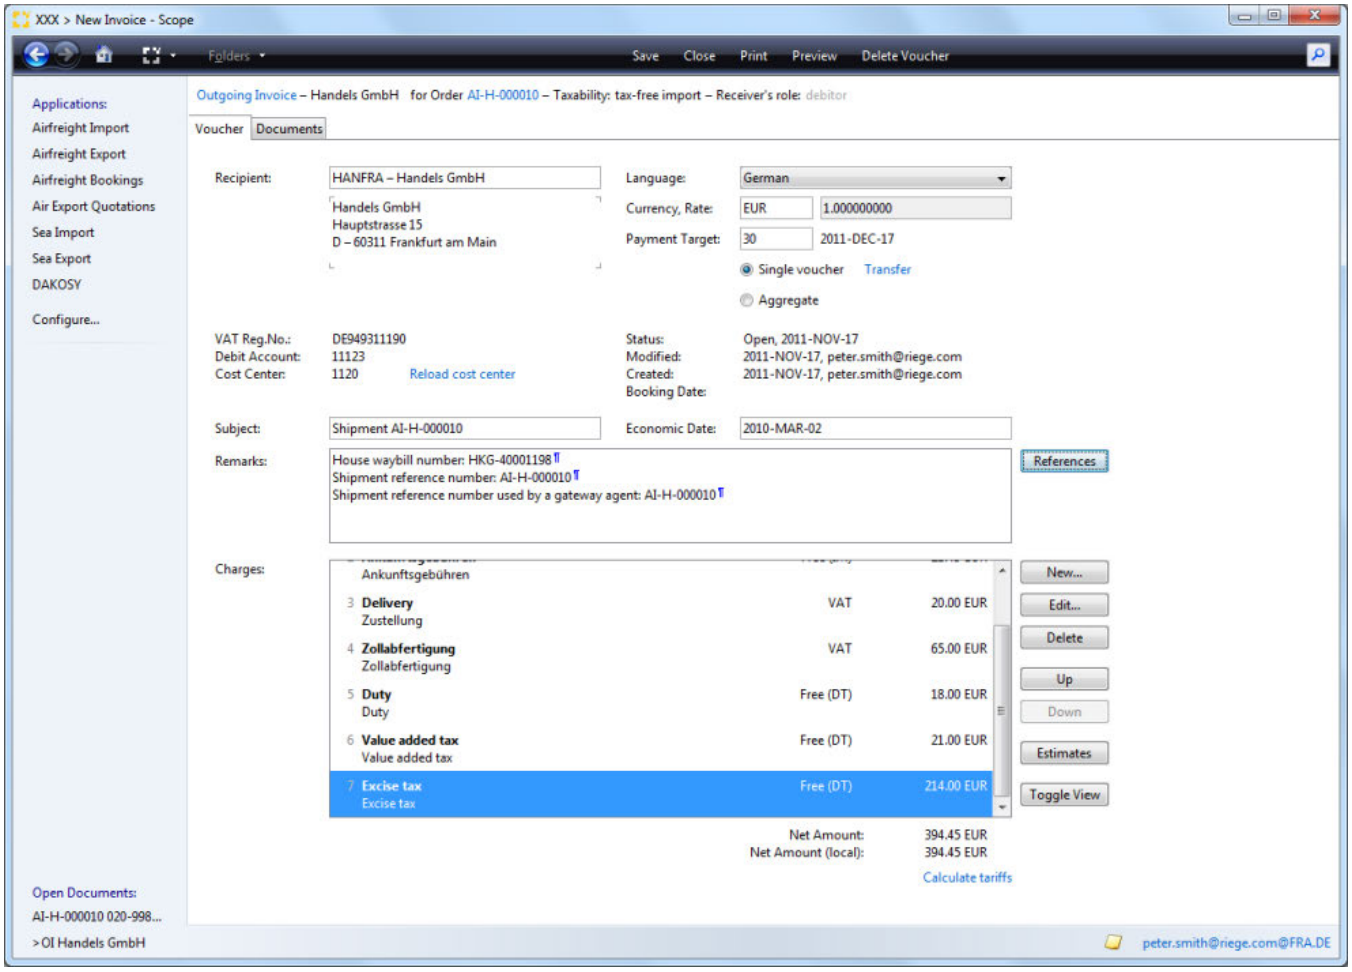
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

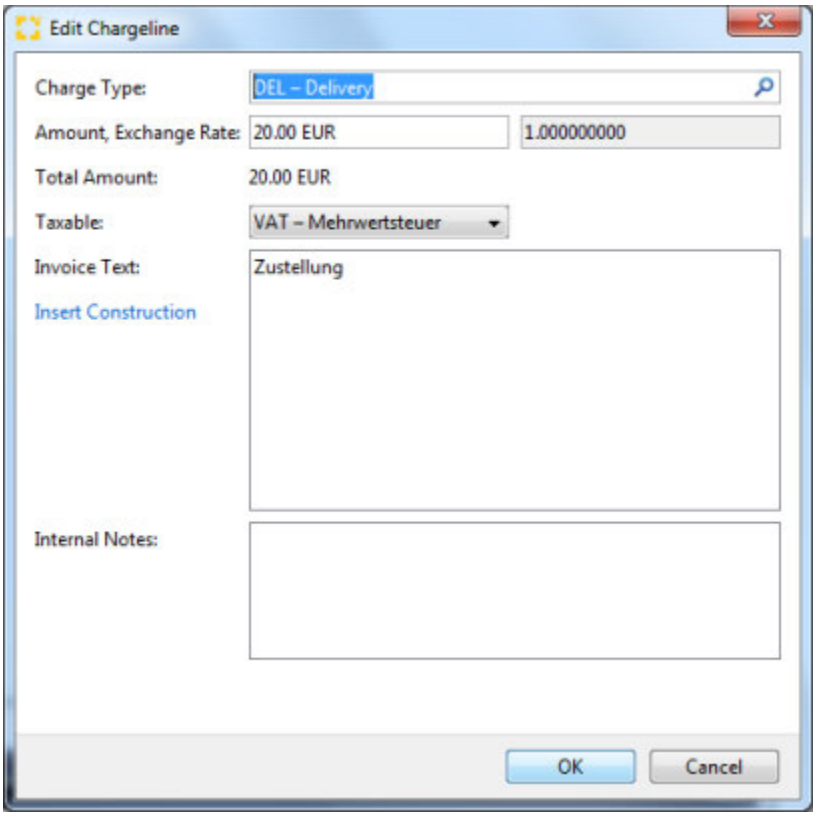
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

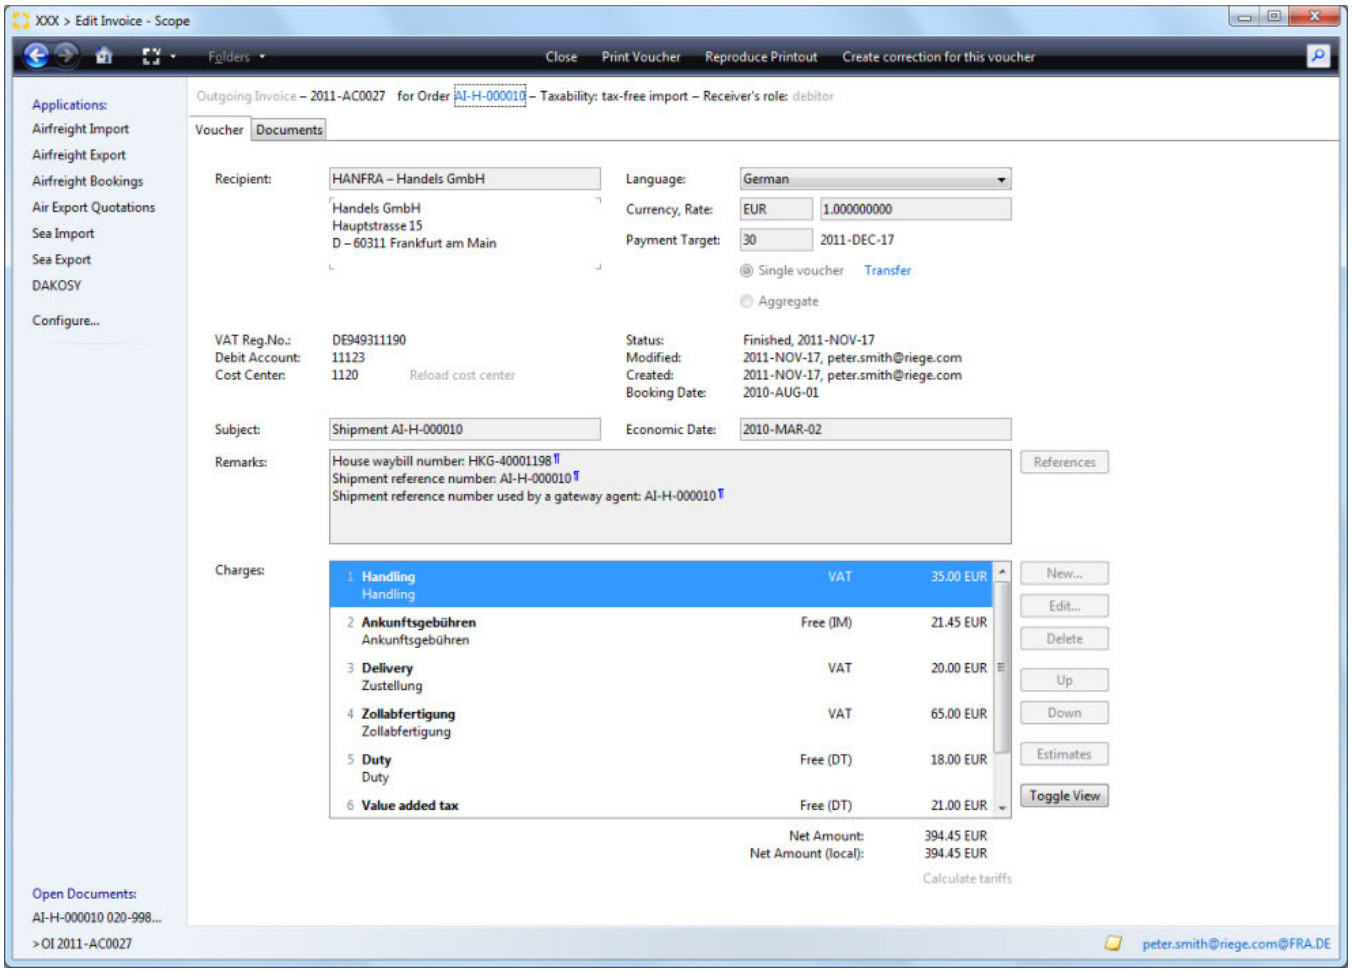
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

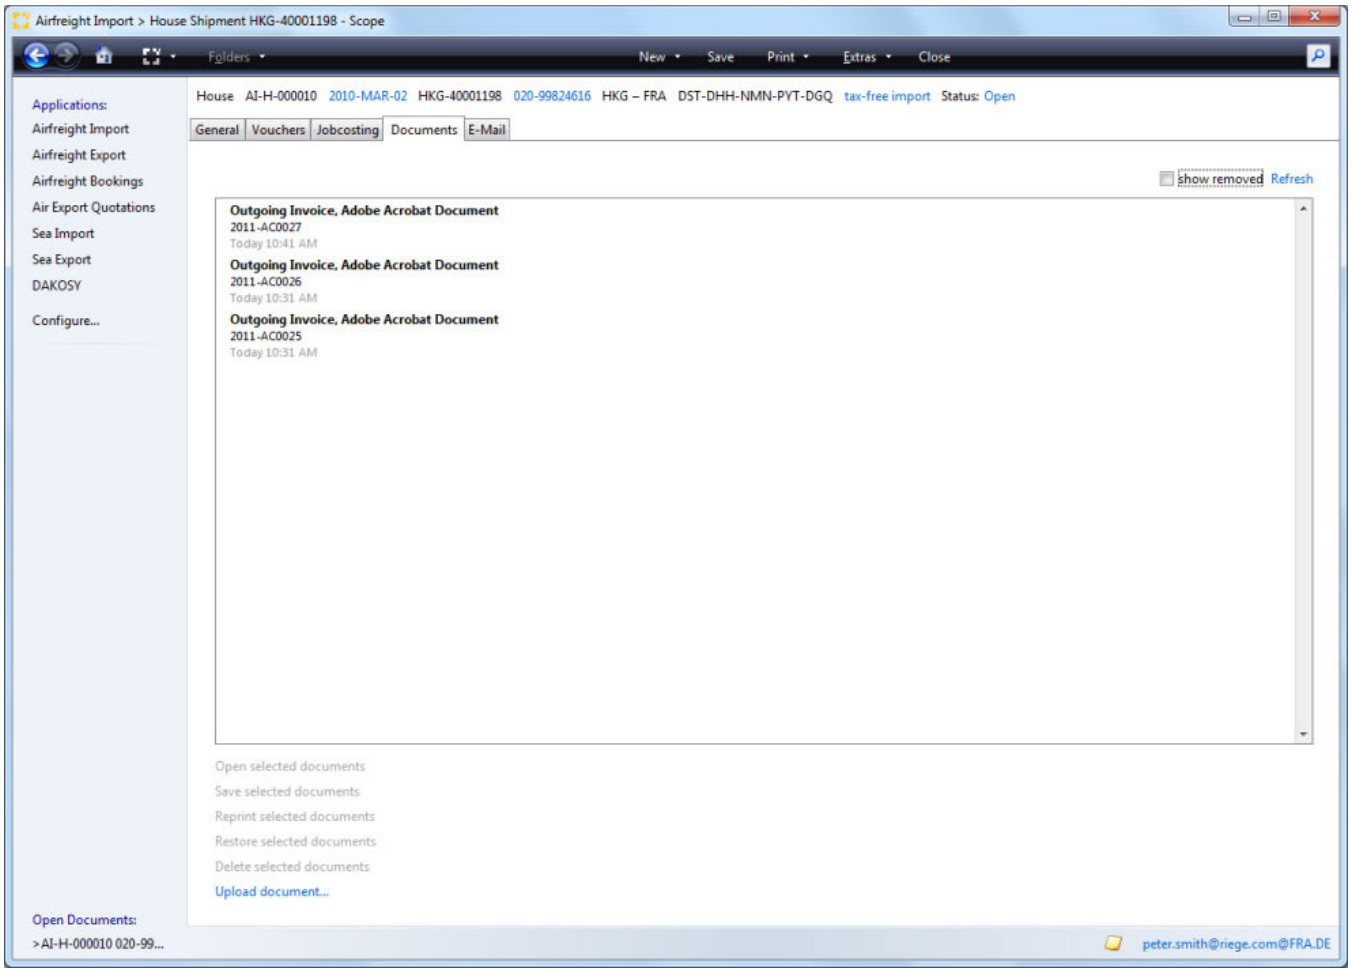
Documents - Back-to-Back Shipment - Airfreight Import

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

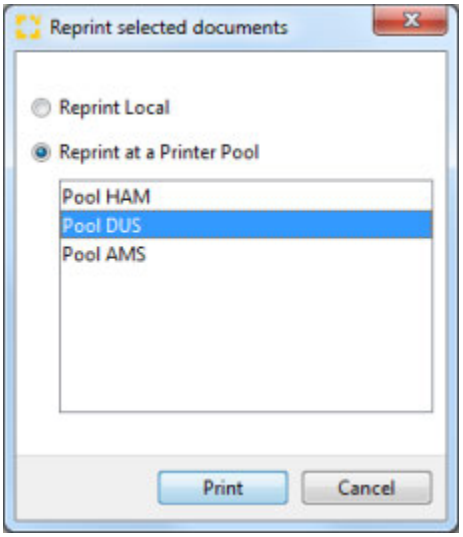
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

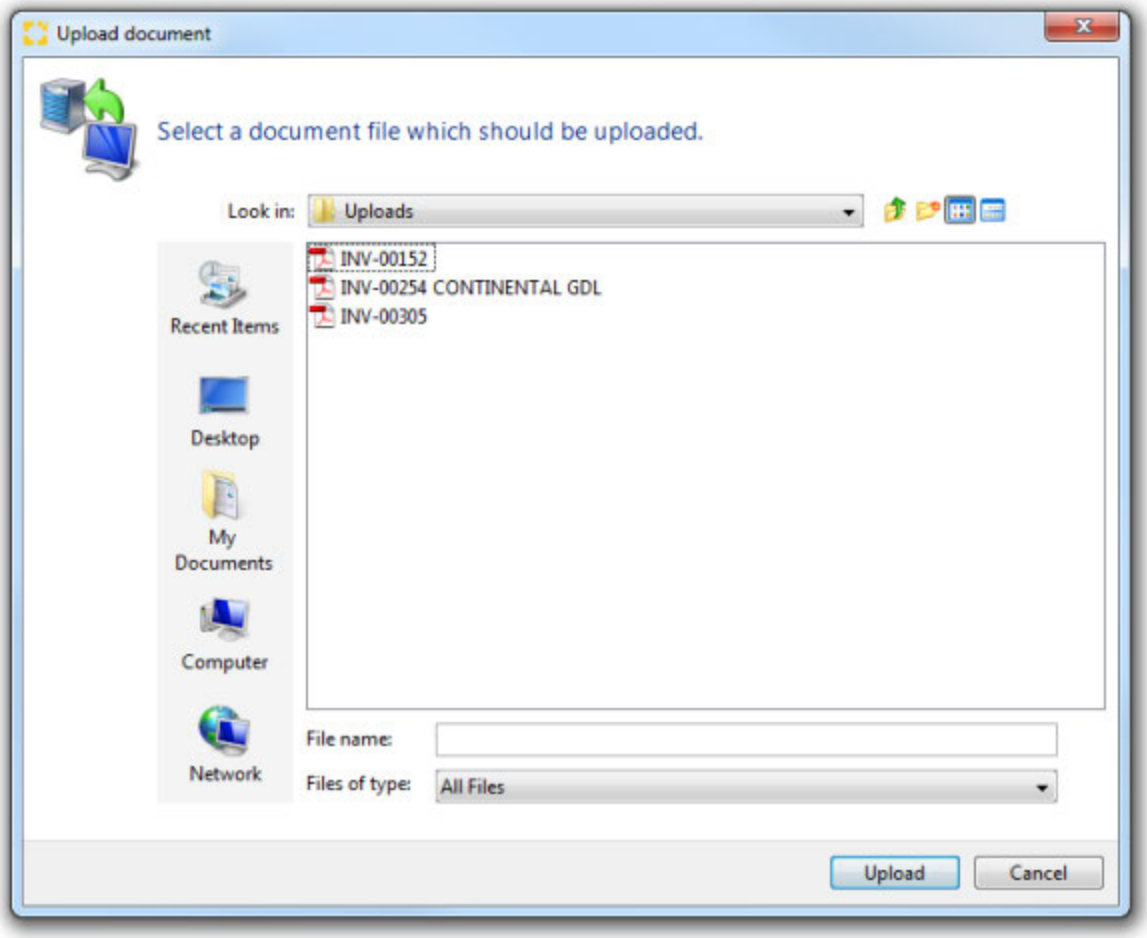
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

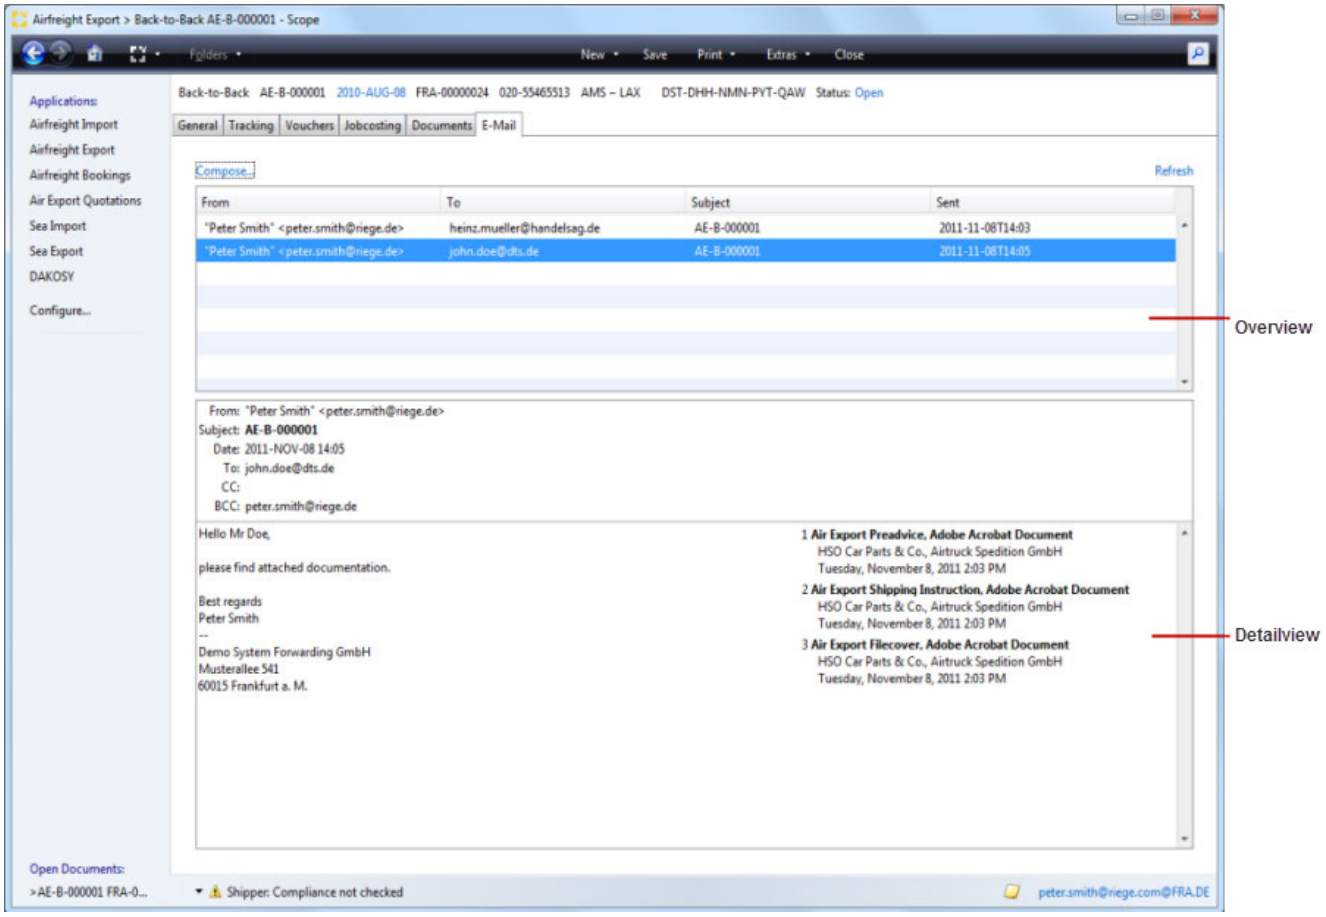
E-Mail - Back-to-Back shipment - Airfreight Import

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

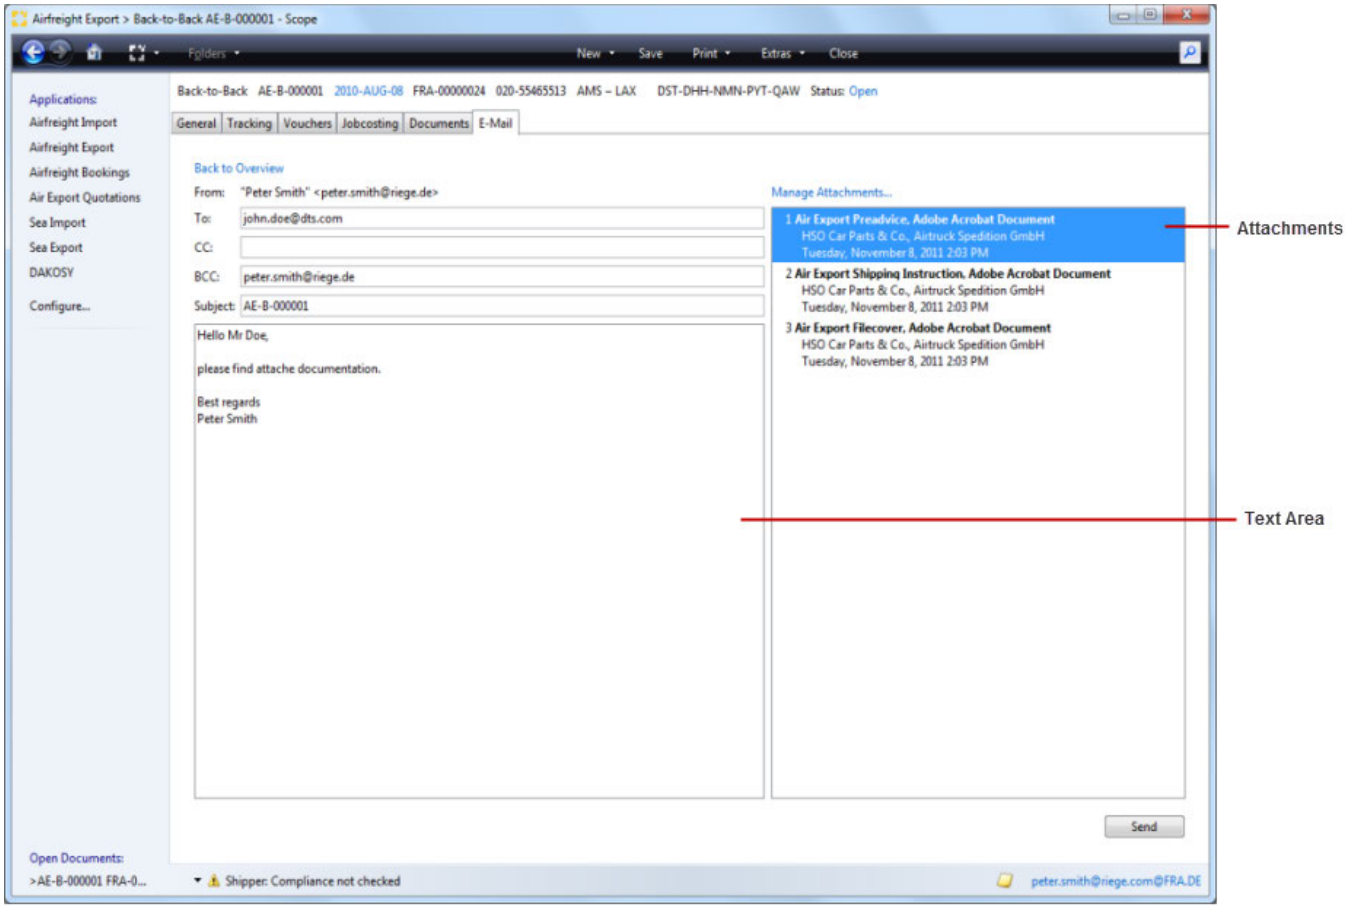
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

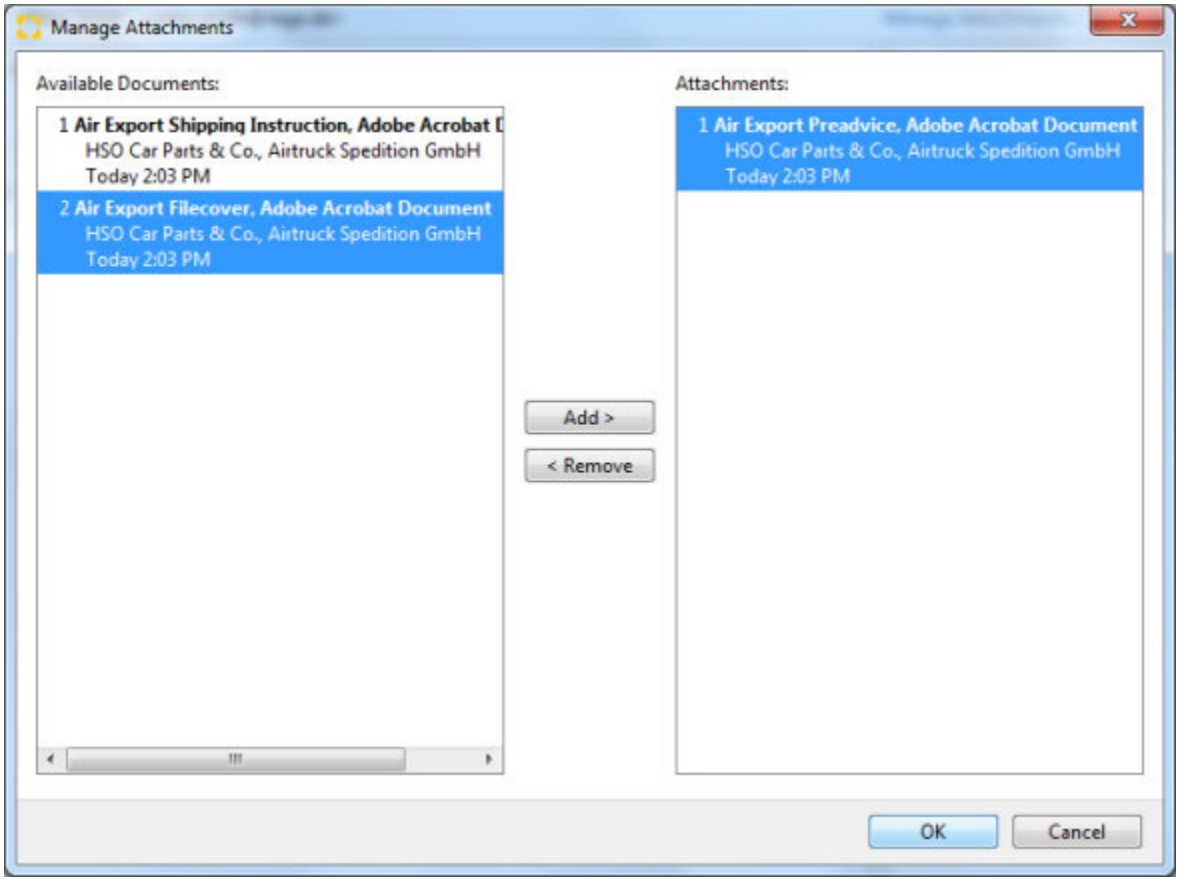
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

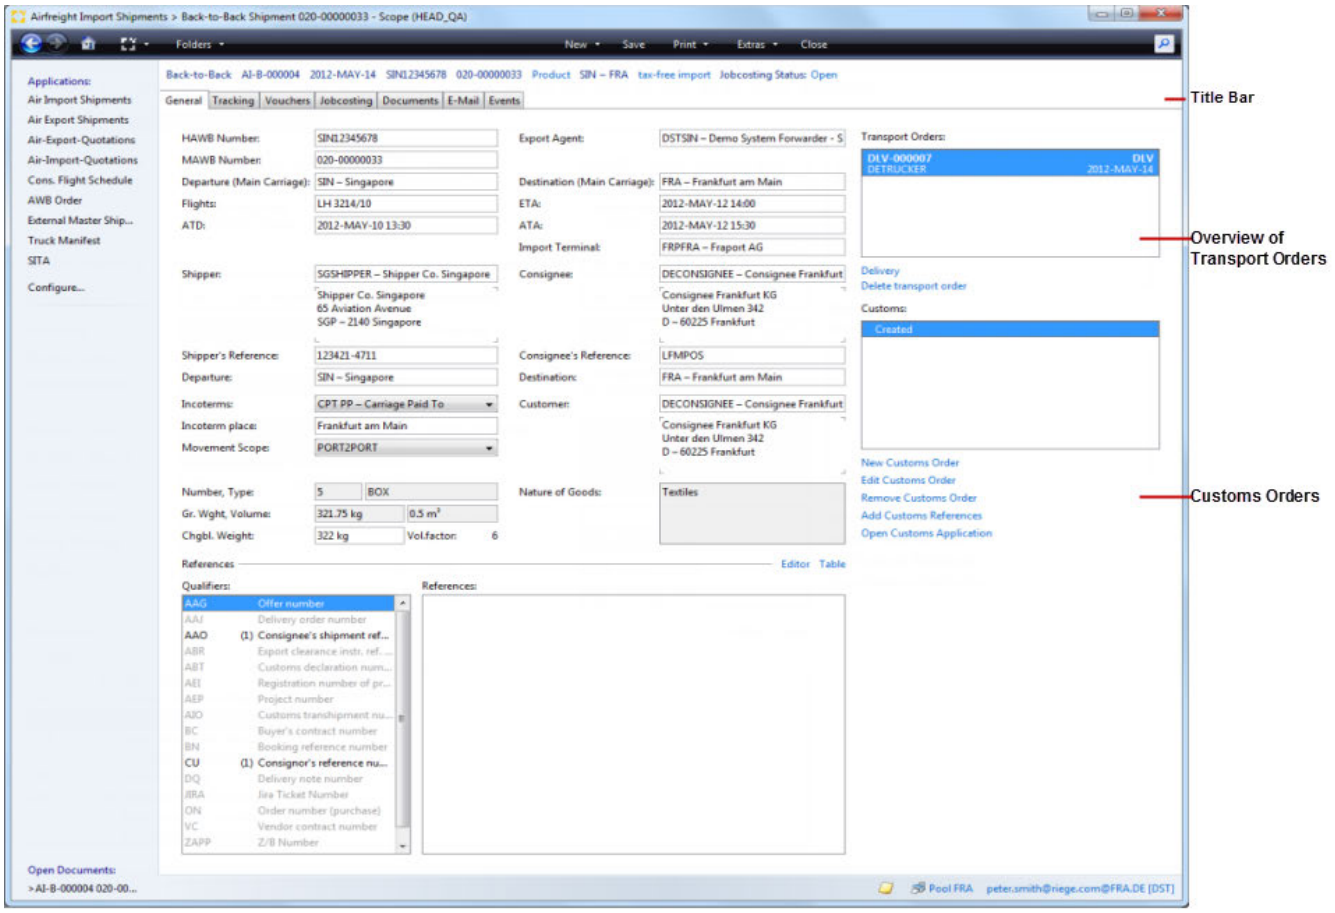
General - Back-to-Back Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **general** tab of the air import shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.

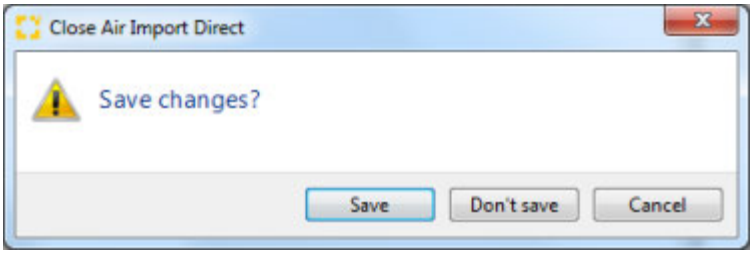
Currently the following documents are available:

- File cover
- Advice of Arrival
- Advice of Arrival (Bank)

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Title Bar

The following information appears in the title bar for a shipment and blue text indicates that the text has an action link and offers further action.

- **Mode**
  Type of shipment *back-to-back shipment*
- **Shipment number**
  Created by the system when the shipment is first saved.
- **Service Date**
  The arrival date of the program is set as follows:
  When present-ATA (Actual Time of Arrival / actual arrival date)
  otherwise ETA (Estimated Time of Arrival / Expected arrival date)
  The current date is automatically stored and updated to match any ETA or ATA as long as the new date is within the same month as the displayed date. If the new date falls within a different month from that displayed, the date will not change unless it is clicked (action link), in which case it will update to show the revise ETA or ATA dates.
- **Housbill number**
  The HAWB number from the corresponding box in the shipment editor.
- **Master bill number**
  The MAWB number from the corresponding field of the master shipment.
- **Departure airport - Destination airport**
  Departure and destination of the shipment entry
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Status**
  The status of the shipment.

Customer

The customer is the party responsible for generating the shipment who typically bear responsibility for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

HAWB Number

House Airway bill number for the shipment.

MAWB Number

Master Airway bill number for the shipment (IATA freight waybill number).

Incoterms

The commercial delivery terms for the shipment

Incoterm Place

The agreed named place that the incoterm applies to.

Movement Scope

The scope of the agreed movement of the cargo for this shipment

Departure

Airport of departure of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Airport of destination of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Shipper

The party listed on freight documentation as the shipper of the cargo. The search function may be used to find the desired business partner. Within the shipper field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Consignee

The party listed on freight documentation as the consignee for the cargo. The search function may be used to find the desired business partner. Within the consignee field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Flights

Flights used for the shipment.

ATD

Actual departure date and time (Actual Time of Departure).

ETA

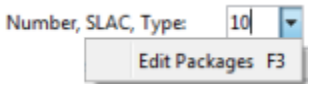
Expected Arrival date and time

ATA

Actual arrival data and time

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages, or the package editor can be called via the drop-down menu or by pressing function key F3. The package editor will allow much greater detail to be entered about individual packages.

> ⚠ If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the packages editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Volume Factor

The volume factor used to calculate the chargeable weight will be displayed. (See also the partner role Forwarding customer where a default volume factor for the air import partner can be stored.)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Export Agent

The station which has exported the shipment. The desired agent can be located using the search field. The search will only consider business partners who have the role of agent and this agent role must include the departure airport of the shipment. By default the export agent of the master shipment will be used when available.

References

This application may be used to enter any references numbers associated with the shipment and which are to be further used in other applications, such as printing or EDI transmission. More information about the reference number editor is available here.

New Delivery Order

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application.

- All transport or delivery orders that are created will be displayed in the overview. By double clicking these they can be opened, edited and printed as desired.

Delete transport order

this action will delete a transport order. The link is only active when a transport order is highlighted and if that transport order has not been printed and the shipment has no entries in costs and revenues.

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Open Customs Application

Opens a customs entry applications if available.

- More information on customs applications is available in the Customs section of the manual.

Tip

Use the keyboard short cut **Ctrl + I** to show information about the current user of the session. This will display the user name, email address and telephone number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

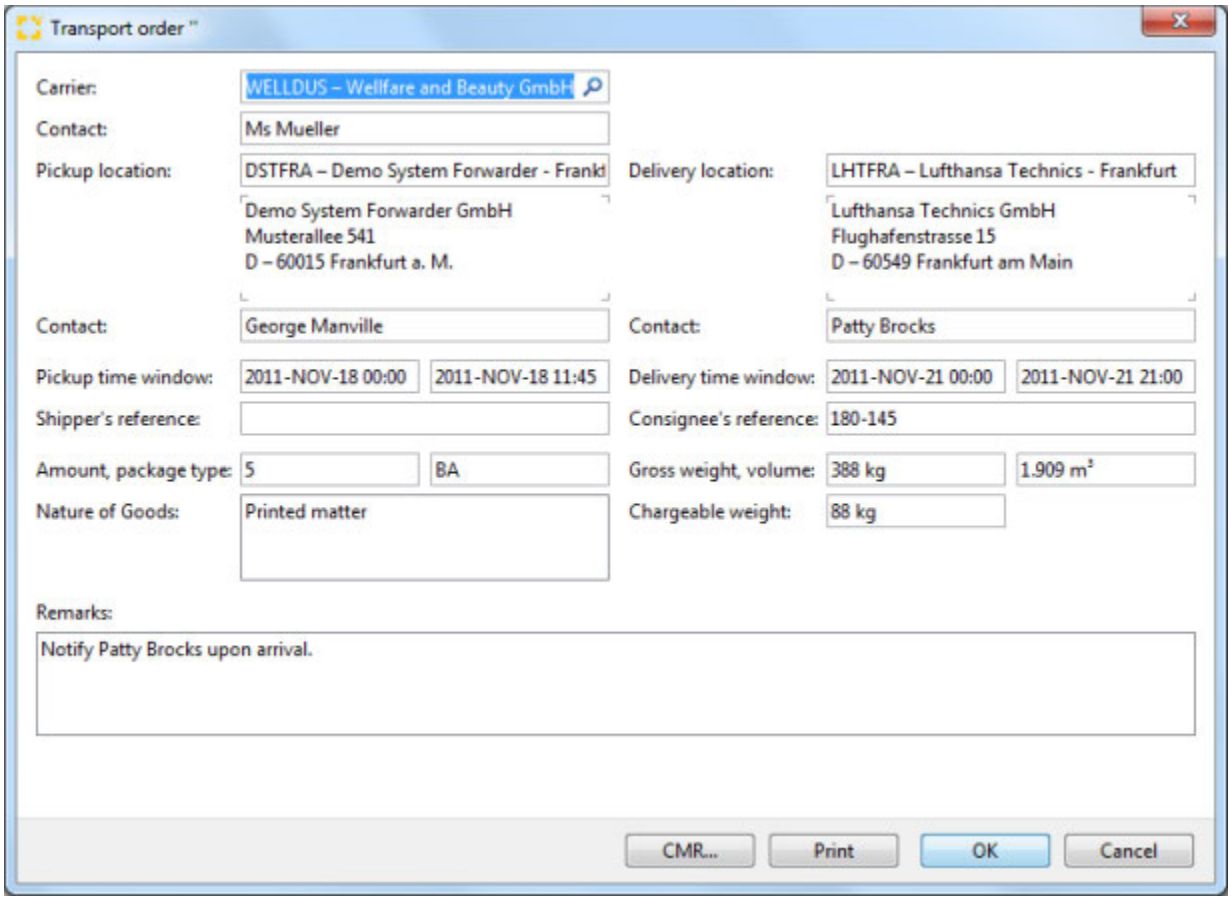
Delivery Order - Back-to-Back - Home - Air Import

- Introduction
- Description

Introduction

Create and print delivery orders or tranfers to other branches. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a set a pickup or delivery addresses link have been stored for this partner, these may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the import agent or or the import agent's pickup address. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

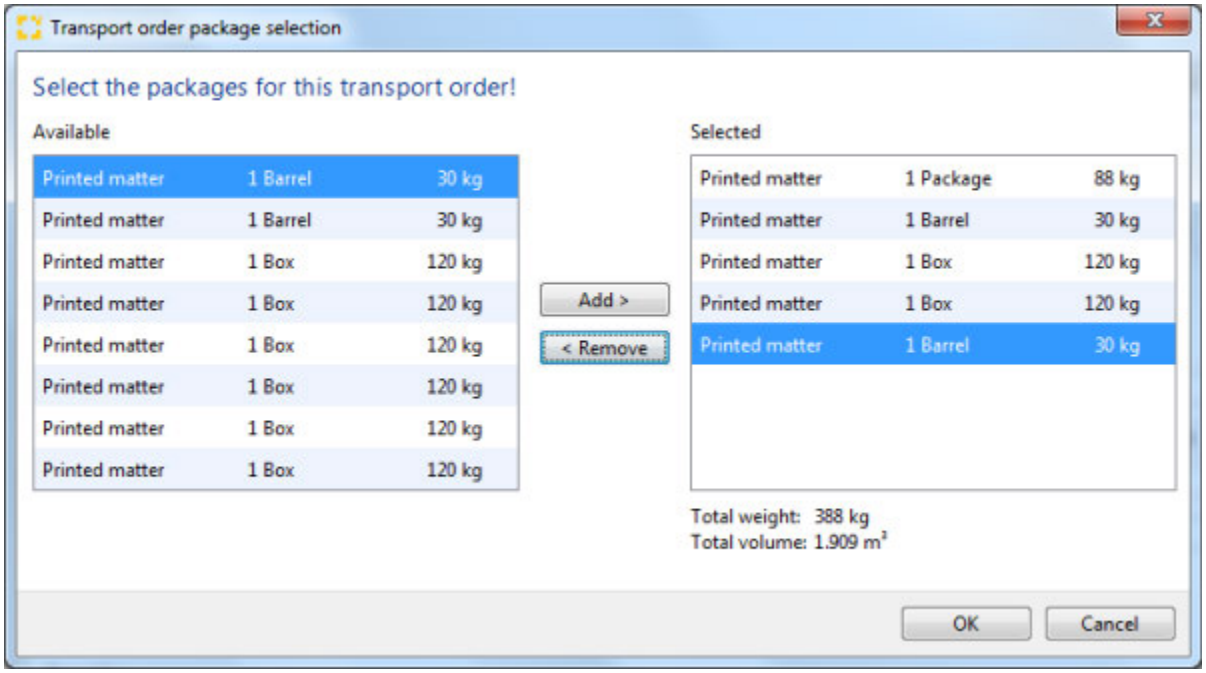
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

> Package selection is only available if the packages have been defined in the package editor of the shipment entry

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Customs orders

When customs details are entered in the main shipment, the "Customs orders" function is available. All the customs orders created on the main shipment will be visible. Use the check box to indicate which customs orders should appear on the delivery order.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Include Shipment Details in printout

check the box to include greater shipment detail on the printed delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

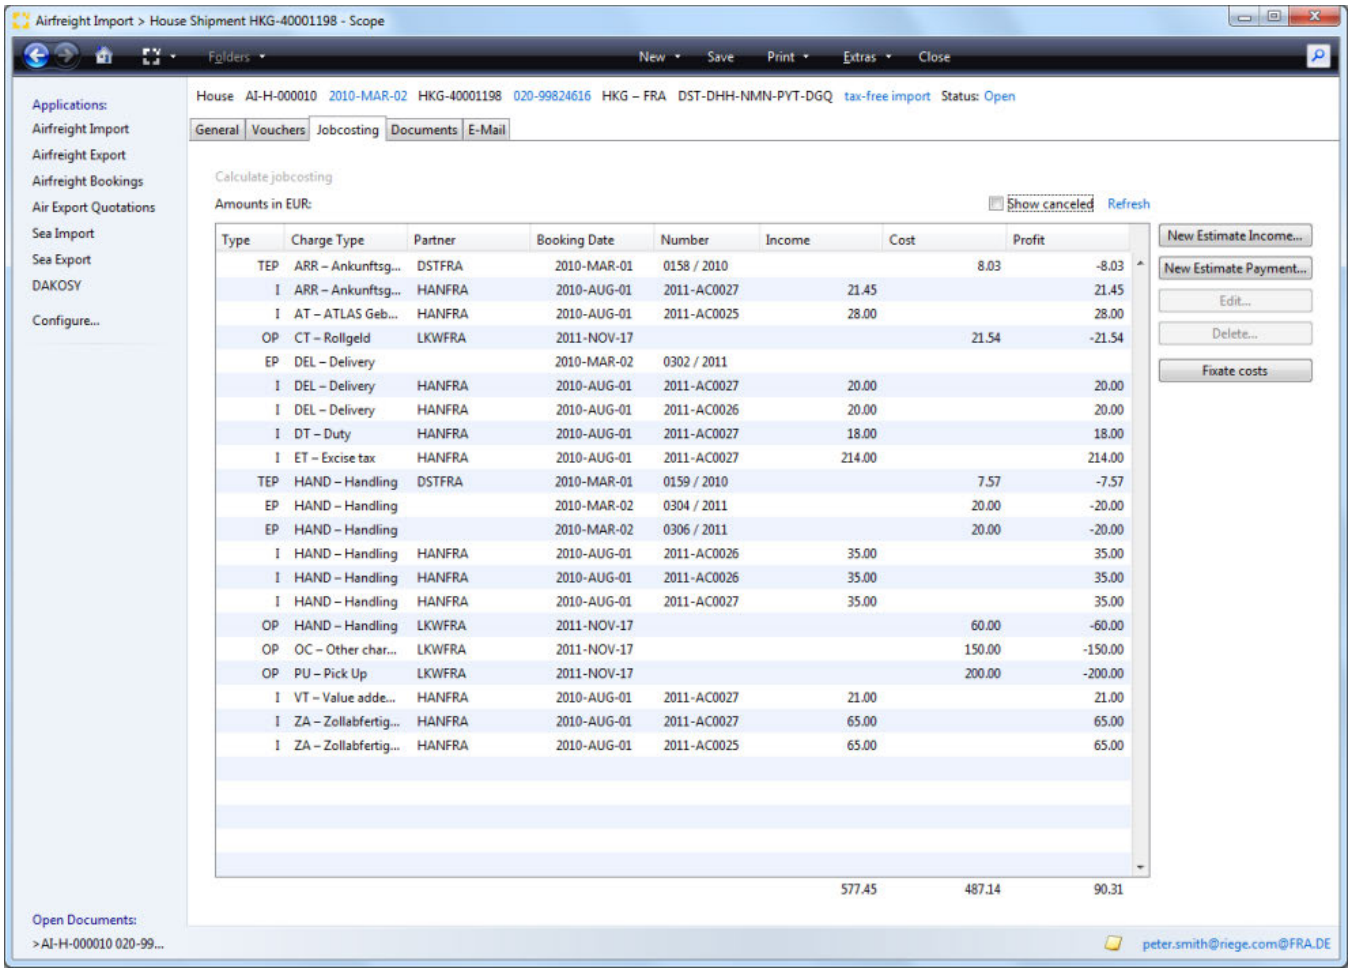
Jobcosting - Back-toBack Shipment - Airfreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the details of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see **General** tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

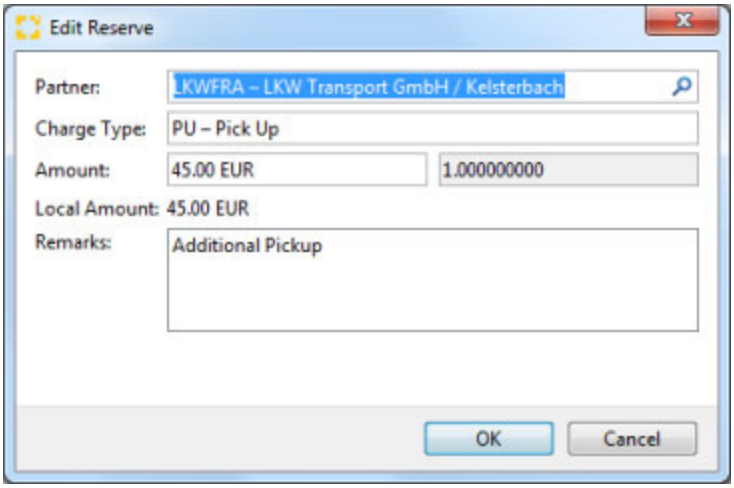
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

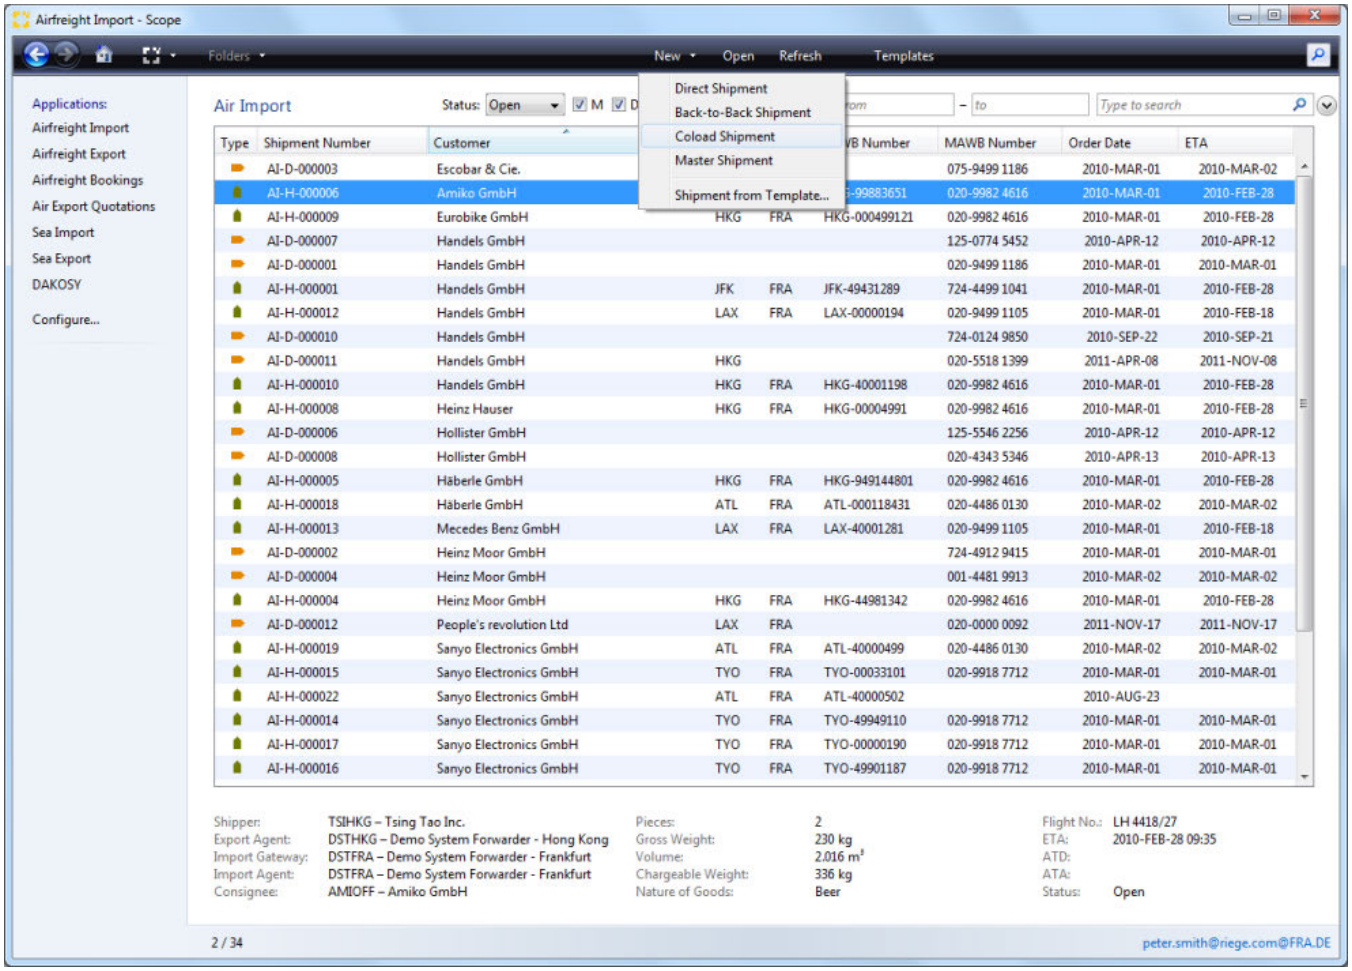
- Description

Introduction

In addition to Consolidated, Direct, House and Back-to-Back shipments, Coload shipments can be created from the air import home screen. A Coload shipment occurs when the forwarder receives an air import house from outside the network. Typically the consignee has instructed the receiving agent to hand the shipment over to the consignee's preferred agent for further processing such as import customs clearance and delivery.

Within the airfreight import application, all operations related to shipment creation are carried out, this includes data collection, billing, printing of documents and cost control.

Description



With ***New - Coload-Shipment*** a new Coload-Shipment is created.
With ***Open*** an existing Coload shipment highlighted in the shipment summary can be opened. Alternatively ***Double click*** the highlighted shipment to open it.

The functions of each of the tabs with a shipment are described here:

- Billing - Coload Shipment - Airfreight Import
- Documents - Coload Shipment - Airfreight Import
- E-Mail - Coload Shipment - Airfreight Import
- General - Coload Shipment - Airfreight Import
- Jobcosting - Coload Shipment - Airfreight Import

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

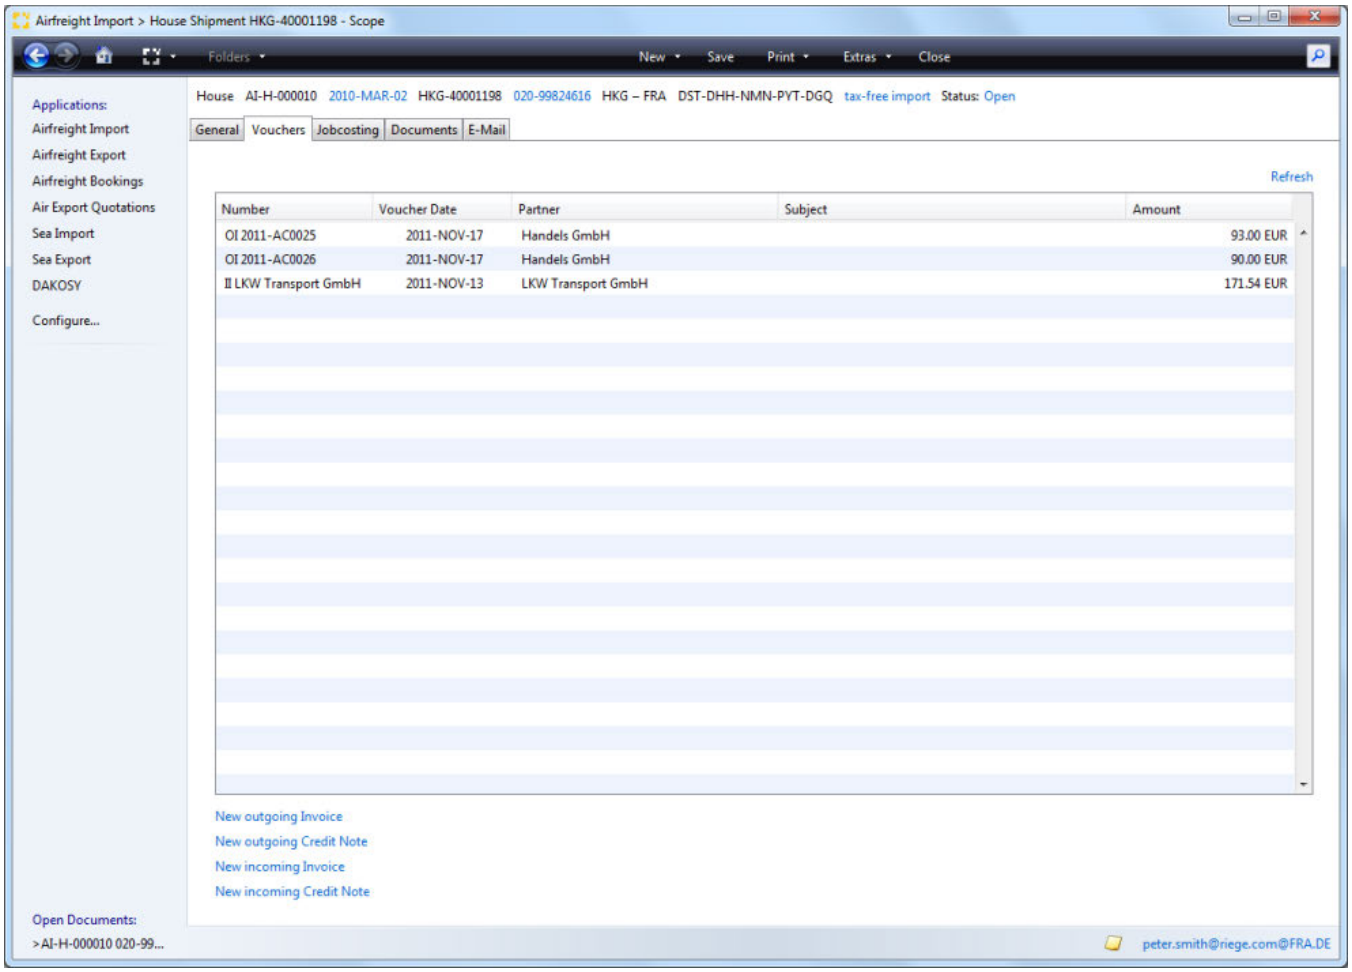
Billing - Coload Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Rider **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Outgoing Credit Note

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Refresh

refreshes the list of vouchers.

Table columns

Number

The number of the document is fixed and will be prefixed with a code indicating the type of voucher.

Voucher Code	Description
OI	Outgoing Invoice
OC	Outgoing Credit note
II	Incoming invoice
IC	Incoming credit note

Voucher Date

The date the voucher was created.

Partner

The party to whom the voucher was issued.

Subject

The subject of the voucher

Amount

the total amount of the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Billing - Coload shipment - Airfreight Import

- Introduction
- Description

Introduction

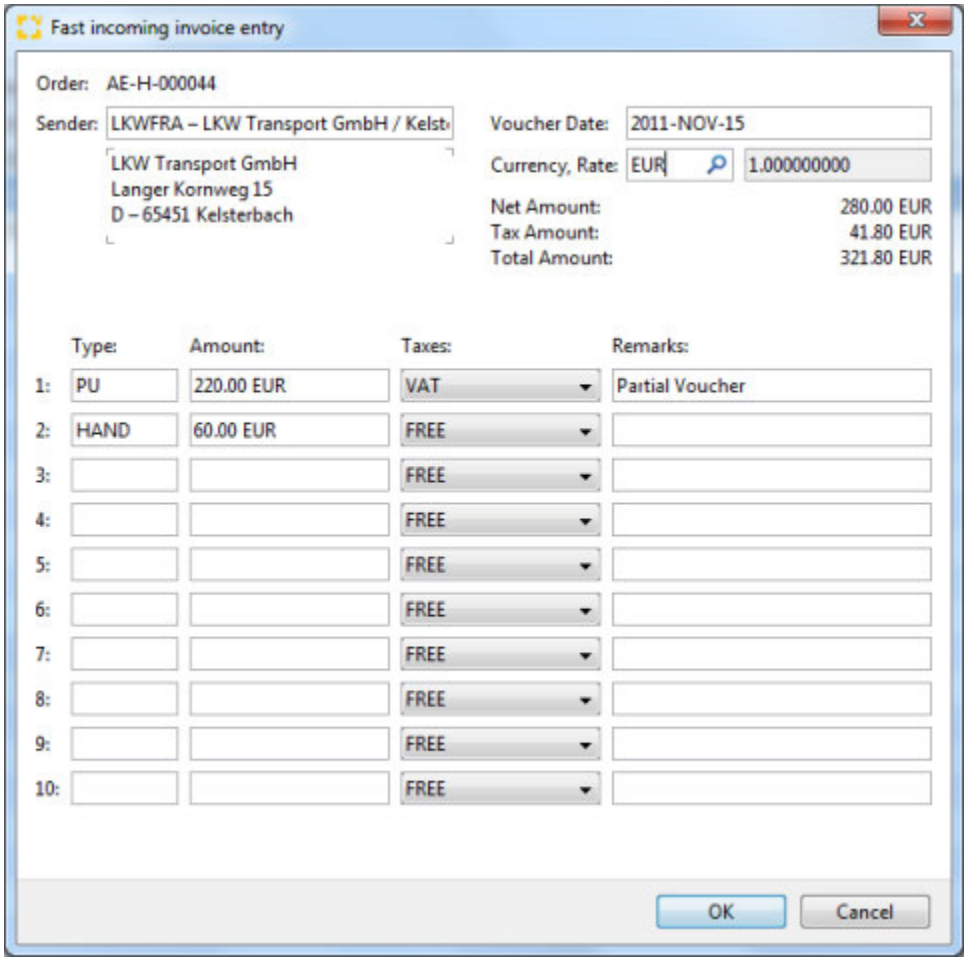
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

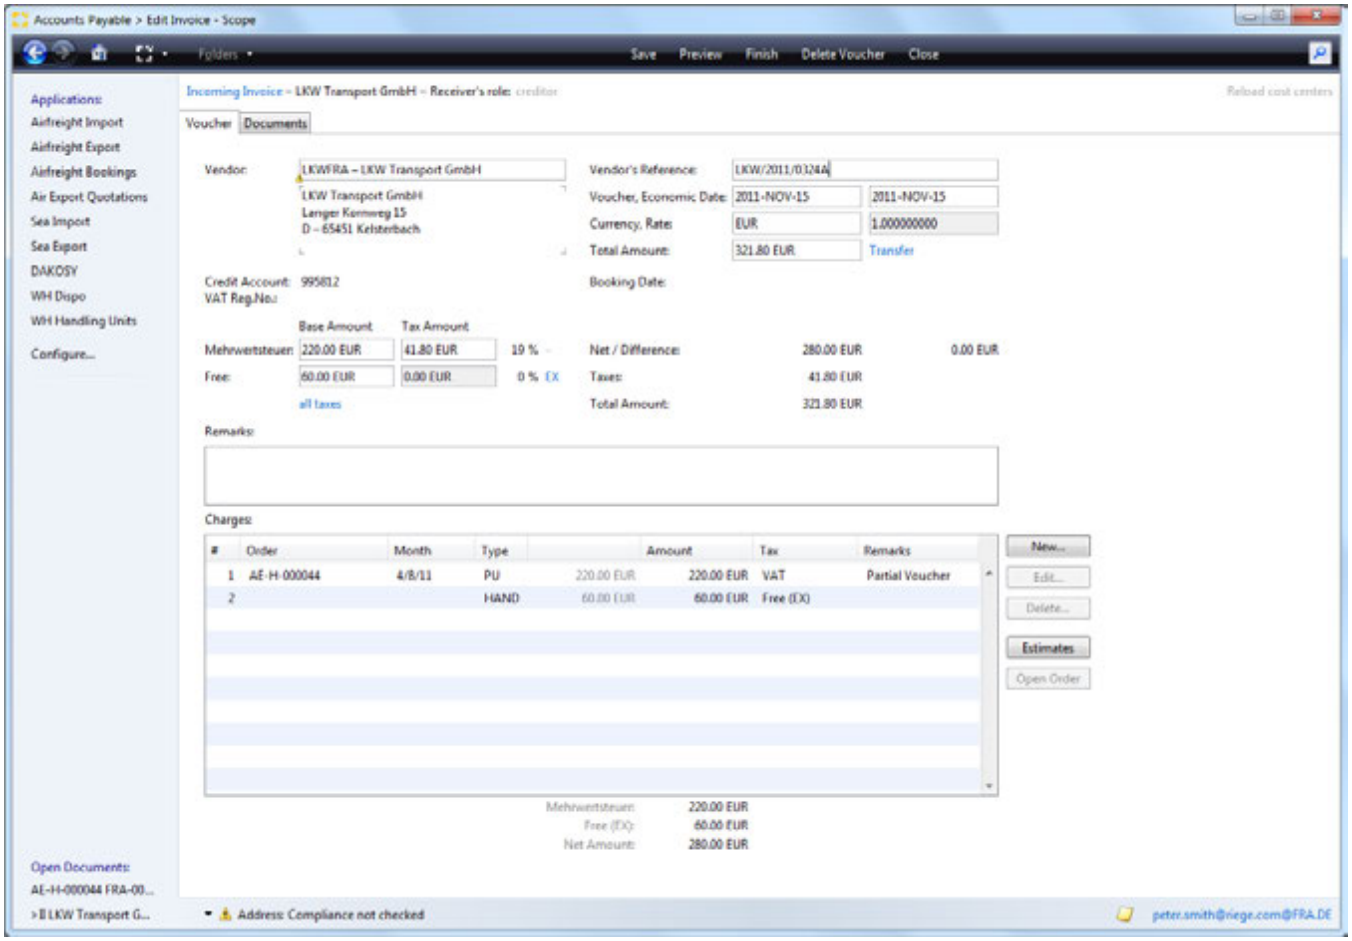
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

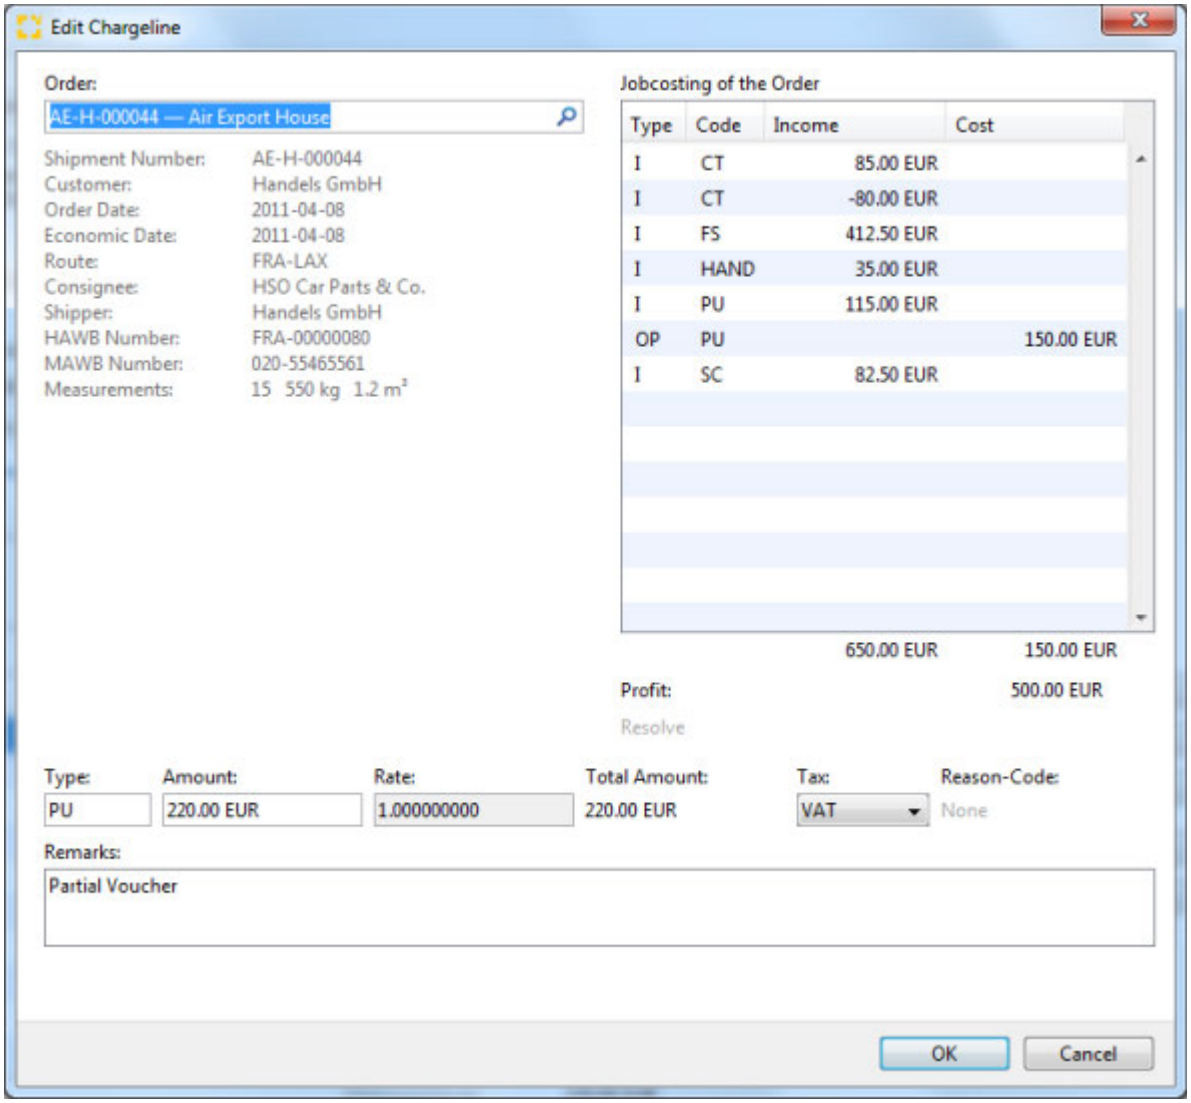
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

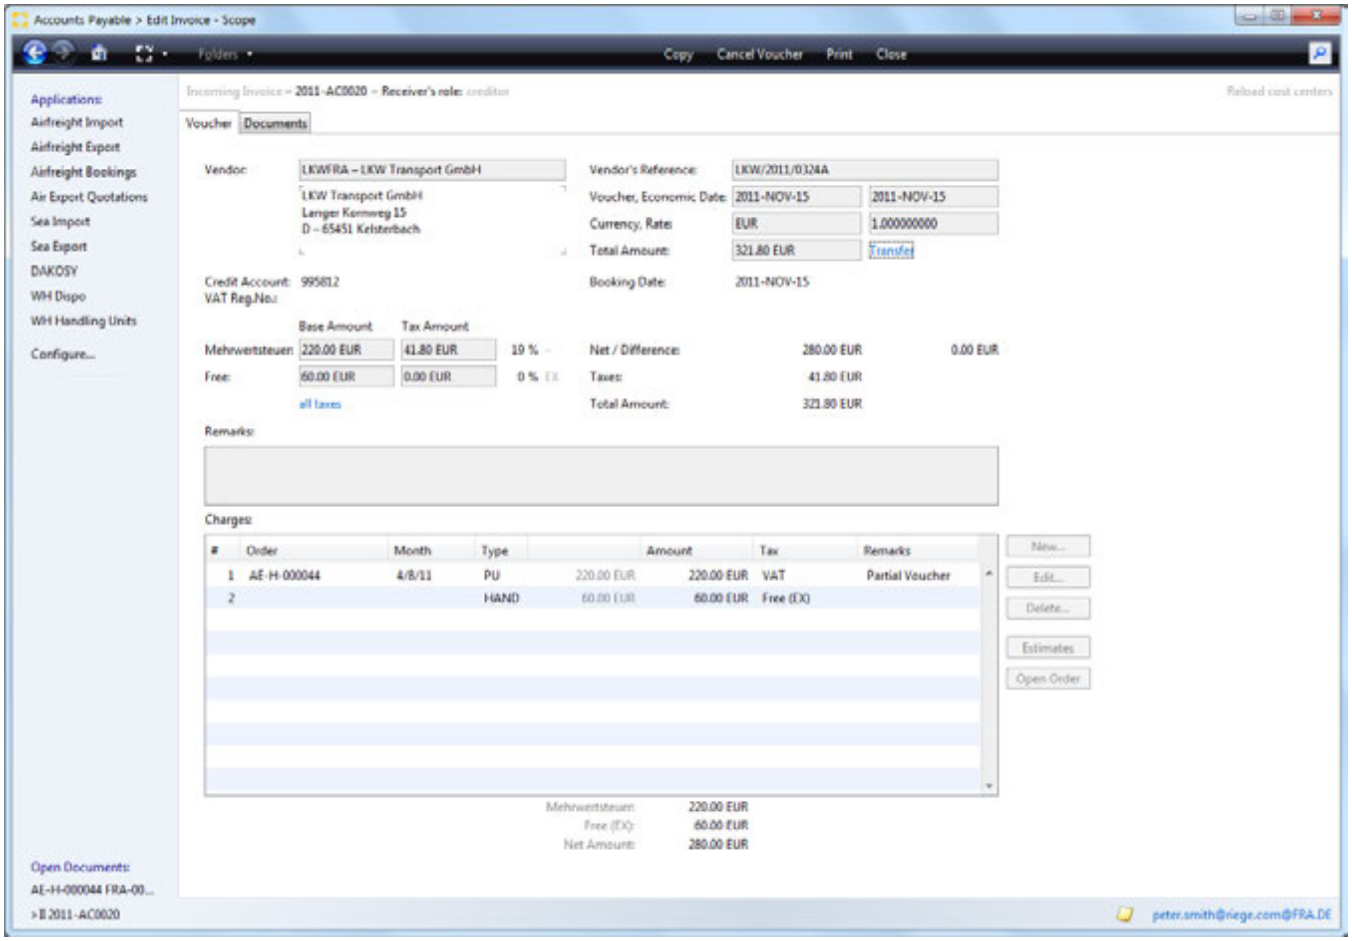
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Outgoing Document - Invoice - Coload Shipment - Airfreight Import

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

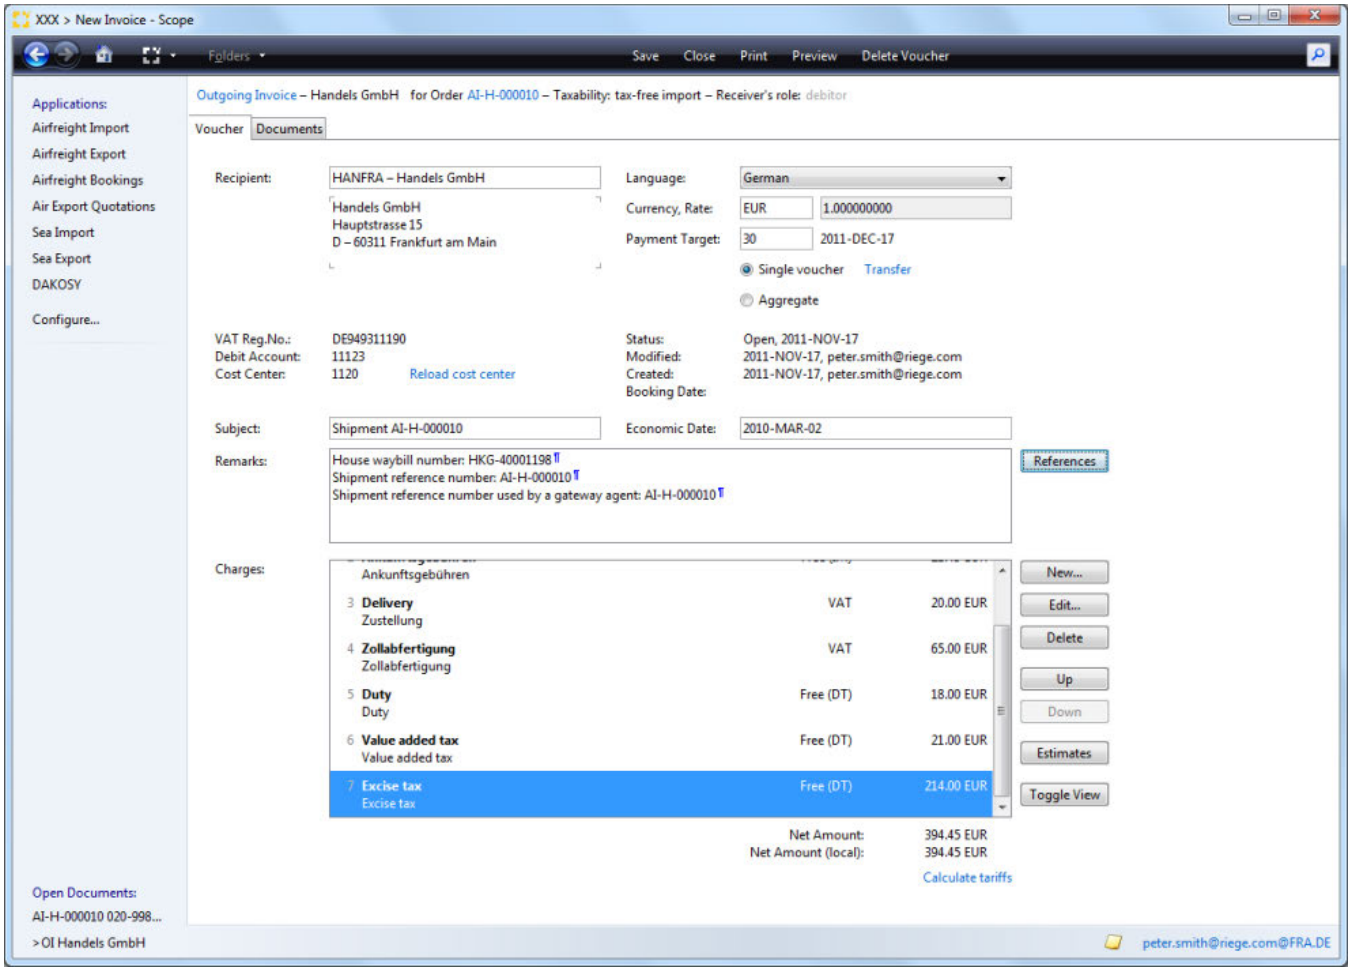
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

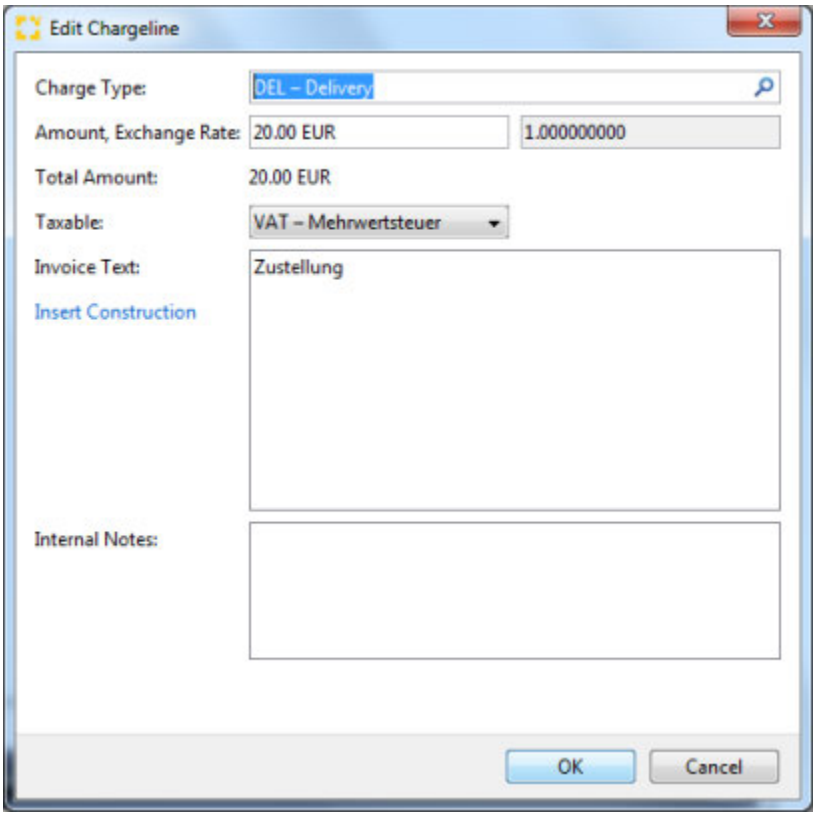
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

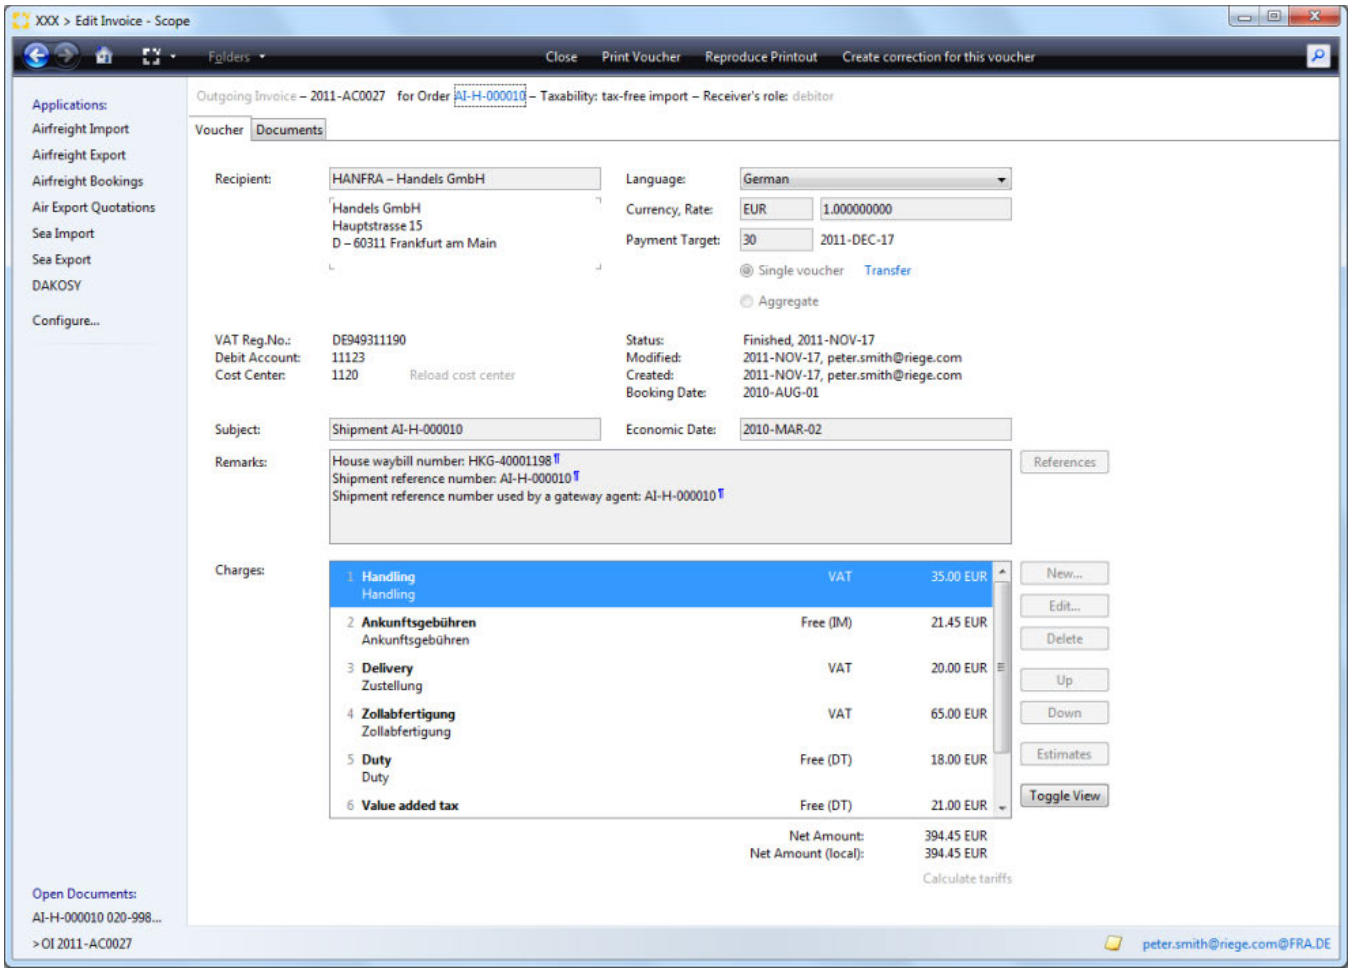
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

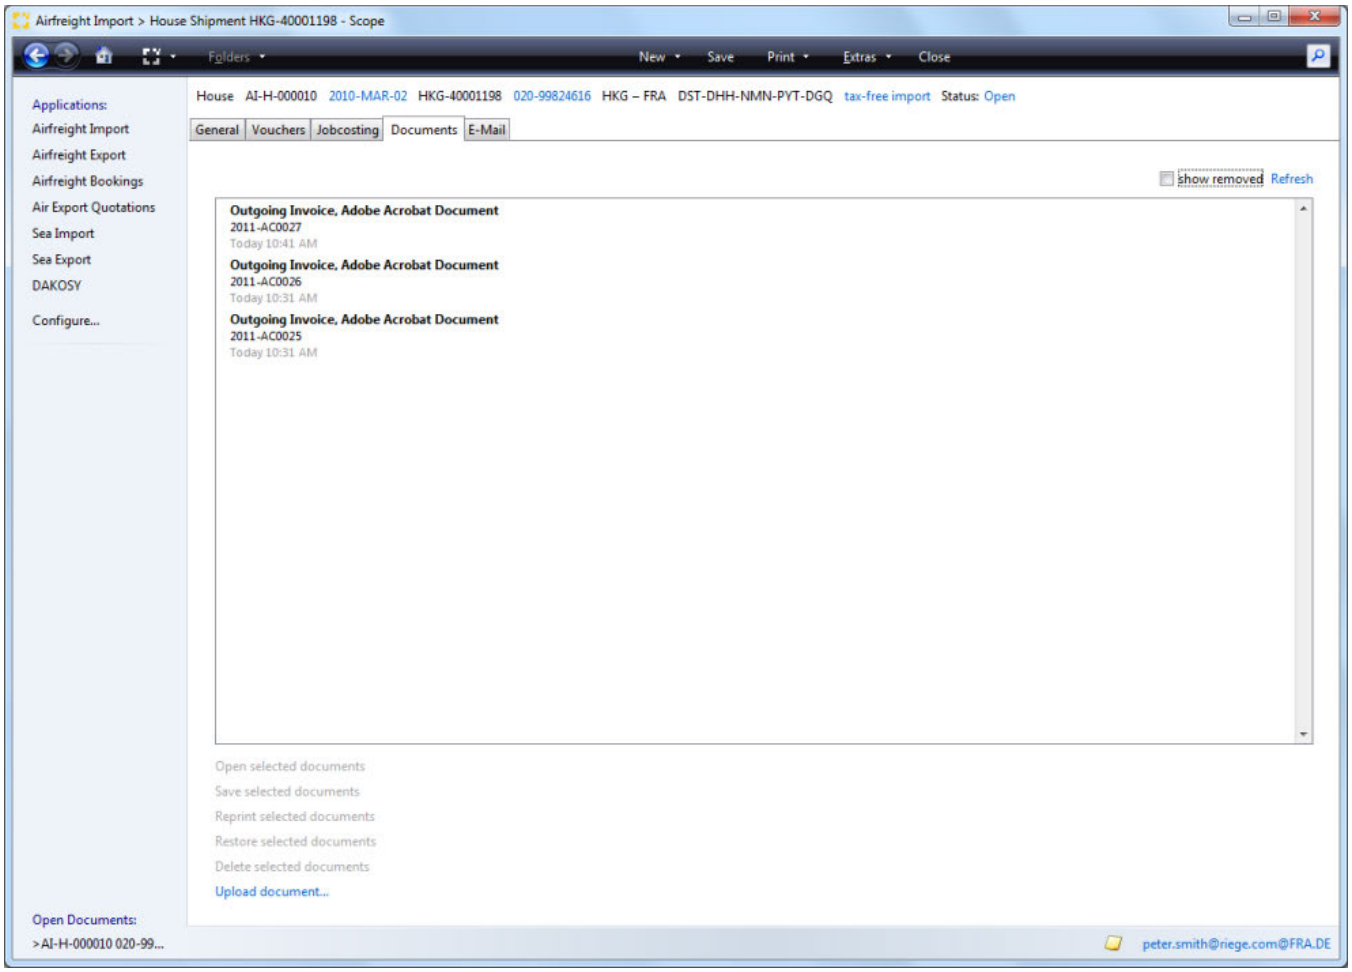
Documents - Coload Shipment - Airfreight Import

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

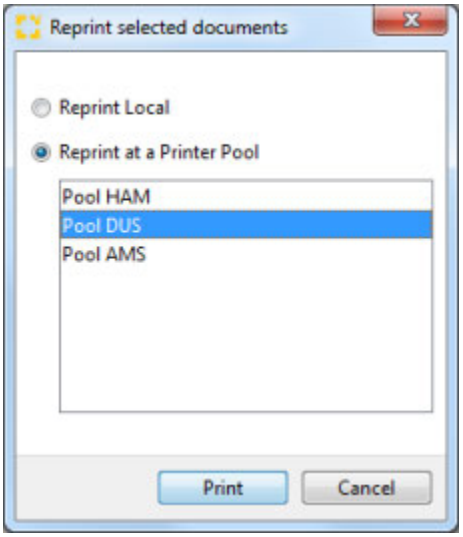
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

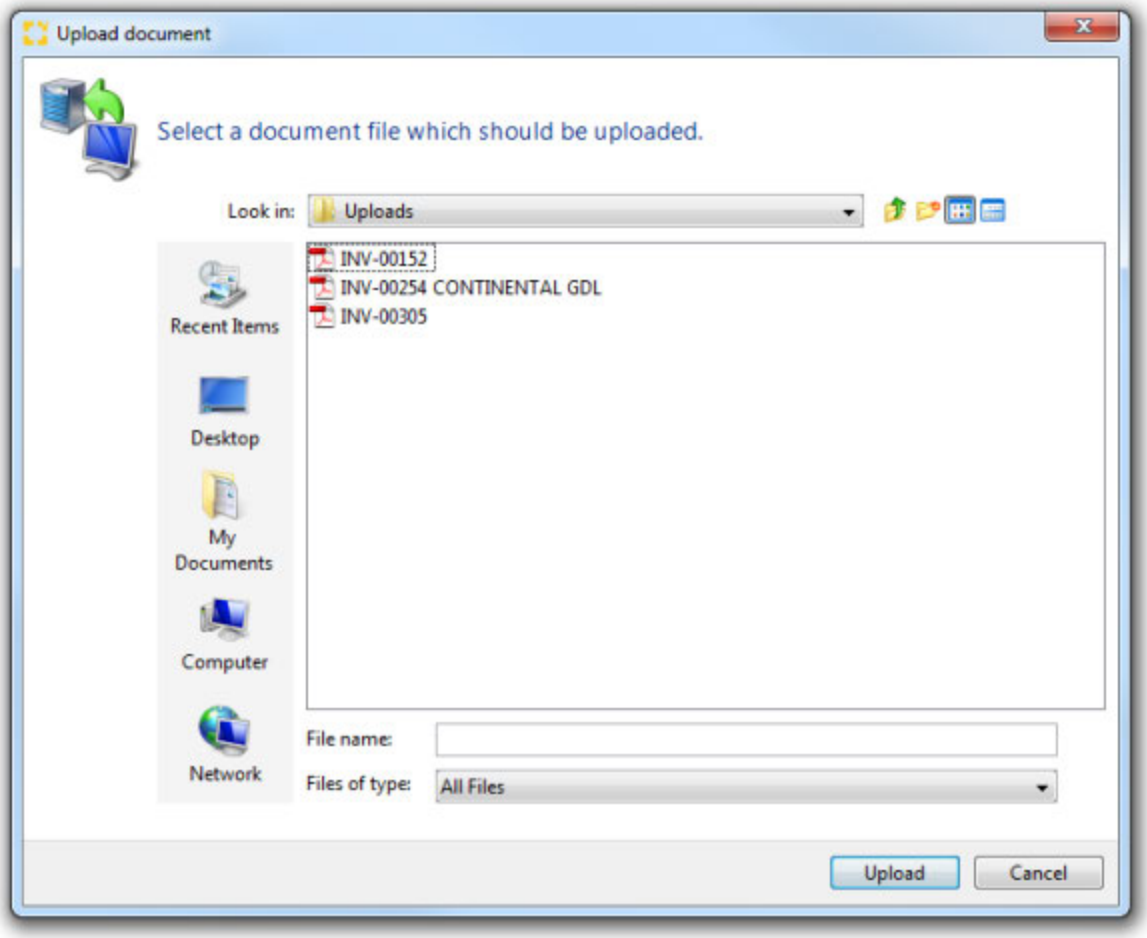
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

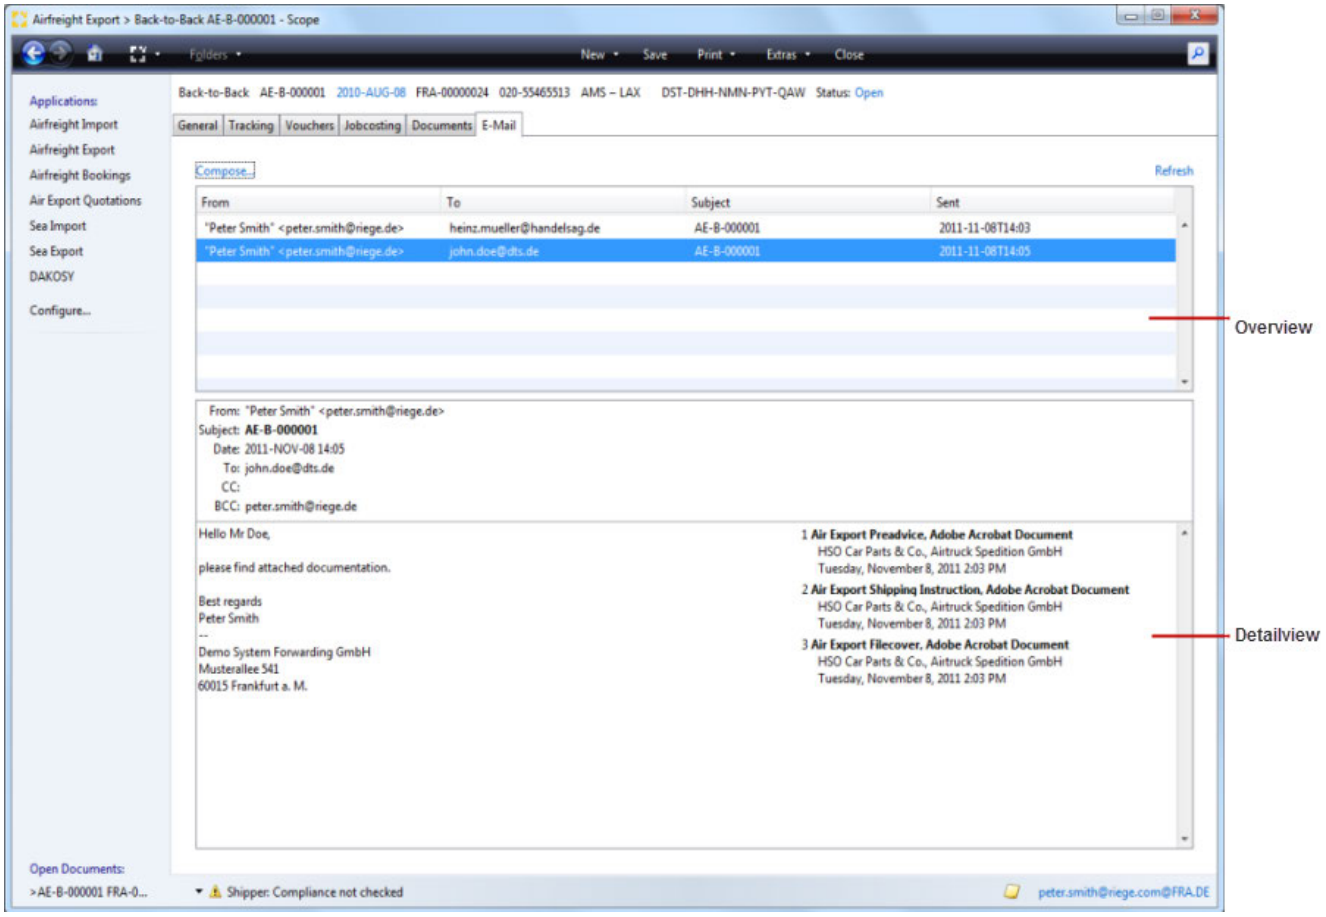
E-Mail - Coload Shipment - Airfreight Import

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

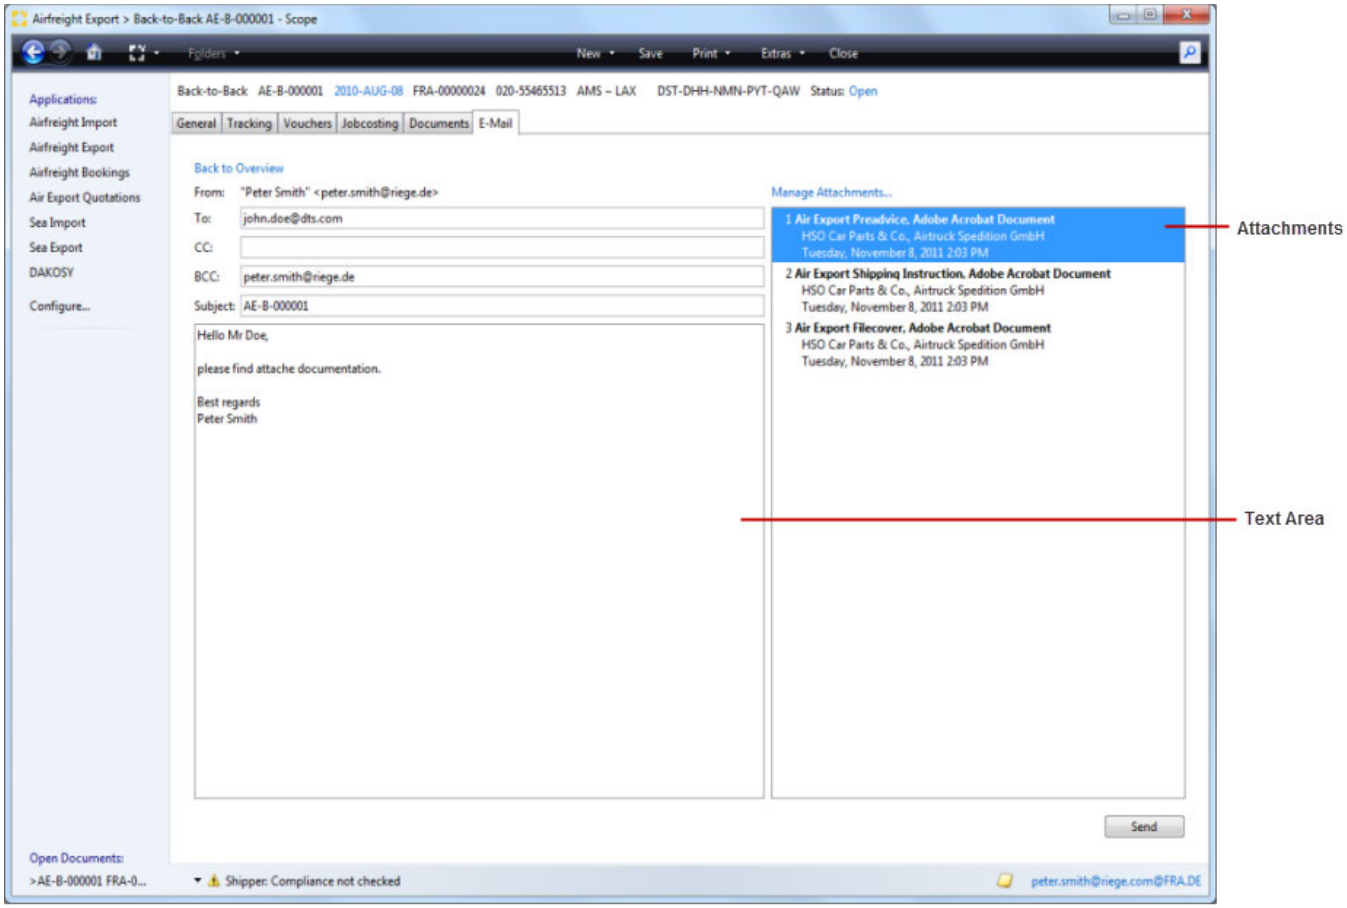
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

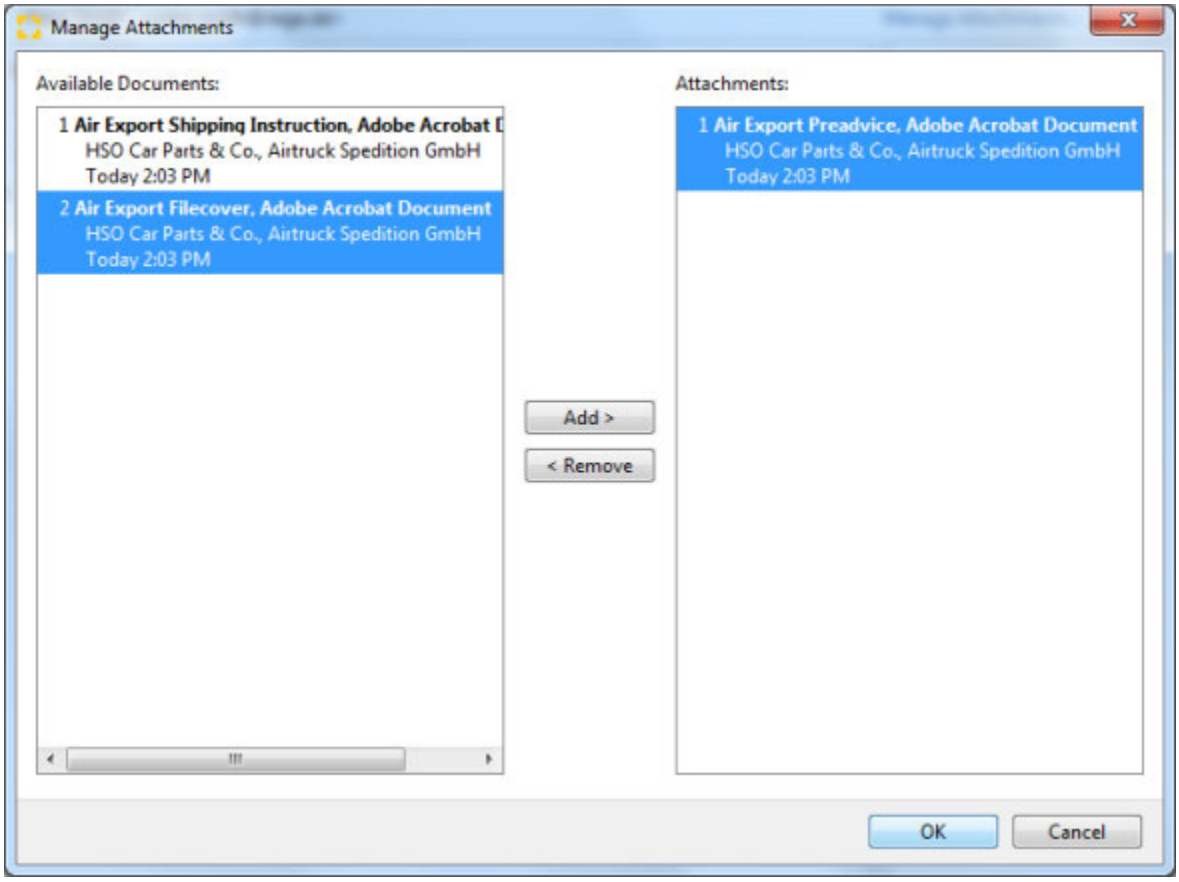
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

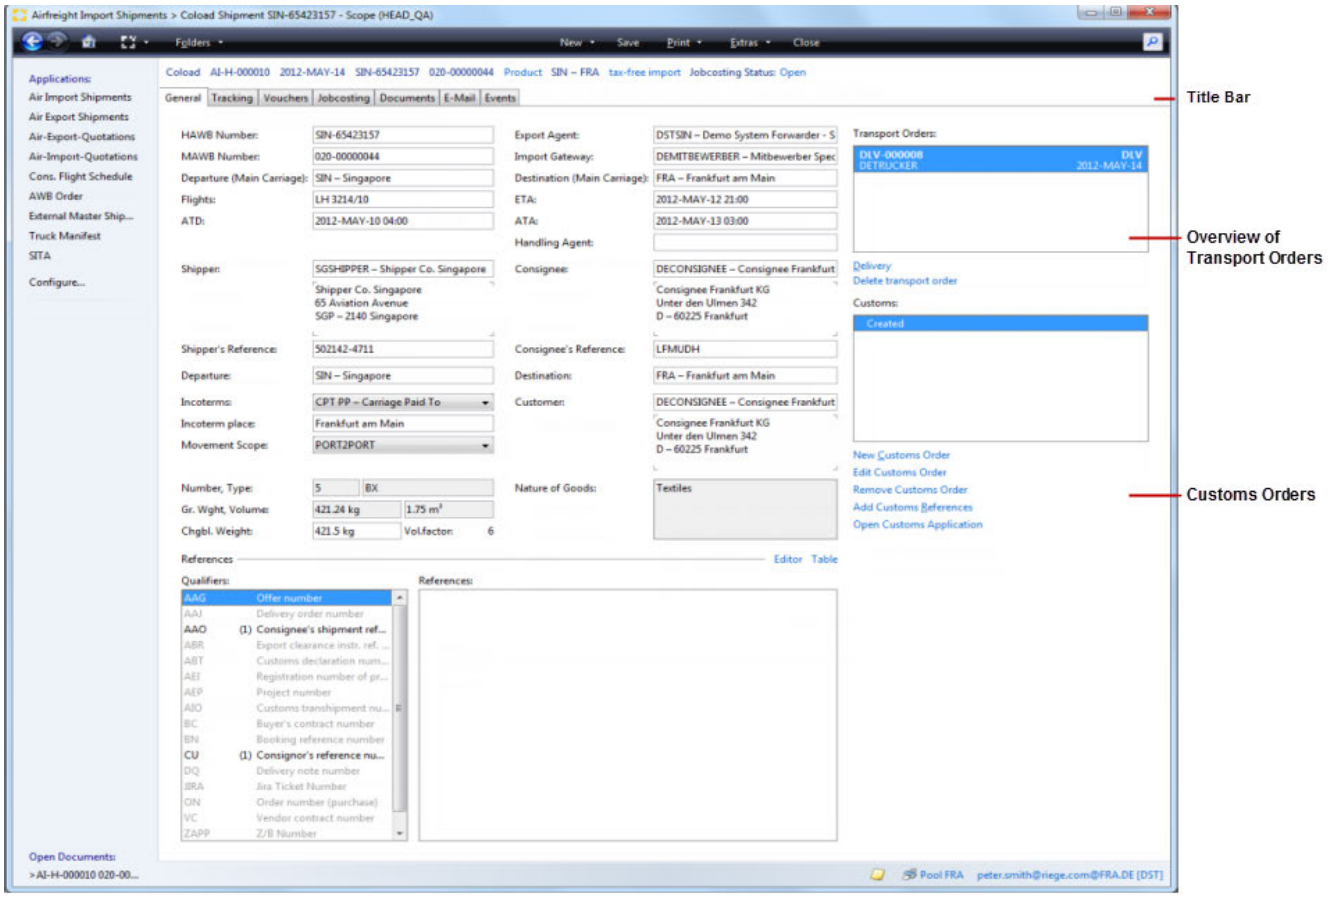
General - Coload Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **general** tab of the air import shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.

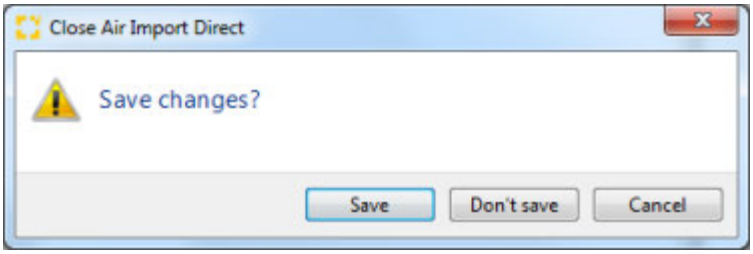
Currently the following documents are available:

- File cover
- Advice of Arrival
- Advice of Arrival (Bank)

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Title Bar

The following information appears in the title bar for a shipment and blue text indicates that the text has an action link and offers further action.

- **Mode**
  Type of shipment *Coload shipment*
- **Shipment number**
  Created by the system when the shipment is first saved.
- **Service Date**
  The arrival date of the program is set as follows:
  When present-ATA (Actual Time of Arrival / actual arrival date)
  otherwise ETA (Estimated Time of Arrival / Expected arrival date)
  The current date is automatically stored and updated to match any ETA or ATA as long as the new date is within the same month as the displayed date. If the new date falls within a different month from that displayed, the date will not change unless it is clicked (action link), in which case it will update to show the revise ETA or ATA dates.
- **Housbill number**
  The HAWB number from the corresponding box in the shipment editor.
- **Master bill number**
  The MAWB number from the corresponding field of the master shipment.
- **Departure airport - Destination airport**
  Departure and destination of the shipment entry
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Status**
  The status of the shipment.

Customer

The customer is the party responsible for generating the shipment who typically bear responsibility for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

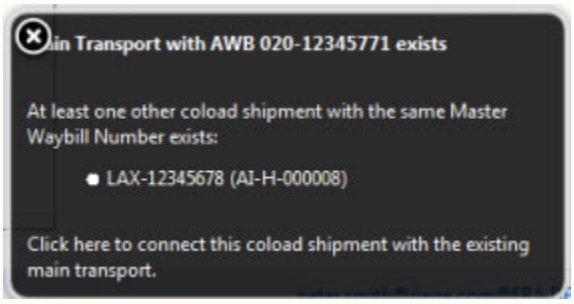
HAWB Number

House Airway bill number for the shipment.

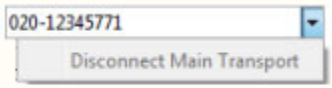
MAWB Number

Master Airway bill number for the shipment (IATA freight waybill number).

If the MAWB number entered already exists (the coload is part of an existing consolidation), then the user is informed with a pop-up message. By clicking on the message window, the master information will populate the coload shipment.



THis link can be removed by using the option in the drop-down menu that appears in the *MAWB Number* field.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoterms

The commercial delivery terms for the shipment

Incoterm Place

The agreed named place that the incoterm applies to.

Movement Scope

The scope of the agreed movement of the cargo for this shipment

Departure

Airport of departure of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Shipper

The party listed on freight documentation as the shipper of the cargo. The search function may be used to find the desired business partner. Within the shipper field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Consignee

The party listed on freight documentation as the consignee for the cargo. The search function may be used to find the desired business partner. Within the consignee field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Flights

Flights used for the shipment.

ATD

Actual departure date and time (Actual Time of Departure).

ETA

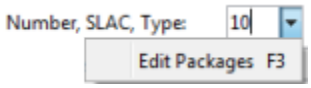
Expected Arrival date and time

ATA

Actual arrival data and time

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages, or the package editor can be called via the drop-down menu or by pressing function key F3. The package editor will allow much greater detail to be entered about individual packages.

If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Type (Packing type)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the packages editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Volume Factor

The volume factor used to calculate the chargeable weight will be displayed. (See also the partner role Forwarding customer where a default volume factor for the air import partner can be stored.)

Export Agent

The station which has exported the shipment. The desired agent can be located using the search field. The search will only consider business partners who have the role of agent and this agent role must include the departure airport of the shipment.

Import Gateway

The import agent who received the shipment. The desired agent can be found by using the search function of the field. Only partners who have been assigned the role *Agent* will be available as import agents.

References

This application may be used to enter any references numbers associated with the shipment and which are to be further used in other applications, such as printing or EDI transmission. More information about the reference number editor is available here.

New Delivery Order

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application.

- All transport or delivery orders that are created will be displayed in the overview. By double clicking these they can be opened, edited and printed as desired.

Delete transport order

this action will delete a transport order. The link is only active when a transport order is highlighted and if that transport order has not been printed and the shipment has no entries in costs and revenues.

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Customs Application

Opens a customs entry applications if available.

- More information on customs applications is available in the Customs section of the manual.

Tip

Use the keyboard short cut **Ctrl + I** to show information about the current user of the session. This will display the user name, email address and telephone number.

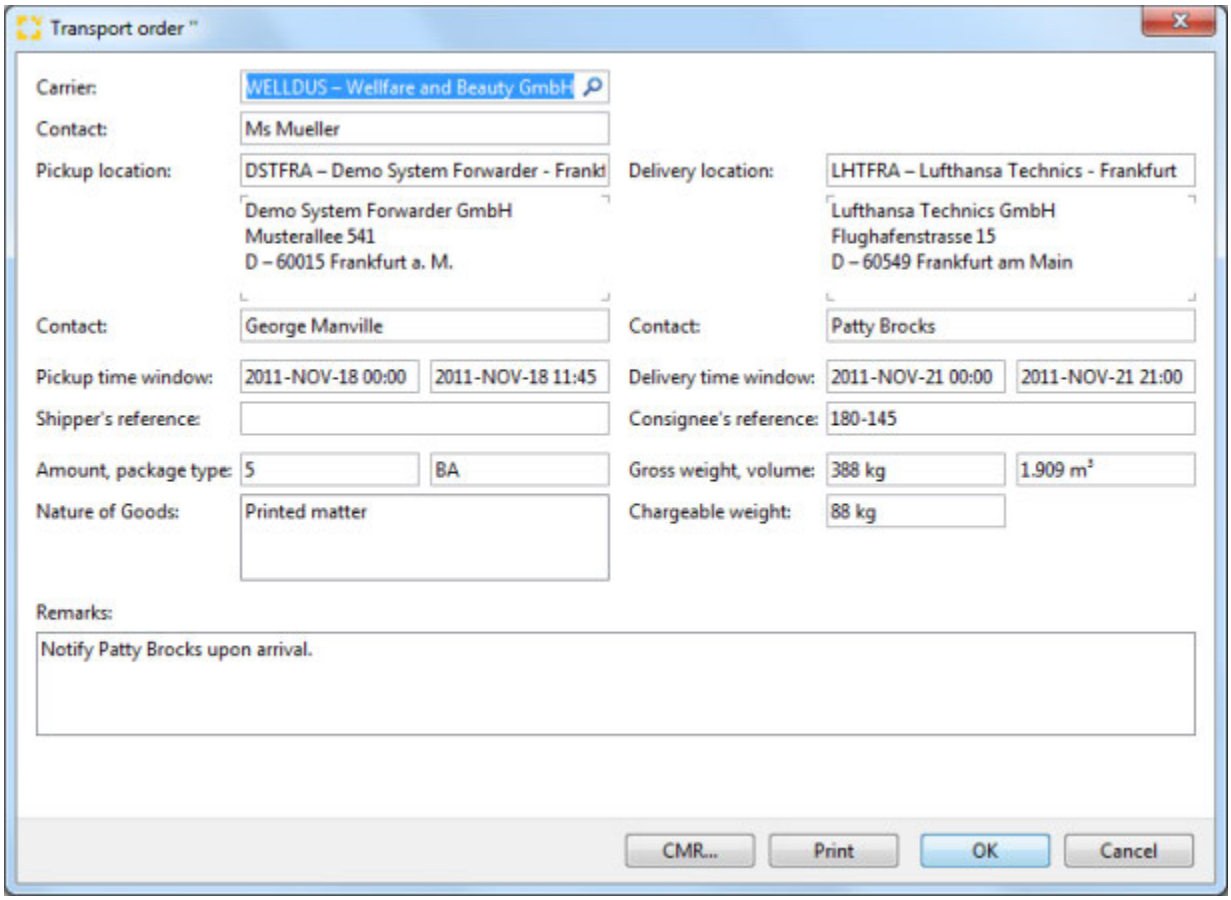
Delivery Order - General - Coload Shipment - Air Import

- Introduction
- Description

Introduction

Create and print delivery orders or tranfers to other branches. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a set a pickup or delivery addresses link have been stored for this partner, these may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the import agent or or the import agent's pickup address. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

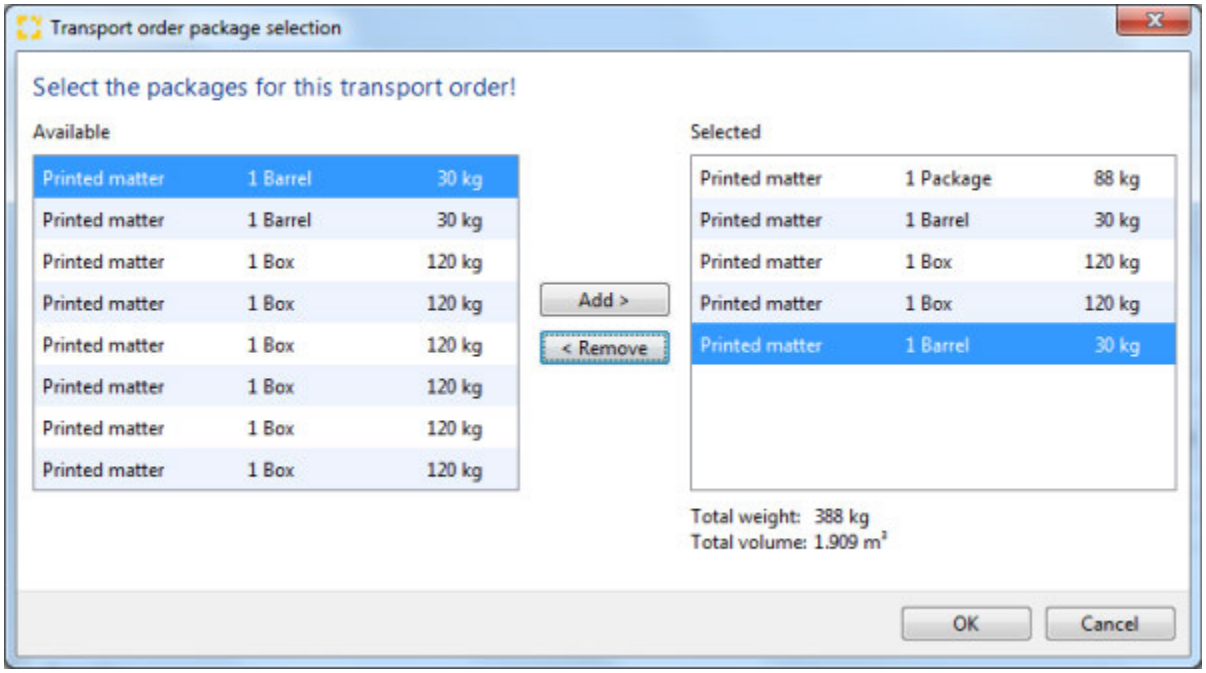
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

> Package selection is only available if the packages have been defined in the package editor of the shipment entry

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Customs orders

When customs details are entered in the main shipment, the "Customs orders" function is available. All the customs orders created on the main shipment will be visible. Use the check box to indicate which customs orders should appear on the delivery order.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Include Shipment Details in printout

check the box to include greater shipment detail on the printed delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

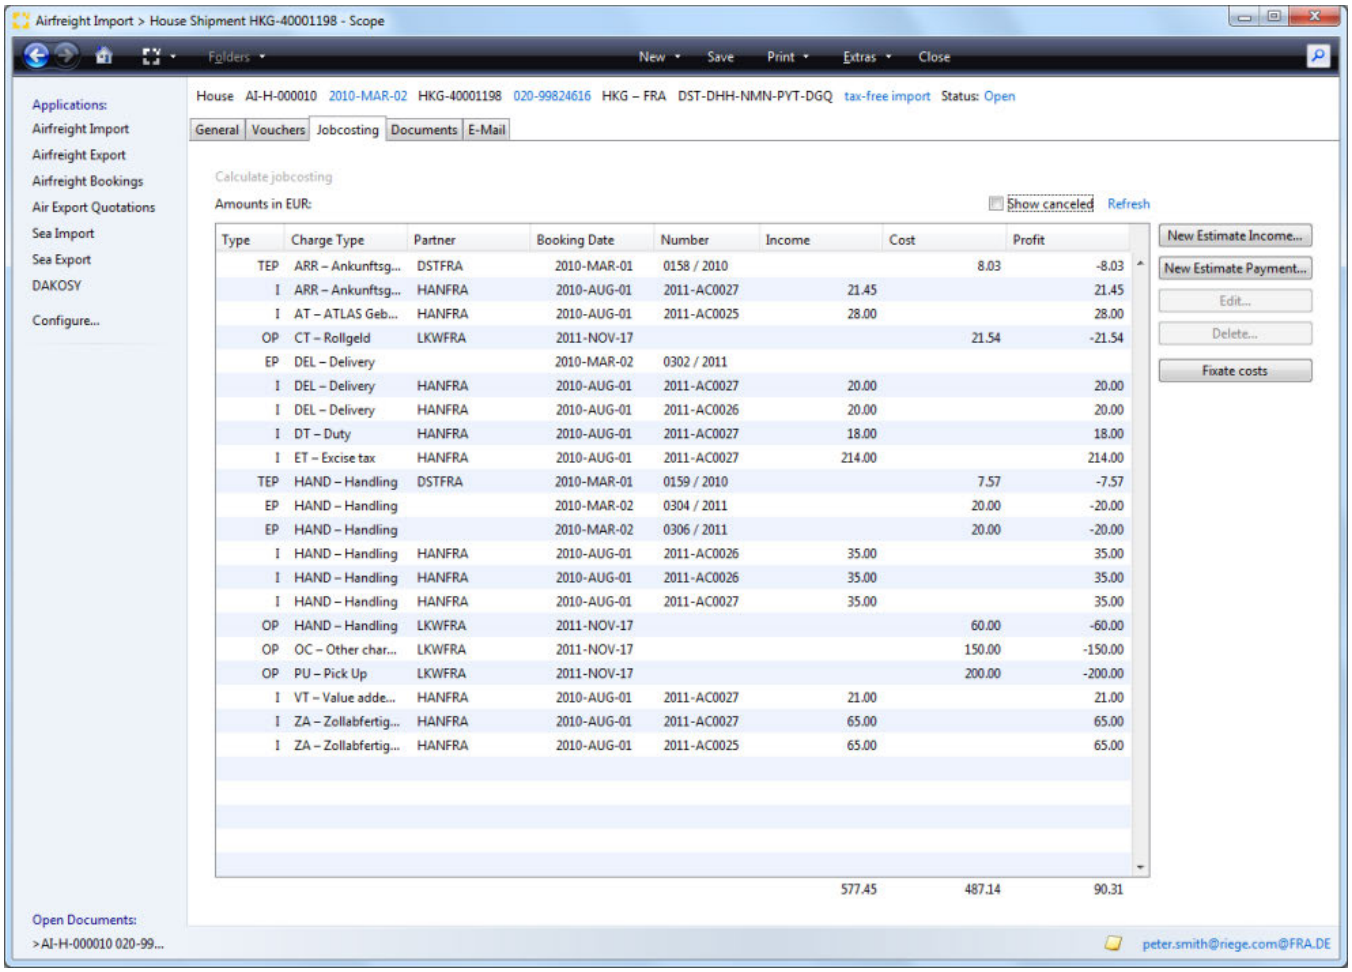
Jobcosting - Coload Shipment - Airfreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the details of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see **General** tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

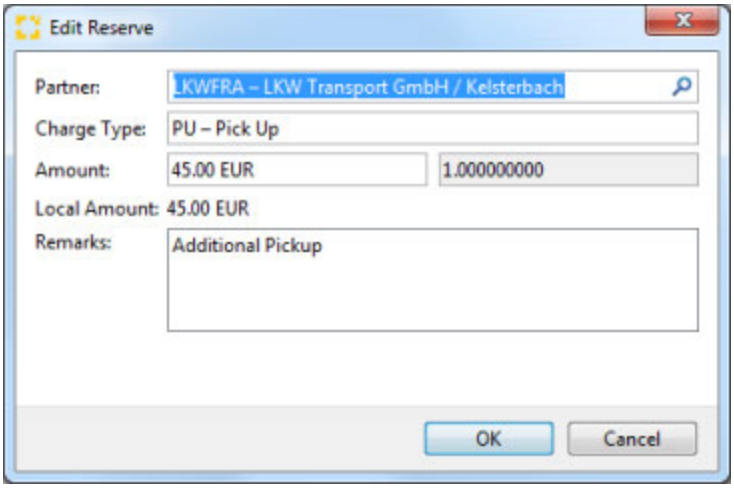
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Reserves Assignment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Description

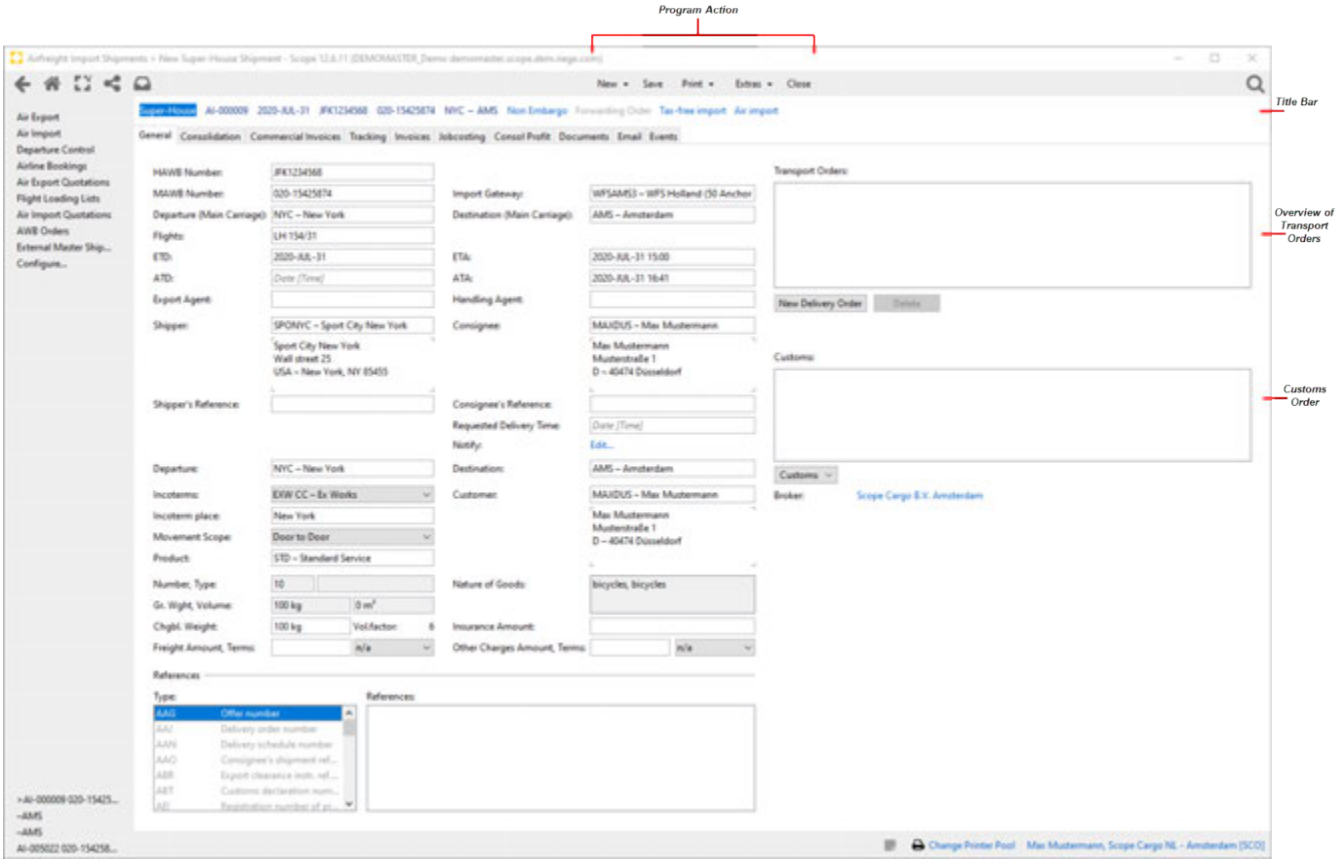
- Program Action
- Title Bar
- Field Description
- Transport Orders
- Customs



Program Action

New

- New Delivery Order

Opens the window New Delivery Order. Data for a Delivery Order can be entered here.

- New Customs Order

Creates a new Customs Order Document, that can be printed.

Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

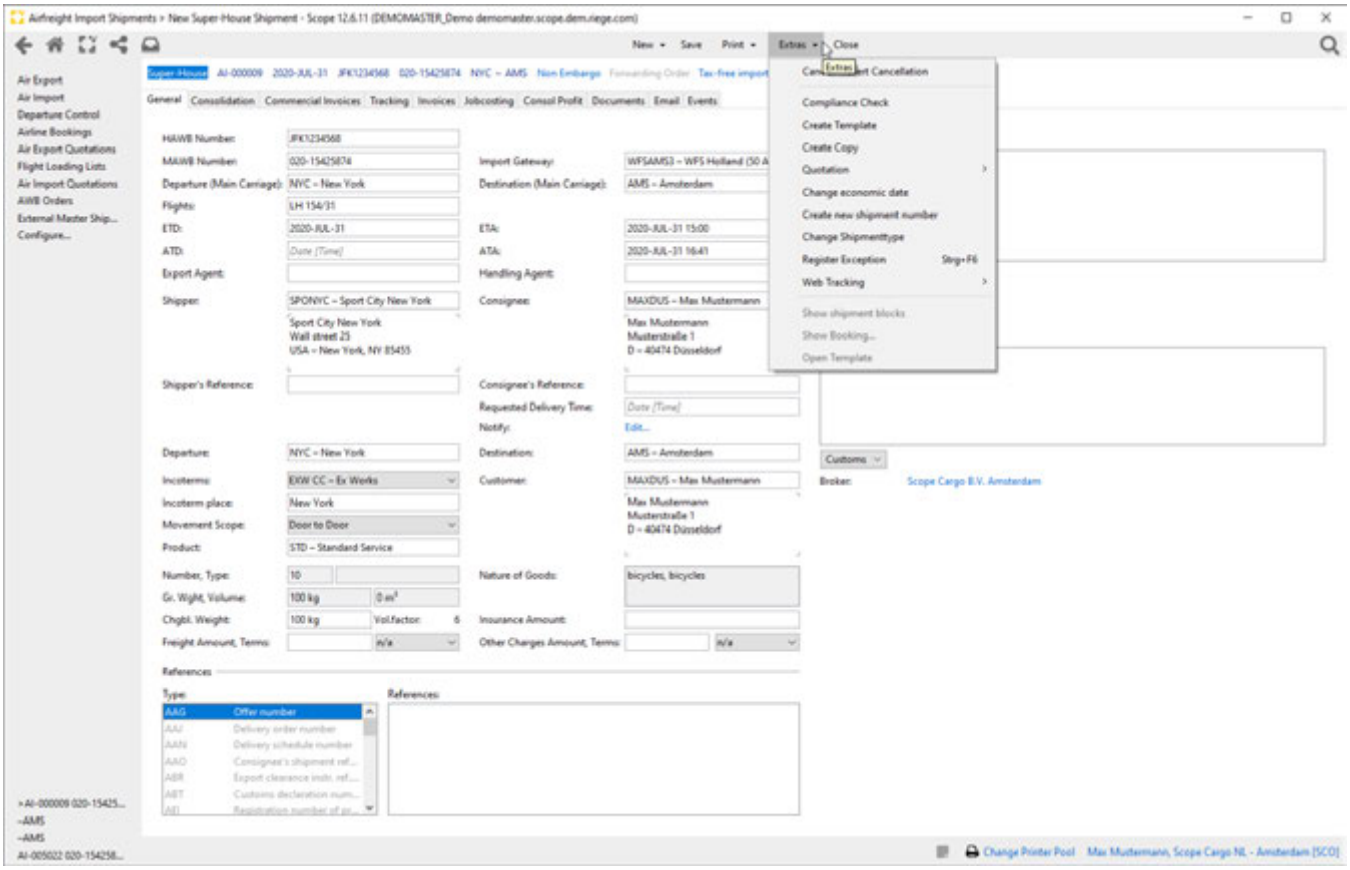
Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

By clicking on the appropriate item in the list under the print command, the required documents can be printed. Currently the following documents are available:

- Filecover
- Notice of Arrival for Consignee, for Customer, for Notify, Notice of Arrival Bank
- Release Documents, Release Order, Carrier`s Certificate
- Notice of Arrival Bank
- Clearing Instructions Request
- Delivery Note
- Pre-Alert
- Unloading List
- Claim Notification
- Shipment Labels...
- Quality Report

Extras



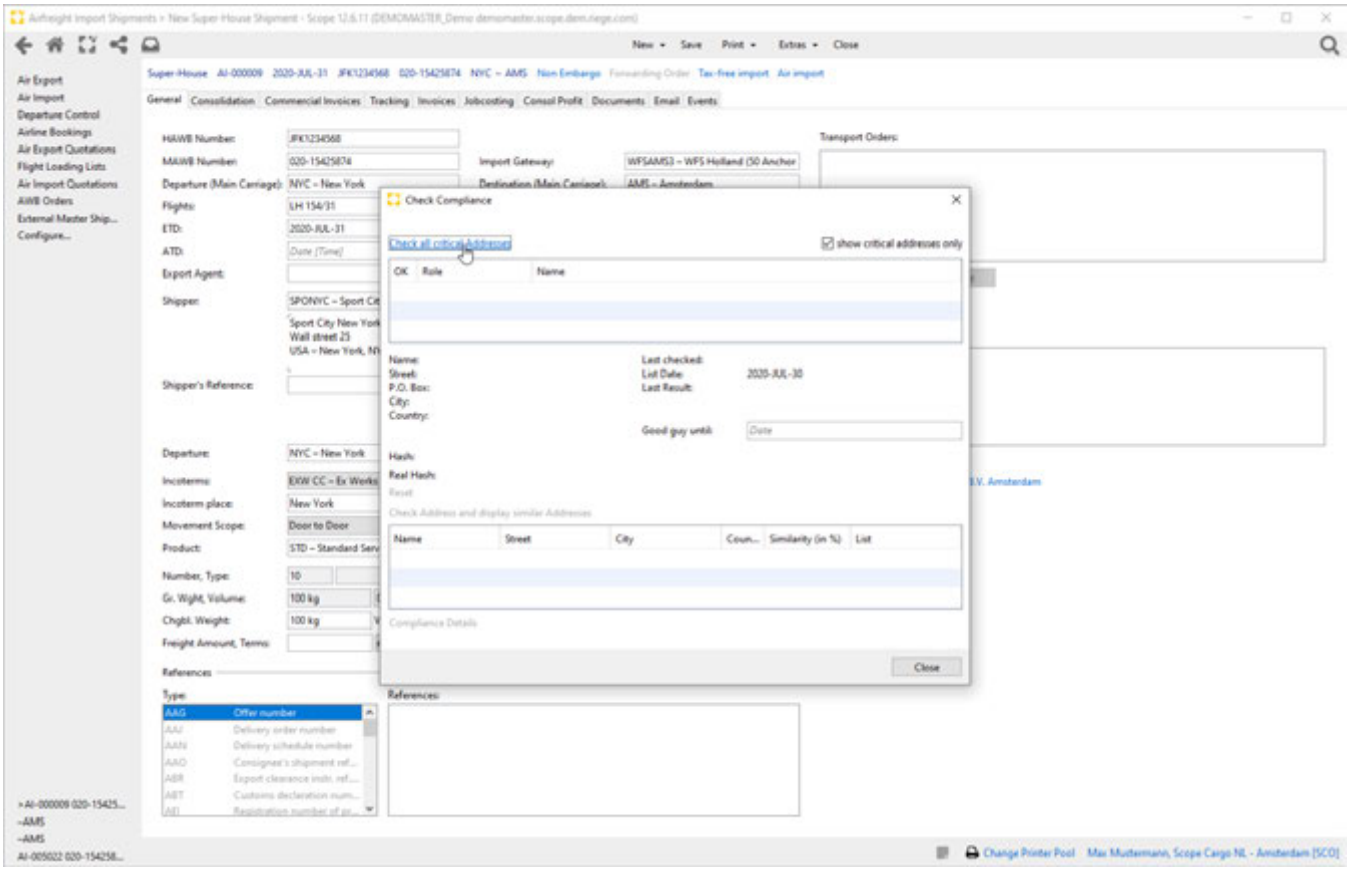
- Cancel/Revert Cancellation

This function cancels a shipment or cancels the cancellation of a shipment. See details here Cancel/Revert Cancellation

- Compliance Check

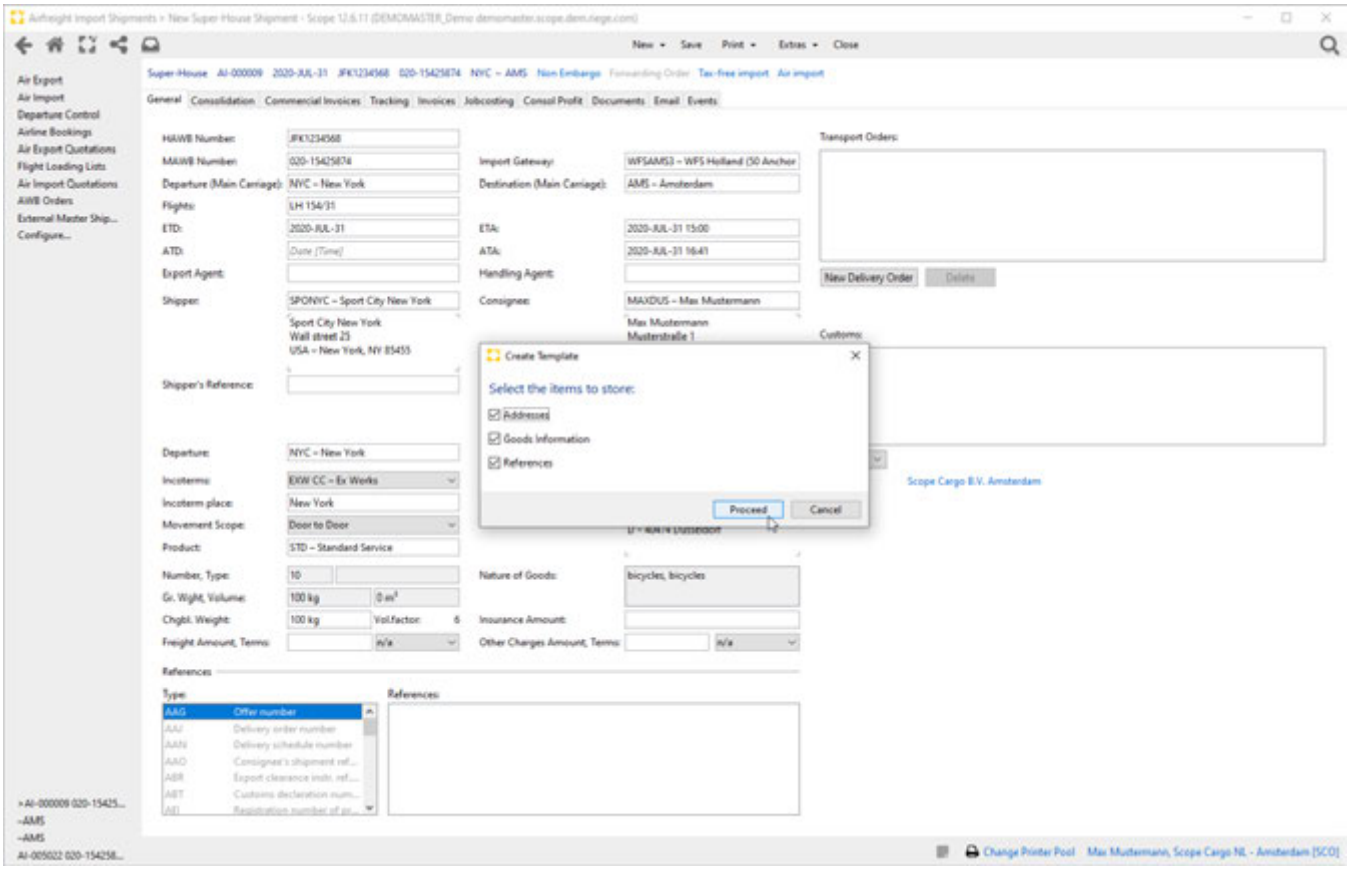
Opens the *Check Compliance* Screen. In this Screen all critical addresses related to the shipment will be displayed and can be checked.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



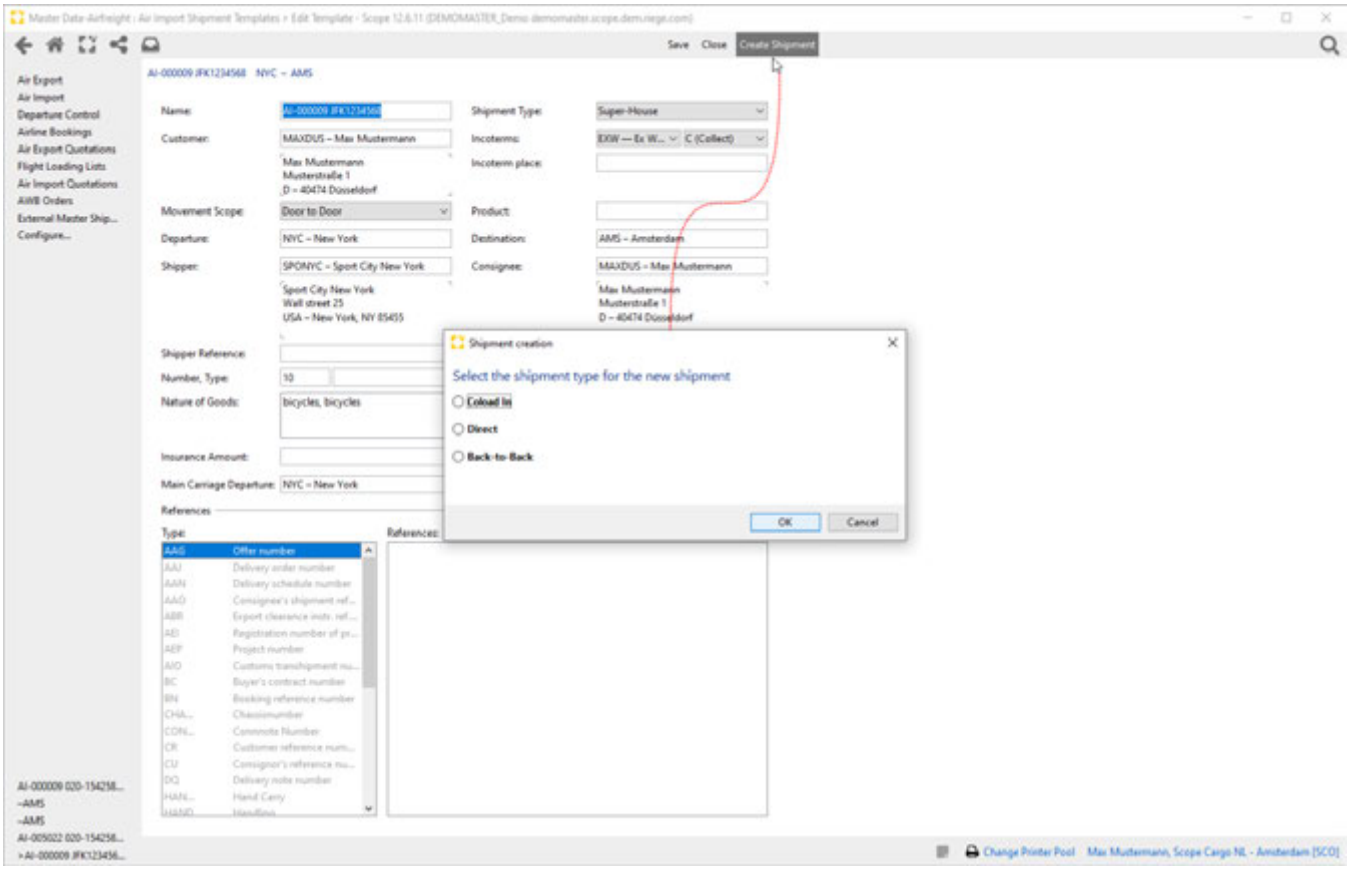
- Create Shipment Template

This program action opens the screen *Create Template*. The button *Proceed* opens the shipment template editor.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

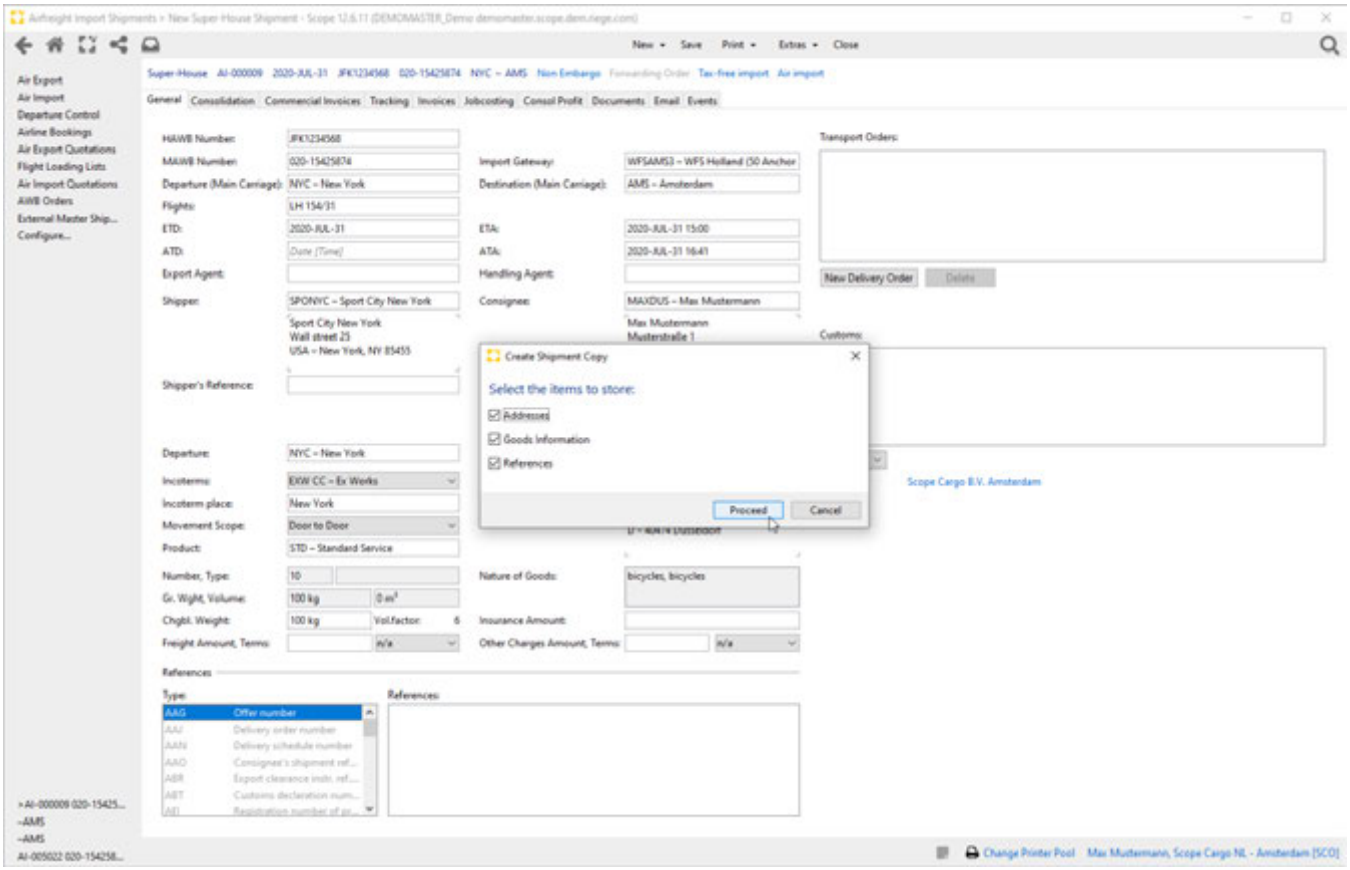
In the shipment template editor, the button *Create Shipment* opens the editor shipment creation where more available shipment types for templates (Coload In, Direct, Back-to-Back) can be chosen.



- Create Copy

This program action opens the screen *Create Shipment Copy*, where the items to be stored can be selected. The button Proceed will confirm the creation of a copy.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



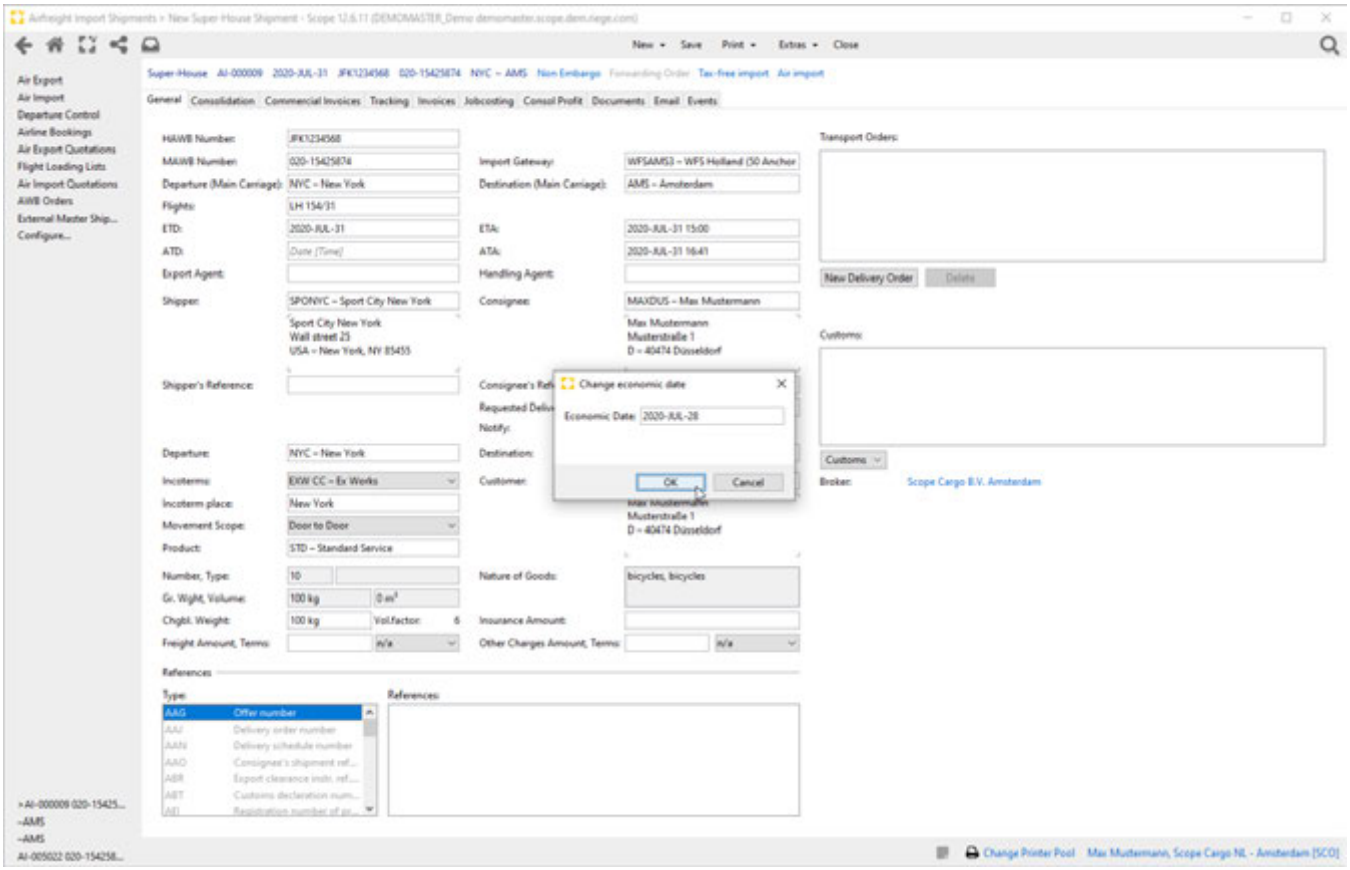
- Quotation

This function can Show, Link or Unlink a quotation for the shipment.

- Change economic date

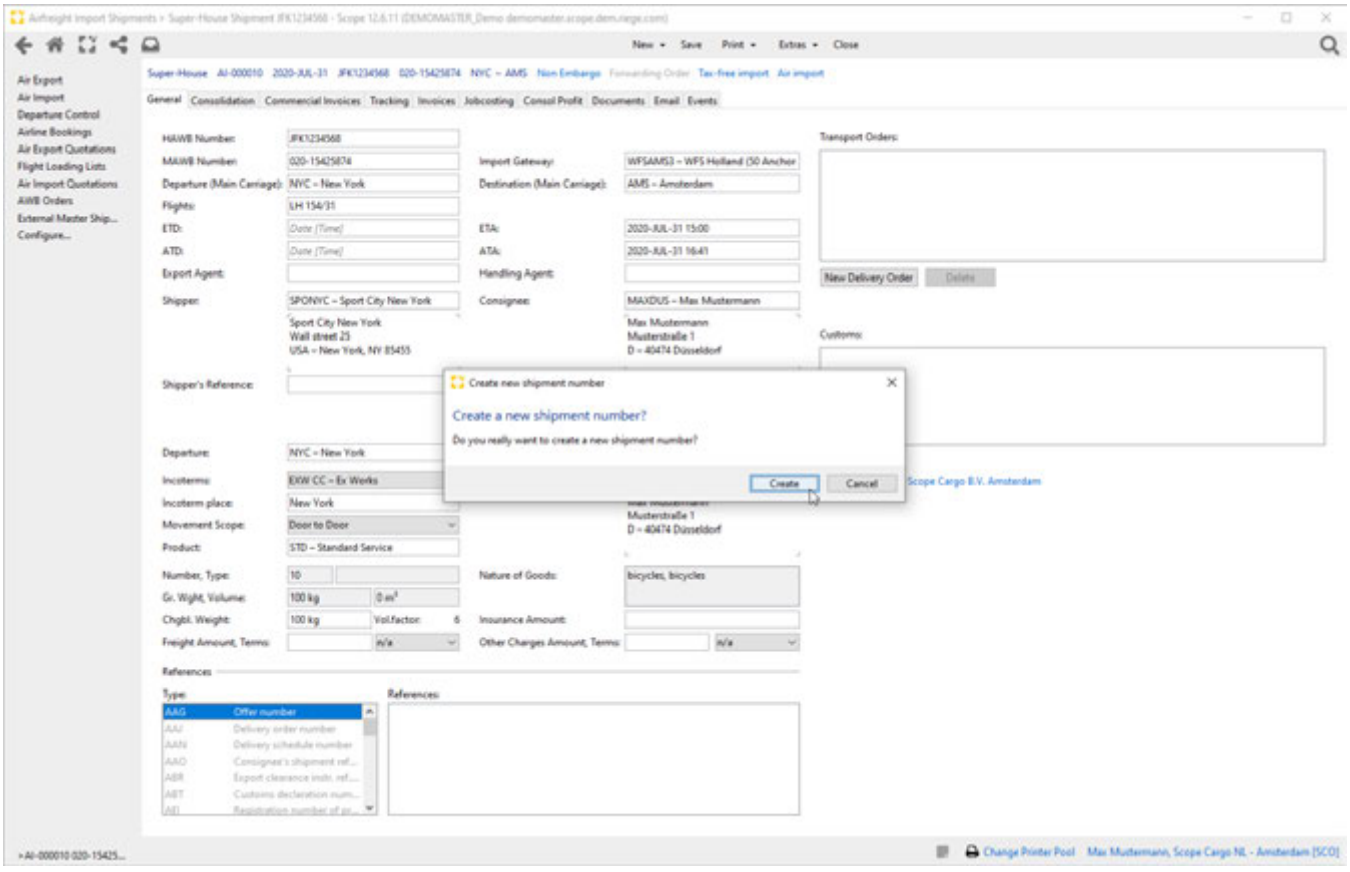
This function opens the screen economic date, where the economic date can be changed.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Create new shipment number

This program action opens the screen *Create new shipment number.* With the button *Create* a new shipment number will be generated.



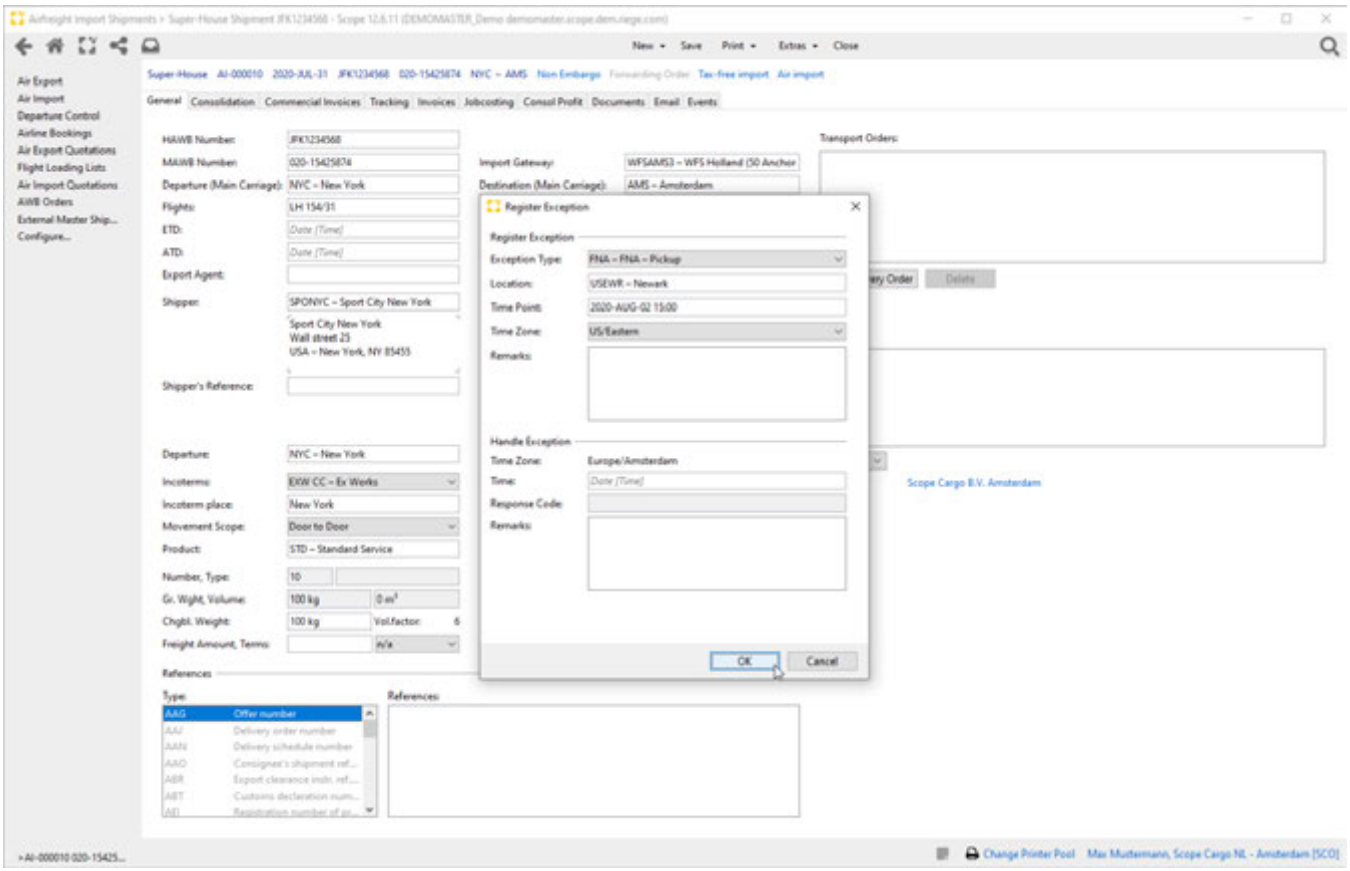
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Change shipment type

This function opens the screen *Change shipment type* where another available shipment type can be chosen, if the function is supported.

- Register Exception

With this action, exceptions can be created. These represent additional information about the milestones.



- Web Tracking

Via web tracking, a URL can be copied, or a program can be opened directly in anonymized web tracking.

- Show shipment blocks

Releases a lock, confirming outstanding payments have been received. See also Top features 12.0

- Show booking...

Opens an existing booking for the shipment.

- Open Template

opens the template that created the shipment

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- Type of shipment
  Type of shipment. For this is Super-House
- Shipment number
  Assigned by the system after the shipment has been saved for the first time.
- Economic date
  The date can be changed via Extras - Change economic date.
- Air Waybill number
  Super-House Air Waybill number entered in field HAWB Number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Master Shipment Number
  Shipment number of master shipment entered in field MAWB Number.
- Departure airport - Destination airport
  Departure and destination of the shipment.
- Non Embargo, Approve Embargo
  Embargo Status set due to destination
- Forwarding Order
  Link to a connected Forwarding Order
- Taxability (e.g. "tax-free Export")
  Actionlink indicates the Taxability type and can also be used to change to a new taxability type
- Cost Center (e.g. Air Import)
  By clicking on this action link, the user will be able to change the Cost Center of the shipment.

Field Description

HAWB Number

HAWB Number of the shipment can be entered here.

MAWB Number

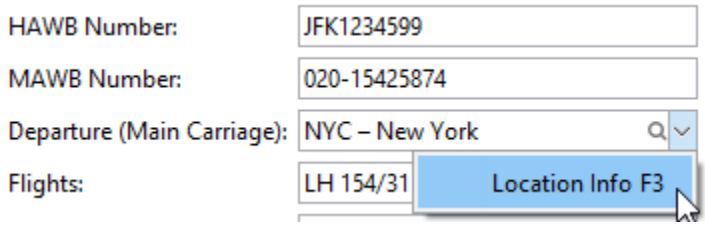
MAWB Number of the shipment can be entered here.

Import Gateway

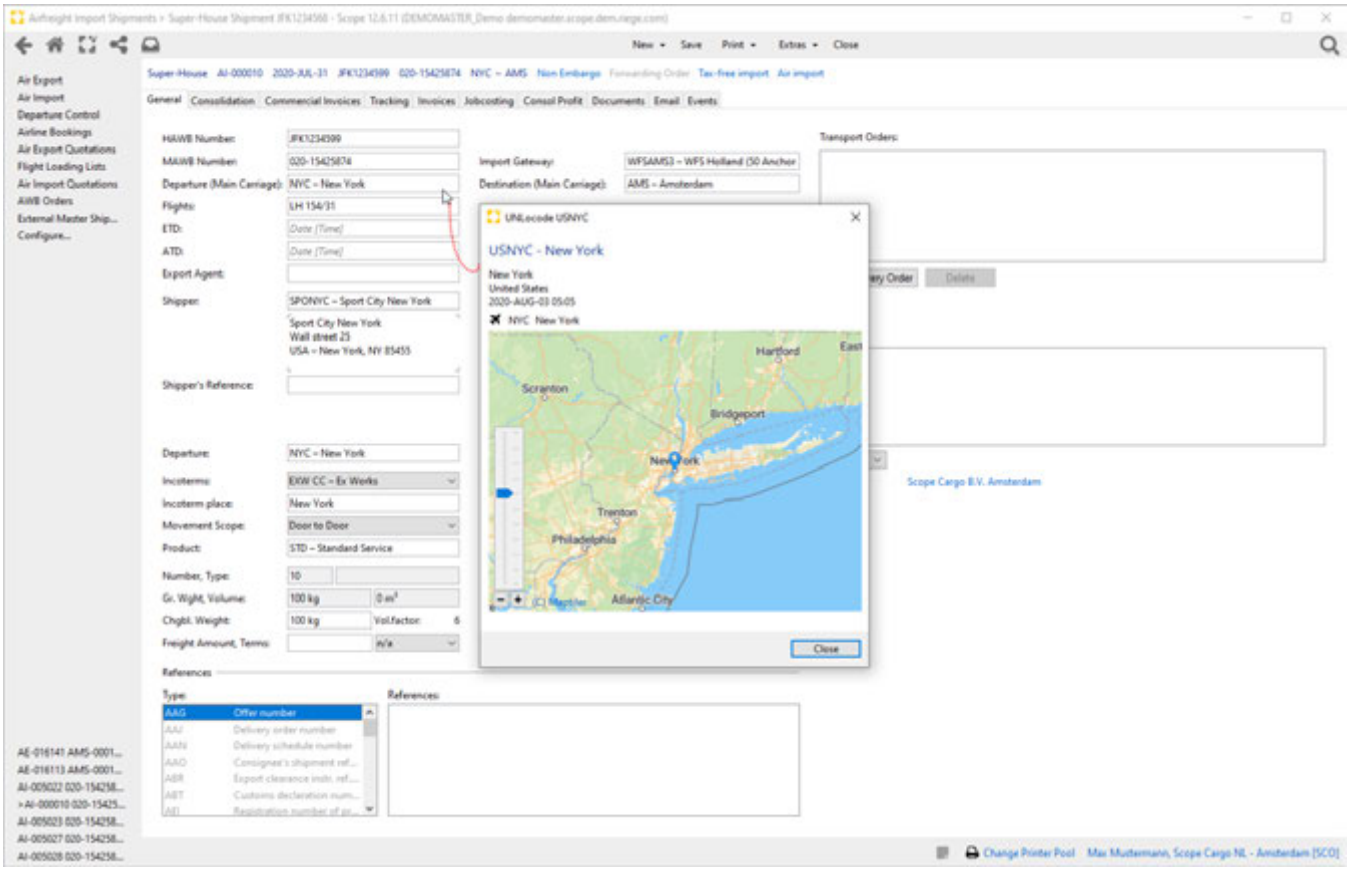
Partner Name and Address of the Import Gateway The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Departure (Main Carriage)

IATA-Code of the Airport of Departure of the Main Carriage. The context menu or F3 will open a corresponding map.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

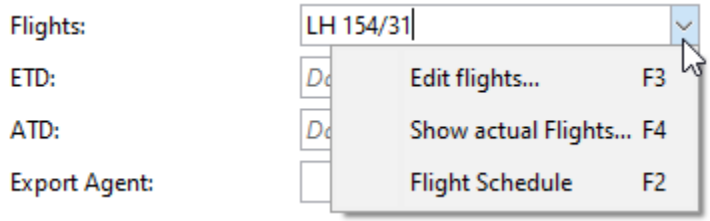


Destination (Main Carriage)

IATA-Code of the Airport of Destination of the Main Carriage. The context menu or F3 will open a corresponding map.

Flights

Flight details can be entered. With the context menu flights can be edited (F3), actual Flight Look up for the MAWB Number can be opened (F4), Flight schedule can be opened.



ETD

Estimated time of Departure

ETA

Estimated time of Arrival

ATD

Actual time of Departure

ATA

Actual time of Arrival

Export Agent

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Handling Agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Shipper`s reference

Shipper´s reference can be entered here

Consignee`s reference

Consignee`s reference can be entered here

Requested Delivery Time

A requested delivery time can be entered here

Notify

The party to be Notified when the shipment arrives. If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic field search function that will display all matching airports. The context menu or F3 will open a corresponding map.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic field search function that will display all matching airports. The context menu or F3 will open a corresponding map.

Incoterms

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes. The Incoterm fills the value of the fields Movement Scope and Customer automatically, as they determine which costs are charged for the sender (backward) or for the recipient (forward).

Incoterms Place

The place name referenced by the incoterms.

Customer

Generally, the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Movement Scope

Movement Scope of the shipment.

Product

The drop down menu will open a list of all available Products. The Products must be defined in the master data Forwarding Selling Products.

Number

Total number of packages in the consignment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super House Shipment.

TYPE

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.) Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks.. Fields will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Gross weight, volume

Total gross weight and volume of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Chargeable Weight; Vol.factor

Total chargeable weight of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment. Volume Factor will be displayed next to the chargeable weight.

Title Bar

see General Tab

Field Description

Participant

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The Consignee address appearing in this field is taken from the field Consignee, entered in the General TAB of the Super-House. If the field is empty, all available House-Shipments will be shown for the selected direction.

Search Criteria

The destination of the available house shipments is used to match them to the destination of the Super-House shipment. The destination of the Super-House shipment is found in the General Tab.

Available Sub Houses

`By default, all house shipments are displayed, that match with Search Criteria.`

- When the Consignee and destination are present, only house shipments with matching Consignee and destination will be shown as available for consolidation.
- When the Consignee is left blank, then all open House-Shipments to the destination will be shown regardless of the Consignee that may be present at the house level.
- If the destination is left blank, then all open houses that match the Consignee will be shown, regardless of the destination of the house shipments.
- if both the destination and Consignee are left blank then all open house shipments will be visible regardless of the Consignee or destination of those houses.

Selected Sub Houses

This window displays house shipments that are currently included in the Consolidation. The base of the window shows the total number of houses on the consol, their total number of pieces, gross weight, volume and total chargeable weight.

Add

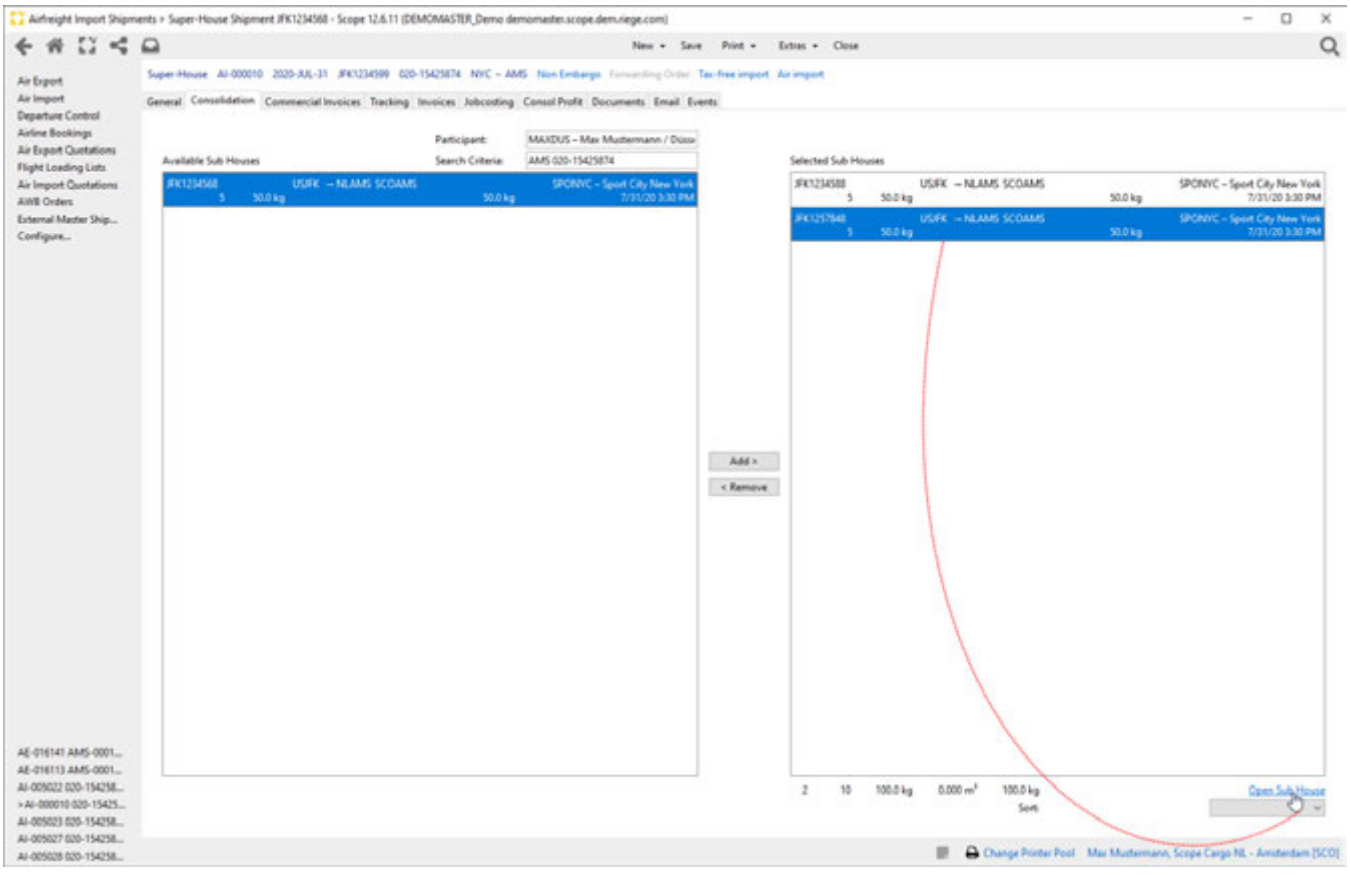
Moves the highlighted house shipment from the Available Sub Houses Shipments window to the Selected Sub House Shipments window to indicate the house is to be included on the consol.

Remove

Removes the highlighted house shipment from the Selected Sub House Shipments window back to the Available Sub Houses Shipments window to indicate the Sub-House is to be removed (deconsolidated) from the consol.

Open Sub-House

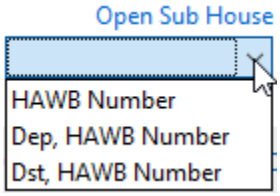
Opens the Sub-House that is marked in the table Selected Sub Houses.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Sort

The selected Sub-House shipments can be sorted using the dropdown menu.



HAWB Number

Sorting is based on house AWB numbers

Dep HAWB Number

Sorting takes place first from departure and within it according to HAWB no.

Des HAWB Number

Sorting takes place first to the destination and within it according to HAWB no.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Consolidated shipment - Airfreight Import

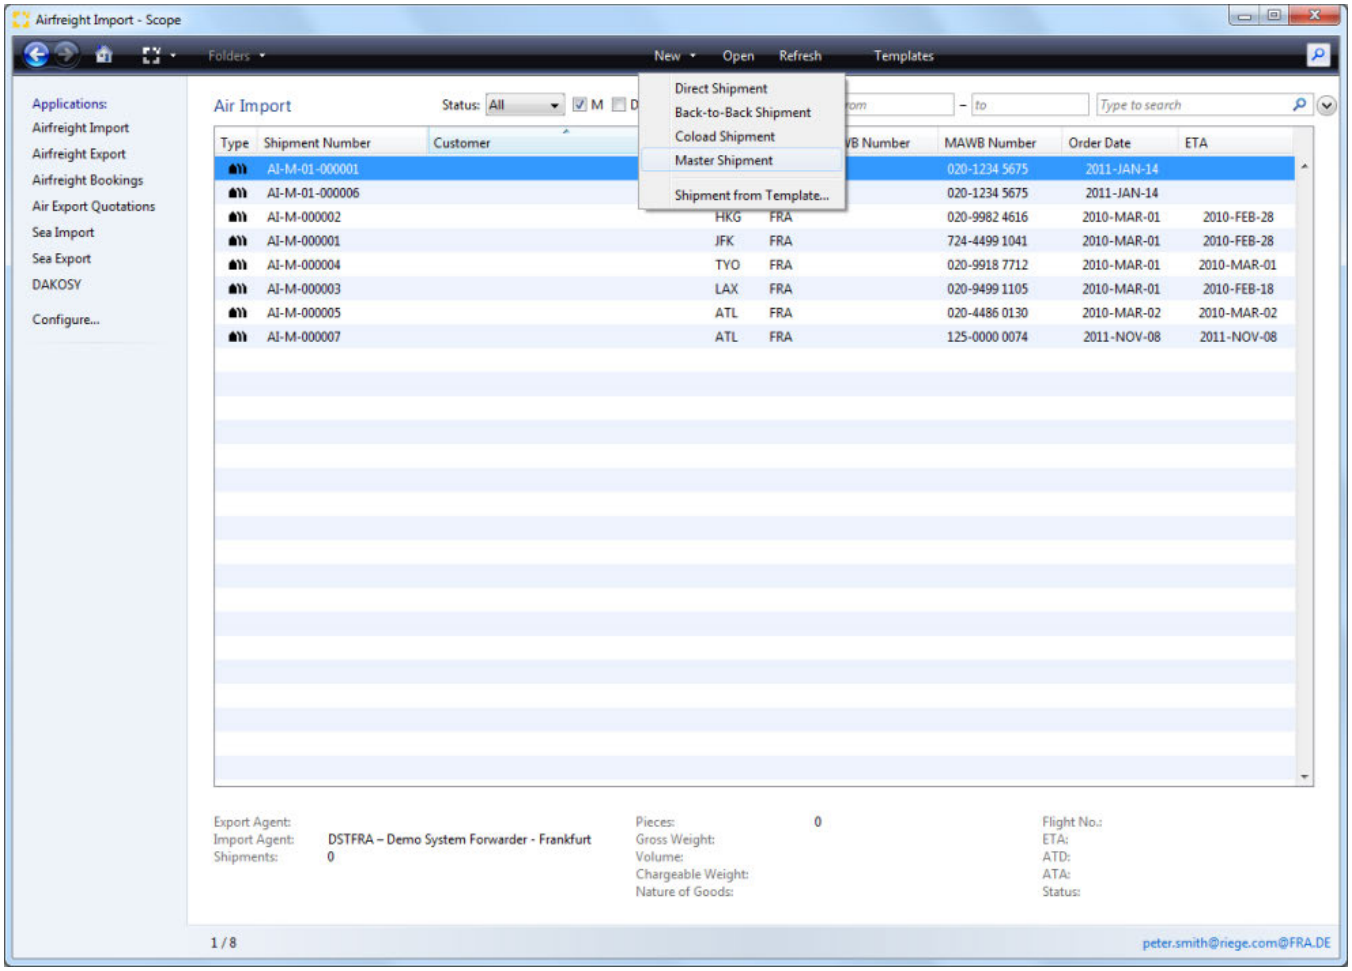
- Introduction
- Description

Introduction

In addition to air freight import house, direct, Back2Back and coload shipments, it is also possible to create master shipments (consolidations) within the air import home screen. A master shipment contains one or more house shipments and is usually from one agent to another. Master shipments are created because they are typically the most cost effective mode for the individual house shipments. The shipment may be significantly slower in comparison to a direct shipment. This is because the agent exporting the goods may delay shipment until several consignments with the same or similar departure and destination points have been accumulated. Typically the larger the volume of weight, the better the freight rate agent may obtain from the carrier. Therefore most agents offer a midweek and a weekend service consolidation service . As a result a house shipment received by the agent on a Thursday may wait until Saturday or Sunday before shipping.

Within the airfreight import application, all operations related to shipment creation are carried out, this includes data collection, billing, printing of documents and cost control. If the shipment is a consolidation, both the master and all houses can be completed.

Description



With the New option - A new master shipment is created.
With Open option, an existing shipment highlighted in the overview will be opened. Alternatively, highlight the desired shipment in the overview and double click it to open the shipment.

The functions of each of the tabs with a shipment are described here:

- Billing - Master Shipment - Airfreight Import
- Documents - Master Shipment - Airfreight Import
- E-Mail - Master Shipment - Airfreight Import
- General - Master Shipment - Airfreight Import
- Jobcosting - Master Shipment - Airfreight Import

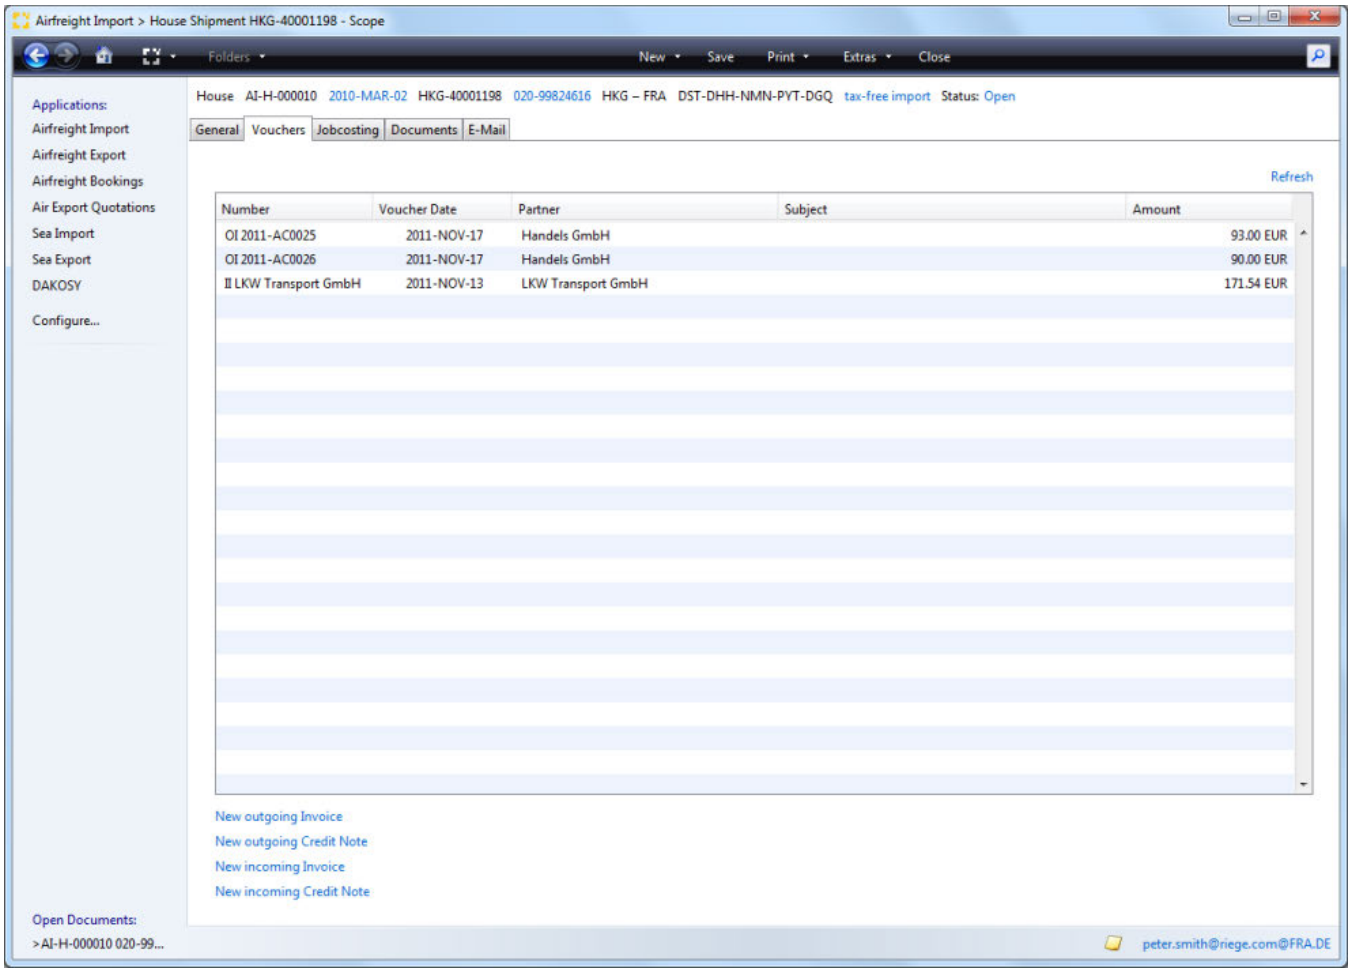
Billing - Master Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Rider **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Outgoing Credit Note

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Refresh

refreshes the list of vouchers.

Table columns

Number

The number of the document is fixed and will be prefixed with a code indicating the type of voucher.

Voucher Code	Description
OI	Outgoing Invoice
OC	Outgoing Credit note
II	Incoming invoice
IC	Incoming credit note

Voucher Date

The date the voucher was created.

Partner

The party to whom the voucher was issued.

Subject

The subject of the voucher

Amount

the total amount of the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Billing - Master shipment - Airfreight Import

- Introduction
- Description

Introduction

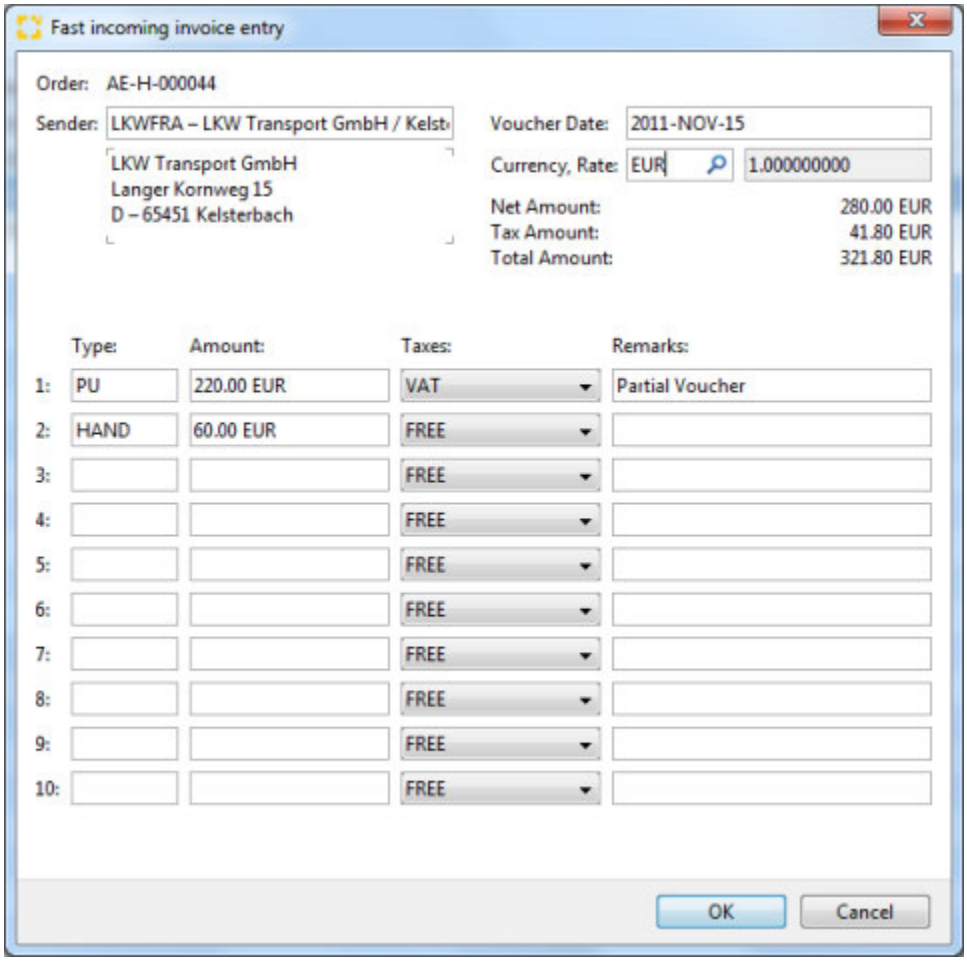
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

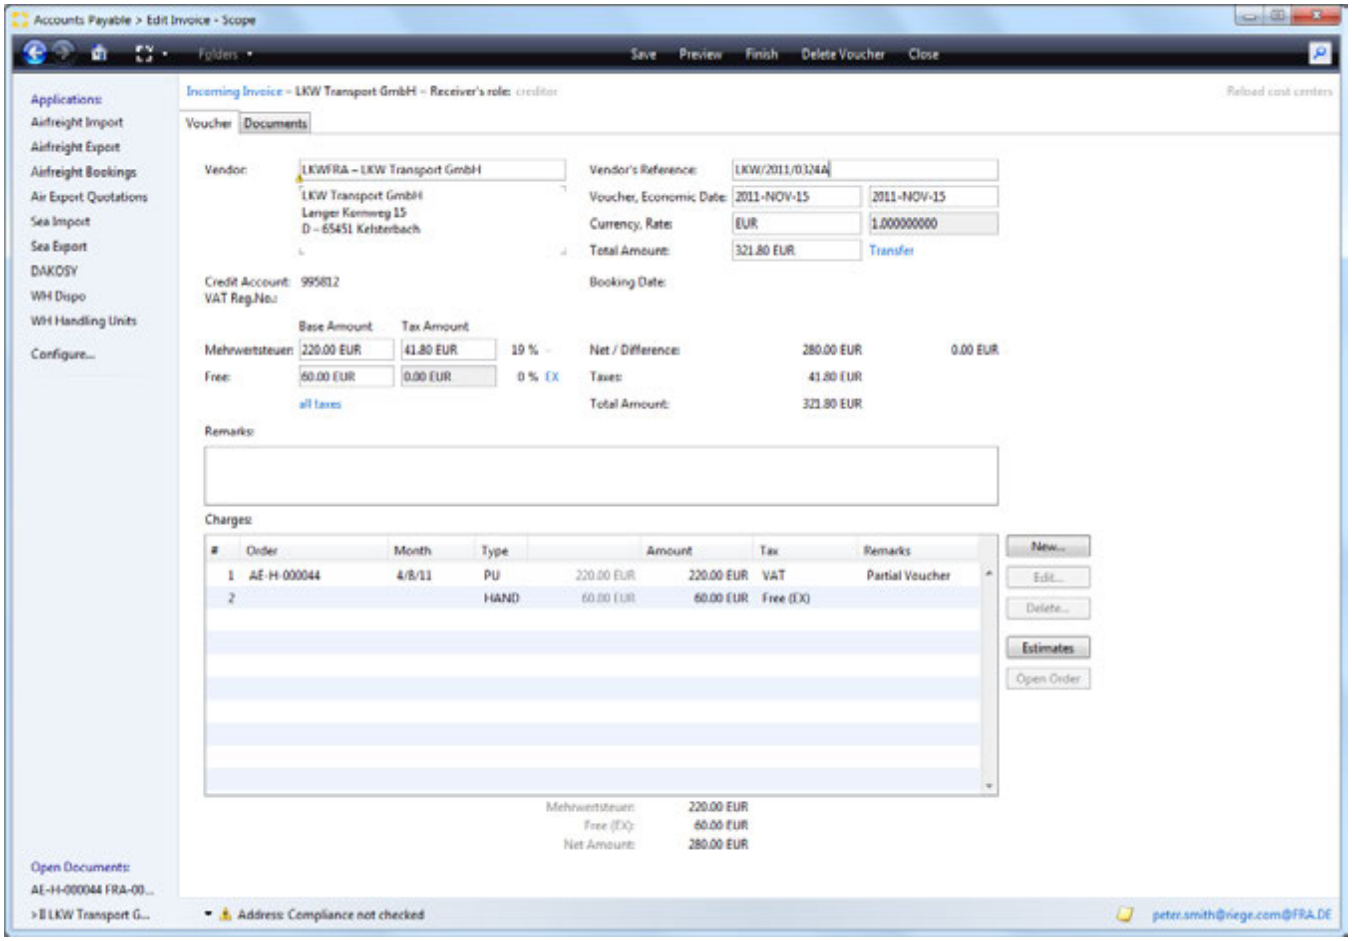
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

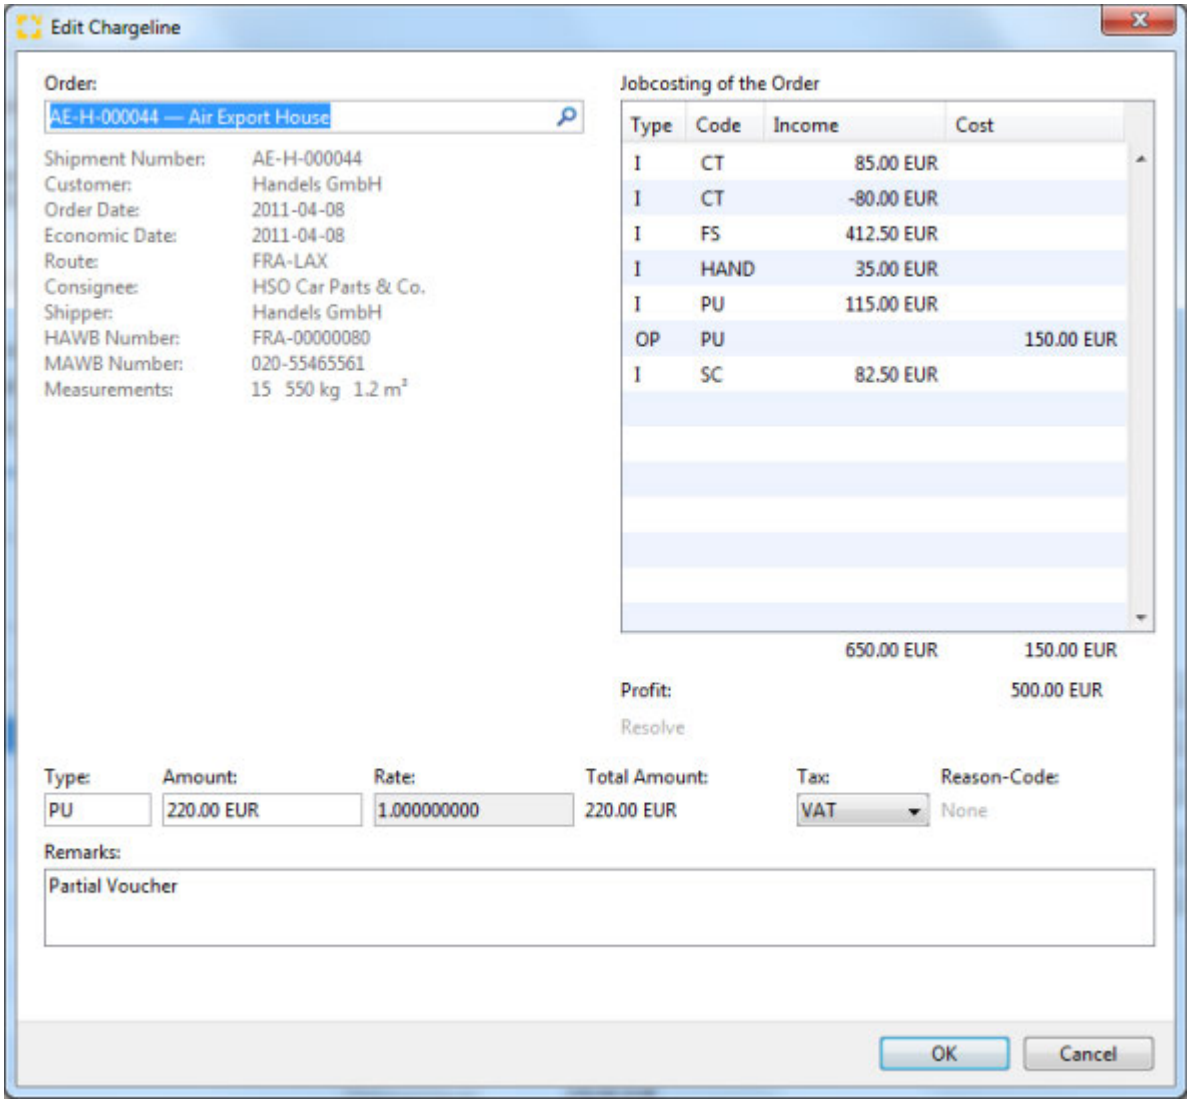
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

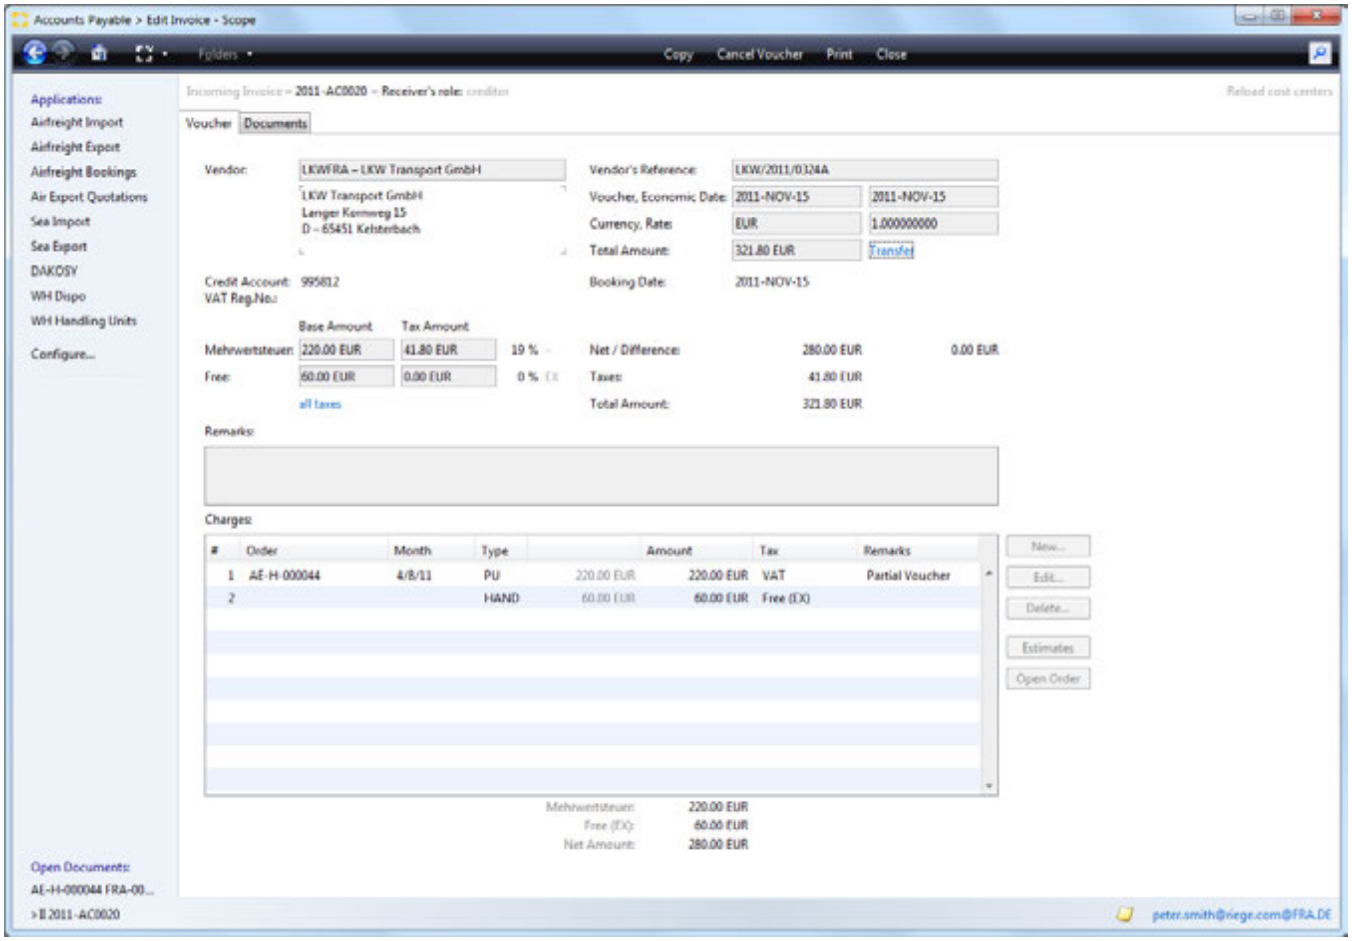
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Outgoing Document - Invoice - Master Shipment - Airfreight Import

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

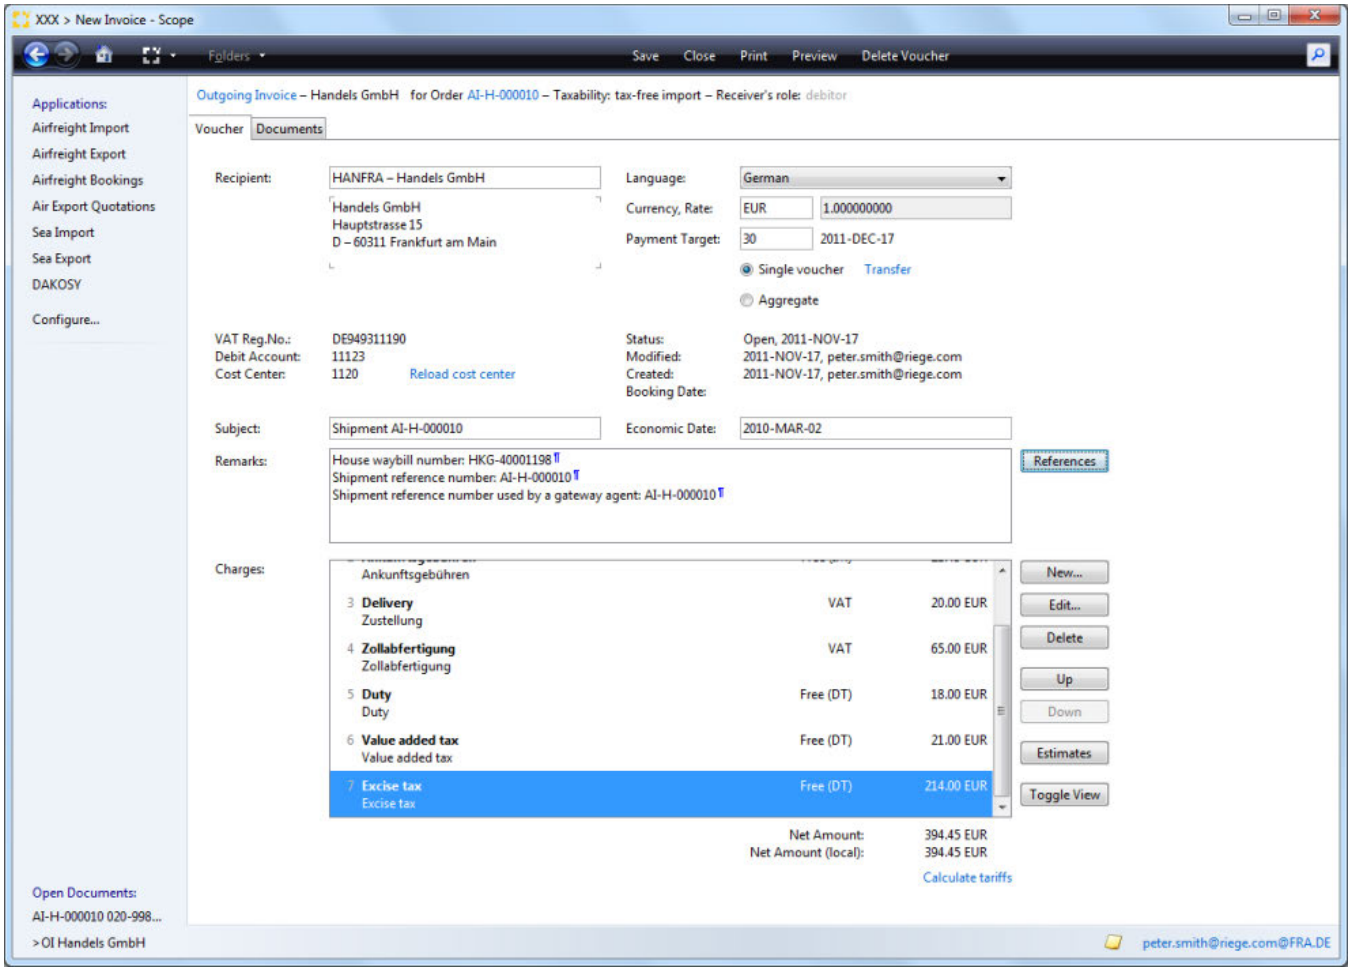
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

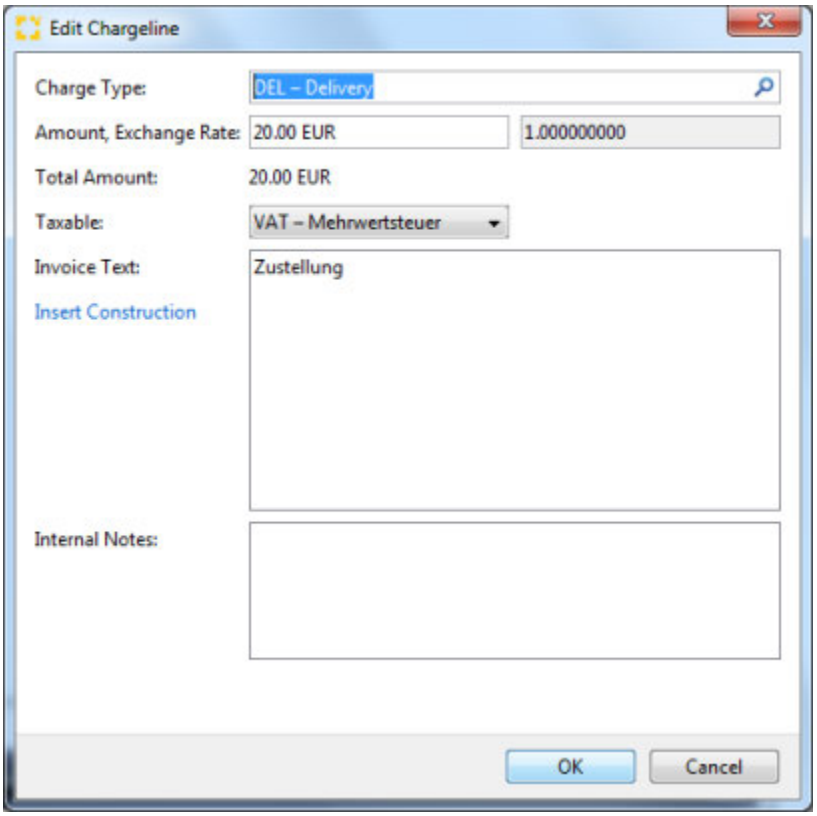
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

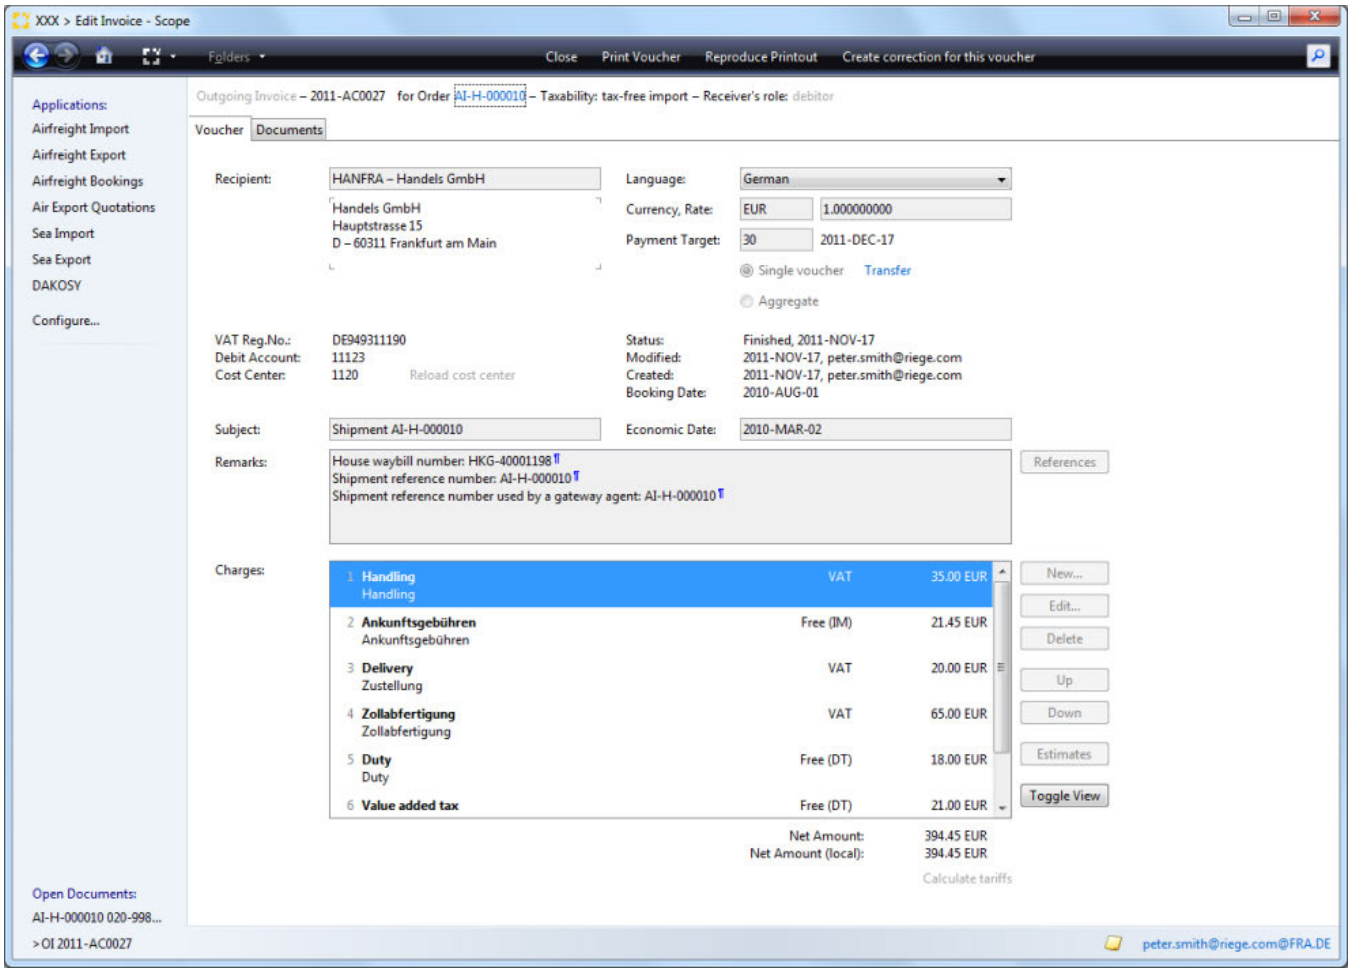
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

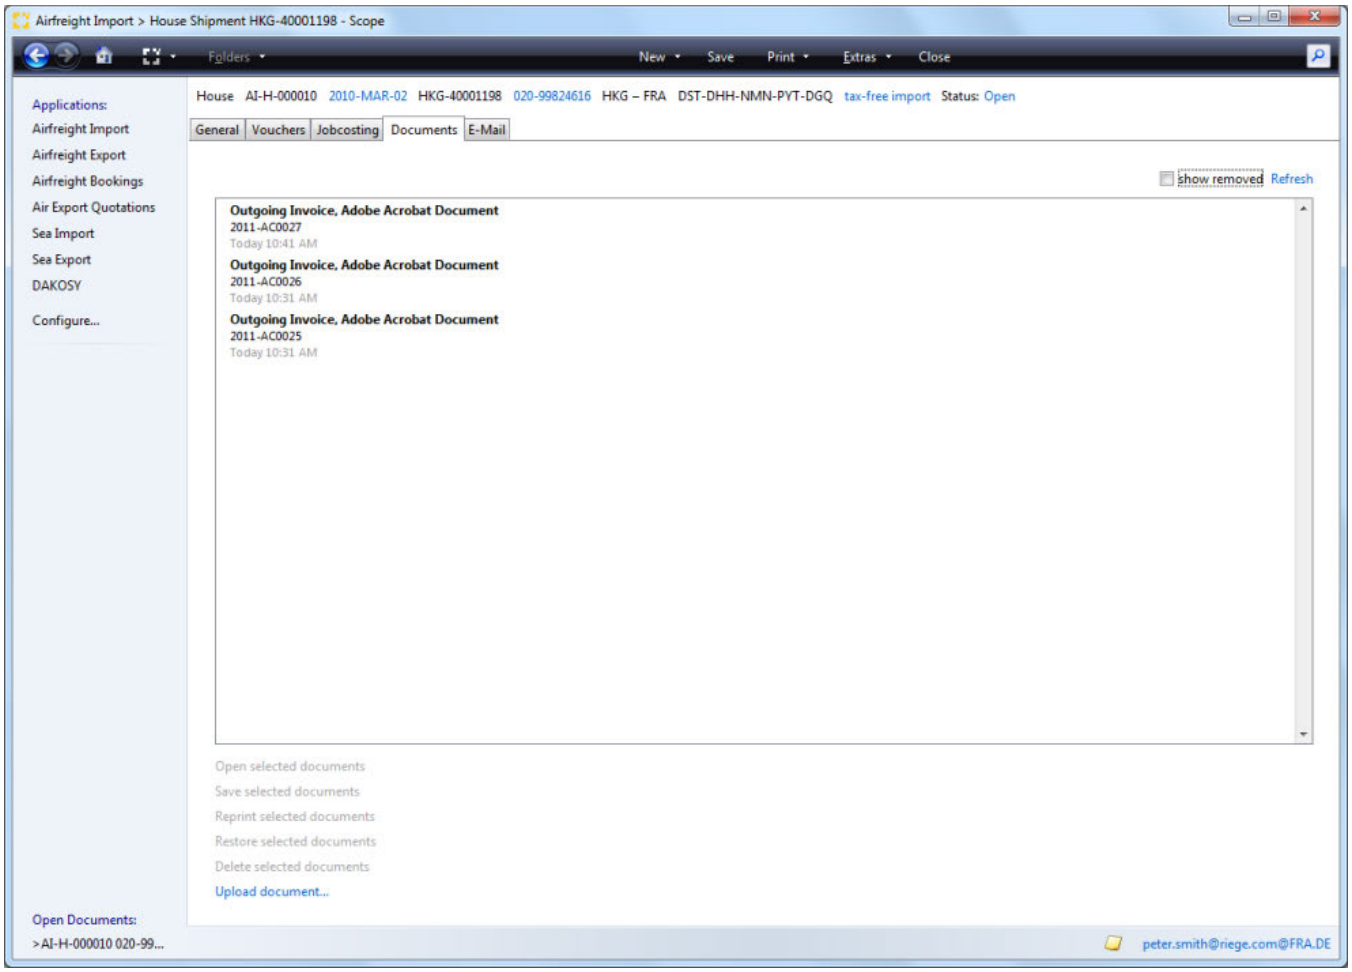
Documents - Master Shipment - Airfreight Import

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

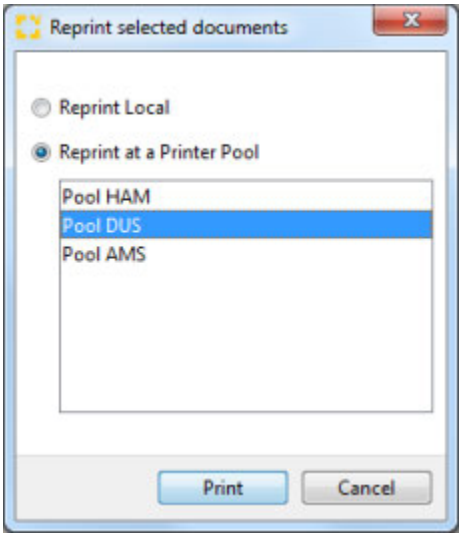
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

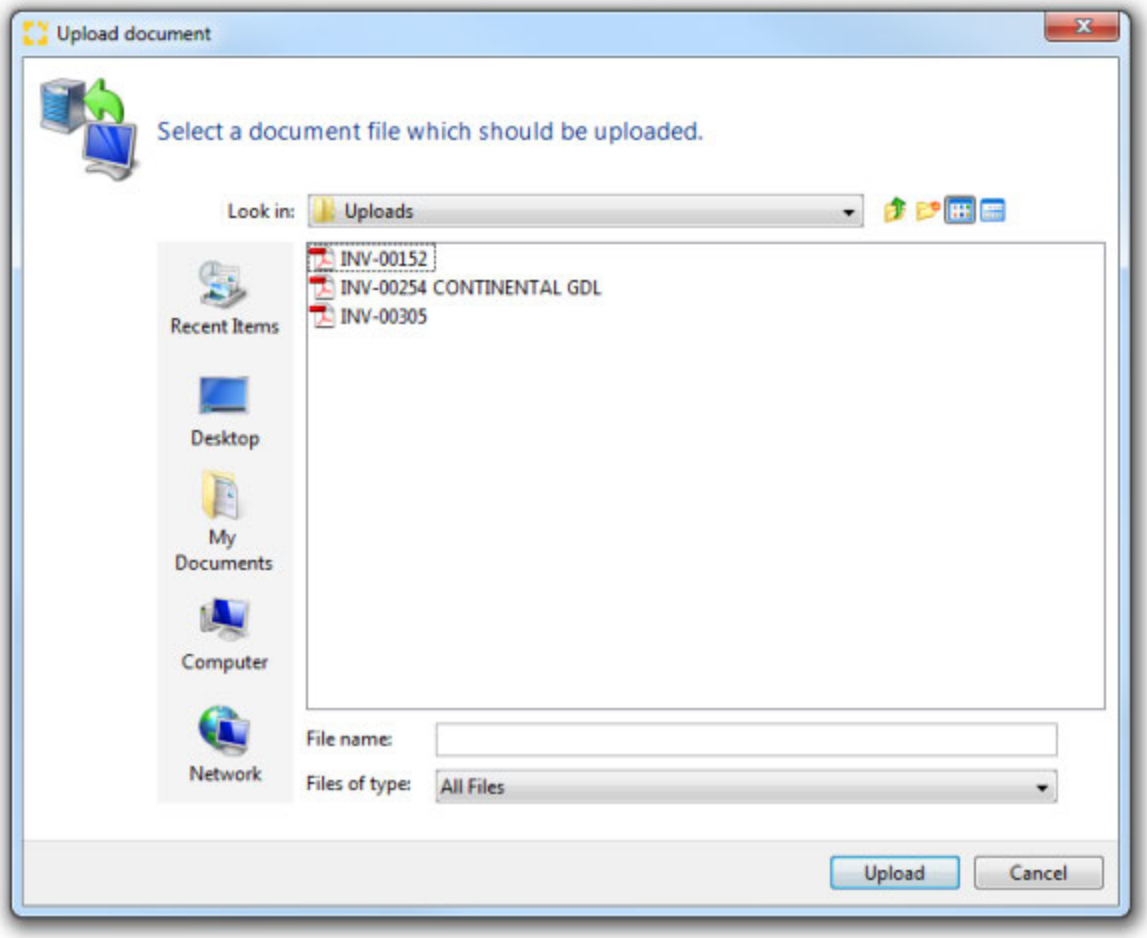
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

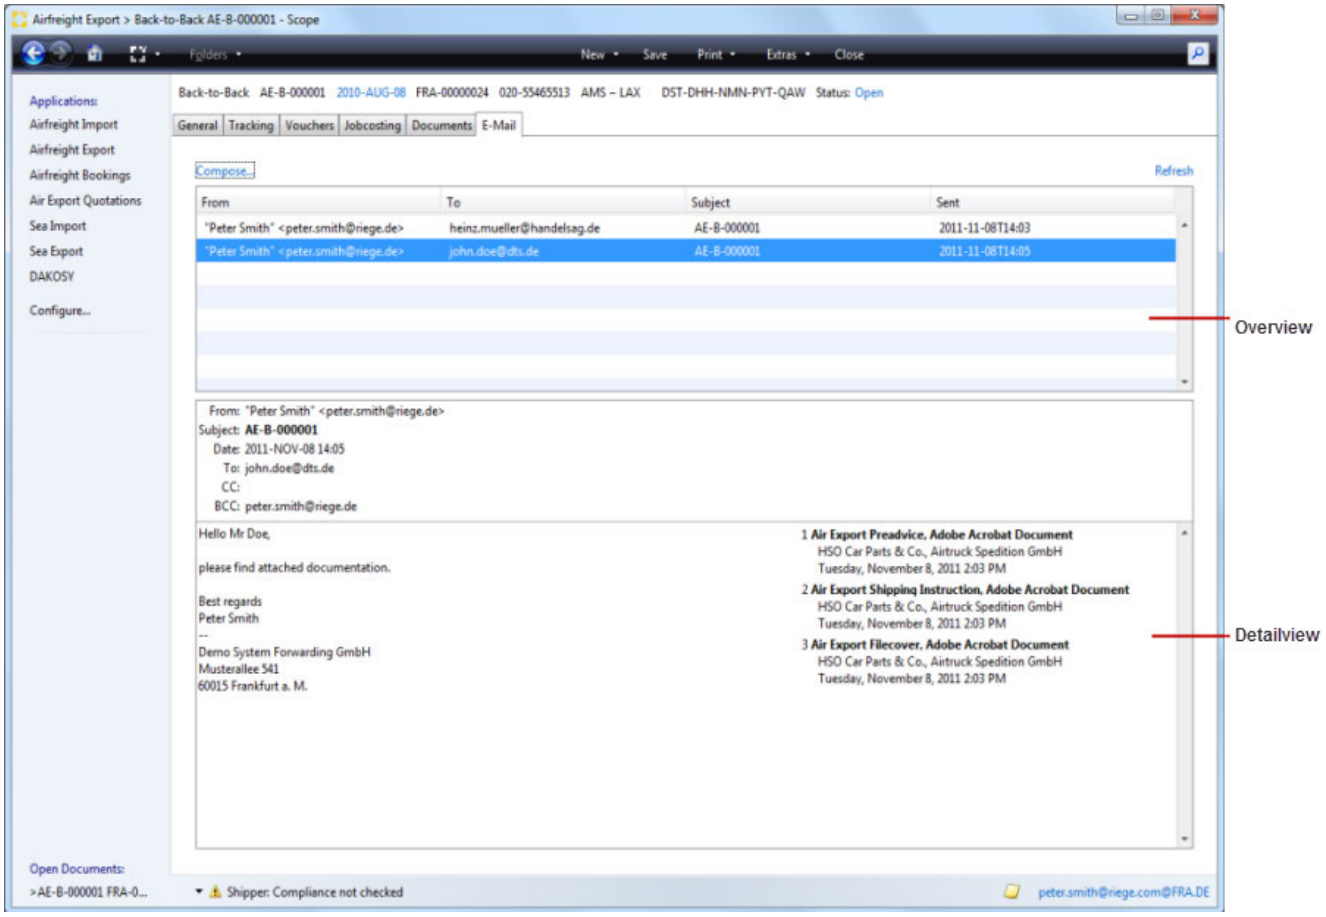
E-Mail - Master Shipment - Airfreight Import

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

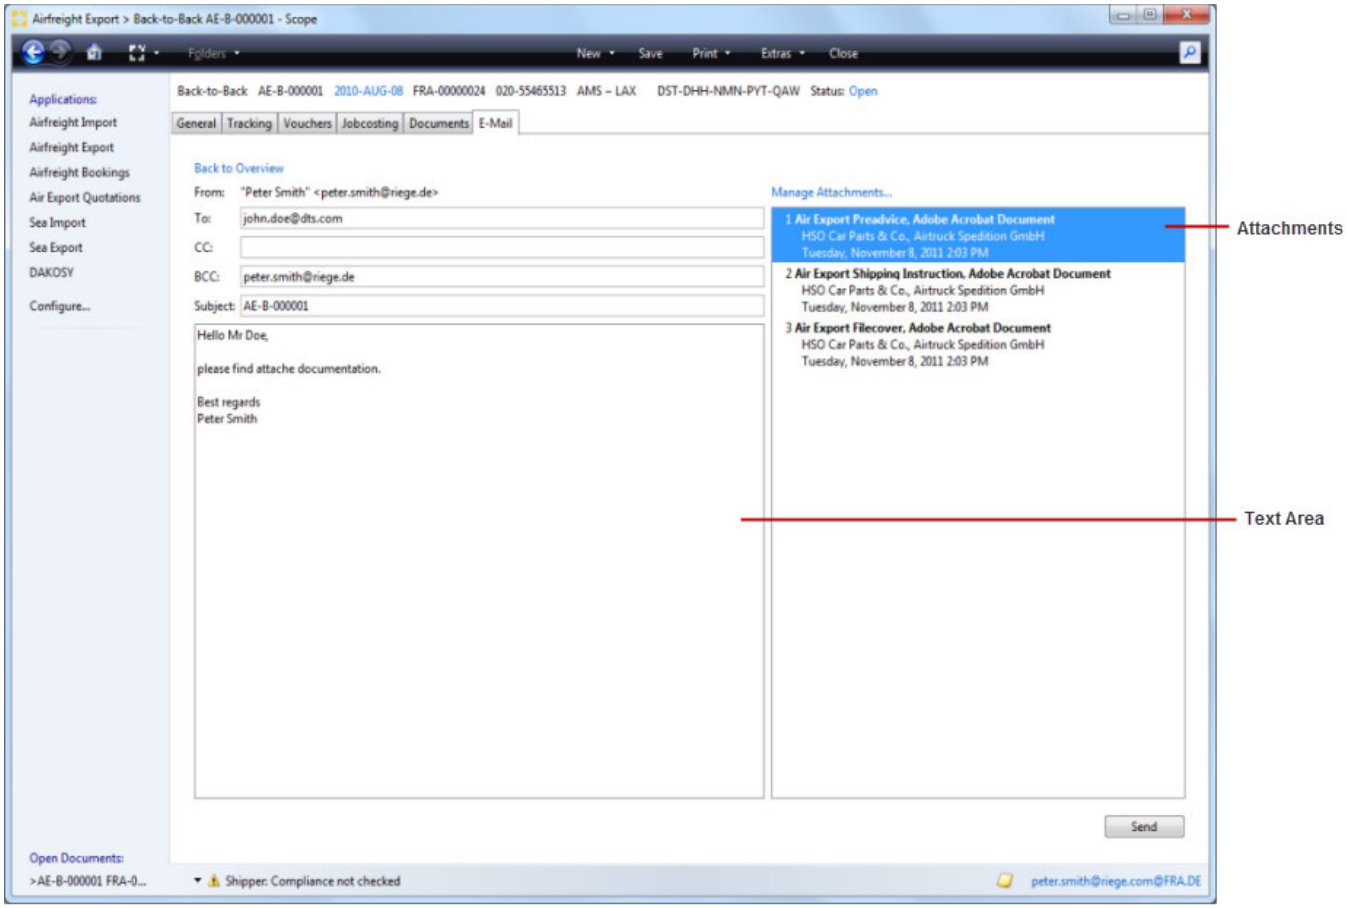
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

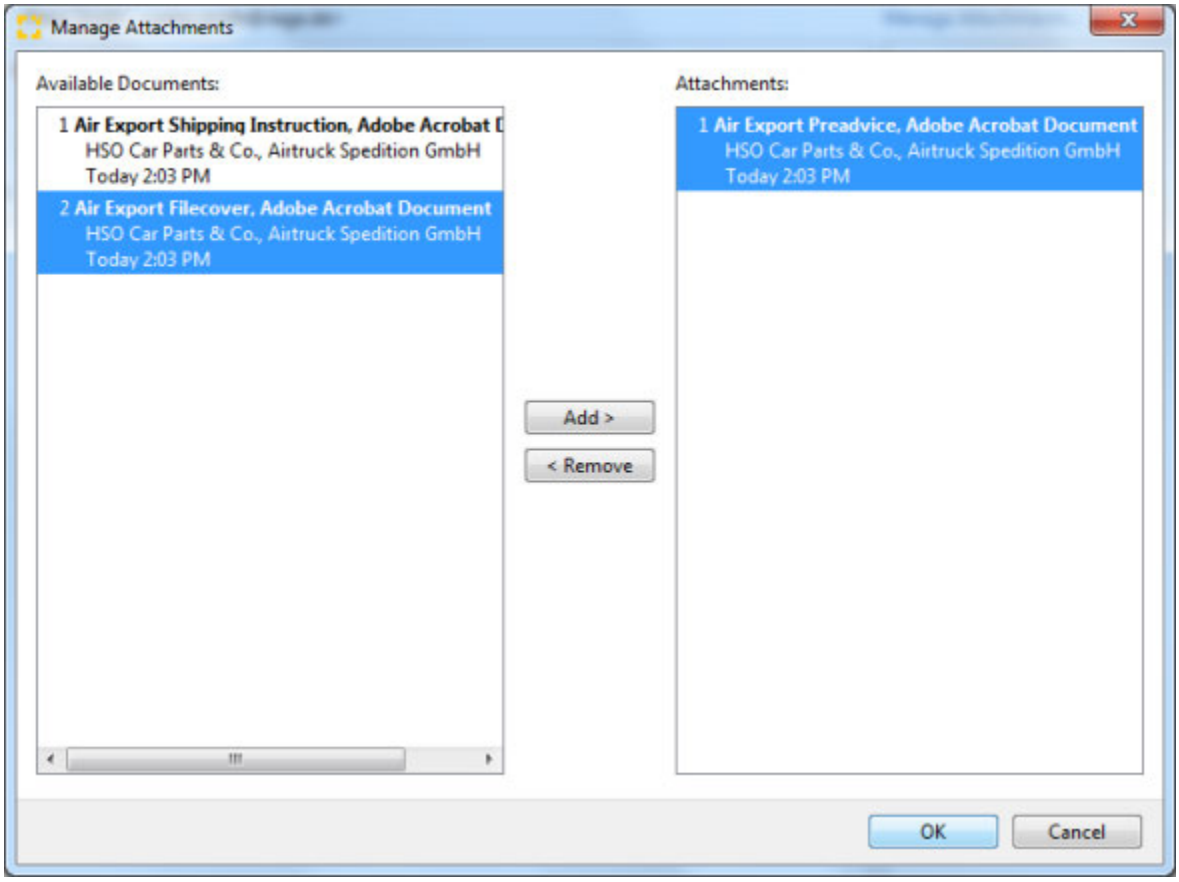
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

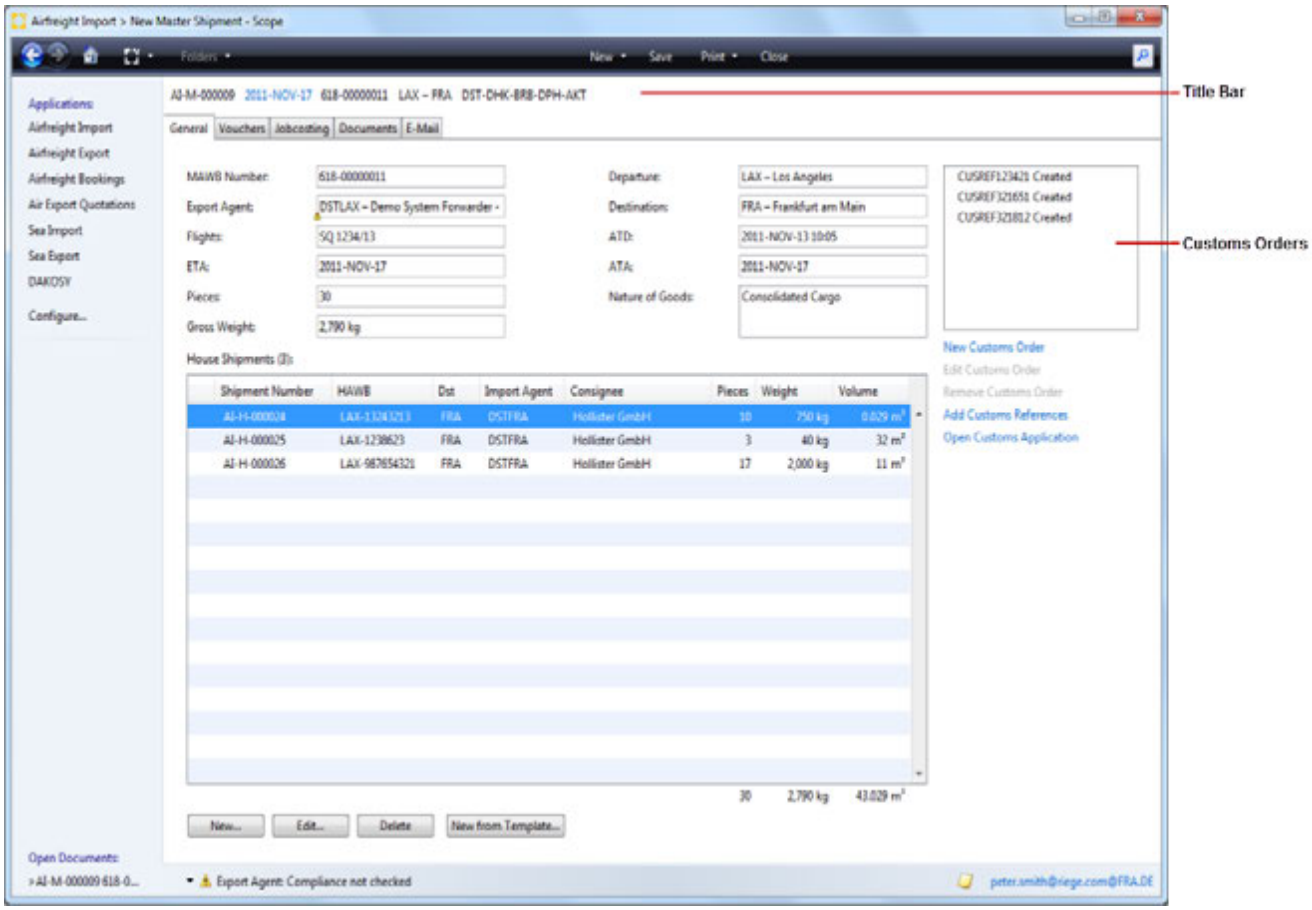
General - Master Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **General** tab of the master shipment enables entry of basic shipment data such as the shipment number, the shiooer, consignee, number of packages and the total weight of the master shipment are recorded. The house section of this tab allows the most important data for the house shipments that are included in the master consolidation. The process of registering these house shipments as "short" shipments allows the subsequent creation of complete house shipments.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information appears in the title bar for a shipment and blue text indicates that the text has an action link and offers further action.

- **Shipment number**
  Created by the system when the shipment is first saved.
- **Service Date**
  The arrival date of the program is set as follows:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

When present-ATA (Actual Time of Arrival / actual arrival date)
otherwise ETA (Estimated Time of Arrival / Expected arrival date)
The current date is automatically stored and updated to match any ETA or ATA as long as the new date is within the same month as the displayed date. If the new date falls within a different month from that displayed, the date will not change unless it is clicked (action link), in which case it will update to show the revise ETA or ATA dates.

- **Air Waybill number**
  MAWB number in the corresponding box of the consolidation program.
- **Departure airport - Destination airport**
  Departure and destination of the shipment entry
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.

MAWB Number

Master Airwaybill Number (IATA freight waybill number) for the master shipment.

Departure

Airport of departure of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Export Agent

The station which has exported the master shipment. The desired agent can be located using the search field. The search will only consider business partners who have the role of agent and this agent role must include the departure airport of the shipment.

Flight

Flight data for the shipment.

ATD

Actual date and time of departure of the master shipment

ETA

Estimate arrival date and time of the master shipment.

ATA

Actual date and time of arrival of the master shipment.

Pieces

Total number of packages on the consolidation.

Gross Weight

Gross weight of the entire consolidation.

The number of packages (Pieces, weights and volumes) on each house shipment is not assigned to them from the master shipment. Instead, within each house the total number of packages for each house must be entered. On finalizing the consolidation, a total the house packages (Pieces, weights and volumes) is calculated and compared against the master totals. This is a check that the figures entered on the master and houses are correct.

Nature of goods

A description of the goods on the consolidation. This will default to *Consolidated Cargo*

House Shipments

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the most important house details (Shipment number, HAWB number, destination, import agent, consignee, number of pieces, weight and volume. *Double Clicking* one of the house shipments in the display will open the house in the fast shipment editor.

Concept of _Consolidation- / Master Shipment_

- It is assumed an import house shipment cannot exist without a corresponding consolidation. Therefore since the master shipment must be created first to create the consolidation, the fast house shipment entry program is available within the master shipment to quickly enter the basic details about the house shipment and speedily construct the complete consolidation.
- Import house shipment can easily be transfer to other agent offices (Gateway Function)
- After the quick creation of a house shipment, this will only be stored -temporarily_. Only when the full house shipment is saved for the first time in the import house shipment editor will a shipment number be assigned. At the same time the import house shipment will appear in the consolidation listing with the icon ✓ next to it. This confirms the house has been processed by the relevant department and is ready for further processing.

New

Opens the fast house shipment entry program in order to enter a new house shipment

Edit

Opens the house shipment highlighted in the house overview using the fast house shipment entry program in order to edit it. The entry can only be edited if it remains unaccepted (the ✓ is not present). If the house shipment has been accepted, only the house information will be displayed. Any changes must be made using the import house shipment editor

Delete

Deletes the house shipment highlighted in the house overview. The entry can only be deleted if it remains unaccepted (the ✓ is not present).

New Customs Order

Opens the customs application to create a new customs order.

Edit Customs Order

Opens the customs order highlight in the list with the customs order editor for further editing.

Remove Customs Order

Removes the customs order highlighted in the list.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

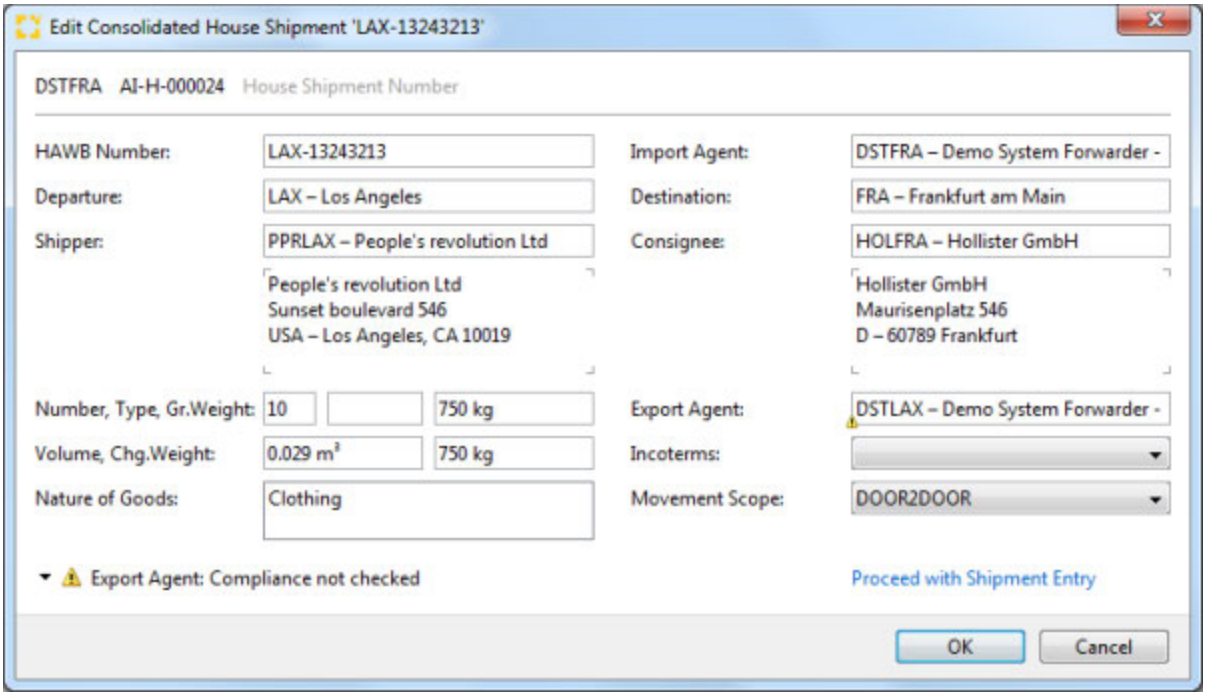
Open Customs Application

Opens a customs entry applications if available.

- More information on customs applications is available in the Customs section of the manual.

House shipment fast entry

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Tile Bar

The titlebar displays the following information:

- Gateway Agent (The agent who received the master shipment. This is usually the local branch.)
- Gateway Agent Shipment number (This is assigned by the fast house entry application.)
- Import Agent shipment number. This number is assigned when the house shipment is saved with the house shipment editor.

> I the Gateway agent and the Import Agent are the same then the Gateway shipment number and Inport Agent shipment number will be identical. They will only differ if the house shipment is transferred to a different branch.

HAWB Number

The House bill number of the house shipment.

Import Agent

The import agent determined for the house shipment by default this will be the current office.

Departure

The departure airport for the jouse shipment. The field search function can be used to locate the correct airport.

Destination

The destination airport for the house shipment. The field search function can be used to locate the correct airport.

Shipper

The shipper of the house shipment. The field search function can be used to locate the correct shipper.

Consignee

The consignee for the house shipment. The field search function can be used to locate the correct consignee.

Ttl. Pcs., Wght., Vol.

The total pieces, gross weight and volume for the house shipment.

Nature of Goods

A description of the goods in the consignment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Export Agent

The agent responsible for exporting the shipment. This will default to the export agent applied to the master shipment.

Incoterms

The commercial delivery terms for the shipment

Movement Scope

The scope of the agreed movement of the cargo for this shipment

Proceed with shipment entry

This action link will save the fast shipment entry and launch the house shipment editor for completion of the full house shipment.

OK

Saves the fast shipment and closes the fast entry shipment editor.

Cancel

Closes the fast shipment editor without further action.

Tip

Use the keyboard short cut **Ctrl + I** to show information about the current user of the session. This will display the user name, email address and telephone number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

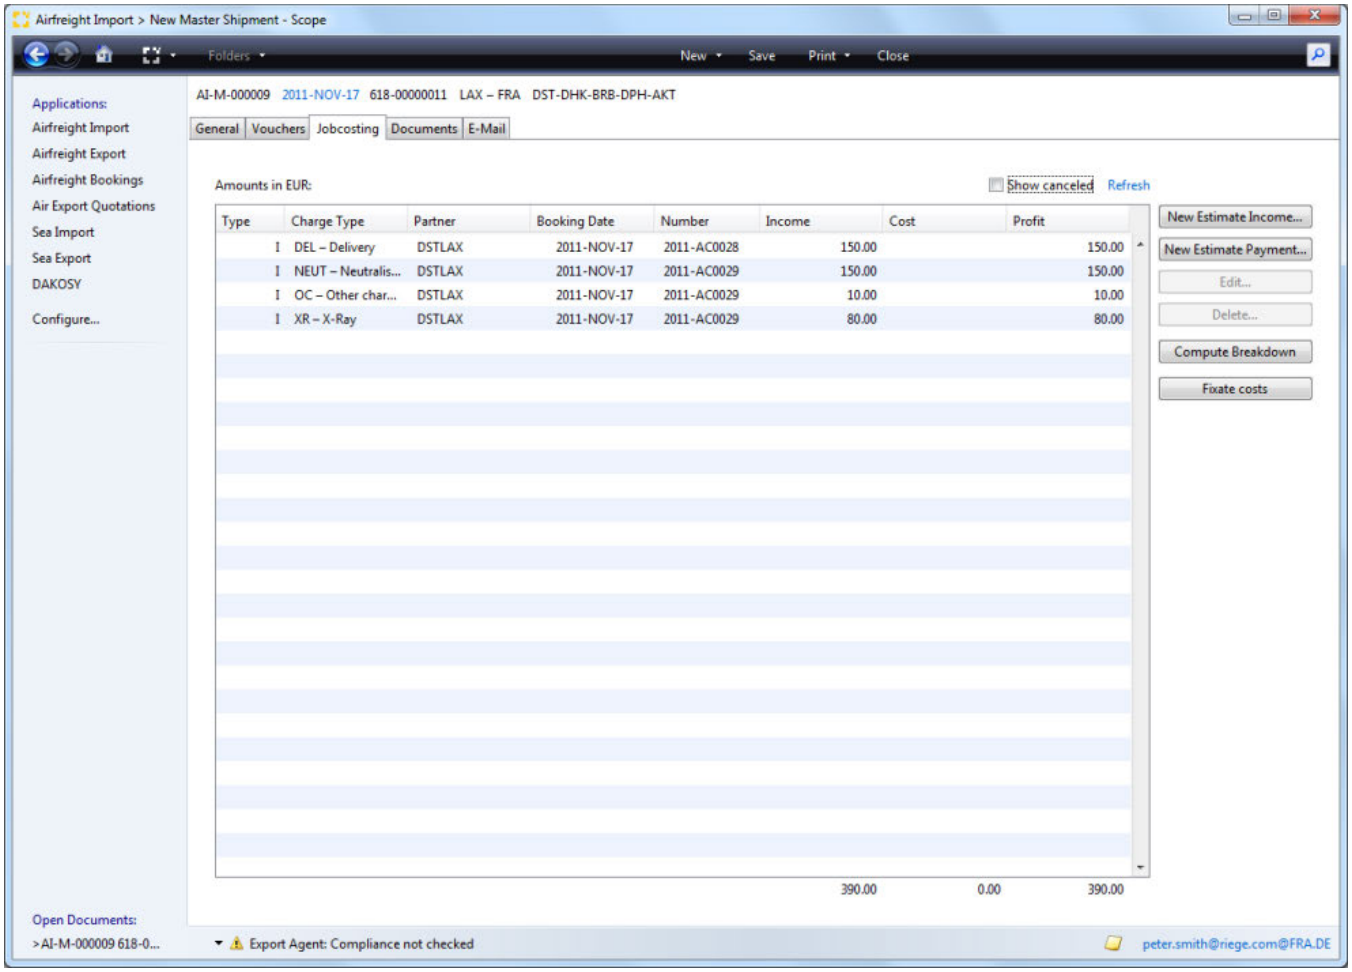
Jobcosting - Master Shipment - Airfreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated. Costs and revenues on the master shipment will also be automatically pro-rated and transferred to the house shipments that are included in the master consolidation.

Description



Main menu bar and title bar

see **General** tab

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

New Estimate Income

Opens charges editor and allows entry of a new estimate income.

New Estimate Payment

Opens charges editor and allows entry of a new estimate cost.

Edit

Opens the charges editor to edit the **estimated** charge highlighted in the overview of charges.

Delete

Deletes the **estimated** charges highlighted in the overview of charges.

> ⚠ Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Compute breakdown

By clicking on this link transfers costs and income to the house shipments. Normally this is done automatically but this function button allows this process to be performed manually.

Turnover in local currency

Individual charges are displayed as income or cost line items. These items can be opened by double-clicking them or by highlighting them and editing them with the charges editor.

Type

The document type.

Charge

The charge type.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

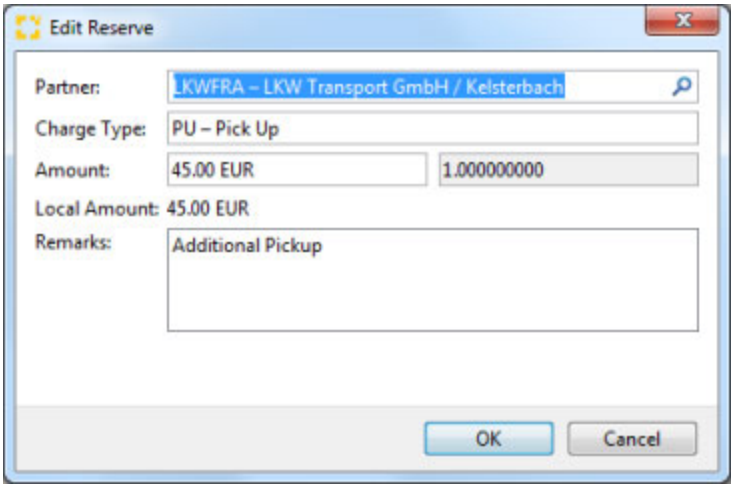
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Direct Shipment - Airfreight Import

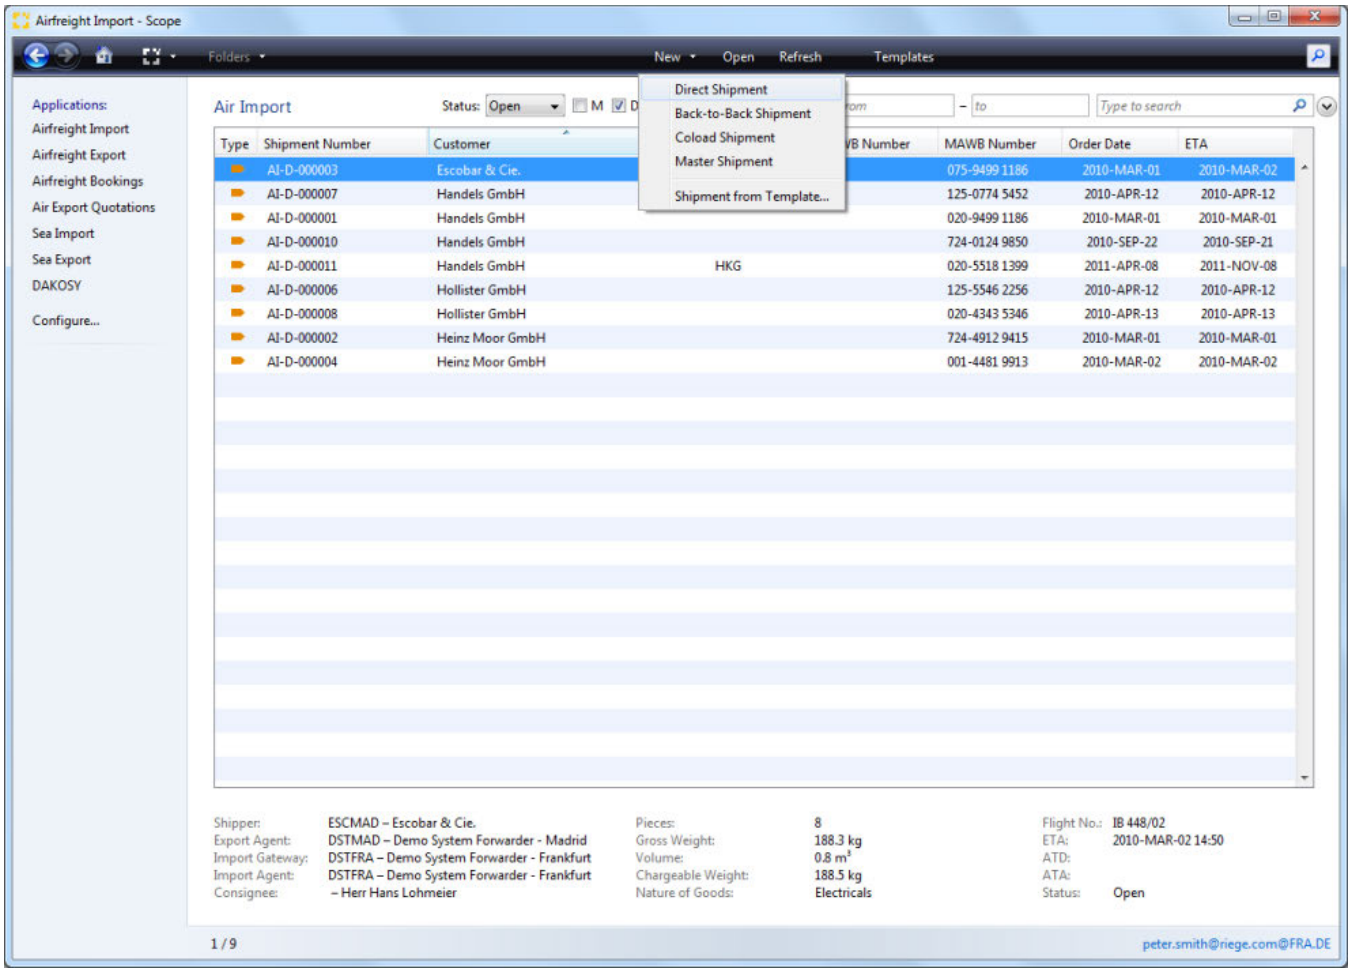
- Introduction
- Description

Introduction

In addition to air freight import related Consolidations, Back-to-Back, Coload- and House, Direct shipments may also be created. As the name suggests, a direct shipment is directly from the shipper to the receiver. These shipments are charged according to a separate offical IATA tariff and are usually expensive since this is the fastest possible method of air transportation. Unlike other types of air freight transportation only a single air waybill (AWB) number is required for a direct shipment.

Within the airfreight import application, all operations related to shipment creation are carried out, this includes data collection, billing, printing of documents and cost control.

Description



With ***New - Direct shipment*** a new direct shipment is created.
With ***Open*** and existing direct shipment can be opened. Alternatively the highlighted direct shipment in the overview can be ***Double clicked***

The functions of each of the shipment editors are described here:

- Billing - Direct Shipment - Airfreight Import
- Documents - Direct Shipment - Airfreight Import
- E-Mail - Direct Shipment - Airfreight Import
- General - Direct Shipment - Airfreight Import
- Jobcosting - Direct Shipment - Airfreight Import

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

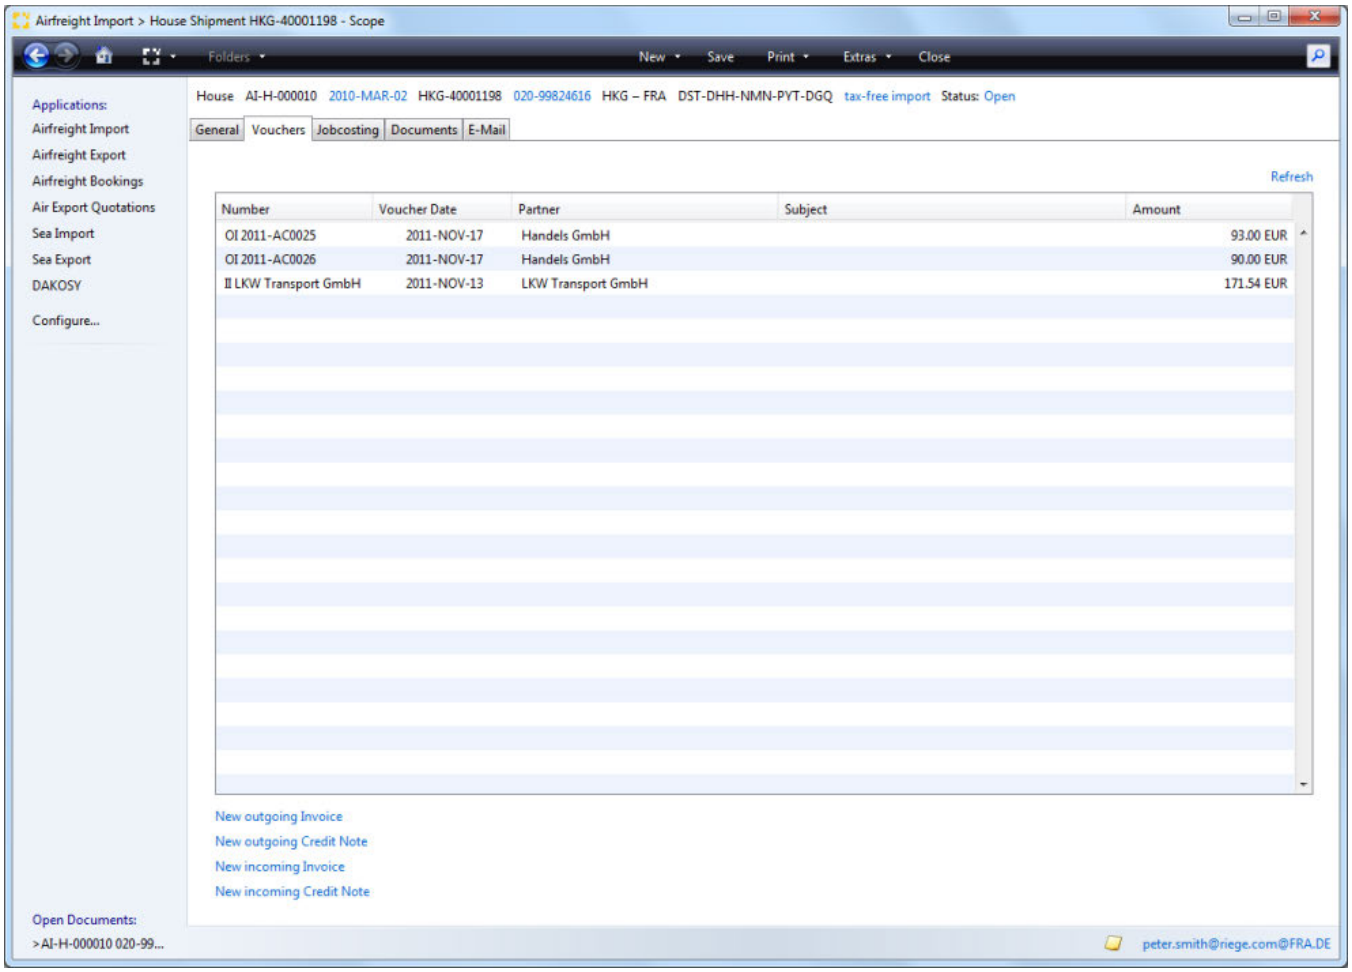
Billing - Direct Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **voucher** tab displays all billings associated with the shipment. Single outgoing and incoming invoices or credit notes can be created or opened for further editing. This allows quick and simple access to the shipment related accounting.

Description



Main menu bar and title bar

see Rider **General**

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Outgoing Credit Note

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Refresh

refreshes the list of vouchers.

Table columns

Number

The number of the document is fixed and will be prefixed with a code indicating the type of voucher.

Voucher Code	Description
OI	Outgoing Invoice
OC	Outgoing Credit note
II	Incoming invoice
IC	Incoming credit note

Voucher Date

The date the voucher was created.

Partner

The party to whom the voucher was issued.

Subject

The subject of the voucher

Amount

the total amount of the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Billing - Direct shipment - Airfreight Import

- Introduction
- Description

Introduction

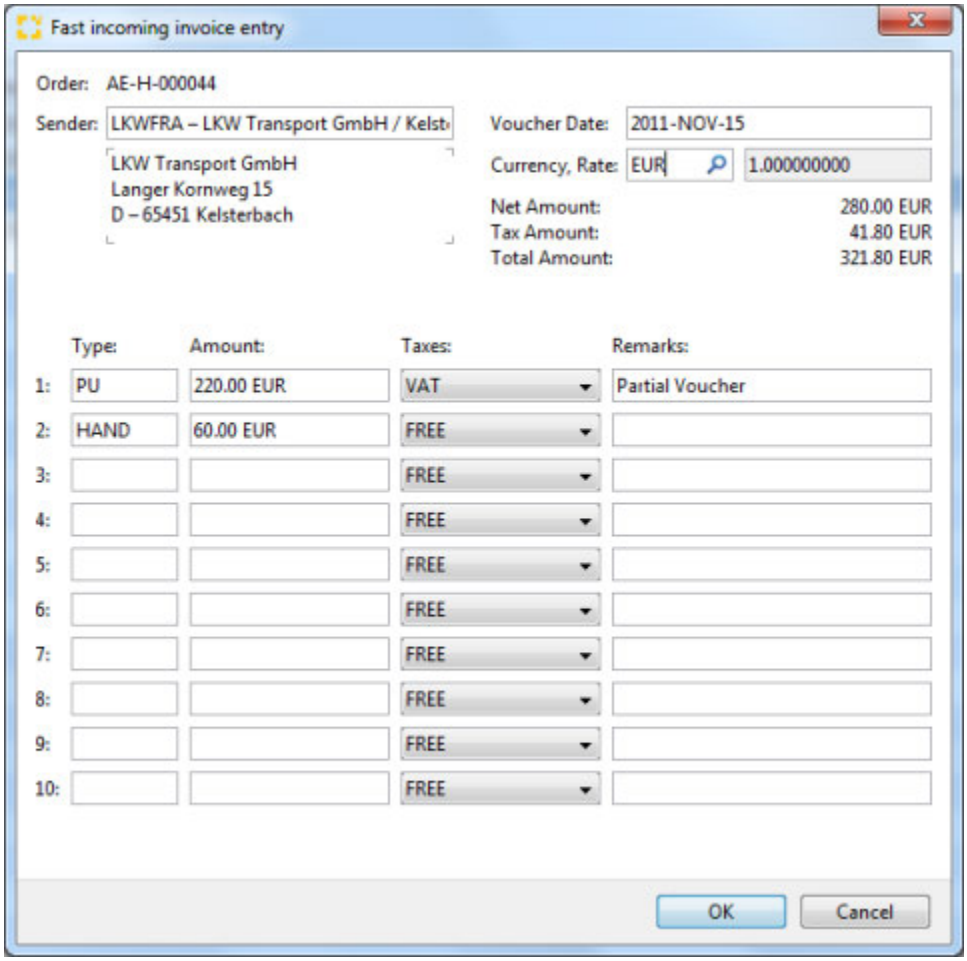
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

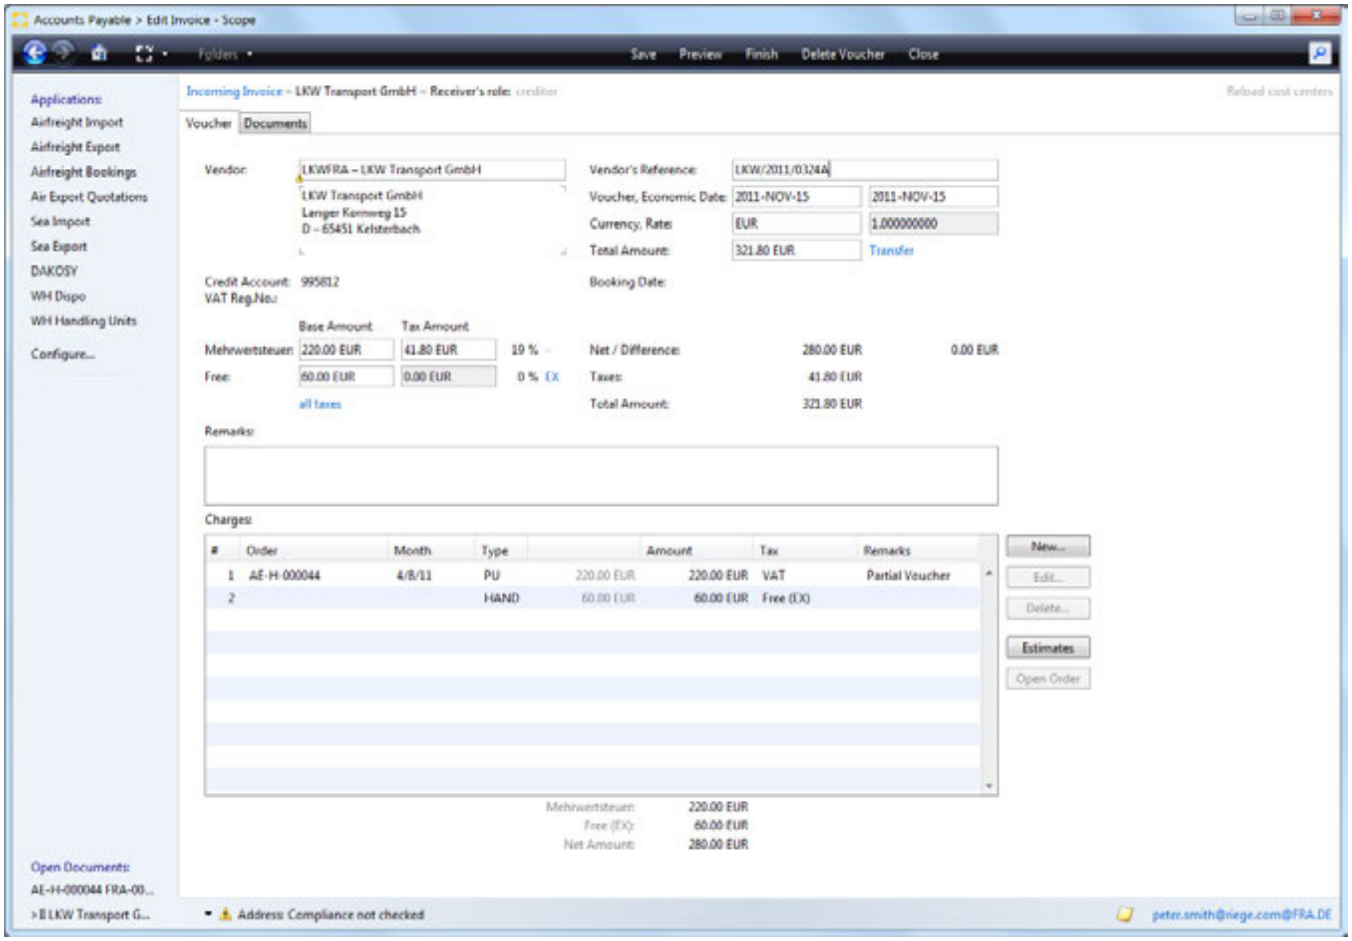
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

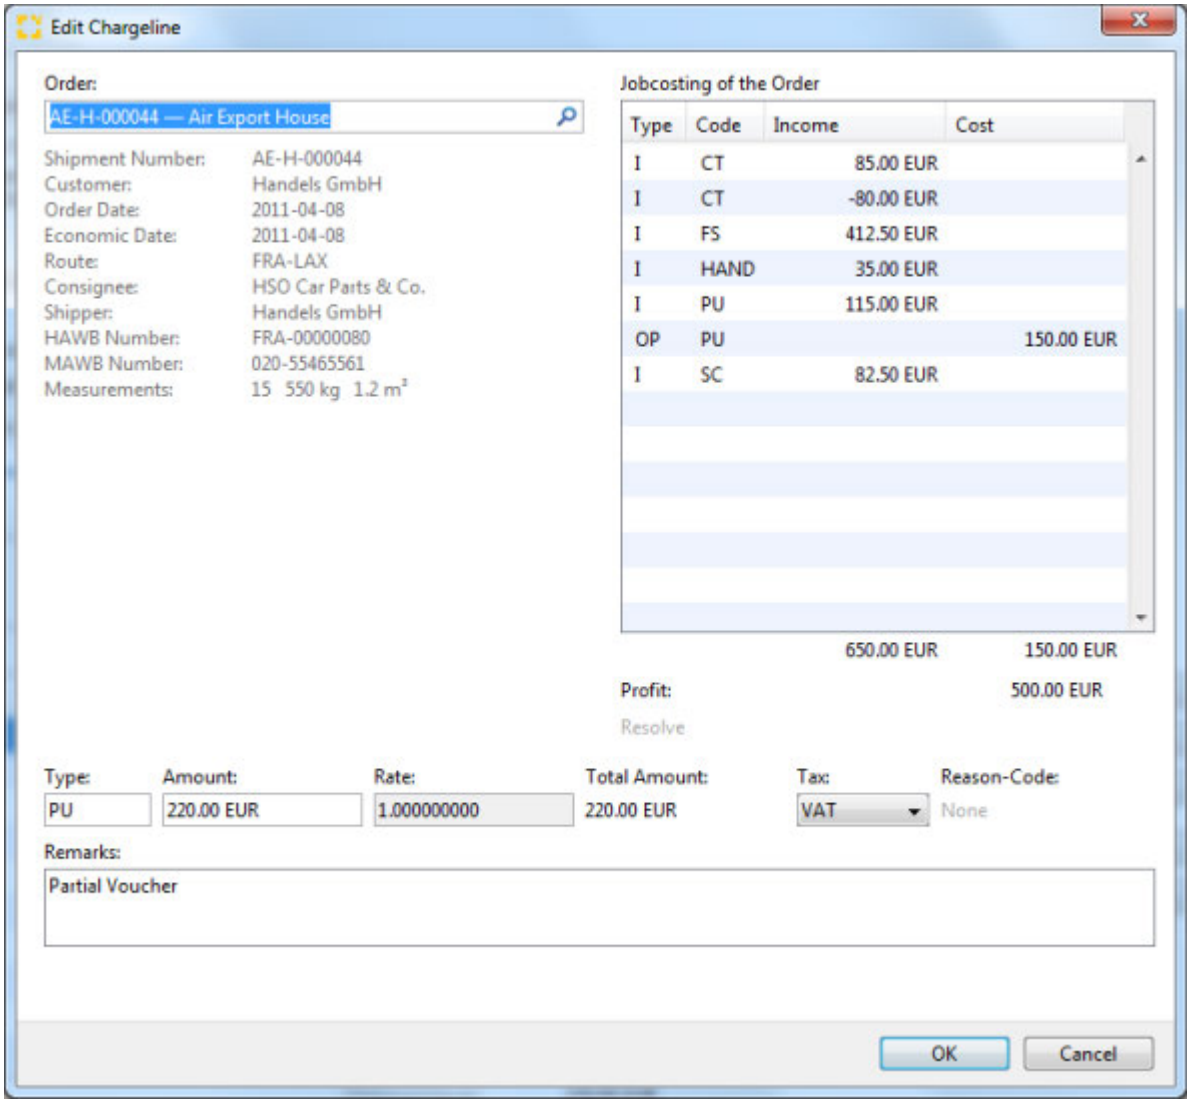
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

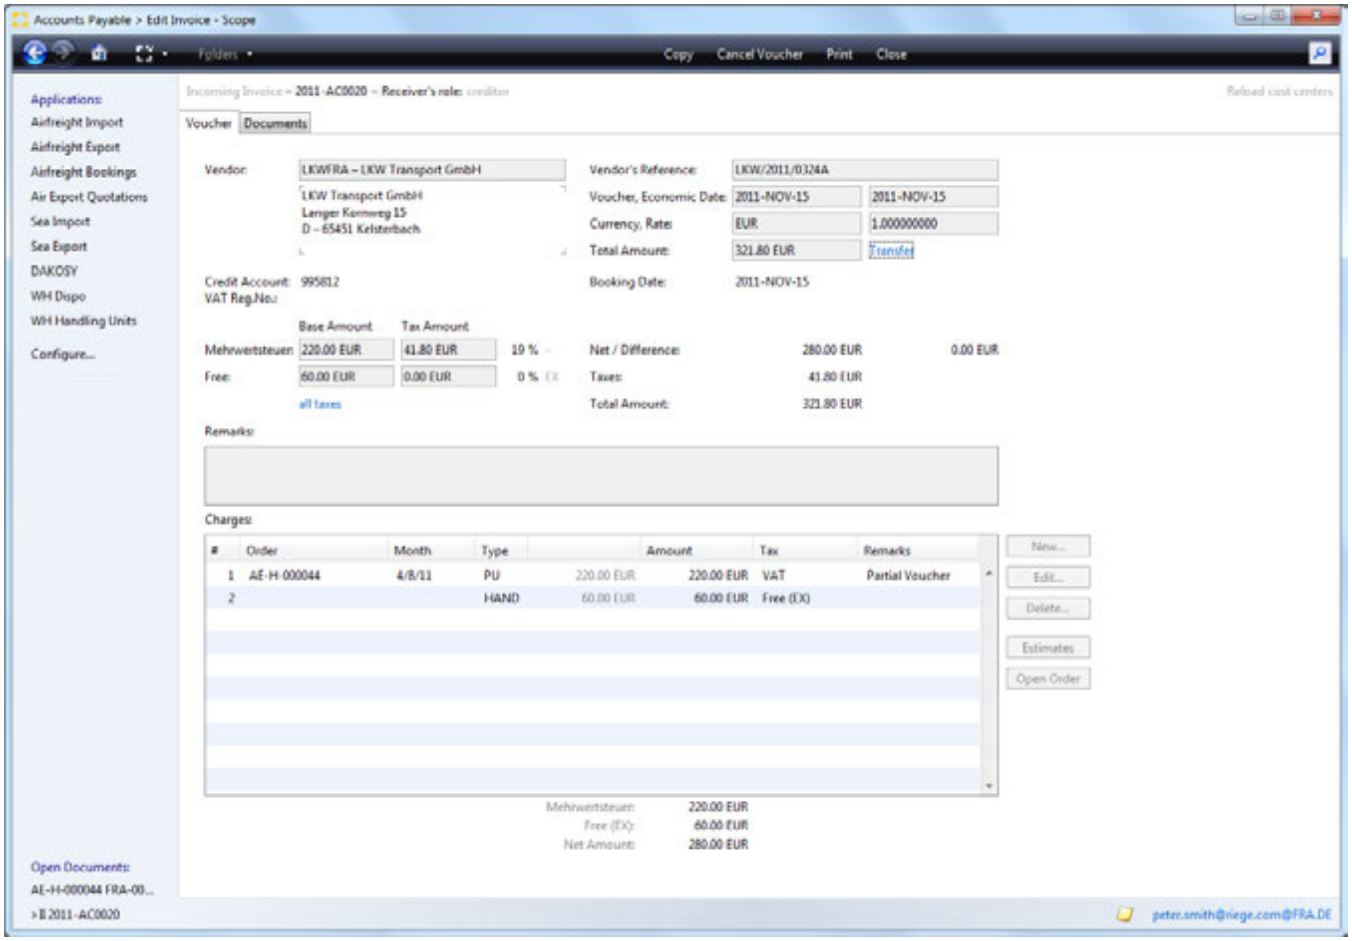
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Outgoing Document - Invoice - Direct Shipment - Airfreight Import

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

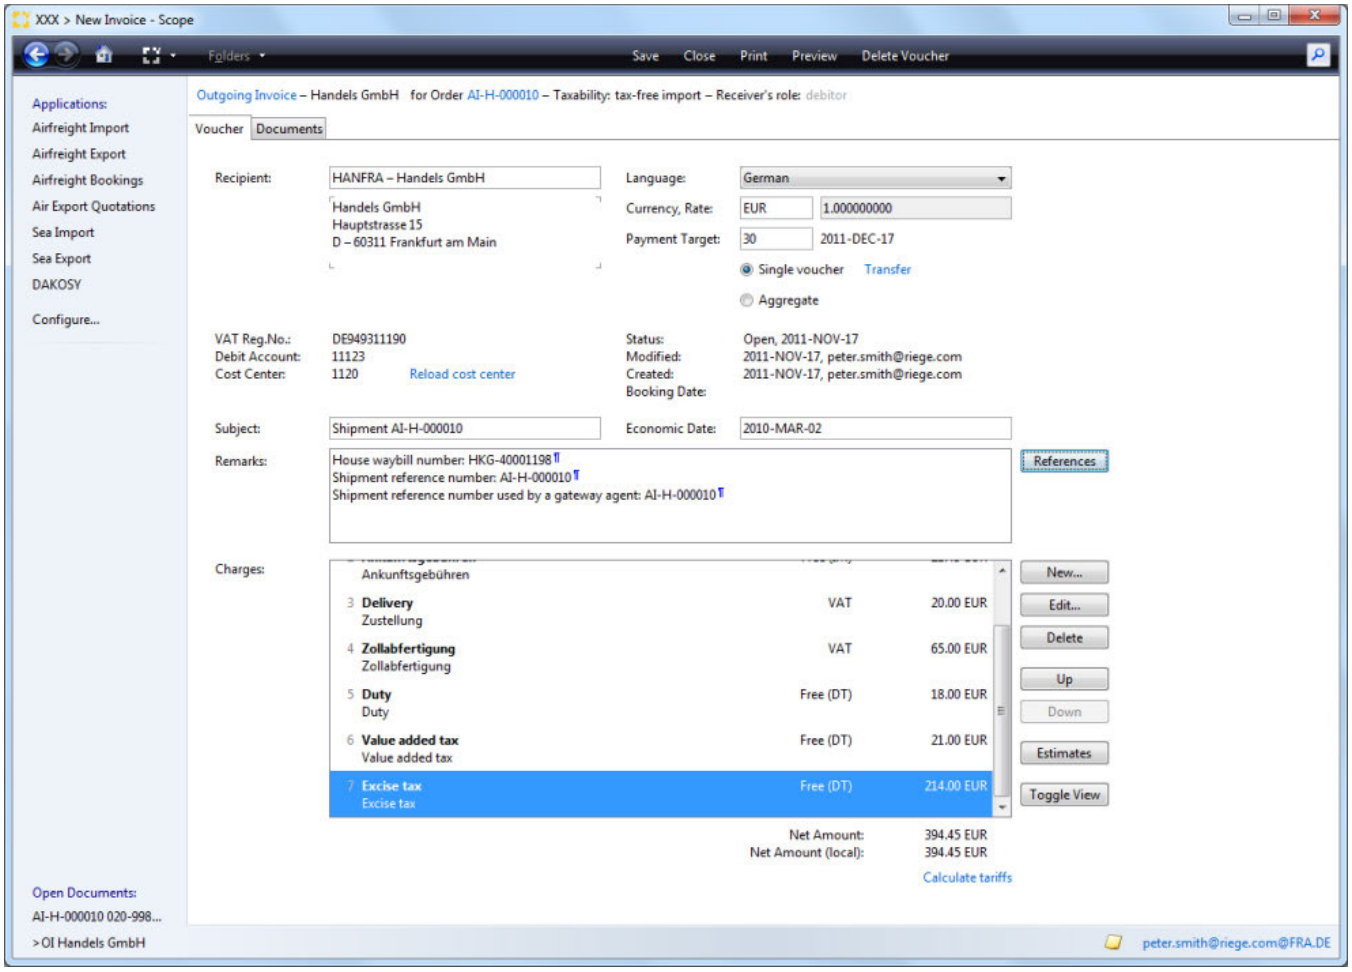
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

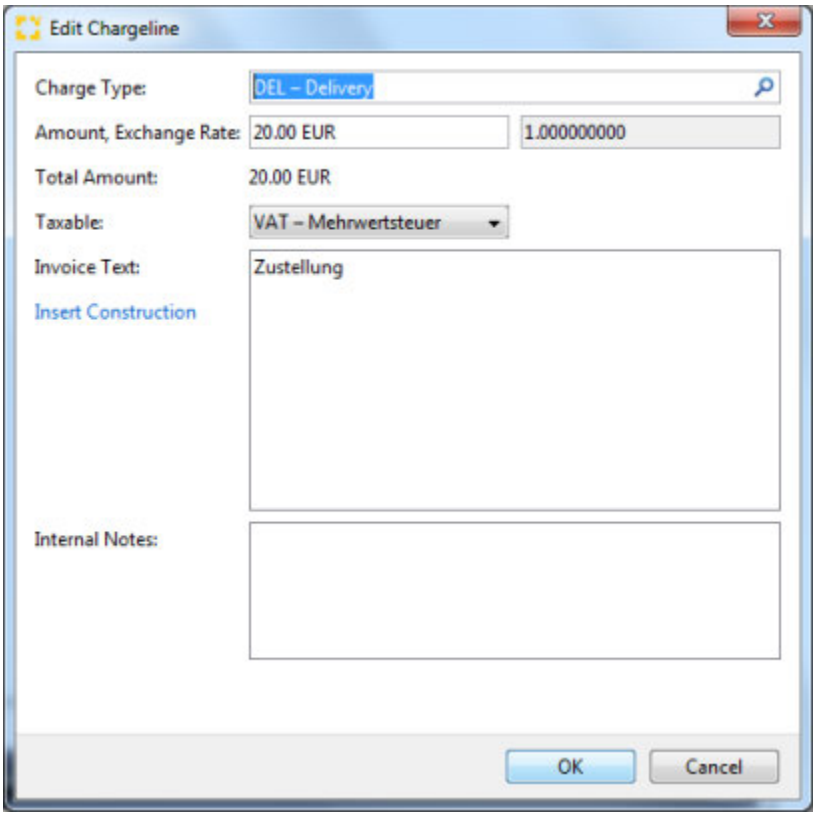
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

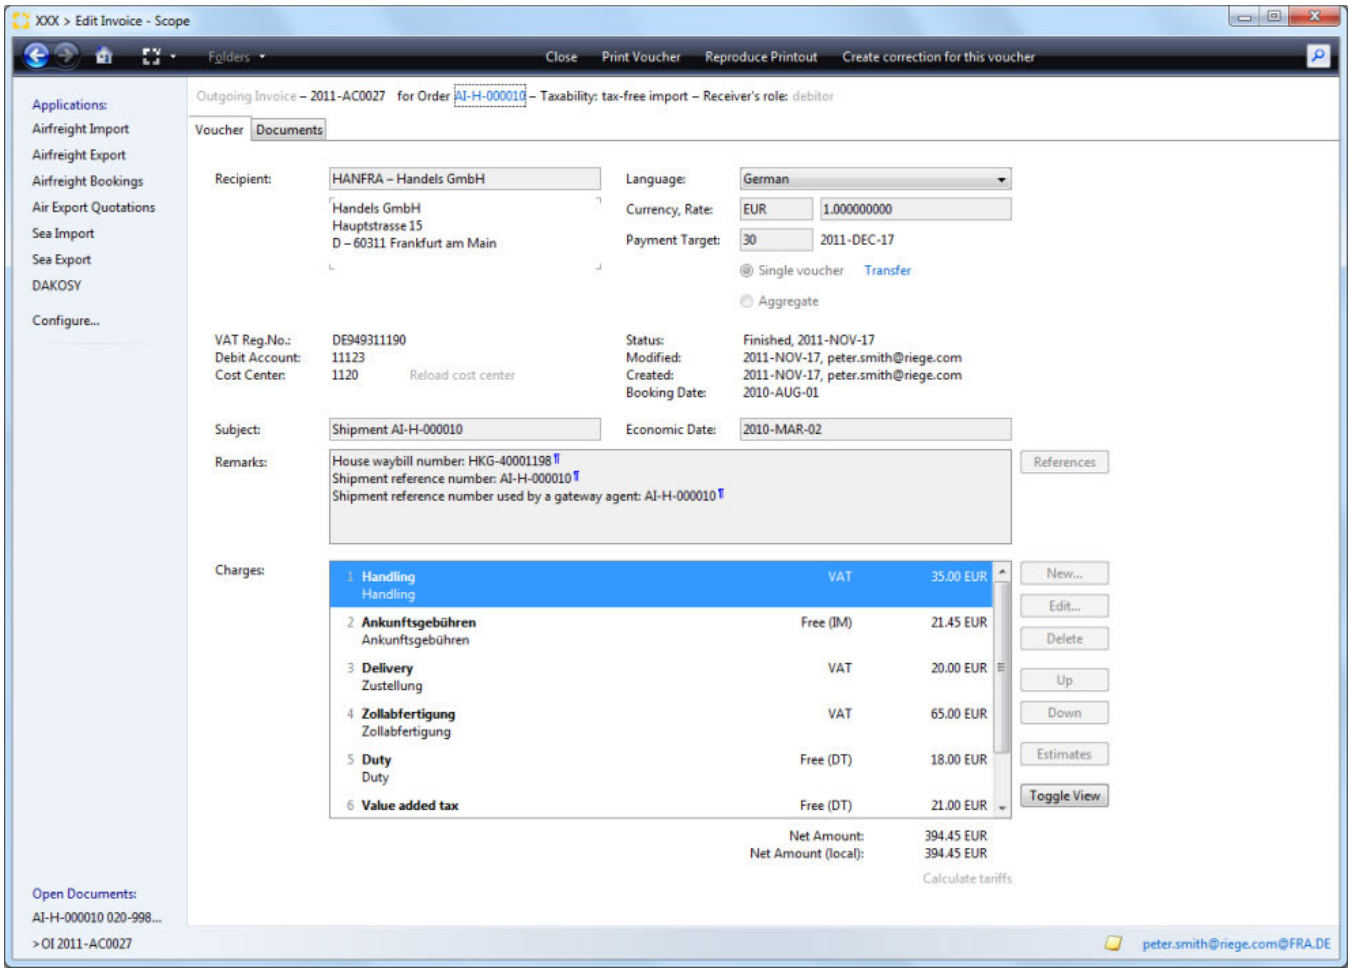
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

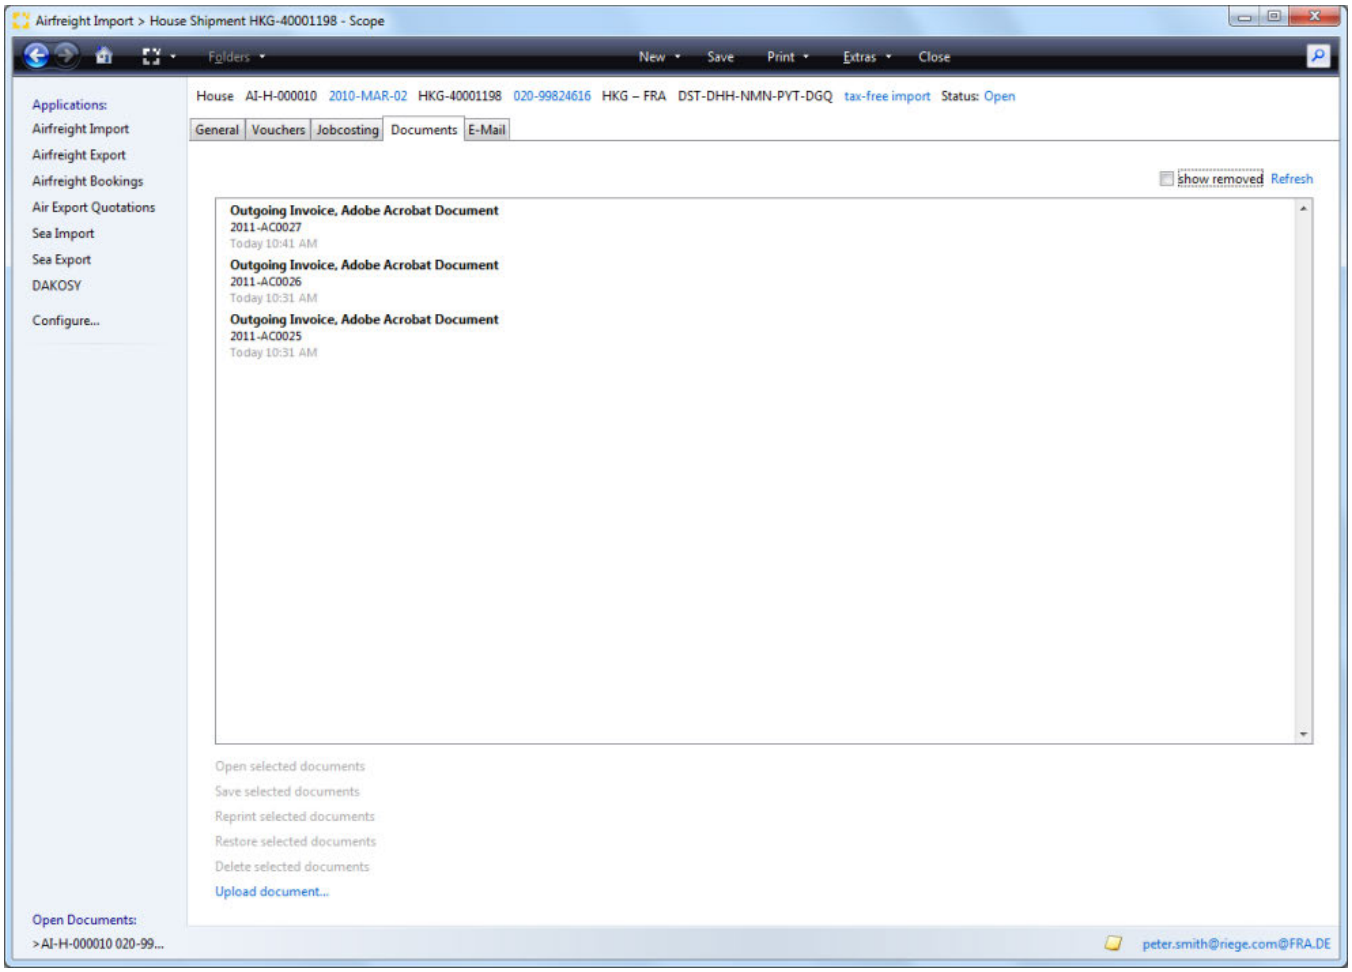
Documents - Direct Shipment - Airfreight Import

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

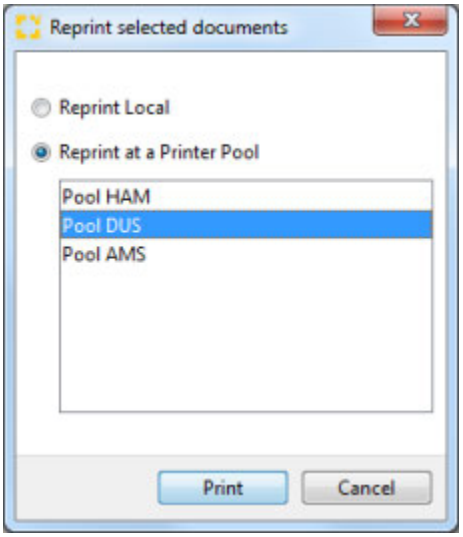
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

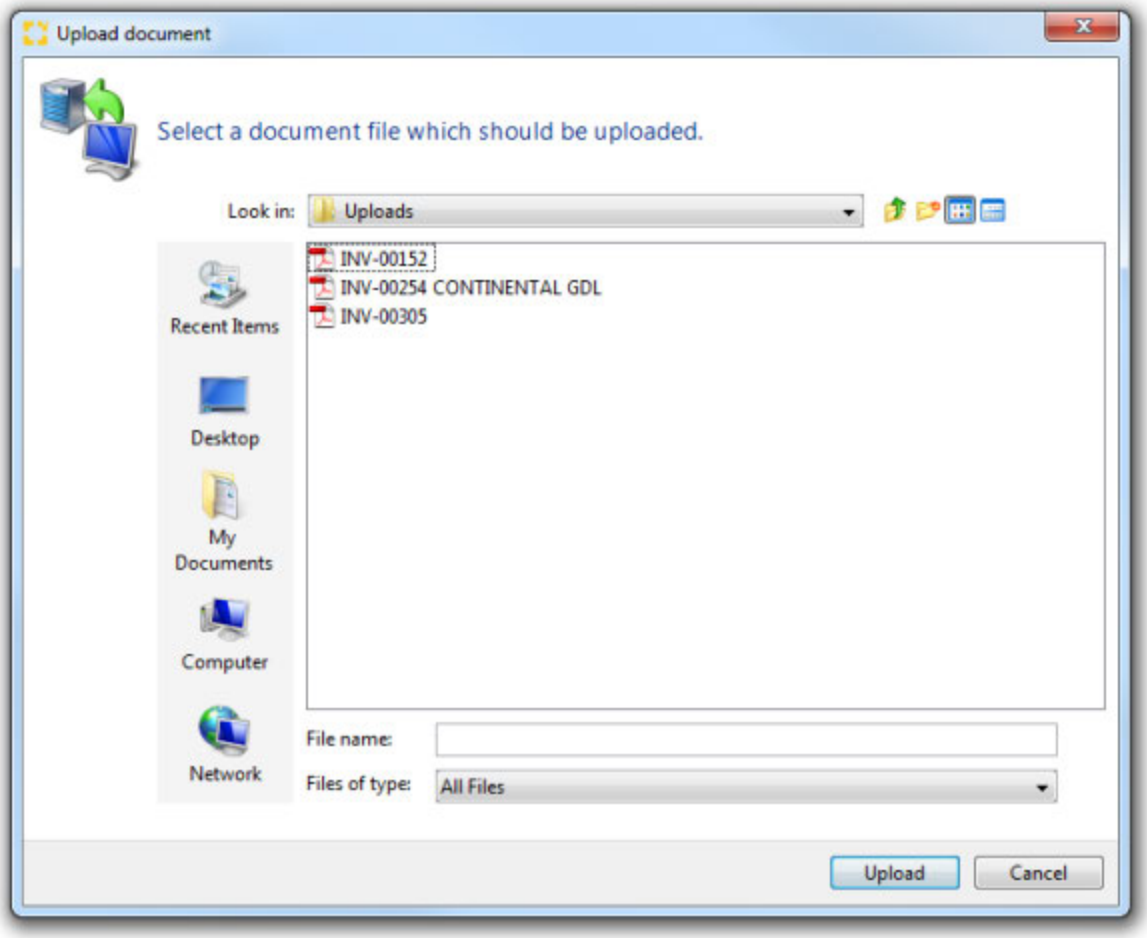
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

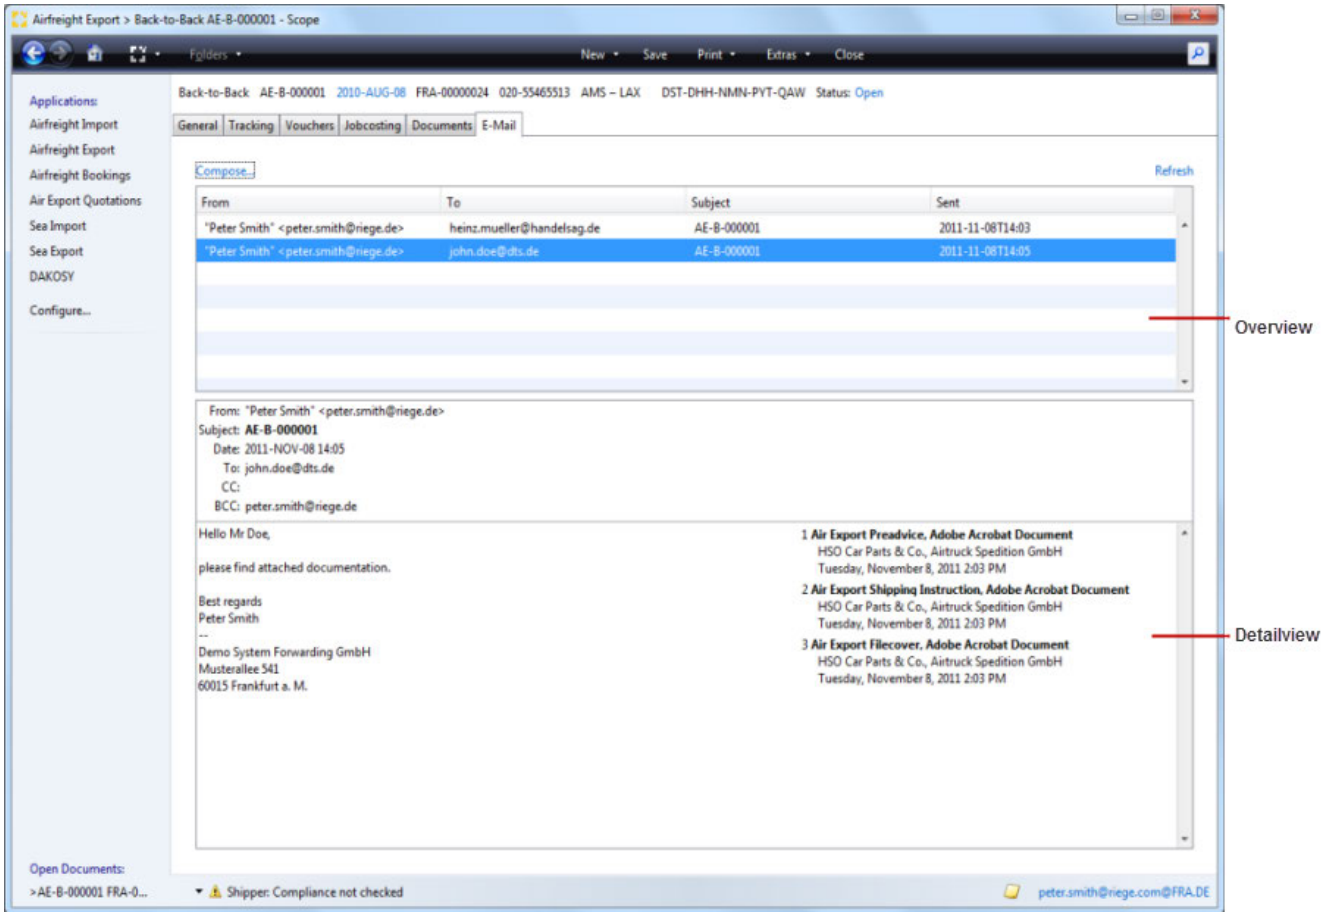
E-Mail - Direct Shipment - Airfreight Import

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

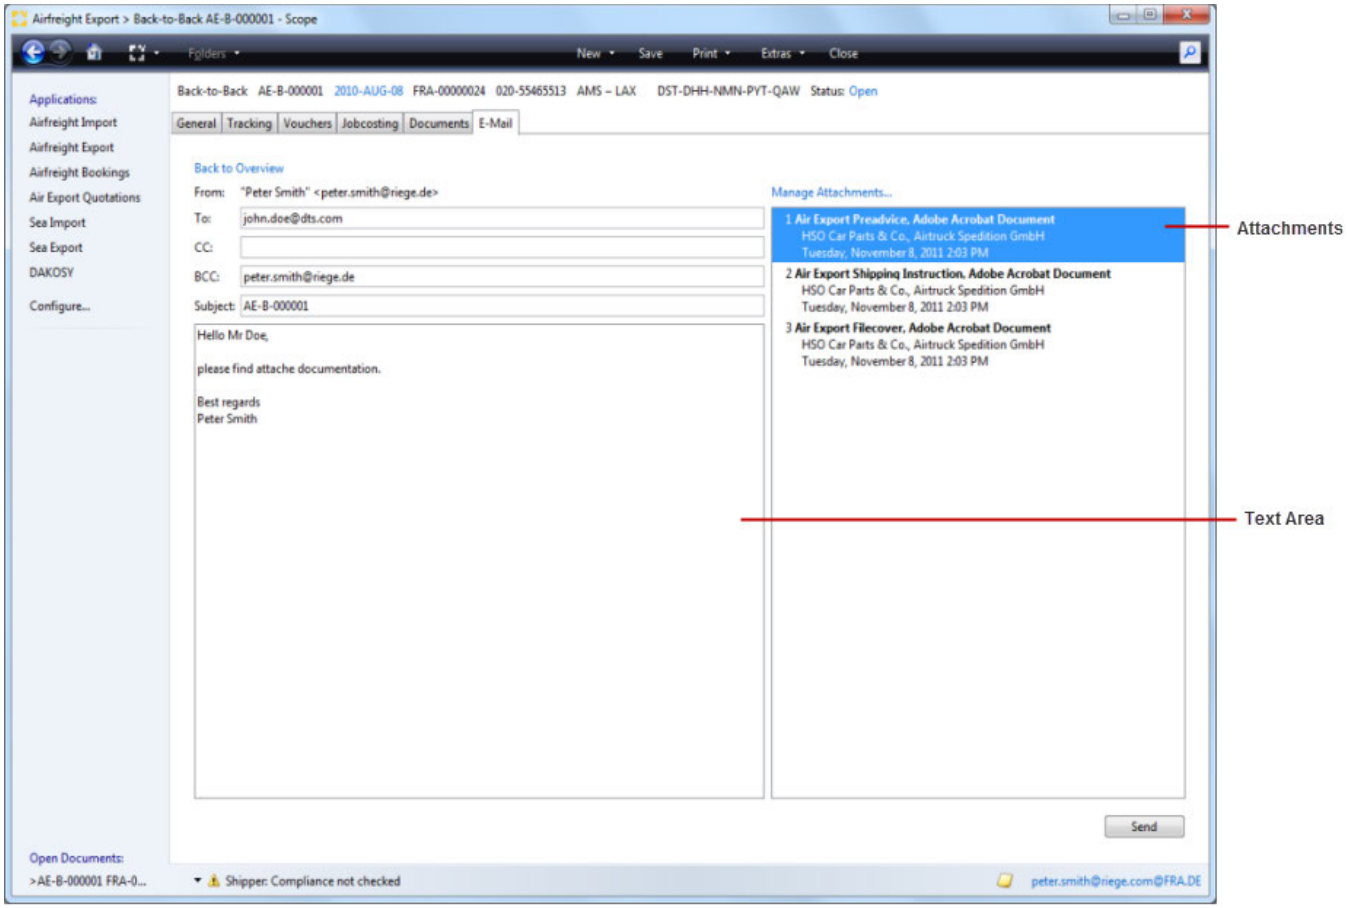
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

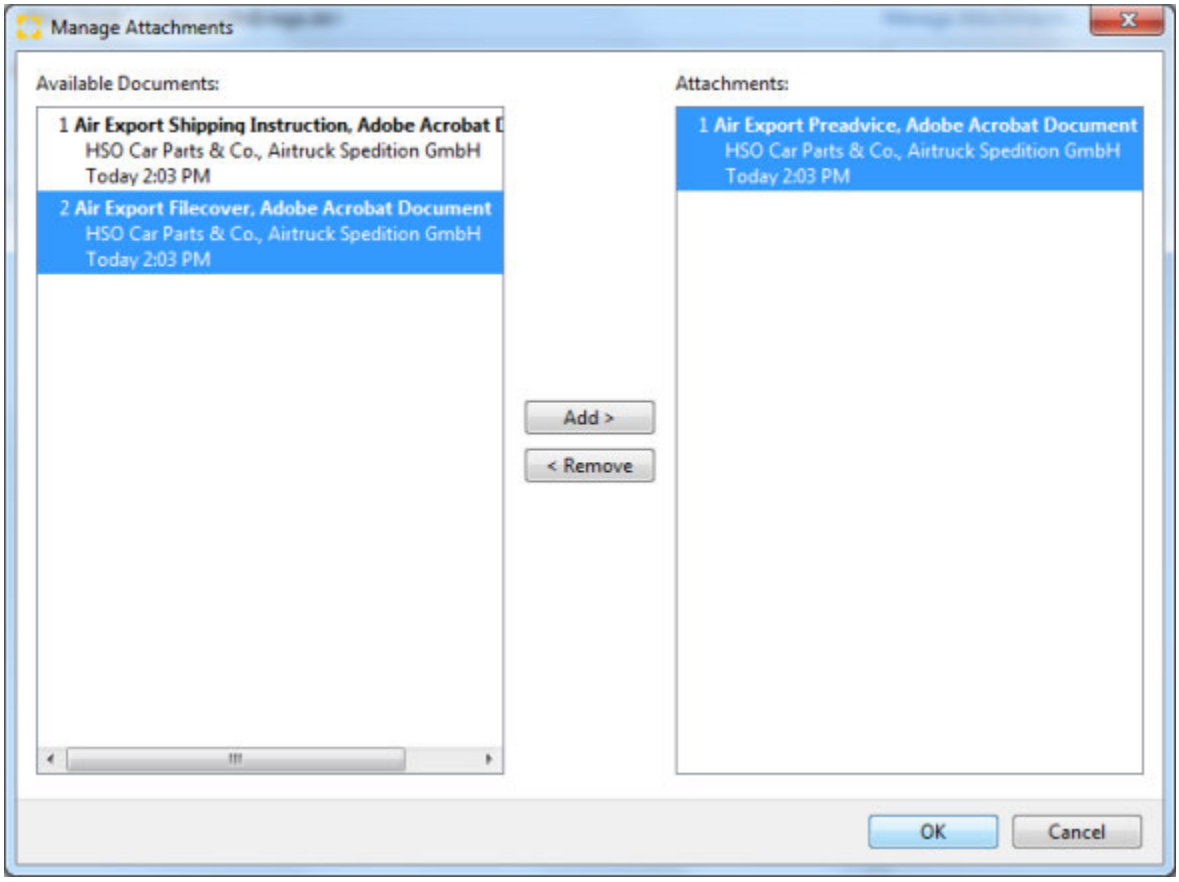
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

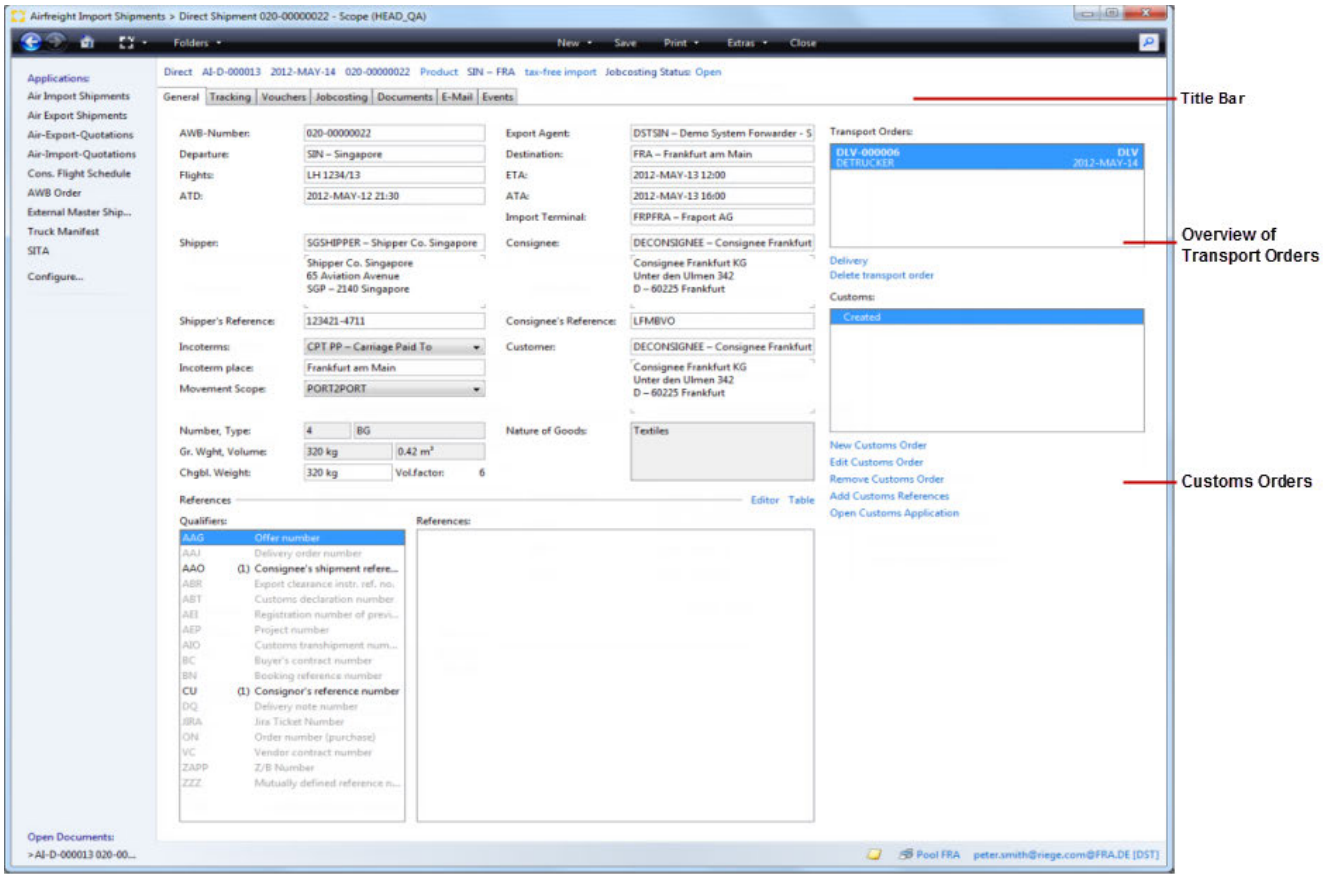
General - Direct Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **general** tab of the air import shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.

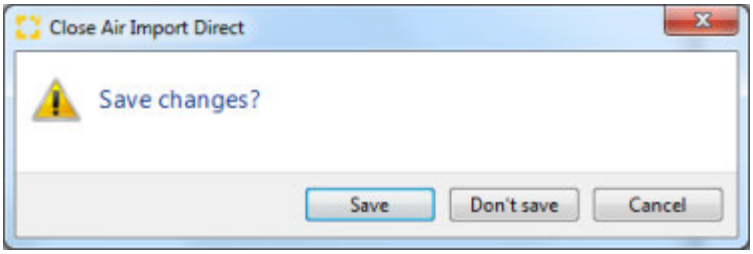
Currently the following documents are available:

- File cover
- Advice of Arrival
- Advice of Arrival (Bank)

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Title Bar

The following information appears in the title bar for a shipment and blue text indicates that the text has an action link and offers further action.

- **Mode**
  Type of shipment *direct shipment*
- **Shipment number**
  Created by the system when the shipment is first saved. When a consignment which has been transferred from another office (Gateway shipment), the shipment number used by the origin office will also be present.
- **Service Date**
  The arrival date of the program is set as follows:
  When present-ATA (Actual Time of Arrival / actual arrival date)
  otherwise ETA (Estimated Time of Arrival / Expected arrival date)
  The current date is automatically stored and updated to match any ETA or ATA as long as the new date is within the same month as the displayed date. If the new date falls within a different month from that displayed, the date will not change unless it is clicked (action link), in which case it will update to show the revise ETA or ATA dates. IF the shipment is a consolidated house, the ETA and ATA dates may only be maintained within the master shipment.
- **Waybill number**
  The AWB number from the corresponding box in the shipment editor.
- **Departure airport - Destination airport**
  Departure and destination of the shipment entry
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Tax status**
  The tax Status of the shipment
- **Status**
  The status of the shipment.

Customer

The customer is the party responsible for generating the shipment who typically bear responsibility for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

AWB Number

Airway bill number (IATA freight waybill number) for the shipment.

Incoterms

The commercial delivery terms for the shipment

Incoterm Place

The agreed named place that the incoterm applies to.

Movement Scope

The scope of the agreed movement of the cargo for this shipment

Departure

Airport of departure of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper

The party listed on freight documentation as the shipper of the cargo. The search function may be used to find the desired business partner. Within the shipper field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Consignee

The party listed on freight documentation as the consignee for the cargo. The search function may be used to find the desired business partner. Within the consignee field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Flights

Flights used for the shipment.

ATD

Actual departure date and time (Actual Time of Departure).

ETA

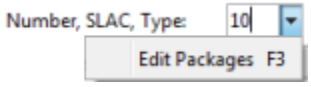
Expected Arrival date and time

ATA

Actual arrival data and time

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages, or the package editor can be called via the drop-down menu or by pressing function key F3. The package editor will allow much greater detail to be entered about individual packages.

> If the package editor has been used to capture details about the packages, then the package fields are disabled here and any additions or changes to packages must be made using the package editor . If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the packages editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Volume Factor

The volume factor used to calculate the chargeable weight will be displayed. (See also the partner role Forwarding customer where a default volume factor for the air import partner can be stored.)

Export Agent

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The station which has exported the shipment. The desired agent can be located using the search field. The search will only consider business partners who have the role of agent and this agent role must include the departure airport of the shipment.

References

This application may be used to enter any references numbers associated with the shipment and which are to be further used in other applications, such as printing or EDI transmission. More information about the reference number editor is available here.

New Delivery Order

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application.

- All transport or delivery orders that are created will be displayed in the overview. By double clicking these they can be opened, edited and printed as desired.

Delete transport order

this action will delete a transport order. The link is only active when a transport order is highlighted and if that transport order has not been printed and the shipment has no entries in costs and revenues.

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Open Customs Application

Opens a customs entry applications if available.

- More information on customs applications is available in the Customs section of the manual.

Tip

Use the keyboard short cut **Ctrl + I** to show information about the current user of the session. This will display the user name, email address and telephone number.

The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Pickup time window from/to

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

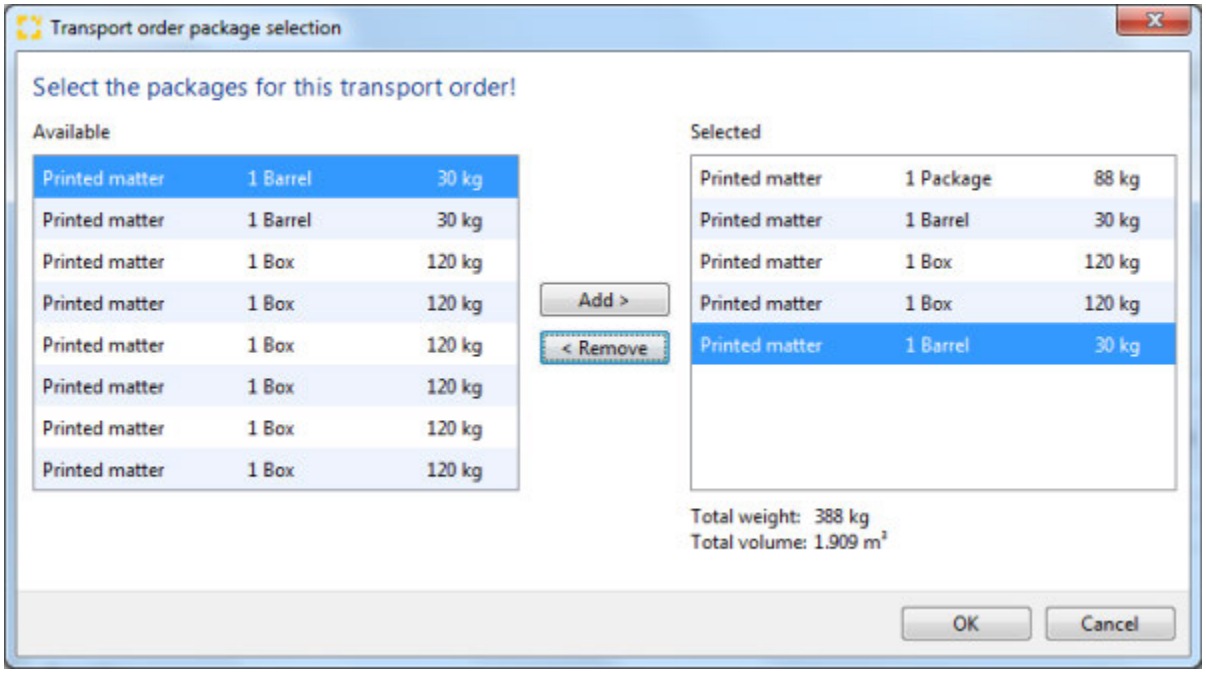
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

> Package selection is only available if the packages have been defined in the package editor of the shipment entry

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Customs orders

When customs details are entered in the main shipment, the "Customs orders" function is available. All the customs orders created on the main shipment will be visible. Use the check box to indicate which customs orders should appear on the delivery order.

Remarks

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Comments or instructions entered in this field will be printed on the delivery order.

Include Shipment Details in printout

check the box to include greater shipment detail on the printed delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

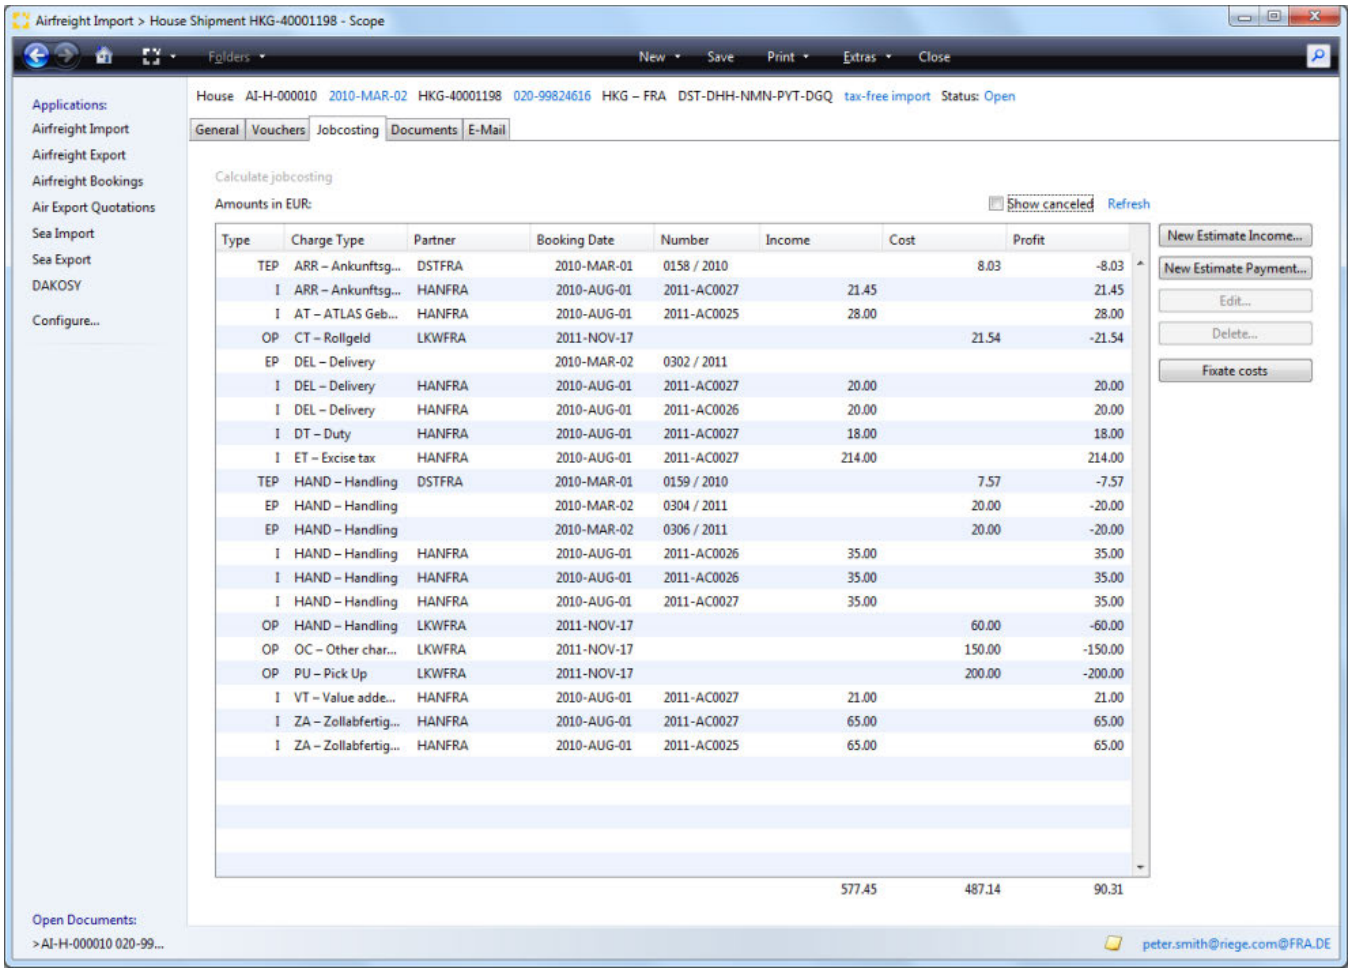
Jobcosting - Direct Shipment - Airfreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the details of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see **General** tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

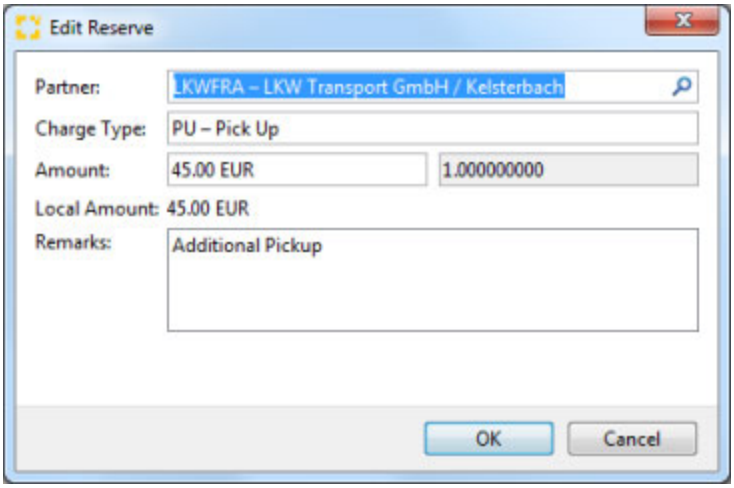
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Reserves Assignment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

House shipments - Airfreight Import

- Introduction
- Description

Introduction

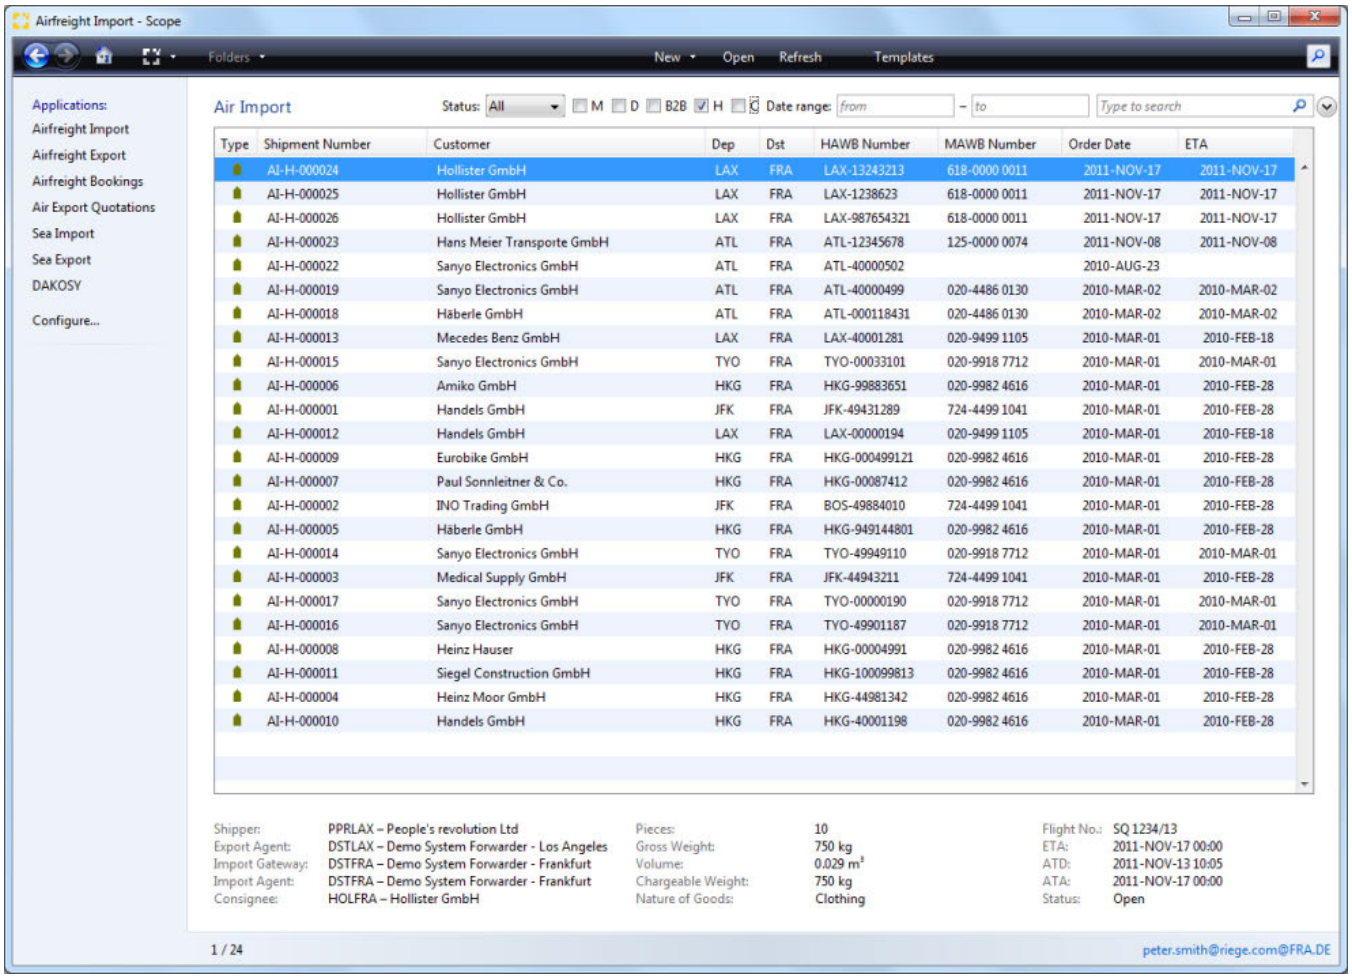
Within air freight imports Consolidated, Direct, Coload- and Back2Back shipments can all be seen. By checking the ***house shipment*** check box, only single house shipments that were combined with other shipments into a consolidated master shipment will be shown. A house shipment will usually be between the actual shipper and consignee, while the consolidation program allows input of master details and here the shipper will be the export agent or export gateway and the consignee will be the import agent or import gateway. The reason for creating house shipments is the transport charges are more cost-effective. The name House shipment derives from the fact that the shipment is an in-house operation and has nothing to do directly with different agents or carriers.

In this application, all house shipments are processed and billed. Costs and revenues are calculated, associated transportation contracts recorded and all necessary documents such as delivery notes, invoices etc. are printed.

New installation of domestic shipments

It is assumed that there is no house without corresponding consolidation details. Therefore, domestic shipments may be entered in the fast House entry of the consolidation program.

Description



Choosing ***Open*** will open an existing shipment shown in the overview. Alternatively the shipment can also be ***Double Clicked*** and this will open the summary of the shipment in the full shipment editor.

The function of each program editor is described here:

OC	Outgoing Credit note
II	Incoming invoice
IC	Incoming credit note

Voucher Date

The date the voucher was created.

Partner

The party to whom the voucher was issued.

Subject

The subject of the voucher

Amount

the total amount of the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoming Invoice - Billing - House shipment - Airfreight Import

- Introduction
- Description

Introduction

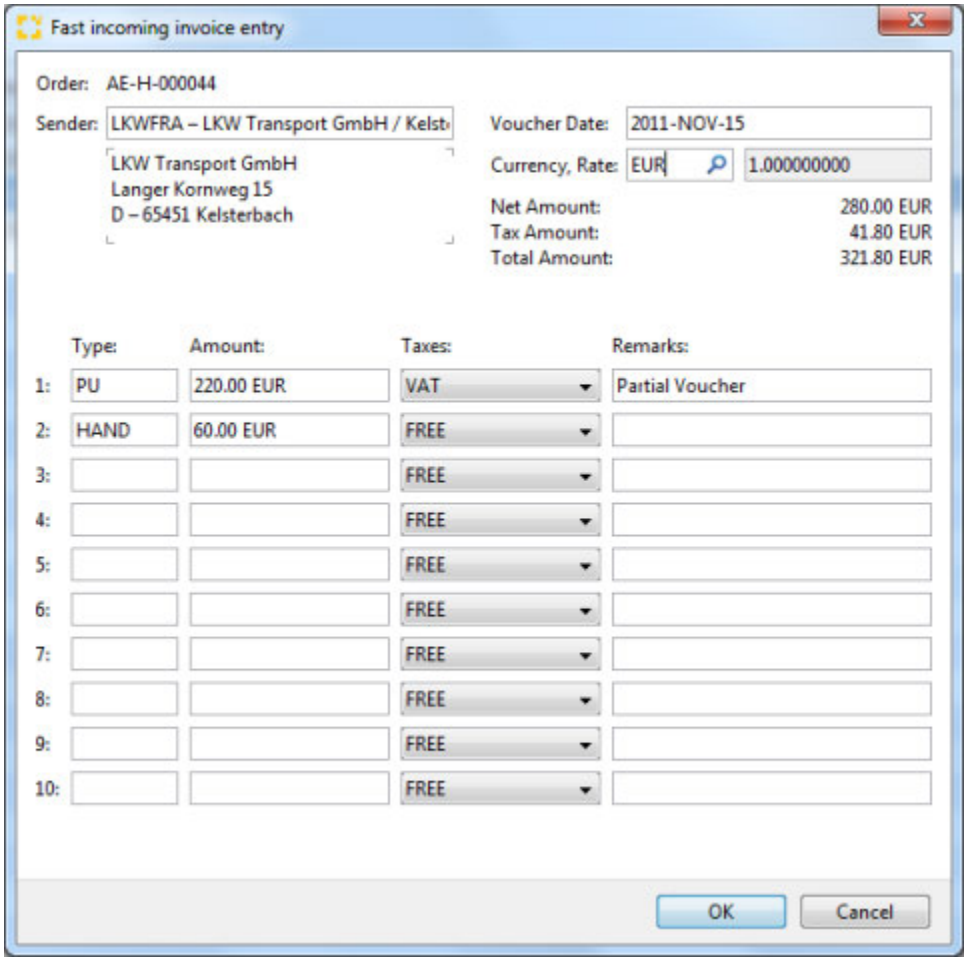
This application records all incoming receipts for the current shipment. This allows simple and rapid input of individual documents. Incoming documents, which cover multiple shipments should be entered using the accounts payable application in the general accounting module.

Description

As with outgoing invoices, there are 2 possibles states for an incoming voucher:

- **New / Open documents**
  These are new or open documents that have been created (manually or using the voucher system), that have been partially processed and saved, but have not been completed.
- **Completed documents**
  When a document is completed, the status is changed from open to closed. A valid document number is assigned and the data is sent to the accounting department. Completed documents can therefore not be modified, but can only be canceled and re-created.

New / Open documents



On clicking the appropriate link in the Voucher overview , the **Fast Incoming Entry Editor** is opened.

Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The shipment number of the current shipment is automatically used.

Sender

The party who issued the incoming document.

Currency

The currency of the incoming document. The field will default to the local currency.

Exchange rate

If the local currency is used then the exchange rate will show as 1.00000000. If the currency is not local then an exchange rate must be entered.

Net amount

The total amount of the line items.

Tax amount

The total amount of tax on the line items.

Total amount

total of the net and tax amounts.

Document lines

Up to five individual items may be entered.

Type

The charge code of the item. The Full text search field feature can be used to locate charges and their codes.

Amount

The net amount of the item (less any taxes)

Tax

The kind of tax that may apply to the line item.

Remarks

A comment on the line item.

OK

Stores the document and then opens the incoming invoice editor.

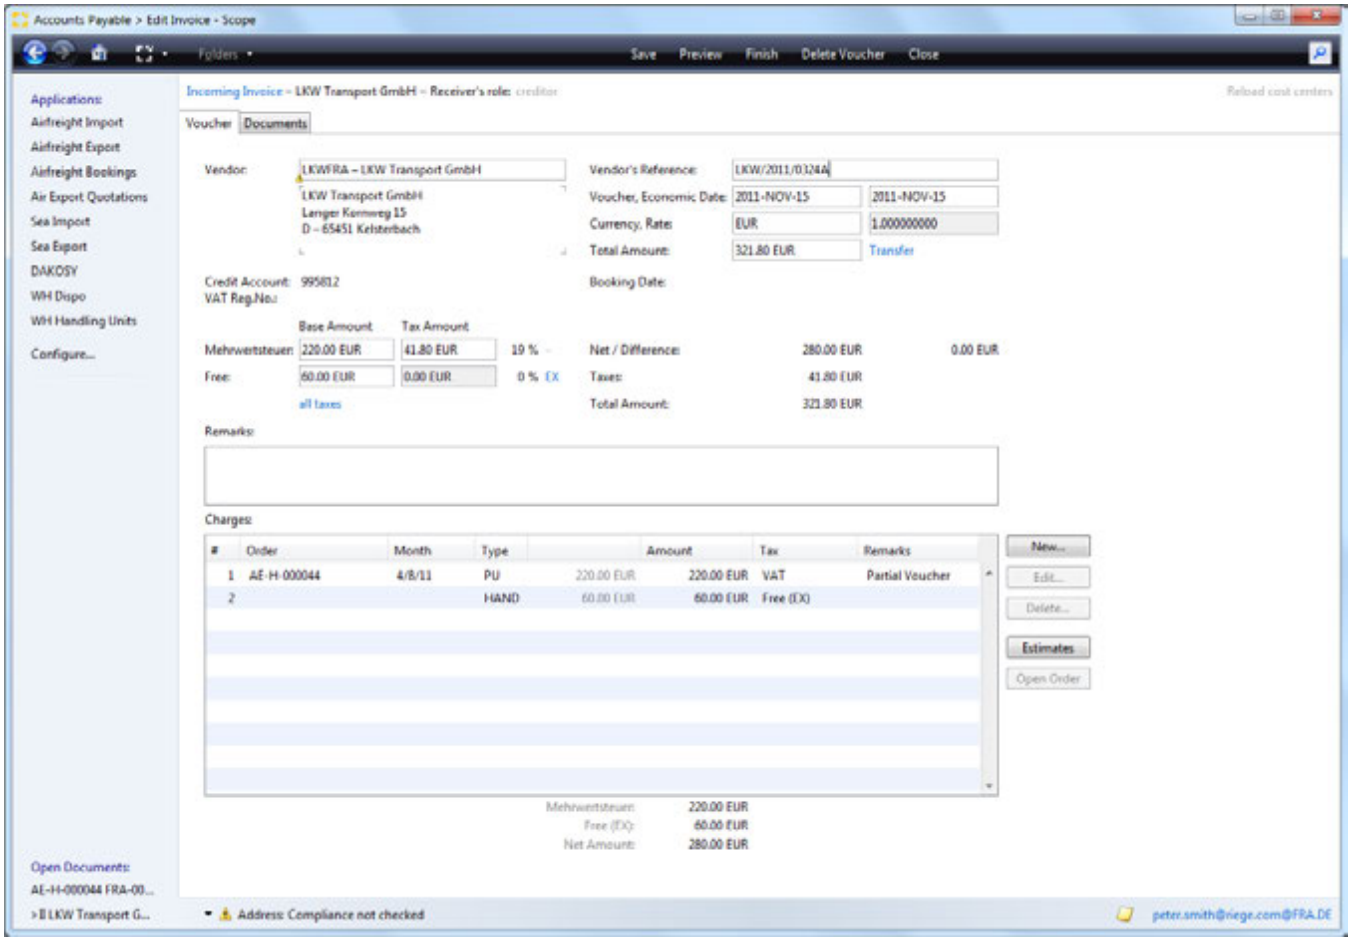
Cancel

Cancels the incoming invoice without saving it.

Incoming invoice editor

On saving the data in the **Fast incoming entry editor** the **Incoming invoice editor** will open to permit the voucher to be finalized.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Menu bar item - Save

Saves the current document

Menu bar item - Close

Closes the current item. If the data has not been saved a query pop-up will appear asking if any changes should be discarded.

Finish

Closes the voucher and saves any changes.

Delete Voucher

Deletes the current document. (Only open documents may be deleted.)

Title Bar

the title bar will display the following information:

- Document Type (invoice or credit)
- Vendor

Vendor

The name of the vendor issuing the voucher. The full text search function can be used to locate the correct vendor. The context menu can be used to create a new partner
or take other actions with regard to the vendor address.

Vendor's Reference

The reference used by the vendor to identify the incoming document. This is usually the vendor's invoice number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voucher (date)

The date of the voucher.

Economic Date

The date assigned to the incoming invoice for accounting purposes.

Currency

The currency of the incoming document.

Rate (Exchange)

The exchange rate to be used for the incoming document. The correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total Amount

The total amount of the voucher including any taxes.

Transfer / Cash / Check (Payment type)

The link will open a window that will allow the method of payment to be selected. In the case of a check payment, the check number can be input.

Credit Account

Displays the account number of the vendor. This is taken from the partner master data .

Tax ID

The official tax identification number of the vendor. This is taken from the partner master data .

Base Amount

The total amount shown on the incoming voucher.

Tax Amount

Total tax amount for the document is entered. In addition the tax rate will be shown. This is based on the data entered in the Quick Entry Editor in conjunction with the master data (Country master data and the charge type .) Tax free amounts will display 0% tax rate. A reason code may be required where a tax free rate is entered. Reason codes may be one of the following categories:

Reason Code	Description
TR	Export/Import
DT	Customs
3C	Third Country
OS	Offshore
IN	Internal

This allows invoice amounts to have differing tax rates or to be tax free. The possible tax types will be according to the tax information maintained in the Tax tab of the master country data.

all taxes

This action link will cause a pop-up window to appear where the taxes on all taxable lines can be edited.

Net / Difference

The net amount of the voucher will be shown and the difference between this and the total of the current line items will be shown.

Taxes

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the total calculated tax amount of the line items.

Total Amount

The total of the line items and any taxes.

Remarks

Addition information about the voucher.

Charges

Individual line items. The line item editor can be used to add or edit lines.

(Number)

The line number of the line item.

Order

The order number associated with the line item. Normally this is the shipment number.

Month

The date of the shipment to which the line item relates.

> ⚠ If multiple line items have the same shipment (order) number, then the shipment or order number and it's details are displayed in only the first line for that shipment.

Type

The charge type of the line.

Amount

The total net amount of the line item.

Tax

The tax and any reason code for the line item.

Net Amount

The total net amount of the lines.

New...

Opens the line item editor for entry of new lines

Edit

Opens the line item editor to allow the highlighted line item to be edited. Alternately double-click the desired line item.

Delete

Deletes the selected line.

Estimates

This button opens the estimates editor which may be used to resolve estimates on the shipment. The estimates editor is mainly used to resolve multiple estimate simultaneously and is use generally in connection with the invoice editor. More details about the estimates editor can be found *here*.

> ⚠ The *New, Edit, Delete* and *Estimates* buttons are only active when the document is saved.

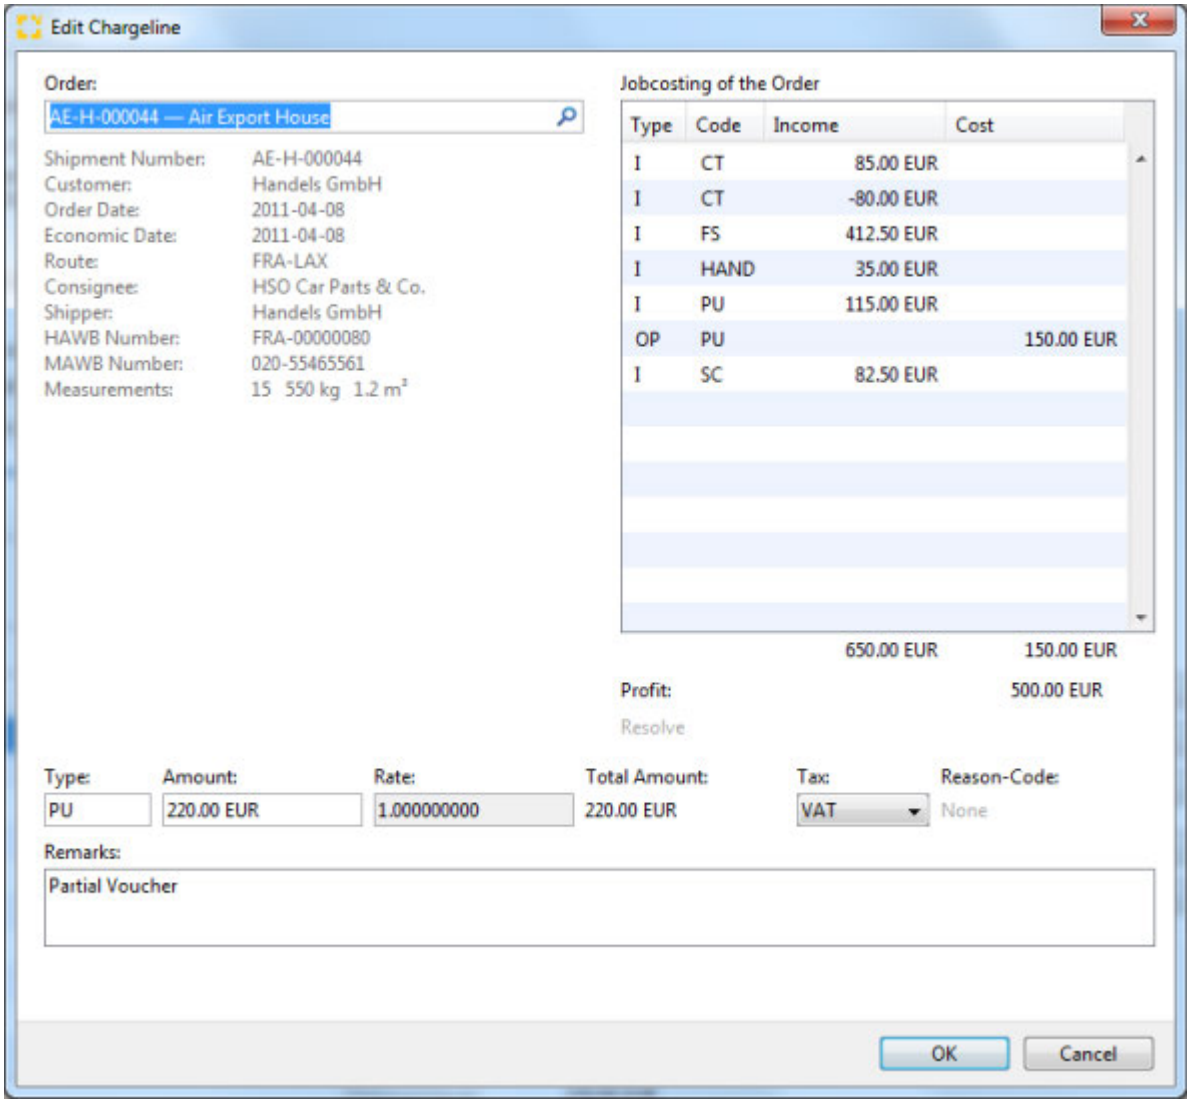
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open Order

Open the shipment to which the line item belongs.

> **Tip**
>
> Use the key combination **Crtl + I** to display the following information:
>
> - The user who generated the invoice
> - The date of the invoice

Edit Chargeline



Order

The shipment number.

Jobcosting of the Order

This table shows the full current jobcosting of the relevant shipment, including the document type the charge code income and costs. The total amounts are displayed at the bottom of the table.

Profit

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Displays the profit of the shipment.

Resolve

By clicking on this link action in the *jobcosting table*, the related estimate amount is resolved and replaced by the current line item.

Type

The charge type of the line.

Amount

The amount of the line item. Line items may be entered in a currency different to that of the incoming voucher.

Rate

The exchange rate of the line item. If the rate is in a foreign currency then the correct rate can be selected from the master exchange rates if these have been maintained. The rate can also be input manually. If the currency is the local currency then the exchange rate will default to 1.00000000.

Total amount

The total amount of the line in the document currency.

Tax

The tax code for the line item.

Reason-Code

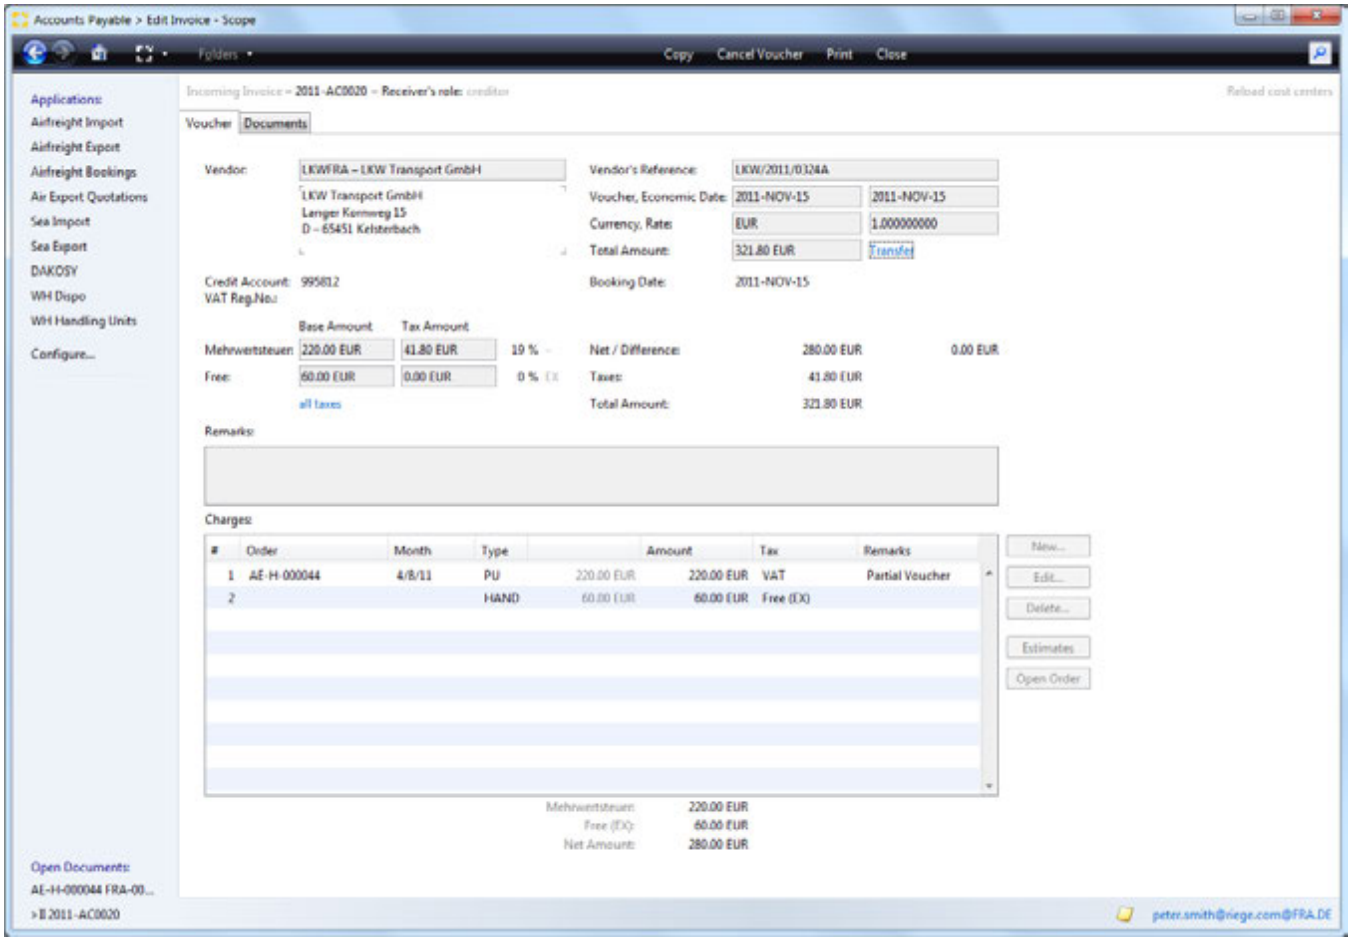
A reason code if the the item is tax free. (for countries where taxes may apply)

Remarks

additional comments relating to the line item.

Closed documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In closed documents, the following actions are available:

Closes

Closed the current document.

Copy

Creates a copy of the document. This is then available as a *new/open* document that may be further processed. When copying, the *charge lines* checkbox will be active and can be used to include the existing charge lines in the new copy of the voucher. If left unchecked, only the document header is copied.

Cancel

creates a cancellation of the current document. When a voucher is cancelled, the *charge lines* check box is available. If checked when the voucher is cancelled a *new/open* voucher is created that contains all the charge lines from the cancelled document. If not checked, then the voucher is cancelled and the *new/open* voucher contains only the header information.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Outgoing Document - Invoice - House Shipment - Airfreight Import

- Introduction
- Description

Introduction

All invoices and credit notes for the house shipment are created, edited, posted or cancelled in this application. Using the system settings, documents can be pre-prepared automatically including costs and revenues. This can significantly simplify the billing process.

Description

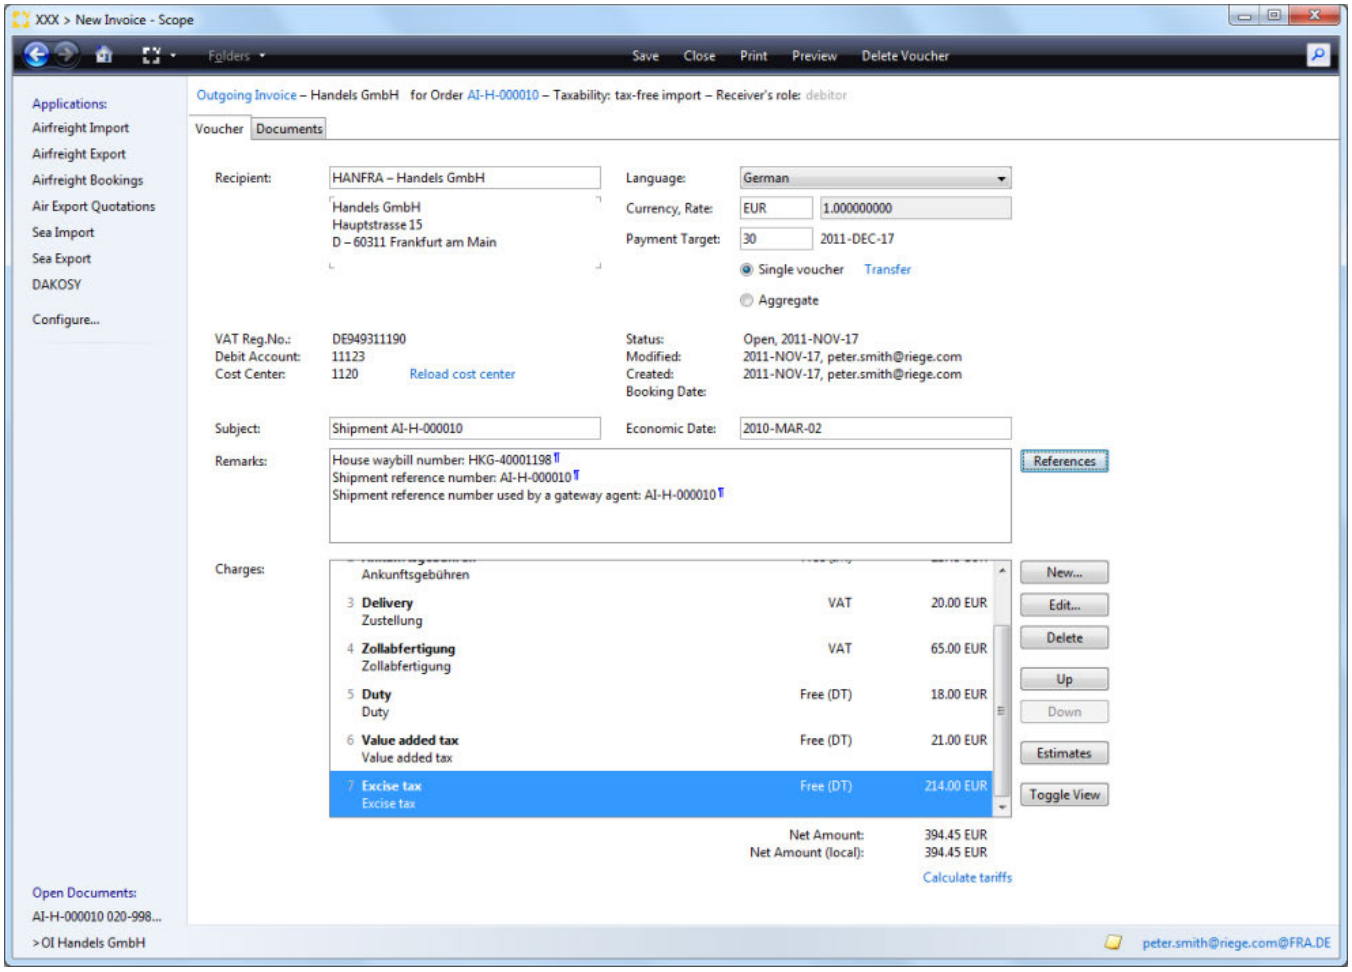
documents in the voucher overview screen may be in either of 2 states:

- **New/Open documents**
  These documents have not yet been printed and are therefore not complete. New documents may be created and edited and existing open documents may be edited. New documents may be saved but are not considered closed until they are printed.
- **Completed documents**

Once printed, the status of a voucher is set from *open* to *closed*. On printing vouchers are given a valid document number (Invoice number) and the financial data they contain is transferred to the accounting department. Printed documents therefore cannot be modified, they can only be cancelled /credited and replacements created.

New /Open documents

the following functions and fields are available when a voucher has the *open* status.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Save

the document will be saved but an invoice number is not assigned.

Close

Close the document. If changes have been made, the system will ask if any changes are to be stored or ignored.

Print

The action will print and complete the document, setting the status to completed. It is only possible to print a voucher if no red error/validation messages are present. If only yellow warnings are present, then the document may be printed.

Preview

this action is only possible if there are no red error/validation messages present. The preview will generate a pdf version of the document that has no document number. This provides a view of the current state of the document.

Delete Voucher

This action will completely remove the document. Only open documents may be deleted. Completed (printed) documents must be cancelled (see completed documents).

Title Bar

The following information and available actions are displayed on the title bar.

- Document type
  By clicking this link a document may be reversed from invoice to credit and vice versa). On clicking the link a security prompt will appear to confirm the action and offer the additional option to "additionally negate charge line amounts". This option will invert the charge line amounts from positive to negative figures (and vice versa). The action is only available for new / open documents.
- Voucher recipient
  Displays the voucher recipient's name.
- Order
  The shipment to which this document is assigned. Clicking this link will open the shipment.
- Taxability

Displays the tax status of the document.

Receiver

The recipient of the document. By default the customer specified in the shipment will be used. The search box can be used to locate a different address for the recipient. The context menu or the corresponding function keyscan be used to further processes the recipient address.

Language

Indicates the language being used on the document. Clicking the language button will produce a list of languages available on the system. By changing the language, the printed output of the document will change accordingly. The exception to this is the charge lines; Once the charge lines have been inserted in the document and the document has been saved, the language of the charge lines will not change if a new language is selected. To match the charge line language to the rest of the document, any existing charge lines must be deleted and re-inserted to reflect the correct language choice. It is also important to note that a translation to the desired language must exist in the Charge Types maintenance.

The default language is maintained in the master business partner data

Currency

Displays the currency of the invoice. A default currency can be stored for the customer using the master partner maintenance program . If no currency is stored then the local currency is used. The field offers a search function to locate alternative currencies for the document.
The currency shown here will determine the currency shown on the invoice for total amounts.

Exchange Rate

The rate at which local currency amounts are converted to foreign currency amounts and vice versa. The exchange rate will transfer from the master exchange rate data, but it may be changed manually. The exchange rate is always required since the entries in costs and revenues of job costing must always be shown in the local currency. If the local currency is used as the invoice currency then the exchange rate will show as 1.0000000 and cannot be modified.

Single Voucher

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If selected, this check box indicates that upon completion/printing a single document number (invoice number) is to be issued and applied to the document. The document is then ready for the accounting department.

Aggregate

If selected, the single voucher is automatically unchecked. Upon completion/printing, no document number (Invoice number)is issued. The document is to be grouped with other documents that will become an aggregated invoice.

Transfer

This action link will open a pop-up window where the payment method can be indicated. The payment method can be bank transfer, cash or check. A payment reference for the latter 2 options may be entered.

Tax ID

The tax identification number of the recipient of the document. This data will appear according to the master data. of the recipient.

Debit Account

The accounts receivable account number of the document recipient as stored in the partner's master data .

Cost Center

Every order is assigned to a cost center. If this changes in the course of document creation, it can be reloaded by clicking the **reload cost center** action link.

Status / Modified / Created

The status of the document is shown and the date that this status was set. In addition the date the document was last changed appears in the **Modified** field and the data the document was created appears in the **Created** field.

Subject

The subject of the document that is to be printed on the document.

Economic Date

The service date of the document used to determine the economic month of the document.

Remarks

Additional information to be printed on the document. By clicking the **References** button, any shipment references such as shipper's references or P.O. numbers will automatically appear in the remarks field.

Charges

Displays charges to be billed to the recipient. At least 1 charge must be present if the document is to be printed. If tariffs and rates have been stored for the customer, then the charges window may be automatically filled with system calculated charges. These may be doubled clicked or opened with the edit function if further adjustments are required.

New

Creates a new line item.

Edit

Opens the highlighted item for further editing.

Delete

The highlighted item will be removed.

Up

The selected item will be moved one position up in the list of charges.

Down

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The selected item will be moved one position down in the list of charges.

Estimates

Estimate income that exist for the shipment can be seen and selected from a pop-up window. This action converts an estimate into a final charge.

Toggle View

Change the way the charge line information is displayed from 1 line entries to 2 line entries and vice versa. This action has no impact on the final printed document.

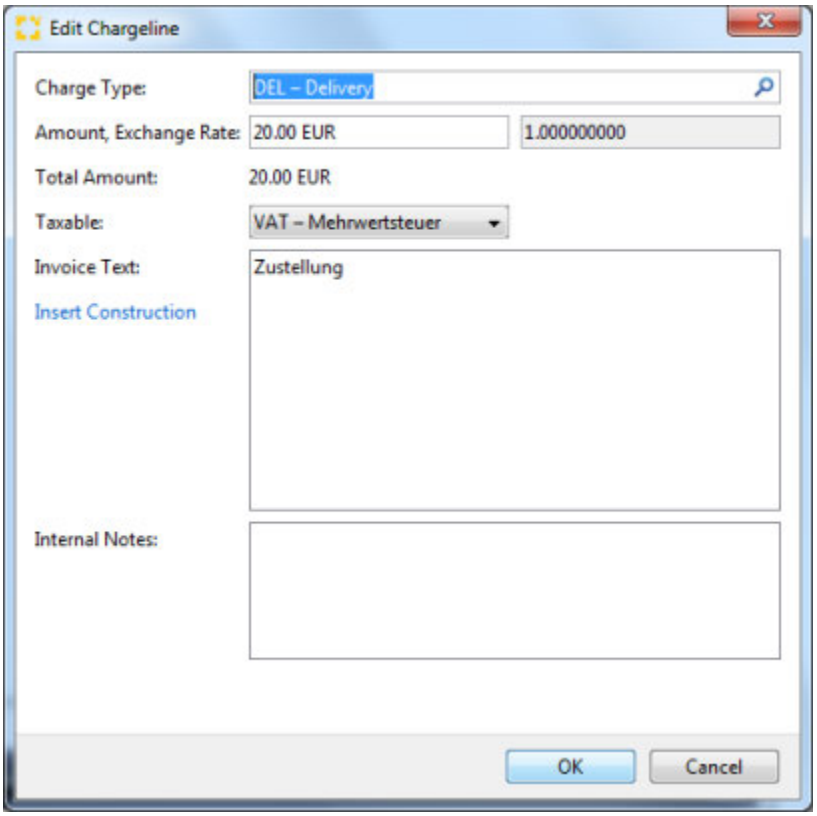
Convert to Invoice / Credit Note

Change the document type, if the entire document is to be converted.

Calculate tariffs

If tariffs have been created for the items in the charge lines, this action link will reprocess all charge lines again against all tariffs to show charges as per the current tariffs.

Charge Code Editor



Charge Type

The charge code and description of the service being billed. Charge codes can be located by entering the code or charge description or part thereof. Only charges defined in the master data are available.

Amount / Exchange rate

Amount and currency code for this line item.

> The field *value* can also be adjusted using the drop-down menu which present the calculator option (or use the function keys F3) or the tariff re-calculation (function key F5) this will automatically recalculate any available tariffs.

Exchange Rate

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Exchange rate for the item line. If the local currency has been used as actual currency, the exchange field is not modified because the exchange rate in this case is 1.0000000.

Tax

Depending nature of the consignment and the tax rates for the voucher recipient country, the appropriate tax rate is proposed.

Invoice Text

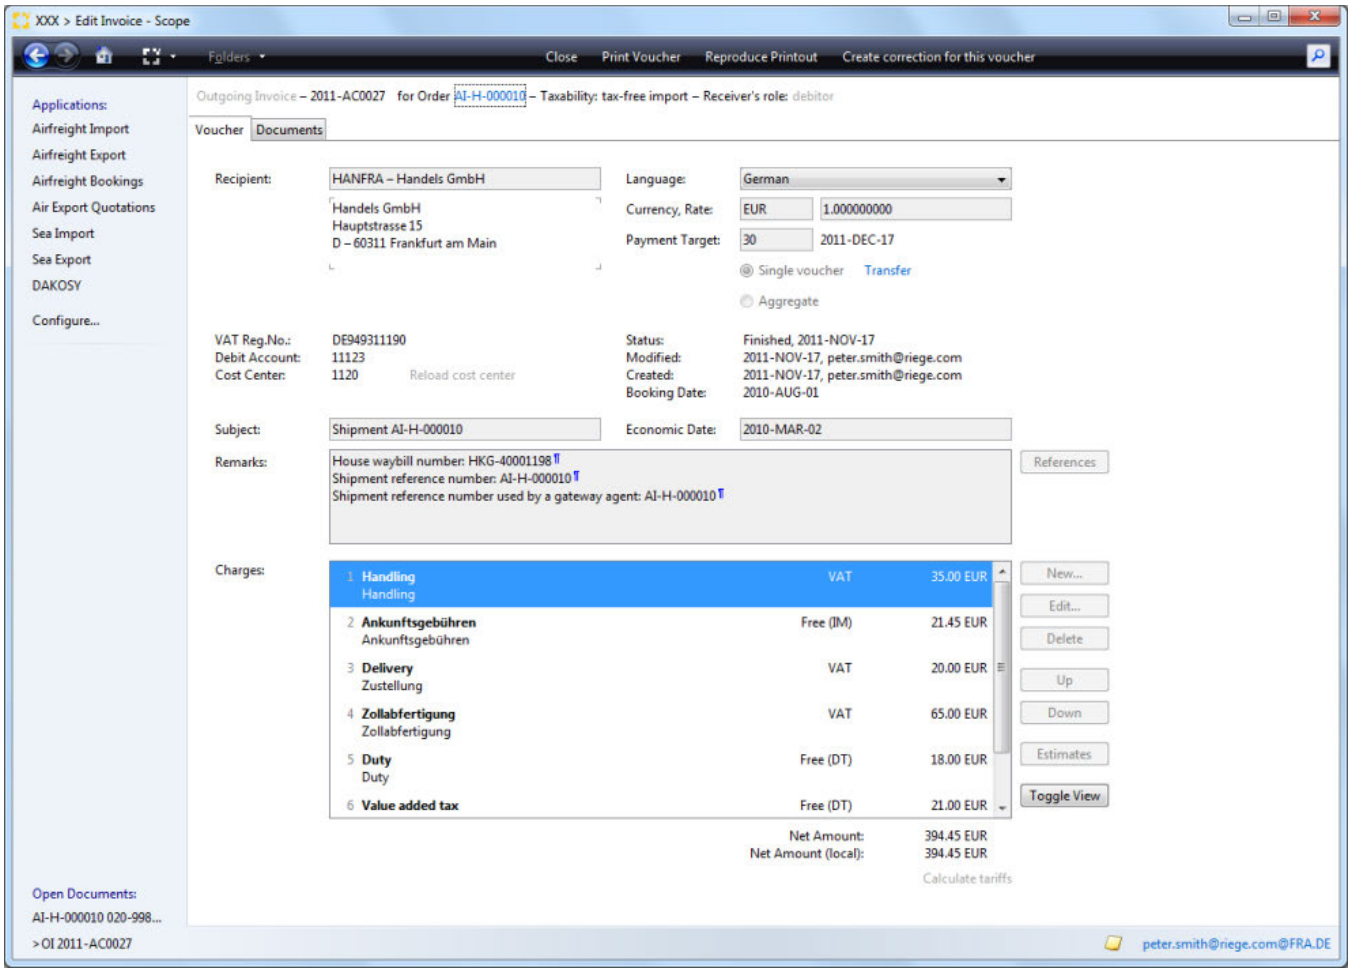
A full description of the line item. The description may be edited as desired and multiple line can be used. Right click to get the context menu which will offer access to Text blocks or press Ctrl + T to access this function.

Remarks

Optional details about the charge which are not printed and not sent to accounting.

Completed Documents

The following functions are available for documents that are completed.



Close

Closes the document and returns to the overview of vouchers.

Print

Print the document which will now appear in the Documents tab.

Preview

Produces a pdf version of the document that can be checked for correctness prior to finalizing the voucher.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

a cancellation of the voucher is generated (invoice or credit note). A replacement voucher is issued that may be re-edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

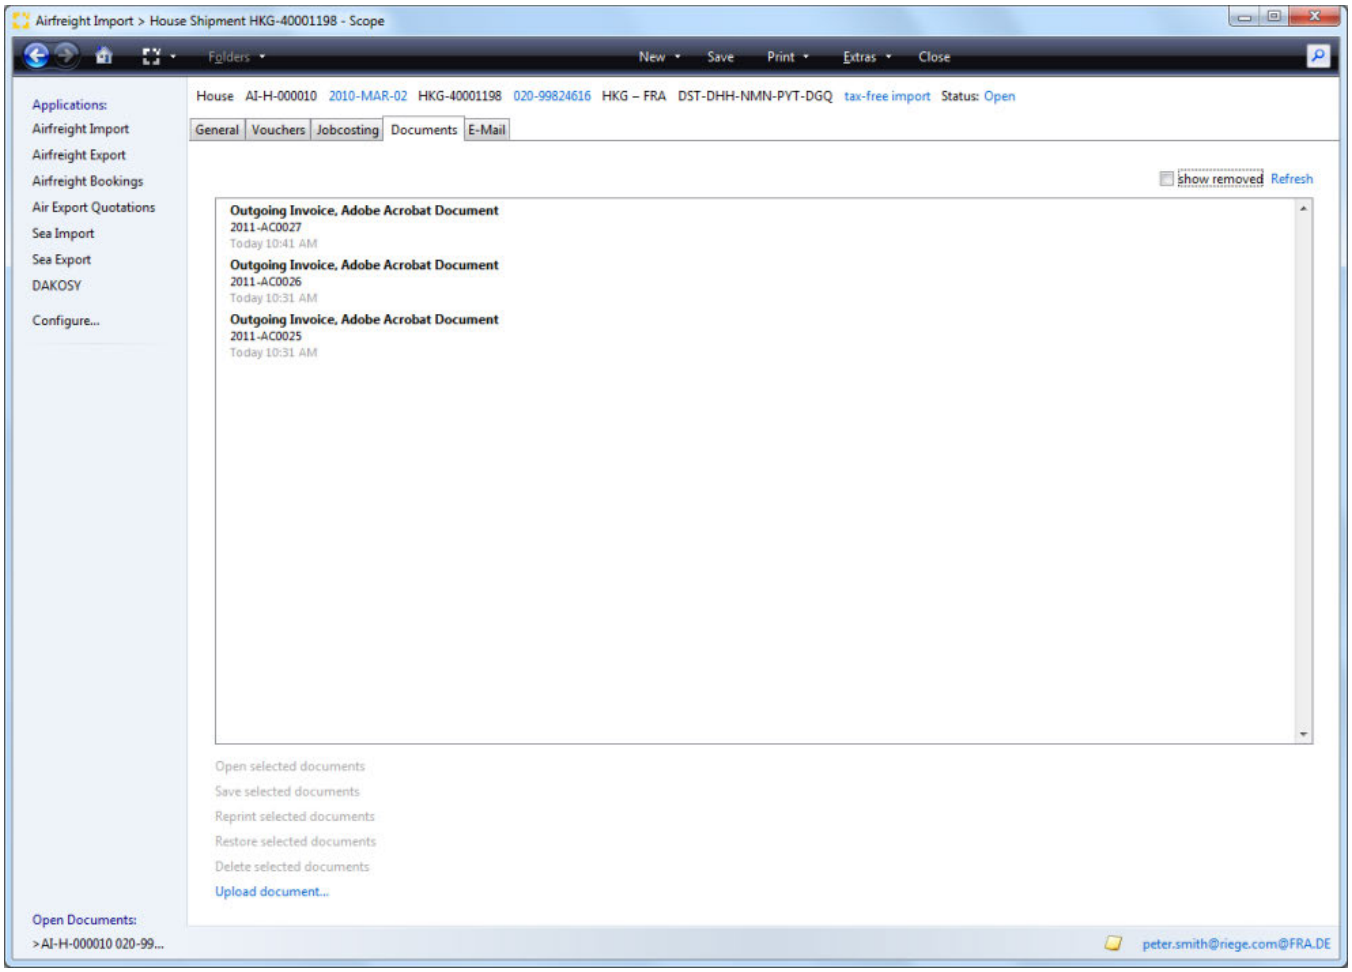
Documents - House Shipment - Airfreight Import

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed.

Description



The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

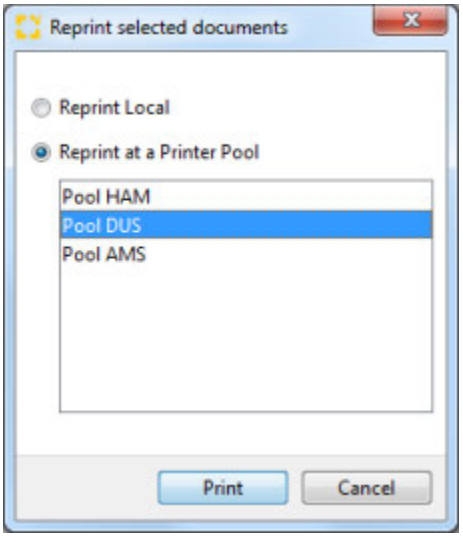
Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

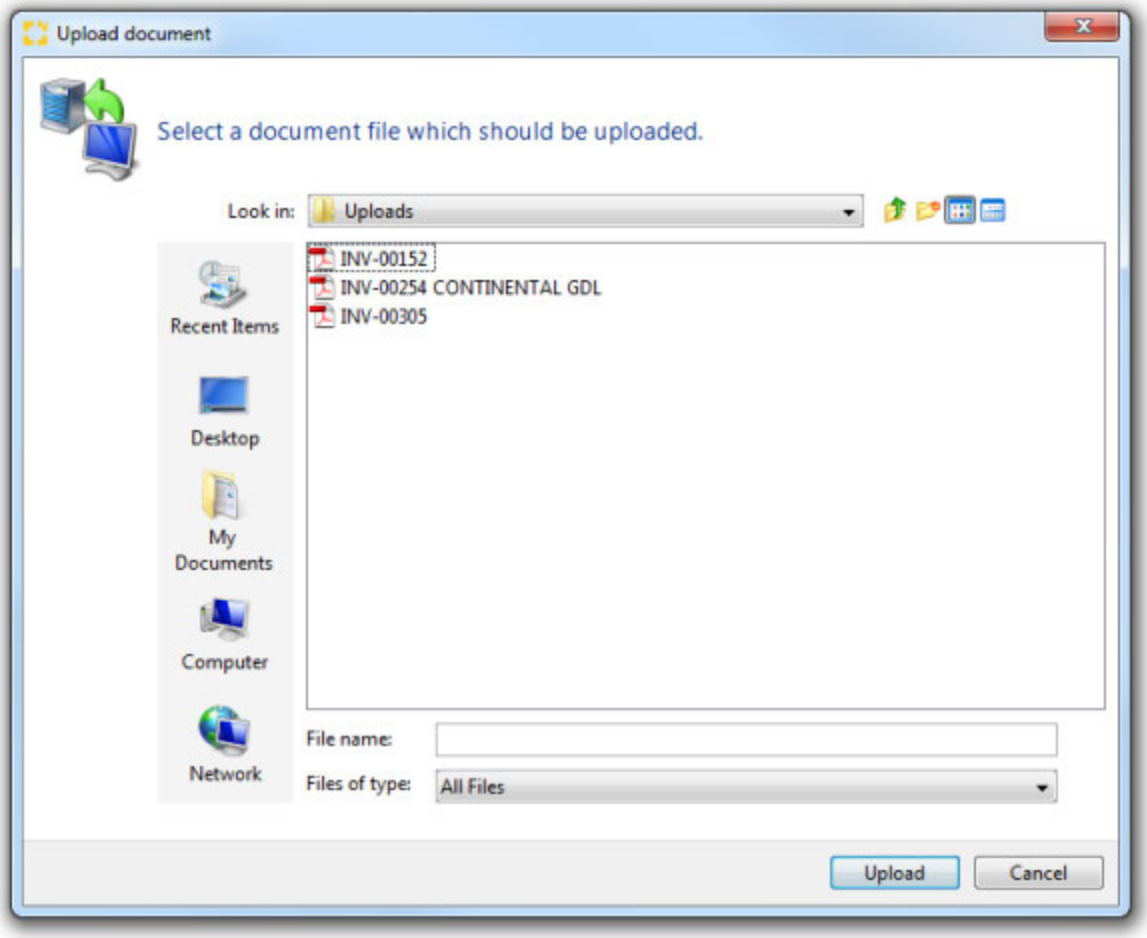
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

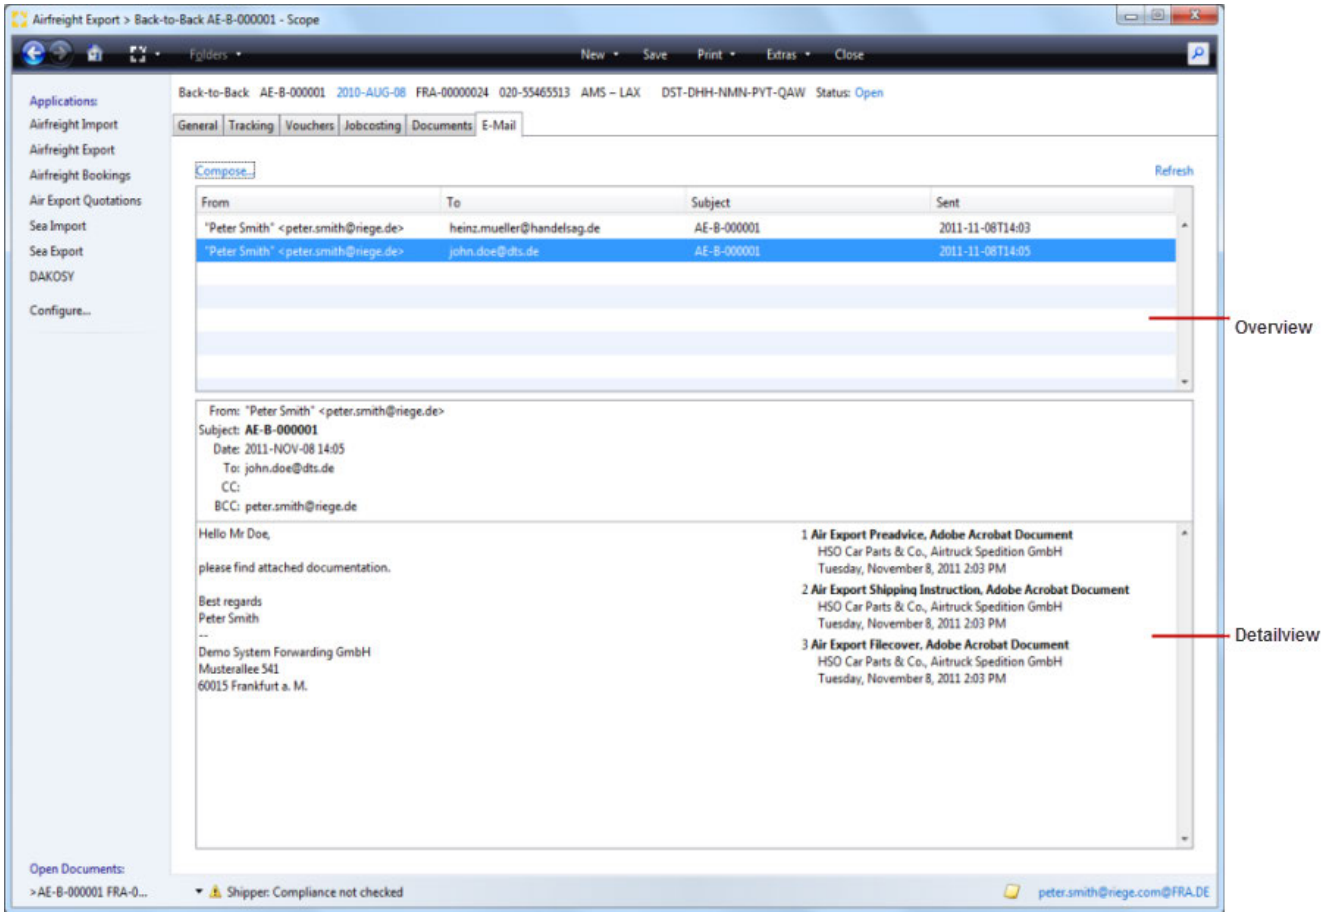
E-Mail - House Shipment - Airfreight Import

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

Detail section

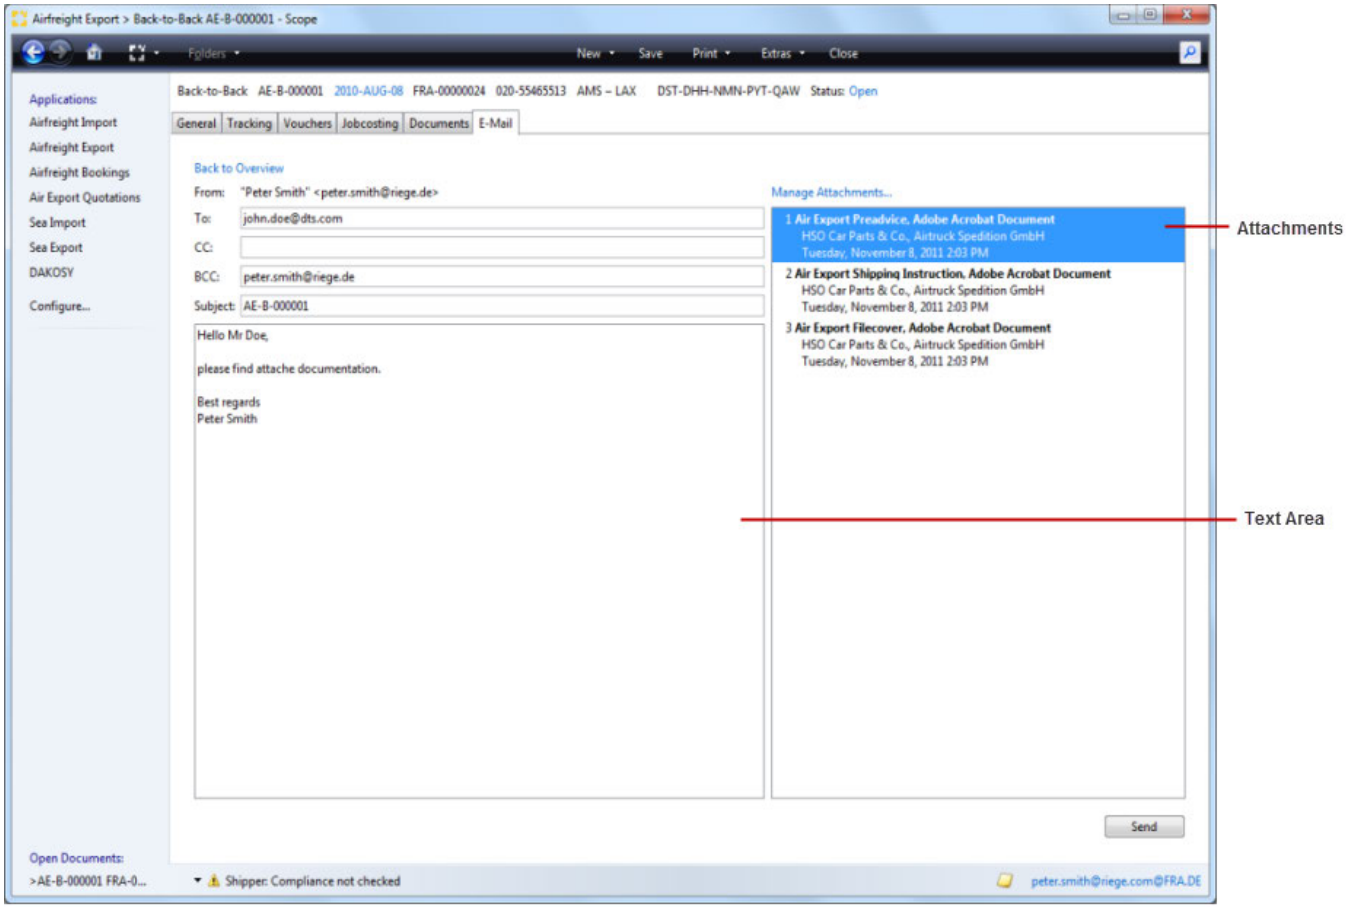
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

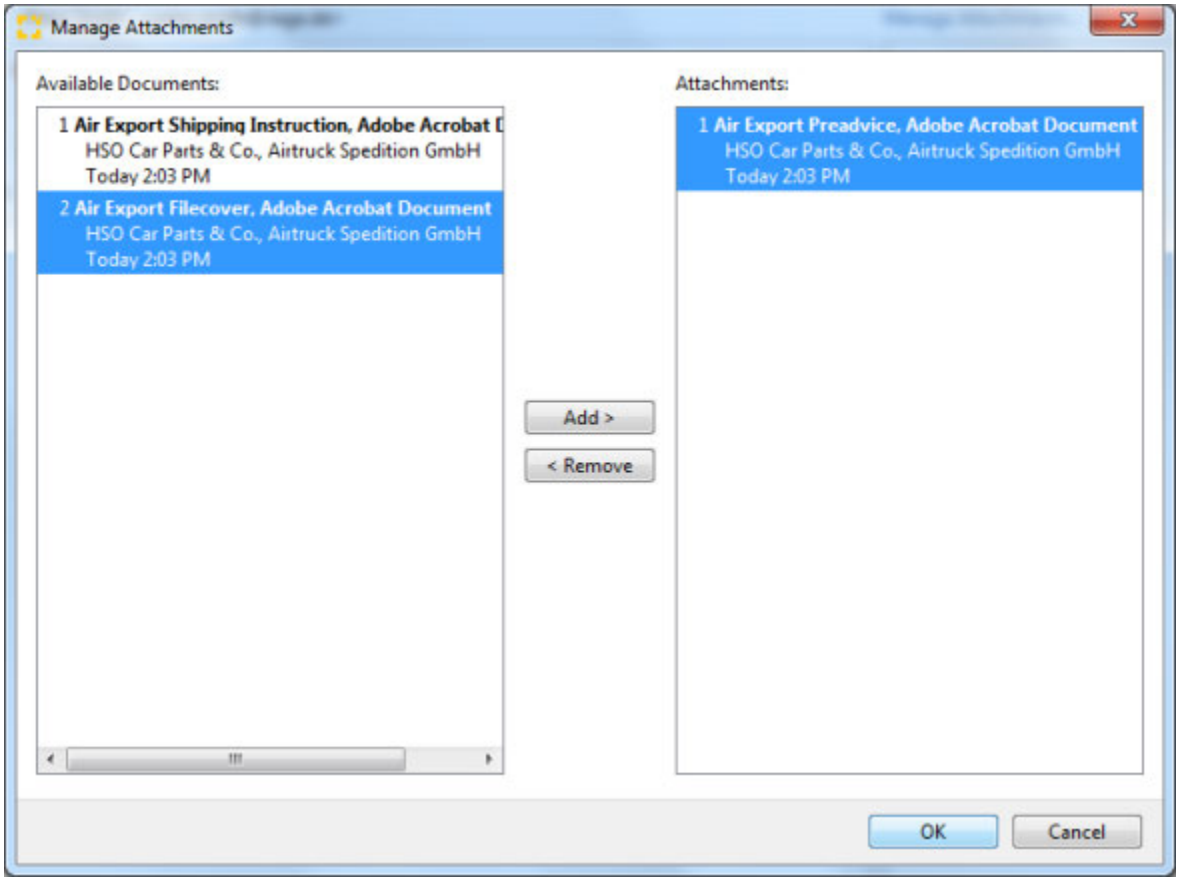
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

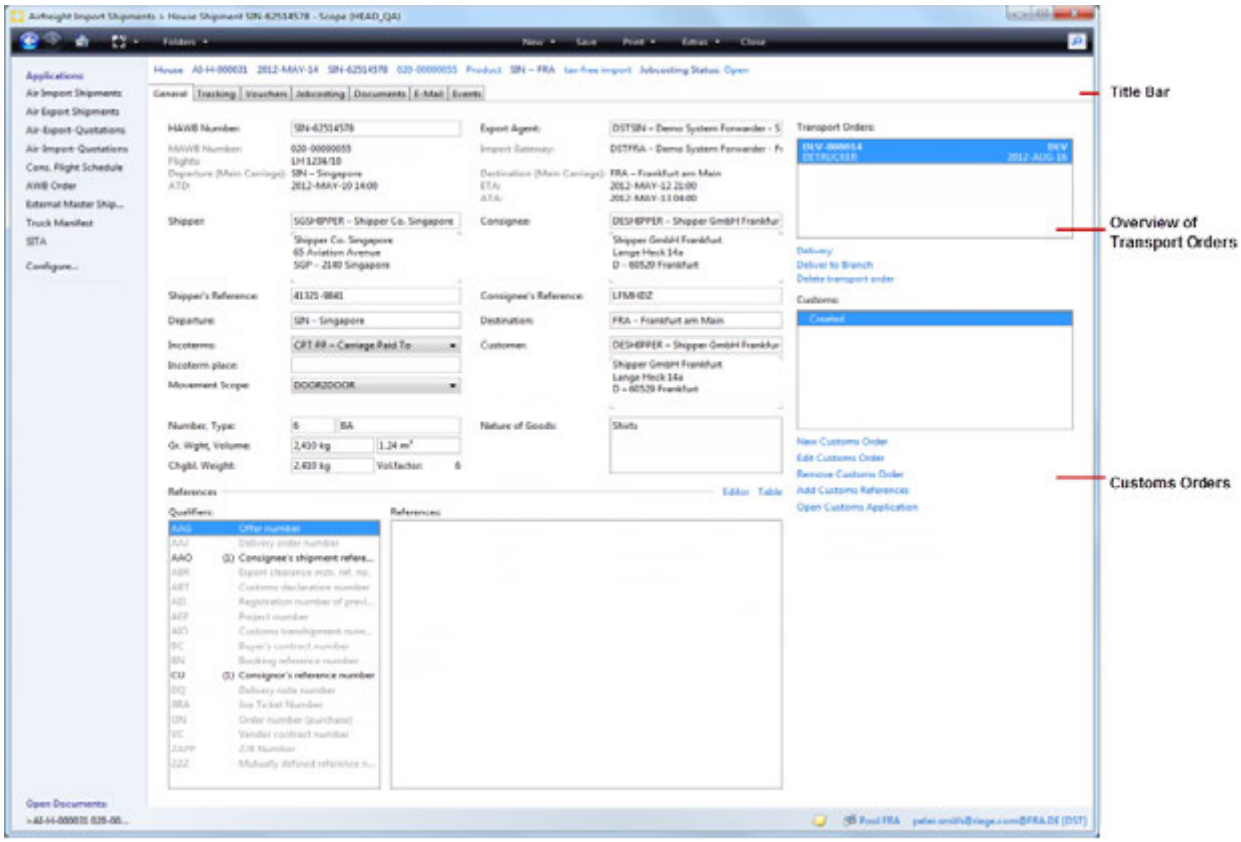
General - House Shipment - Airfreight Import

- Introduction
- Description

Introduction

The **general** tab of the air import shipment application is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. In addition delivery orders can be created and customs details can be entered.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.

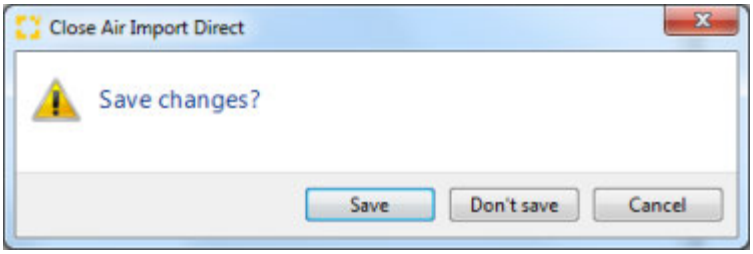
Currently the following documents are available:

- File cover
- Advice of Arrival
- Advice of Arrival (Bank)

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

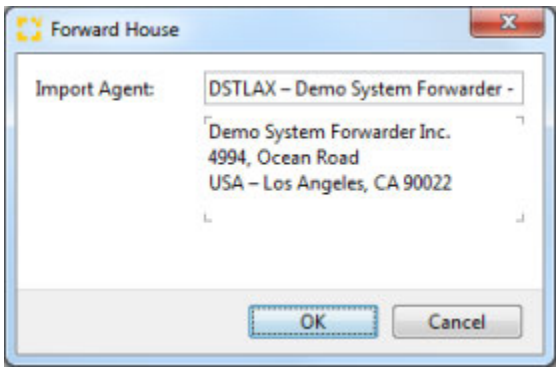
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Title Bar

The following information appears in the title bar for a shipment and blue text indicates that the text has an action link and offers further action.

- **Mode**
  Type of shipment *house shipment*
- **Shipment number**
  Created by the system when the shipment is first saved. When a consignment which has been transferred from another office (Gateway shipment), the shipment number used by the origin office will also be present. (Example: AI-000030 (AI-000026 @ DSTFRA)))
- **Service Date**
  The arrival date of the program is set as follows:
  When present-ATA (Actual Time of Arrival / actual arrival date)
  otherwise ETA (Estimated Time of Arrival / Expected arrival date)
  The current date is automatically stored and updated to match any ETA or ATA as long as the new date is within the same month as the displayed date. If the new date falls within a different month from that displayed, the date will not change unless it is clicked (action link), in which case it will update to show the revise ETA or ATA dates. IF the shipment is a consolidated house, the ETA and ATA dates may only be maintained within the master shipment.
- **Waybill number**
  HAWB number in the corresponding box in the shipment editor.
- **Master's bill number**
  MAWB number in the corresponding box of the consolidation program. By clicking on this number (Action Link), the corresponding master shipment will be opened.
- **Departure airport - Destination airport**
  Departure and destination of the shipment entry
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Tax status**
  The tax Status of the shipment
- **Forward Shipment**
  By clicking on this action link will open a popup window where a search can be done for another branch. Selecting OK will then transfer this shipment to the selected branch.



The *Forward house* option is only available as long as the shipment is not part of a *consolidation* or if latest changes have not been saved.

Customer

The customer is the party responsible for generating the shipment who typically bear responsibility for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

HAWB Number

House airway bill number for the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoterms

The commercial delivery terms for the shipment

Incoterm Place

The agreed named place that the incoterm applies to.

Movement Scope

The scope of the agreed movement of the cargo for this shipment

Departure

Airport of departure of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Shipper

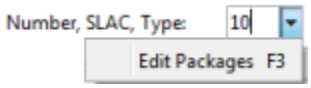
The party listed on freight documentation as the shipper of the cargo. The search function may be used to find the desired business partner. Within the shipper field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Consignee

The party listed on freight documentation as the consignee for the cargo. The search function may be used to find the desired business partner. Within the consignee field, the drop down context menu will allow other tasks to be performed such as creating new partners or editing existing partners.

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages, or the package editor can be called via the drop-down menu or by pressing function key F3. The package editor will allow much greater detail to be entered about individual packages.

> ⚠ If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the packages editor has been used to enter a variety of packing types, this field is blank.)

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Volume Factor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The volume factor used to calculate the chargeable weight will be displayed. (See also the partner role Forwarding customer where a default volume factor for the air import partner can be stored.)

Export Agent

The station which has exported the shipment. The desired agent can be located using the search field. The search will only consider business partners who have the role of agent and this agent role must include the departure airport of the shipment. By default the export agent of the master shipment will be used when available.

Main Leg

The main flight details will be displayed including flight number, ATD, ETA, ATA, Departure and Destination.
These details are transferred from the master shipment.

References

This application may be used to enter any references numbers associated with the shipment and which are to be further used in other applications, such as printing or EDI transmission. More information about the reference number editor is available here.

New Delivery to Branch

This action enable the transfer of the cargo to another branch. By clicking the link the transfer order editor opens

- All transport or delivery orders that are created will be displayed in the overview. By double clicking these they can be opened, edited and printed as desired.

New Delivery Order

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application.

Delete transport order

this action will delete a transport order. The link is only active when a transport order is highlighted and if that transport order has not been printed and the shipment has no entries in costs and revenues.

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Open Customs Application

Opens a customs entry applications if available.

- More information on customs applications is available in the Customs section of the manual.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Tip

Use the keyboard short cut **Ctrl + I** to show information about the current user of the session. This will display the user name, email address and telephone number.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

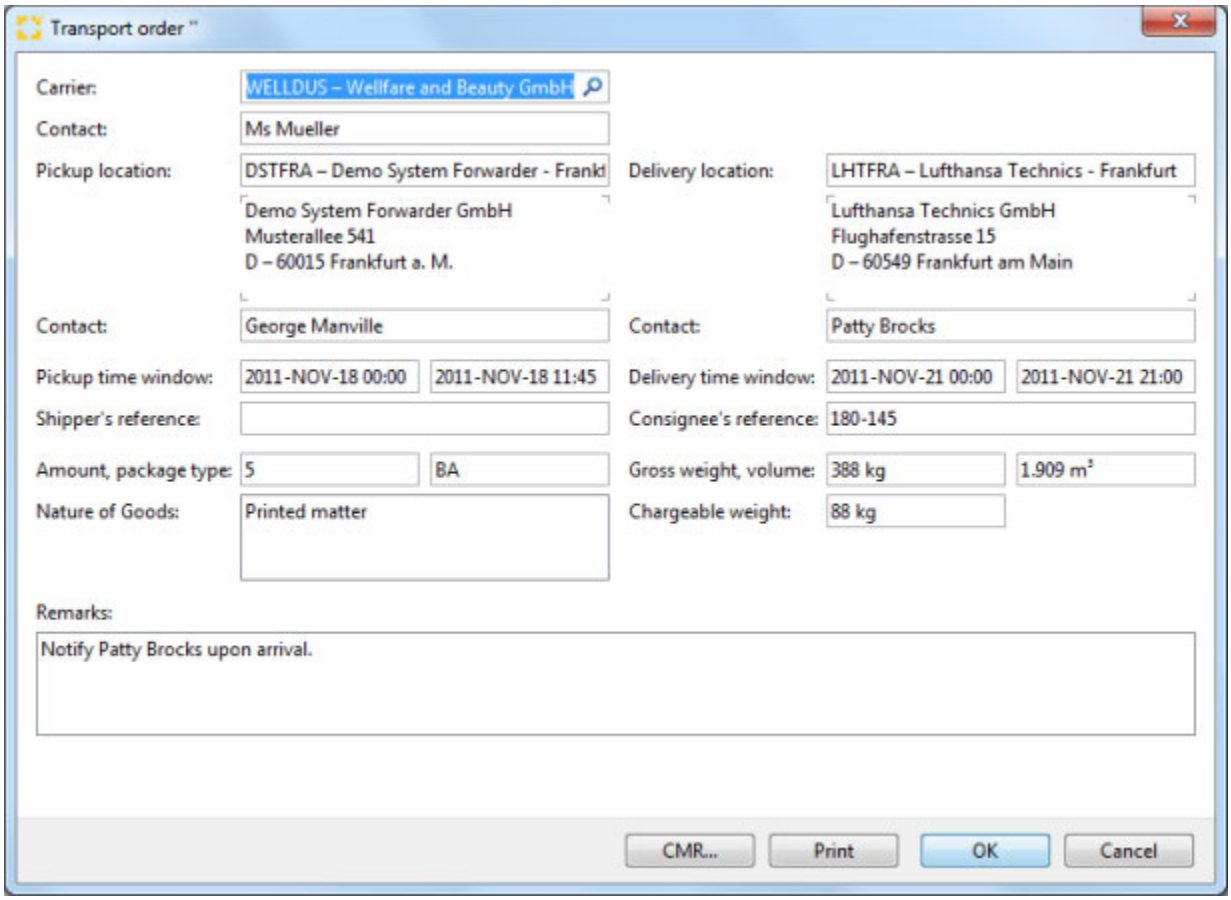
Delivery Order - General - House Shipment - Air Import

- Introduction
- Description

Introduction

Create and print delivery orders or tranfers to other branches. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a set a pickup or delivery addresses link have been stored for this partner, these may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the import agent or or the import agent's pickup address. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

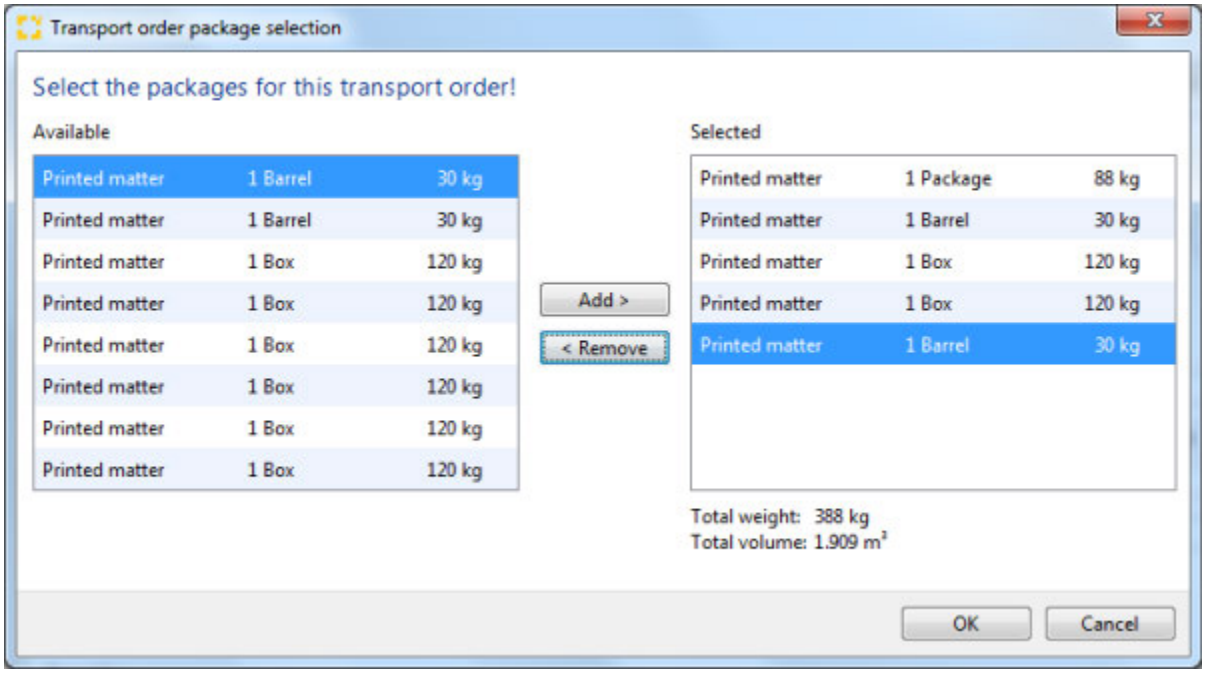
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

> Package selection is only available if the packages have been defined in the package editor of the shipment entry

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Customs orders

When customs details are entered in the main shipment, the "Customs orders" function is available. All the customs orders created on the main shipment will be visible. Use the check box to indicate which customs orders should appear on the delivery order.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Include Shipment Details in printout

check the box to include greater shipment detail on the printed delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

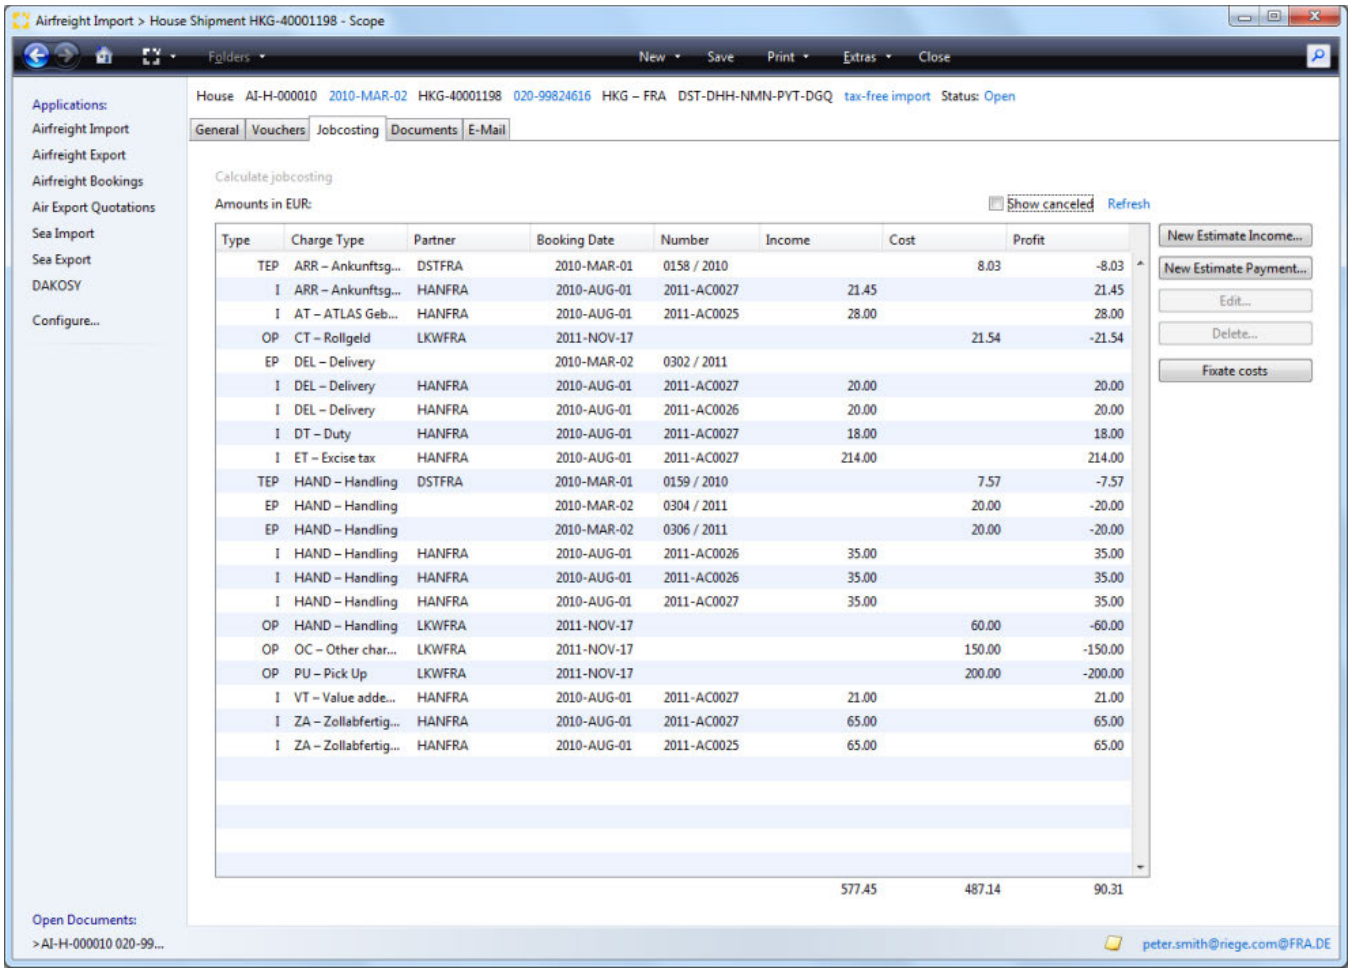
Jobcosting - House Shipment - Airfreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the details of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description



Main menu bar and title bar

see **General** tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

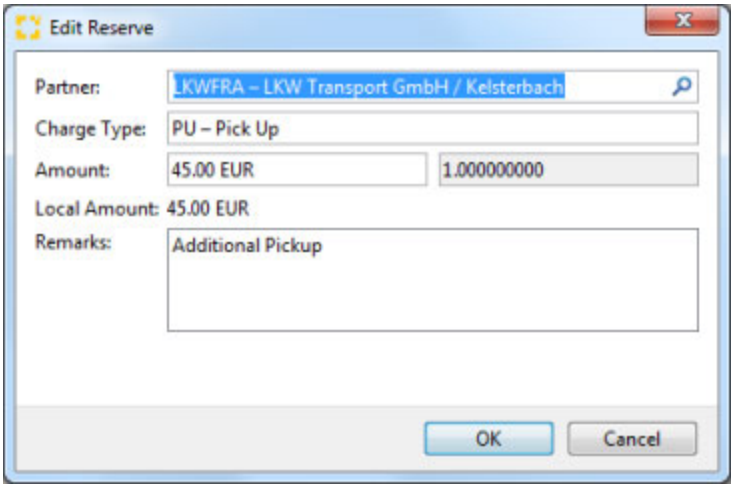
Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Reserves Assignment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

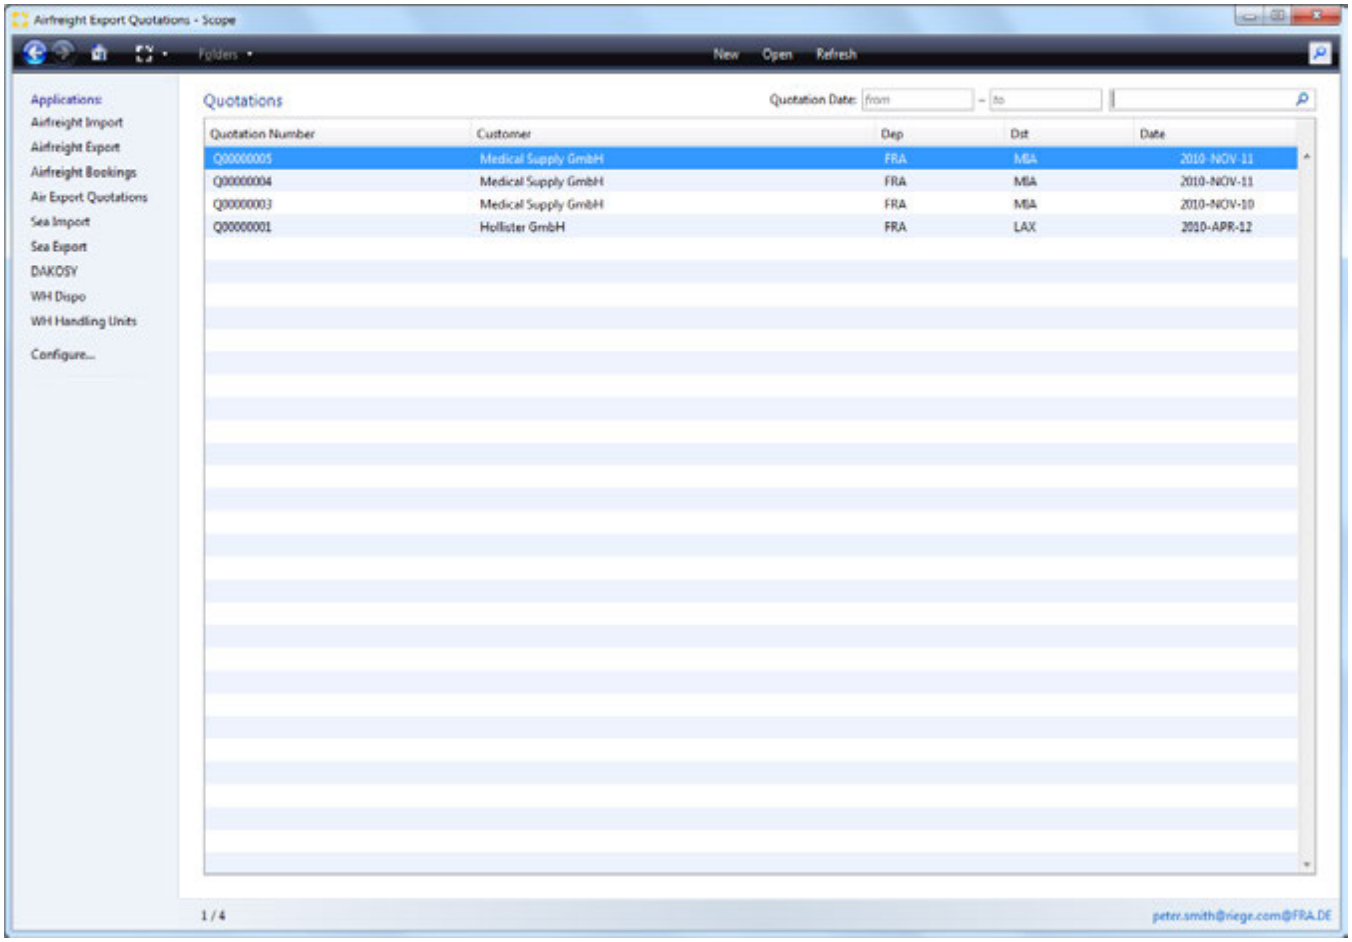
Quotation - Airfreight Import

- Introduction
- Description

Introduction

This application is used to quickly create quotations. These quotes can be used internally or issued to a customer. From the quotation application, a quotation can be used to directly create a direct, back-to-back house shipment or Coload In Shipment. When creating a direct, back-to-back house or Coload In shipment, if the shipment matches an existing quotation, then a pop-up window appears and provides the option to use the quotation for the shipment being constructed.

Description



With ***New - Quotation*** a new quotation can be created.
With ***Open*** the existing quotation highlighted in the index can be opened. Alternatively the quotation highlighted in the index can be ***Double clicked*** to open it.

- Calculation
- E-Mail

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Calculation

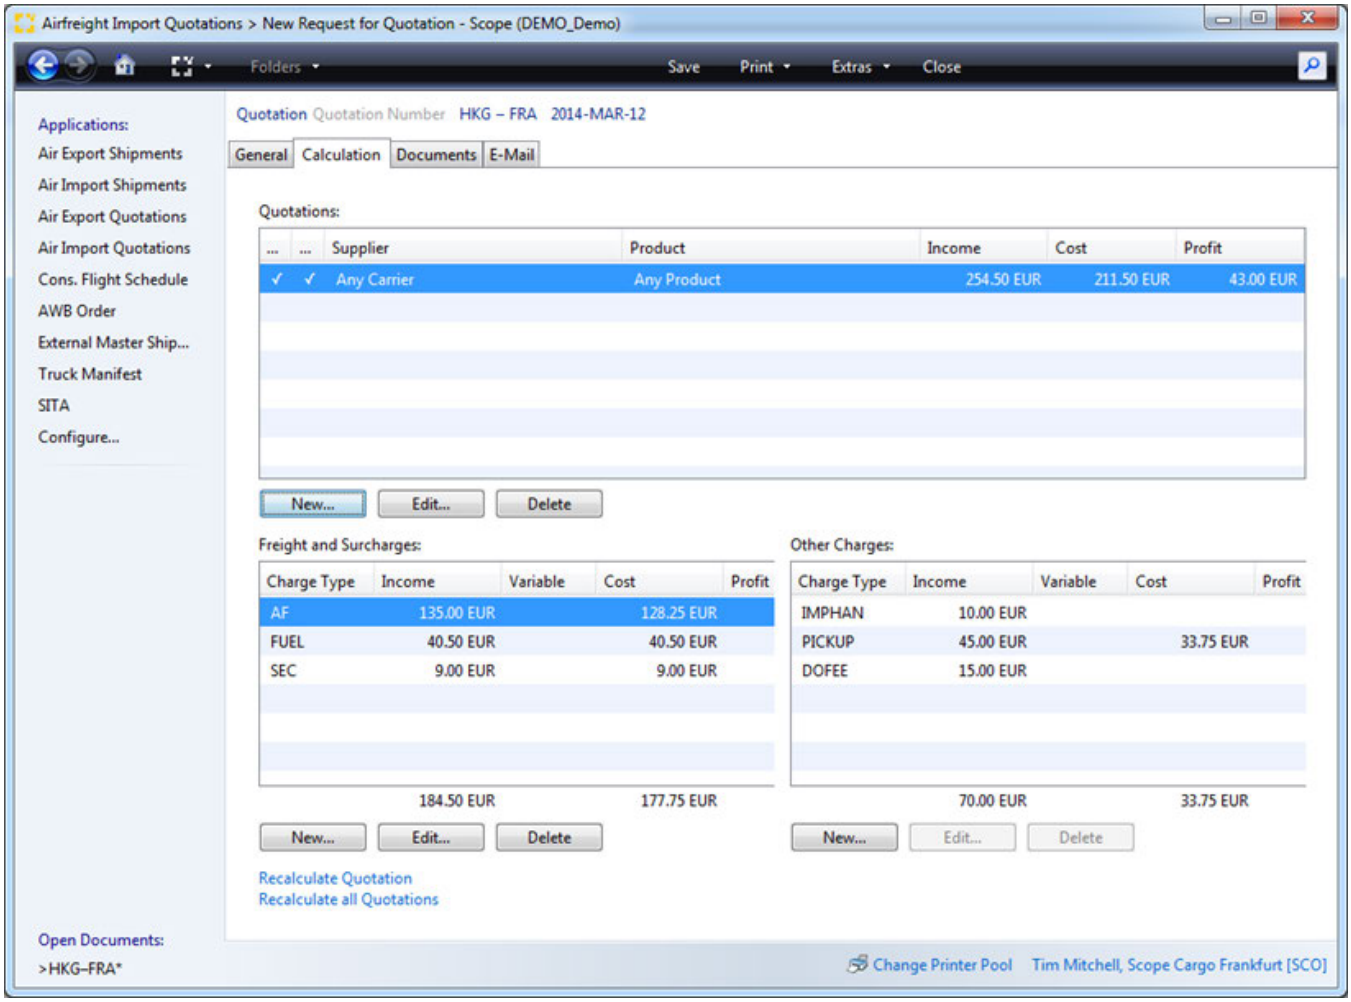
- Introduction
- Description

Introduction

Once the General details about the quote have been entered, the calculation tab is used to further define when the quote can be used, what charges will be applied and how these charges will calculate

- The type of shipment that the quote can be applied to
- Specify Carriers and Products for the quote
- Sales Products the quote applies to.
- Specify charges to be used
- Manage how charges will calculate for the quote

Description



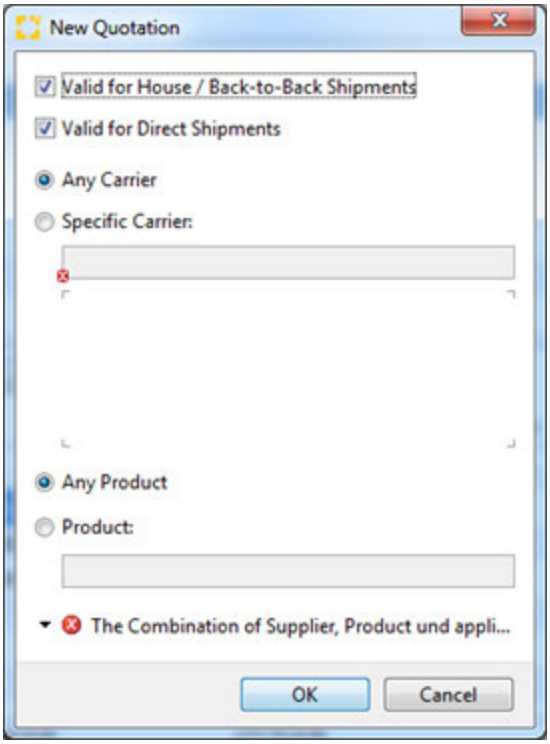
Quotations

This summary table will show carriers and their products which may be used with this quotation. It is possible to specify a single carrier, multiple carriers or all carriers.

New

Opens a pop-up window to add new carriers and products to the quote.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Valid for House / Back-to-Back Shipment

Check this field if the quote may be used with house or back-to-back shipments

Valid for Direct Shipments

Check this field if the quote may be used with direct shipments

Any Carrier

This option indicates any carrier may be used for the quotation. In this case the automatic calculation of costs is done using the general tariff data

Specific Main-Leg Carrier

This option indicates only specific carriers may be used for the quotation. The search field can be used to locate the correct carriers. Costs are automatically calculated using the tariff rates stored for the carrier.

Carrier Product

When the quote only applies to a specific airline product, use the search field to locate the correct airline product.

Any Sales Product

Check this option if the quote can be used with any sales product.

Product

When the quote only applies to specific sales product, use this search field to locate valid sales products.

OK

Stores the data and closes the pop-up window in order for the quotation to be further *edited*.

Cancel

Closes the pop-up window without further action.

Edit

Opens the highlighted carrier in a pop-up window to make changes.

Delete

Deletes a carrier selected in the summary table.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Freight and Surcharges

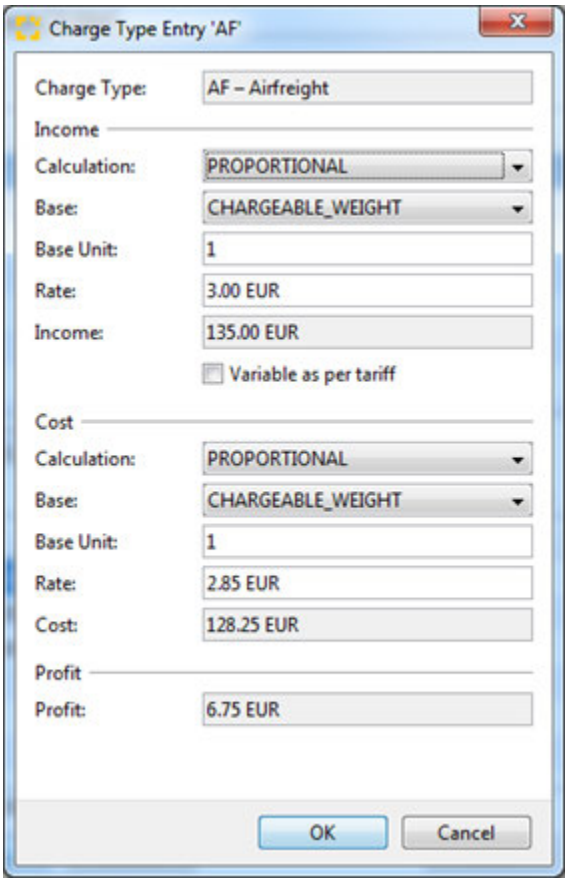
This window displays a summary of freight charges and any associated surcharges such as Fuel Surcharge which are to be applied to the quotation. Beneath the window the total income, total costs and profit for just the freight and surcharges is displayed. This window provide 3 options

- New - add a new freight charge or surcharge
- Edit - adjust the existing highlighted charge
- Delete - remove the highlighted charge

New and Edit

If the New or Edit functions are selected, a pop-up window appears where a new freight charge or surcharge may be entered, or existing charges may be edited.

Both the income and cost for the charge may be calculated.



Charge Type

The charge type for which a calculation is being created. Type to search for available charge types.

Income

The income section will define the revenue to be expected from the shipment.

Calculation Method

The method by which the income or costs should be calculated.
This is a drop down field that will offer the following possibilities:

Type	Description
Fix	No calculation - a fixed amount
Proportional	Calculation based on number of units
Step	Calculation proceeds in step-wise fashion

Base

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The basis used for the calculation

- Not Applicable
- Only base amount
- Manual Entry
- Number of Pieces
- Chargeable Weight
- Gross Weight
- Amount Charge Type
- Amount Charge Type Cost
- Amount Charge Type List
- Amount Charge Type List Cost
- Amount all Charges
- Other Tariff
- Volume
- Container Type
- Counter
- Storage Time
- Number of Consignments
- Weight or Measurement

Select the correct basis which will be *Chargeable Weight* in most cases

Base Units

The units for the basis. For example if the basis is *chargeable weight*, the units for the basis would normally be *1* indicating per 1 kilo of chargeable weight.

Further information about calculation methods, basis and basis units is available under master data rates

The calculation method, basis and basis units are only used for manual calculation. When the income and costs are calculated automatically using the tariff rates they should appear as fixed amounts.

Rate

The rate to be charged for the units on the shipment.

Income

The total calculated freight and surcharges income based on the preceding details.

Cost

The cost section of the freight and surcharges entry provides the same elements as the Income section with the same functions. However the cost section will calculate the expected payments to be made to the carrier for the freight and surcharges.

Profit

The profit section shows the total profit expected by subtracting total income from total costs of freight and surcharges.

OK

Stores the data and closes the pop-up edit charges pop-up window.

Cancel

Closes the pop-up window without further action.

Other Charges

Charges that are not freight or surcharges but which must be included in the quotation are entered using the *Other Charges* window. This window displays all the other charges currently applied to the quote in table form:

- **Charge Type** - The charge type code
- **Income** - The total income the charge will generate. Total income from all charges shown beneath the column
- **Variable**
- **Cost** - The total cost that will have to be paid on the charge. Total cost from all charges shown beneath the column
- **Profit** - The total profit made on the charge. Total Profit from all charges shown beneath the column

The Other charge window provides 3 functions:

- **New..** - Add a new other charge
- **Edit** - Adjust the highlighted other charge in the table
- **Delete** - Remove the other charge highlighted in the table

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New and Edit

If the *New* function is selected, the other charge editor appears and allows new charges to be entered with their income and costs. The *Edit* function also launches the charge editor but only allows the income an costs of an existing other charge to be adjusted.

Recalculate Quotation

Recalculates the quotation for the carrier highlighted in the carrier table summary.

Recalculate all Quotations

recalculates the quotations for all carriers.

> ⚠ When quotations are recalculated, any manually inserted data is lost and only the master data from the master tariff rates is use to recalculate the figures.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail

- Introduction

Introduction

The E-Mail tab of the air import quotation provides standard Scope email functionality and allows pdf versions of quotations to be emailed to recipients. Retaining within the Quotation application a complete history of when quotes were produced, the date they were emailed, the recipient of the email and messages sent to the recipient.

Truck Manifest

- Introduction
- Description

Introduction

In the air freight shipments are often transported by truck to its own branch of the air cargo terminal of the airline or to other offices or export gateway (see also Airfreight export consolidated shipment). This application allows such shipments planned and documented and the corresponding loading lists are printed.

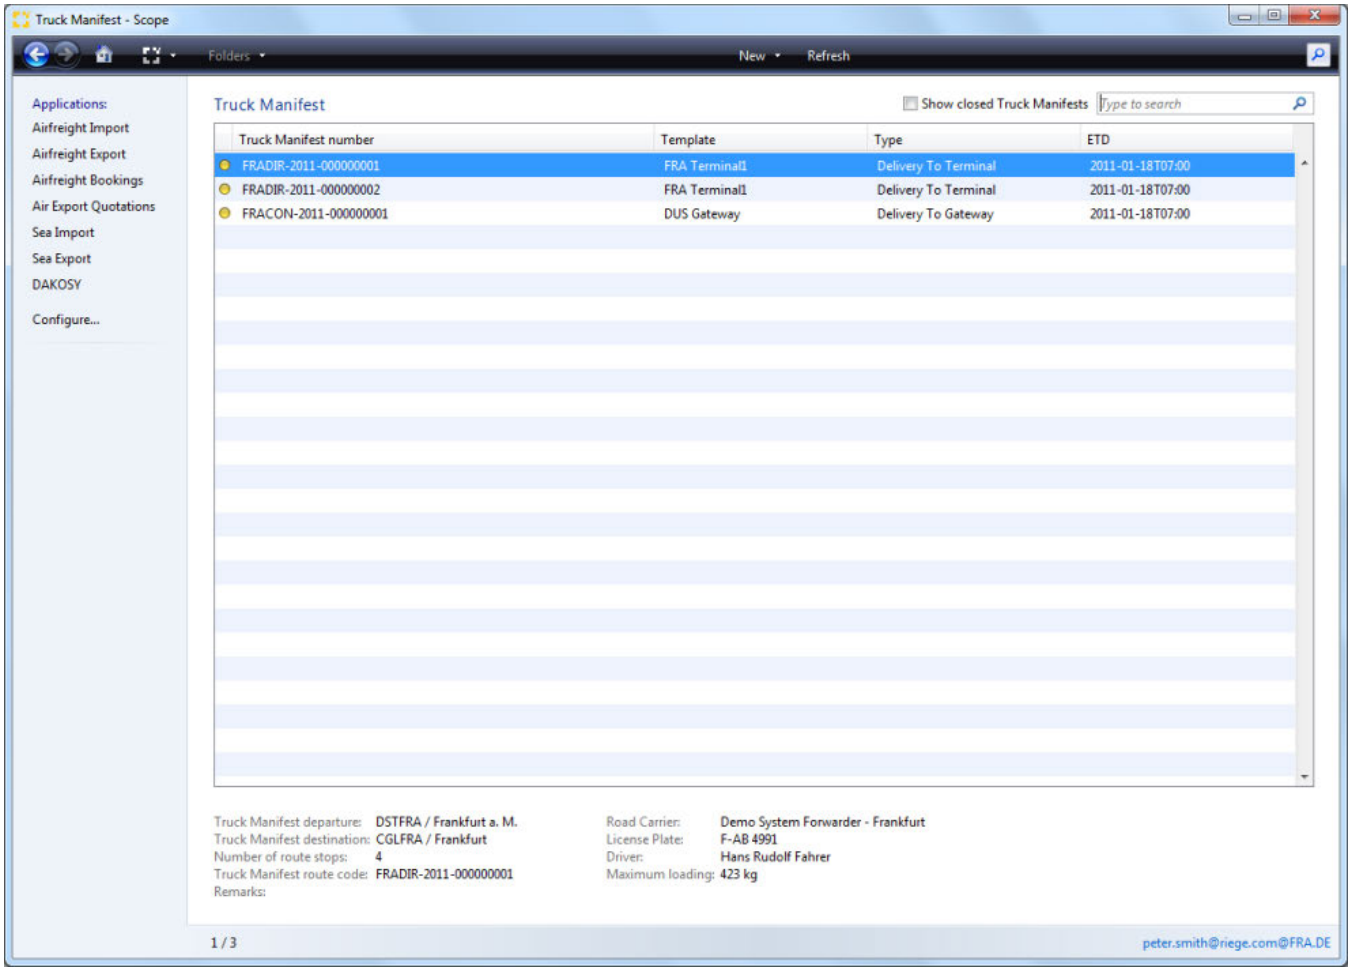
It may also manifest also in the truck exit the Scope Exit Module are transmitted to AES transactions can be processed by external service providers who have no access to the scope of the system's own office.

Einleitung

In der Luftfracht werden Sendungen vielfach per LKW von der eigenen Niederlassung zum Luftfrachtterminal der Fluggesellschaft oder zu anderen Niederlassungen bzw. Export-Gateway (siehe auch Luftfracht Export Sammelsendung) transportiert. Mit dieser Anwendung können solche Transporte disponiert und dokumentiert sowie entsprechende Ladelisten gedruckt werden.

Zudem können die Daten des Truck Manifest auch an das Scope Exit Modul übermittelt werden damit AES Vorgänge auch von externen Dienstleistern bearbeitet werden können welche keinen Zugang zum Scope System der eigenen Niederlassung haben.

Description



Beschreibung

Documents - Truck Manifest (Dokumente - Truck Manifest)

- Introduction
- Description

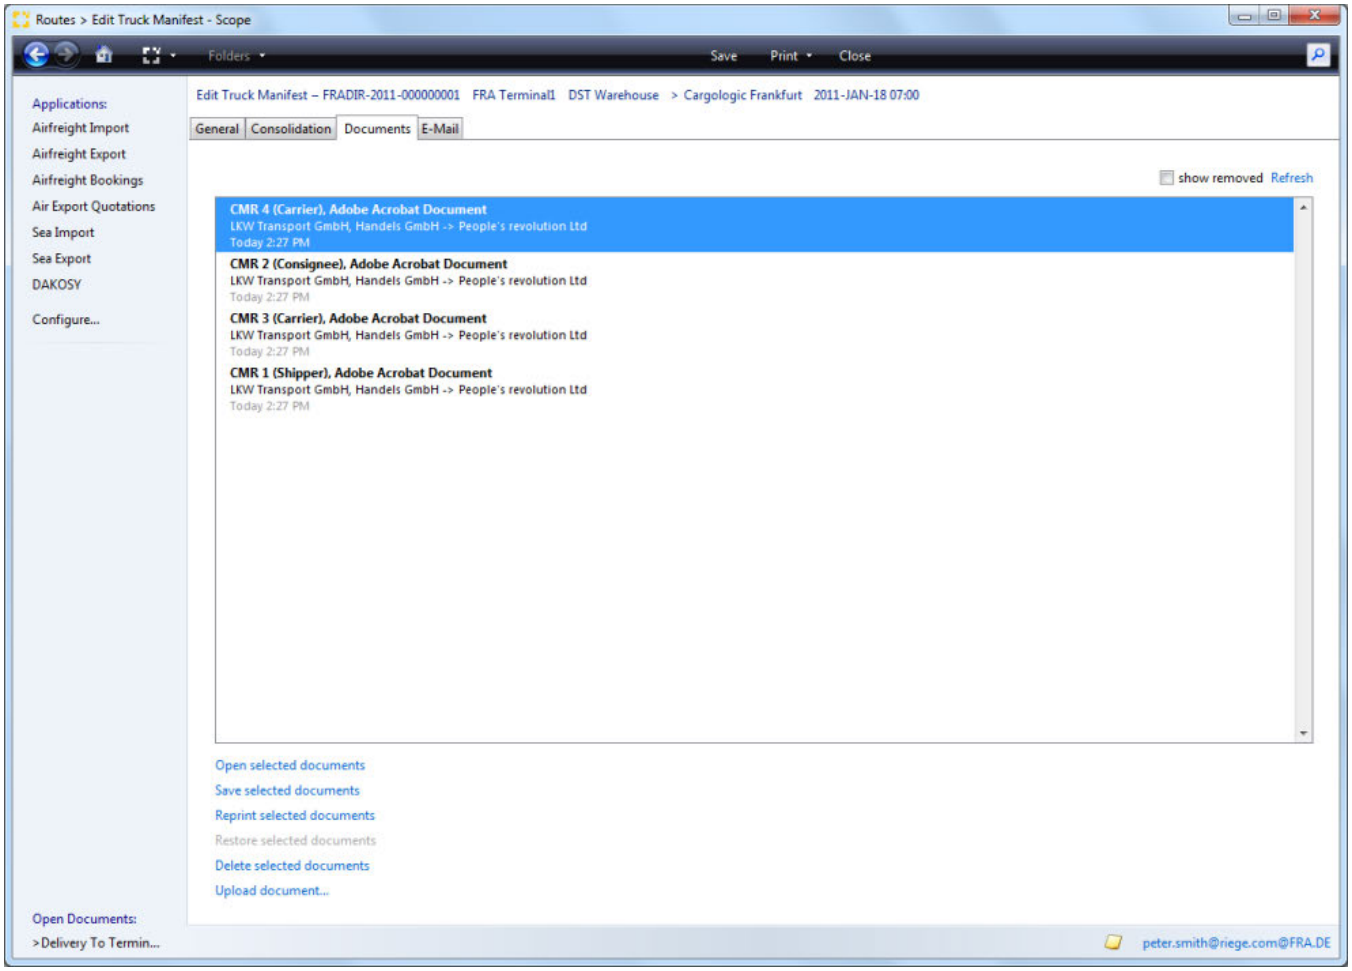
Introduction

The tab **Documents** displays all documents that have been created for the latest Truck Manifest and printed.

Einleitung

Im Reiter **Dokumente** werden alle Dokumente angezeigt, die für das aktuelle Truck Manifest erstellt und gedruckt worden sind.

Description



The following functions are available:

Main-menu bar and Title-bar

See **General** tab

Hauptmenüleiste und Titelleiste

siehe Reiter **Allgemein**

Open selected documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens the currently, in the list of selected documents, document as a PDF file. Alternatively the document can be opened by double clicking on the listing.

Ausgewählte Dokumente öffnen

Öffnet das aktuell, in der Dokumentenliste ausgewählte, Dokument als PDF-Datei. Alternativ kann das Dokument auch mit einem Doppelklick auf den gewünschten Listeneintrag geöffnet werden.

Save selected documents

Saves the selected document as a PDF file in the directory of the local PC.

Ausgewählt Dokumente speichern

Speichert die ausgewählten Dokumente als PDF-Datei in das gewünschte Verzeichnis des lokalen PCs.

Print selected documents again

Recreated a print job to the selected documents.

Ausgewählte Dokumente nochmal drucken

Erzeugt erneut einen Druck-Job für die ausgewählte Dokumente.

Upload document...

Opens a file dialog window with which an external file (eg PDF, Excel-list) can be added to the current program.

Dokument hochladen...

Öffnet ein Datei-Dialogfenster mit welchem eine externe Datei (z.B. PDF-Datei, Excel-Liste) zur aktuellen Sendung hinzugefügt werden kann.

Update

Updates the list of entries.

Questions

Aktualisieren

Aktualisiert die Übersicht der Einträge.

Print

By clicking on the appropriate item in the list under the Print command, the required documents are printed.
At present the following documents:

- Truck Manifest

Drucken

Durch einen Klick auf den entsprechenden Punkt in der Auswahlliste unter dem Befehl *Drucken* können die benötigten Dokumente ausgedruckt werden.
Zur Zeit stehen folgende Dokumente zur Verfügung:

- Truckmanifest

Save

With the Save action an entered Truck Manifest will be saved.

Speichern

Mit der Aktion *Speichern* kann eine eingegebenes Truck Manifest gespeichert werden.

Close

Includes the latest Truck Manifest. If this has not yet been saved, a corresponding query.

Schliessen

Schliesst das aktuelle Truck Manifest. Falls dieses noch nicht gespeichert worden ist, erfolgt eine entsprechende Rückfrage.

Title bar

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The following information and actions are displayed in the title bar and are available there:

- **Application Title**
- **Truck Manifest Number**

  The number of the current Truck Manifest. This number is in the first storage of assigned automatically by the system.
- **Tour Template**
  The name of the used Tour Template.
- **Tour Start**
  Tour start according Tour Template.
- **Tour Destination**
  Tour destination according Tour Template.
- **ETD**
  Approximate for estimated date and time of departure of the tour.

Titelleiste

Folgende Informationen und Aktionen werden in der Titelleiste angezeigt bzw. stehen dort zur Verfügung:

- **Anwendungstitel**
- **Truck Manifest Nummer**

  Die Nummer des Aktuellen Truck Manifestes. Diese Nummer wird bei der ersten Speicherung vom automatisch vom System vergeben.
- **Tourvorlage**
  Der Name der benutzten Tourvorlage.
- **Tourstart**
  Tourstart gemäss Tourvorlage.
- **Tourziel**
  Tourziel gemäss Tourvorlage.
- **ETD**
  Voraussichtliche Abgangsdatum und Zeit der Tour.

Tour Start (Partner/Address)

Business partners with the address at which the tour takes place start. The desired business partner can be found using the field search function. About the business partner context menu can also create a new affiliate or selected partners can be edited.

Tourstart (Partner/Adresse)

Geschäftspartner mit Adresse bei welchem der Tourstart stattfindet. Der gewünschte Geschäftspartner kann mit der Feldsuchfunktion gefunden werden. Über das Geschäftspartner Kontextmenü kann auch ein neuer Partner angelegt oder der ausgewählte Partner editiert werden.

Start Airport

Here, a possible departure airport will be found via field search function and used.

Start Airport

Hier kann ein eventueller Abgangsflughafen mittels Feldsuchfunktion gefunden und eingesetzt werden.

Tour Destination (Partner/Address)

Business partners with the address at which is the destination of tour. The desired business partner can be found using the field search function. About the business partner context menu can also create a new affiliate or selected partners can be edited.

Tourziel (Partner/Adresse)

Geschäftspartner mit Adresse bei welchem sich das Tourziel befindet. Der gewünschte Geschäftspartner kann mit der Feldsuchfunktion gefunden werden. Über das Geschäftspartner Kontextmenü kann auch ein neuer Partner angelegt oder der ausgewählte Partner editiert werden.

Destination Airport

Here, a possible departure airport will be found via field search function and used.

Ziel Airport

Hier kann ein eventueller Ankunftsflughafen mittels Feldsuchfunktion gefunden und eingesetzt werden.

Seafreight

- Introduction
- Description

Introduction

As sea freight is the transportation of goods by ocean vessel.
Physical transport of the goods is undertaken by:

- A liner service (scheduled services controlled by the owners of ships, where a defined route is serviced regularly and at set time intervals)

or

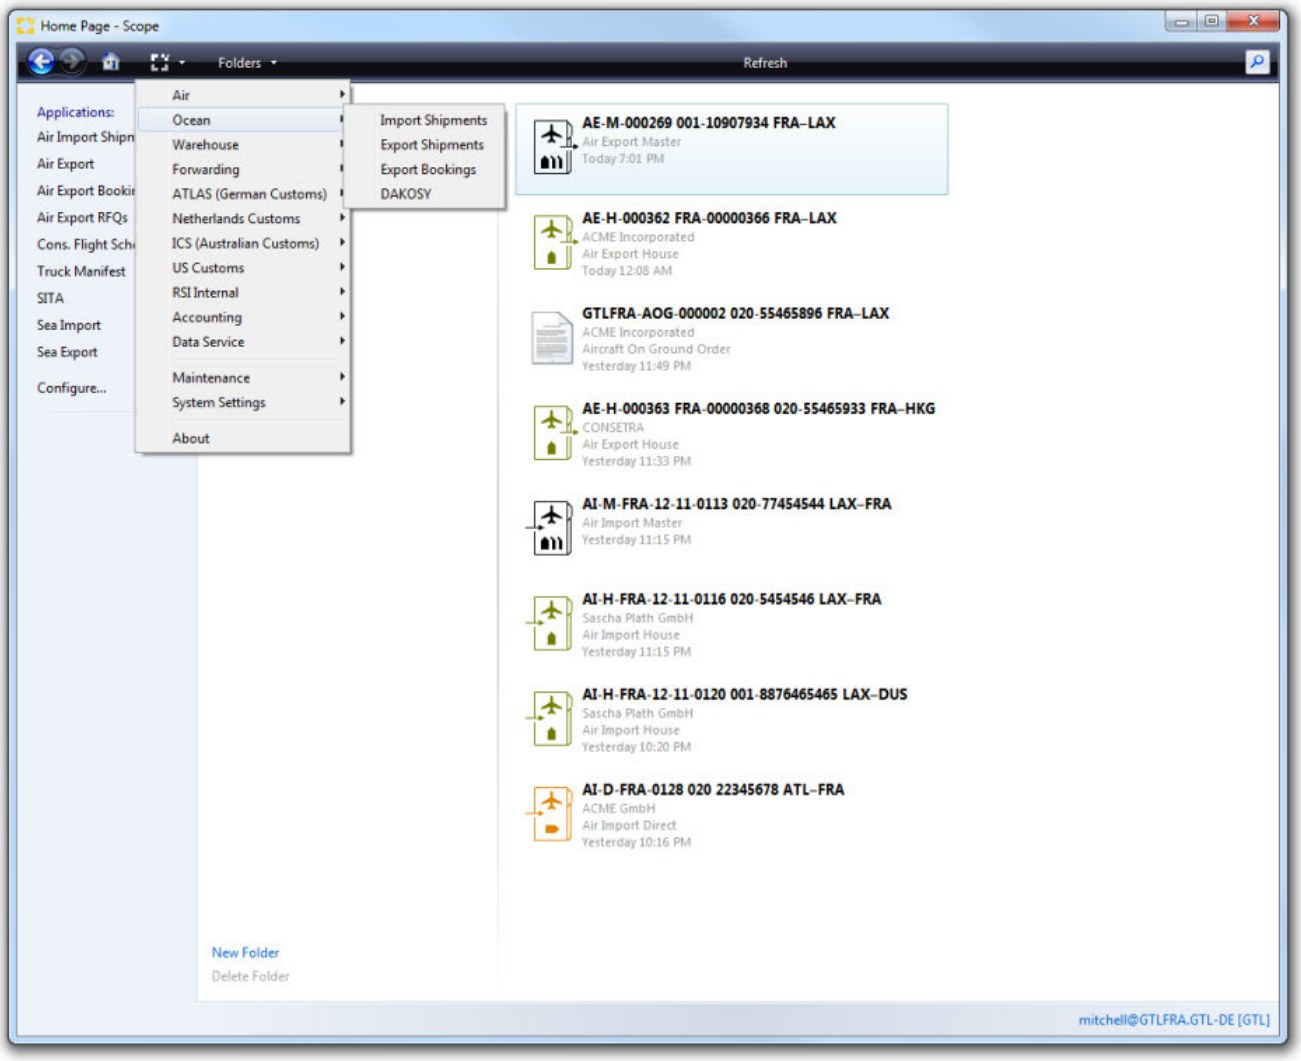
- Tramp service (usually charter transport ship with a flexible-route and no fixed schedule).

Scope ocean modules provide all functions required for the creation of sea freight import and exports shipments including booking, clearance and documentation.
The flexible processing options permit the Scope user to handle all types of goodsl; LCL, FCL, break-bulk, RO-RO or bulk goods.

Description

On launching Scope the Overview mode (start screen) is presented. The menu of Scope Applications shows sea freight export and sea freight import applications. Clicking on the desired application (ocean freight sea freight export or import) to start the program.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



In the following chapters applications are described in detail.

- Seafreight Export
- Seafreight Import
- Seafreight Port systems

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Seafreight Export

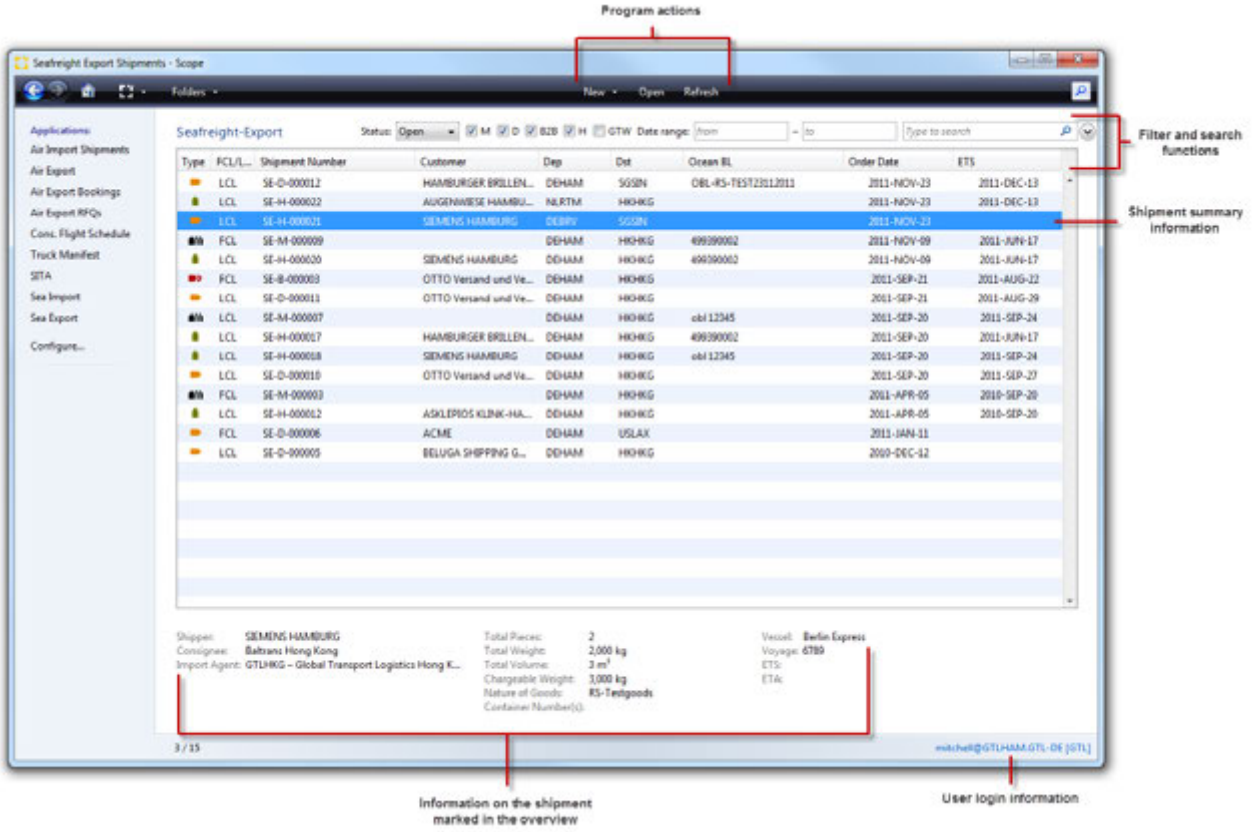
- Introduction
- Description

Introduction

In the seafreight exports module, all data required for seafreight export shipments is collected and processed.

Description

Use the menu sequence Scope Applications - Ocean to view the available applications (sea freight export and import). Click the sea freight export application to open it.



Program Actions
- New
- Open
- Refresh

Filter and search functions
- Date Range
- Enter keyword
- Sorting function

Shipment overview
Information on the shipments marked in the overview
User Information

Program Actions

New

The "New" function produces a dialog box for new shipment entry in ocean exports. The dialogue presents the following options:

- New House Shipment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- New Direct Shipment
- New Back-to-Back-Shipment
- New Consolidation Shipment

Open

The action "Open" will open the shipment highlighted in the summary table below in order to view or edit the shipment.

Refresh

The action "Refresh" will update the list of sea freight export shipments shown in the the summary list.

Filter and search functions

Date Range

The shipments shown in the summary table can be restricted to those matching a data range (date from - to) entered in the "Date range" fields".

Enter keyword

The shipments shown in the summary table can be restricted to those which include a keyword entered in the *Type to search* field.

Sorting function

Use the sort function of each column to sort the data:

Criterion	Description
Type	The shipments are sorted by type (direct shipment / house shipment / Consolidation shipment).
Shipment number	Shipments are sorted by shipment number
Customer	The shipments are listed alphabetically according to the customer name \ - sorted ascending or descending order.
From	The shipments are listed alphabetically according to the port of loading \ - sorted ascending or descending order.
To	The shipments are listed alphabetically according to the port of discharge \ - sorted ascending or descending order.
OBL	Shipments are numerically by the number of the OBL \ - sorted ascending or descending order.
Order date	Shipments are sorted according to the order date \ - sorted ascending or descending order.

Shipment overview

The shipment overview displays all seafreight export shipments, most recent at the top. Each row represents a shipment. These can be sorted using the drop-down menus.

Information on the shipments marked in the overview

The lower section of the overview screen displays detailed information about the shipment highlighted in the shipment overview.

User Information

The lower right edge of the seafreight export overview displays the user information. By clicking on this link it is possible to switch to a different branch if the correct permissions are available.

Goods - Sea Shipment - Seafreight Export

- Introduction
- Description

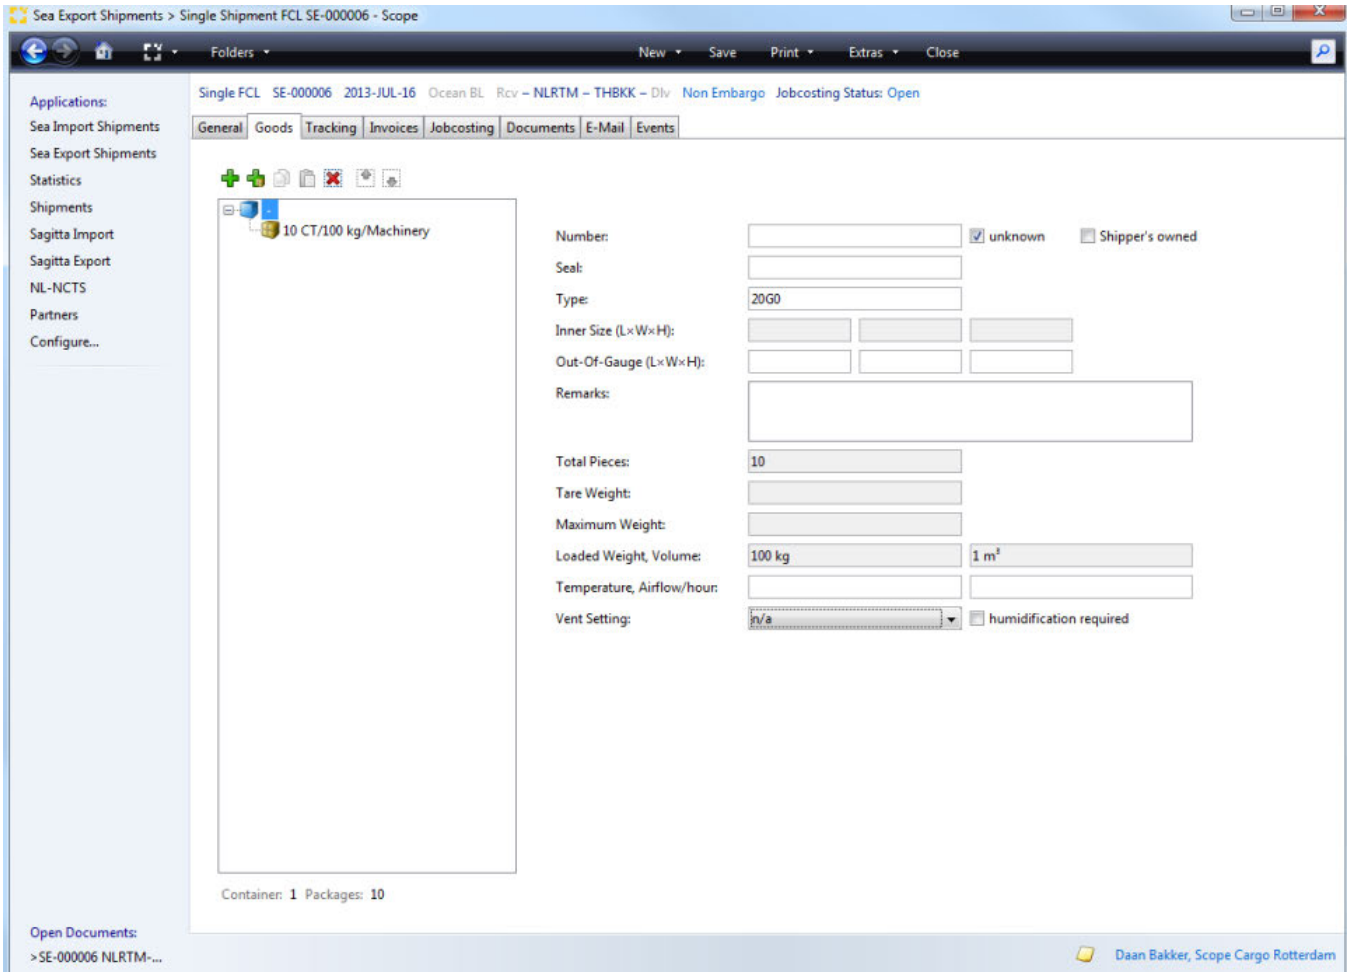
Introduction

The tab *Goods* shows a summary of all containers and their goods on the left and two sub tabs on the right showing comprehensive details of the physical nature of the goods and containers, including any dangerous goods information .

Description

The_goods tab_ presents the cargo information with the individual packages and containers on the left and the corresponding details of each package or container appears on the right as each package is highlighted.

The goods already entered in the General tab will appear automatically.



Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
	Container
	Cargo

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
	Adds a new container
	Adds a new piece of cargo
	Places a copy of the selected Cargo Lines in the Clipboard
	Pastes a copy of a selected Cargo line in the shipment
	Removes a piece of cargo or container
	Moves the item up the list
	Moves the item down the list

Shipment types - Goods Matrix.

This schedule gives an overview of the behaviour and available options of the Goods tab per available Shipment type

shipment type						description		
Booking	✓	✓	✓	✓	✓	Shipment type to be determined therefor all options available		
House Shipment	✗	✓	✓	✓	✓	House Shipment only allows the registration of Cargo Lines, can be linked to a container on a Master or Superhouse FCL		
Single Shipment	✓	✓	✓	✓	✓	Single shipment allows registration of container and cargo lines, however container details will only be used as information		
Single Shipment FCL	✓	✓	✓	✓	✓	Single shipment FCL allows registration of container and cargo lines as functional details		
Superhouse Shipment	✗	✗	✗	✗	✗	Superhouse Shipments, will only show the goods details of underlying house(s)		
Superhouse Shipment FCL	✓	✗	✗	✗	✗	Superhouse Shipments FCL allows the adding and linking of containers and will show the goods details of underlying house(s)		
Master Shipment	✓	✗	✗	✗	✗	Master Shipment allows the adding and linking of containers and will show the goods details of underlying house(s)		

LCL or Breakbulk Back-to-Back shipment

When the Back-to-Back shipment is not containerized a minimum of 1 cargo item should be present and cargo items can be added by clicking on the  icon.

For each cargo item detailed information can be added in the sub tabs:

- Cargo description
- Dangerous Information

Cargo Description - Sea Shipment - Seafreight Export

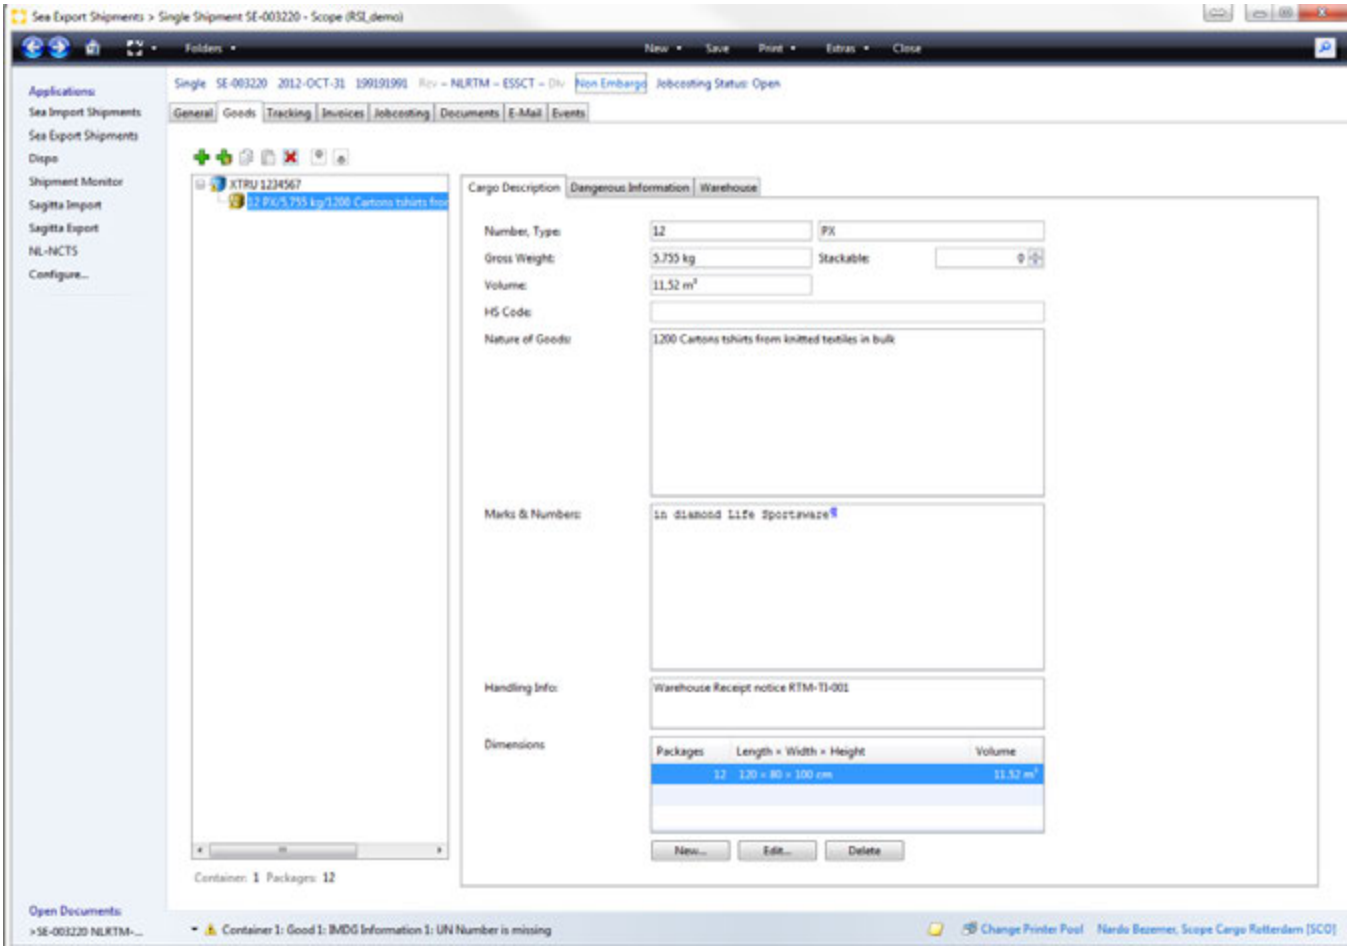
- Introduction
- Description

Introduction

Complete details about the physical nature of the cargo is recorded including marks and numbers and any special handling instructions.

Description

The *Cargo Description* tab will appear as the default tab, showing the details of the cargo highlighted to the left.



Number,

The exact number of pieces.

Packing type

To the right of the pieces, the type of packing can be described - pallets, boxes, barrels etc. maintained in the Equipment appliance

Gross Weight

The gross weight of the packages. This figure will default to Kg, but this may be changed to Lbs if required.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Volume

The total volume of the packages. This figure will default to Cubic meters (m3), but this may be changed to cubic feet (CFT)if required.

Stackable

The stackablilty of the packages.

Nature of Goods

A description of the goods. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Marks and Numbers

Any marks and numbers on the goods that are to be noted on the documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Handling Info

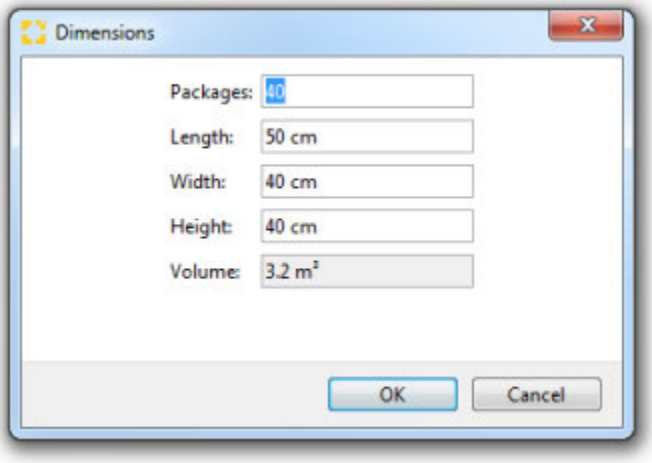
Special handling instructions to be included on Loading List forms. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Dimensions

Each piece of the package can be recorded in the *Dimensions Editor*.

New

By clicking on the **new** button the dimensions editor will appear. This can be repeated for each item until all have been entered and the results will be tabulated.



Data is saved by clicking the "OK" button and discarded by clicking the "Cancel" button.

Packages

The number of packages.

Length

The length of each package. The default measurement will be in **cm** but this can be changed to **in**.

Width

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Height

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Containers - Sea Shipment - Seafreight Export

- Introduction
- Description

Introduction

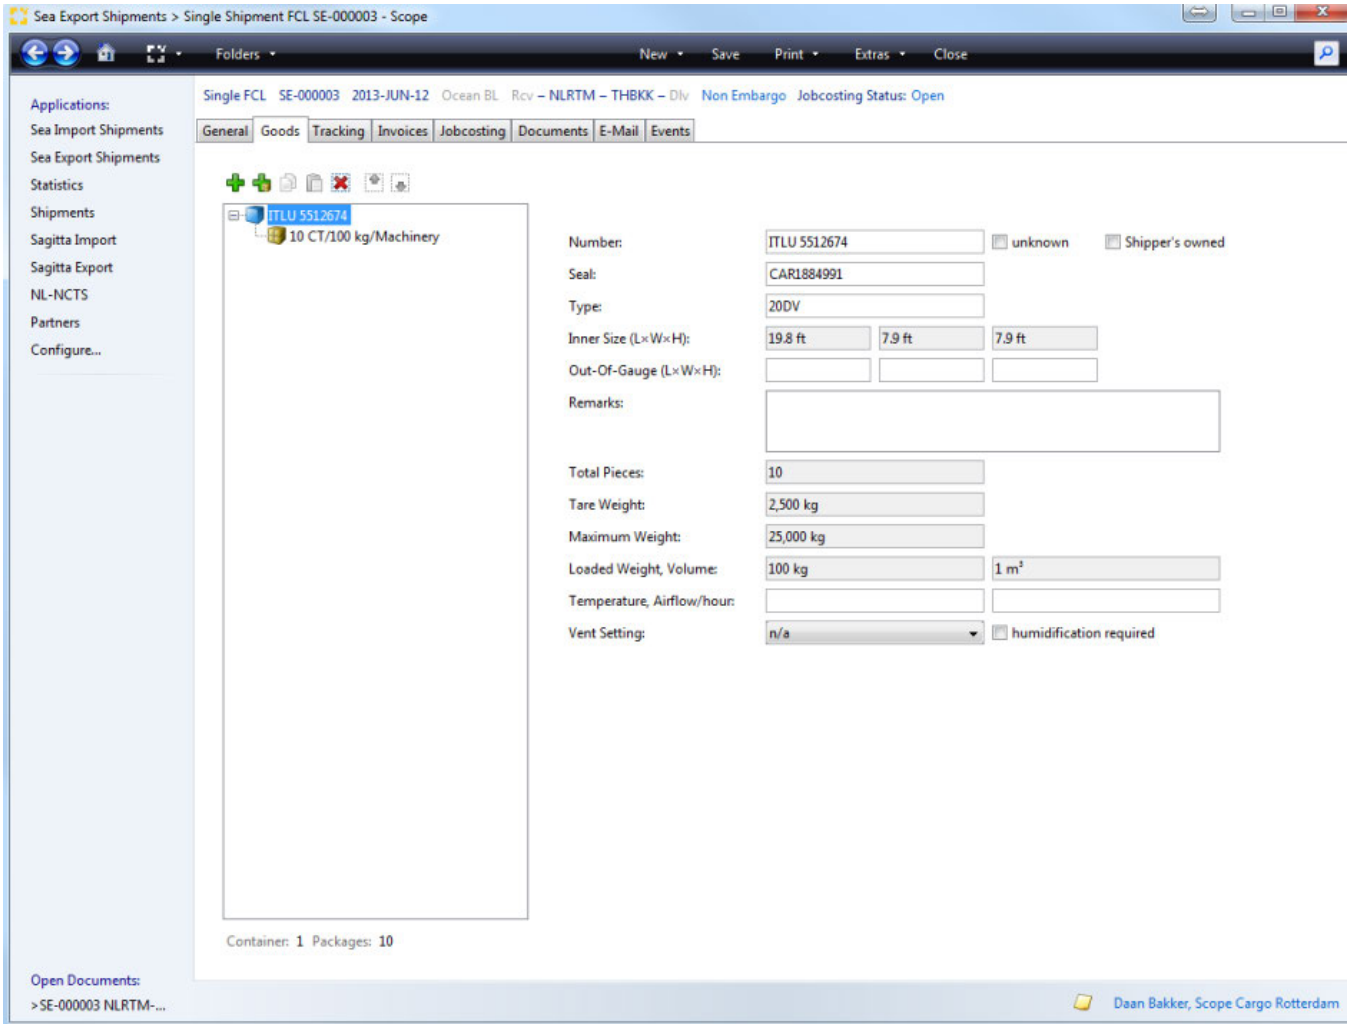
With the container details all relevant information regarding a shipment is registered.

Description

Container Details

If the cargo is to be shipped containerized then the container details must be added using the icon. This will open a container entry screen on the right where the full container details are recorded.

On completion of the container details, at least one cargo item must be added to the container using the icon.



Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489,
The container number will be validated against the applicable container check digit algorithm.

A container number is mandatory unless the unknown option is active.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Unknown

If the "Unknown" box is checked, then the container number can be left empty, used when originally creating an sea export FCL shipment when only the type is known, the container number is populated later in the process.
When keying a container number in the number field, the unknown option will be de-activated automatically.

Shipper's owned [1]

Check the "Shipper's owned" box if the shipper owns the container, When this option is set to active the container number validation will not be done.

Seal

The container seal number

Type [1]

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Out-Of-Gauge (LxWxH) [1]

Registration of the out-of-gauge dimension, Dimensions of cargo outside of the normal dimensions of the container, possible applicable with Open top or flat-rack containers

Remarks

Any remarks particular to this container, Details of the remarks will be printed on the loading Instruction

Total pieces

The total number of pieces in the container. This is calculated from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Temperature [1]

In case a reefer container is used the required

Airflow/hour [1]

Vent Setting [1]

Humidification required [1]

Note 1)

These details will be used in a EDI Carrier booking (if applicable)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargoe items:

Shipment types - Seafreight Export

- Introduction
- Description

Introduction

Scope supports a number shipment types to supports different kind of shipments which meets the requirements of the sea freight departments.

Description

Shipment Type	HBL	OBL	Use Cases
House	✓ loose cargo	✗ consolidate on Superhouse or Master	Your customer books containerizable cargo that will be consolidated together with other House shipments from other customers onto a Master, and for which you issue a House B/L. Your customer books containerziable cargo that will be consolidated with other cargo of the same customer onto a Superhouse. For each, the House and the Superhouse, you issue a House B/L (e.g. shipper, buyer).
House FCL	✓ FCL	✗ consolidate on Superhouse or Master	Your customer books containerizable cargo that will be consolidated by you. The House B/L will be issued as FCL.
Single	✓ loose cargo	✓ either FCL or loose cargo	Your customer books loose cargo that will not be consolidated by your organization, but which you hand over to a third party (carrier, NVOCC, third party forwarder). You *do* have the option to organize the stuffing and transport of containers, but the House B/L will be issued as loose cargo.
Single FCL	✓ FCL	✓ FCL	Your customer books containerizable cargo that will not be consolidated any further by you. The House B/L will be issued as FCL.
Superhouse	✓ loose cargo	✗ consolidate on SuperHouse	Your customer books loose cargo you will later consolidate onto a Master. This loose cargo can come from different sources, but your customer expects one House B/L to be issued.
Superhouse FCL	✓ FCL	✗ consolidate on SuperHouse	Your customer books containerizable cargo you will later consolidate onto a Master. All parts of this shipment travel in a House B/L specific container, so the House B/L of the Superhouse FCL is issued as FCL.
Master	✗ not a customer order	✓ either FCL or loose cargo	You wish to consolidate multiple shipments to hand over to a carrier.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

House Shipment - Seafreight Export

- Introduction
- Description

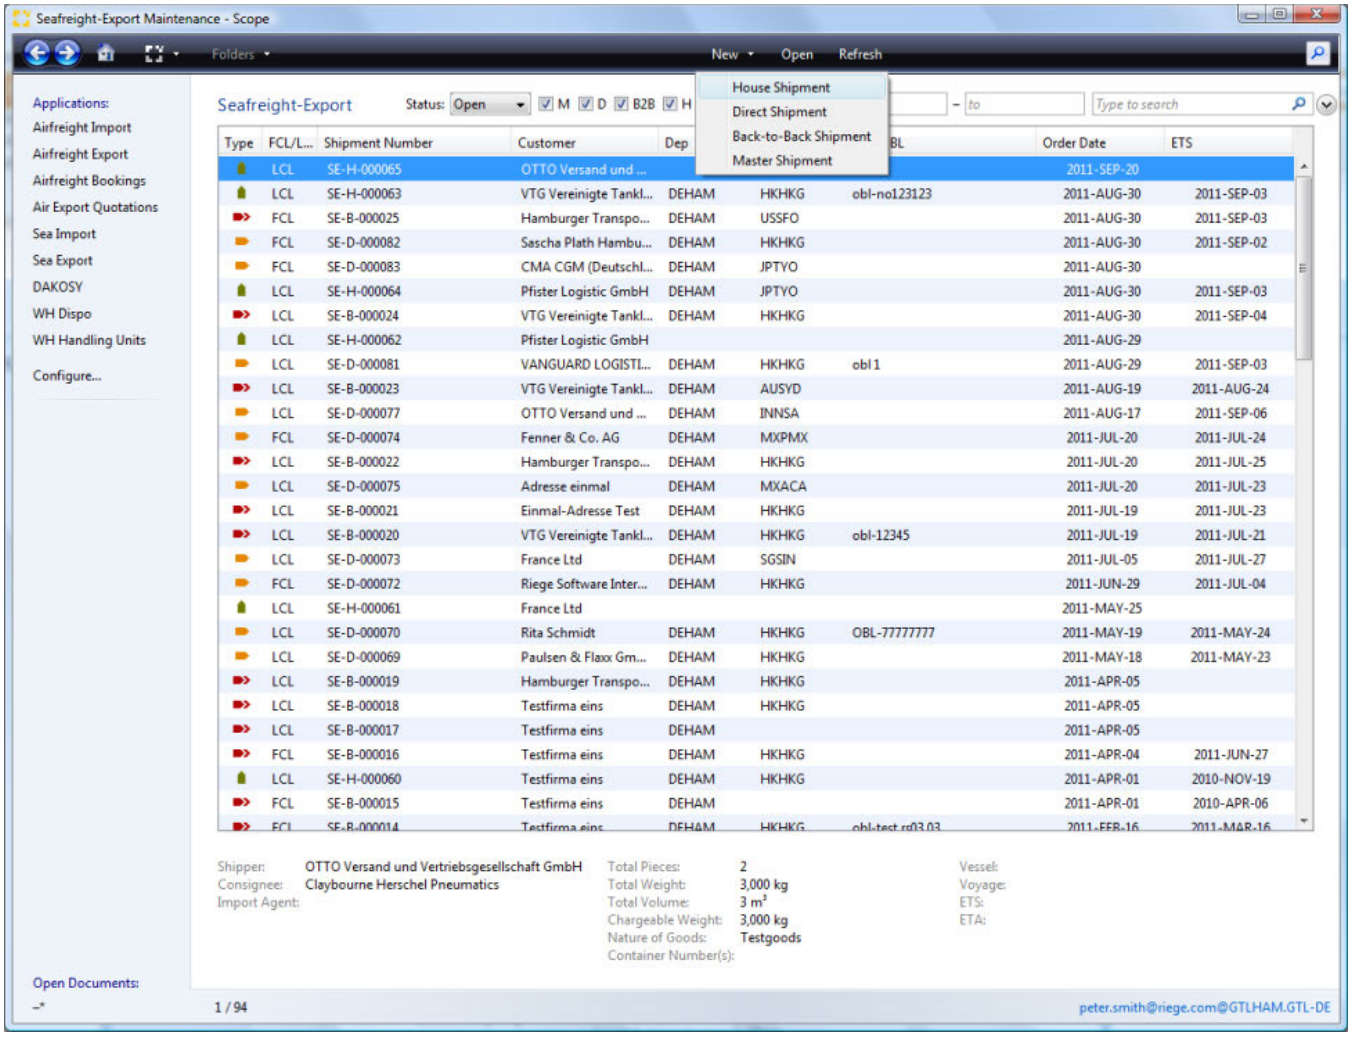
Introduction

A house shipment is a LCL shipment in which the actual shipper and consignee are named. House shipments are normally consolidated with other house shipments into a master consolidated shipment. This consolidated shipment normally shows the export freight forwarder as the shipper and the import freight forwarder as the consignee. The import forwarder deconsolidates the master shipment into the original individual house shipments and organizes the distribution of these shipment from the point of deconsolidation. The advantage of sending house shipments in a consolidated master shipment is the possibility of filling one or more complete containers with goods. The most favorable shipping rates can be obtained from steamship companies (seafreight carriers) for full container loads.

All relevant data for an LCL shipment is collected and processed when creating a house shipment.

Description

To create a new house shipment, click on "New" in the Scope menu bar and then click the option "New house shipment" (see illustration). This opens the application for the creation of a new house shipment.



The following tabs are available to the user for the shipment entry:

- General
- Goods
- Vouchers
- Jobcosting
- Documents

Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.

Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

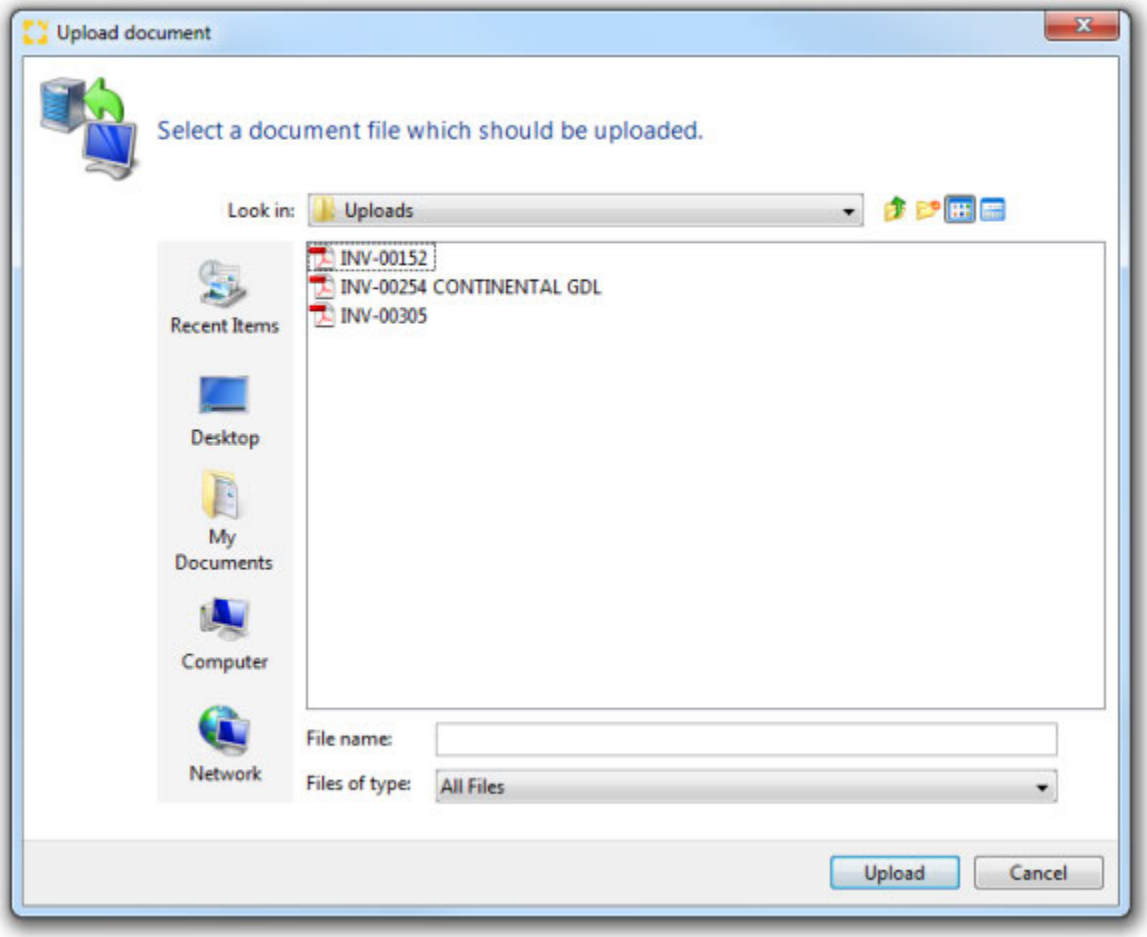
Print the document to the selected printer.

Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.



Update

Updates the current list of documents.

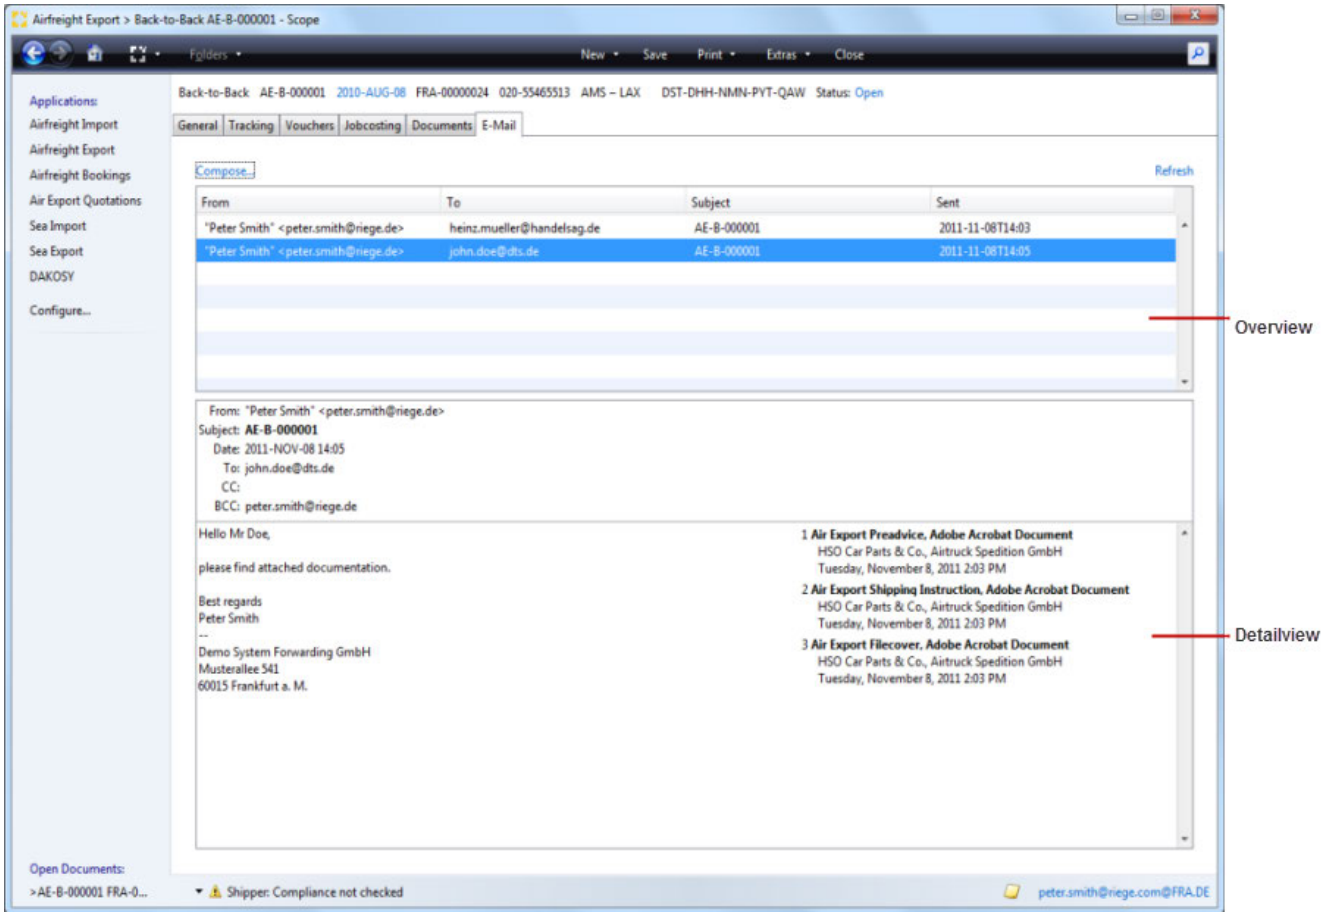
E-Mail - House Shipment - Seafreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

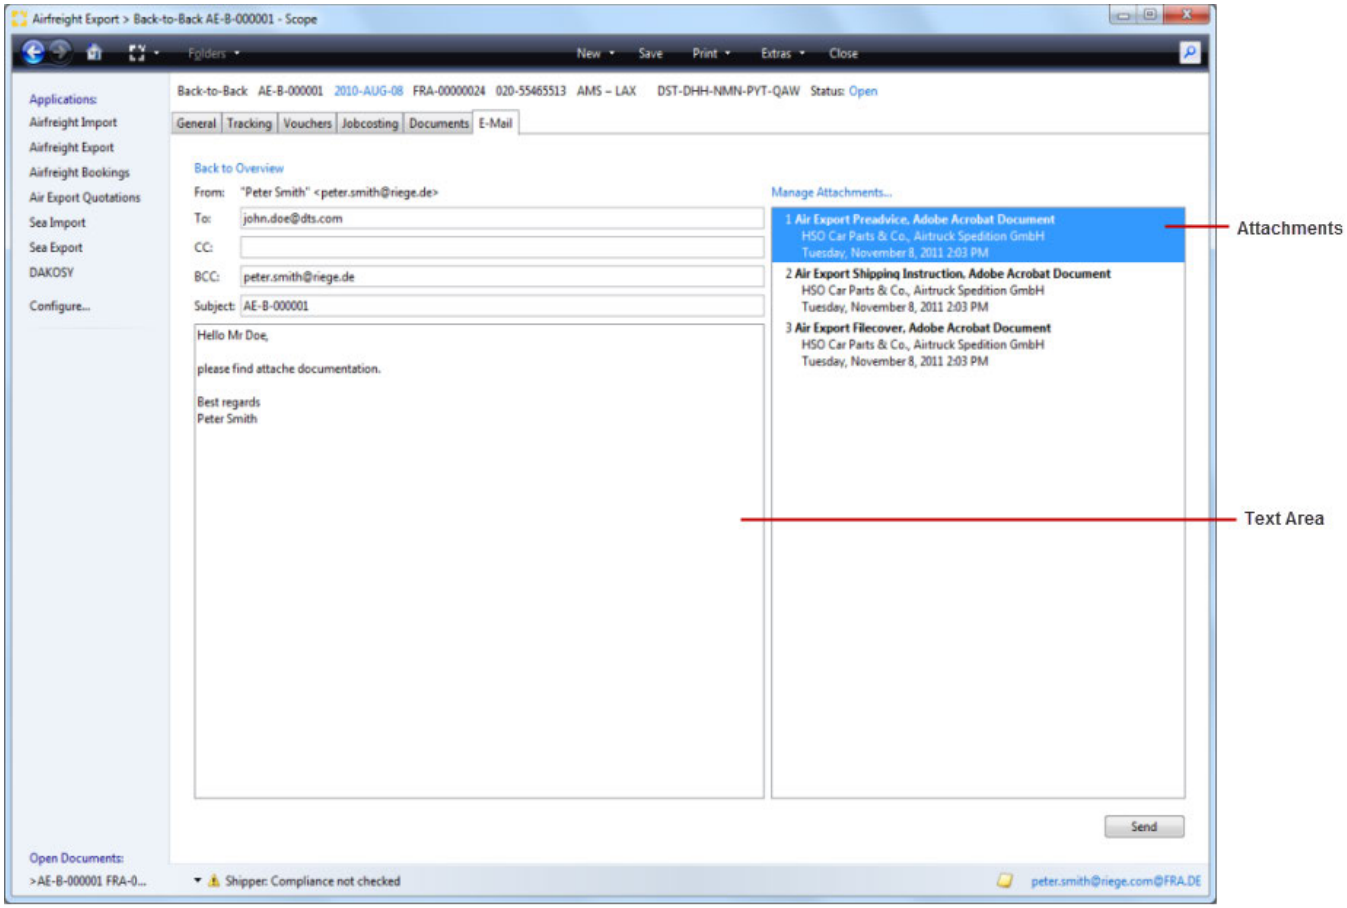
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

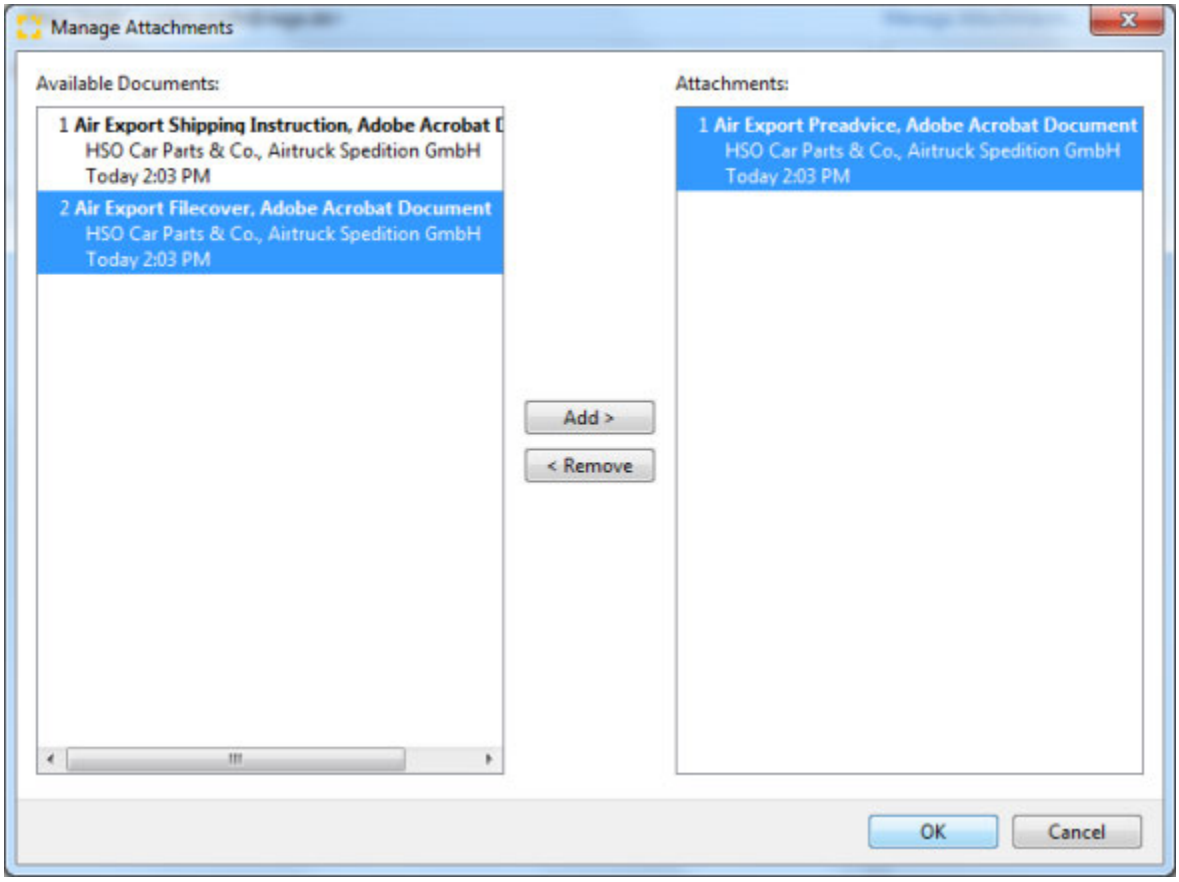
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

General - House Shipment - Seafreight Export

- Introduction
- Description

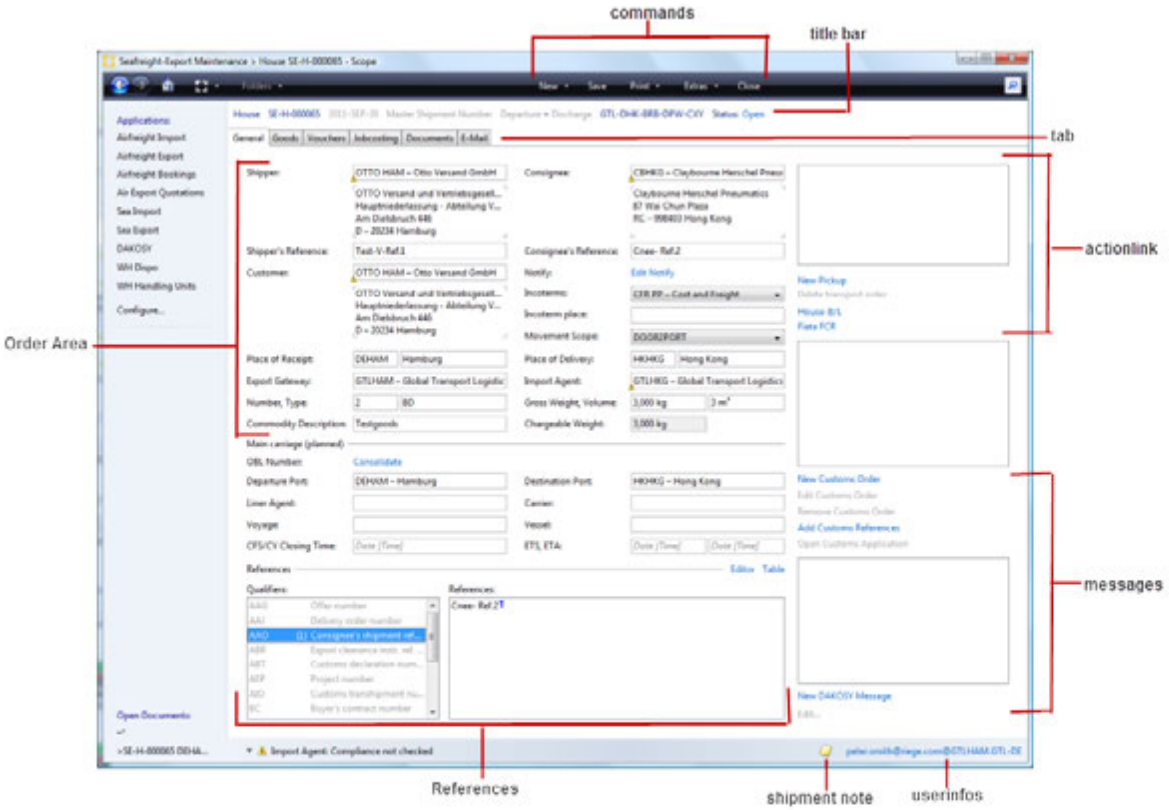
Introduction

In a house shipment all relevant data for an LCL shipment is recorded. These LCL shipments will be consolidated at a later date with other LCL shipments into a master consolidated shipment. On saving a house shipment, a USI (nuique shipment identifier) will be created and assigned to the shipment, this can assist in identifying and retrieving the shipment.

The shipment type "house shipment" can always be transformed into another type of shipment if required.

Description

A new house shipment will open with the "General" tab , where the main shipment data is collected.



Program Actions

Program actions may be used in any open order. They allow saving the shipment, printing documents or closing the shipment.

Save

Saves all the current shipment data.

Print

The "print" action presents the user with a selection of documents which the user can edit in an editor and can then print. The printed documents are then displayed in the tab "Documents" and shown as a Pdf file.

Close

The action "close" will close the shipment. Changes should be saved before closing a shipment.

Shipment information bar

The shipment information bar presents a summary of the most important shipment information.
From left to the right, the information is as follows:

- Shipment type
- Shipment number
- Order date
- Assigned master shipment number - the port of loading - Port of discharge - USI (Unique Shipment Identifier = this unique identification number for the shipment is assigned on saving the shipment for the first time and can be used in the search function to locate the shipment).
- Status - financial status.

> **Financial Status**
>
> the financial status reflects the status of the shipment from the billing point of view. There are three statuses: (1) Open: Outgoing Invoice to Customer not yet sent (2) Billed: Customer billed (3) Closed: All cost estimates resolved and all accounts payable booked Status (2) is set automatically when the invoice to the customer is posted. Status (3) is a manual process by accounting staff. Typically, at the end of every month, all open or billed shipments are reviewed. All shipments where all costs have been allocated are closed.

Change Shipment type

The function "Change shipment type" can be used to convert the shipment into another type of shipment such as a Direct Shipment.

Tabs

Beneath the shipment summary information, the tabs of the open shipment are shown. The focus is on the tab which is currently being viewed or edited.

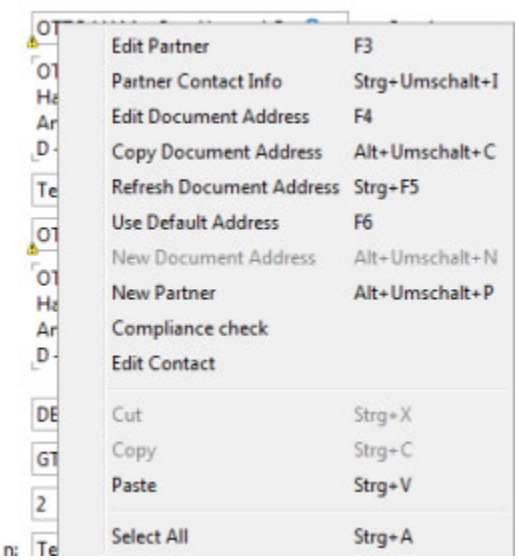
Shipment Information area

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The main shipment details are displayed.

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.



Edit Partner

Opens the business partner editor , where the partner can be edited.

Edit address

Opens an editor to change the address for the current shipment.

Update address

Updates the address.

Use default address

Sets address to the default address for the field stored in the master address data.

Edit document address

The option "Edit document address" allows the selected address to be edited as required, but these changes are not stored as master data and only appear on this shipment.

New Partner

The option "New Partner" opens the master data maintenance in order to create a new business partner in the Scope database. This new address will then be available as a shipper for example.

Compliance check

Performs an address compliance check.

Edit contact description

Opens a window where a new contact and details can be entered for this shipment.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of loading

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Export-Gateway

Branch which is responsible for consolidating and dispatching the cargo. For a house shipment this will default to the name of the branch creating the shipment. It is not possible to edit this field.

Import-Agent

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Partner in the importing country, who receives the consolidated goods at port of discharge. The desired agent can be found using the field search function.

Shipper

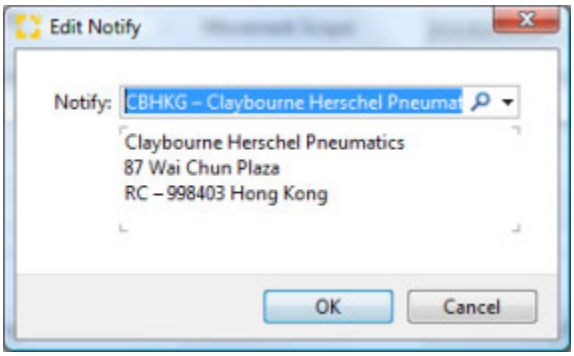
Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Notify

The Notify ("to be notified") is the party to be notified when the shipment arrives in the port of discharge. The Notify can also be the consignee. The notify is entered by clicking the blue action link "Edit Notify". This opens a dialog window in which notify party is recorded.



The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

Number, Type

In the left field the number of packages will be entered. In the right field the packing type is entered (cardboard boxes, pallets, crates ...). The available packing types are maintained in the master data packing types maintenance program . The total entered in these fields defaults to the "goods" tab automatically, and further details about the goods may be entered there.

Gross Weight, Volume

The gross weight of the shipment. This is defaulted in kilograms (kg). If the symbol "kg" is changed to "lb", the total will automatically convert to "kg". In the right pane the total cubic volume i record. This will default to cubic meters (m3). If the symbol "m3" is changed to "CFT" the figure is assumed to be in cubic feet and will automatically convert to "m3"
The data entered in these fields automatically transfers to the to the "goods" tab.

Commodity Description

A short description of the goods. This is a brief synopsis of the goods to be transported. The data entered in this fields automatically transfers to the to the " goods" tab.

Chargeable Weight

This field displays the freight ton (Frt). It is calculated automatically using a comparison of weight (1 t) versus volume (1 m3). The higher value (ton or volume) is the freight ton.

OBL Number

The OBL number of the shipment appears only once the cargo is consolidated and an Ocean-B/L-Number has been assigned to the master shipment by the carrier.

Consolidation

The blue action link "Consolidate ", is only active when all mandatory fields of the general tab for the shipment have been entered. When active, this link will launch a consolidation application to add the house shipment to a consol.

Reference

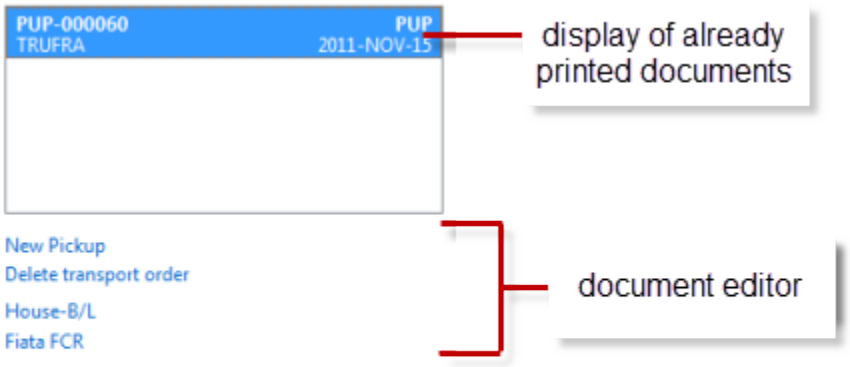
The various reference numbers for the shipment are entered here using the references application

Documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

To the right of the "General tab" is an area that provides action links to create various Scope documents and in the case of "pick-up orders" any existing documents are shown. In general all documents created in scope are output to PDF file and are shown in the "*Documents tab*.

To create a document, the mandatory data of *General tab* must be completed and saved. Once saved, the gray links transform to blue action links and when clicked launch the appropriate editor to create the document.



New pick-up order

Once the data has been stored, a new pick-up order can be created. This order gives the trucking companies all the necessary instructions to pick up the shipment at the shipper or his loading point transport the cargo to a CFS or packing shed.

Launch the editor by clicking the blue action link "New pickup".

Delete transport order

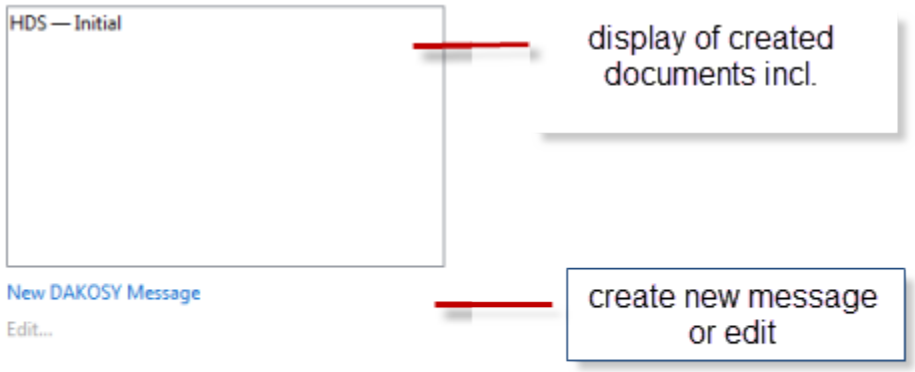
Existing pick_up orders will appear in the right hand table of pickup orders. Any pick-up order can be deleted by highlighting it and selecting the *Delete transport order* action link.

House-B/L

A house B / L can be either a bill of lading (original) or accompanying document (Bill Express Cargo / Waybill / Seawaybill / Express B / L). This is issued by the agent to the shipper or customer.
Click the action link "House-B/L" to open the house B/L editor and create house documentation.

Message - Area

The message area displays and allows creation of electronic export information to customs.



All customs entries manually created or transmitted electronically to customs are displayed in the upper field. The current status of the entry is displayed to the right of the entry type.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Customs Order

This function is available after entering and saving the important shipment data. By clicking on action link "New Customs Order" a pop-up window will appear where the user may define the kind of message they wish to create.

Edit Customs Order

Once a customs entry has been created, it appears in the list of customs entries. By highlighting the desired entry in the list and then selecting the action link *Edit Customs Order*, the existing entry may be reopened for alteration.

Shipment Note

By clicking on the note icon, the user can see notes already created for this shipment. A window opens and displays all existing notes. Further notes can be created or an existing note may be modified.
For each note there are three possible priority classifications available: red dot means **high**, yellow spot **moderate** and a note without a dot is **low** priority.
An expiration date for the notes will be created and will appear on the note.

Consolidate - General - House shipment - Seafreight Export

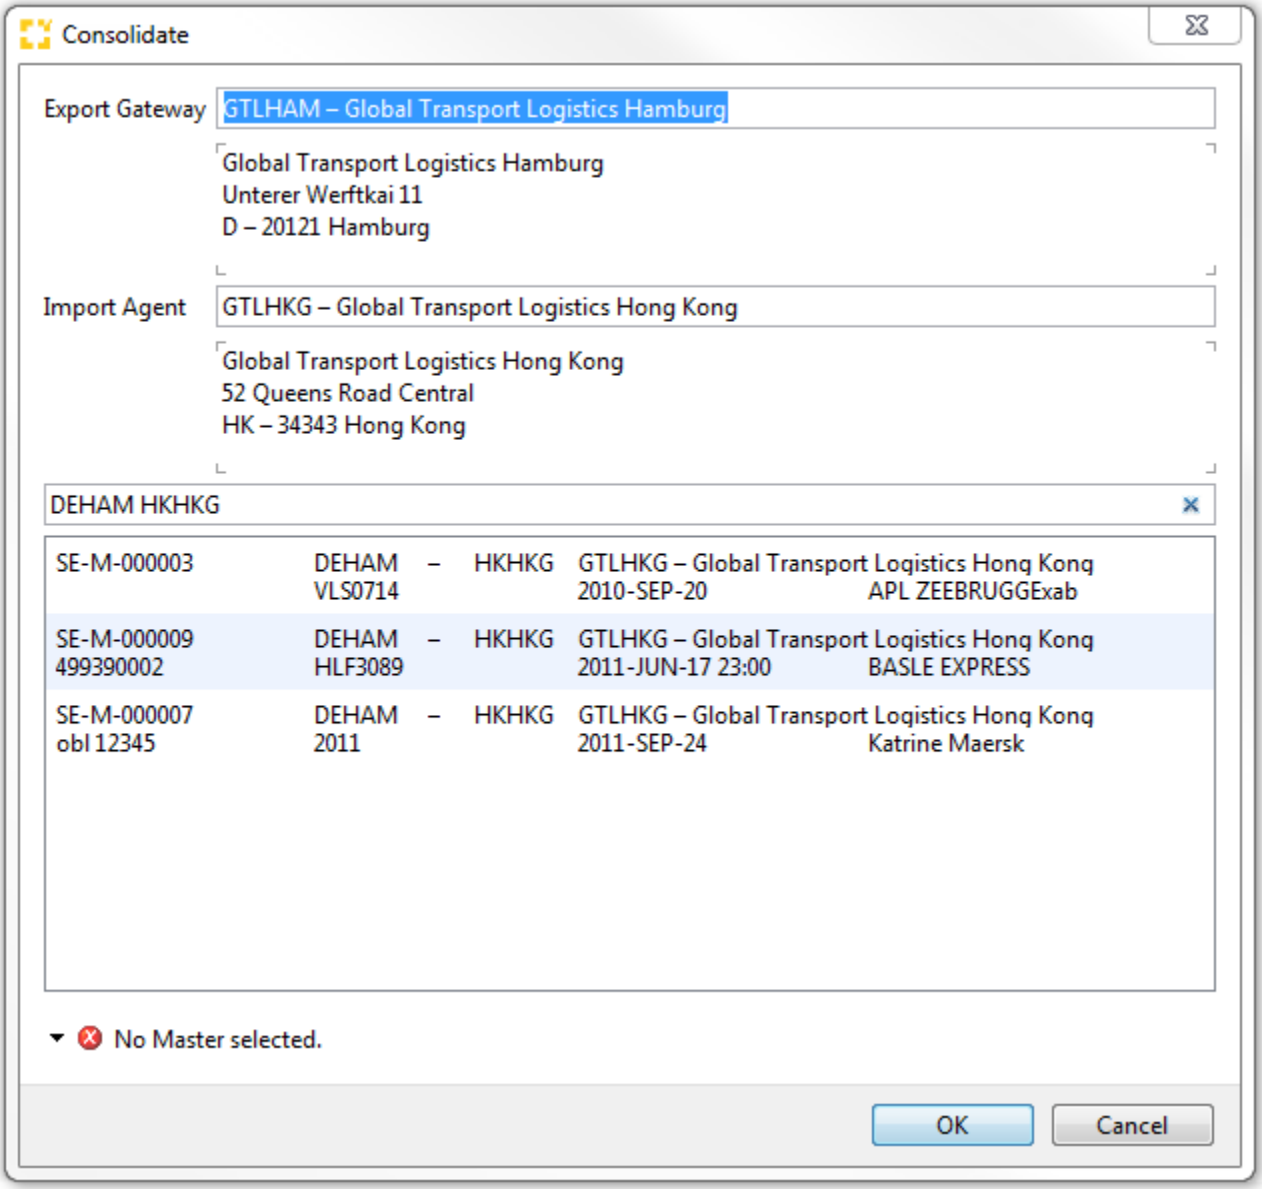
- Introduction
- Description

Introduction

The action link *Consolidate* found in the General tab of the house shipment, enables the house shipment to be consolidated on a master shipment.

Description

The *Consolidate* action link launches an application to control the consolidation process:



Export Gateway
Import Agent
Port of Loading, Port of Discharge
Master shipment listing
OK
Cancel

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Export Gateway

The export gateway is the export agent who is responsible for consolidating the house shipment into a master shipment. This party can be the local branch or a remote branch - normally a hub.

Import Agent

The Agent who will receive the consolidation at the port of discharge and who is normally responsible for deconsolidating the shipment

Port of Loading, Port of Discharge

The port of loading and port of discharge from the General tab will appear and accordingly, any existing master shipments that match these ports will appear and can be chosen as the desired consol. These ports can be altered change the possible master depart and destination ports.

Master shipment listing

master shipments matching the ports of the consolidation application will appear. The desired master shipment can be selected.

OK

If a master shipment is selected it is possible to save the selection by clicking the *OK* button. The master shipment details will now appear in the General tab of the main shipment.

Cancel

Closes the *Consolidation* application without further action.

DAKOSY - New Message - General - House Shipment - Seafreight Export

- Einleitung
- Beschreibung

Einleitung

Eine neue DAKOSY-Nachricht ermöglicht dem Nutzer 3 verschiedene Optionen. Hafendatensatz (AES), Hafendatensatz (Classic) und Neues Bill-of-Lading stehen dem Nutzer zur Auswahl. Über das Dakosy-Modul kann die Ausgangszollabfertigung über den Hamburger Hafen sowie der gesamte Hafen-Datenverkehr (zu Reedereien, Packschuppen, Terminals..) abgefertigt werden, sofern die Beteiligten ebenfalls an DAKOSY angebunden sind. Beim Klicken auf die Schaltfläche "Neue DAKOSY-Nachricht" öffnet sich ein Auswahlfenster für den Benutzer.

HDS (AES) - DAKOSY- New Message - General - House Shipment - Seafreight Export

- Einleitung
- Beschreibung

Einleitung

Der Hafendatensatz (HDS) dient sowohl als Verladaeauftrag an die Beteiligten Hafenbetriebe (Kaibetrieb und Reederei) als auch gleichzeitig als Gestellungsmitteilung (GM 01) für den Zoll. Über die Erstellung und Senden eines HDS (AES) kann der Benutzer eine Z-Nummer zur Zollseitigen Bearbeitung über das ZAPP-System des Hamburger Hafens erlangen. Die freigegebene Z-Nummer (RELEASED) ist notwendig für die Verlade-Erlaubnis der Ware auf das Seeschiff.

Die Auswahl HDS (AES) deckt die Möglichkeiten der Abfertigung von Marktordnungswaren (AEM) und Nicht-Marktordnungswaren (AES) ab, für die ein Ausfuhrbegleitdokument mit MRN erstellt wurde.

Beschreibung

Durch Auswahl (Klick auf den Aktionslink) "HDS (AES)" öffnet sich der Editor zur Erstellung des Hafendatensatzes in drei Reitern:

- Allgemein
- Sendungsbeschreibung
- Dokumente

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Allgemein - HDS (AES) - Neue DAKOSY-Nachricht - Allgemein - Haussendung - Seefracht Export

- Einleitung
- Beschreibung

Einleitung

Im Reiter Allgemein werden alle relevanten Daten für den Hafendatensatz (HDS = Hafen-Verladeauftrag an alle Beteiligten) und der Gestellungsmitteilung 01 (GM01 = Mitteilung über die physische Gestellung der Ware an einem Amtsplatz) für den Zoll in ZAPP erfasst.
Grundlage für diese Anmeldeart ist, dass die Beteiligten ihre Ausfuhranmeldungen bzw. Versendungsmitteilungen mittels AES (Automated Export System) für Nicht-Marktordnungswaren (mit Ausfuhrbegleitdokument) und für Marktordnungswaren (mit Ausfuhrbegleitdokument) und sonstige Waren (mit Kontrollexemplar T5) erstellt wurden.

Beschreibung

Durch die Auswahl "Hafendatensatz (AES)" gelangen sie in den Reiter Allgemein für diese Anmeldeart.

House-BL - General - House Shipment - Seafreight Export

- Introduction
- Description

Introduction

A house B/L for a house shipment is generally created by the forwarding agent prior to loading the cargo aboard a vessel.
This document is normally either issued as an original bill of lading with accompanying copies, or it is issued as an express bill of lading. In the case of an original bill of lading, whoever posses the original bill may take possession of the goods by presenting a fully endorsed original bill of lading. With an express bill of lading, the goods may be released by the receiving agent to the consignee without presentation of an original bill of lading. House bills serve to confirm the receipt of the goods, and include detailed conditions of transport and description of the goods. Thus, the document also serves as proof of the contract of carriage.

Description

By clicking the blue action link shown as "House- B/L" the house B/L editor will open with the data from the shipment entry defaulted to the various fields.
All entries can be saved at any time by clicking the "OK" button. Information can be discarded by clicking the "Cancel" button.

The house B/L editor provides the following tabs:

- Cargo Details - General - House BL - General - House Shipment - Seafreight Export
- General - House BL - General - House Shipment - Seafreight Export
- Preview - House BL - General - House Shipment - Seafreight Export

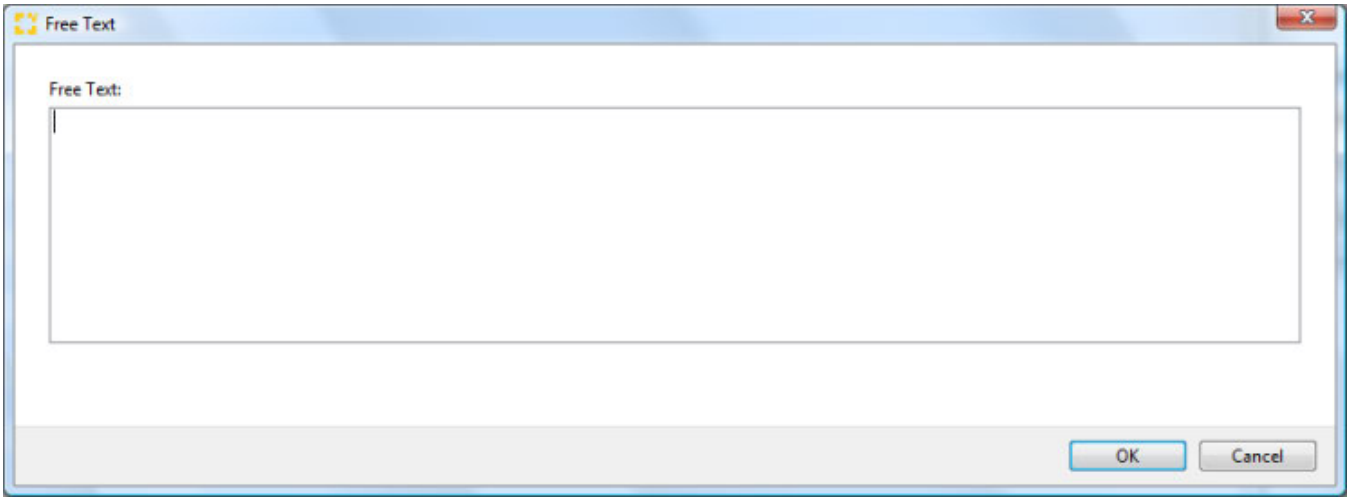
Up
Down
OK
Cancel

New Textblock

The *New Textblock" button opens a free text editor that allows the entry of free text. By right clicking, the context menu appears and allows the selection of *Inserting a textblock* for access to existing blocks of text.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

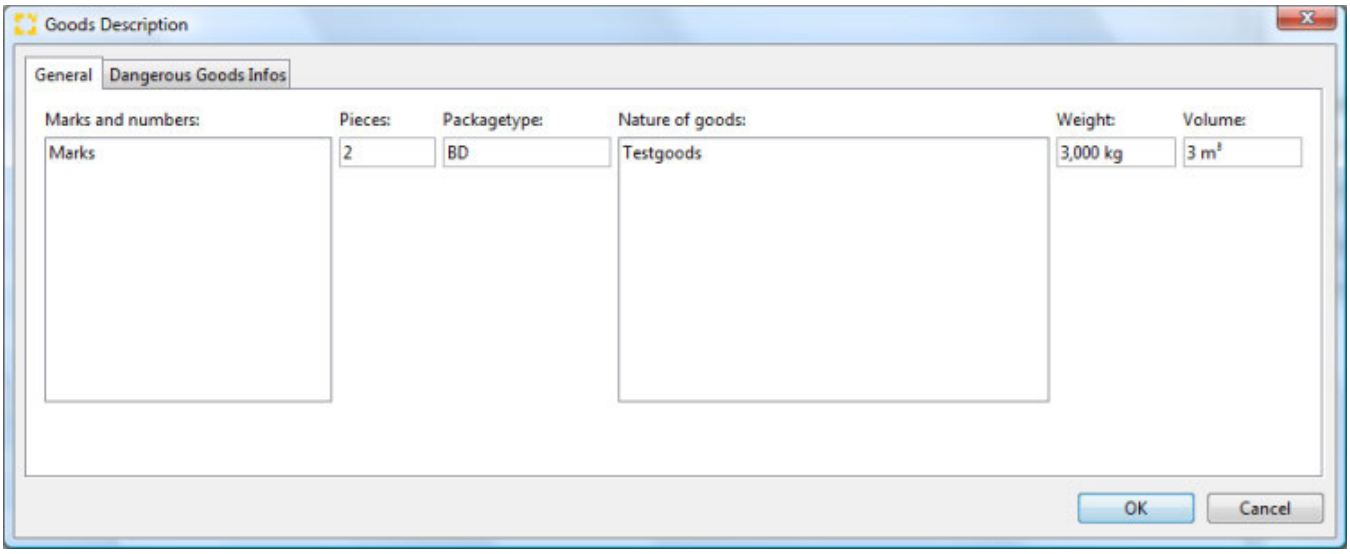
Choose *OK* to save new data in the free text editor. Choose *Cancel* to close the editor without saving data.



Edit...

The *Edit* function will open the line of text highlighted in the *cargo details* table. If this line contains pieces, packing types, weights and volume from the main shipment, then the *goods description* editor will open to allow adjustment of this formatted data. Each element of the structured line appears in a field designed for the type of data it contains. Free text lines are opened with the *Free text editor*.

Goods description editor



Marks and numbers

Marks and numbers will display marks and numbers entered in the main shipment entry goods tab . These may be edited as desired. By right clicking, the context menu appears and allows the selection of *Inserting a textblock* for access to existing blocks of text.

Pieces

The pieces from the cargo entry in the main shipment entry goods tab will appear. These may be edited as desired.

Package type

The packing type entered in the main shipment entry goods tab . This is a search field that can be used to choose an alternate stored packing type.

Nature of goods

This field will display Nature of goods entered in the main shipment entry goods tab . These may be edited as desired. By right clicking, the context menu appears and allows the selection of *Inserting a textblock* for access to existing blocks of text.

Weight

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

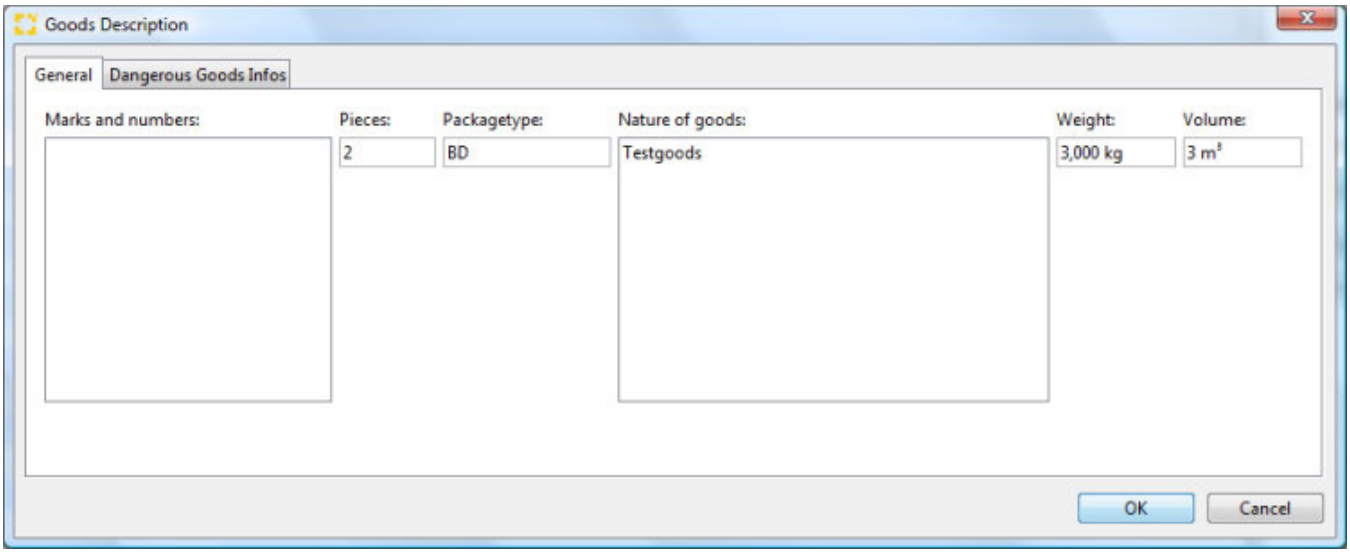
The weight from the cargo entry in the main shipment entry goods tab will appear. This may be edited as desired.

Volume

The volume from the cargo entry in the main shipment entry goods tab will appear. This may be edited as desired.

Dangerous goods

The 2nd tab of the *Goods Description* editor is the dangerous goods infos. This will any display dangerous goods information associated with the goods in the goods tab of the main shipment entry.



Delete

Deletes the highlighted row from the cargo details.

Up

Moves the highlighted row from the cargo details up.

Down

Moves the highlighted row from the cargo details down.

OK

Select *OK* to save the cargo details information and exit the house B/L.

Cancel

Select *Cancel* to discard any new data entered in the cargo details tab and exit the house B/L.

General - House BL - General - House Shipment - Seafreight Export

- Introduction
- Description

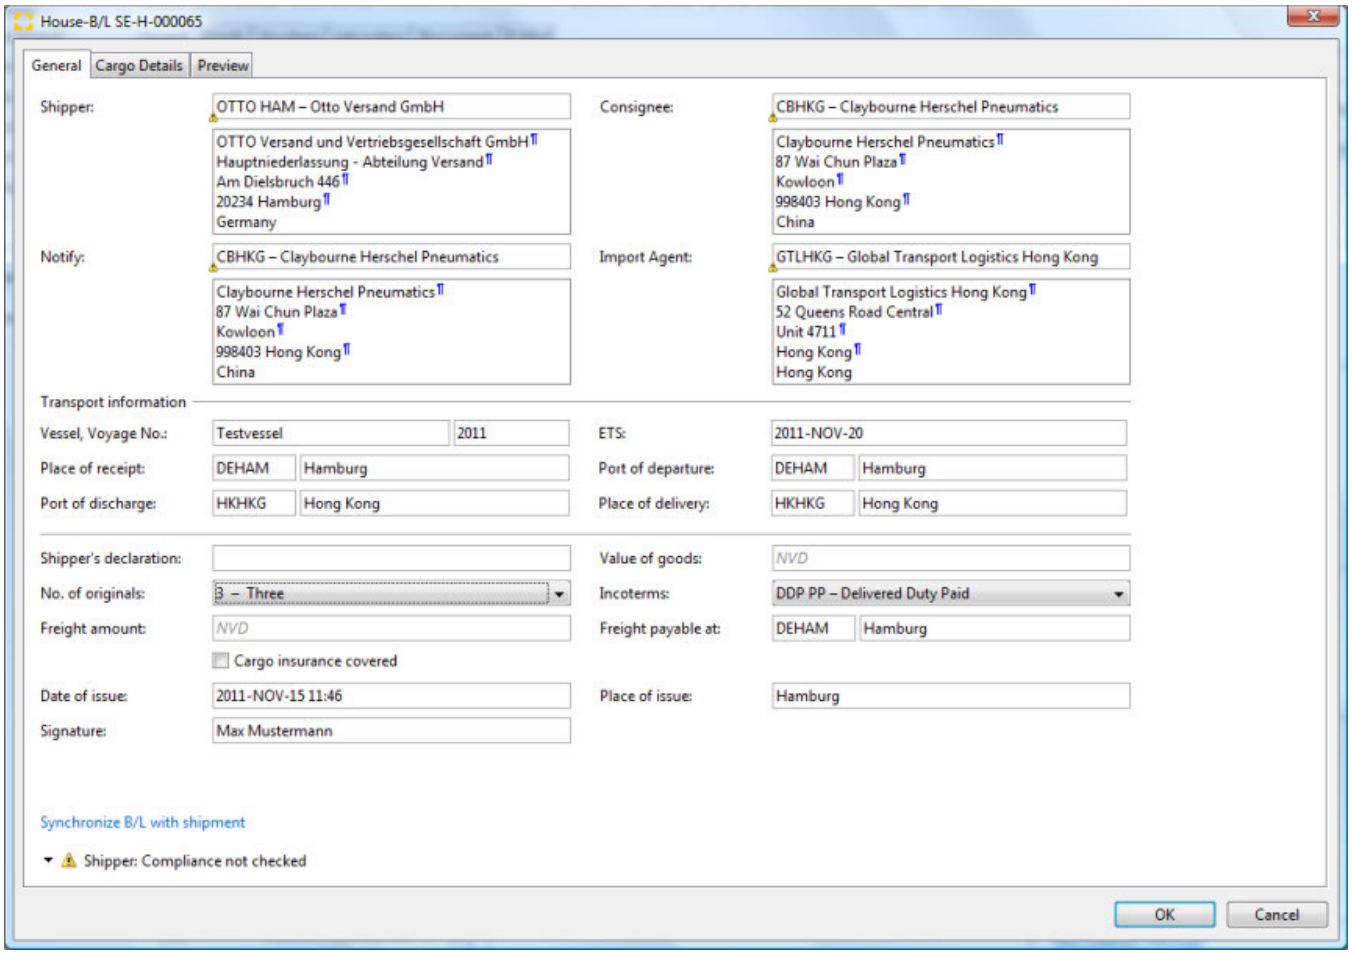
Introduction

The *General* tab of the the House B/L allows entry of the most important data for the creation of a bill of lading. This is address details, transport information, dates and shipping terms.

The details entered in the *General* tab of the house shipment should transfer to the house B/L where it can be further processed.

Description

The input window is divided into three different areas. The upper part is for address details for the B/L, the middle and lower sections are for transport details, dates and freight terms.



- Address data
  - Shipper
  - Consignee
  - Notify
  - Import Agent
- Transport Information
  - Vessel
  - Voyage No.
  - Place of Receipt
  - Port of Departure
  - Port of Discharge

Address data

Shipper

Shipper for the shipment. This may be found with the field search or can be entered directly.

Consignee

Consignee for the shipment. This may be found with the field search or can be entered directly.

Notify

Notify from shipment editor (if available). This is the party to be notified when the shipment arrives at the importing country. The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Import Agent

The agent responsible for the freight on arrival at the importing country. The address for the agent is taken from the data already entered in the main shipment entry.

Transport Information

Vessel

The name of the vessel aboard which the freight will be loaded. This vessel name may change when the house shipment is consolidated because the vessel of the master shipment will automatically overwrite any existing vessel name.

Voyage No.

The voyage number of the the vessel aboard which the freight will be loaded. This voyage may change when the house shipment is consolidated because the voyage of the master shipment will automatically overwrite any existing voyage details.

Place of Receipt

The place from the main shipment entry will appear.
The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of Departure

The Port of Departure from the main shipment entry will appear.
Place or port where vessel containing the goods will depart.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of Discharge

The Port of Discharge from the main shipment entry will appear.
Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Place of Delivery

The place from the main shipment entry will appear.
The place of delivery is the final destination of the goods.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Instructions and additional information

Shipper's Declaration

Used for hazardous information

Value of goods

This is an optional field, normally only used when specified in a letter of credit.

No. of Originals

Select the number of original bills of lading issued from the drop down menu.

Freight amount

Amount agreed for the freight transport costs.

Inco Terms

From the main shipment entry. The Incoterms that will be printed on the B/L.

Freight payable at:

The location where the freight charges are payable. (according to the Incoterms)

Cargo Insurance covered

A check field to indicate if the shipment is insured.

Date of issue

The date of issue of the bill of lading.

Place of issue

Signature

The name of the agent responsible for issuing the bill of lading.

Synchronize B/L with shipment

This action link will synchronize all the fields in the *General* tab of the house bill of lading with the same fields of the *General* tab of the *General* shipment entry. Any existing data will be lost from the house bill of lading.

OK

Click "OK" to save all the details enter in the house bill of lading and close the house bill of lading editor.

Cancel

Click "Cancel" to discard any details entered in the house bill of lading and close the house bill of lading editor.

Synchronize preview

The initial view of the B/L is generated using the information stored in the *House B/L general* and *Cargo Details* tab. When the synchronize flag is unset, the B/L becomes detached from these tabs and available for editing. Any text may be added to any part of the B/L. On setting the synchronize flag, any edits made to the B/L preview will be lost and the form will again be synchronized with the *House B/L general* and *Cargo Details* tabs.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Previous Page

scrolls the B/L back one page. Only active for multi-page B/Ls.

Next Page

scrolls the B/L forward one page. Only active for multi-page B/Ls.

Print B/L original

The number of original B/Ls that should print are entered and then select the *print B/L original* action link to generate printed B/Ls. These will be visible in the documents tab of the main shipment. A blank orginal bill of lading should be ready in the printer when this document is printed.

Print B/L copy (with background image)

The number of copy B/Ls that should print are entered and then select the *print B/L copy* action link to generate printed B/Ls. These will be visible in the documents tab of the main shipment. This document should print on plain paper since the background image of the B/L will be generated.

Print B/L draft (with background image)

The number of draft B/Ls that should print are entered and then select the *print B/L draft* action link to generate printed B/Ls. These will be visible in the documents tab of the main shipment. This document should print on plain paper since the background image of the B/L will be generated.

Print attachment

The number of copies of attachment documents that should print are entered and then select the *print attachment* action link to generate any attachment docuemnts. These will be visible in the documents tab of the main shipment. This document should print on plain paper. Attachment documents are created when it is desired to print additional B/L details on plain paper.

OK

Select *OK* to save data entered in the House B/L application and exit back to the main shipment.

Cancel

Select *Cancel* to discard data entered in the House B/L application and exit back to the main shipment.

Jobcosting - House Shipment - Seafreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Main menu bar and title bar

see Tab **General**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Overview

All prepared or completed billing related documents will appear in the overview. The voucher type, invoice number, issue date, business partner, subject and total voucher amount will be displayed.

- The list of documents can be sorted by clicking on the column titles, a second click will reverse the order.
- Double clicking the desired entry in the list will open the voucher.

New Outgoing Invoice

Opens the application to create a new outgoing invoice.

New Outgoing Credit Note

Opens the application to create a new outgoing credit note.

New Incoming Invoice

Opens the application to create a new incoming invoice.

New Incoming Credit Note

Opens the application to create a new incoming credit note.

Refresh

refreshes the list of vouchers.

Table columns

Number

The number of the document is fixed and will be prefixed with a code indicating the type of voucher.

Voucher Code	Description
OI	Outgoing Invoice
OC	Outgoing Credit note
II	Incoming invoice
IC	Incoming credit note

Voucher Date

The date the voucher was created.

Partner

The party to whom the voucher was issued.

Subject

The subject of the voucher

Amount

the total amount of the voucher.

Master Shipment - Seafreight Export

- Introduction
- Description

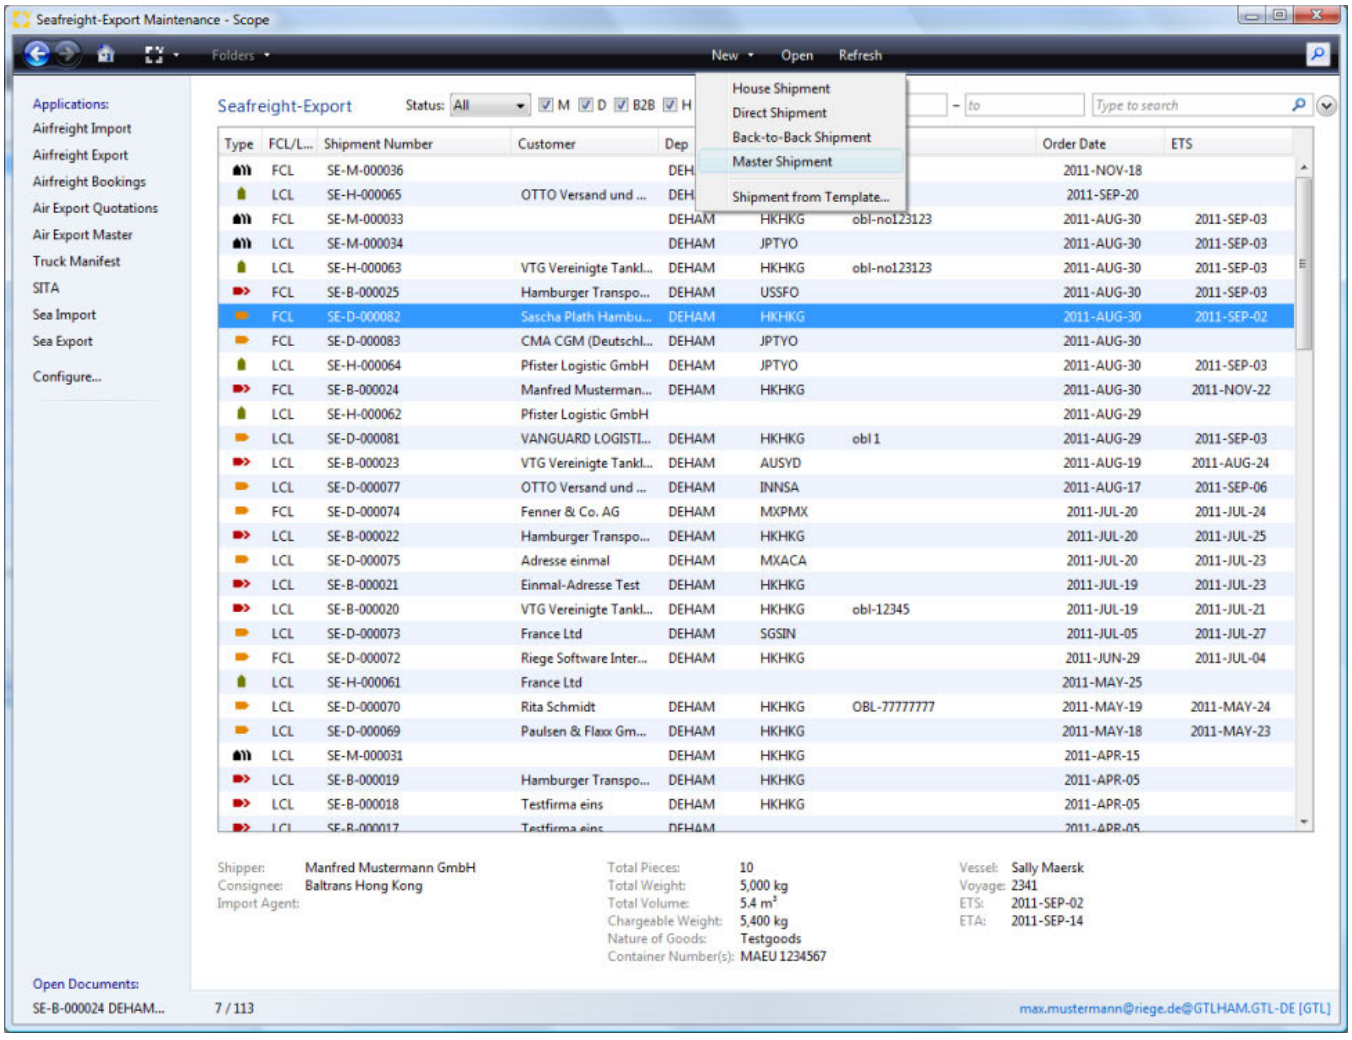
Introduction

A master shipment is created where a group of house shipments are all destined for the same discharge port and can be combined in one or more containers covered by a single master shipment. The house shipments are typically transported to a container freight station where they are stuffed in a container and an ocean bill of lading representing the combined cargo is presented to the carrier. The containerized shipment arrives at the port of discharge, the container is transported to a container freight station in the importing country and the receiving agent makes arrangement for de-stuffing the container and distribution of the individual cargoes.

A minimum of one house shipment is required to create a consolidation.

Description

Create a consolidated shipment by clicking the "New" option on the Scope sea export menu bar and from the list of shipment types select "Master shipment". This will open the master shipment "General " tab.



The following tabs are available in the master shipment editor:

- General
- Consolidation
- Goods
- Vouchers
- Jobcosting
- Documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Consolidation - Master Shipment - Seafreight Export

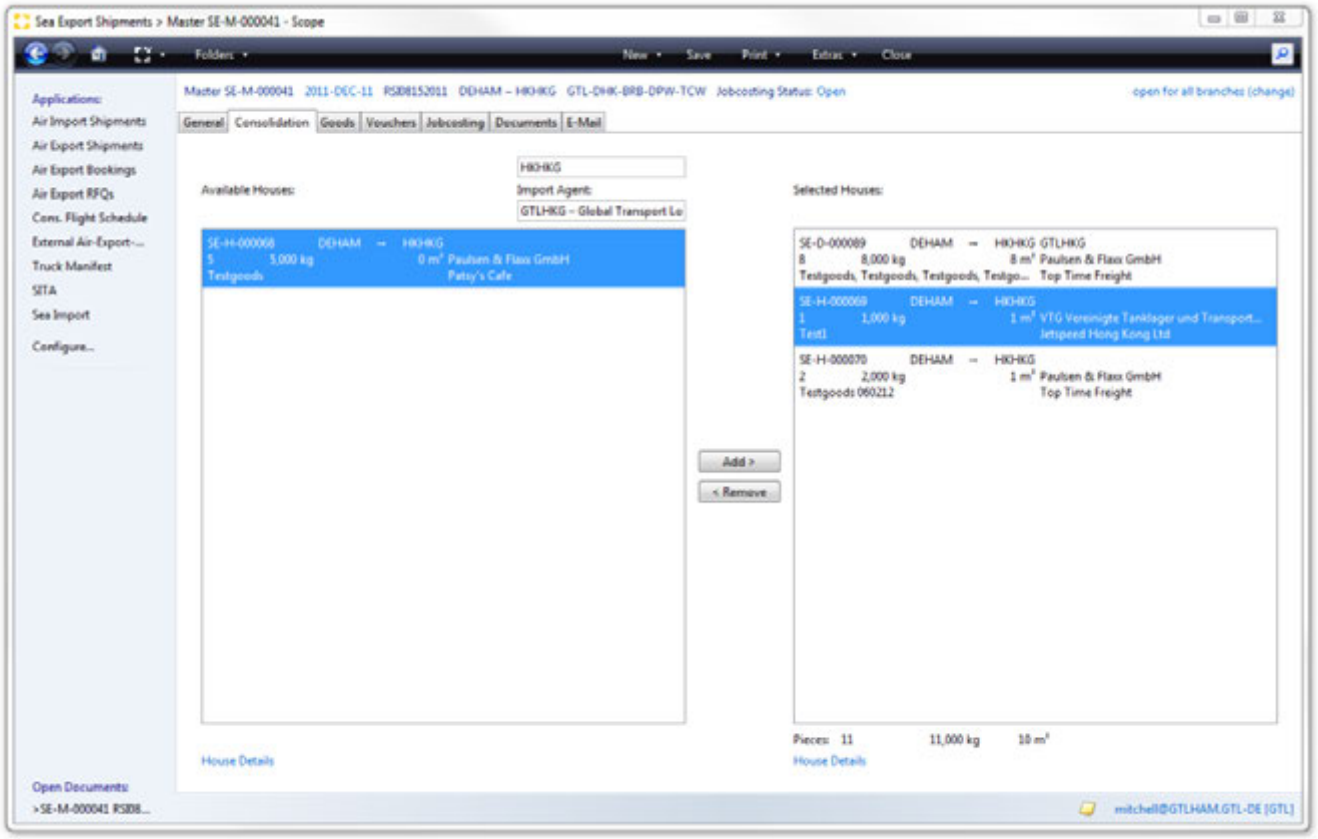
- Introduction
- Description

Introduction

The "Consolidation" tab shows the house that are available for consolidation on the selected master and it shows any houses that are already on the master. This tab allows for the easy addition of house to the master and removal of houses from the master.

Description

The destination port and agent are visible and can be altered. Beneath these are two windows, the left showing available house shipments and the right showing house shipments already on the master. Between then are action buttons to add and remove houses.



Destination
Import Agent
Available Houses
Selected Houses
Add
Remove
Pieces
House Details

Destination

The current destination port of the master shipment.

Import Agent

The Import Agent who will deconsolidate the shipment in the country of destination.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Available Houses

House shipments that are available for consolidation. basic details are shown:

- Shipment number
- The depart port
- destination port
- pieces
- weight
- volume
- nature of goods
- Shipper
- Consignee

Selected Houses

Houses to be included in the consolidation.

Add

Adds the house shipment highlighted in the available house list to the list of selected houses.

Remove

Removes the house shipment highlighted in the selected houses list to the list of available houses (deconsolidation from master).

Pieces

The combined total of all the pieces, weights and volume of the house shipments in the selected window.

House Details

Presents a pop-up window showing greater detail of any house highlighted either of the "available" or "selected" windows.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

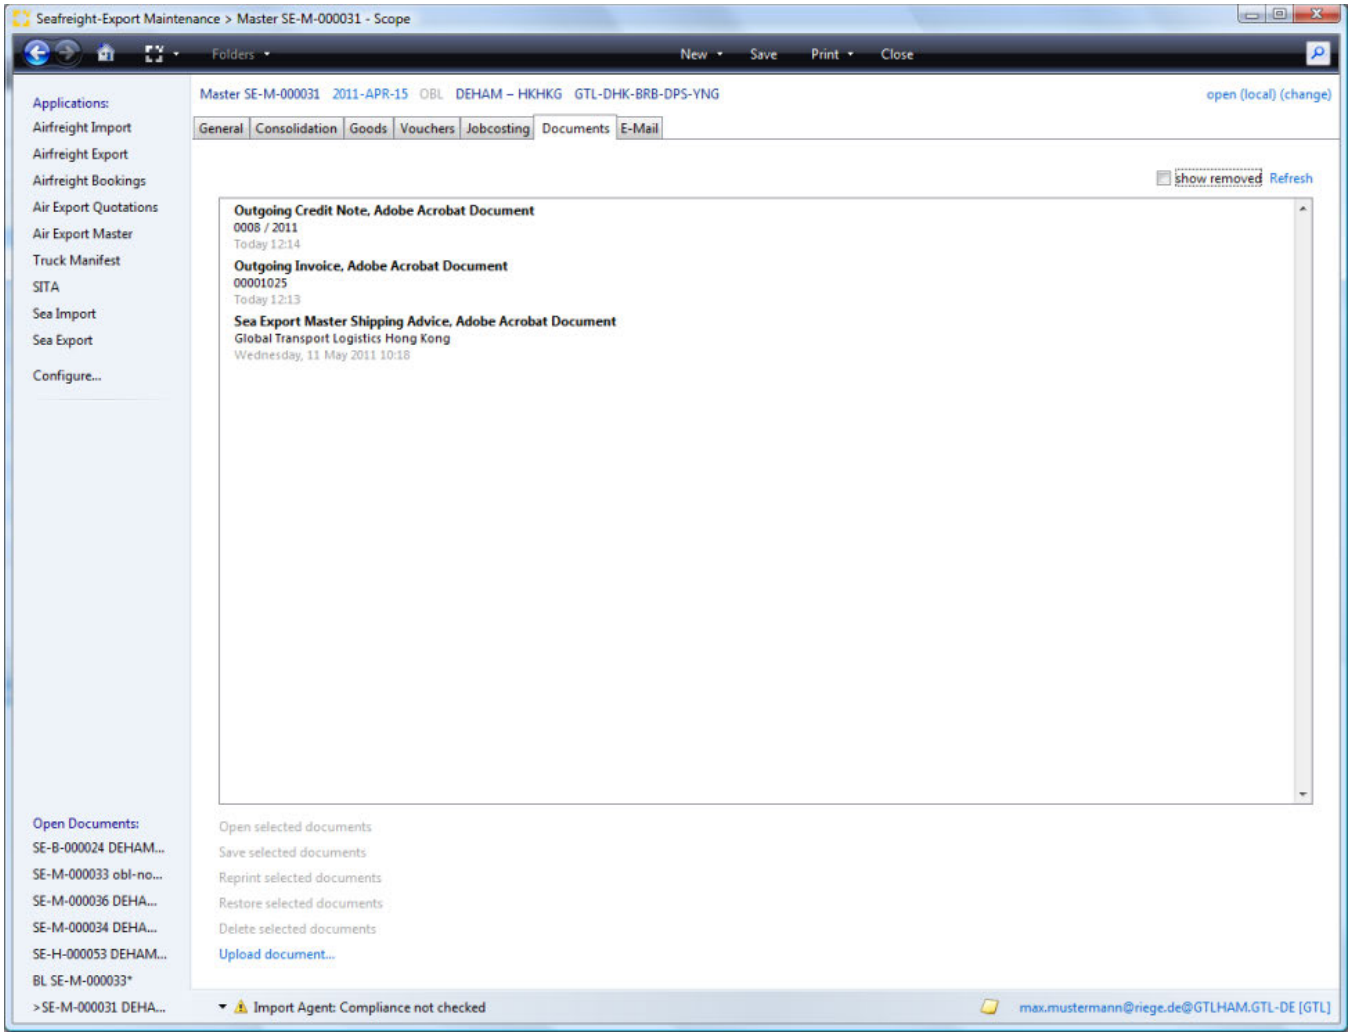
Documents - Master Shipment - Seafreight Exports

- Introduction
- Description

Introduction

In the *Documents* tab displays in summary form all documents created (transfer orders, House B/L's, invoices, credit notes, invoice cancellations, etc.) The user can also upload documents of different file formats, and view and print all the documents shown.

Description



Main menu bar and title bar
Open selected documents
Save selected document
Reprint selected documents.
Upload document...
Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.

Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

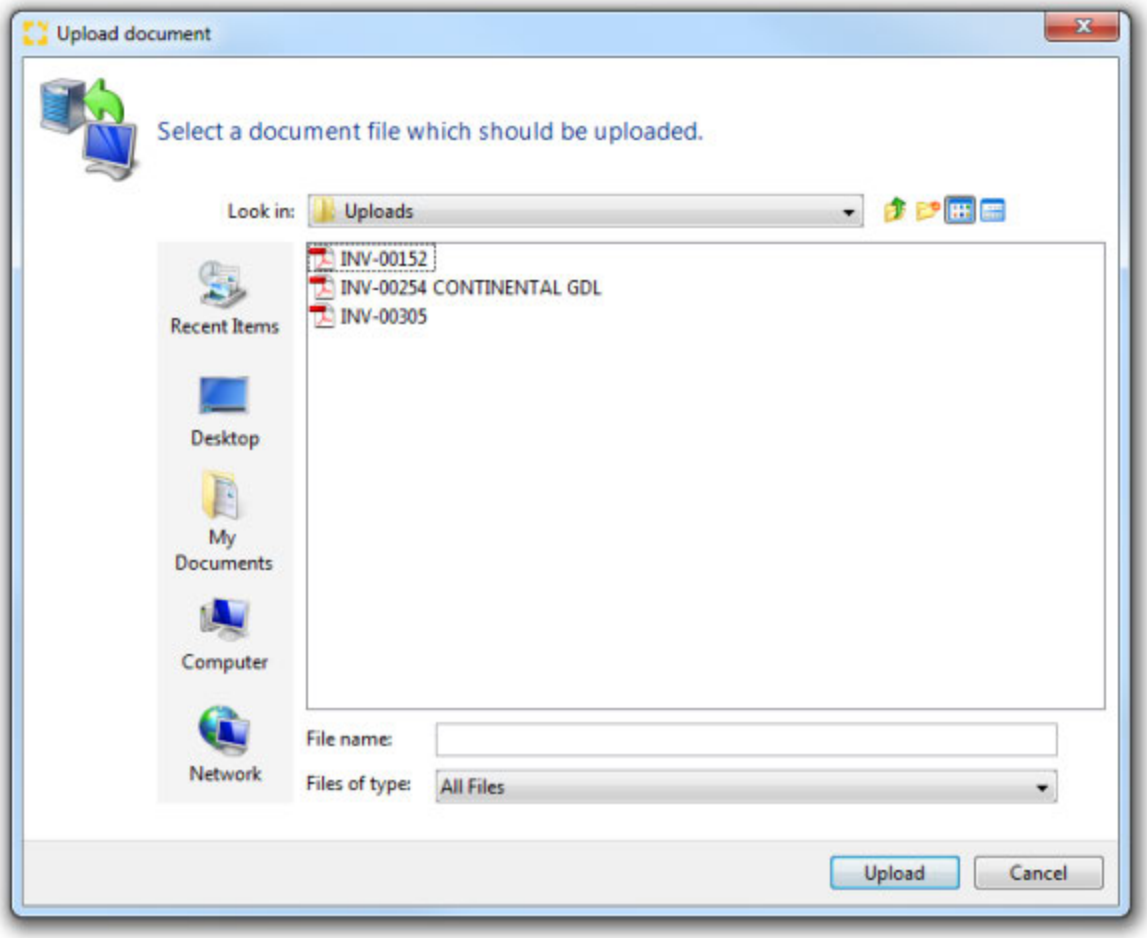
Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Update

Updates the current list of documents.

General - Master Shipment - Seafreight Export

- Introduction
- Description

Introduction

The general tab of the master shipment records the parties involved in the shipment; the agent, the liner agent and the import agent. The main transport details are recorded; the original bill of lading the vessel, voyage, depart and destination points along with estimated depart and arrival times. Based on the house shipments selected for the consolidation, the general tab displays a total piece count, weight and volume. The general tab also displays the houses themselves.

The right edge of the general tab provides access to document production; transportation orders and bills of lading.

Program actions

The program actions are shown on the title bar. These provide immediate access to print functions, saving or closing the shipment.

New

Transport orders can be created from the "new" action as well as within the "general" tab. The following tranport order types are available:

- **New Delivery to Terminal**
- **New Pickup Empty Containers**

Save

Once mandatory data for the master shipment has been entered, the shipment may be saved. On first save a USI (Unique shipment number) is issued.

Print

Further documents may be printed once the master shipment has been saved:

- **File Cover**
- **Preadvise**
- **Liner Agent Booking**
- **Shipping Advice**
- **B/L** Instructions*
- **Consol Manifest** (Only available when a house has been consolidated on the master)

Close

Closes the shipment. If there are unsaved changes, a dialogue appears asking if changes should be save.

Shipment information bar

Above the tabs, the shipment information bar shows the most important identifiers for the shipment.

- **Shipment type**
  This will show "Master"
- **Shipment Number**
  The shipment number is issued when the shipment is first save. It is comprised of the the mode id, in this case "SE" meaning "Sea Export" followed by the shipment type "M" indicating "Master Shipment", followed by a 6 digit shipment number.
- **Service Date**
  This will use the ETS date. If the ETS changes, the service date can be clicked to update it.
- **OBL Number**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- *Depart and destination port codes.
- **USI**
  A unique shipment identifier used for system purposes.

Open/Closed - Change

The *Open/Closed Change* action link allows the use to close the master for all branches so no further house shipments may be added or it may be changed so that only the local branch may add further house shipments.

Tabs

Across the top of the of the master shipment editor, all the tabs are visible with the focus on the currently opened tab.

Application Area

The application area is broadly divied into 3 areas:

- **Master shipment details**
- **House shipment summary table**
- **Documents**

Issuing Agent

The agent creating the consolidation, normally the local agent.

OBL

Ocean Bill of Lading Number or Master Bill of Lading Number.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of departure

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

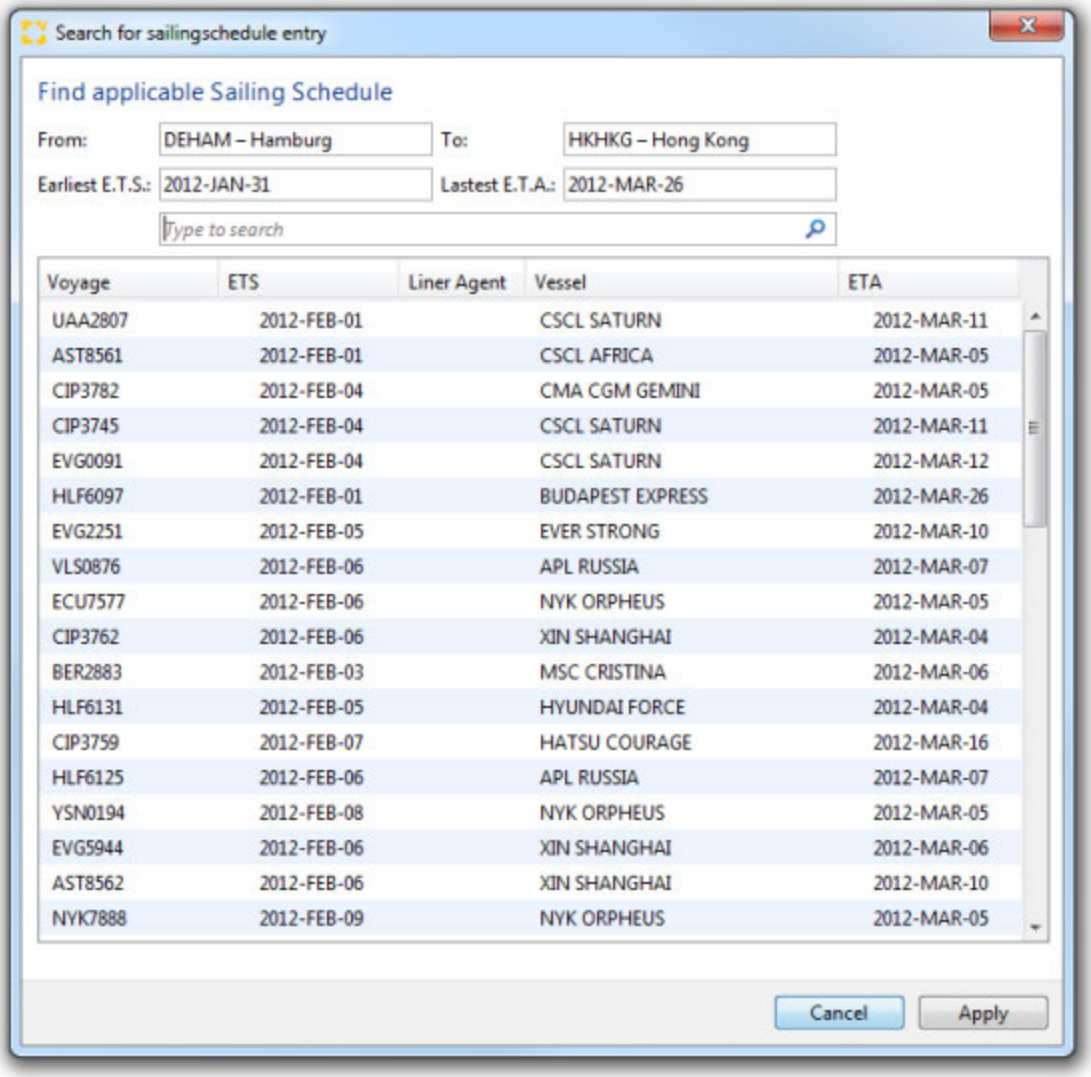
Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Voyage / Sailing Schedule

The voyage number of the vessel may be entered directly. The drop down menu also offers access to the sailing schedule or use the F3 function key.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



From

The port the cargo will depart from

To

The port the cargo will arrive at

Earliest E.T.S.

The earliest estimated sailing date the cargo can depart.

Latest E.T.A.

The latest estimated date of arrival for the cargo.

Type to search

Use the search function to enter search terms that will narrow down the list of possible sailings.

Cancel

Cancels selection of a sailing without further action

Apply

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Applies the select sailing to the shipment and writes the folling information to the shipment:

Sailing Schedule information:
Voyage (Voyage Number)
Vessel
Line Agent
Carrier
Port of Loading
Port of Discharge
E.T.S. = Estimated Time of Sailing
E.T.A. = Estimated Time of Arrival

Vessel

The vessel on which the goods will be loaded.

Liner Agent

The agent of the steamship line to whom the goods will be delivered for export. Only carrier addresses will be available using the search field

Carrier

The owner of the vessel that will carry the goods. This will be the SCAC code and name of the carrier and should appear automatically when the "liner agent" is entered.

Import Agent

The Agent at the port of discharge who will be responsible for the consolidation on arrival of the cargo.

4. E.T.S.

The estimated sailing date and time of the vessel. This is a date and time field, use the drop down option to select from the calendar

E.T.A.

The estimated arrival date and time of the vessel at the port of discharge. This is a date and time field, use the drop down option to select from the calendar

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

DAT	delivered at terminal

Booking reference

This is the reference issued by the carrier to identify the goods and confirm their acceptance for the sailing. This reference is often used prior to the issue of an OBL number.

Pieces

The total number of pieces. Calculated from the total pieces on all the house shipments.

Gross Weight

The gross weight of the cargo in Kg. Calculated from the gross weight of all the house shipments.

Total Volume

The total volume of the cargo CBM. Calculated from the total volume of all the house shipments.

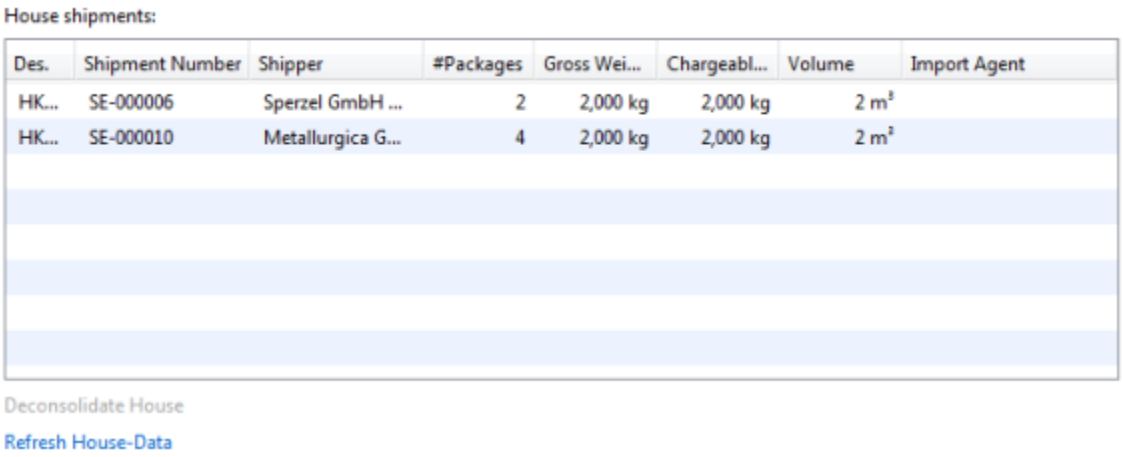
Chargeable Weight

Chargeable Weight

This field displays the freight ton (Frt). It is calculated automatically using a comparison of weight (1 t) versus volume (1 m3). The higher value (ton or volume) is the freight ton.

House Shipments

The summary table displays all the house shipments currently consolidated on the master. Each row represents a house shipment and essential information about each house is displayed.



Des.

Destination of the house shipment.

Shipment Number

Shipment number of the house shipment.

Shipper

The shipper for the house shipment.

Packages

Total number of packages on the house shipment.

Gross Weight

Gross weight of the house shipment

Charge Weight

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Chargeable weight of the house shipment

Volume

Volumen of the house shipment

Import Agent

The Import Agent who will be responsible for the house shipment when it is deconsolidated at the port of arrival.

Deconsolidate house

This action link is active when a house shipment in the summary table is highlighted. Clicking this link will remove the highlighted house shipment from the consol.

Refresh House Data

The action link will refresh the list of house shipment shown in the summary table, this ensure the very latest entries are visible.

Adding house shipments to the consolidation

House shipments are added to the summary of house shipments on the consol by using the Consolidation tab.

Documents Area

The documents area of the *General* tab of the master shipment enables the creation of transport orders and bills of lading.

The documents window shows transport order that have already been created. Existing transport orders in the document window can be re-edited by clicking them. Hovering the cursor over the transport order in the document window will reveal further details on the transport order.

New Deliver to Terminal

Click the action link New Deliver to Terminal to create a new transport order.

New Pickup Empty Containers

Click the action link New Pickup Empty Containers to create a new empty container transport order.

Ocean-B/L

An Ocean B/L is either an original or non-original (Express bill of lading/Waybill) and is issued by the carrier or it's agent to the Forwarder. Click the action link Ocean B/L to open the Ocean B/L editor where a facsimile of the Ocean B/L can be create and used by the carrier as the basis for the real Ocean B/L.

HDS (SAC) - Neue Dakosy-Nachricht - Allgemein - Sammelsendung - Seefracht Export

- Einleitung
- Beschreibung

Einleitung

Der Hafendatensatz (HDS) dient sowohl als Verladeauftrag an die beteiligten Hafenbetriebe (Kaibetrieb und Reederei) als auch gleichzeitig als Gestellungsmitteilung (GM 01) für den Zoll. Über die Erstellung und Senden eines HDS (SAC) kann der Benutzer eine Z-Nummer zur zollseitigen Bearbeitung über das ZAPP-System des Hamburger Hafens erlangen. Die freigegebene Z-Nummer (RELEASED) ist notwendig für die Verladeerlaubnis der Ware auf das Seeschiff.

Die Auswahl HDS (SAC) deckt die Möglichkeit der Abfertigung von Sammelcontainern ab, für deren Haussendungen bereits eine Z/B-Nummer erstellt wurde.

Beschreibung

Durch Auswahl (Klick auf den Aktionslink) "HDS (AES)" öffnet sich der Editor zur Erstellung des Hafendatensatzes in drei Reitern:

- Allgemein
- Sendungsbeschreibung
- Dokumente

Deliver to Terminal - General - Master Shipment - Sea Exports

- Introduction
- Description

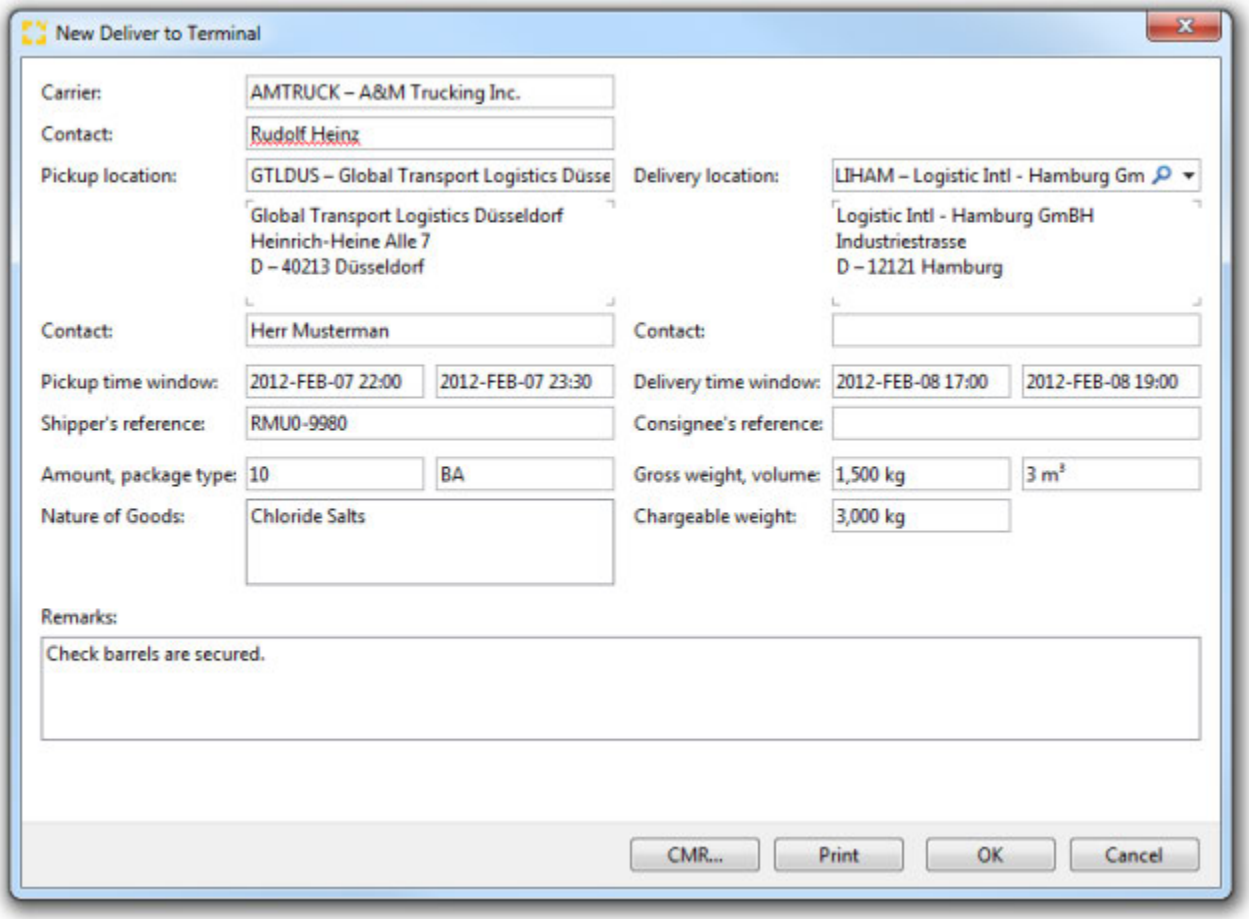
Introduction

Creation of a delivery to terminal order requires the full shipment details have been saved in the "General" tab.

The order is created by the the forwarding agent to collect the container from the address specified by the forwarder and to deliver it to the terminal which may be a Container Freight Station (CFS).

Description

A **Delivery to terminal order** can be created by click the blue action link *New Deliver to Terminal*. This will open the *New Deliver to Terminal* editor.



Carrier

The trucking company who will transport the container. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner.

Carrier Contact

The name of the party employed by the carrier who should be contacted for details of the pickup.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Pickup location

The address at which the container should be picked up. The desired partner can be located with the search field. The default address will be the address of the local branch. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner.

Delivery Location

The address to which the container is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location contact party

The name of the person at the point of pickup who should be contacted.

Delivery location contact

The name of the person at the point of delivery who should be contacted.

Pickup time window from/to

The pick up window (Date / Time), in which the container is to be picked up.

Delivery time window from /to

The delivery window (Date / Time), in which the container is to be delivered.

Shippers reference

The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.

By default, all packages are proposed for delivery.

Packing type

The type of packages

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Nature of goods

A description of the goods. The description from the general tab will default.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Ocean BL - General - Master Shipment - Seafreight Export

- Introduction
- Description

Introduction

The ocean B/L is issued by the ocean carrier or steamship line. The freight forwarder provides instructions to the ocean carrier or steamship line on how to prepare the ocean bill of lading. The Ocean B/L editor is the application used by the freight forwarder to create these instruction. Once complete the bill of lading instructions can be generated as a PDF, printed or e-mailed to the shipping company.

Description

Open the Ocean B/L editor by clicking the action link "Ocean B/L" on the right side of the "general" tab. This will open the editor.

Within the Ocean b/L editor the following tabs are available:

General
Cargo Details
Preview

Address data

Shipper

Shipper for the Original B/L. This may be found with the field search or can be entered directly.

Consignee

Consignee for the Orignal B/L. This may be found with the field search or can be entered directly.

Notify

Notify from the general shipment entry (if available). This is the party to be notified when the shipment arrives at the importing country. The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Import Agent

The agent responsible for the freight on arrival at the importing country. The Import agent is also known as the "2nd Notify".

Transport Information

Vessel

The name of the vessel aboard which the freight will be loaded.

Voyage No.

The voyage number of the the vessel aboard which the freight will be loaded.

ETS

The estimated sailing date . This is a date and time field and the calendar icon provides access to a calendar.

Place of Receipt

The place from the main shipment entry will appear.
The place of receipt is the place where the goods are handed over to the Carrier.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of Departure

The Port of Departure from the main shipment entry will appear.
Place or port from where the vessel will depart.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of Discharge

The Port of Discharge from the main shipment entry will appear.
Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Place of Delivery

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The place from the main shipment entry will appear.
The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Instructions and additional information

Shipper's Declaration

Used for hazardous information

Value of goods

This is an optional field, normally only used when specified in a letter of credit.

No. of Originals

Select the number of original bills of lading to be issued from the drop down menu.

Freight amount

Amount agreed for the freight transport costs.

Inco Terms

From the main shipment entry. The Incoterms that will be printed on the B/L.

Freight payable at:

The location where the freight charges are payable. (according to the Incoterms)

Pickup Empty Containers - General - Master Shipment - Seafreight Exports

- Introduction
- Description

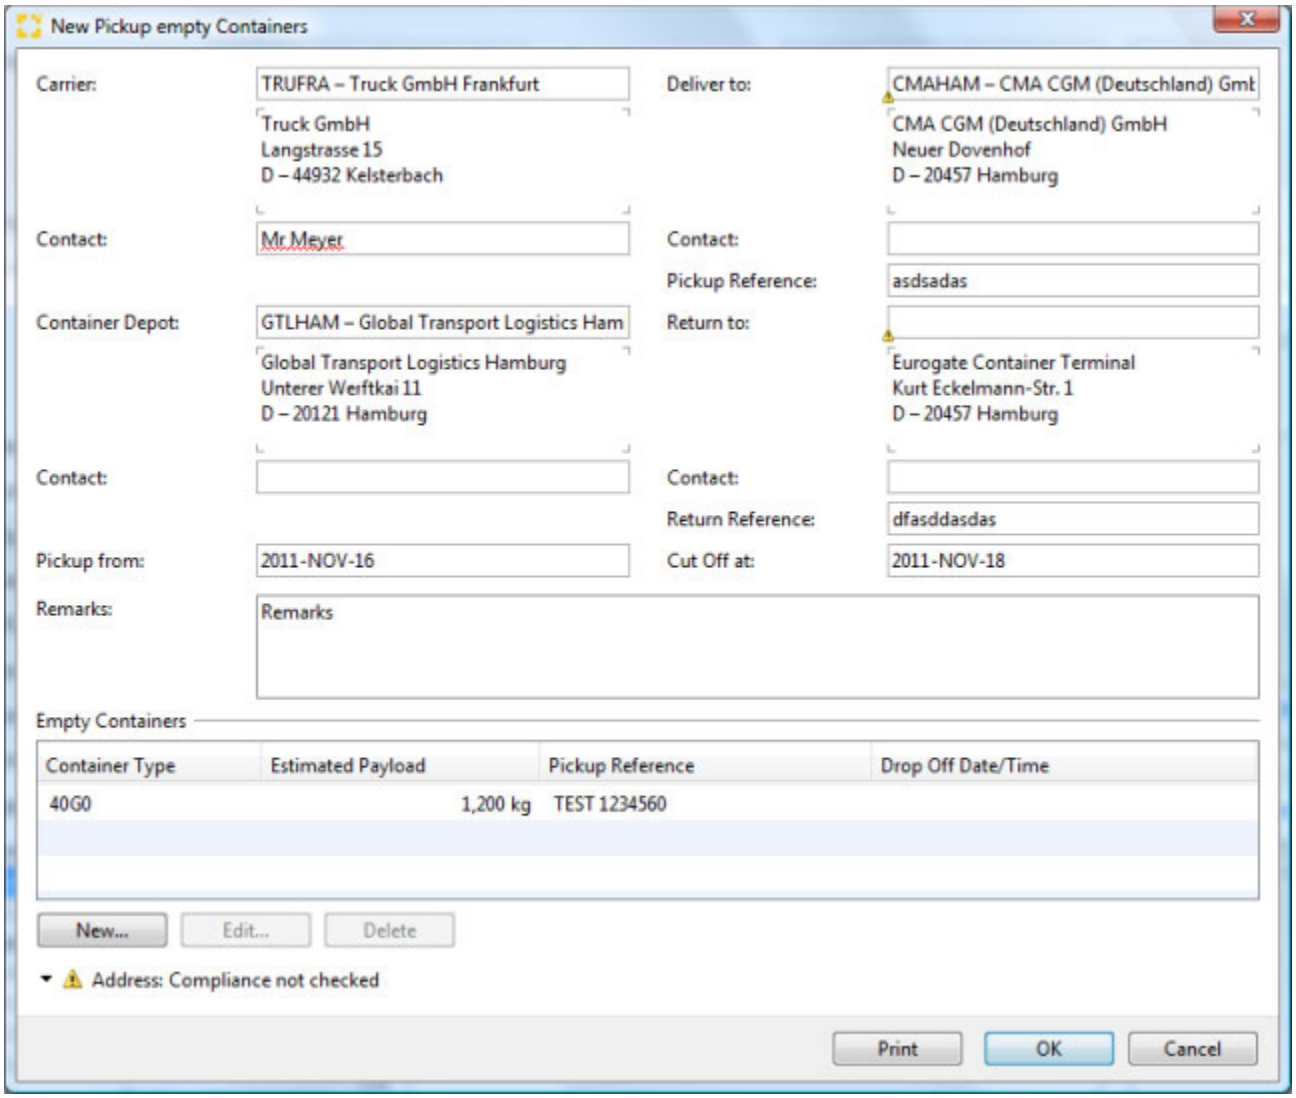
Introduction

Creation of an empty container pick-up order requires the full shipment details have been saved in the "General" tab.

The "Empty Pick-up" order is created by the the forwarding agent and instructs the carrier/trucker where to collect empty containers from and where they should be delivered to.

Description

A pick-up empty containers order" can be created by clicking the blue action link "New-pickup empty containers". This will open the "New Pickup empty Containers" editor.



Carrier

The trucking company who will pickup the containers. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Carrier Contact

The name of the party employed by the carrier who should be contacted for details of the container pickup.

Container Depot

The address where the containers should be picked up from. The desired address can be located with the search field.

Contact (Container Depot)

The **contact name** for the container depot may be entered or selected from the list of contacts for this partner.

Deliver to

The address to which the containers should be delivered. The desired address can be located with the search field.

Contact (Deliver to address)

The name of the person at the point of delivery who should be contacted. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Pickup Reference

The reference provided by the party supplying the empty containers.

Return to

The address to which the containers should be returned. The desired address can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Contact (Return to address)

The name of the person at the return to address who should be contacted. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Return Reference

The reference used by the **Return to** address to identify the consignment.

Pickup from

The date and time when the empty containers will be available (Date / Time).

Cut off at

The date and time when pickup of the containers expires (Date / Time).

Remarks

Comments or instructions entered in this field will be printed on the container pickup order.

Empty Containers

The empty containers section of the **Pickup empty containers** application displays a summary table of containers on the pickup order. The table is comprised of the following columns:

- **Container type**
  The size and type of container, 20' Dry van container for example
- **Estimated payload**
  The total weight of cargo the container can carry. This figure defaults to **kg** but can be over-written with **LB**
- **Pickup Reference**
  The reference used to identify the container at the pickup point.
- **Drop Off Date/Time**

The Empty container table offers function keys to enable entry of the container details into the table.

New

Cargo Detailed Description

Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
	Container
	Cargo

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
	Adds a new container
	Removes a container
	Moves the item up the list
	Moves the item down the list

Cargo details

Individual cargo items are obtained from the Goods tab of the house shipments. And can be edited further here.

For each cargo item detailed information be seen in the sub tabs:

- Cargo description
- Dangerous Information

Container

Containers can be added by clicking the  icon. This opens the container details view to the right. Each container must have at least one cargo item. Goods can be dragged and dropped into and out of containers.

Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489.

Unknown

If the "Unknown" box is checked, then the container number can be left empty.

Shipper's owned

Check the "Shipper's owned" box if the carrier owns the container.

Seal

The container seal number

Type

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Remarks

Any remarks particular to this container

Total pieces

The total number of pieces in the container. This is derived from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargoe items:

Jobcosting - Master Shipment - Seafreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

1. Profitshare - Consol Profit Analysis - General - Master Shipment - Seafreight Export

- Introduction
- Description

Introduction

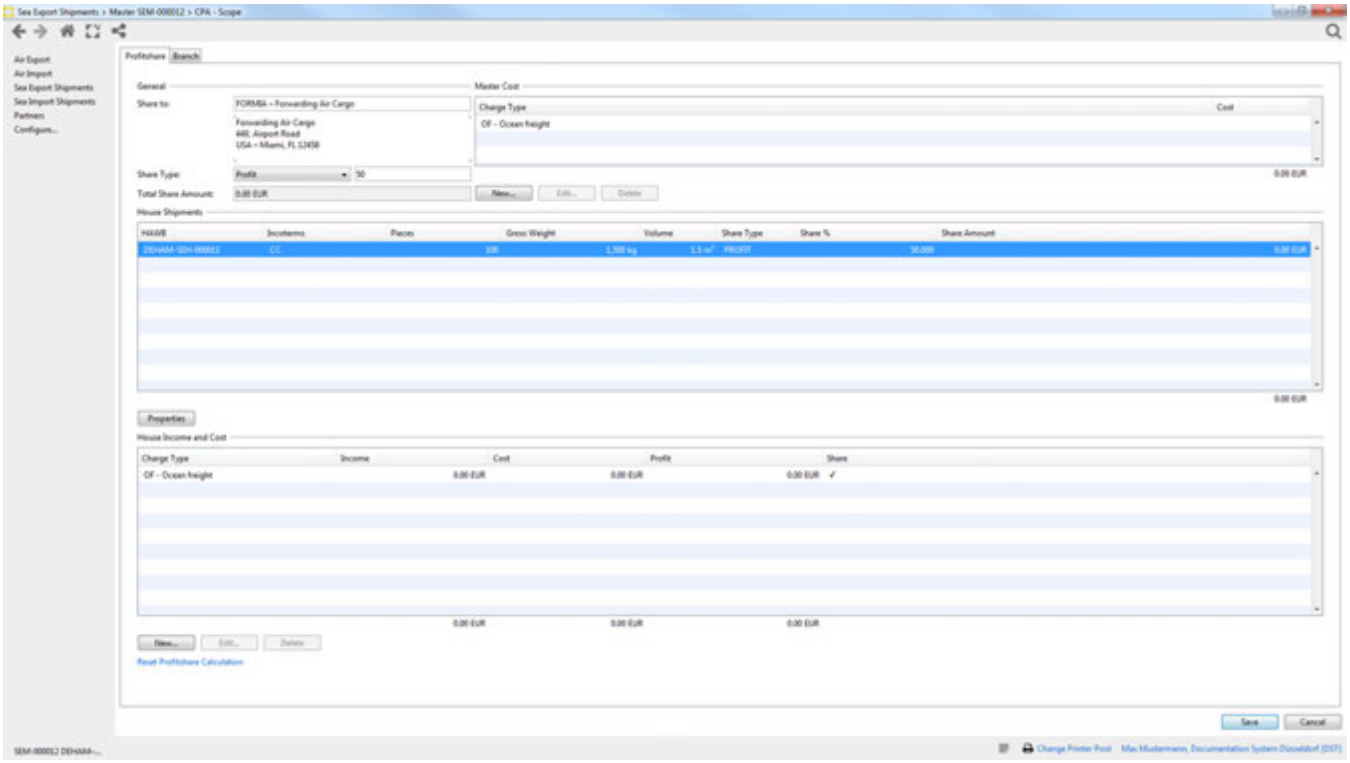
Sea freight consolidations often involve a **profit share** arrangement that is agreed between the sending agent and the receiving agent in order to distribute any profits made on the consolidation. The sum agreed can be part of the profit, part of the turnover or a fixed amount and is paid by the sending agent to the receiving agent. In some cases the entire consolidation or some shipments on the consolidation may represent a loss and in these cases these losses also must be distributed between the agents. The usual arrangement is to share 50% of the profits or losses. The **Profitshare** application calculates these figures using all the figures from the house and the master to arrive at the correct amounts. On completion of the calculation it is possible within the **Profits hare** application to issue the appropriate invoice or credit note. These vouchers will be created according to the setup of the receiving agent in the partner maintenance and may include a consol profit analysis sheet. To further automate the process of setting up profit share arrangements between agents, a CP A template can be created and applied to receiving agents as necessary. The calculation of profitshare can then take place automatically based on the settings in this template.

Description

When the application is launched it checks if a CPA template is present in the receiving agents master data.

- If a CPA template is present in the receiving agents master data, then this will be used.
- If a CPA template is *not+ present in the receiving agents master data, but a default CPA template CPA Templates is present, then this default will be used
- If no CPA template of any kind is present, then no data will appear in the **profitshare** tab.

The data that appears can be overridden if required, it may be edited, removed or new data added.



- The Jobcosting of the house shipments must be complete before automatic profit share can be calculated on the consolidation.
- Due to the extensive calculations that may have to take place, depending on the number of house shipments on the consolidation, the transfer of data to the profit share screen may take some time.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The scope profit share application includes a default CPA Template for most Agents in order for most fields to be filled in general usage. However the information below discusses each field as if it is empty.

General

This area contains the general information about the calculation.

Share to

The destination agent who will receive the profits. The search function of the field can be used to locate the desired agent.

Share Type

This field will display one of three possible share types used for this business partner:

Type	Description
Profit	Participation in profits
Turnover	Participation in sales
Fixed amount	Agreed fixed amount

Share

The amount of share between the parties is displayed. For *profit* or *turnover* this will appear as a set percentage. Far a fixed share, the actual fixed amount will appear in the local currency. Normally profit share is a 50% profit split between the agents.

Total Share Amount

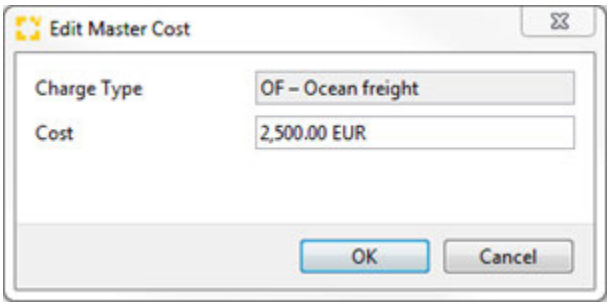
The calculated profit share of the master shipment will appear *(This figure cannot be edited)*.

Master Costs

This table shows the total costs on the master shipment. For each cost the charge type and actual cost figure are shown.

New

Opens a pop-up window in which new charges may be entered.



Charge type

Enter the kind of charge, using the field search function to find the desired charge type.

Cost

the actual cost of the charge should be entered. A calculator is available from the drop down menu.

OK

Closes the pop-up menu and transfers the data to the master shipment cost table.

Cancel

Closes the pop-up menu without further action

Edit

Opens in a pop-up window the master cost highlighted in the table. *(The charge type cannot be changed, to do this the charge should be deleted and then re-entered in the master shipment.)* The charge can also be edited by double clicking it.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Delete

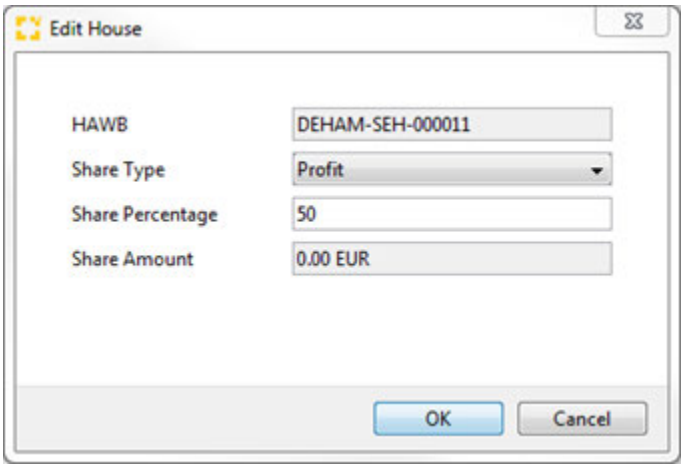
Deletes the charge highlighted in the master cost table.

House Shipments

this summary table will show all the house shipments consolidated on this master. The table will show the B/L number, the number of packages, gross weight, volume, share type, % share and the share amount.

Properties

This button will open in a pop-up window, the house shipment highlighted in the house summary table. The house can also be opened by double clicking it.



HAWB

The house B/L number. *(this field cannot be edited)*

Share Type

The type of profit share applied to this house. The share type used at the master level is used but this can be changed as desired.

Share Percentage

The share percentage used for the calculation. The share percentage used at the master level is shown but this can be changed as desired for each house.

Share Amount

The calculated amount of the profit share on the house shipment. **These amounts are shown on the profit share statement** *(This field cannot be edited)*

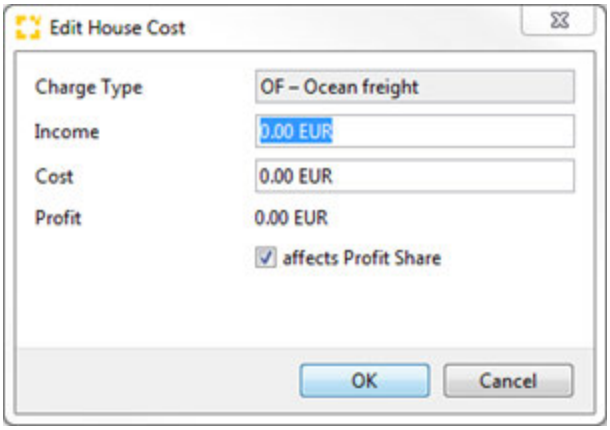
House Shipment - Revenues and Costs

This summary table shows the revenues and costs of the house shipment highlighted in the house shipments summary table. *(The columns are described by the following pop-up window that appears if a charge is to be added or edited)*.

New

Opens a pop-up window in which new costs and income can be added to the current house shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Charge Type

The new charge for which costs and revenue are going to be recorded. Use the field search function to locate the desired charge type.

Revenue

The income for the charge that is being applied to the current house shipment. The field offers a calculator function.

Cost

The cost of the charge being applied to the current house shipment. The field offers a calculator function.

Profit

The calculated profit base on the income minus the cost. *(This field cannot be edited)*.

Include in Profit Share.

This check-box indicates if the charge should be included in the calculated profit share.

Edit

Opens a charge highlighted in the table showing the summary of house charges. This charge can then be edited. *(It is not possible to edit the costs on a charge. To do this the charge should be deleted and re-entered)*. The charge can also be opened by double clicking it.

Delete

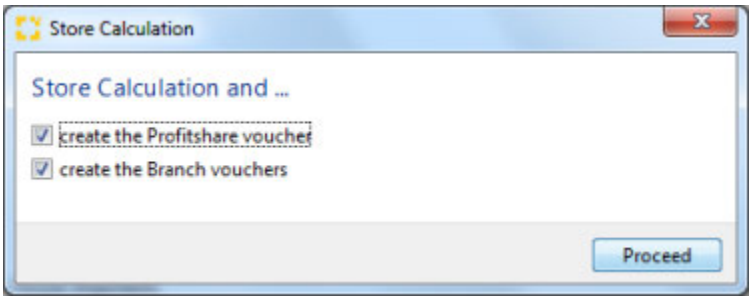
deletes the charge from the table showing the summary of house charges.

Recalculate Profitshare

This action link will restore the profit share tab to it's original condition, removing any changes made to it.

OK

Opens a pop-up window to generate the required documents for the profit share.



Generate Profitshare Voucher

Check this box to generate the profit share voucher. Generation only occurs when the *OK* button is used (see below).

Profit Share Statement

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Check this box to prepare a profit share statement. Generation only occurs when the *OK* button is used (see below).

OK

Save the profitshare spreadsheet and prepare the selected documents. Closes the pop-up window and the profit share application.

Cancel

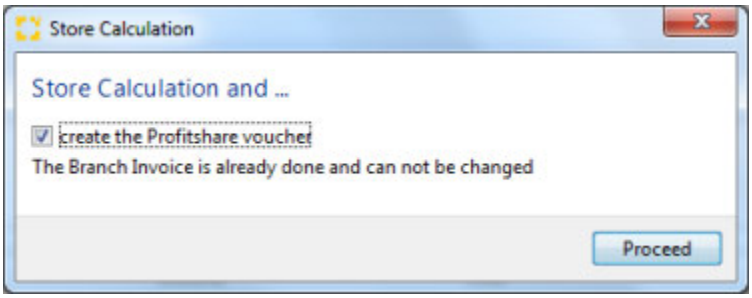
Closes the pop-up window without further action.

Cancel

Closes the pop-up window without further action.

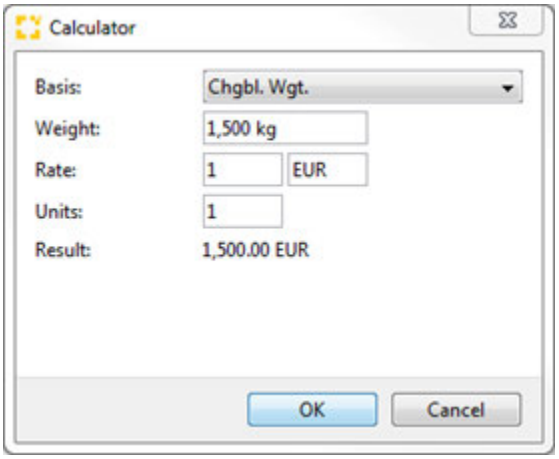
Subsequent changes

On completion including generation of all profit share documents, if a profit share calculation is re-opened and reissued, on pressing *OK* a pop-up window will appears asking if the previous profit share is to be cancelled and replaced by this new profit share.



Calculator

In most fields within the spreadsheet *Consol Profit Analysis* application a calculator can be opened with the F3 function key or by using the drop-down menu. This calculator is used for quick and easy recalculation of tariffs.



Basis

The basis units can be selected from the following drop-down list:

- Pieces = No. of items
- Chgbl. wgt. = chargeable weight
- gross wgt. = gross weight
- Volume
- Number of Containers
- Number of Consigments
- W/M = weight or measure = 1m3 = 1000kg = 1 W/M
- Insurance value

Rate

Rate per unit.

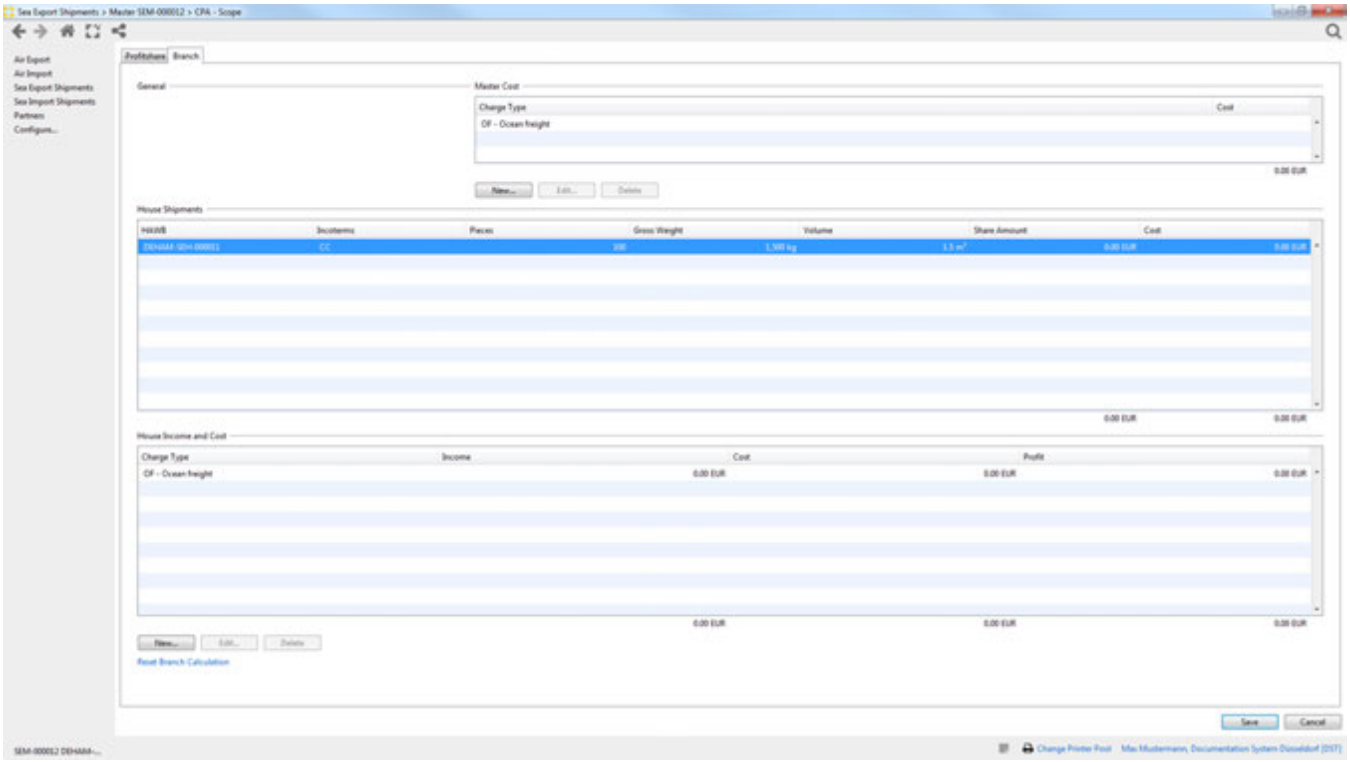
2. Branch - Consol Profit Analysis - Accounting - Master Shipment - Seafreight Export

- Introduction
- Description

Introduction

The tab **branch** relates to the branch to which the costs of the master shipment are incurred for the house shipments. This tab is used to generate documents for each branch whose house shipment may have been included on this master shipment. Any costs on the master are automatically transferred to the jobcosting of all the house shipments included in the consolidation and any billings appear in the documents tab of the master and the house shipments.

Description



Master Costs

This table shows the total costs on the master shipment. For each cost the charge type and actual cost figure are shown.

New

Opens a pop-up window in which new charges may be entered.

Single FCL Shipment - Seafreight Export

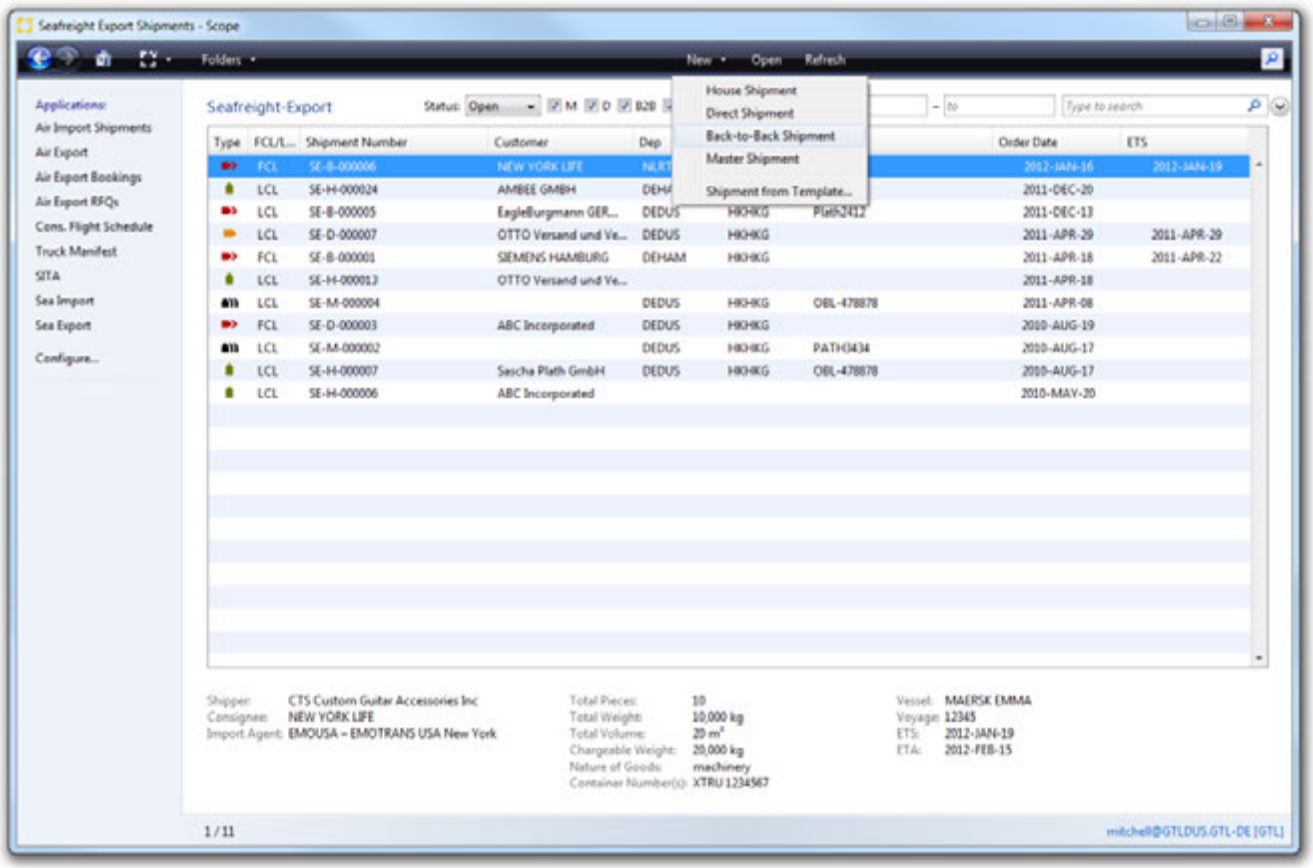
- Introduction
- Description

Introduction

A Back-to-back shipment may be either an LCL or FCL shipment, or it may be a breakbulk shipment or a ro-ro shipment. A single house B/L issued for a back-to-back shipment and a single ocean B/L or Marine Bill of lading is issued.

Description

Create a back-to-back shipment by clicking the "New" option on the Scope menu bar and from the list of shipment types select "back-to-back shipment". This will open the house shipment "General " tab.



The following tabs are availble to enter direct shipment details:

- General
- Goods
- Vouchers
- Jobcosting
- Documents
- E-mail

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

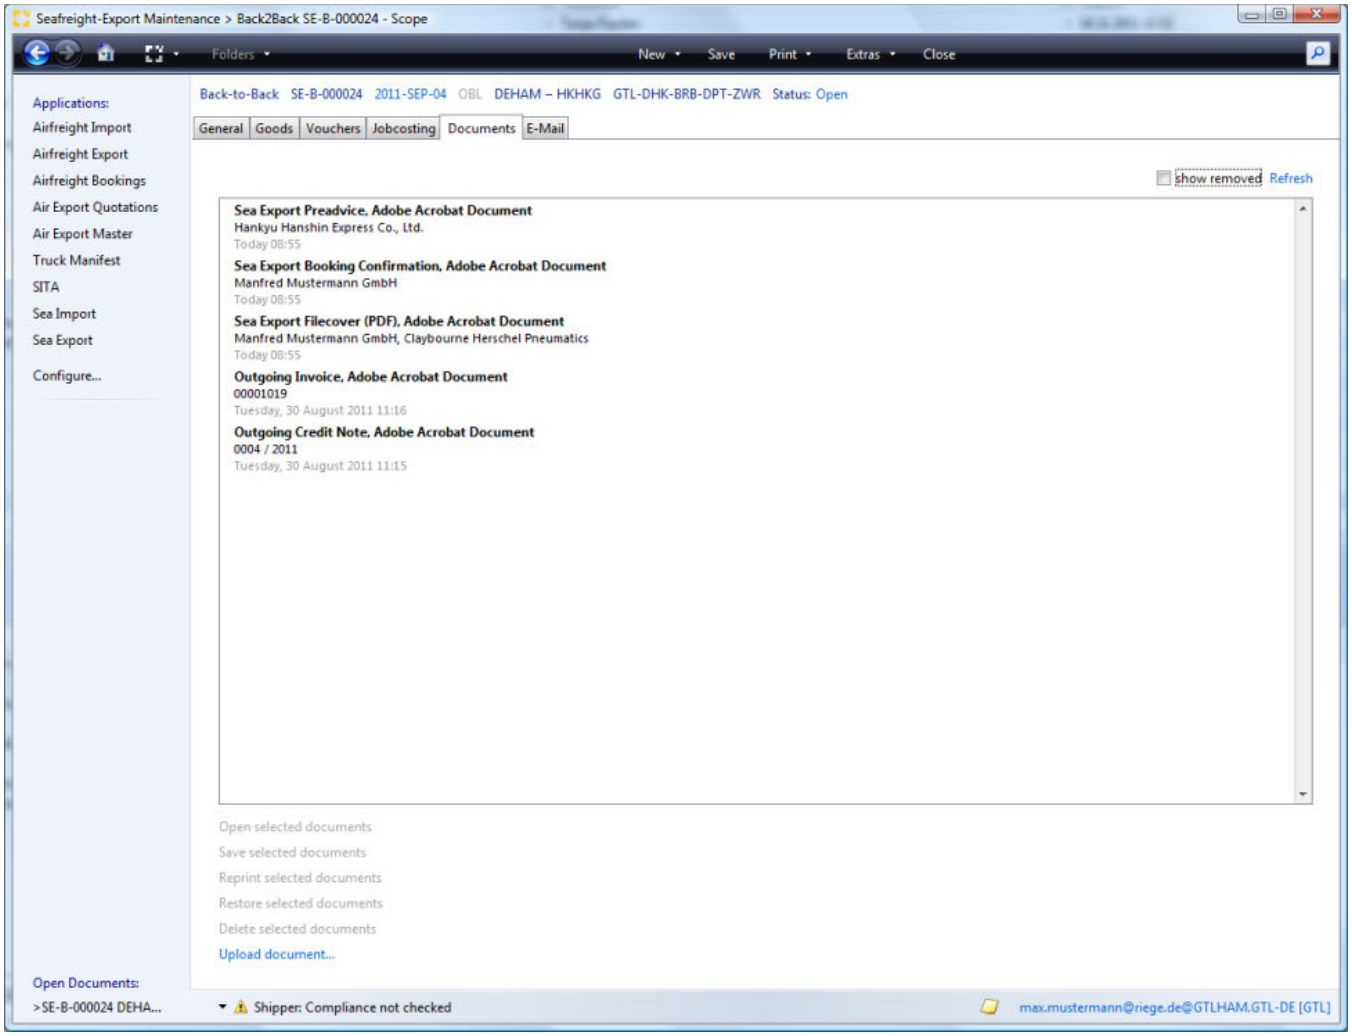
Documents - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

Introduction

In the *Documents* tab displays in summary form all documents created (transfer orders, House B/L's, invoices, credit notes, invoice cancellations, etc.) The user can also upload documents of different file formats. The user can view and print all the documents shown.

Description



Main menu bar and title bar
Open selected documents
Save selected document
Reprint selected documents.
Upload document...
Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.

Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.

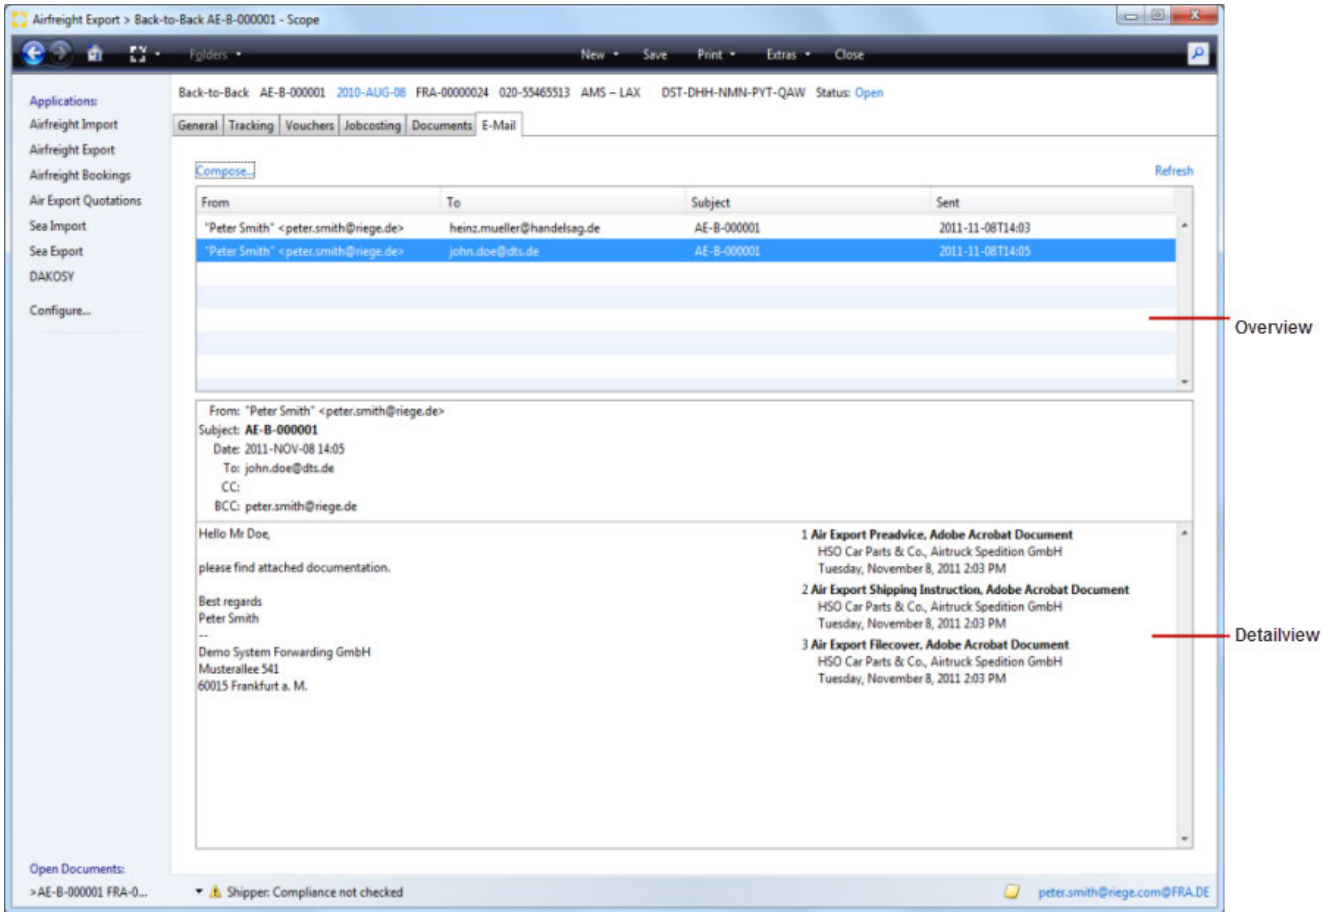
E-Mail - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

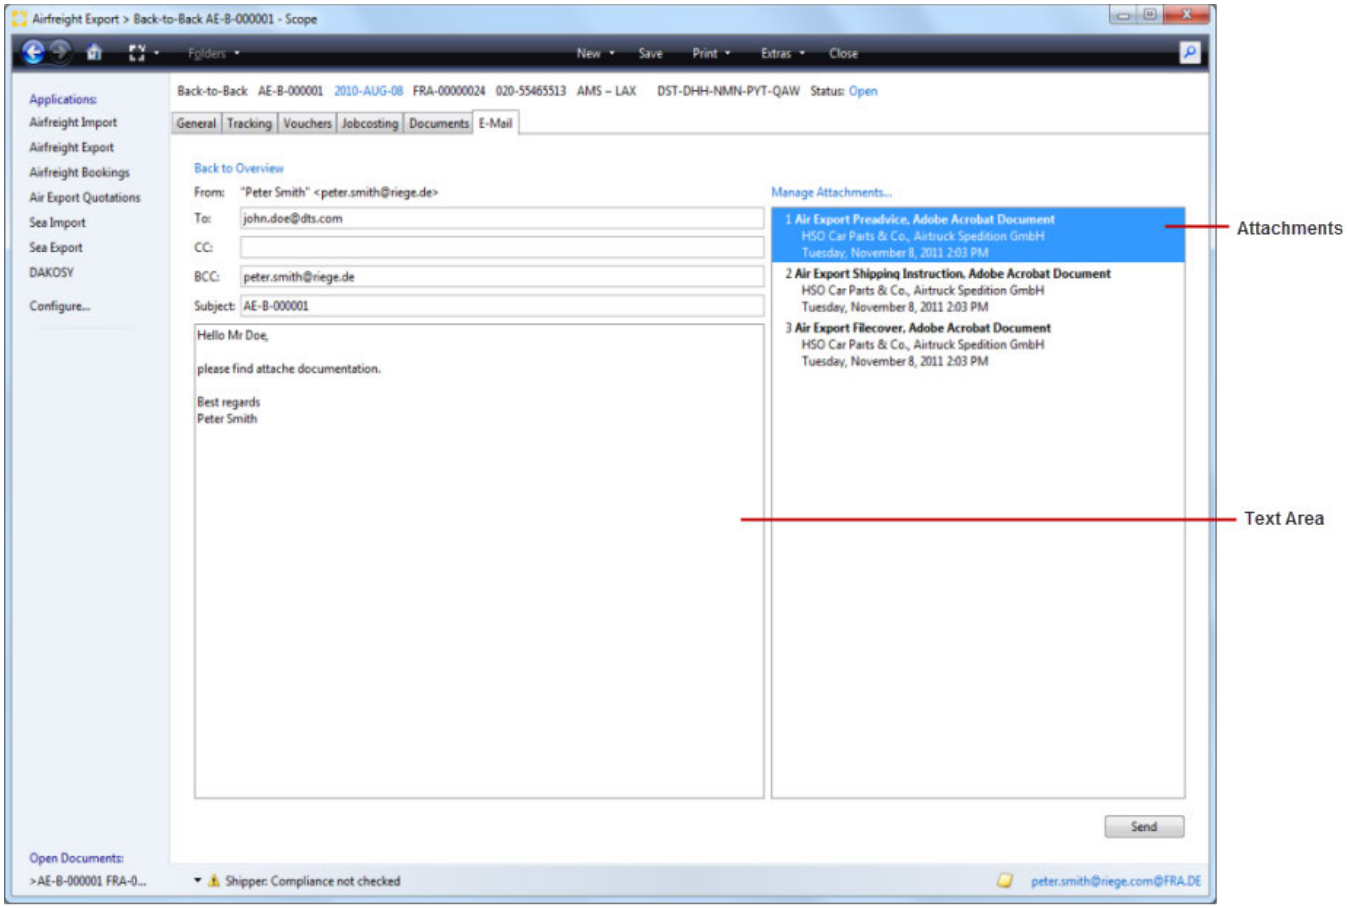
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

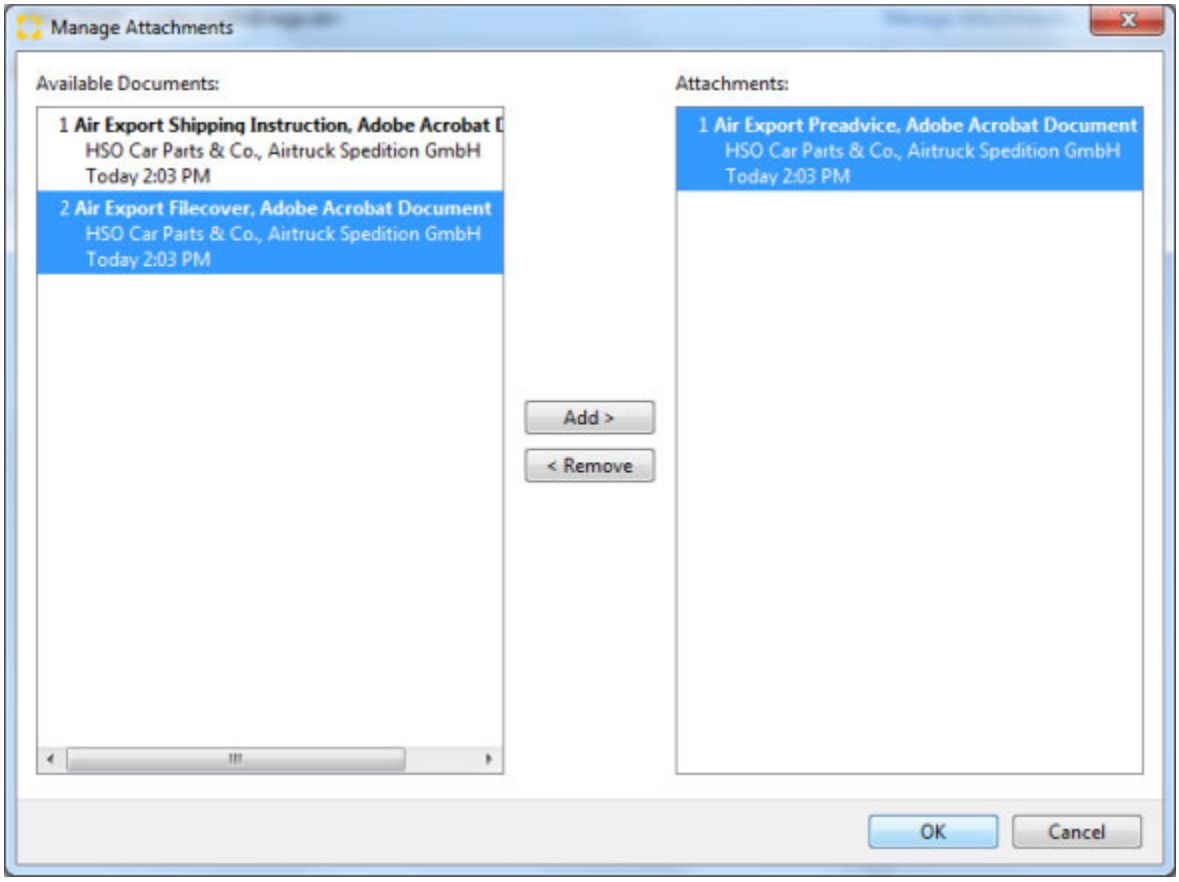
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

General - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

Introduction

The "General" tab of the Back-to-Back shipment captures the parties involved in the shipment, the transport details, summary of the cargo and shipment references. From this tab transport orders can be created, bills of lading generated and customs information entered and in some cases transmitted to customs. On saving the information in this tab, a unique shipment number (USI) will be issued for the shipment.

The Back-to-Back shipment can be created as an LCL or FCL shipment and both the House and Ocean bill of lading for the shipment may be created.

Application actions

In the Scope title bar, various overall functions are available:

New

If sufficient data about the Back-to-Back shipment has been entered and saved, the "New" option allows:

- Create a new pickup order
- Create a new pickup order for empty containers
- New Customs order

Save

When all mandatory fields for a Back-to-Back shipment have been entered it is possible to save the Back-to-Back shipment. At this point a USI is issued.

Print

When the direct shipment is saved this option will allow printing of:

- File cover
- Booking confirmation
- Preadvise
- Shipping advise
    - For shipper
    - For consignee
- Export declaration
- B/L instructions

Extras

When the Back-to-Back shipment is saved, use the extras option for:

- Create a template (the shipment is used as a template for further shipments)
- Change shipment type - it is only possible to change a Back-to-Back shipment to a house shipment or a direct shipment.

Close

Close the shipment without saving or further action. If there is unsaved data, a dialogue will appear confirming if unsaved data should be discarded.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Title Bar

Above the shipment tabs the title bar appears. This summarizes the details of the shipment and offers further actions:

- **Shipment type**
  This will be "Back-to-Back" indicating a Back-to-Back shipment.
- **Shipment number**
  This unique number (USI) is generated on first saving the shipment. Prior to saving it will display the greyed text *direct shipment*. After saving the shipment number will be generated in the format of the 2 digit mode "SE" (Sea Export) followed by the 1 digit shipment type "B" (Back-to-Back) followed by a 6 digit shipment number.
- **Service date**
  If an estimated sailing date is present on first saving, this will be the service date. If not present then the current date will be used.
- **OBL Number**
  The OBL of the Back-to-Back shipment
- **Depart and destination port codes**
- **Internal USI**
- **Status**
  The status will be "Open" until the shipment is billed. By clicking this item the shipment can be manually closed.

Tabs

All available tabs are displayed. The focus will be on the open tab.

Application area

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Shipper's Reference

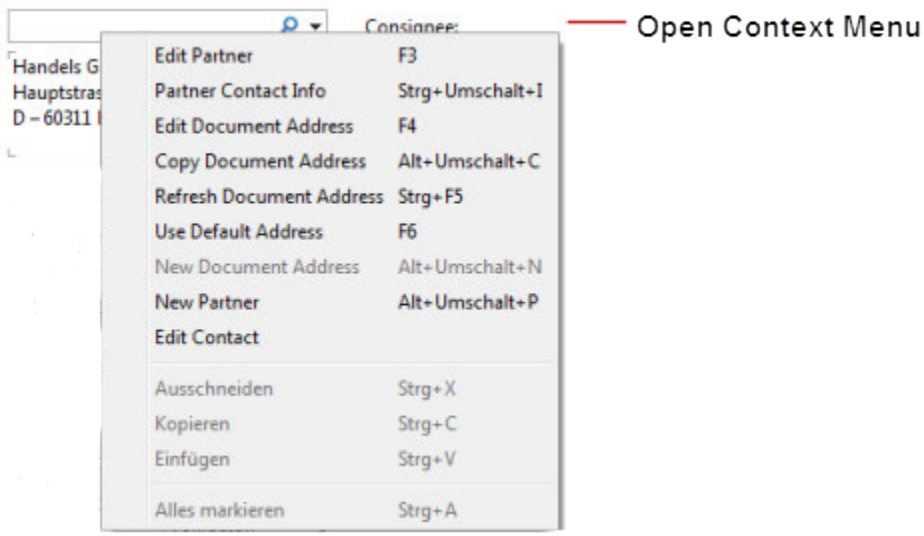
References used by the shipper to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *R eferences* section of the general tab.

Consignee's Reference

References used by the consignee to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *References* section of the general tab.

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Edit Partner

Opens the business partner editor , where the partner can be edited.

Edit address

Opens an editor to change the address for the current shipment.

Update address

Updates the address.

Use default address

Sets address to the default address for the field stored in the master address data.

Edit document address

The option "Edit document address" allows the selected address to be edited as required, but these changes are not stored as master data and only appear on this shipment.

New Partner

The option "New Partner" opens the master data maintenance in order to create a new business partner in the Scope database. This new address will then be available as a shipper for example.

Compliance check

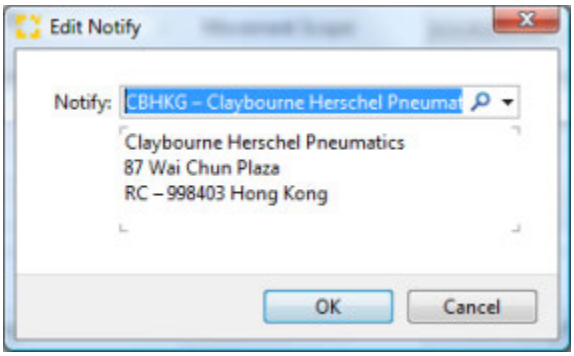
Performs an address compliance check.

Edit contact description

Opens a window where a new contact and details can be entered for this shipment.

Notify

The Notify ("to be notified") is the party to be notified when the shipment arrives in the port of discharge. The Notify can also be the consignee. The notify is entered by clicking the blue action link "Edit Notify". This opens a dialog window in which notify party is recorded.



The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Incoterms place

The place name referenced by the incoterms.

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of departure

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

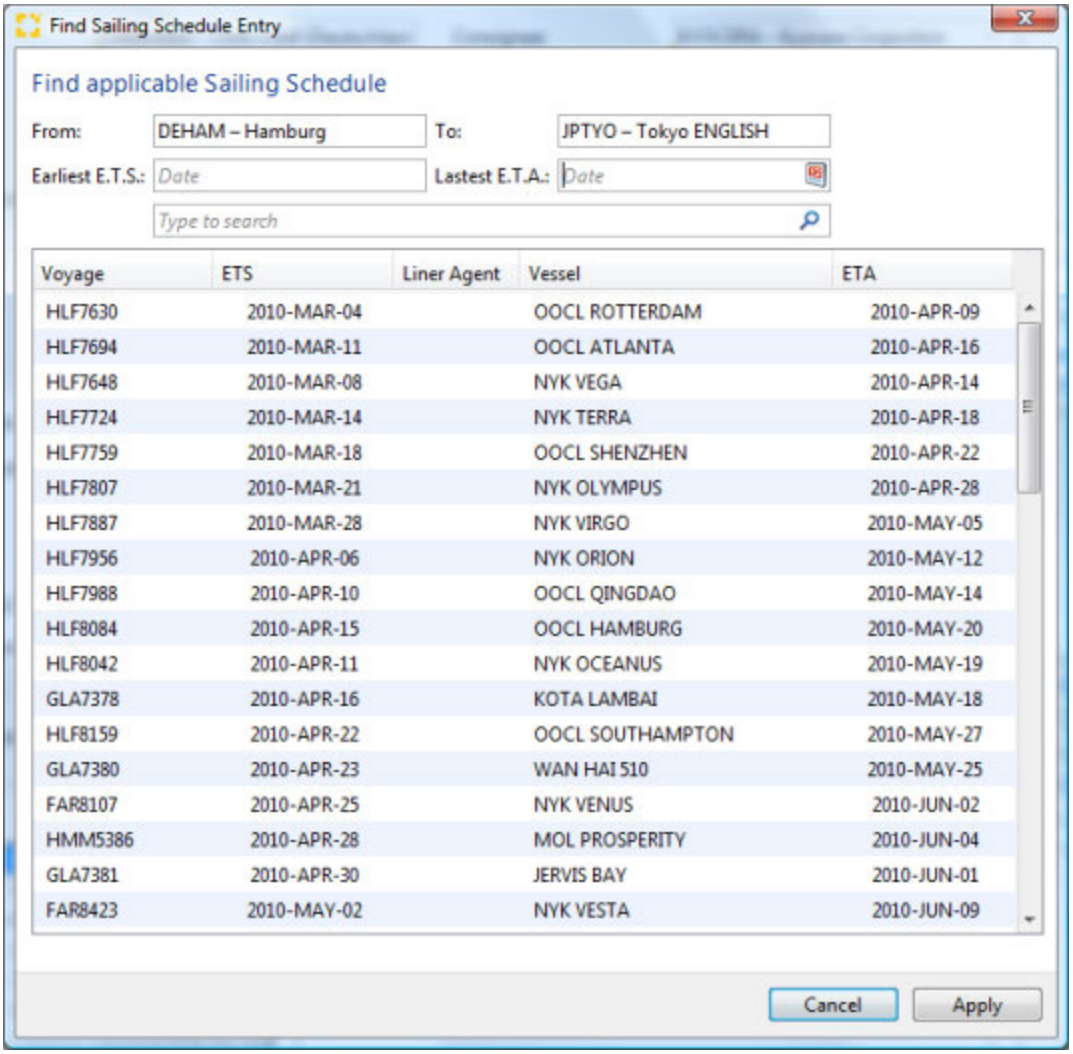
Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Voyage / Sailing Schedule

The voyage number of the vessel may be entered directly. The drop down menu also offers access to the sailing schedule or use the F3 function key.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



From

The port the cargo will depart from

To

The port the cargo will arrive at

Earliest E.T.S.

The earliest estimated sailing date the cargo can depart.

Latest E.T.A.

The latest estimated date of arrival for the cargo.

Type to search

Use the search function to enter search terms that will narrow down the list of possible sailings.

Cancel

Cancels selection of a sailing without further action

Apply

Applies the select sailing to the shipment and writes the folling information to the shipment:

Sailing Schedule information:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voyage (Voyage Number)
Vessel
Line Agent
Carrier
Port of Loading
Port of Discharge
E.T.S. = Estimated Time of Sailing
E.T.A. = Estimated Time of Arrival

Vessel

The vessel on which the goods will be loaded.

Liner Agent

The agent of the steamship line to whom the goods will be delivered for export. Only carrier addresses will be available using the search field

Carrier

The owner of the vessel that will carry the goods. This will be the SCAC code and name of the carrier and should appear automatically when the "liner agent" is entered.

CFS/CY Closing time

The date and time the container freight station or container yard cease accepting new cargo for the voyage selected. This is a date and time field, use the drop down option to select from the calendar

4. E.T.S.

The estimated sailing date and time of the vessel. This is a date and time field, use the drop down option to select from the calendar

E.T.A.

The estimated arrival date and time of the vessel at the port of discharge. This is a date and time field, use the drop down option to select from the calendar

Booking reference

This is the reference issued by the carrier to identify the goods and confirm their acceptance for the sailing. This reference is often used prior to the issue of an OBL number.

OBL number

The ocean bill of lading number issued by the carrier.

Number, Type

In the left field the number of packages will be entered. In the right field the packing type is entered (cardboard boxes, pallets, crates ...). The available packing types are maintained in the master data packing types maintenance program . The total entered in these fields defaults to the "goods" tab automatically, and further details about the goods may be entered there.

Gross Weight, Volume

The gross weight of the shipment. This is defaulted in kilograms (kg). If the symbol "kg" is changed to "lb", the total will automatically convert to "kg". In the right pane the total cubic volume i record. This will default to cubic meters (m3). If the symbol "m3" is changed to "CFT" the figure is assumed to be in cubic feet and will automatically convert to "m3"
The data entered in these fields automatically transfers to the to the "goods" tab.

Commodity Description

A short description of the goods. This is a brief synopsis of the goods to be transported. The data entered in this fields automatically transfers to the to the " goods" tab.

Chargeable Weight

This field displays the freight ton (Frt). It is calculated automatically using a comparison of weight (1 t) versus volume (1 m3). The higher value (ton or volume) is the freight ton.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

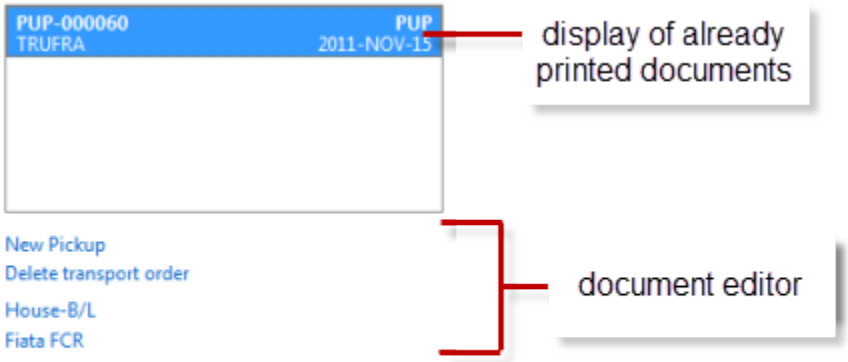
Reference

The various reference numbers for the shipment are entered here using the references application

Documents

To the right of the "General tab" is an area that provides action links to create various Scope documents and any existing documents are shown. In general all documents created in scope are output to PDF file and are shown in the "*Documents tab*.

To create a document, the mandatory data of *General tab* must be completed and saved. Once saved, the gray links transform to blue action links and when clicked launch the appropriate editor to create the document.



New pick-up order

Once the data has been stored, a new pick-up order can be created. This order gives the trucking companies all the necessary instructions to pick up the shipment at the shipper or his loading point transport the cargo to a Container freight station or container yard.

Launch the editor by clicking the blue action link "New pickup".

New Pickup empty containers

This action link launches an application that allows the user to arrange the pickup and delivery of empty containers.

Delete transport order

Existing pick_up orders or empty container orders will appear in the right hand table of pickup orders. Any of these can be deleted by highlighting them and selecting the *Delete transport order* action link.

Ocean-B/L

An ocean B/L is either an original or non-original (express cargo bill / waybill/ seawaybill/Express B/L) issued by the carrier or their agent. Click the action link to open the editor for creating an Ocean B/L.

House-B/L

A house B/L is either an original or non-original (express cargo bill / waybill/ seawaybill/Express B/L) issued by the forwarding agent to the shipper or customer. Click the action link to open the editor for creating a House B/L.

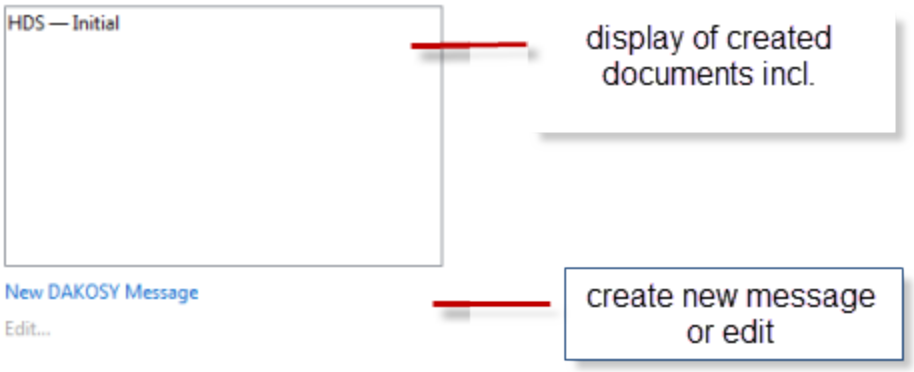
Fiata FCR

Click the action link to open the FIATA FCR editor to create a FIATA forwarders certificate of receipt.

Message - Area

The message area displays and allows creation of electronic export information to customs.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



All customs entries manually created or transmitted electronically to customs are displayed in the upper field. The current status of the entry is displayed to the right of the entry type.

New Customs Order

This function is available after entering and saving the important shipment data. By clicking on action link "New Customs Order" a pop-up window will appear where the user may define the kind of message they wish to create.

Edit Customs Order

Once a customs entry has been created, it appears in the list of customs entries. By highlighting the desired entry in the list and then selecting the action link *Edit Customs Order*, the existing entry may be reopened for alteration.

Shipment Note

By clicking on the note icon, the user can see notes already created for this shipment. A window opens and displays all existing notes. Further notes can be created or an existing note may be modified.
For each note there are three possible priority classifications available: red dot means **high**, yellow spot **moderate** and a note without a dot is **low** priority.
An expiration date for the notes will be created and will appear on the note.

*New Pickup - General - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

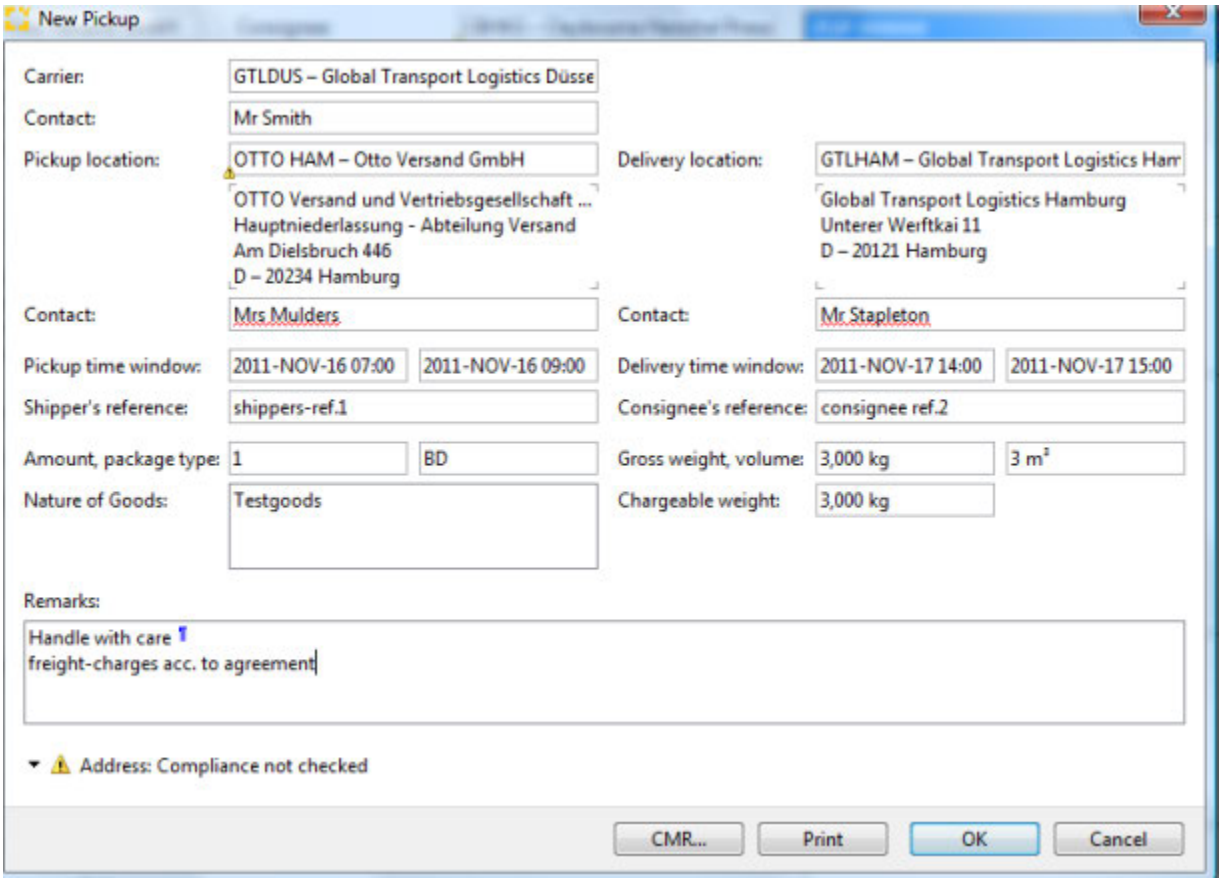
Introduction

Creation of a pick-up order requires the full shipment details have been saved in the "General" tab.

The "Pick-up" note is created by the the forwarding agent to collect the goods from the customer and have them delivered to the forwarding agents warehouse or Container Freight Station (CFS).

Description

A pick-up Order" can be created by click the blue action link "New-pickup". This will open the "New Pickup" editor.



Carrier

The trucking company who will transport the consignment. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Carrier Contact

The name of the party employed by the carrier who should be contacted for details of the pickup.

Pickup location

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the shipper. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location contact party

The name of the person at the point of pickup who should be contacted.

Delivery location contact

The name of the person at the point of delivery who should be contacted.

Pickup time window from/to

The pick up window (Date / Time), in which the consignment is to be picked up.

Delivery time window from /to

The delivery window (Date / Time), in which the consignment is to be delivered.

Shippers reference

The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.

By default, all packages are proposed for delivery.

Packing type

The type of packages

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Nature of goods

A description of the goods. The description from the general tab will default.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

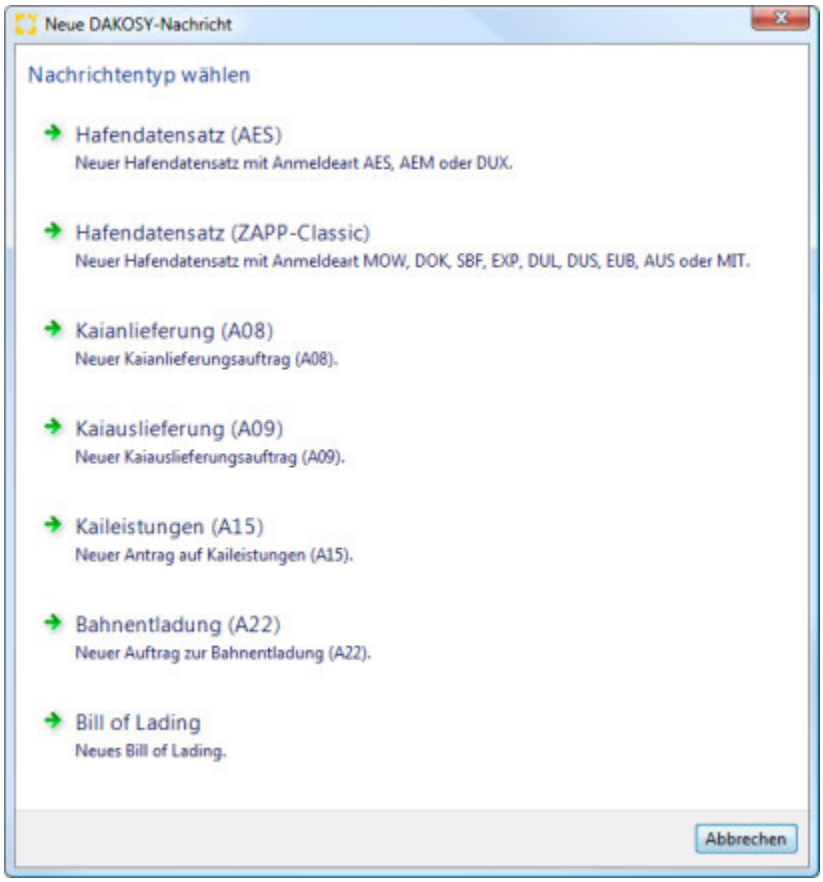
DAKOSY- New Message - General - Back-to-Back-Shipment - Seafreight Export

- Einleitung
- Beschreibung

Einleitung

Eine neue DAKOSY-Nachricht ermöglicht dem Nutzer 7 verschiedene Optionen. Hafendatensatz (AES), Hafendatensatz (Classic),Kaianlieferung (A08), Kaiauslieferung (A09), Kaileistungen (A15), Bahnentladung (A22) und Neues Bill-of-Lading stehen dem Nutzer zur Auswahl. Über das Dakosy-Modul kann die Ausgangszollabfertigung über den Hamburger Hafen sowie der gesamte Hafen-Datenverkehr (zu Reedereien, Packschuppen, Terminals..) abgefertigt werden, sofern die Beteiligten ebenfalls an DAKOSY angebunden sind. Beim Klicken auf die Schaltfläche "Neue DAKOSY-Nachricht" öffnet sich ein Auswahlfenster für den Benutzer.

Beschreibung



Hafendatensatz (AES)
Hafendatensatz (ZAPP-Classic)
Bill of Lading
Kaianlieferung (A08)
Kaiauslieferung (A09)
Kaileistungen (A15)
Bahnentladung (A22)

Hafendatensatz (AES)

Öffnet den Editor zur Erstellung eines neuen Hafendatensatz für das AES/AEM-Verfahren.

Hafendatensatz (ZAPP-Classic)

Öffnet den Editor zur Erstellung eines neuen Hafendatensatzes für alle Ausfuhrverfahren ausser AES/AEM/SAC.

HDS (AES) - Neue DAKOSY-Nachricht - Allgemein - Back-to-Back-Sendung - Seefracht Export

- Einleitung
- Beschreibung

Einleitung

Der Hafendatensatz (HDS) dient sowohl als Verladeauftrag an die Beteiligten Hafenbetriebe (Kaibetrieb und Reederei) als auch gleichzeitig als Gestellungsmitteilung (GM 01) für den Zoll. Über die Erstellung und das Senden eines HDS (AES) kann der Benutzer eine Z-Nummer zur zollseitigen Bearbeitung über das ZAPP-System des Hamburger Hafens erlangen. Die freigegebene Z-Nummer (RELEASED) ist notwendig für die Verladeerlaubnis der Ware auf das Seeschiff.

Die Auswahl HDS (AES) deckt die Möglichkeiten der Abfertigung von Marktordnungswaren (AEM) und Nicht-Marktordnungswaren (AES) ab, für die ein Ausfuhrbegleitdokument mit MRN erstellt wurde.

Beschreibung

Durch Auswahl (Klick auf den Aktionslink) "HDS (AES)" öffnet sich der Editor zur Erstellung des Hafendatensatzes in drei Reitern:

- Allgemein
- Sendungsbeschreibung
- Dokumente

Allgemein - HDS (AES) - Neue DAKOSY-Nachricht - Allgemein - Back-to-Back-Sendung - Seefracht Export

- Einleitung
- Beschreibung

Einleitung

Im Reiter Allgemein werden alle relevanten Daten für den Hafendatensatz (HDS = Hafen-Verladeauftrag an alle Beteiligten) und der Gestellungsmitteilung 01 (GM01 = Mitteilung über die physische Gestellung der Ware an einem Amtsplatz) für den Zoll in ZAPP erfasst.
Grundlage für diese Anmeldeart ist, dass die Beteiligten ihre Ausfuhranmeldungen bzw. Versendungsmitteilungen mittels AES (Automated Export System) für Nicht-Marktordnungswaren (mit Ausfuhrbegleitdokument) und für Marktordnungswaren (mit Ausfuhrbegleitdokument) und sonstige Waren (mit Kontrollexemplar T5) erstellt wurden.

Beschreibung

Durch die Auswahl "Hafendatensatz (AES)" gelangen sie in den Reiter Allgemein für diese Anmeldeart.

House-BL - General - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

Introduction

A house B/L for a back-to-back shipment is generally created by the forwarding agent prior to loading the cargo aboard a vessel.
This document is normally either issued as an original bill of lading with accompanying copies, or it is issued as an express bill of lading. In the case of an original bill of lading, whoever posses the original bill may take possession of the goods by presenting a fully endorsed original bill of lading. With an express bill of lading, the goods may be released by the receiving agent to the consignee without presentation of an original bill of lading. House bills serve to confirm the receipt of the goods, and include detailed conditions of transport and description of the goods. Thus, the document also serves as proof of the contract of carriage.

Description

By clicking the blue action link shown as "House- B/L" the house B/L editor will open with the data from the shipment entry defaulted to the various fields.
All entries can be saved at any time by clicking the "OK" button. Information can be discarded by clicking the "Cancel" button.

The house B/L editor provides the following tabs:

- Cargo Details - General - House BL - General - Back-to-Back Shipment - Seafreight Export
- General - House BL - General - Back-to-back House Shipment - Seafreight Export
- Preview - House BL - General - Back-to-Back Shipment - Seafreight Export

Address data

Shipper

Shipper for the shipment. This may be found with the field search or can be entered directly.

Consignee

Consignee for the shipment. This may be found with the field search or can be entered directly.

Notify

Notify from shipment editor (if available). This is the party to be notified when the shipment arrives at the importing country. The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Import Agent

The agent responsible for the freight on arrival at the importing country. The address for the agent is taken from the data already entered in the main shipment entry.

Transport Information

Vessel

The name of the vessel aboard which the freight will be loaded. This vessel name may change when the house shipment is consolidated because the vessel of the master shipment will automatically overwrite any existing vessel name.

Voyage No.

The voyage number of the the vessel aboard which the freight will be loaded. This voyage may change when the house shipment is consolidated because the voyage of the master shipment will automatically overwrite any existing voyage details.

Place of Receipt

The place from the main shipment entry will appear.
The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of Departure

The Port of Departure from the main shipment entry will appear.
Place or port where vessel containing the goods will depart.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of Discharge

The Port of Discharge from the main shipment entry will appear.
Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Place of Delivery

The place from the main shipment entry will appear.
The place of delivery is the final destination of the goods.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Instructions and additional information

Shipper's Declaration

Used for hazardous information

Value of goods

This is an optional field, normally only used when specified in a letter of credit.

No. of Originals

Select the number of original bills of lading issued from the drop down menu.

Freight amount

Amount agreed for the freight transport costs.

Inco Terms

From the main shipment entry. The Incoterms that will be printed on the B/L.

Freight payable at:

The location where the freight charges are payable. (according to the Incoterms)

Cargo Insurance covered

A check field to indicate if the shipment is insured.

Date of issue

The date of issue of the bill of lading.

Place of issue

Signature

The name of the agent responsible for issuing the bill of lading.

Synchronize B/L with shipment

This action link will synchronize all the fields in the *General* tab of the house bill of lading with the same fields of the *General* tab of the *General* shipment entry. Any existing data will be lost from the house bill of lading.

OK

Click "OK" to save all the details enter in the house bill of lading and close the house bill of lading editor.

Cancel

Click "Cancel" to discard any details entered in the house bill of lading and close the house bill of lading editor.

Ocean BL - General - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

Introduction

The ocean B/L is issued by the ocean carrier or steamship line. The freight forwarder provides instructions to the ocean carrier or steamship line on how to prepare the ocean bill of lading. The Ocean B/L editor is the application used by the freight forwarder to create these instruction. Once complete the bill of lading instructions can be generated as a PDF, printed or e-mailed to the shipping company.

Description

Open the Ocean B/L editor by clicking the action link "Ocean B/L" on the right side of the "general" tab. This will open the editor.

Within the Ocean b/L editor the following tabs are available:

General

Pickup Empty Containers - General - Back-to-Back Shipment - Seafreight Exports

- Introduction
- Description

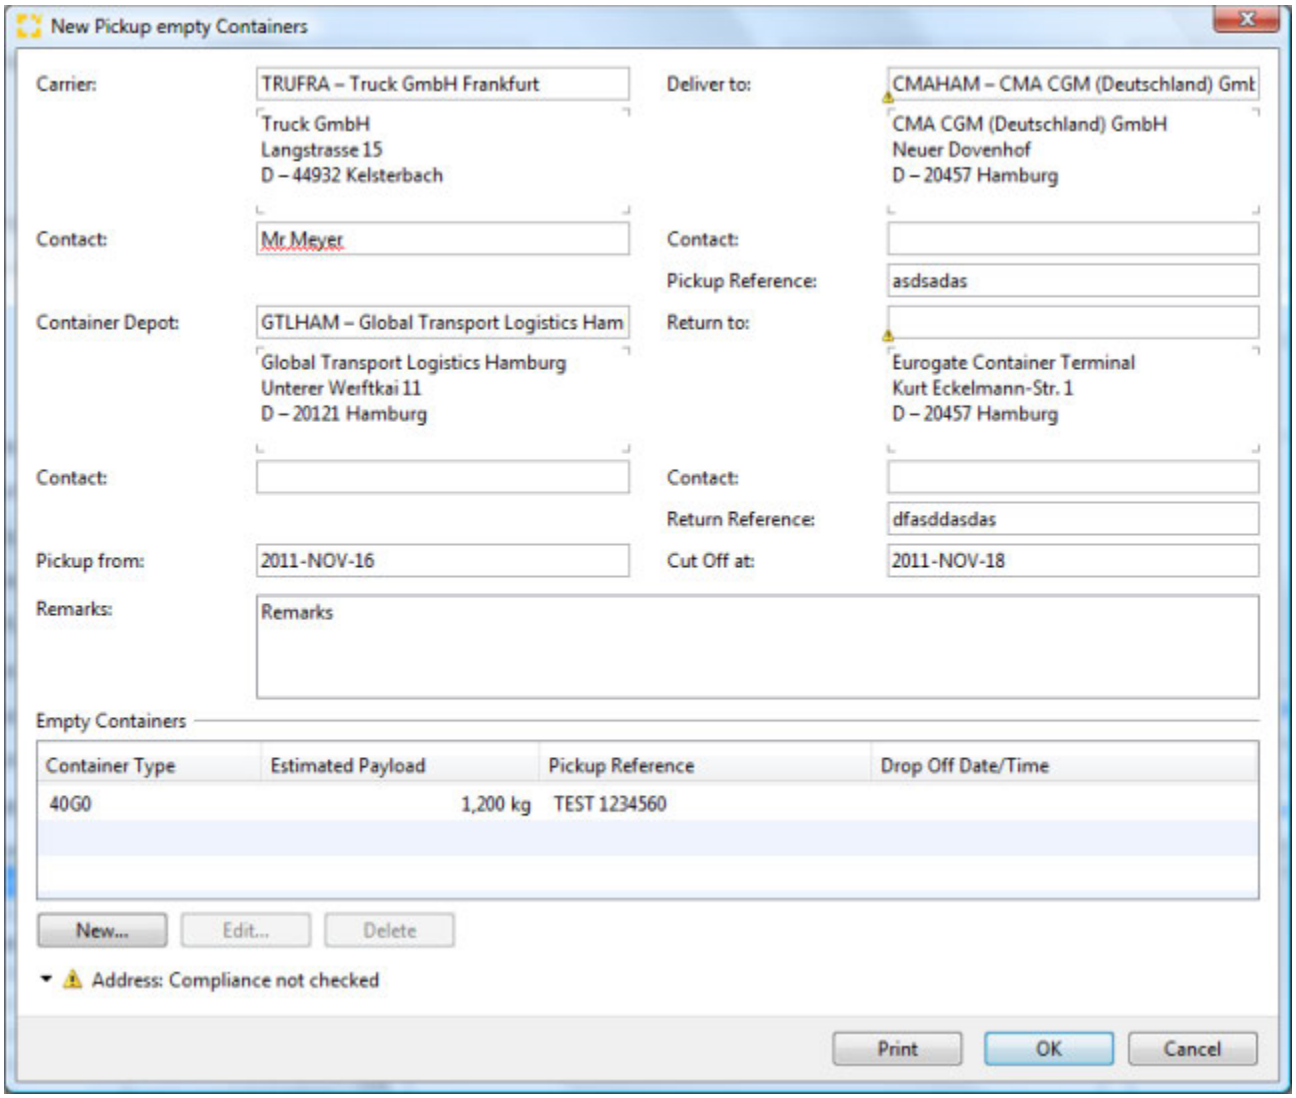
Introduction

Creation of an empty container pick-up order requires the full shipment details have been saved in the "General" tab.

The "Empty Pick-up" order is created by the the forwarding agent and instructs the carrier/trucker where to collect empty containers from and where they should be delivered to.

Description

A pick-up empty containers order" can be created by clicking the blue action link "New-pickup empty containers". This will open the "New Pickup empty Containers" editor.



Carrier

The trucking company who will pickup the containers. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Carrier Contact

The name of the party employed by the carrier who should be contacted for details of the container pickup.

Container Depot

The address where the containers should be picked up from. The desired address can be located with the search field.

Contact (Container Depot)

The **contact name** for the container depot may be entered or selected from the list of contacts for this partner.

Deliver to

The address to which the containers should be delivered. The desired address can be located with the search field.

Contact (Deliver to address)

The name of the person at the point of delivery who should be contacted. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Pickup Reference

The reference provided by the party supplying the empty containers.

Return to

The address to which the containers should be returned. The desired address can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Contact (Return to address)

The name of the person at the return to address who should be contacted. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Return Reference

The reference used by the **Return to** address to identify the consignment.

Pickup from

The date and time when the empty containers will be available (Date / Time).

Cut off at

The date and time when pickup of the containers expires (Date / Time).

Remarks

Comments or instructions entered in this field will be printed on the container pickup order.

Empty Containers

The empty containers section of the **Pickup empty containers** application displays a summary table of containers on the pickup order. The table is comprised of the following columns:

- **Container type**
  The size and type of container, 20' Dry van container for example
- **Estimated payload**
  The total weight of cargo the container can carry. This figure defaults to **kg** but can be over-written with **LB**
- **Pickup Reference**
  The reference used to identify the container at the pickup point.
- **Drop Off Date/Time**

The Empty container table offers function keys to enable entry of the container details into the table.

New

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

generates a popup application to enter new container details

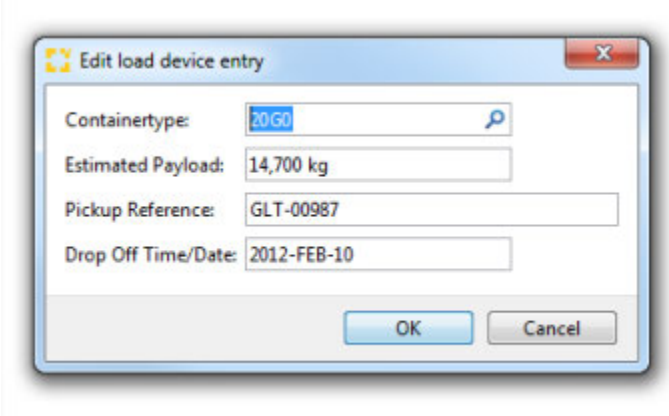
Edit

Opens a popup application to edit the details of the container highlighted in the table.

Delete

Deletes the container highlighted in the table

New Load device entry



On selecting **new** or **edit** in the empty container table, the **New load device** application appears to allow entry or editing of containers:

Container type

The size and type of container, 20' Dry van container for example. This is a container type search field that will only allows existing container types stored in the container types database.

Estimated payload

The total weight of cargo the container can carry. This figure defaults to **kg** but can be over-written with **LB**

Pickup Reference

The reference used to identify the container at the pickup point.

Drop Off Date/Time

Date and time the container should be dropped of. This is a data and time field and the drop down menu provides a calendar.

Print

Print the container pick-up order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the container pick-up order.

Assignment of a cargo item to a container
Cargo Detailed Description

Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
	Container
	Cargo

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
	Adds a new container
	Adds a new piece of cargo
	Removes a piece of cargo or container
	Moves the item up the list
	Moves the item down the list

LCL or Breakbulk Back-to-Back shipment

When the Back-to-Back shipment is not containerized a minimum of 1 cargo item should be present and cargo items can be added by clicking on the  icon.

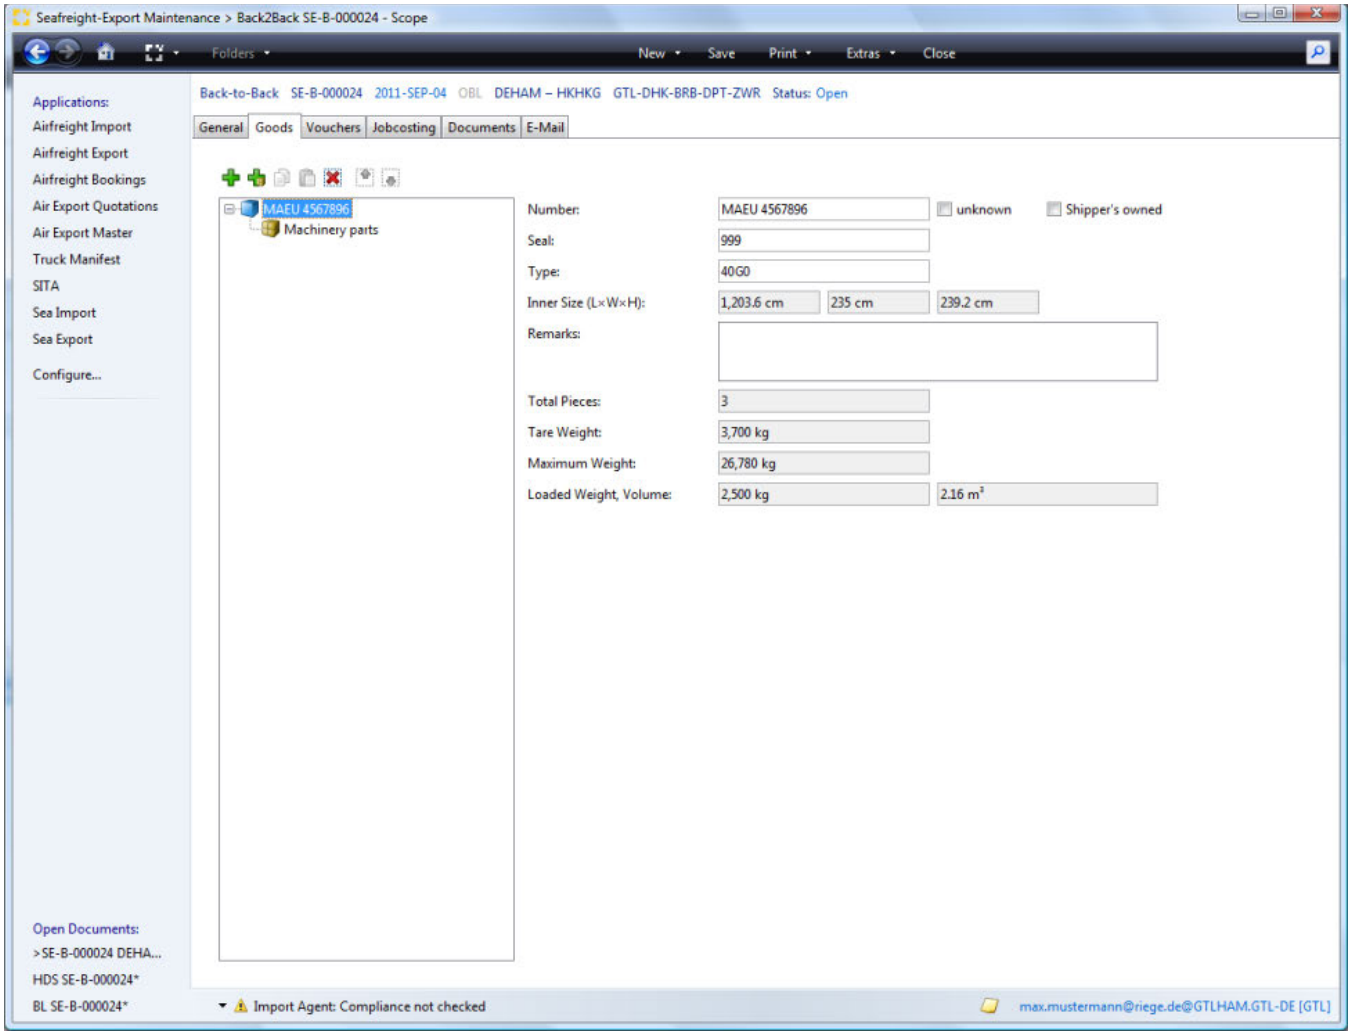
For each cargo item detailed information can be added in the sub tabs:

- Cargo description
- Dangerous Information

FCL Shipment

If the cargo is to be shipped containerized then the container details must be added using the  icon. This will open a container entry screen on the right where the full container details are recorded. On completion of the container details, at least one cargo item must be added to the container using the  icon.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489.

Unknown

If the "Unknown" box is checked, then the container number can be left empty.

Shipper's owned

Check the "Shipper's owned" box if the carrier owns the container.

Seal

The container seal number

Type

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Remarks

Any remarks particular to this container

Total pieces

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The total number of pieces in the container. This is derived from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargoe items:

The exact number of pieces.

Packing type

To the right of the pieces, the type of packing can be described - pallets, boxes, barrels etc.

Gross Weight

The gross weight of the packages. This figure will default to Kg, but this may be changed to Lbs if required.

Volume

The total volume of the packages. This figure will default to Cubic meters (m3), but this may be changed to cubic feet (CFT)if required.

Stackable

The stackablilty of the packages.

Nature of Goods

A description of the goods. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Marks and Numbers

Any marks and numbers on the goods that are to be noted on the documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Handling Info

Special handling instructions to be included on documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Dimensions

Each piece of the package can be recorded in the *Dimensions Editor*.

New

By clicking on the **new** button the dimensions editor will appear. This can be repeated for each item until all have been entered and the results will be tabulated.

? Unbekannter Anhang

Data is saved by clicking the "OK" button and discarded by clicking the "Cancel" button.

Packages

The number of packages.

Length

The length of each package. The default measurement will be in **cm** but this can be changed to **in**.

Width

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Height

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Volume

The volume of the packages will be calculated automatically using the dimensions provided. This field cannot bee edited.

Edit

Any existing package in the summary table of packages my be highlighted and edited by clicking the *edit* button.

Enable dangerous goods entry

Checking the dangerous goods flag marks the entire shipment as carrying dangerous goods. In addition the previous greyed data fields of the dangerous goods tab are now activated for entry.

Any cargo marked as dangerous will appear in the cargo list with a red and white "dangerous" symbol.

IMDG Class

IMDG code for the Hazardous class of materials.

UN Number

The UN number of the substance. This is prefixed by "UN" followed by a 4 digit number.

Proper shipping name

The full shipping name of the substance

Technical Name

The precise technical designation of the hazardous substance. This is on the IMO-DGD.

MFAG Number 1

Medical First Aid Guide - Number 1 acc. IMO-DGD.

MFAG-Number 2

Medical First Aid Guide - Number 2 acc. IMO-DGD.

EMS-(Fire)

Emergency Schedule - Number 1 acc. IMO-DGD.

EMS-(spill)

Emergency Schedule - Number 2 acc. IMO-DGD.

Limited Quantity

Check the field to indicate a limited quantity of the dangerous goods.

Exempted Quantity

Check the field if the limited quantity of the dangerous goods is sufficient to exempt it.

Net Weight

The net weight of the dangerous goods (see IMO-DGD).

Flash Point

The temperature in degrees Celsius (° C) at which the hazardous substance will ignite.

Radioactivity

The radioactivity of the hazardous cargo.

Page Number

Jobcosting - Back-to-Back Shipment - Seafreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

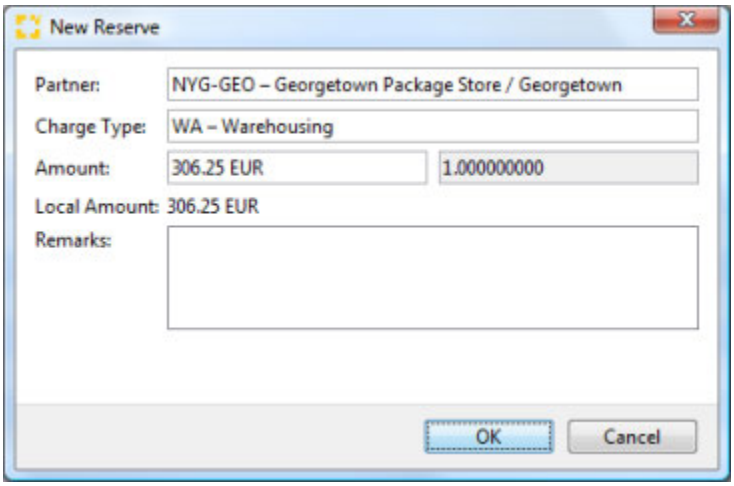
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Single Shipment - Seafreight Export

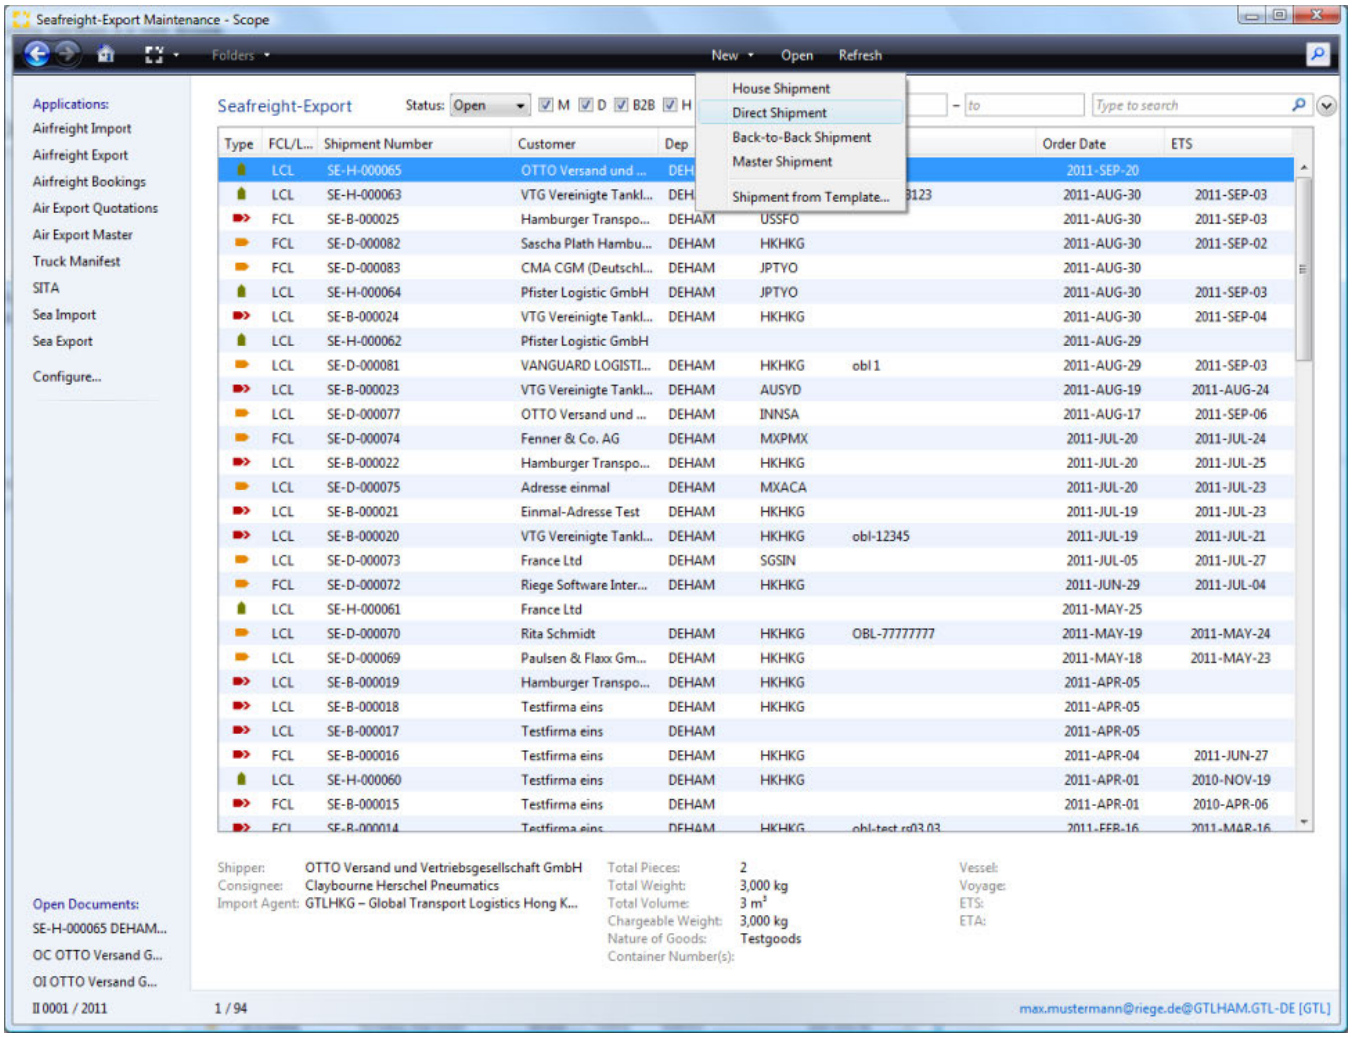
- Introduction
- Description

Introduction

A direct shipment may be either an LCL or FCL shipment, or it may be a breakbulk shipment or a ro-ro shipment. There is no house B/L issued for a direct shipment, instead a single ocean B/L or Marine Bill of lading is issued. In addition there is no import agent for a direct shipment since management of the goods on arrival is handled by the Carrier. This application allows the collection of all information for the creation of a direct shipment, generation of documentation of communication of data to partners and authorities.

Description

Create a direct shipment by clicking the "New" option on the Scope menu bar and from the list of shipment types select "Direct". This will open the direct shipment "General " tab.



The following tabs are availble to create direct shipment details:

- General
- Goods
- Vouchers
- Jobcosting
- Documents
- E-mail

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

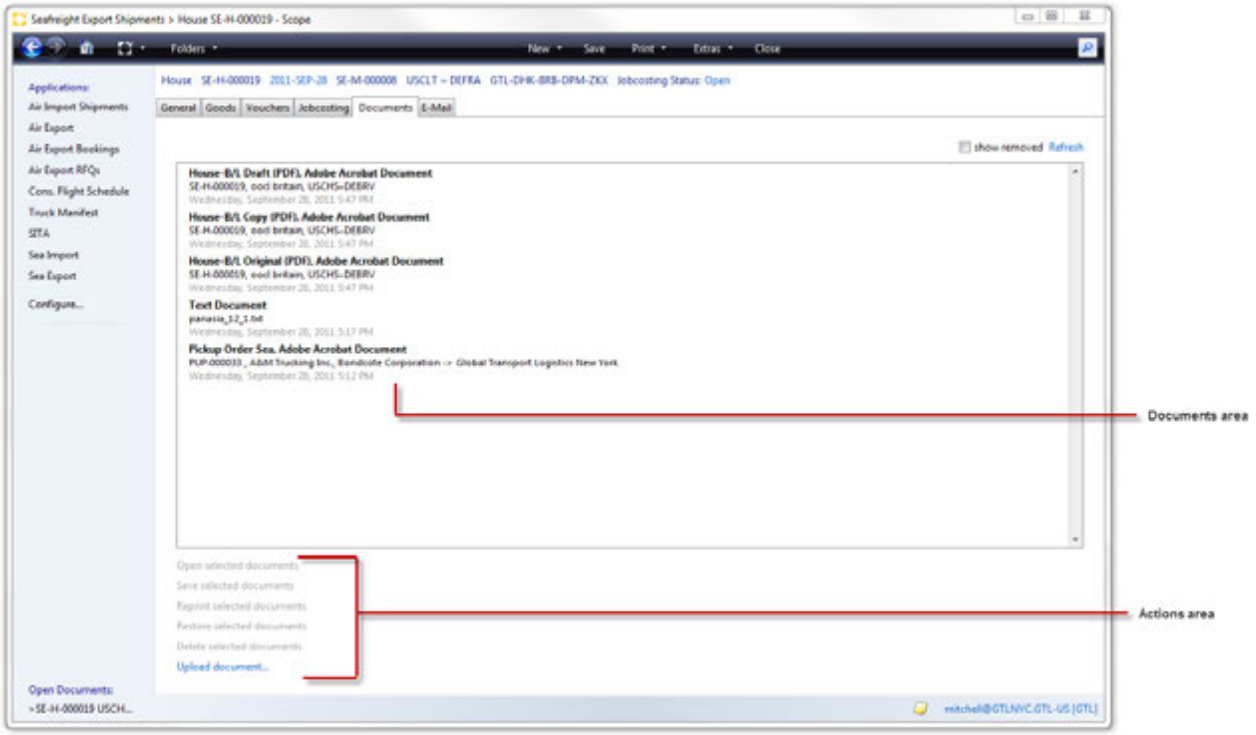
Documents - Direct Shipments - Seafreight Export

- Introduction
- Description

Introduction

In the *Documents* tab displays in summary form all documents created (transfer orders, House B/L's, invoices, credit notes, invoice cancellations, etc.) The user can also upload documents of different file formats, and view and print all the documents shown.

Description



Main menu bar and title bar
Open selected documents
Save selected document
Reprint selected documents.
Upload document...
Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Open selected documents

Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.

Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

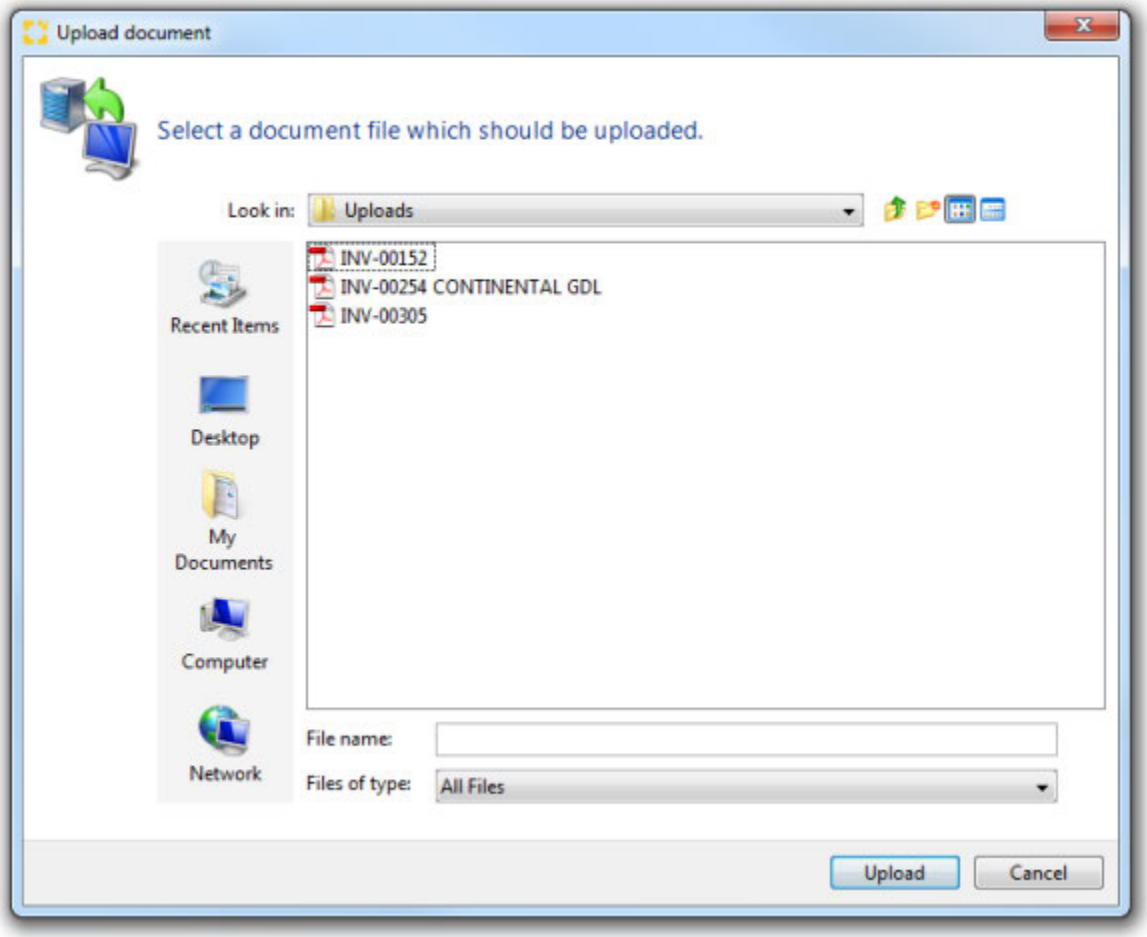
Print the document to the selected printer.

Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.



Update

Updates the current list of documents.

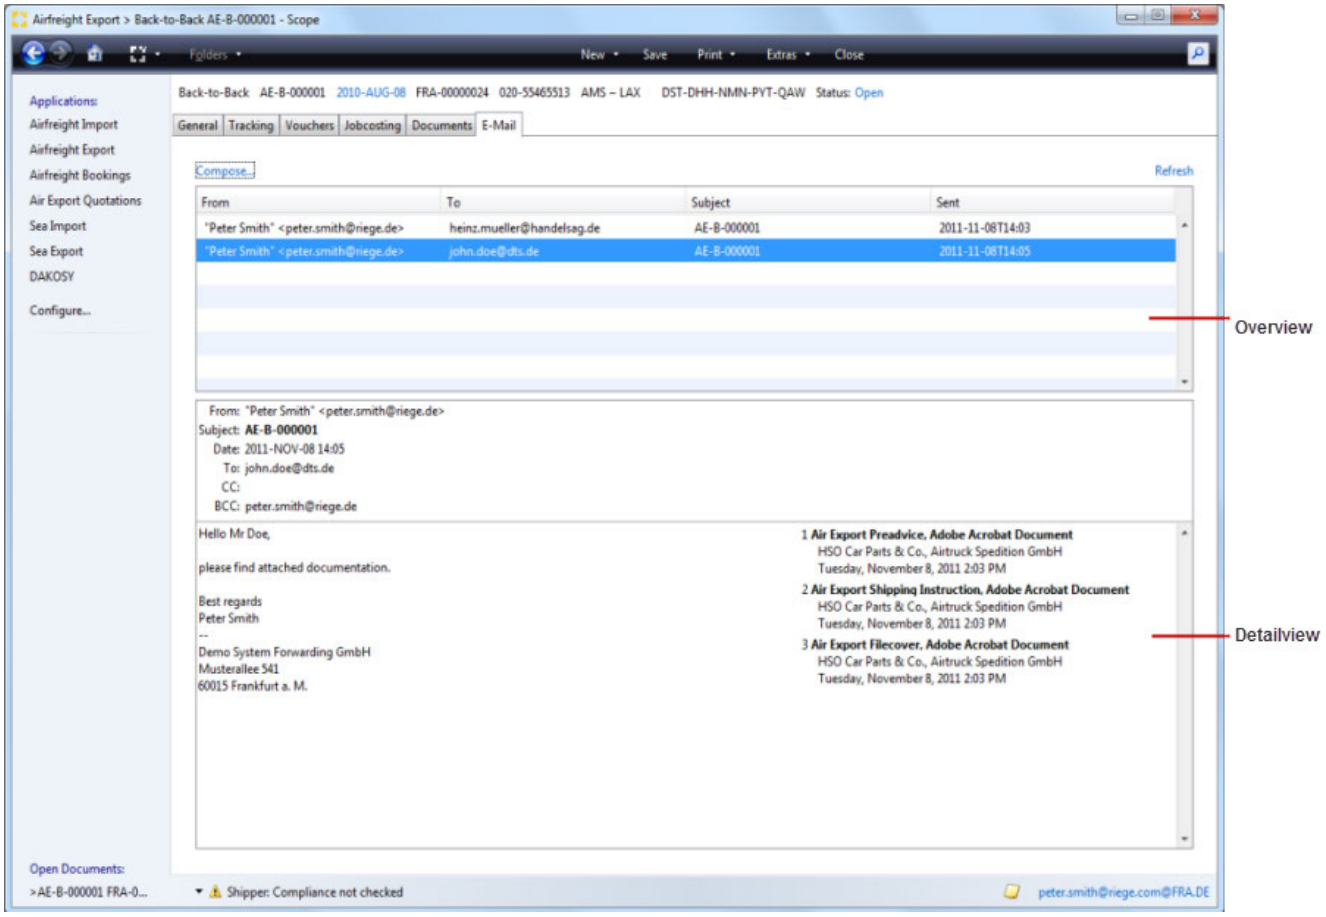
E-Mail - Direct Shipment - Seafreight Export

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

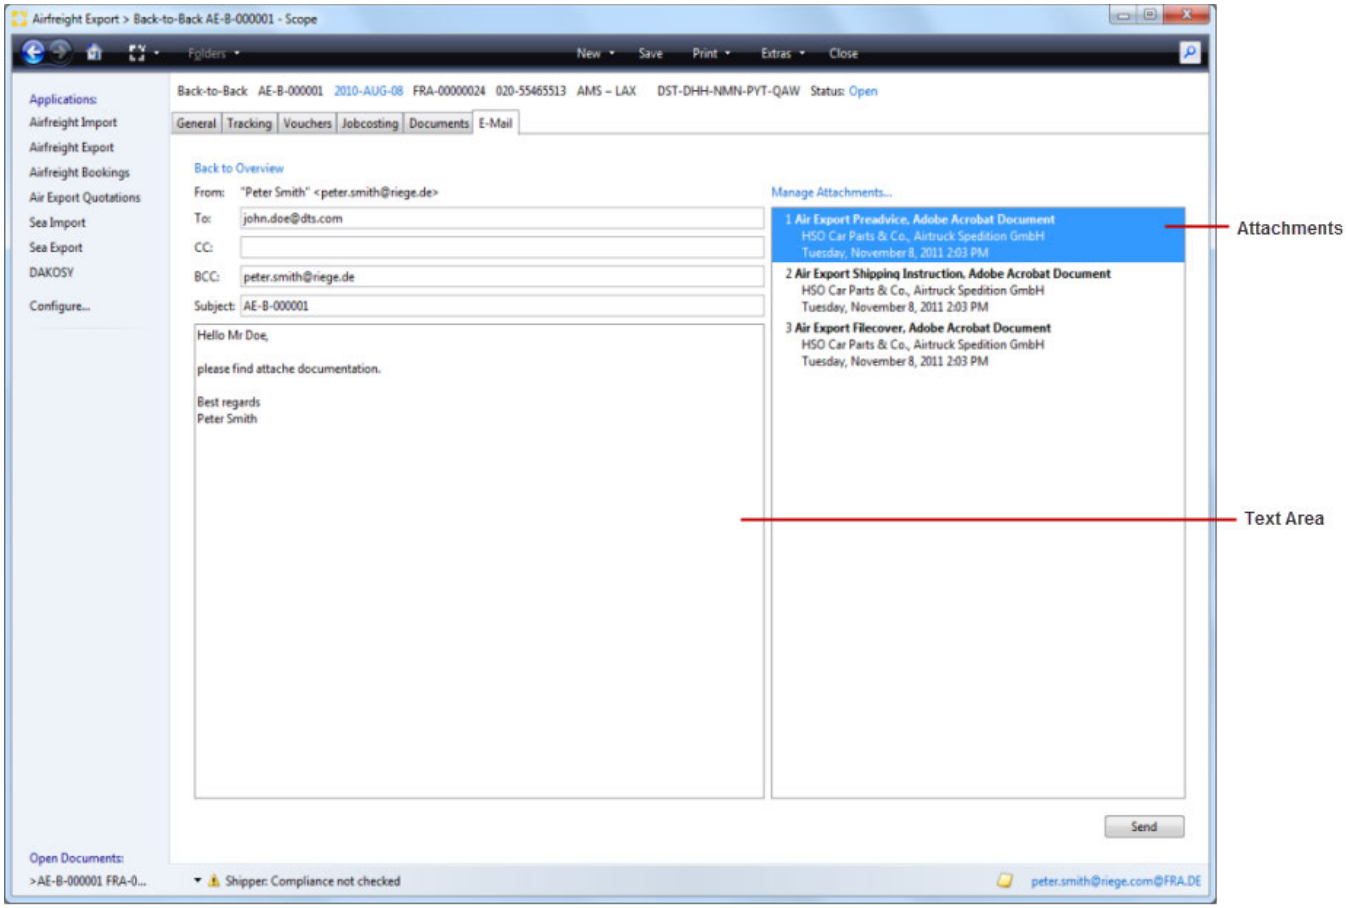
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

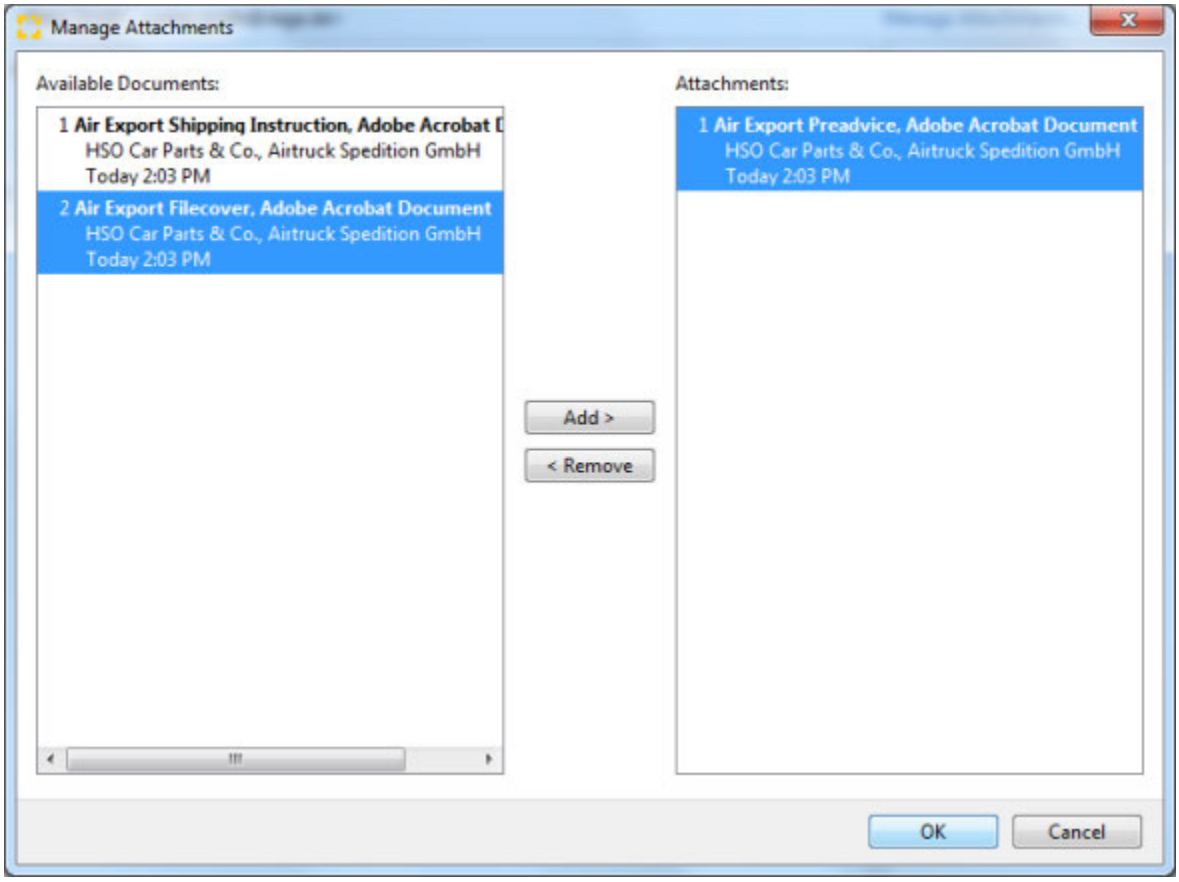
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

General - Direct Shipment - Seafreight Export

- Introduction
- Description

Introduction

The "General" tab of the direct shipment captures the parties involved in the shipment, the transport details, summary of the cargo and shipment references. From this tab transport orders can be created, bills of lading generated and customs information entered and in some cases transmitted to customs. On saving the information in this tab, a unique shipment number (USI) will be issued for the shipment.

Application actions

In the Scope title bar, various overall functions are available:

New

If sufficient data about the direct shipment has been entered and saved, the "New" option allows:

- Create a new pickup order
- Create a new pickup order for empty containers
- New Customs order

Save

When all mandatory fields for a direct shipment have been entered it is possible to save the direct shipment. At this point a USI is issued.

Print

When the direct shipment is saved this option will allow printing of:

- File cover
- Booking confirmation
- Preadvise
- Shipping advise
  - For shipper
  - For consignee
- Export declaration
- B/L instructions

Extras

When the direct shipment is saved, use the extras option for:

- Create a template (the shipment is used as a template for further shipments)
- Change shipment type - it is only possible to change a direct shipment to a house shipment or a back-to- back shipment.

Close

Close the shipment without saving or further action. If there is unsaved data, a dialogue will appear confirming if unsaved data should be discarded.

Title Bar

Above the shipment tabs the title bar appears. This summarizes the details of the shipment and offers further actions:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- **Shipment type**
  This will be "Direct" indicating a direct shipment.
- **Shipment number**
  This unique number (USI) is generated on first saving the shipment. Prior to saving it will display the greyed text *direct shipment*. After saving the shipment number will be generated in the format of the 2 digit mode "SE" (Sea Export) followed by the 1 digit shipment type "D" (Direct) followed by a 6 digit shipment number.
- **Service date**
  If an estimated sailing date is present on first saving, this will be the service date. If not present then the current date will be used.
- **OBL Number**
  The OBL of the direct shipment
- **Depart and destination port codes**
- **Internal USI**
- **Status**
  The status will be "Open" until the shipment is billed. By clicking this item the shipment can be manually closed.

Tabs

All available tabs are displayed. The focus will be on the open tab.

Application area

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Shipper's Reference

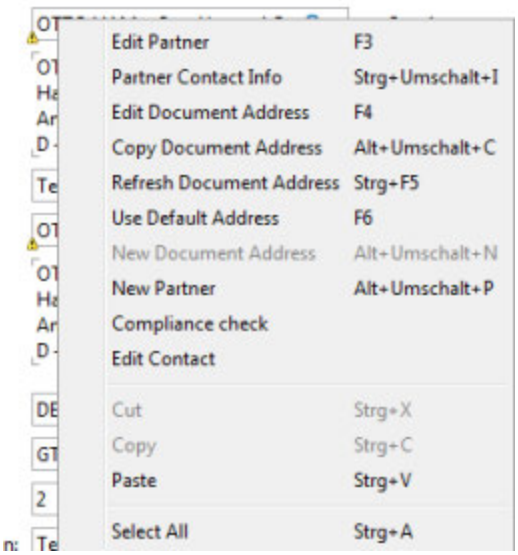
References used by the shipper to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *R eferences* section of the general tab.

Consignee's Reference

References used by the consignee to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *References* section of the general tab.

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.



Edit Partner

Opens the business partner editor , where the partner can be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Edit address

Opens an editor to change the address for the current shipment.

Update address

Updates the address.

Use default address

Sets address to the default address for the field stored in the master address data.

Edit document address

The option "Edit document address" allows the selected address to be edited as required, but these changes are not stored as master data and only appear on this shipment.

New Partner

The option "New Partner" opens the master data maintenance in order to create a new business partner in the Scope database. This new address will then be available as a shipper for example.

Compliance check

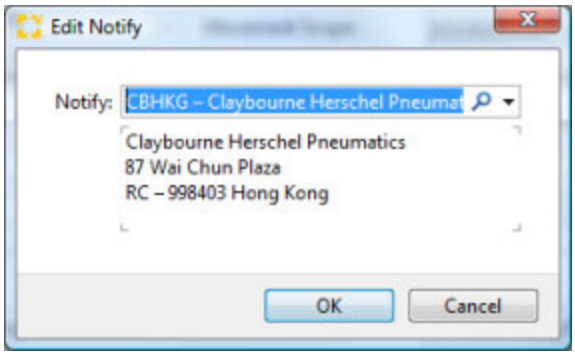
Performs an address compliance check.

Edit contact description

Opens a window where a new contact and details can be entered for this shipment.

Notify

The Notify ("to be notified") is the party to be notified when the shipment arrives in the port of discharge. The Notify can also be the consignee. The notify is entered by clicking the blue action link "Edit Notify". This opens a dialog window in which notify party is recorded.



The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Incoterms place

The place name referenced by the incoterms.

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of departure

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Voyage / Sailing Schedule

The voyage number of the vessel may be entered directly. The drop down menu also offers access to the sailing schedule or use the F3 function key.

The earliest estimated sailing date the cargo can depart.

Latest E.T.A.

The latest estimated date of arrival for the cargo.

Type to search

Use the search function to enter search terms that will narrow down the list of possible sailings.

Cancel

Cancels selection of a sailing without further action

Apply

Applies the select sailing to the shipment and writes the folling information to the shipment:

Sailing Schedule information:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voyage (Voyage Number)
Vessel
Line Agent
Carrier
Port of Loading
Port of Discharge
E.T.S. = Estimated Time of Sailing
E.T.A. = Estimated Time of Arrival

Vessel

The vessel on which the goods will be loaded.

Liner Agent

The agent of the steamship line to whom the goods will be delivered for export. Only carrier addresses will be available using the search field

Carrier

The owner of the vessel that will carry the goods. This will be the SCAC code and name of the carrier and should appear automatically when the "liner agent" is entered.

CFS/CY Closing time

The date and time the container freight station or container yard cease accepting new cargo for the voyage selected. This is a date and time field, use the drop down option to select from the calendar

4. E.T.S.

The estimated sailing date and time of the vessel. This is a date and time field, use the drop down option to select from the calendar

E.T.A.

The estimated arrival date and time of the vessel at the port of discharge. This is a date and time field, use the drop down option to select from the calendar

Booking reference

This is the reference issued by the carrier to identify the goods and confirm their acceptance for the sailing. This reference is often used prior to the issue of an OBL number.

OBL number

The ocean bill of lading number issued by the carrier.

Number, Type

In the left field the number of packages will be entered. In the right field the packing type is entered (cardboard boxes, pallets, crates ...). The available packing types are maintained in the master data packing types maintenance program . The total entered in these fields defaults to the "goods" tab automatically, and further details about the goods may be entered there.

Gross Weight, Volume

The gross weight of the shipment. This is defaulted in kilograms (kg). If the symbol "kg" is changed to "lb", the total will automatically convert to "kg". In the right pane the total cubic volume i record. This will default to cubic meters (m3). If the symbol "m3" is changed to "CFT" the figure is assumed to be in cubic feet and will automatically convert to "m3"
The data entered in these fields automatically transfers to the to the "goods" tab.

Commodity Description

A short description of the goods. This is a brief synopsis of the goods to be transported. The data entered in this fields automatically transfers to the to the " goods" tab.

Chargeable Weight

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This field displays the freight ton (Frt). It is calculated automatically using a comparison of weight (1 t) versus volume (1 m3). The higher value (ton or volume) is the freight ton.

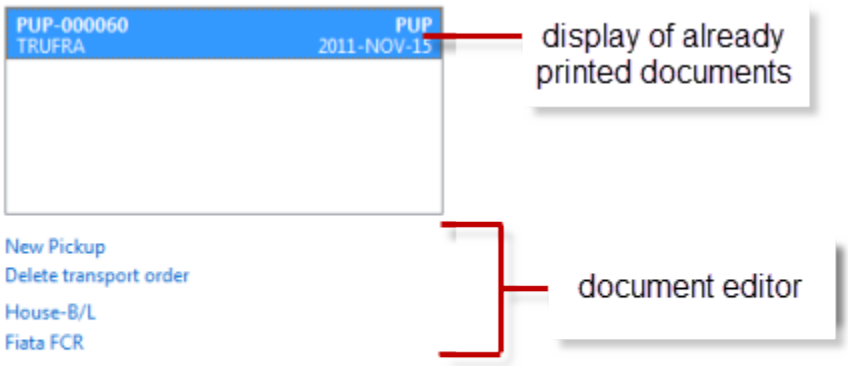
Reference

The various reference numbers for the shipment are entered here using the references application

Documents

To the right of the "General tab" is an area that provides action links to create various Scope documents and any existing documents are shown. In general all documents created in scope are output to PDF file and are shown in the *"Documents tab*.

To create a document, the mandatory data of *General tab* must be completed and saved. Once saved, the gray links transform to blue action links and when clicked launch the appropriate editor to create the document.



New pick-up order

Once the data has been stored, a new pick-up order can be created. This order gives the trucking companies all the necessary instructions to pick up the shipment at the shipper or his loading point transport the cargo to a Container freight station or container yard.

Launch the editor by clicking the blue action link "New pickup".

New Pickup empty containers

This action link launches an application that allows the user to arrange the pickup and delivery of empty containers.

Delete transport order

Existing pick_up orders or empty container orders will appear in the right hand table of pickup orders. Any of these can be deleted by highlighting them and selecting the *Delete transport order* action link.

Ocean=B/L

An ocean B/L is either an original or non-original (express cargo bill / waybill/ seawaybill/Express B/L) issued by the carrier or their agent. Click the action link to open the editor for creating an Ocean B/L.

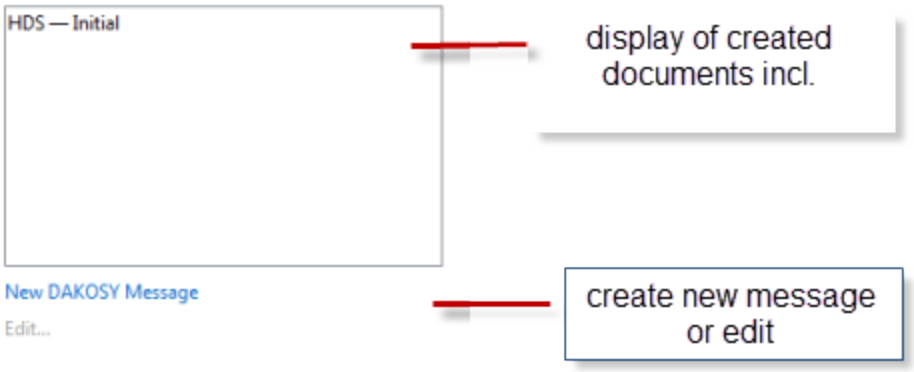
Fiata FCR

Click the action link to open the FIATA FCR editor to create a FIATA forwarders certificate of receipt.

Message - Area

The message area displays and allows creation of electronic export information to customs.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



All customs entries manually created or transmitted electronically to customs are displayed in the upper field. The current status of the entry is displayed to the right of the entry type.

New Customs Order

This function is available after entering and saving the important shipment data. By clicking on action link "New Customs Order" a pop-up window will appear where the user may define the kind of message they wish to create.

Edit Customs Order

Once a customs entry has been created, it appears in the list of customs entries. By highlighting the desired entry in the list and then selecting the action link *Edit Customs Order*, the existing entry may be reopened for alteration.

Shipment Note

By clicking on the note icon, the user can see notes already created for this shipment. A window opens and displays all existing notes. Further notes can be created or an existing note may be modified.
For each note there are three possible priority classifications available: red dot means **high**, yellow spot **moderate** and a note without a dot is **low** priority.
An expiration date for the notes will be created and will appear on the note.

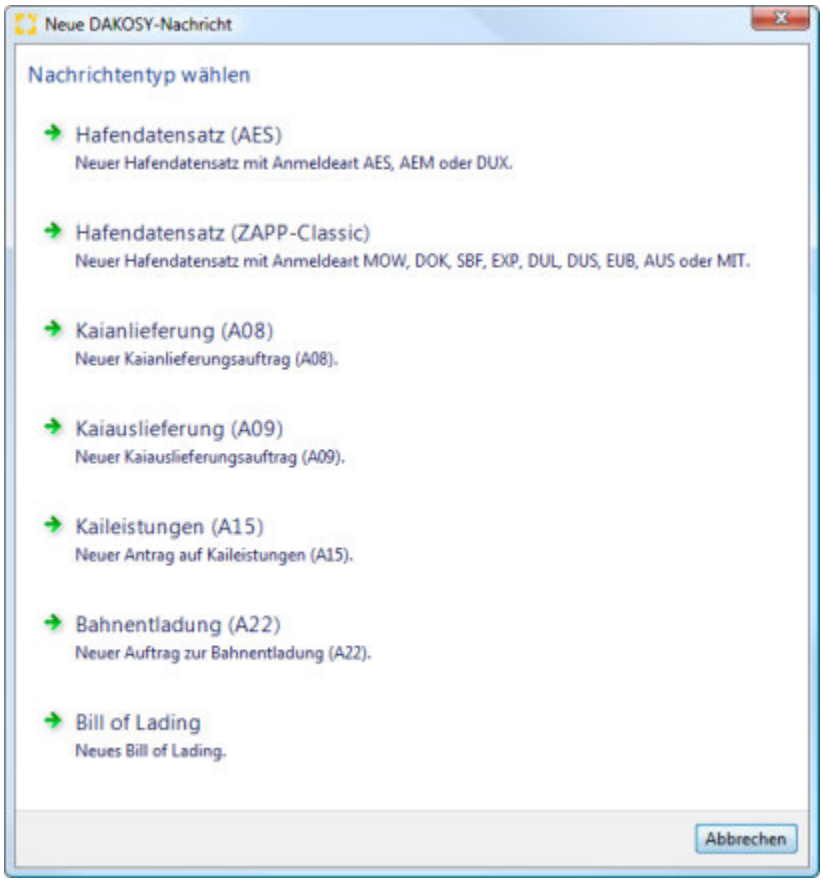
DAKOSY - New Message - General - Direct Shipment - Seafreight Export

- Einleitung
- Beschreibung

Einleitung

Für eine neue DAKOSY-Nachricht stehen dem Anwender 7 verschiedene Optionen zur Auswahl: Hafendatensatz (AES), Hafendatensatz (Classic), Kaianlieferung (A08), Kaiauslieferung (A09), Kaileistungen (A15), Bahnentladung (A22) und Neues Bill-of-Lading. Über das Dakosy-Modul kann die Ausgangszollabfertigung über den Hamburger Hafen sowie der gesamte Hafen-Datenverkehr (zu Reedereien, Packschuppen, Terminals usw.) abgefertigt werden, sofern die Beteiligten ebenfalls an DAKOSY angebunden sind. Beim Klicken auf die Schaltfläche "Neue DAKOSY-Nachricht" öffnet sich für den Benutzer ein Auswahlfenster.

Beschreibung



Hafendatensatz (AES)
Hafendatensatz (ZAPP-Classic)
Kaianlieferung (A08)
Kaiauslieferung (A09)
Kaileistungen (A15)
Bahnentladung (A22)
Bill of Lading

Hafendatensatz (AES)

öffnet den Editor zur Erstellung eines neuen Hafendatensatz für das AES/AEM-Verfahren.

Hafendatensatz (ZAPP-Classic)

öffnet den Editor zur Erstellung eines neuen Hafendatensatzes für alle Ausfuhrverfahren außer AES/AEM/SAC.

HDS (AES) - Neue DAKOSY-Nachricht - Allgemein - Direktsendung - Seefracht Export

- Einleitung
- Beschreibung

Einleitung

Der Hafendatensatz (HDS) dient sowohl als Verladeauftrag an die beteiligten Hafenbetriebe (Kaibetrieb und Reederei) als auch gleichzeitig als Gestellungsmitteilung (GM 01) für den Zoll. Über die Erstellung und Senden eines HDS (AES) kann der Benutzer eine Z-Nummer zur zollseitigen Bearbeitung über das ZAPP-System des Hamburger Hafens erlangen. Die freigegebene Z-Nummer (RELEASED) ist notwendig für die Verladeerlaubnis der Ware auf das Seeschiff.

Die Auswahl HDS (AES) deckt die Möglichkeiten der Abfertigung von Marktordnungswaren (AEM) und Nicht-Marktordnungswaren (AES) ab, für die ein Ausfuhrbegleitdokument mit MRN erstellt wurde.

Beschreibung

Durch Auswahl (Klick auf den Aktionslink) "HDS (AES)" öffnet sich der Editor zur Erstellung des Hafendatensatzes in drei Reitern:

- Allgemein
- Sendungsbeschreibung
- Dokumente

Ocean BL - General - Direct Shipment - Seafreight Export

- Introduction
- Description

Introduction

The ocean B/L is issued by the ocean carrier or steamship line. The freight forwarder provides instructions to the ocean carrier or steamship line on how to prepare the ocean bill of lading. The Ocean B/L editor is the application used by the freight forwarder to create these instruction. Once complete the bill of lading instructions can be generated as a PDF, printed or e-mailed to the shipping company.

Description

Open the Ocean B/L editor by clicking the action link "Ocean B/L" on the right side of the "general" tab. This will open the editor.

Within the Ocean b/L editor the following tabs are available:

- Cargo Details - Ocean-BL - General - Direct Shipment - Seafreight Export
- General - Ocean-BL - General - Direct Shipment - Seafreight Export
- Preview - Ocean BL - General - Direct Shipment - Seafreight Export

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cargo Details - Ocean-BL - General - Direct Shipment - Seafreight Export

- Introduction
- Description

Introduction

The *Cargo details* tab enables the entry of details of the cargo as they are to appear on the bill of lading.

Description

A description of the goods including pieces, weights and volume will default from the main shipment entry and appear in a structured format. These details may be edited as required and further details may be added in an unstructured (free text) format.

Address data

Shipper

Shipper for the Original B/L. This may be found with the field search or can be entered directly.

Consignee

Consignee for the Orignal B/L. This may be found with the field search or can be entered directly.

Notify

Notify from the general shipment entry (if available). This is the party to be notified when the shipment arrives at the importing country. The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Import Agent

The agent responsible for the freight on arrival at the importing country. The Import agent is also known as the "2nd Notify".

Transport Information

Vessel

The name of the vessel aboard which the freight will be loaded.

Voyage No.

The voyage number of the the vessel aboard which the freight will be loaded.

ETS

The estimated sailing date . This is a date and time field and the calendar icon provides access to a calendar.

Place of Receipt

The place from the main shipment entry will appear.
The place of receipt is the place where the goods are handed over to the Carrier.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of Departure

The Port of Departure from the main shipment entry will appear.
Place or port from where the vessel will depart.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of Discharge

The Port of Discharge from the main shipment entry will appear.
Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Place of Delivery

The place from the main shipment entry will appear.
The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Instructions and additional information

Shipper's Declaration

Used for hazardous information

Value of goods

This is an optional field, normally only used when specified in a letter of credit.

No. of Originals

Select the number of original bills of lading to be issued from the drop down menu.

Freight amount

Amount agreed for the freight transport costs.

Inco Terms

From the main shipment entry. The Incoterms that will be printed on the B/L.

Freight payable at:

The location where the freight charges are payable. (according to the Incoterms)

Pickup Empty Containers - General - Direct Shipment - Seafreight Exports

- Introduction
- Description

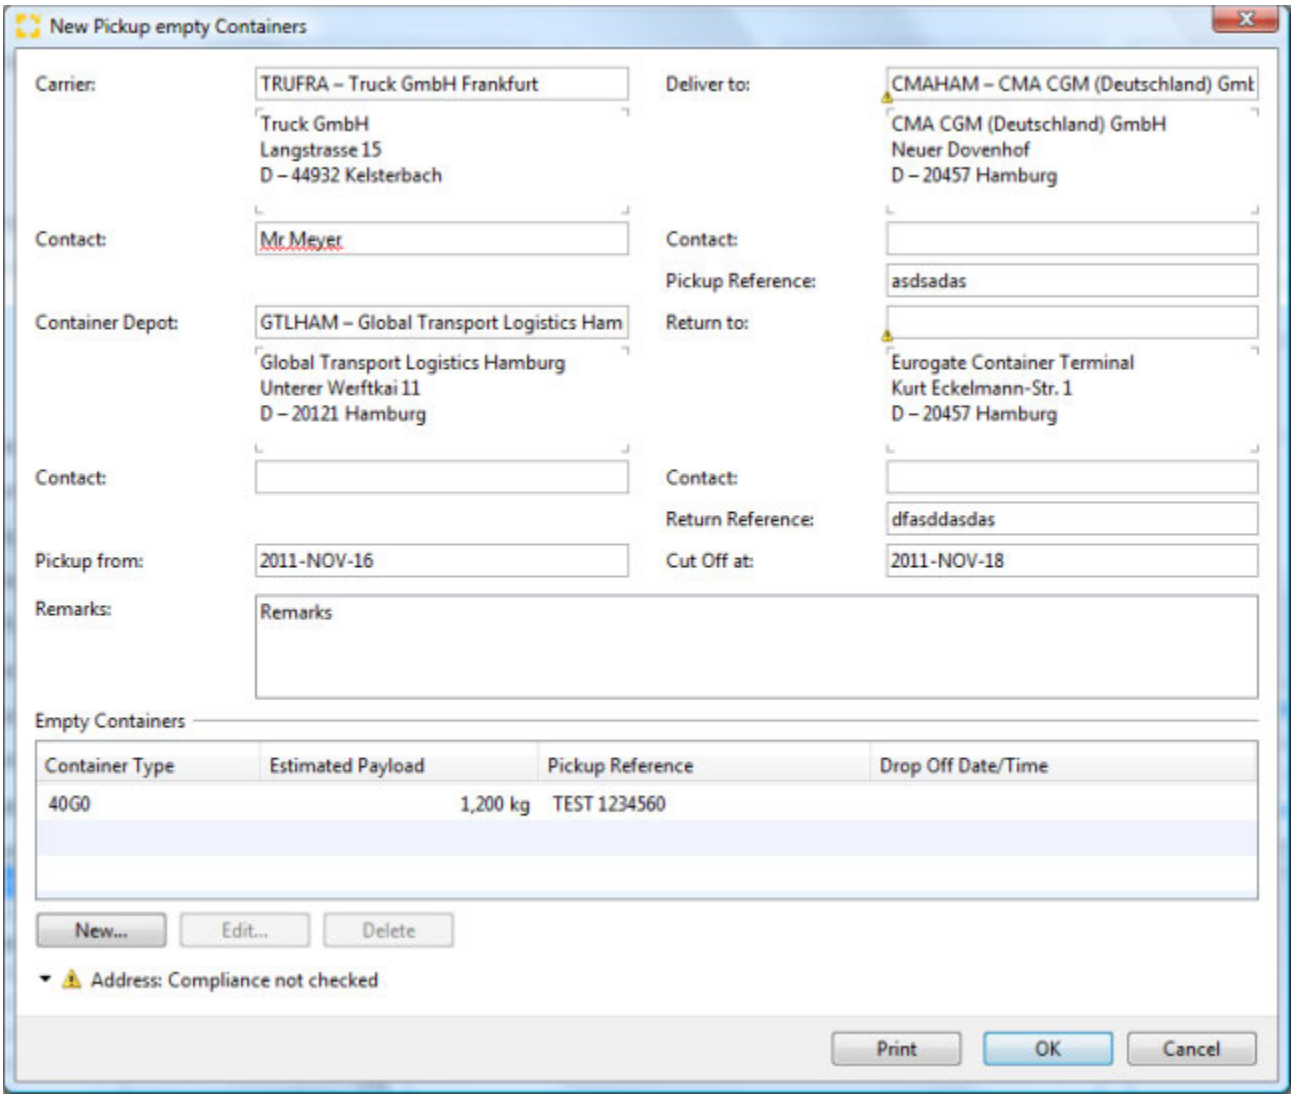
Introduction

Creation of an empty container pick-up order requires the full shipment details have been saved in the "General" tab.

The "Empty Pick-up" order is created by the the forwarding agent and instructs the carrier/trucker where to collect empty containers from and where they should be delivered to.

Description

A pick-up empty containers order" can be created by clicking the blue action link "New-pickup empty containers". This will open the "New Pickup empty Containers" editor.



Carrier

The trucking company who will pickup the containers. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a pickup address has been stored for this partner, this may also be used when completing the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Carrier Contact

The name of the party employed by the carrier who should be contacted for details of the container pickup.

Container Depot

The address where the containers should be picked up from. The desired address can be located with the search field.

Contact (Container Depot)

The **contact name** for the container depot may be entered or selected from the list of contacts for this partner.

Deliver to

The address to which the containers should be delivered. The desired address can be located with the search field.

Contact (Deliver to address)

The name of the person at the point of delivery who should be contacted. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Pickup Reference

The reference provided by the party supplying the empty containers.

Return to

The address to which the containers should be returned. The desired address can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Contact (Return to address)

The name of the person at the return to address who should be contacted. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Return Reference

The reference used by the **Return to** address to identify the consignment.

Pickup from

The date and time when the empty containers will be available (Date / Time).

Cut off at

The date and time when pickup of the containers expires (Date / Time).

Remarks

Comments or instructions entered in this field will be printed on the container pickup order.

Empty Containers

The empty containers section of the **Pickup empty containers** application displays a summary table of containers on the pickup order. The table is comprised of the following columns:

- **Container type**
  The size and type of container, 20' Dry van container for example
- **Estimated payload**
  The total weight of cargo the container can carry. This figure defaults to **kg** but can be over-written with **LB**
- **Pickup Reference**
  The reference used to identify the container at the pickup point.
- **Drop Off Date/Time**

The Empty container table offers function keys to enable entry of the container details into the table.

New

Cargo Detailed Description

Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
	Container
	Cargo

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
	Adds a new container
	Adds a new piece of cargo
	Removes a piece of cargo or container
	Moves the item up the list
	Moves the item down the list

LCL or Breakbulk direct shipment

When the direct shipment is not containerized a minimum of 1 cargo item should be present and cargo items can be added by clicking on the  icon.

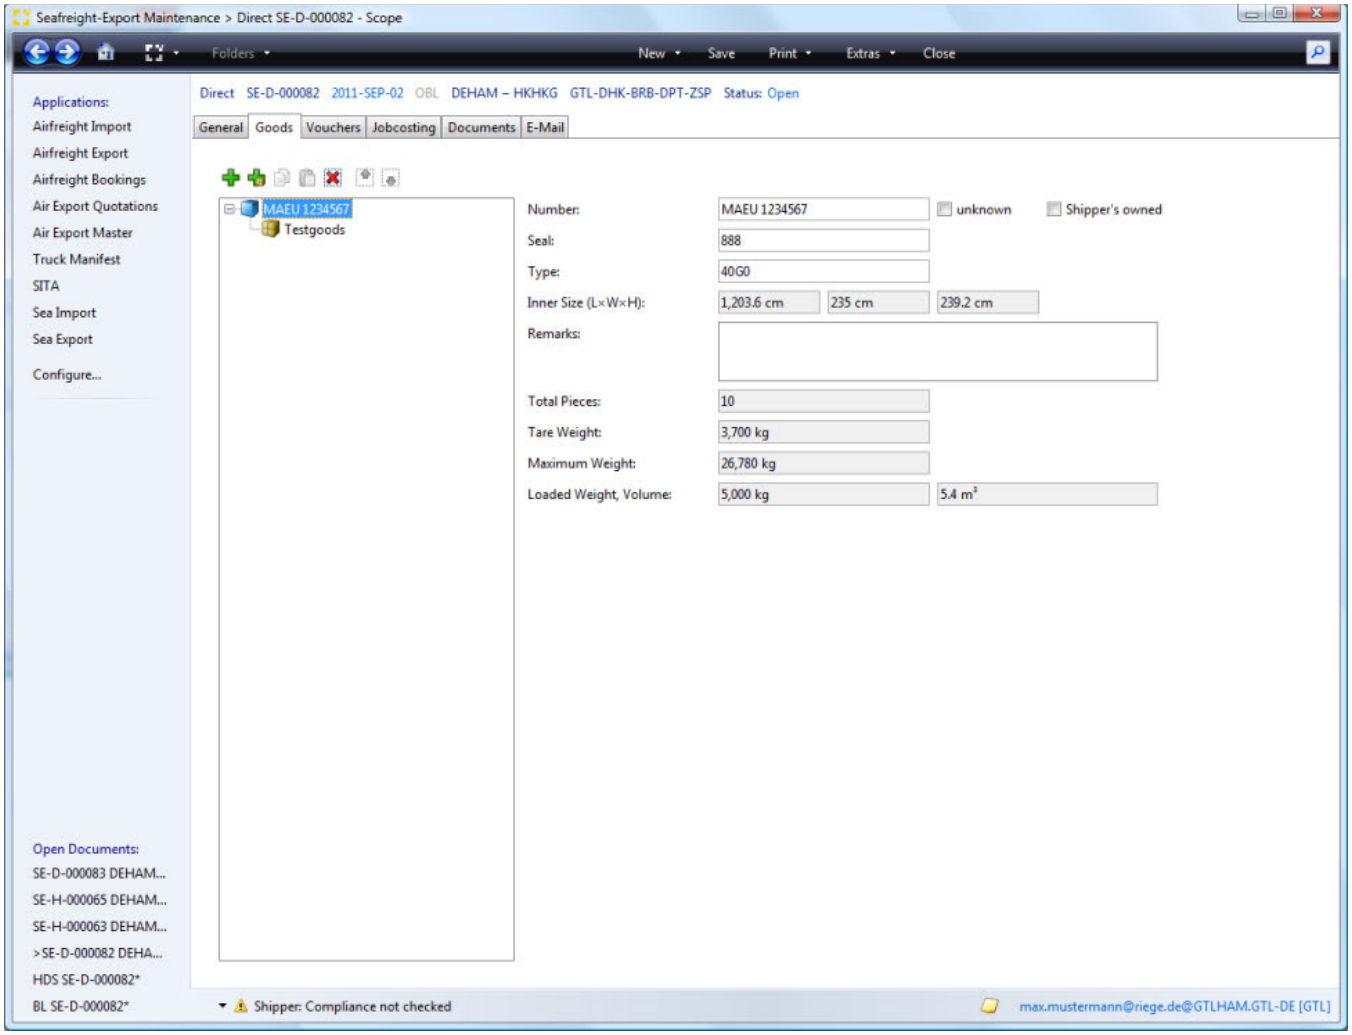
For each cargo item detailed information can be added in the sub tabs:

- Cargo description
- Dangerous Information

FCL Shipment

If the cargo is to be shipped containerized then the container details must be added using the  icon. This will open a container entry screen on the right where the full container details are recorded. On completion of the container details, at least one cargo item must be added to the container using the  icon.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489.

Unknown

If the "Unknown" box is checked, then the container number can be left empty.

Shipper's owned

Check the "Shipper's owned" box if the carrier owns the container.

Seal

The container seal number

Type

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Remarks

Any remarks particular to this container

Total pieces

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The total number of pieces in the container. This is derived from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargoe items:

Enable dangerous goods entry

Checking the dangerous goods flag marks the entire shipment as carrying dangerous goods. In addition the previous greyed data fields of the dangerous goods tab are now activated for entry.

Any cargo marked as dangerous will appear in the cargo list with a red and white "dangerous" symbol.

IMDG Class

IMDG code for the Hazardous class of materials.

UN Number

The UN number of the substance. This is prefixed by "UN" followed by a 4 digit number.

Proper shipping name

The full shipping name of the substance

Technical Name

The precise technical designation of the hazardous substance. This is on the IMO-DGD.

MFAG Number 1

Medical First Aid Guide - Number 1 acc. IMO-DGD.

MFAG-Number 2

Medical First Aid Guide - Number 2 acc. IMO-DGD.

EMS-(Fire)

Emergency Schedule - Number 1 acc. IMO-DGD.

EMS-(spill)

Emergency Schedule - Number 2 acc. IMO-DGD.

Limited Quantity

Check the field to indicate a limited quantity of the dangerous goods.

Exempted Quantity

Check the field if the limited quantity of the dangerous goods is sufficient to exempt it.

Net Weight

The net weight of the dangerous goods (see IMO-DGD).

Flash Point

The temperature in degrees Celsius (° C) at which the hazardous substance will ignite.

Radioactivity

The radioactivity of the hazardous cargo.

Jobcosting - Direct Shipment - Seafreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description

see General tab

Calculate jobcosting

By clicking on this link, any predefined the action costs and revenues are based on the master data (activity types , master data rate) in connection with the shipment data (Incoterms , chargeable weight generates). In addition, an initial invoice with the relevant cost categories and stored as a draft which tariffs will be applied after the initial account application process, can be printed and completed.

Show Cancelled

Check this box to show cancelled documents. This box is unchecked by default.

Refresh

This link will refresh the list of transactions and include the latest.

New Income

Opens charges editor and allows entry of a new income.

New Expense

Opens charges editor and allows entry of a new expense.

Edit

Opens the charges editor and allows the charge highlighted in the overview of charges.

Delete

Deletes the charge highlighted in the overview of charges.

Only certain entries may be edited or deleted. Entries that cannot be edited or deleted can be adjusted here

Turnover in local currency

individual charges are shown in local currency. Double click an entry to open it or highlight the entry and then select the Edit button to open the charges editor.

Type

The type of charge line.

Charge type

Charge type of the current line.

Partner

Partner code of the business partner to whom the charge was applied or from whom the charge was received.

Booking date

The date of the document that contains the charge.

Number

The voucher number for the voucher that contains the charge.

Income

Income or revenue amount.

Cost

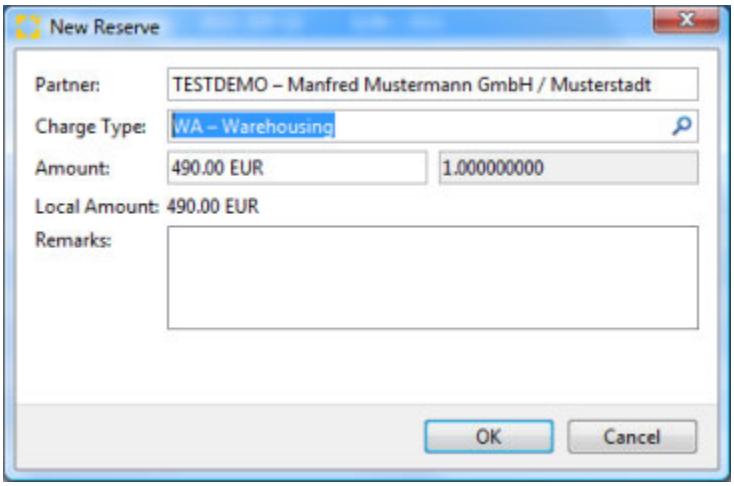
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cost or expenses amount.

Profit

The profit of the line item.

Charges Editor



Partner

The party who billed or received the charge. The partner search function is available to locate a different partner.

Charge Type

Charge type of the item.

Amount, Exchange Rate

the amount of the item in local currency. If in foreign currency an exchange rate is shown.

> In addition to manual adjustment of the value of the item, the field also provided a drop down menu to access an on screen calculator (F3) or refresh of tariffs (F5) to apply any new tariffs to the line item.

Total

The total amount in local currency.

Remarks

Any remarks relevant to the line item may be recorded. Right click to access text blocks .

OK

Store the line item and any changes made.

Cancel

Exits the application without any changes.

Super-House Shipment - Seafreight Export

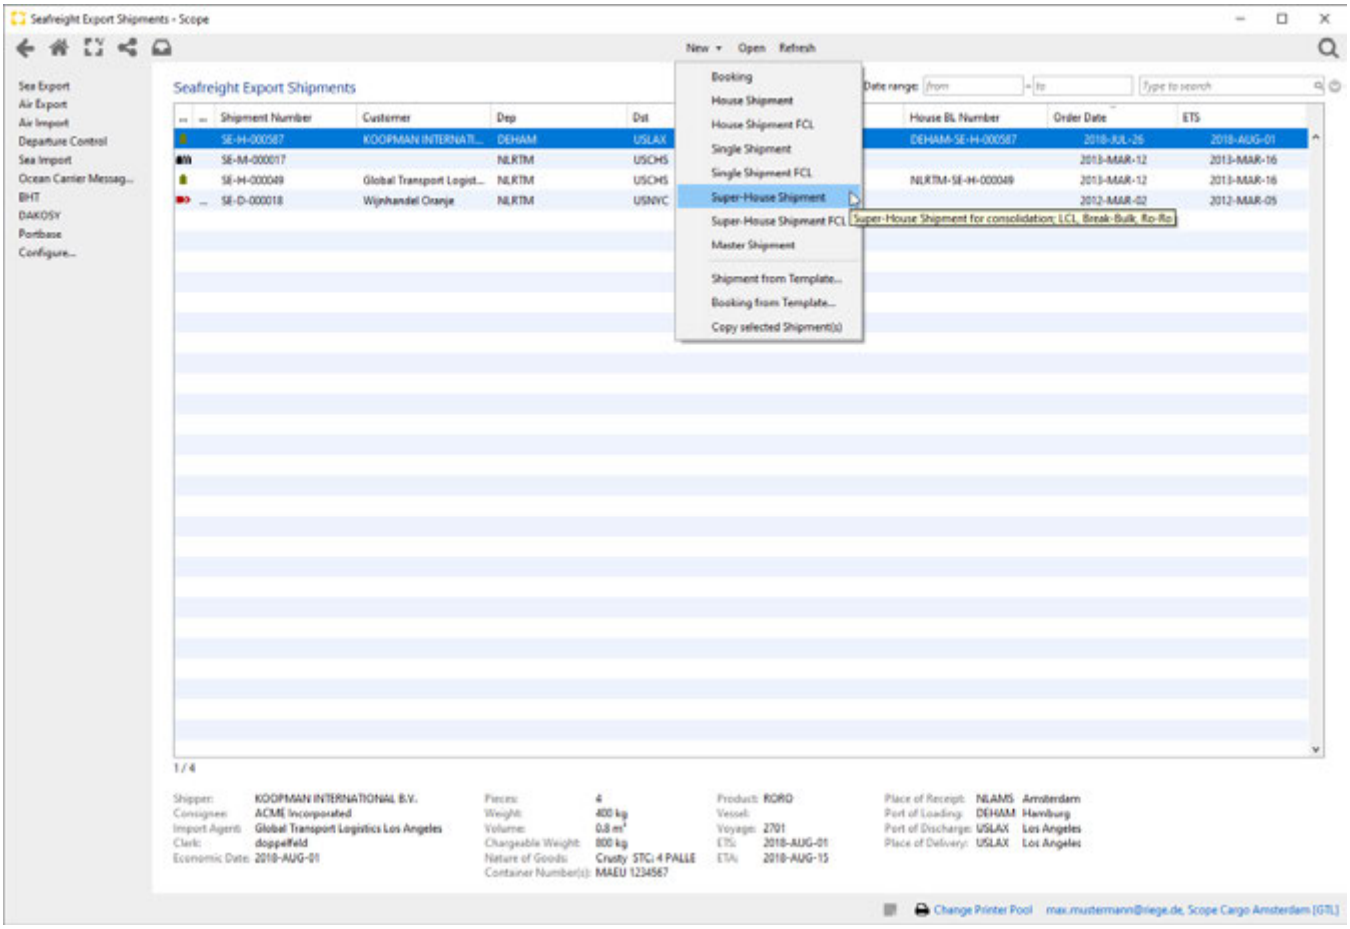
- Introduction
- Description

Introduction

The application Super House Shipment Seafreight Export enables the consolidation of regular House shipments to a Super House Shipment. There may be multiple reasons for creating a Super House, like one shipper to many consignees (shipper consolidation), or many shippers to one consignee (consignee consolidation), or many shippers to many consignees. The purpose of a super house shipment is to combine House shipments in such a way that the quantity (weight / volume) enables cost-effective transportation for your customer.

Description

With the program action *New* in the Seafreight Export Shipments home view the input dialog for the *Super-House Shipment* can be opened.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(a) General - Super-House-Shipment - Seafreight Export

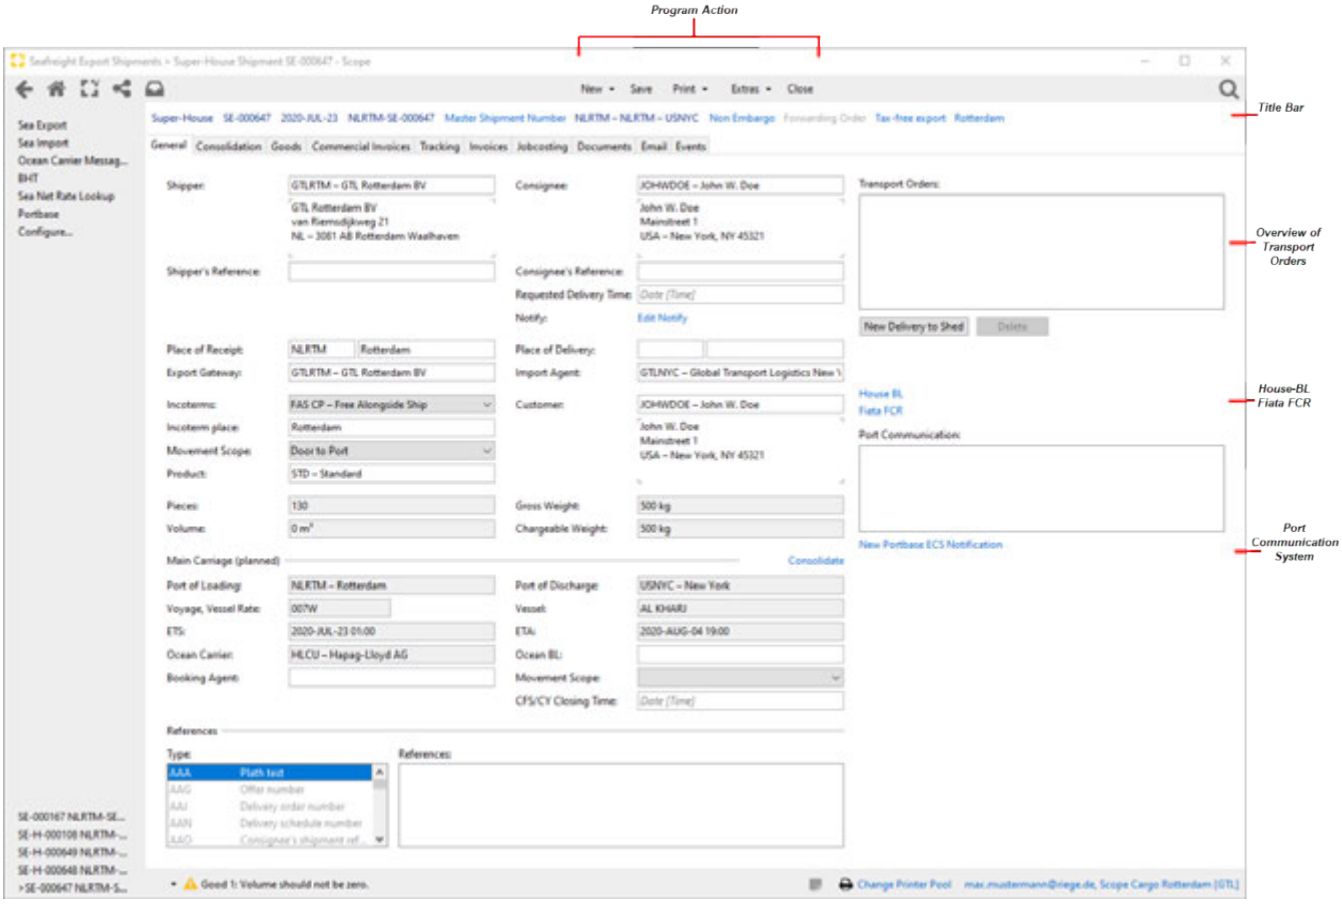
- Introduction
- Description

Introduction

General shipment data, can be entered in the General Tab. The weight and the number of packages of the Sub-House Shipments will automatically be transferred to the corresponding field.

Description

- Program Action
- Title Bar
- Field Description
- Consolidate / Deconsolidate
- Select Master shipment
- Transport Orders
- House BL
- FIATA FCR
- Port Communication



Program Action

New

- New Delivery to Shed

Opens the window *New Delivery to Shed.* Data for a Transport Order to Shed can be entered here.

- New Customs Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens the window New Customs Order to enter the data and create a new Customs Order.

Save

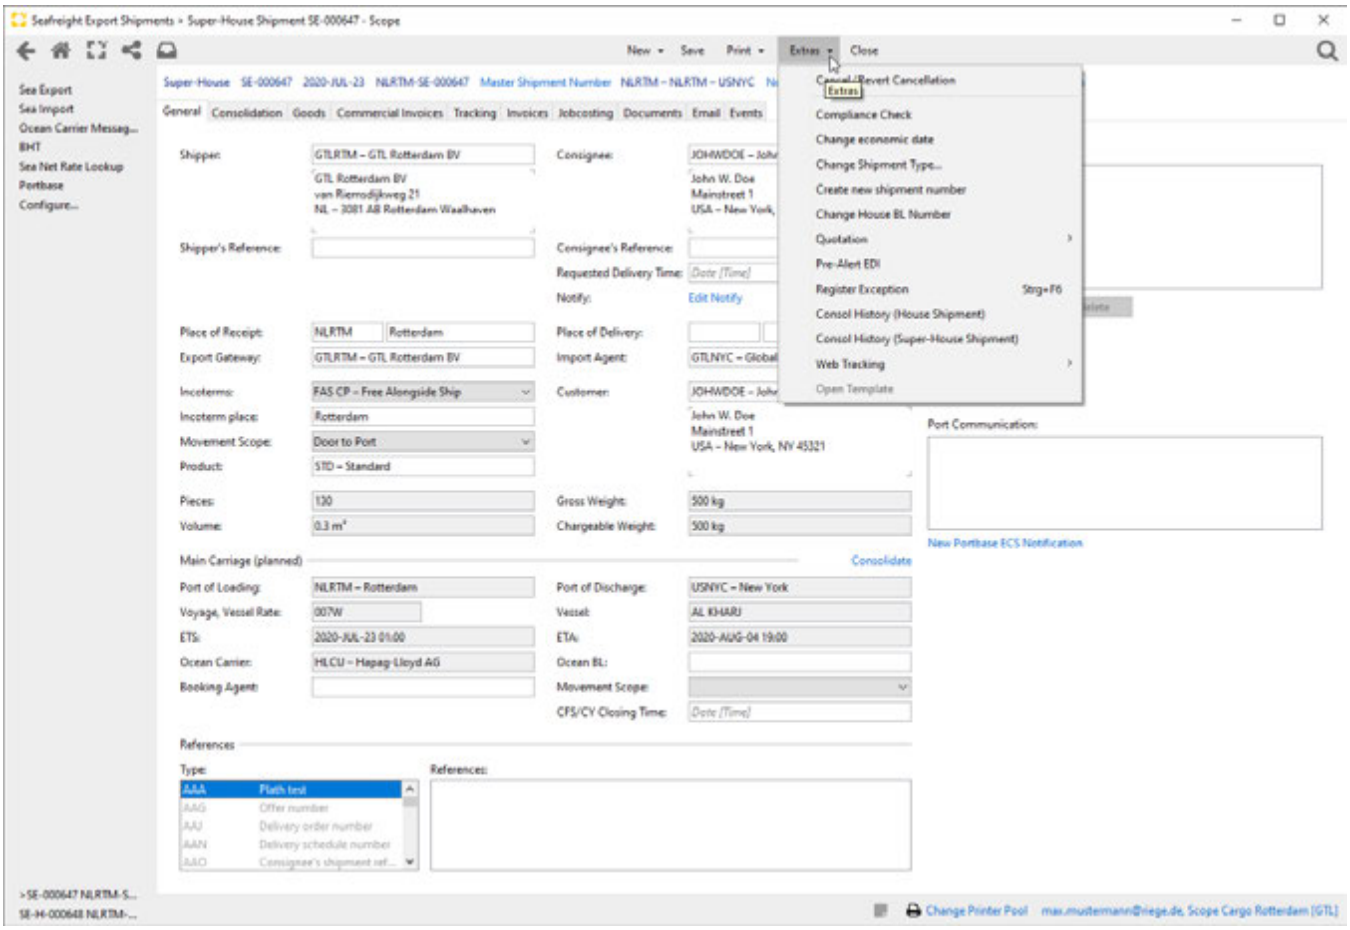
The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case, then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command, the required documents can be printed. Currently the following documents are available:

- Filecover
- Preadvice
- Shipping Instruction for Shipper, Consignee, for Import Agent, for Customer, for Notify
- FOB Delivery
- Export Declaration
- Claim Notification
- Super-House Manifest
- Labels Package, Shipment
- Certificate of Origin
- Quality Report

Extras



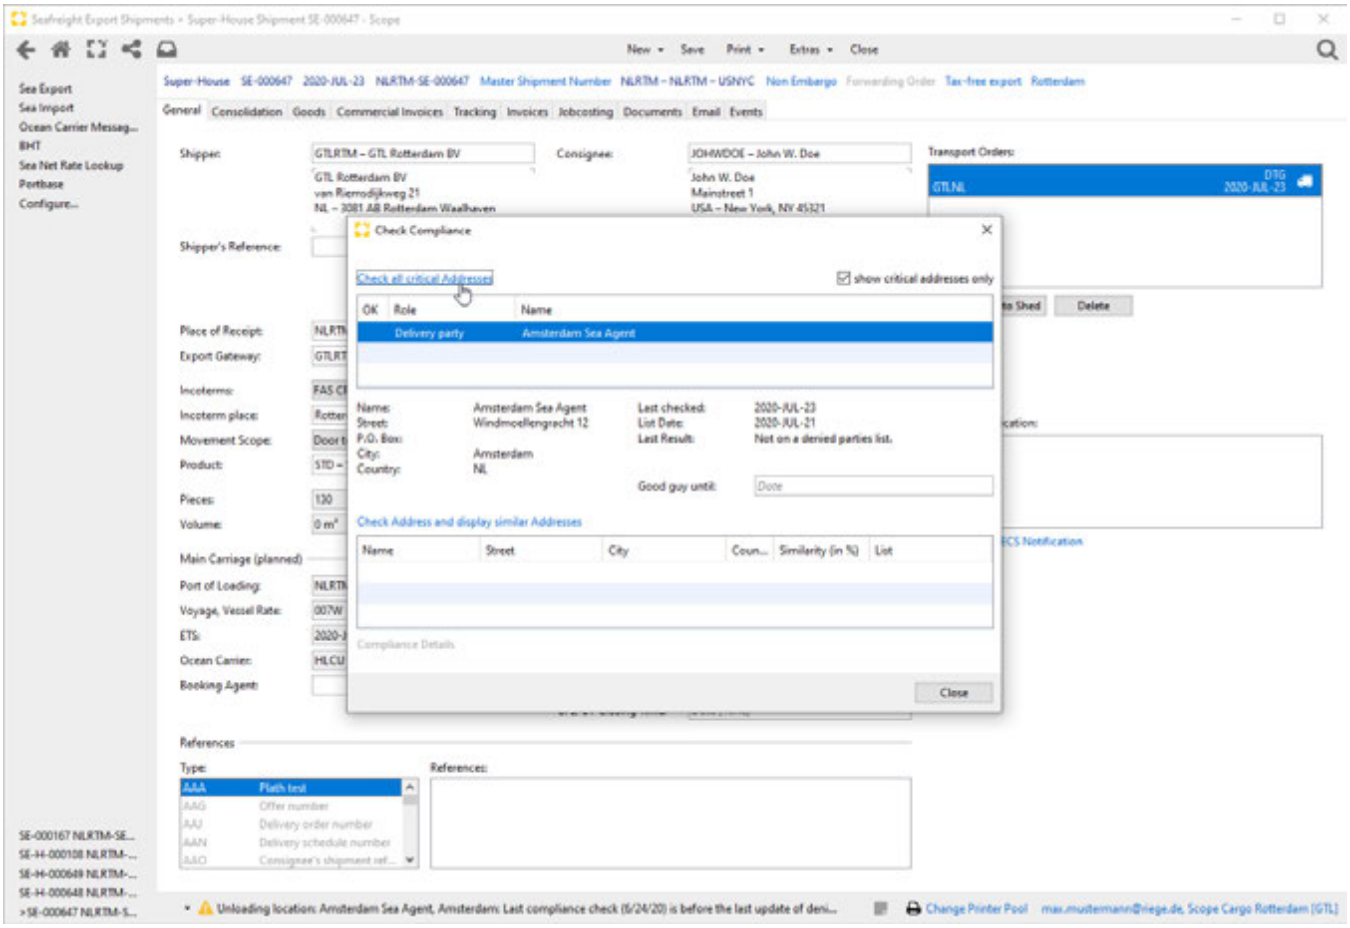
- Cancel/Revert Cancellation

This function cancels a shipment or cancels the cancellation of a shipment. See details here Cancel/Revert Cancellation

- Compliance Check

Opens the *Check Compliance* Screen. In this Screen all critical addresses related to the shipment will be displayed and can be checked.

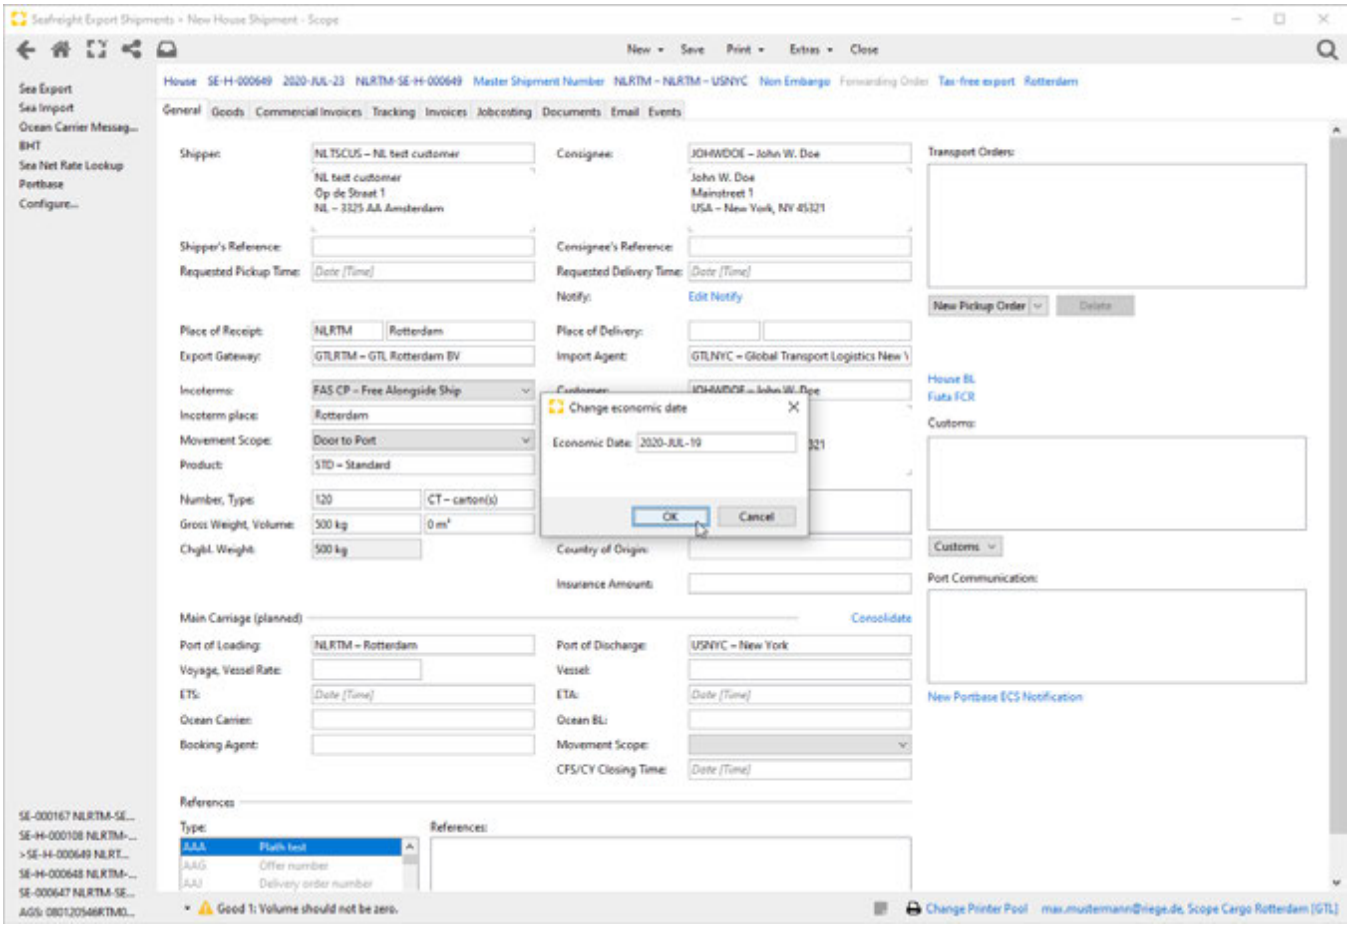
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change economic date

This function opens the screen economic date, where the economic date can be changed.

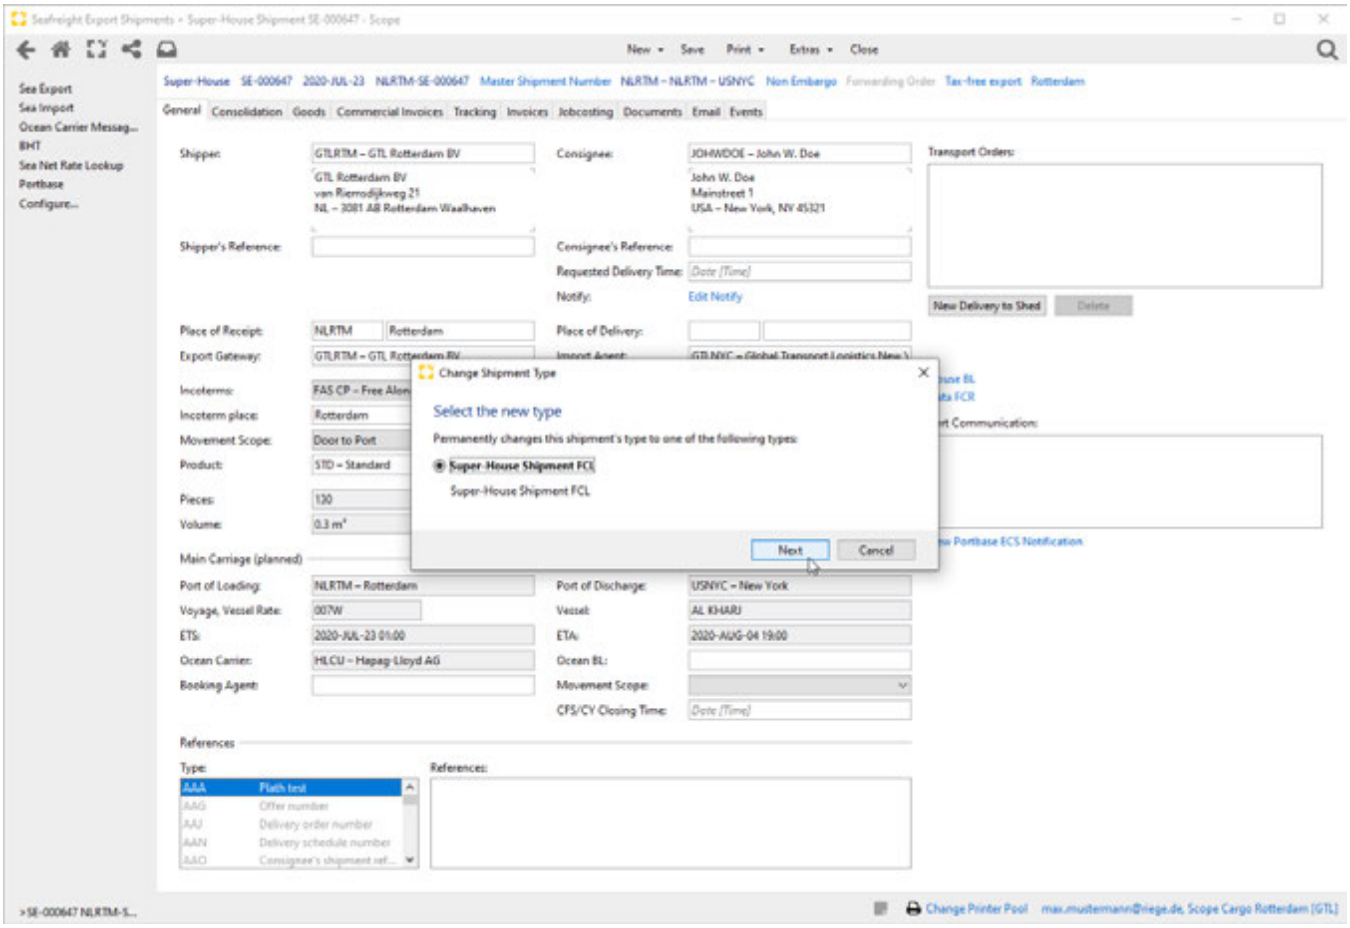
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change shipment type

This function opens the screen *Change shipment type* where another available shipment type can be chosen. The Button *Next* confirms the data entry and the shipment type will be changed.

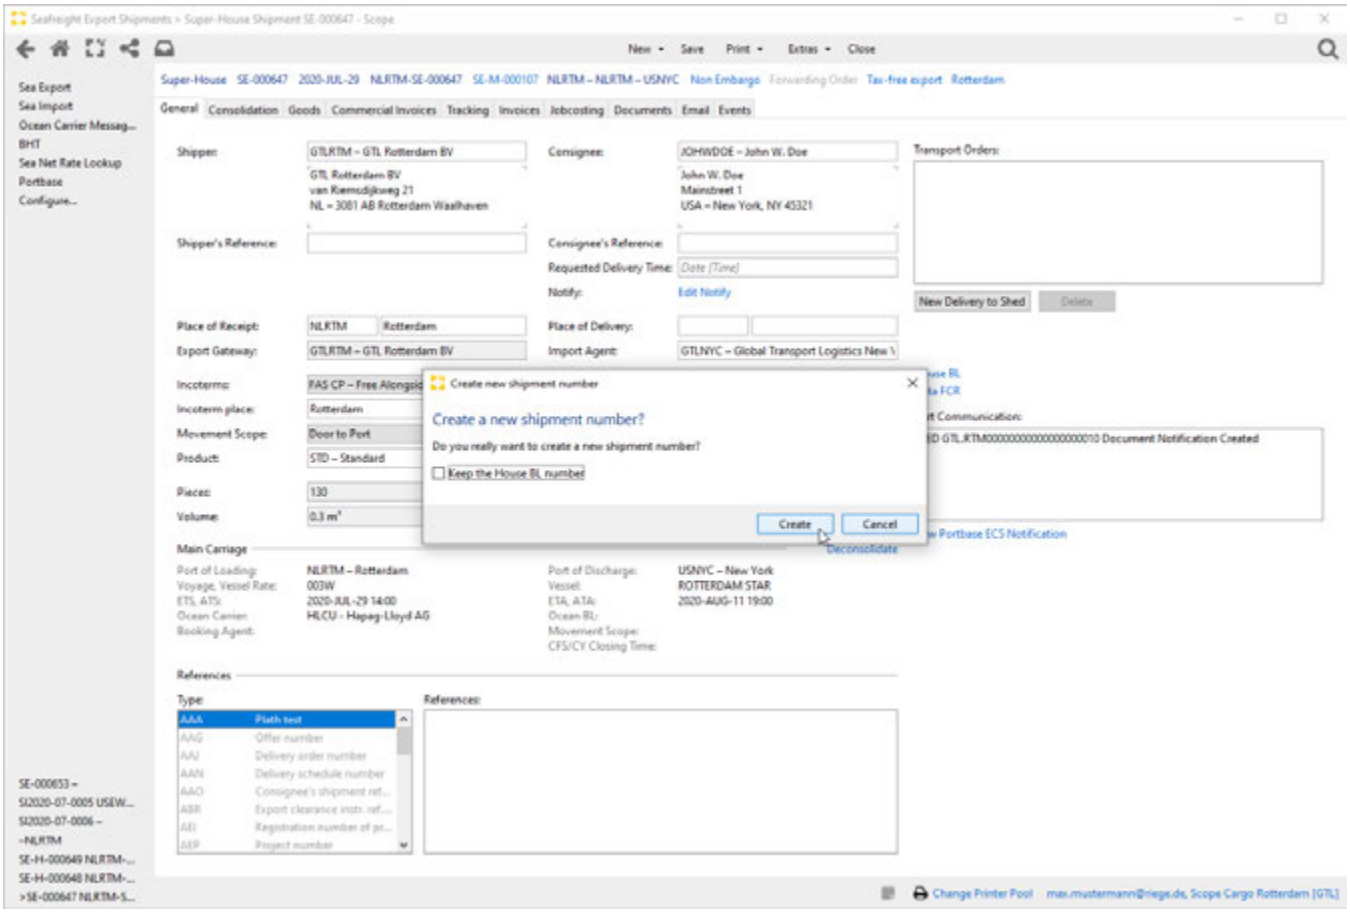
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Create new shipment number

This program action opens the screen *Create new shipment number.* With the button *Create* a new shipment number will be generated; if the flag *Keep the House BL Number* is ticked, House BL Number will stay the same.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change House BL number

This program action opens the screen *Change House BL number.* As soon as the data of a new shipment are saved, Scope automatically generates a House BL number. This can be changed by the user if necessary.

- Quotation

This function can Show, Link or Unlink a quotation for the shipment.

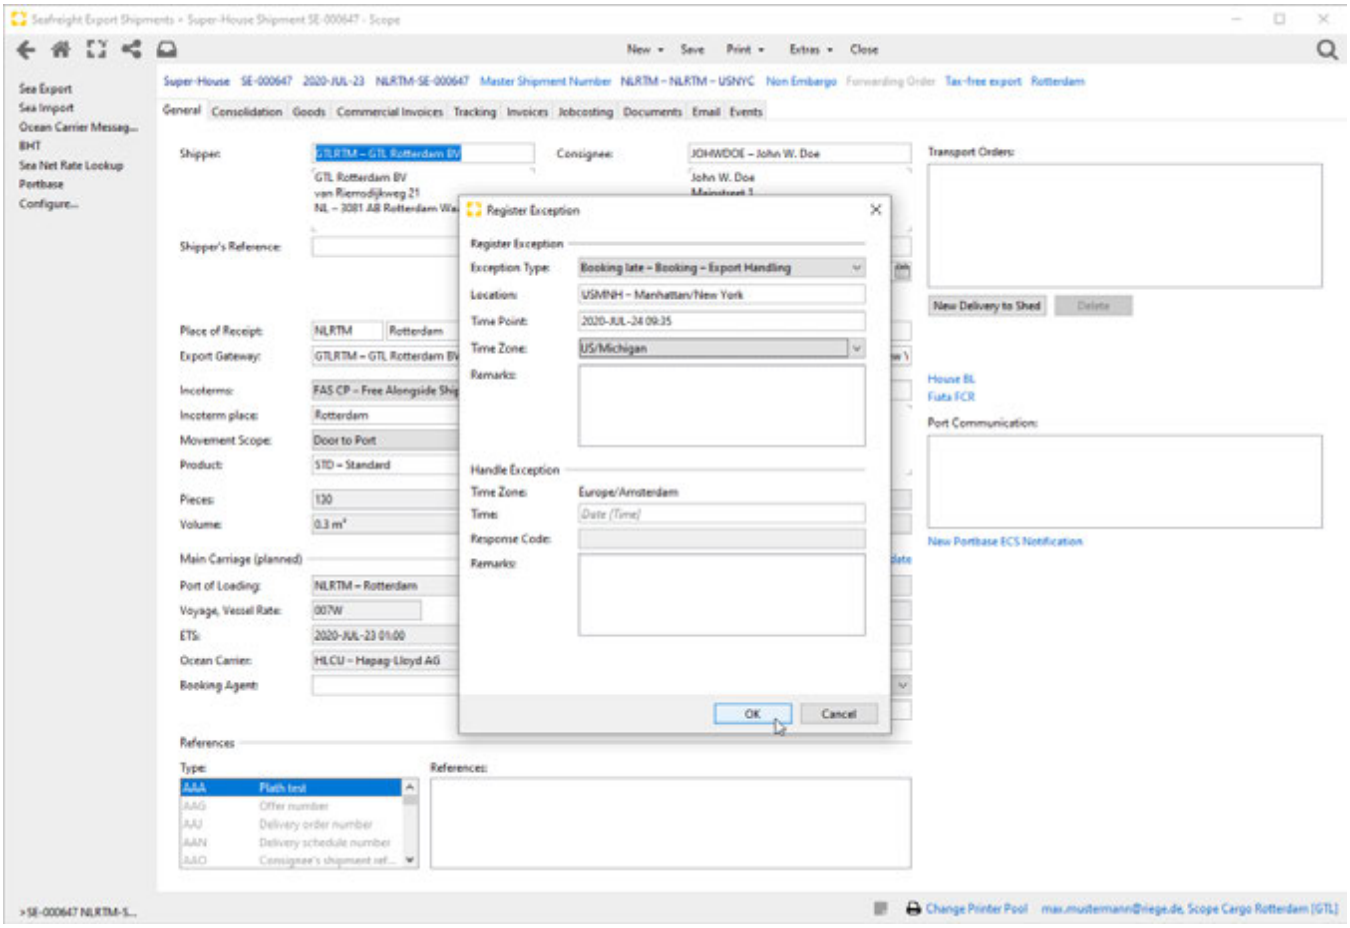
- Pre-Alert EDI

This function is used for generating the Pre-Alert XML. Therefore, the import agent must have a valid EDI profile assigned.

- Register Exception

With this action, exceptions can be created. These represent additional information about the milestones.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



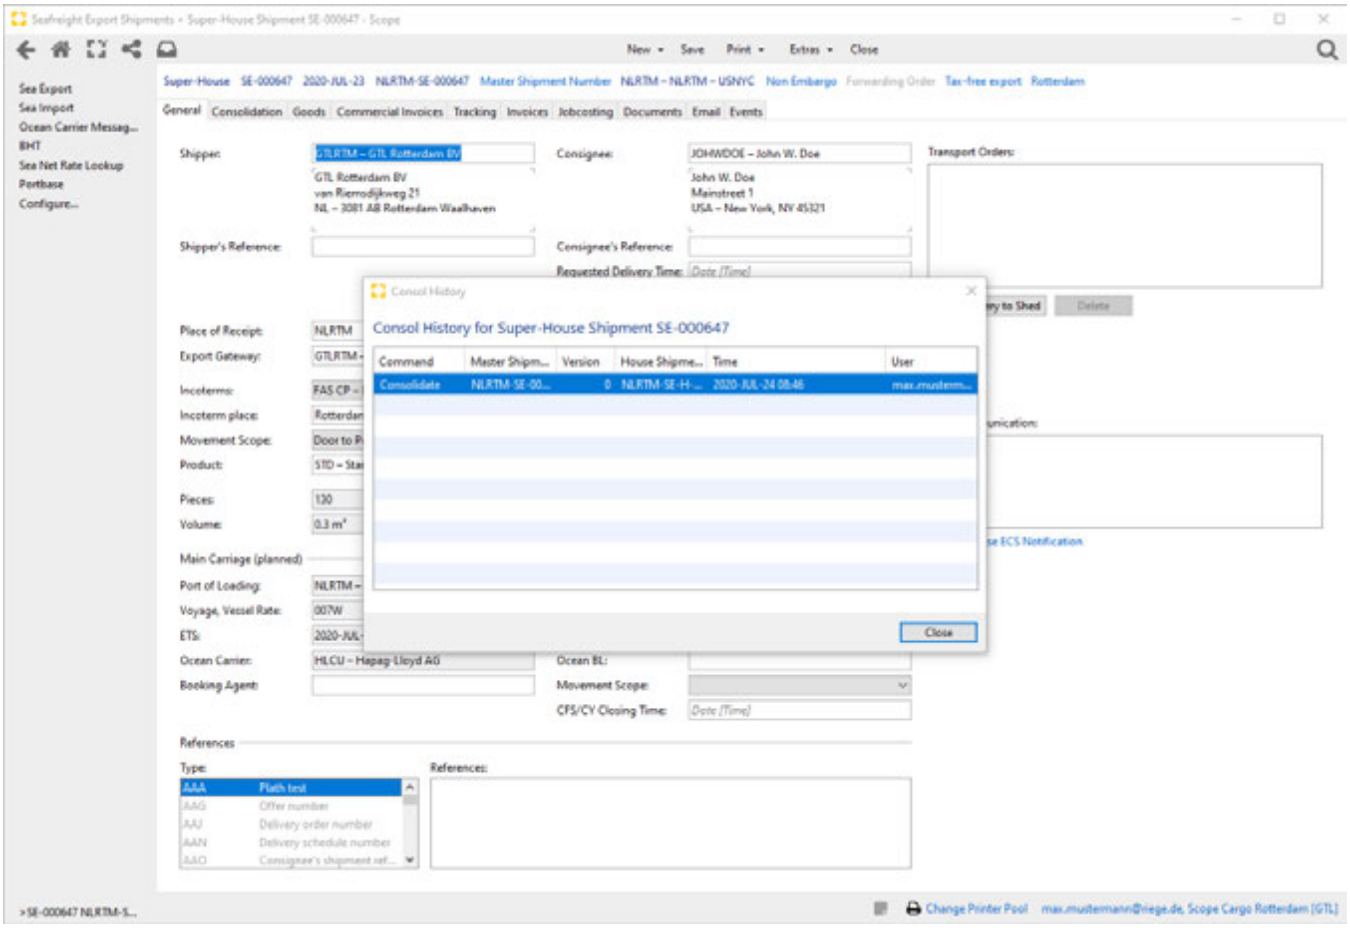
- Consol History (House Shipment)

shows the logged actions on the Consol regarding the House-Shipment

- Consol History (Super-House Shipment)

shows the logged actions on the Consol regarding the Super-House-Shipment

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Web Tracking

Via web tracking, a URL can be copied, or a program can be opened directly in anonymized web tracking.

- Open Template

opens the template that created the shipment

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- Type of shipment
  Type of shipment. For this is Super-House
- Shipment number
  Assigned by the system after the shipment has been saved for the first time.
- Economic date
  The date can be changed via Extras - Change economic date.
- House BL Number
  House BL Number created by Scope when shipment has been saved for the first time.
- Master Shipment Number
  Shipment number of master shipment where Sub-house shipments has been consolidated.
- Departure port - Destination port
  Departure and destination of the shipment.
- Non Embargo, Approve Embargo
  Embargo Status set due to destination
- Forwarding Order
  Link to a connected Forwarding Order
- Taxability (e.g. "tax-free Export")
  Actionlink indicates the Taxability type and can also be used to change to a new taxability type
- Cost Center (e.g. Sea Export)
  By clicking on this action link, the user will be able to change the Cost Center of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Field Description

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Shipper`s reference

Shipper´s reference can be entered here

Consignee`s reference

Consignee`s reference can be entered here

Requested Delivery Time

A requested delivery time can be entered here

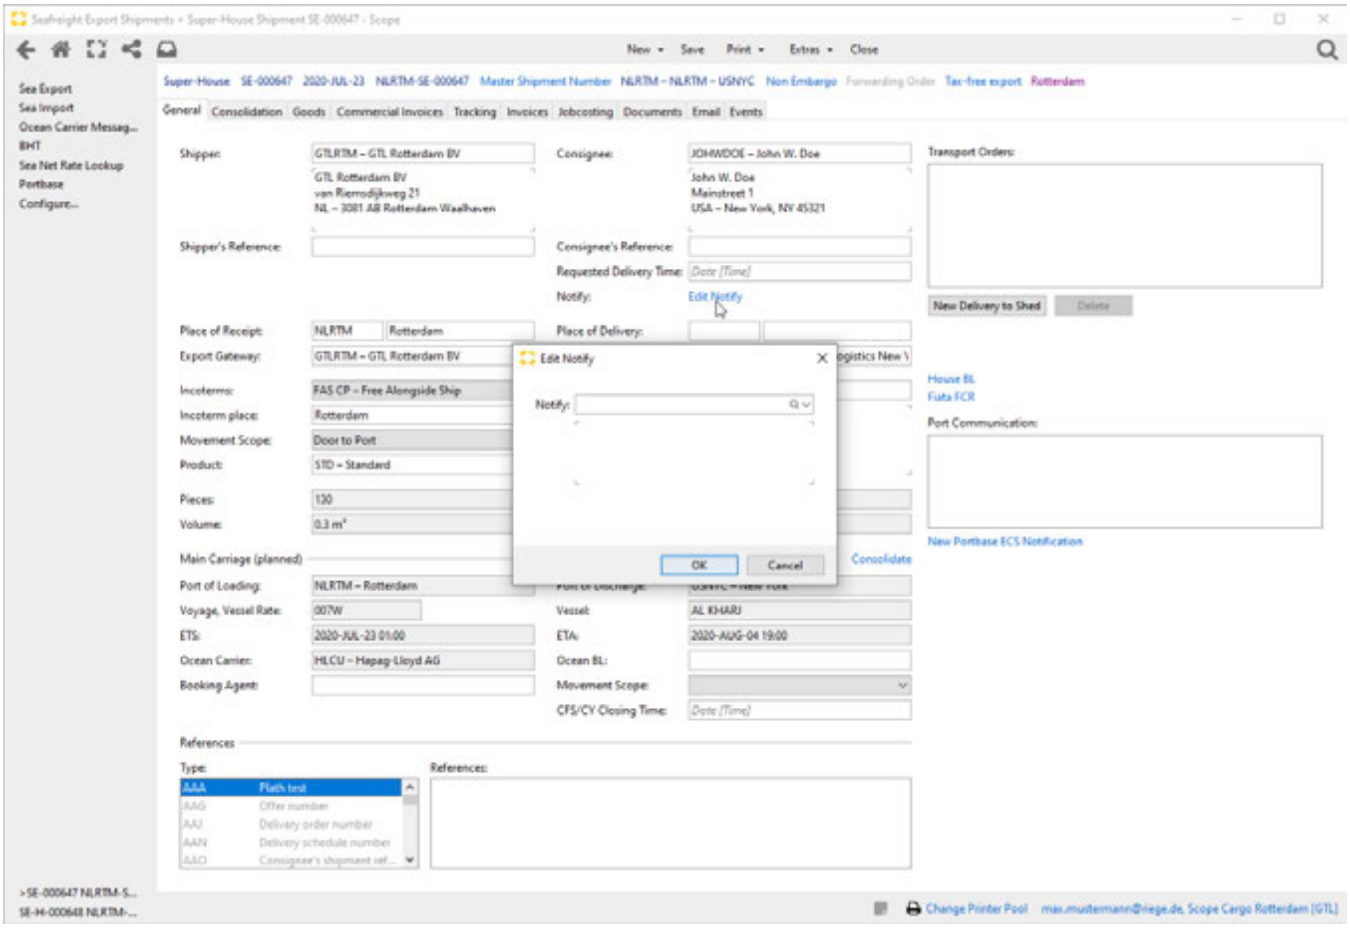
Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify. If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Edit Notify

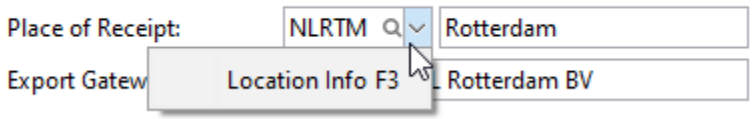
With this action link the editor to add a notify address can be opened. The notify address can be located by using the search field. The context menu of the Partner field provides options for new document addresses to be created or existing document addresses may be edited. In the master data of the partner, if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partner is used in any shipment where this partner is the recipient (consignee).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

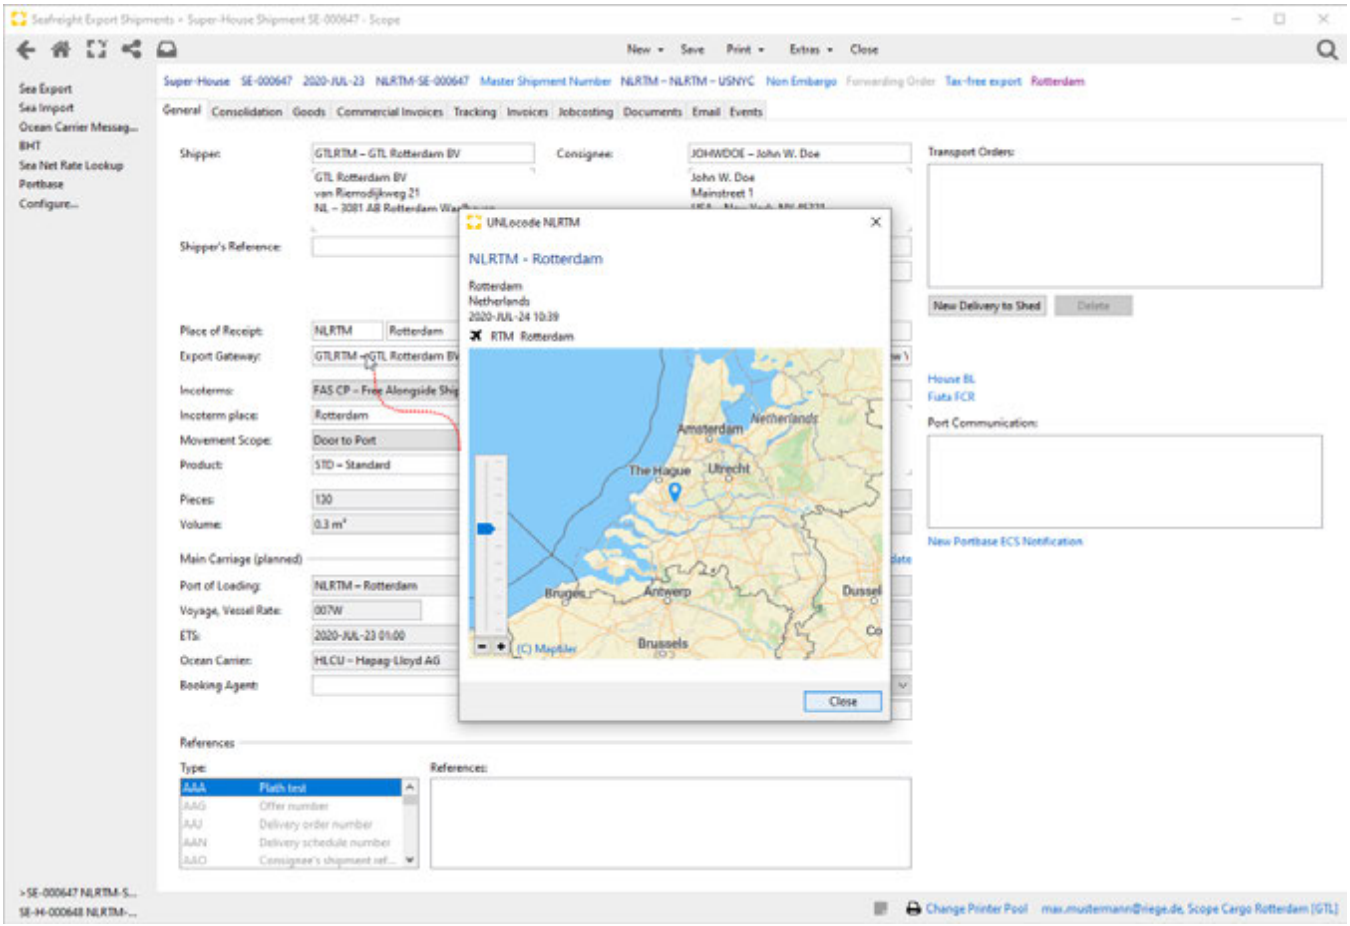


Place of receipt

UNlocode of the place of receipt. The context menu or F3 will open a corresponding map.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Place of Delivery

UNlocode of the place of delivery. The context menu or F3 will open a corresponding map.

Export Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Import Agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function. The import agent depends on the destination. The field will use the following logic when presenting possible agent choices:

- If no destination has been entered, all agents are offered for selection.
- If a destination has been entered and the master data stores only one agent stored for that destination, then that agent is automatically used the import agent.
- If a destination has been entered and the master data for that destination has been assigned more than one agent, the field is not initialized. Instead, all stored agents are offered for selection.
- If a destination has been entered for which no partner has been assigned as an agent, then the field cannot be completed until an import agent has been created.

Incoterms

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes. The Incoterm fills the value of the fields Movement Scope and Customer automatically, as they determine which costs are charged for the sender (backward) or for the recipient (forward).

Incoterms Place

The place name referenced by the incoterms.

Customer

Generally, the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Movement Scope

Movement Scope of the shipment.

Product

The drop-down menu will open a list of all available Products. The Products must be defined in the master data Forwarding Selling Products.

Pieces

Total number of pieces in the consignment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super House Shipment.

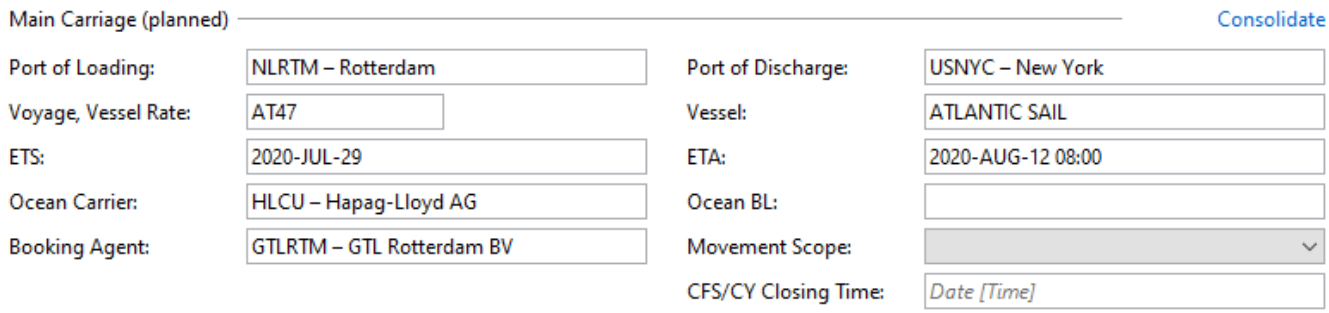
Gross weight, volume

Total gross weight and volume of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Chargeable Weight

Total chargeable weight of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Main carriage (planned)



Port of Loading - Main carriage (planned)

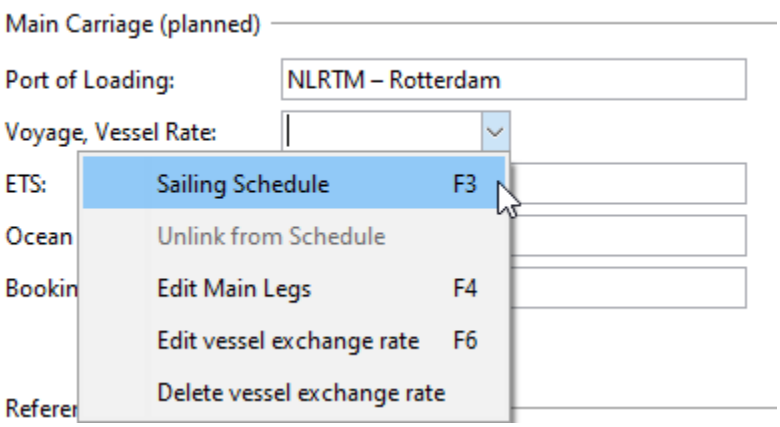
Port of Loading (Departure) of the shipment. The UNLocodes and the full name of the Port are displayed. Either of these can be entered to launch an automatic field search function that will display all ports of destination. The context menu or F3 will open a corresponding map.

Port of Discharge - Main carriage (planned)

Port of Discharge of the shipment. The UNLocodes and the full name of the Port are displayed. Either of these can be entered to launch an automatic field search function that will display all ports of destination. The context menu or F3 will open a corresponding map.

Voyage, Vessel rate vessel - Main carriage (planned)

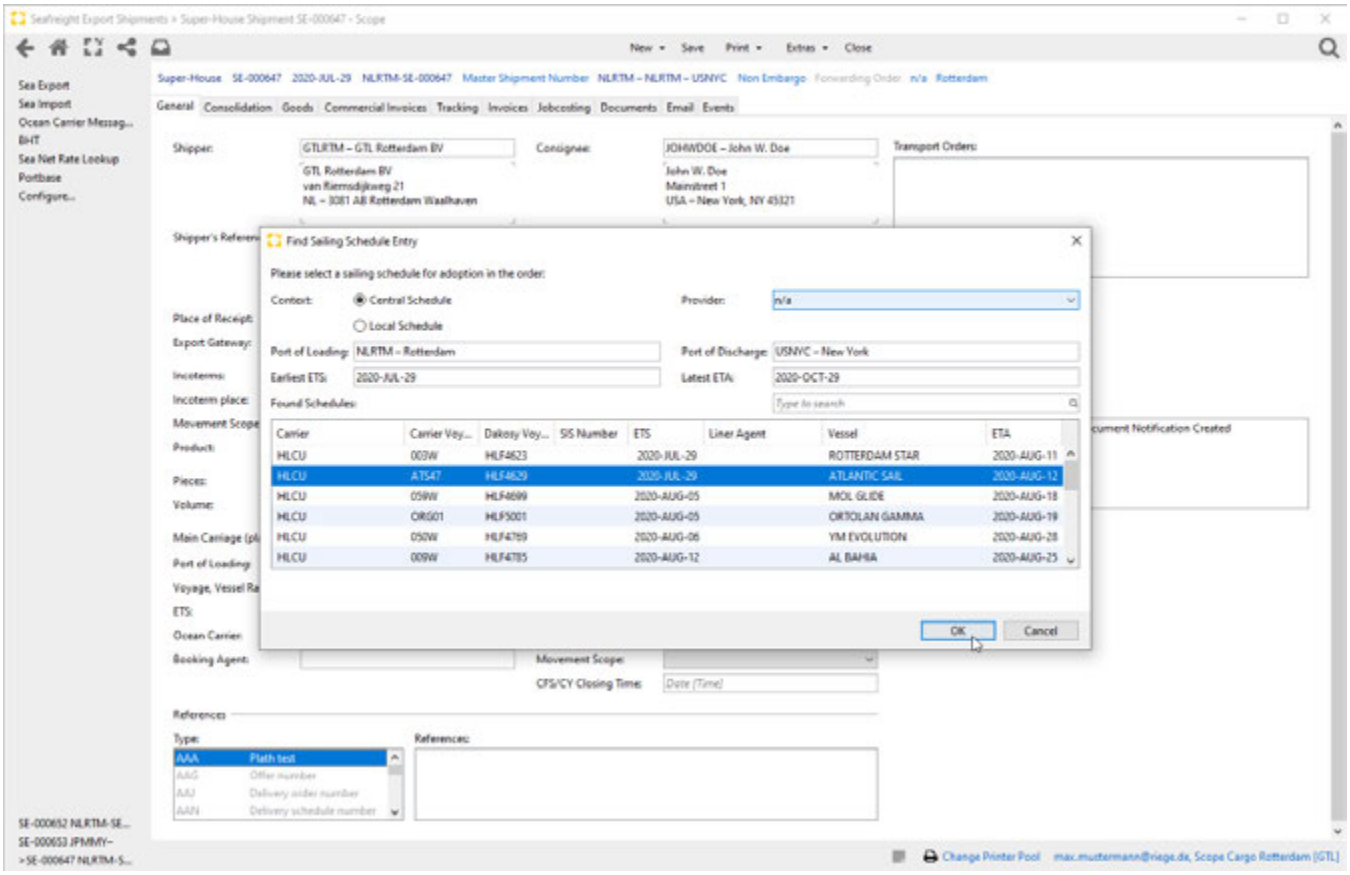
Displays the name of the Voyage. With the integrated drop-down menu, a Sailing schedule can be opened, main legs and vessel exchange rates can be edited.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

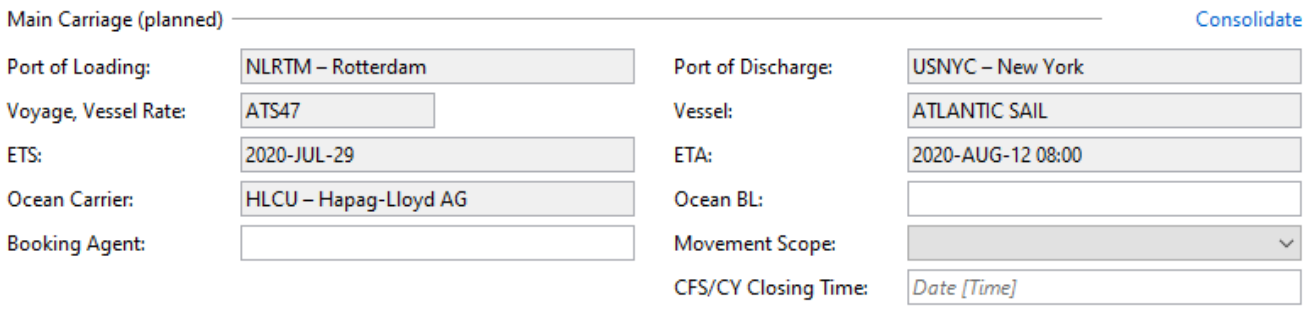
- Find Sailing schedule F3

The option Sailing Schedule or F3 opens a Sailing Schedule.



- Select sailing schedule entry

Once the Selection of a sailing schedule entry is confirmed with Ok, all corresponding input fields regarding the voyage will be filled automatically with the chosen sailing schedule entry.



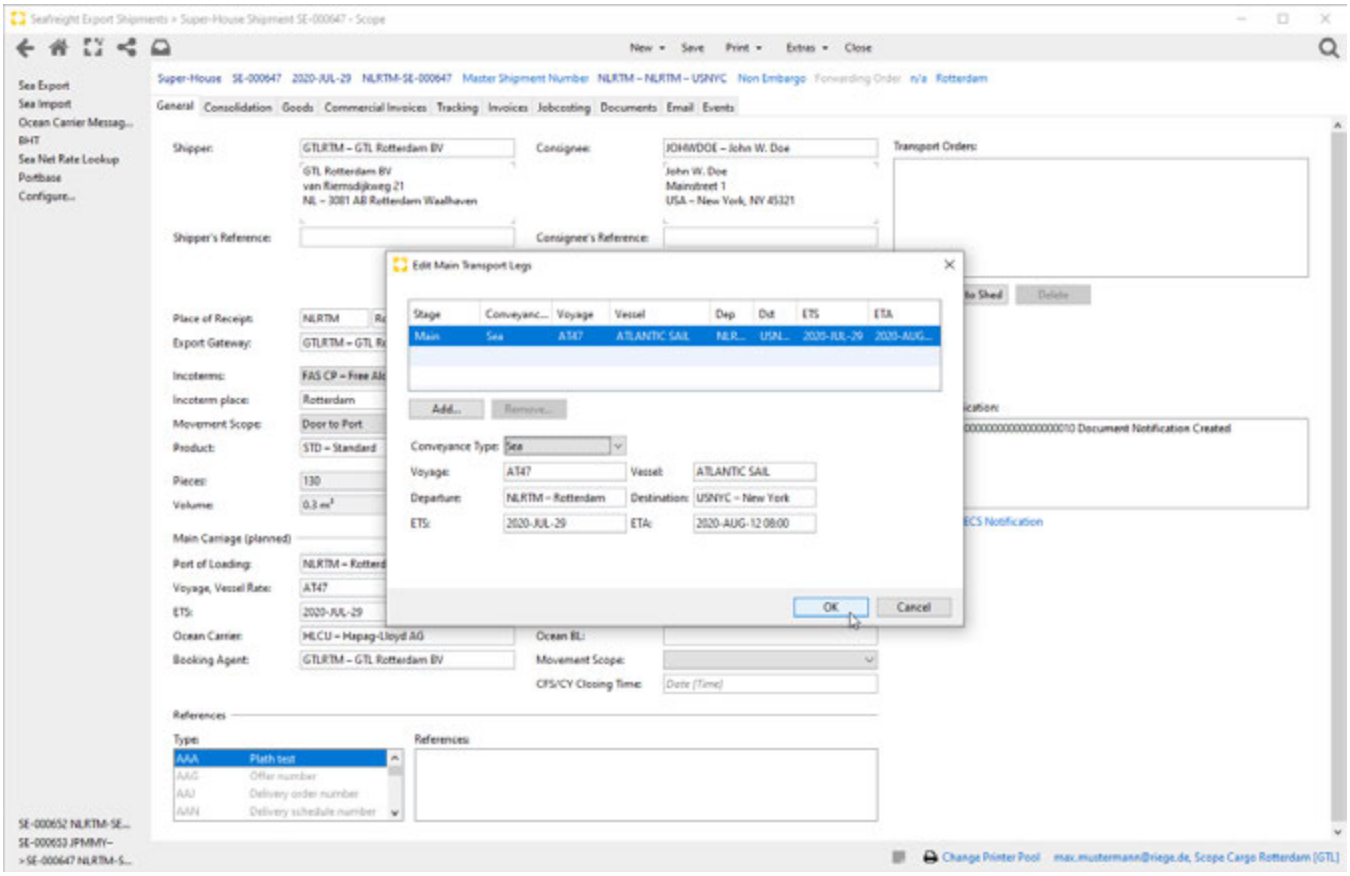
- Unlink from schedule

This function will unlink the shipment from the chosen Selection of from the sailing schedule again and all input fields regarding the main carriage are editable again.

- Edit Main Legs F4

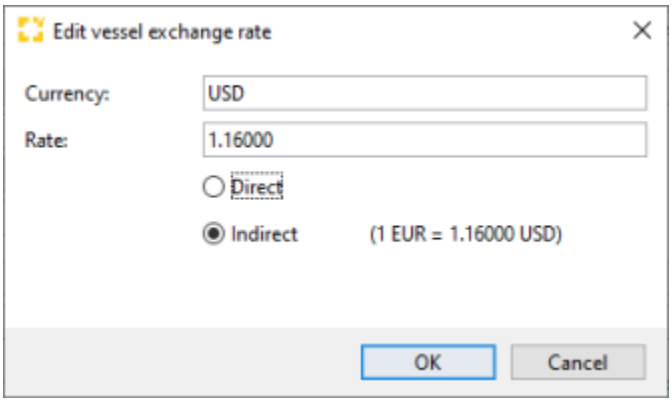
Opens the Edit Main Transport Legs window, where Transport Legs can be added, removed or just edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Edit vessel exchange rate

Opens a window, where the vessel exchange rate can be edited.



Once the exchange rate has been entered, it is displayed next to the input field Voyage, Vessel Rate.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Delete vessel exchange rate

Will delete an existing vessel exchange rate.

Vessel

Name of the vessel

ETS

Estimated time of departure of the shipment

ETA

Estimated time of Arrival of the shipment

Ocean Carrier

Name of the Ocean Carrier

Ocean BL

Ocean BL Number. Via the integrated drop-down menu, the Consolidate function can be addressed.

Booking Agent

Name and Address of the Booking agent, that can be selected from the partner master data

Movement Scope

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes.

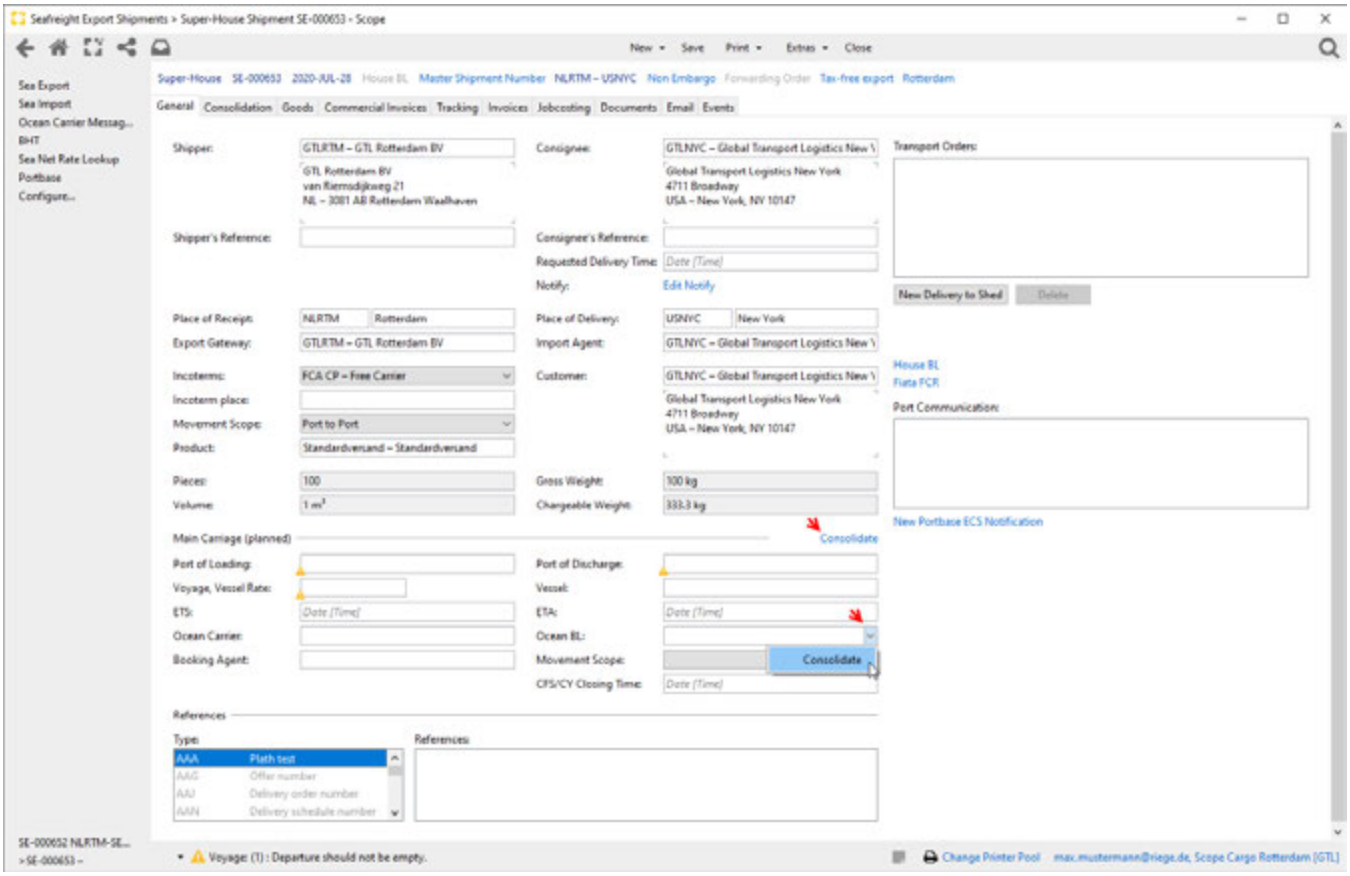
CFS/CY Closing Time

Planned transport closing date for the shipment.

Consolidate / Deconsolidate

The area *main carriage* of the Super-House shipment allows the Super-House to be consolidated on a master shipment or deconsolidated if already assigned to an open master shipment. If the Super-House has already been consolidated, then the master shipment can be opened directly at this point to complete the consolidation. Alternatively it is possible to exit the Super-House shipment and complete the consolidation or deconsolidate in the master shipment application. The input dialog can be opened by using the drop-down menu in the field Ocean BL, or using the corresponding Actionlink *Consolidat e...* . See also FAQ How-To build a sea export consolidation

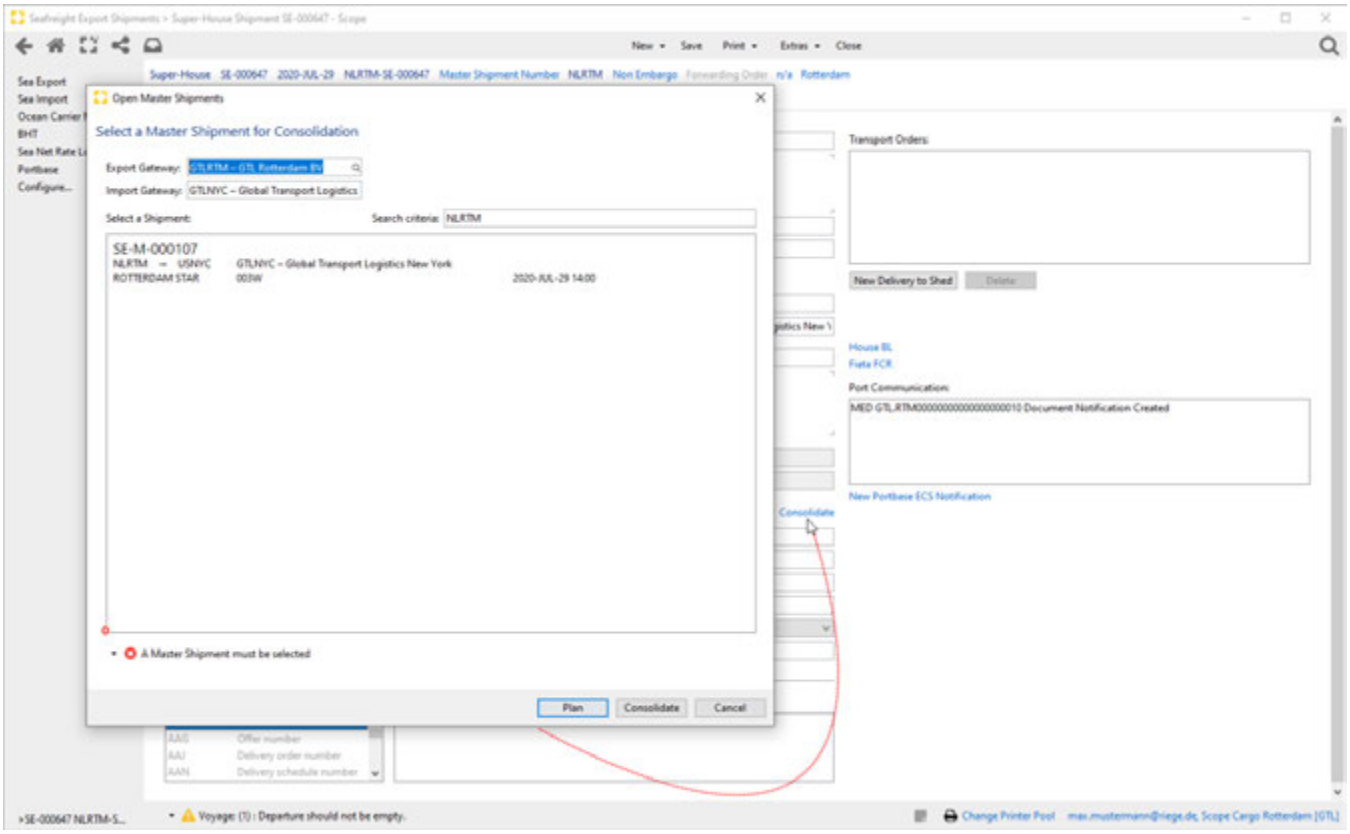
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Consolidate**

If the "consolidate" option is taken, the Open Master Shipments dialog box appears, and an available Master can be selected by choosing the button *Conso lidate*. If the Super-House is consolidated to a Master Shipment the main Carriage Data will be filled with the data from the Master Shipment and appear in the fields regarding the Main Carriage.

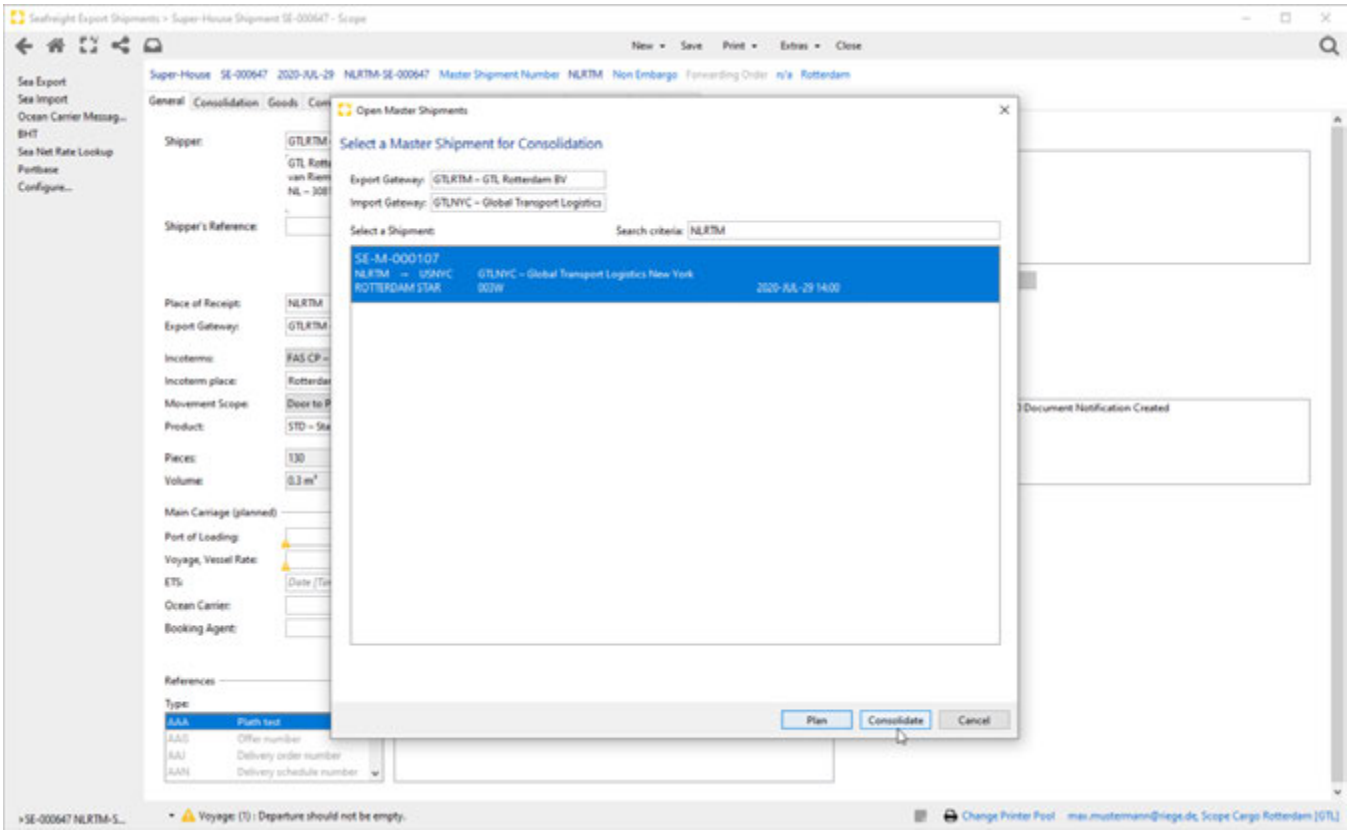
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



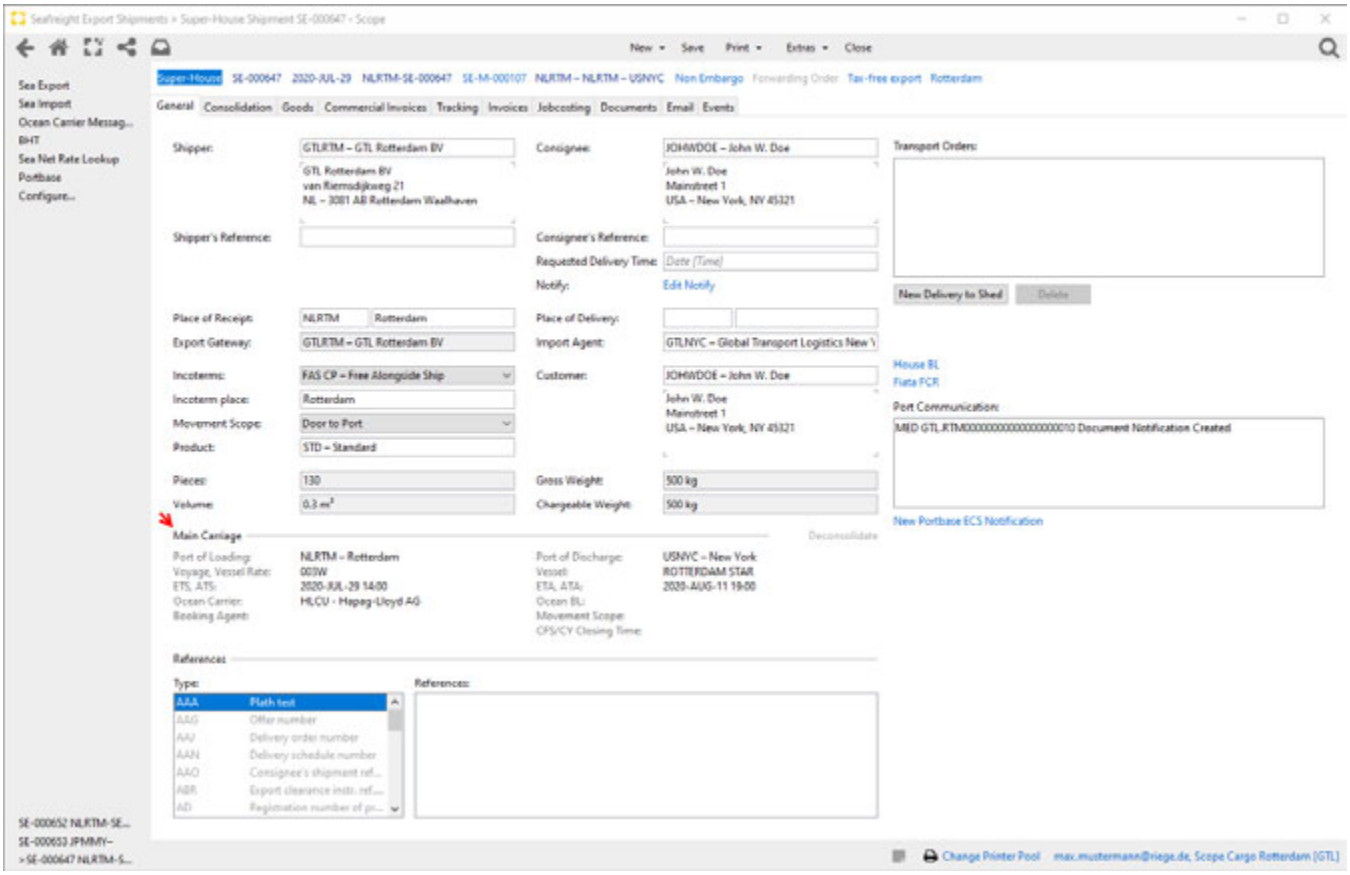
Select Master shipment

In the Open Master Shipments window normally the agent who creates the Super-House shipment is shown as the export gateway. The Import Gateway is the station who will receive and handle the shipment at the destination. The UNLocodes and the full name of the Port can be entered in the field Search criteria to launch an automatic field search function. If the selection is confirmed with the button **Plan**, the consolidation of the Super-House Shipment is not yet confirmed. The Actionlink to *Consolidate* the shipment is still be shown as *Consolidate* and does not change to *Deconsolidate*. The button *Consolidate* definitely confirms the selection and closes the editor shown below. Cancel closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



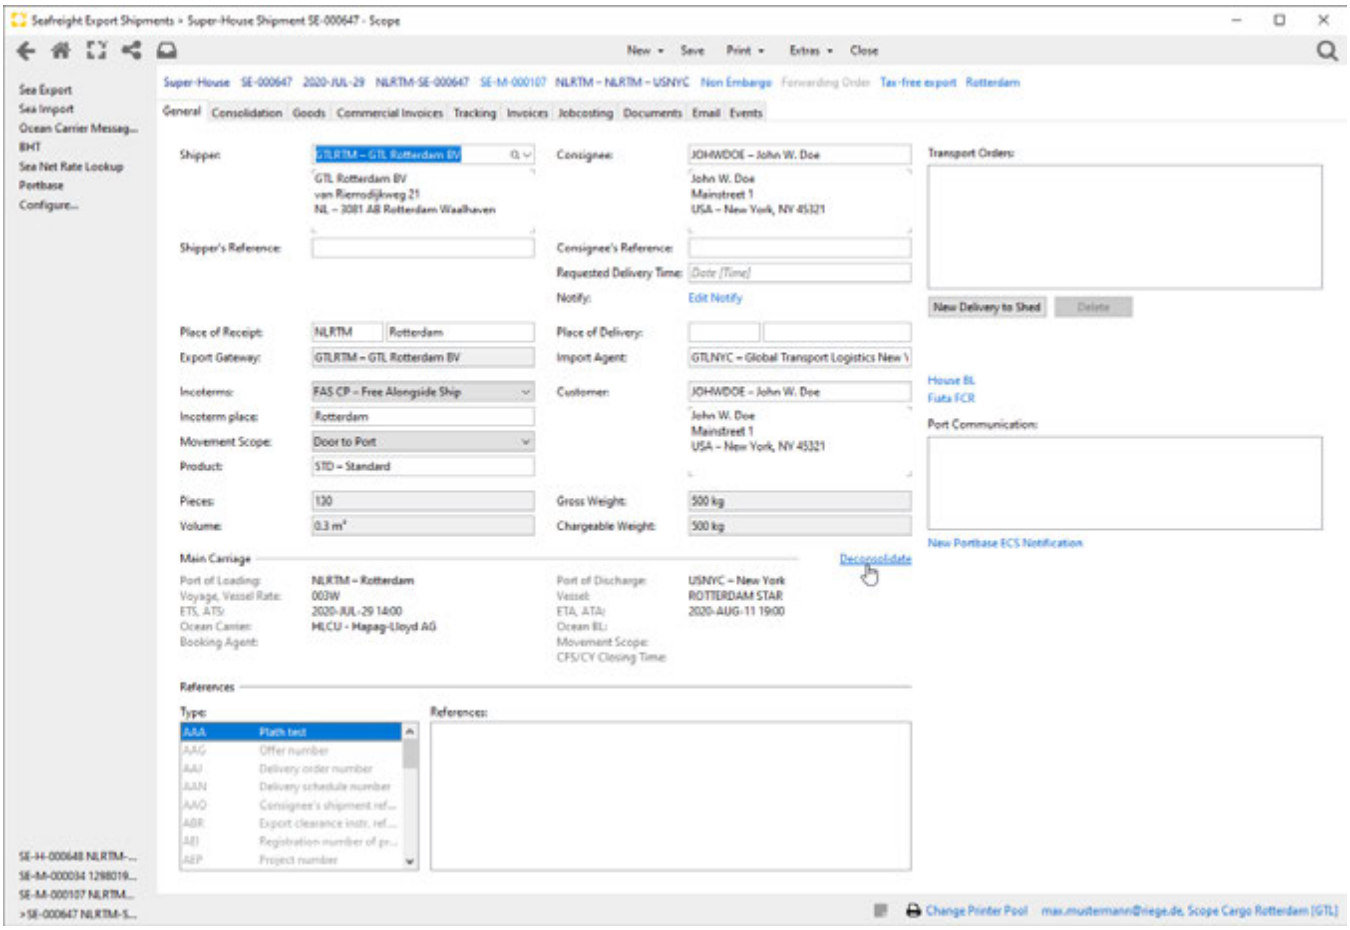
A soon as the Super-House shipment is consolidated on a master shipment, all of this information will appear in the section Main Carriage (planned) from the master.



- **Deconsolidate**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the Super-House is consolidated to a Master Shipment the main Carriage Data will be filled with the data from the Master Shipment and appear in the fields regarding the Main Carriage. The Actionlink shows the option *Deconsolidate* now, instead of the *Consolidate...* option. This link can be clicked to deconsolidate the shipment again. After that the Consolidate function will be active again.



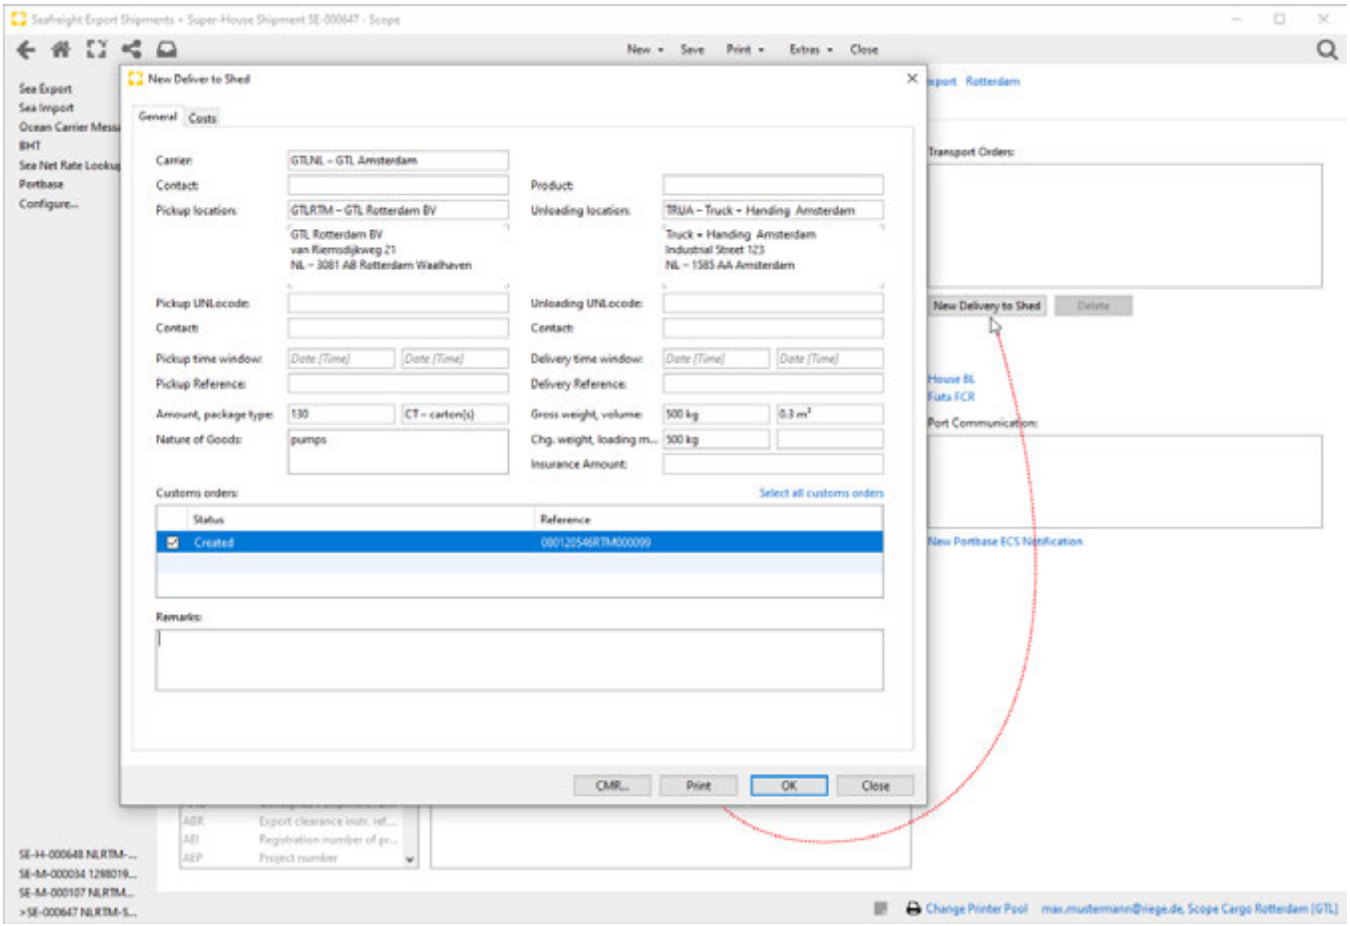
References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

Transport Orders

In this box transport orders will be shown, or can be issued by using the button *New Delivery to Shed,* or deleted by using the button *Delete*.

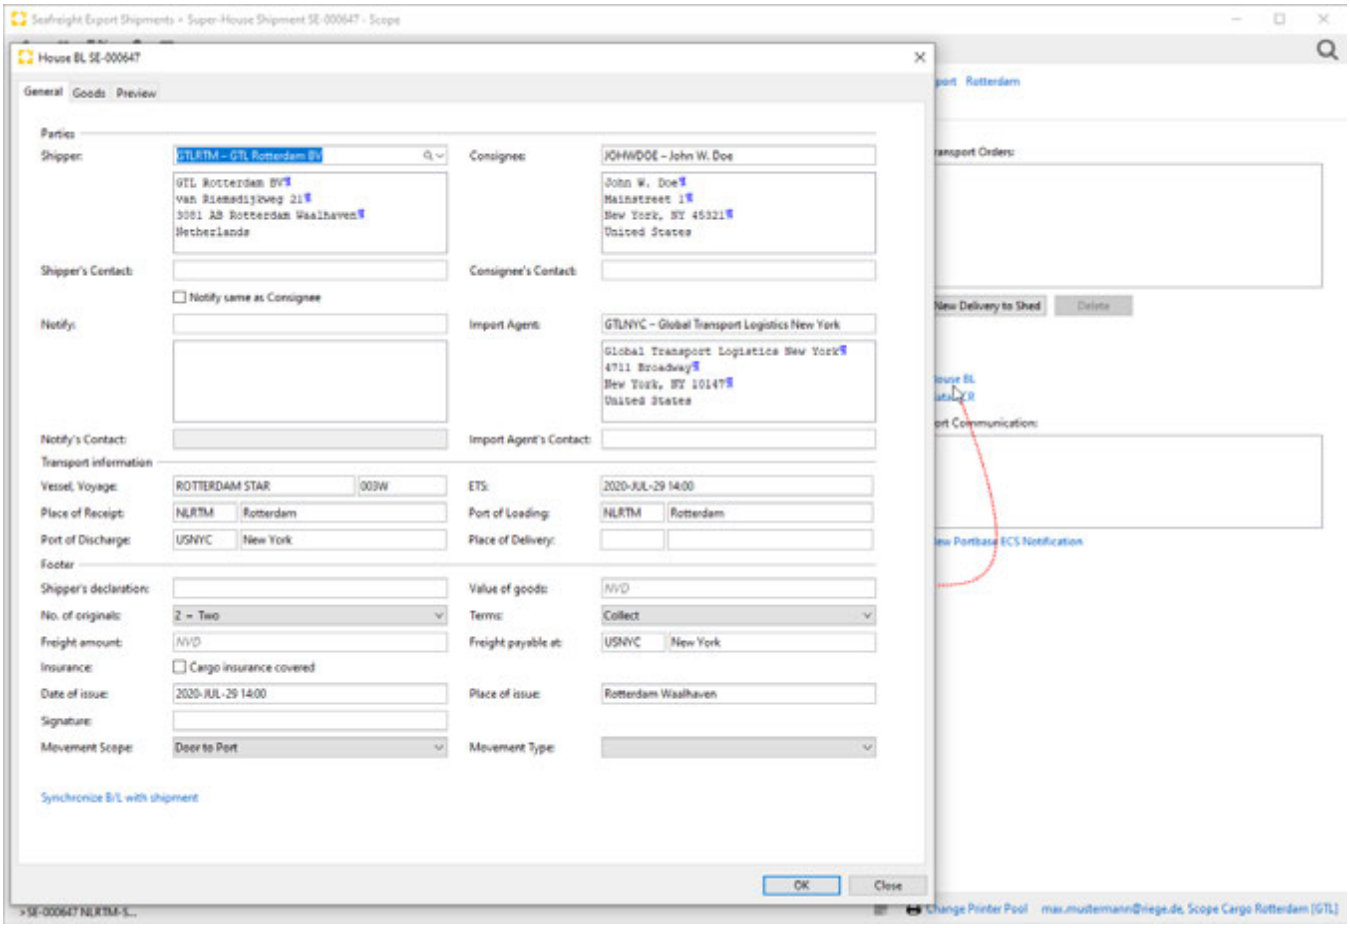
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



House BL

With this action link the House BL Editor can be opened. A more detailed description of the BL Editor can be found here House-BL - General - House Shipment - Seafreight Export.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



FIATA FCR

With this action link the House FIATA FCR Editor can be opened and FIATA forwarders certificate of receipt can be created.

(b) Consolidation - Super-House Shipment - Seafreight Export

- Introduction
- Description

Introduction

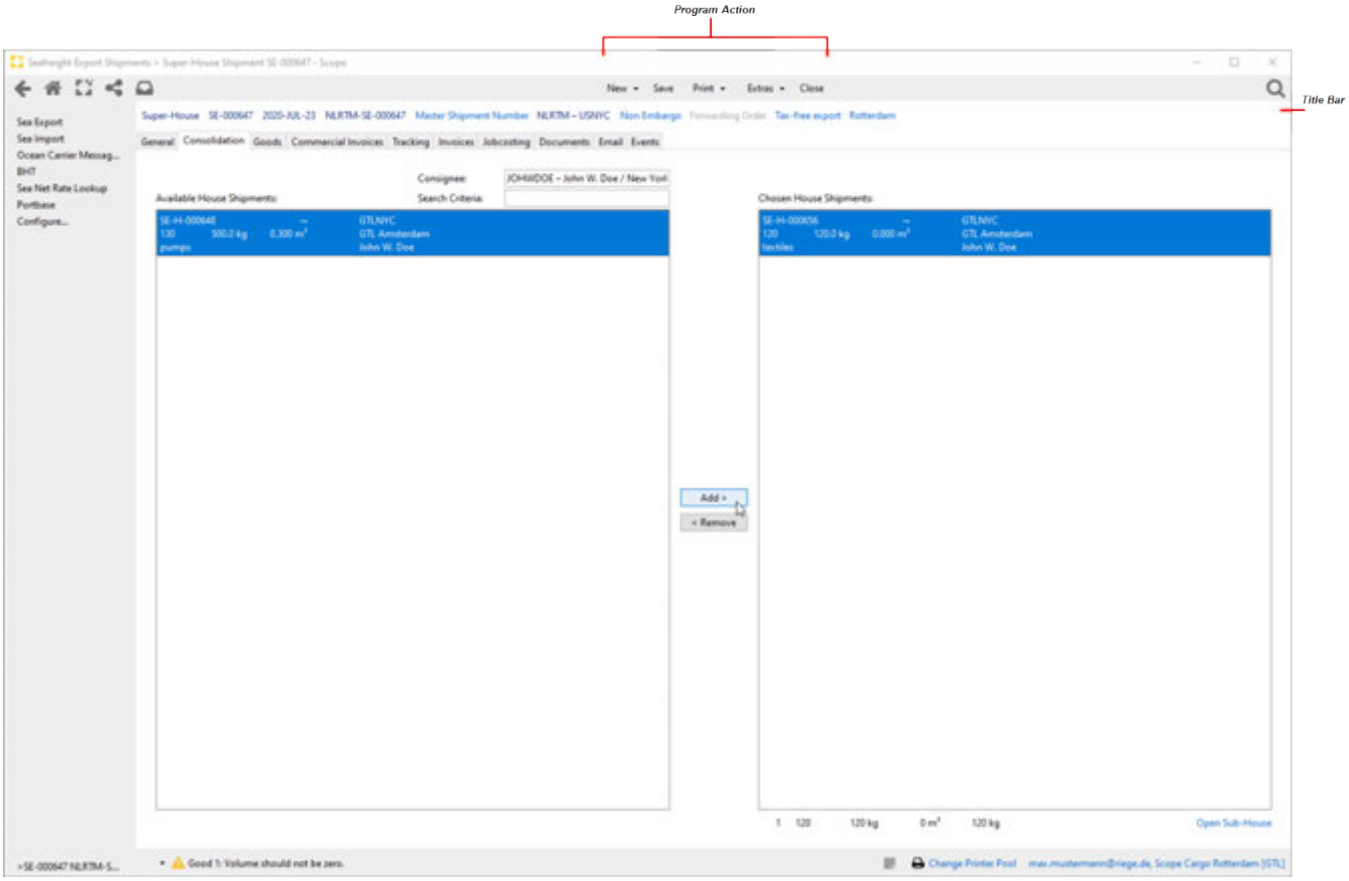
The Consolidation tab presents a view of all available Sub-House shipments that are ready to be consolidated. These can be easily added to or removed from the Super-House shipment, ensuring a fast, flexible approach to building consolidations.

Description

- Program Action
- Title Bar
- Field Description
- Open Sub-House
- Sort

- **Consolidation TAB - Consolidate Subhouses**

As long as the Super-House Shipment is not consolidated yet on a Master Shipment, the available Sub-House shipments easily can be added to or removed from the Super-House shipment.



Program Action

see General Tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Title Bar

see General Tab

Field Description

Consignee

The Consignee address appearing in this field is taken from the field Consignee, entered in the General TAB of the Super-House. If the field is empty, all available House-Shipments will be shown for the selected direction.

Search Criteria

The destination of the available house shipments is used to match them to the destination of the Super-House shipment. The destination of the Super-House shipment is found in the General Tab.

Available House Shipments

`By default, all house shipments are displayed, that match with Search Criteria.`

- When the Consignee and destination are present, only house shipments with matching Consignee and destination will be shown as available for consolidation.
- When the Consignee is left blank, then all open House-Shipments to the destination will be shown regardless of the Consignee that may be present at the house level.
- If the destination is left blank, then all open houses that match the Consignee will be shown, regardless of the destination of the house shipments.
- if both the destination and Consignee are left blank then all open house shipments will be visible regardless of the Consignee or destination of those houses.

Chosen House Shipments

This window displays house shipments that are currently included in the Consolidation. The base of the window shows the total number of houses on the consol, their total number of pieces, gross weight, volume and total chargeable weight.

Add

Moves the highlighted house shipment from the Available House Shipments window to the Chosen House Shipments window to indicate the house is to be included on the consol.

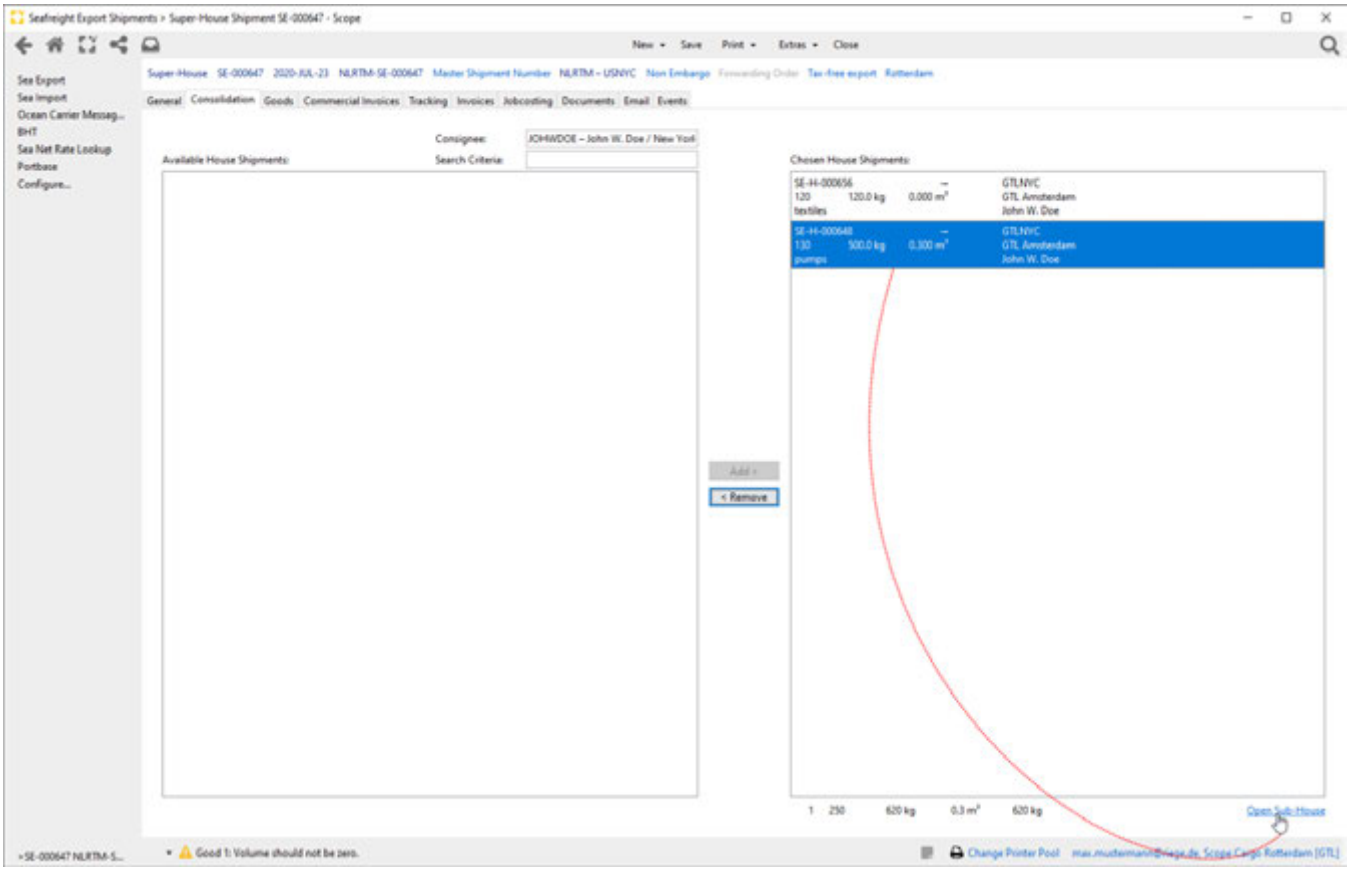
Remove

Removes the highlighted house shipment from the Chosen House Shipments window back to the Available House Shipments window to indicate the Sub-House is to be removed (deconsolidated) from the consol.

Open Sub-House

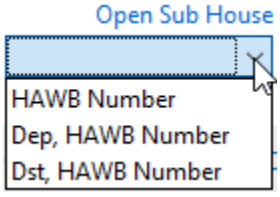
Opens the Sub-House that is marked in the table Chosen House Shipments

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Sort

The selected Sub-House shipments can be sorted using the dropdown menu.



HAWB Number

Sorting is based on house AWB numbers

Dep HAWB Number

Sorting takes place first from departure and within it according to HAWB no.

Des HAWB Number

Sorting takes place first to the destination and within it according to HAWB no.

- **Consolidation TAB - Superhouse consolidated**

As soon as the Super-House is consolidated on a Master Shipment the Consolidation TAB shows the result of the consolidation of the Sub-House shipments in a table and the functions to add or remove further Sub-House Shipments are no longer available.

(g) Jobcosting - Super-House Shipment - Seafreight Export

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated. See also chapter Jobcosting - Functions - General.

Description

Super-House Shipment FCL - Seafreight Export

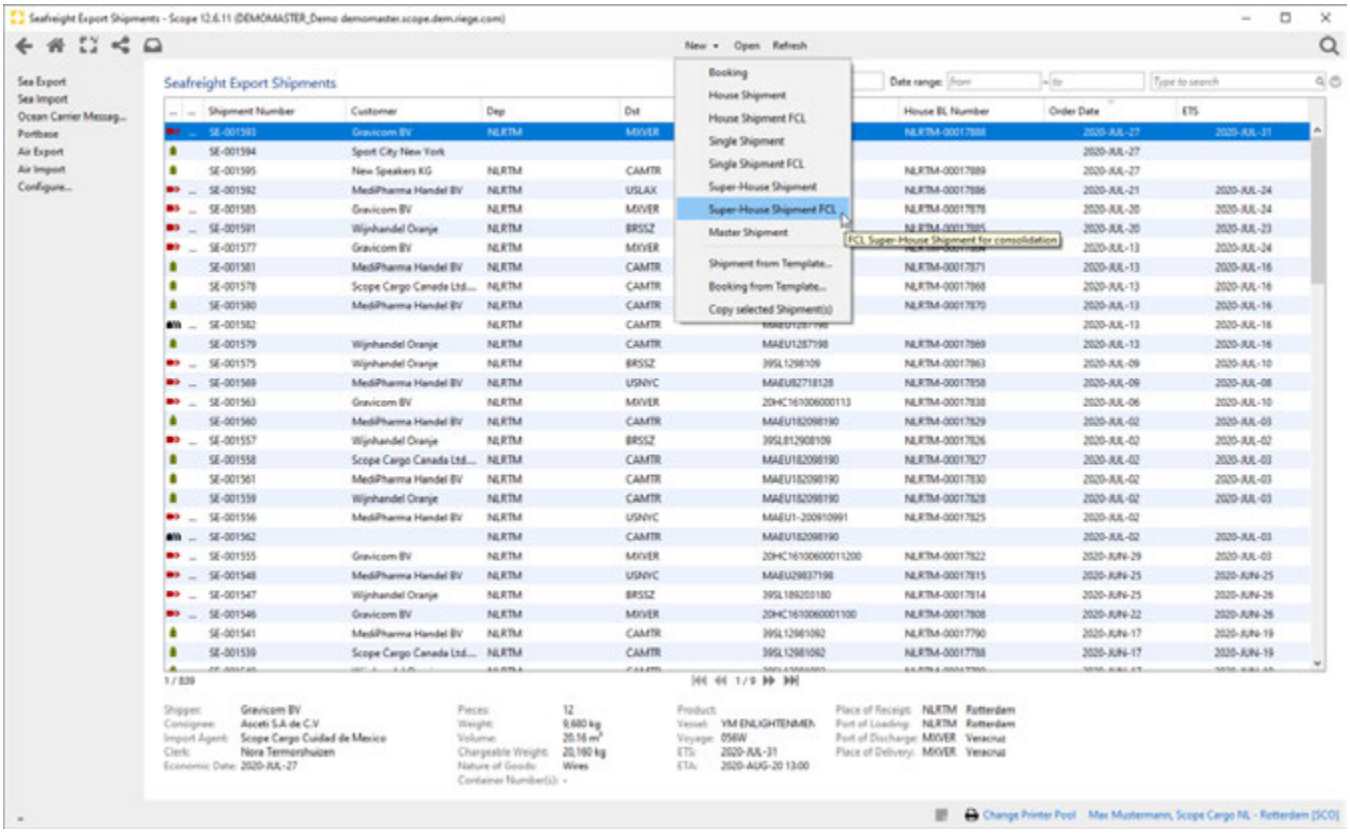
- Introduction
- Description

Introduction

The application Super House Shipment FCL Seafreight Export enables the consolidation of regular House shipments to a Super House Shipment. There may be multiple reasons for creating a Super House, like one shipper to many consignees (shipper consolidation), or many shippers to one consignee (consignee consolidation), or many shippers to many consignees. The purpose of a super house shipment FCL is to combine House shipments in such a way that the quantity (weight / volume) enables cost-effective transportation for your customer.

Description

With the program action in the Seafreight Export Shipments home view the input dialog for the *Super-House Shipment* FCL can be opened.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(a) General - Super-House-Shipment FCL - Seafreight Export

- Introduction
- Description

Introduction

General shipment data, can be entered in the General Tab. The weight and the number of packages of the Sub-House Shipments will automatically be transferred to the corresponding field.

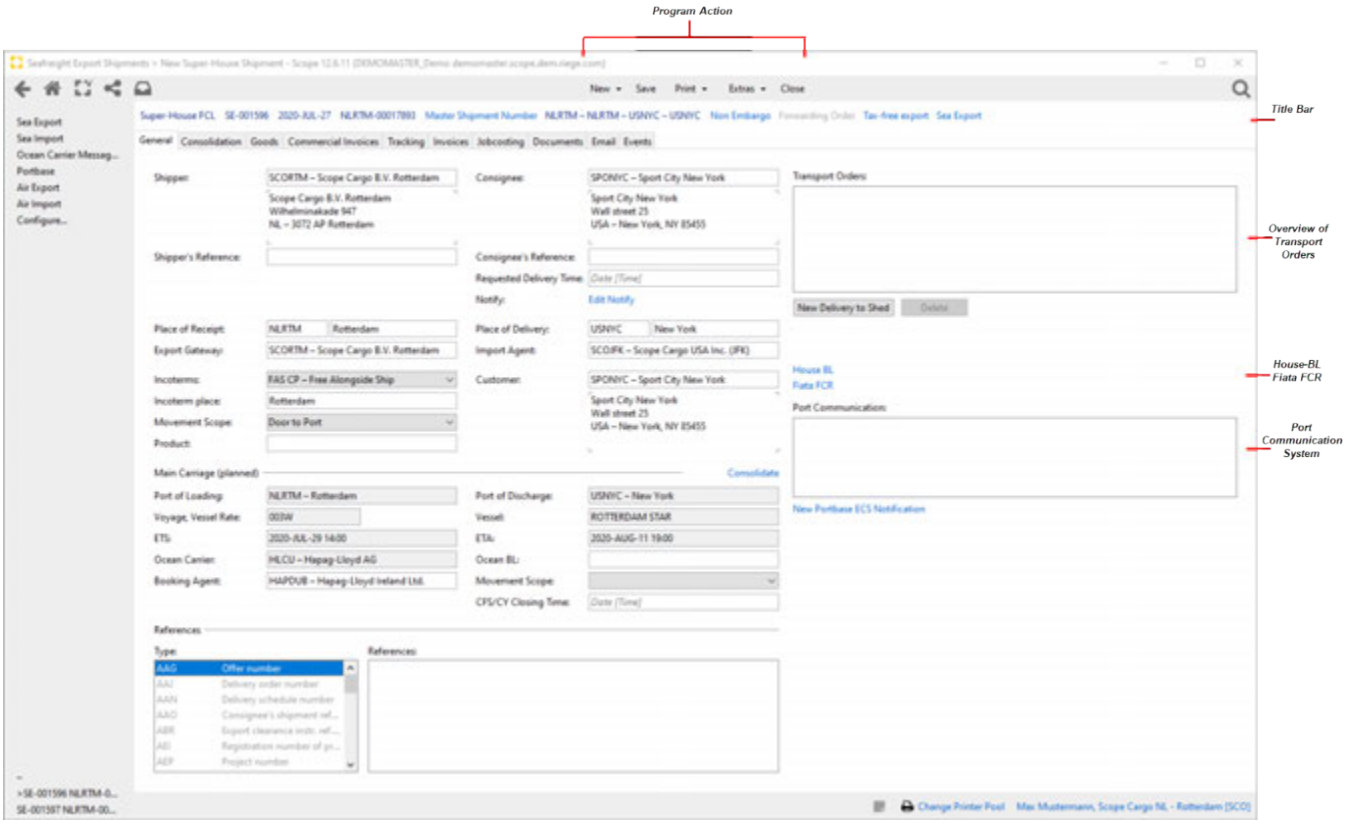
- Consolidate / Deconsolidate
- Select Master shipment
- Transport Orders
- House BL
- FIATA FCR
- Port Communication



Program Action

New

- New Delivery to Shed

Opens the window *New Delivery to Shed.* Data for a Transport Order to Shed can be entered here.

- New Customs Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens the window New Customs Order to enter the data and create a new Customs Order.

Save

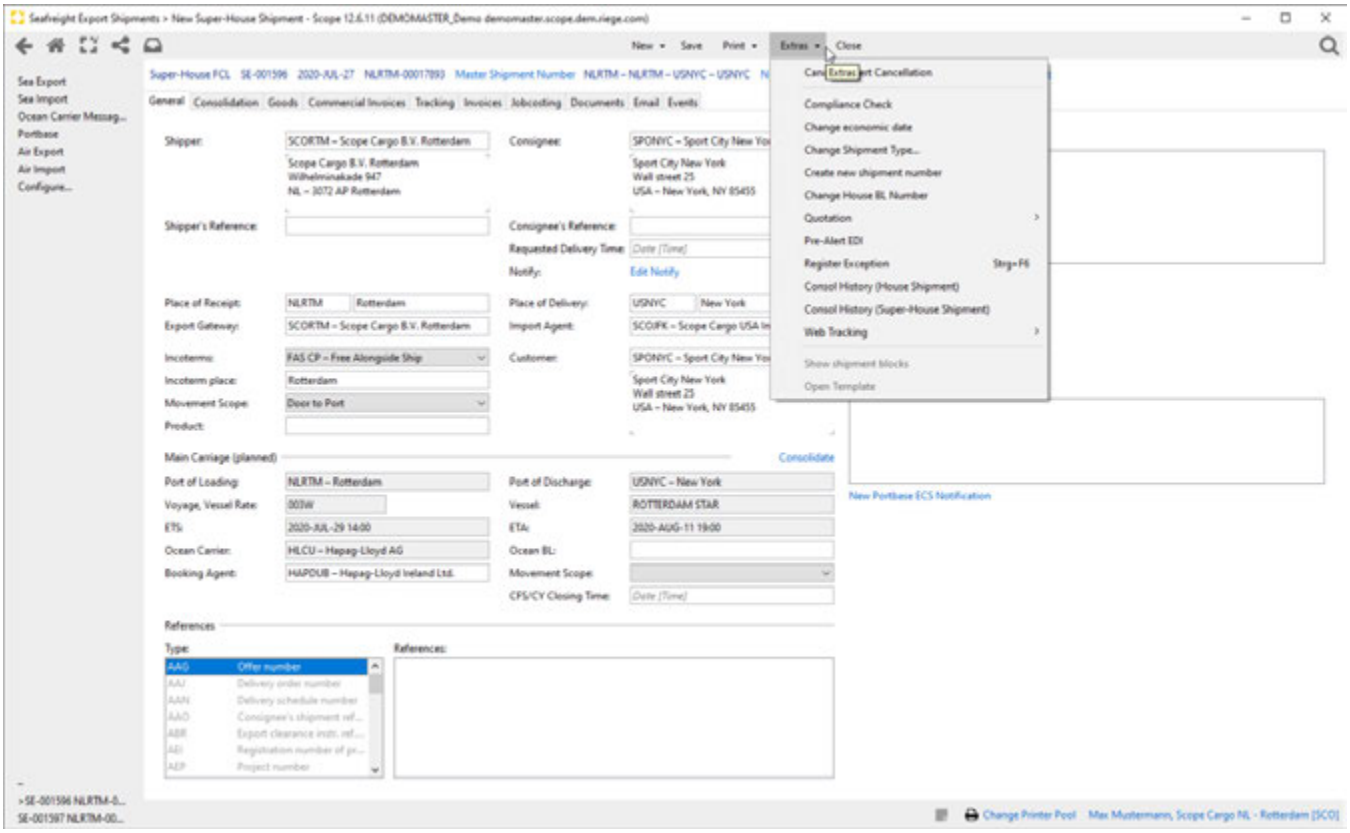
The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case, then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command, the required documents can be printed. Currently the following documents are available:

- Filecover
- Preadvice
- Shipping Instruction for Shipper, Consignee, for Import Agent, for Customer, for Notify
- FOB Delivery
- Export Declaration
- Claim Notification
- Super-House Manifest
- Labels Package, Shipment
- Certificate of Origin
- Quality Report

Extras



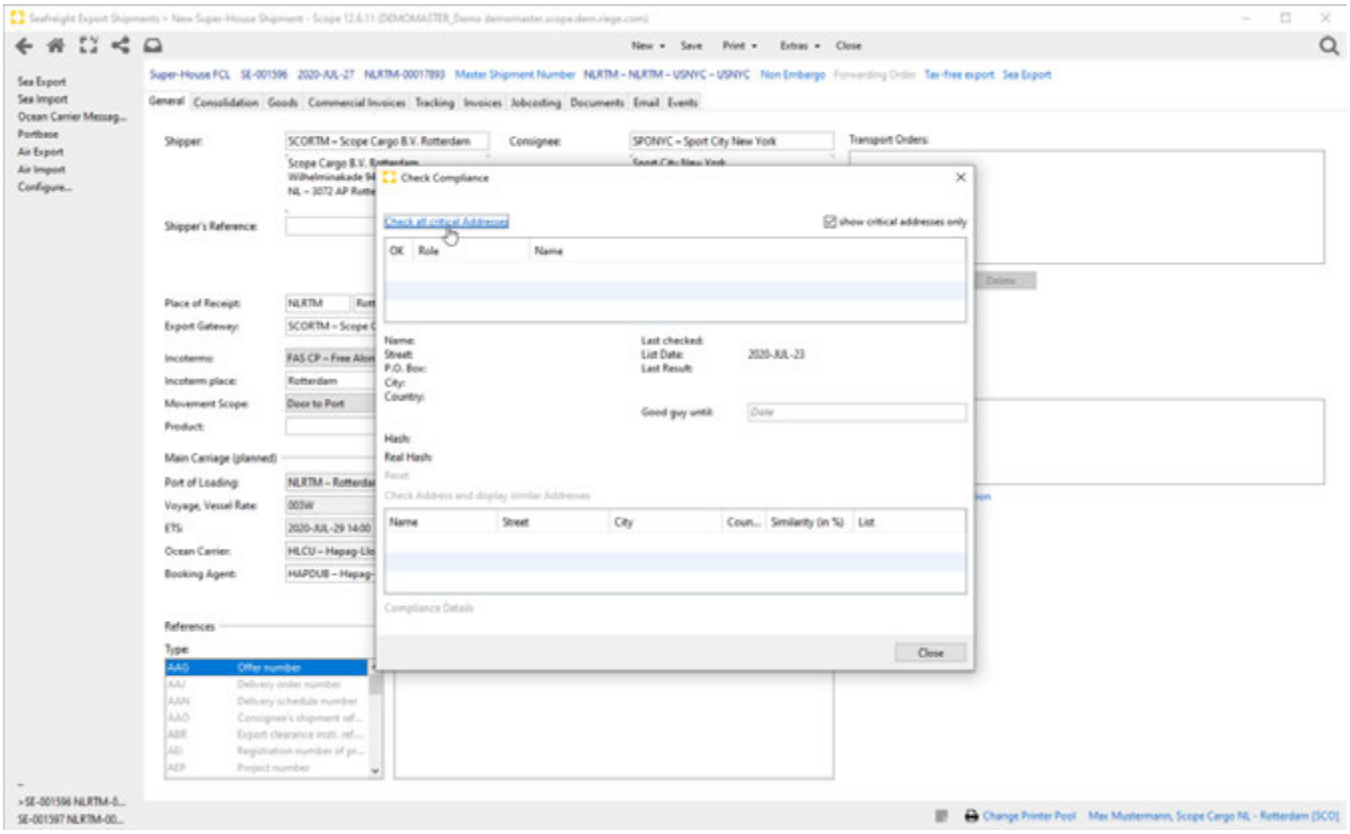
- Cancel/Revert Cancellation

This function cancels a shipment or cancels the cancellation of a shipment. See details here Cancel/Revert Cancellation

- Compliance Check

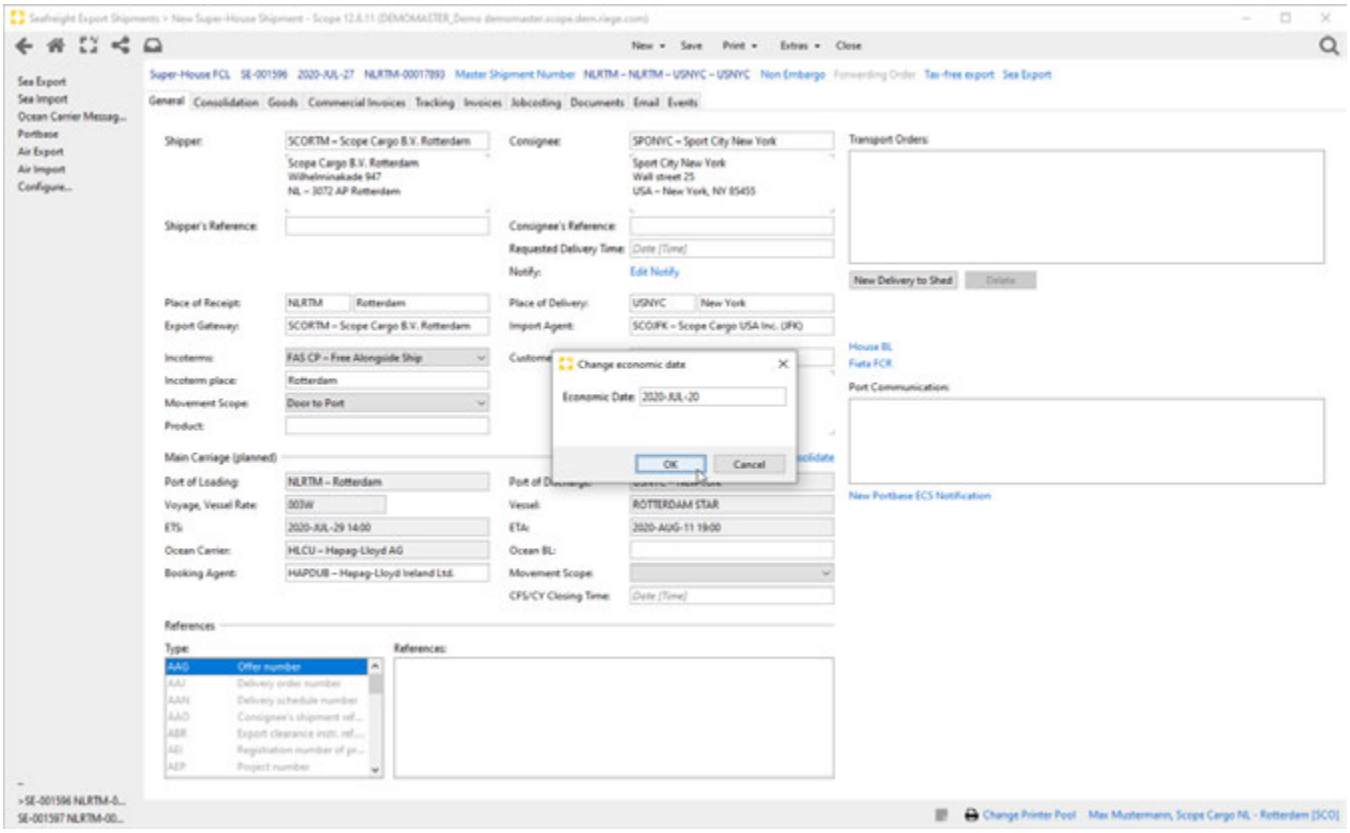
Opens the *Check Compliance* Screen. In this Screen all critical addresses related to the shipment will be displayed and can be checked.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change economic date

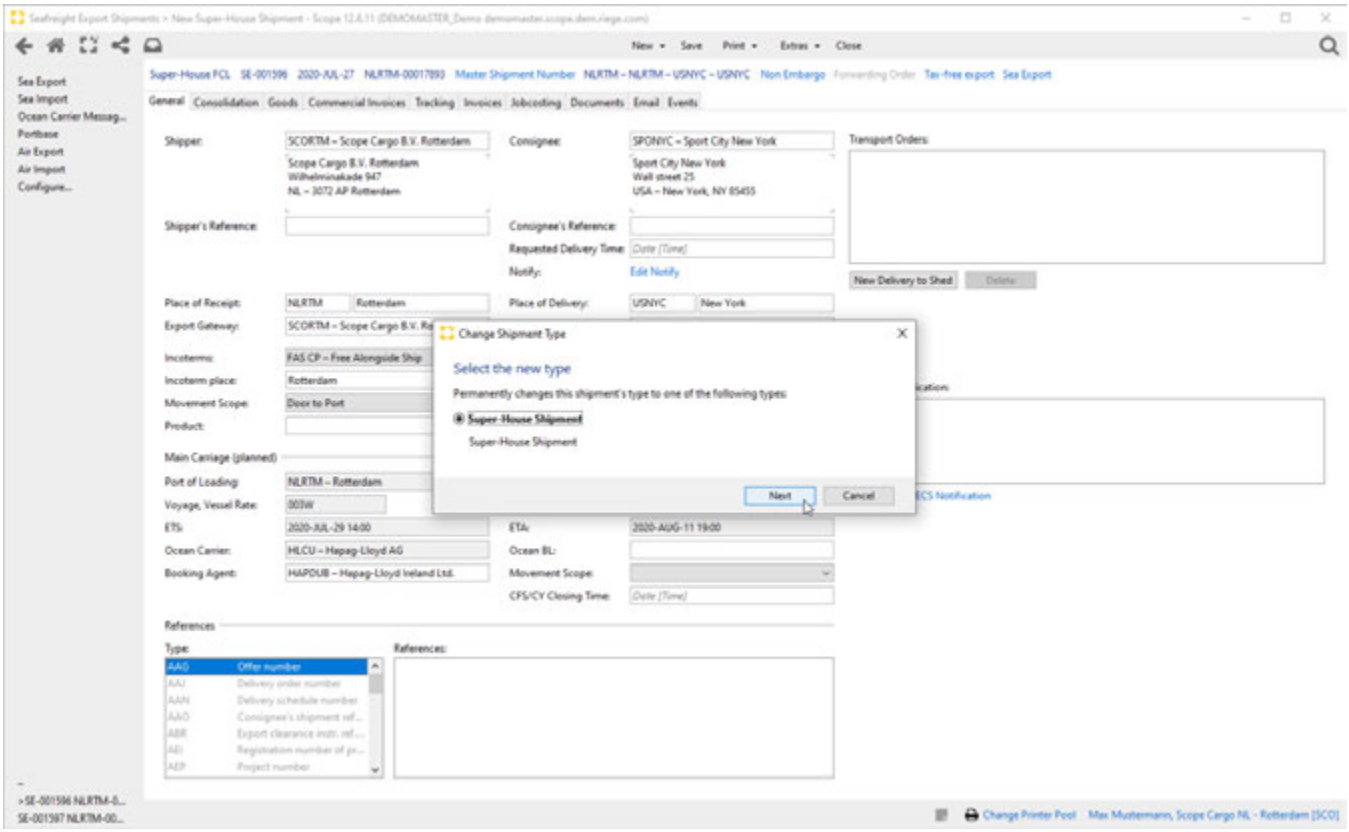
This function opens the screen economic date, where the economic date can be changed.



- Change shipment type

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

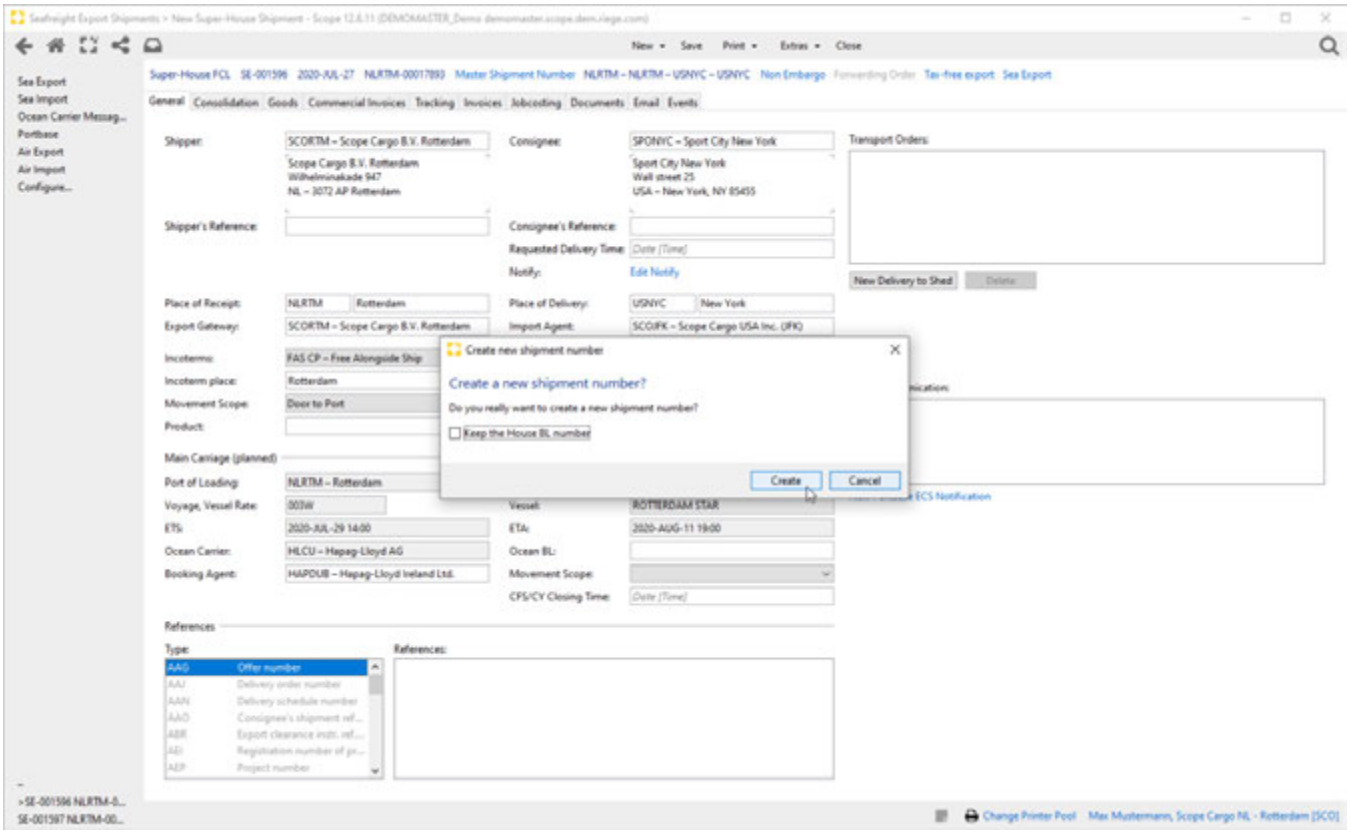
This function opens the screen *Change shipment type* where another available shipment type can be chosen. The Button *Next* confirms the data entry and the shipment type will be changed.



- Create new shipment number

This program action opens the screen *Create new shipment number.* With the button *Create* a new shipment number will be generated; if the flag *Keep the House BL Number* is ticked, House BL Number will stay the same.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change House BL number

This program action opens the screen *Change House BL number.* As soon as the data of a new shipment are saved, Scope automatically generates a House BL number. This can be changed by the user if necessary.

- Quotation

This function can Show, Link or Unlink a quotation for the shipment.

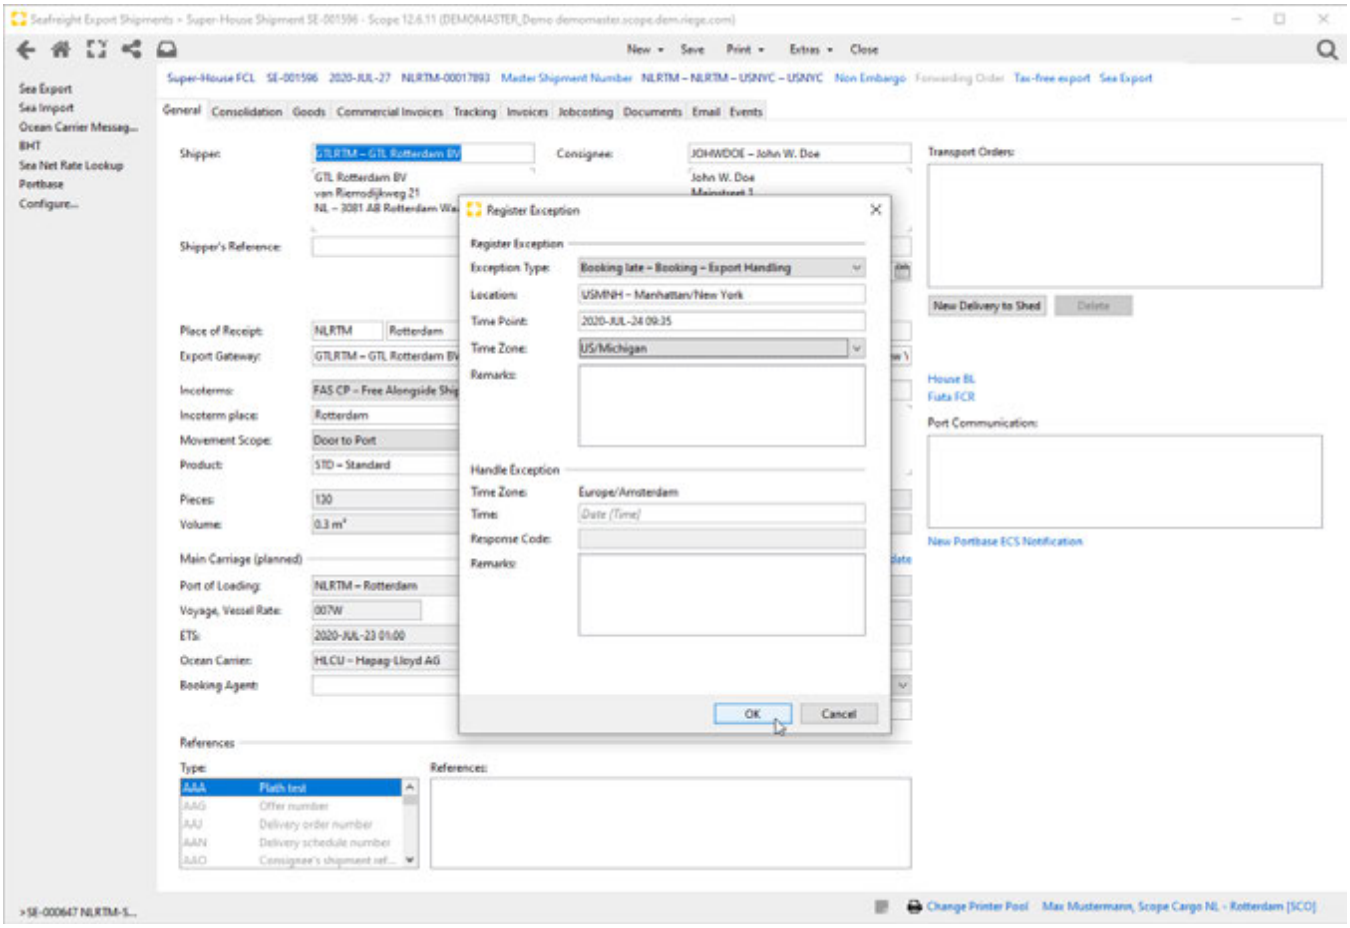
- Pre-Alert EDI

This function is used for generating the Pre-Alert XML. Therefore, the import agent must have a valid EDI profile assigned.

- Register Exception

With this action, exceptions can be created. These represent additional information about the milestones.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



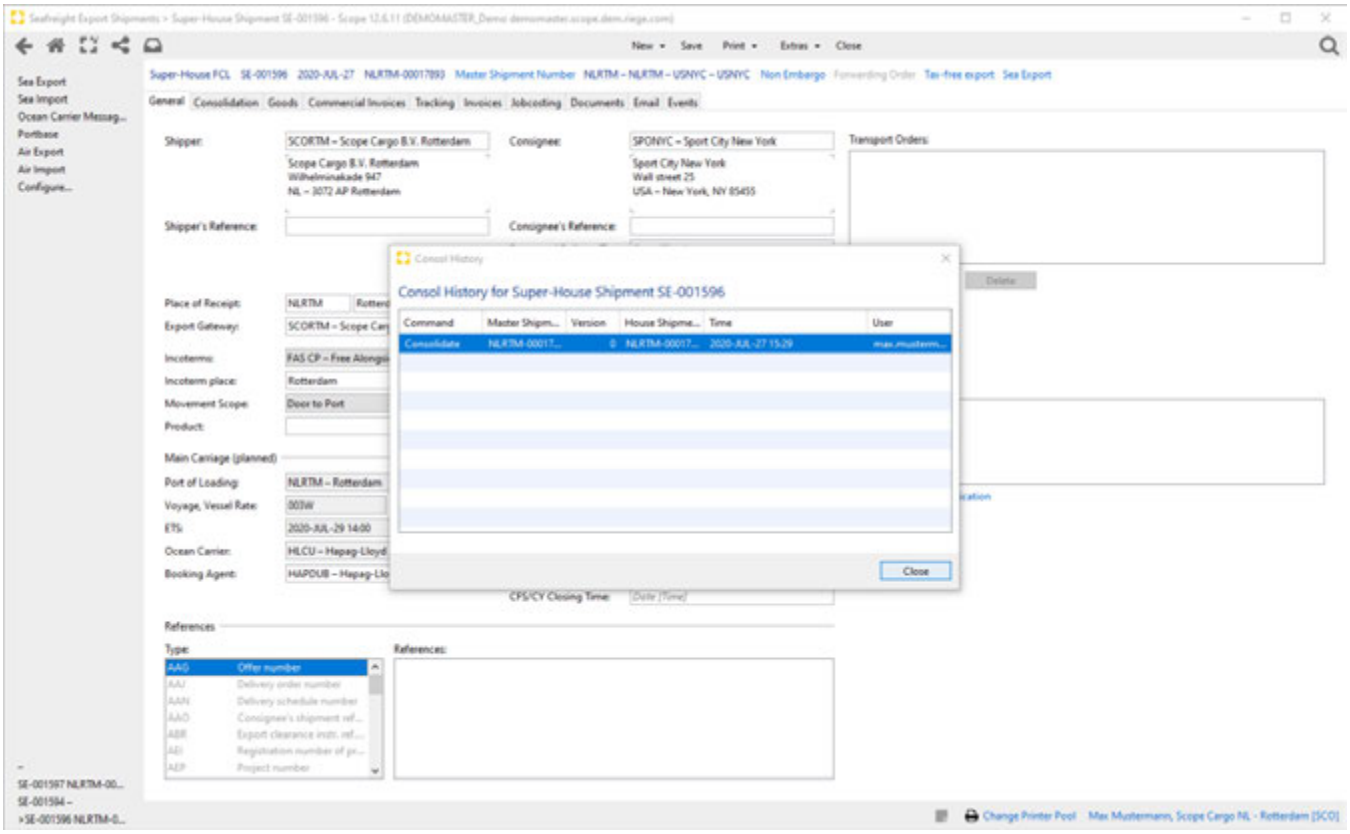
- Consol History (House Shipment)

shows the logged actions on the Consol regarding the House-Shipment

- Consol History (Super-House Shipment)

shows the logged actions on the Consol regarding the Super-House-Shipment FCL

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Web Tracking

Via web tracking, a URL can be copied, or a program can be opened directly in anonymized web tracking.

- Open Template

opens the template that created the shipment

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

- Type of shipment
  Type of shipment. For this is Super-House FCL
- Shipment number
  Assigned by the system after the shipment has been saved for the first time.
- Economic date
  The date can be changed via Extras - Change economic date.
- House BL Number
  House BL Number created by Scope when shipment has been saved for the first time.
- Master Shipment Number
  Shipment number of master shipment where Sub-house shipments has been consolidated.
- Departure port - Destination port
  Departure and destination of the shipment.
- Non Embargo, Approve Embargo
  Embargo Status set due to destination
- Forwarding Order
  Link to a connected Forwarding Order
- Taxability (e.g. "tax-free Export")
  Actionlink indicates the Taxability type and can also be used to change to a new taxability type
- Cost Center (e.g. Air Export)
  By clicking on this action link, the user will be able to change the Cost Center of the shipment.

Field Description

Shipper

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper of the shipment. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Shipper`s reference

Shipper´s reference can be entered here

Consignee`s reference

Consignee`s reference can be entered here

Requested Delivery Time

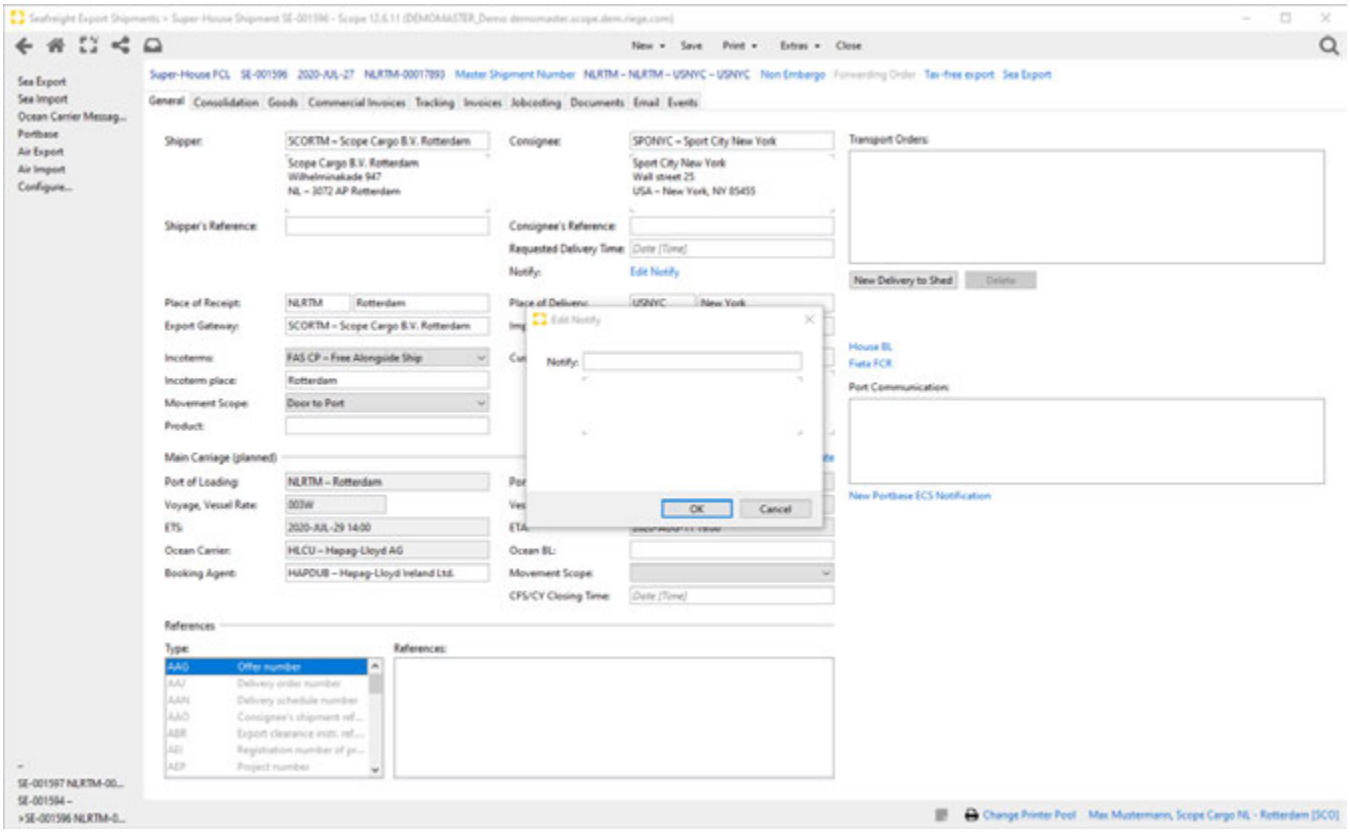
A requested delivery time can be entered here

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify. If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Edit Notify

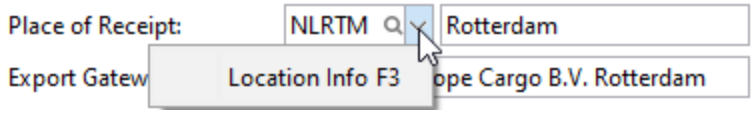
With this action link the editor to add a notify address can be opened. The notify address can be located by using the search field. The context menu of the Partner field provides options for new document addresses to be created or existing document addresses may be edited. In the master data of the partner, if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partner is used in any shipment where this partner is the recipient (consignee).

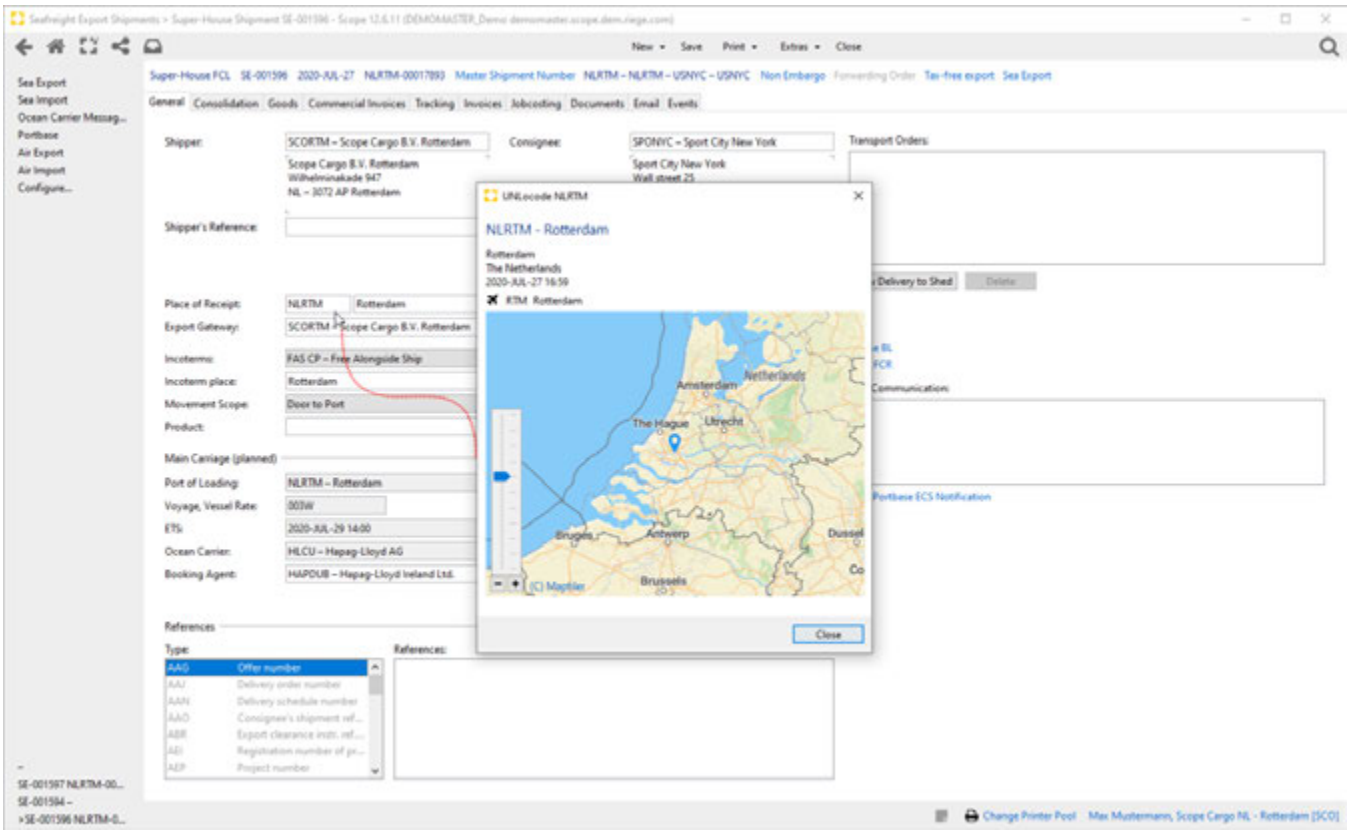


Place of receipt

UNlocode of the place of receipt. The context menu or F3 will open a corresponding map.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.





Place of Delivery

UNlocode of the place of delivery. The context menu or F3 will open a corresponding map.

Export Gateway

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function. Normally the agent who creates house shipment is also the export gateway.

Import Agent

The station who will receive and handle the shipment at the destination. The desired agent can be found using the field search function. The import agent depends on the destination. The field will use the following logic when presenting possible agent choices:

- If no destination has been entered, all agents are offered for selection.
- If a destination has been entered and the master data stores only one agent stored for that destination, then that agent is automatically used the import agent.
- If a destination has been entered and the master data for that destination has been assigned more than one agent, the field is not initialized. Instead, all stored agents are offered for selection.
- If a destination has been entered for which no partner has been assigned as an agent, then the field cannot be completed until an import agent has been created.

Incoterms

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes. The Incoterm fills the value of the fields Movement Scope and Customer automatically, as they determine which costs are charged for the sender (backward) or for the recipient (forward).

Incoterms Place

The place name referenced by the incoterms.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Customer

Generally, the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

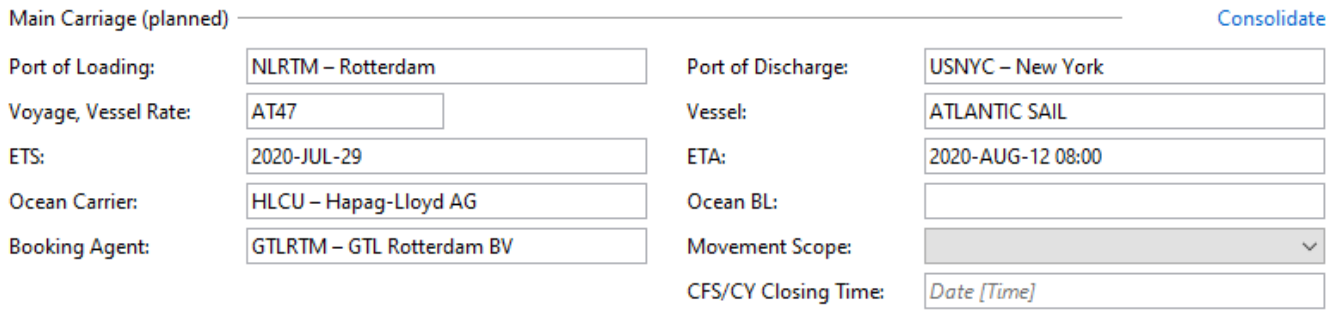
Movement Scope

Movement Scope of the shipment.

Product

The drop-down menu will open a list of all available Products. The Products must be defined in the master data Forwarding Selling Products.

Main carriage (planned)



Port of Loading - Main carriage (planned)

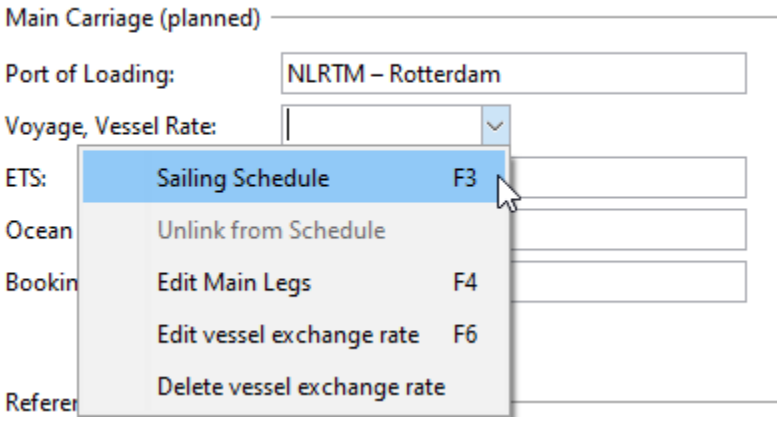
Port of Loading (Departure) of the shipment. The UNLocodes and the full name of the Port are displayed. Either of these can be entered to launch an automatic field search function that will display all ports of destination. The context menu or F3 will open a corresponding map.

Port of Discharge - Main carriage (planned)

Port of Discharge of the shipment. The UNLocodes and the full name of the Port are displayed. Either of these can be entered to launch an automatic field search function that will display all ports of destination. The context menu or F3 will open a corresponding map.

Voyage, Vessel rate vessel - Main carriage (planned)

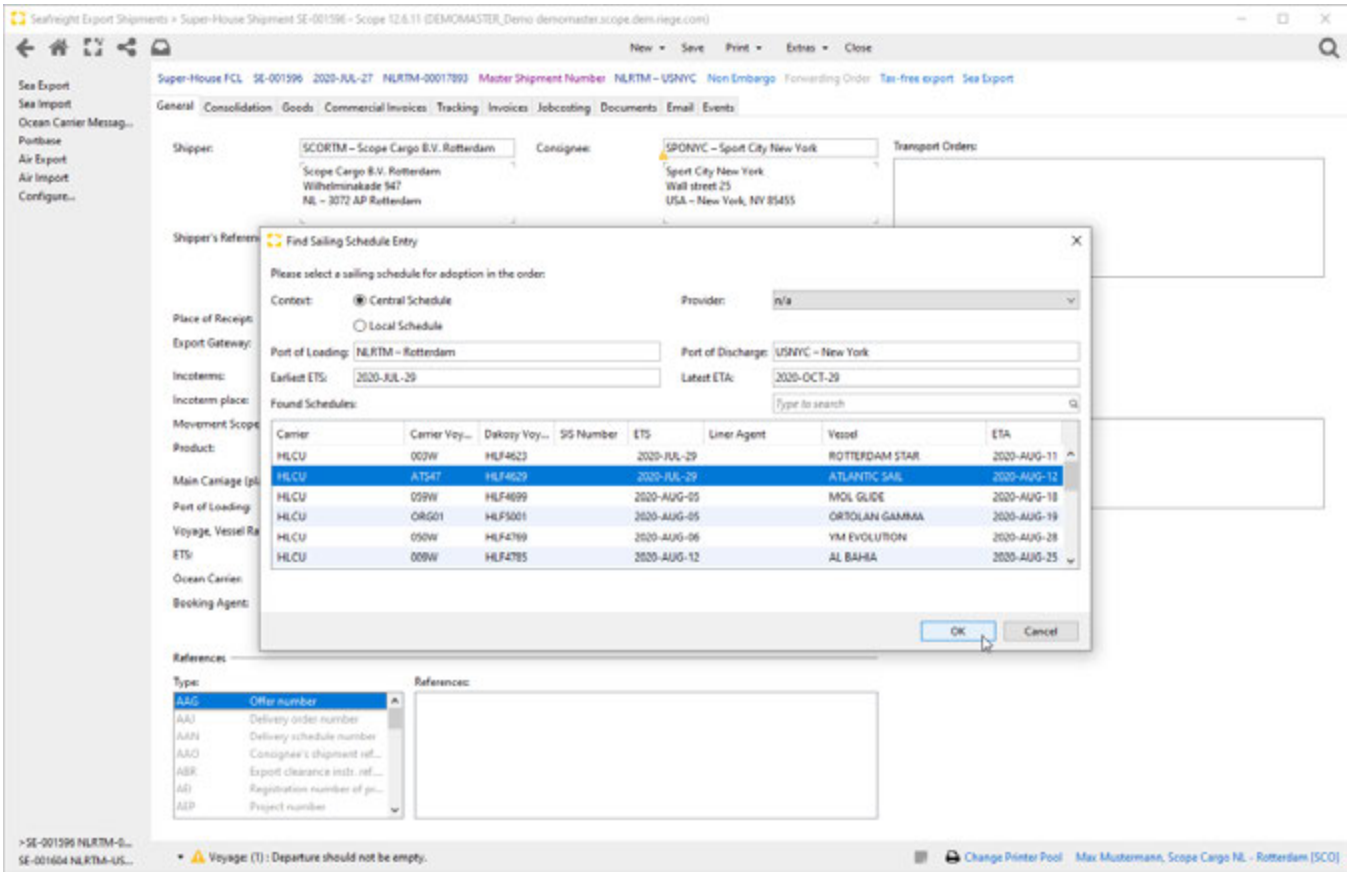
Displays the name of the Voyage. With the integrated drop-down menu, a Sailing schedule can be opened, main legs and vessel exchange rates can be edited.



- Find Sailing schedule F3

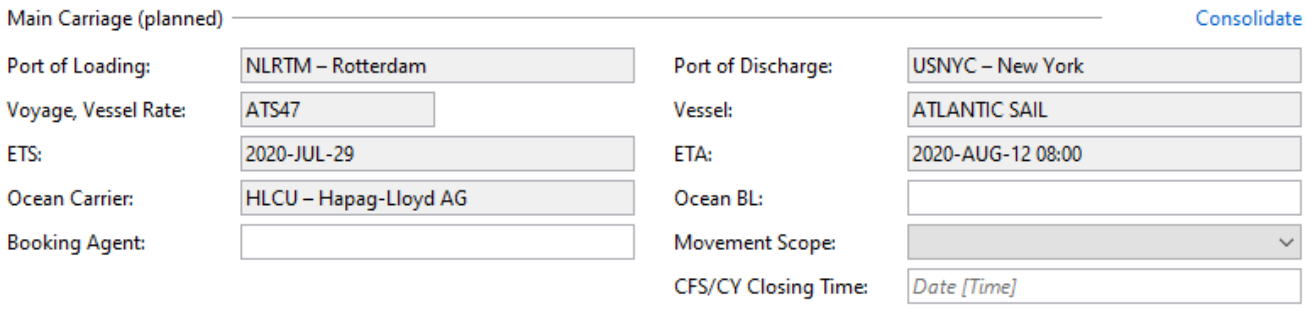
The option Sailing Schedule or F3 opens a Sailing Schedule.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Select sailing schedule entry

Once the Selection of a sailing schedule entry is confirmed with Ok, all corresponding input fields regarding the voyage will be filled automatically with the chosen sailing schedule entry.



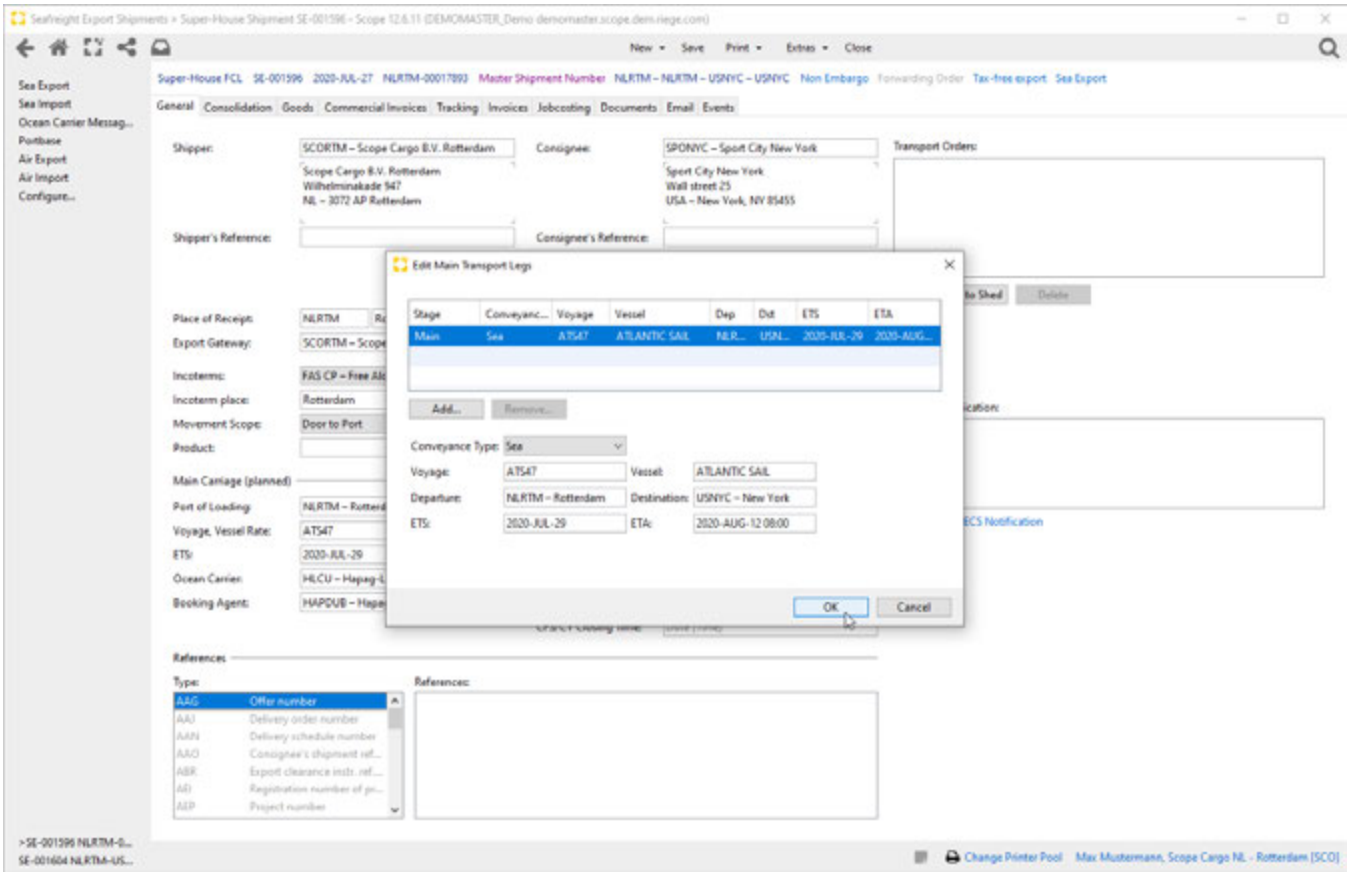
- Unlink from schedule

This function will unlink the shipment from the chosen Selection of from the sailing schedule again and all input fields regarding the main carriage are editable again.

- Edit Main Legs F4

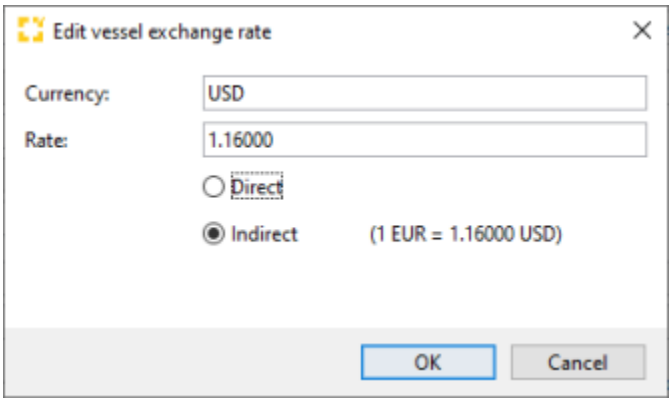
Opens the Edit Main Transport Legs window, where Transport Legs can be added, removed, or just edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Edit vessel exchange rate

Opens a window, where the vessel exchange rate can be edited.



Once the exchange rate has been entered, it is displayed next to the input field Voyage, Vessel Rate.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Delete vessel exchange rate

Will delete an existing vessel exchange rate.

Vessel

Name of the vessel

ETS

Estimated time of departure of the shipment

ETA

Estimated time of Arrival of the shipment

Ocean Carrier

Name of the Ocean Carrier

Ocean BL

Ocean BL Number. Via the integrated drop-down menu, the Consolidate function can be addressed.

Booking Agent

Name and Address of the Booking agent, that can be selected from the partner master data

Movement Scope

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes.

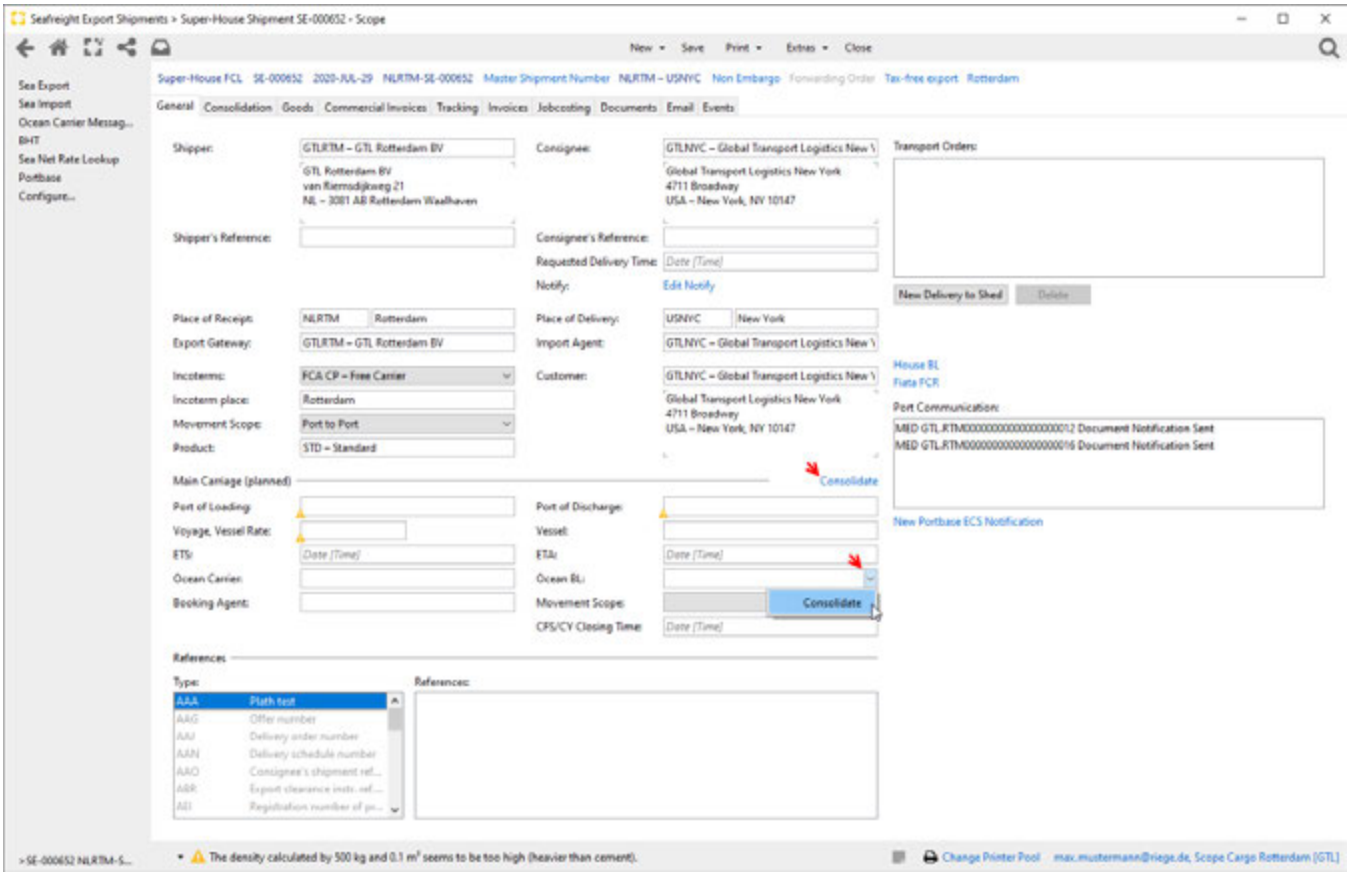
CFS/CY Closing Time

Planned transport closing date for the shipment.

Consolidate / Deconsolidate

The area *main carriage* of the of the Super-House shipment FCL allows the Super-House FCL to be consolidated on a master shipment or deconsolidated if already assigned to an open master shipment. If the Super-House FCL has already been consolidated, then the master shipment can be opened directly at this point to complete the consolidation. Alternatively it is possible to exit the Super-House shipment and complete the consolidation or deconsolidate in the master shipment application. The input dialog can be opened by using the drop-down menu in the field Ocean BL, or using the corresponding Actionlink *Consolidate...* .See also FAQ How-To build a sea export consolidation

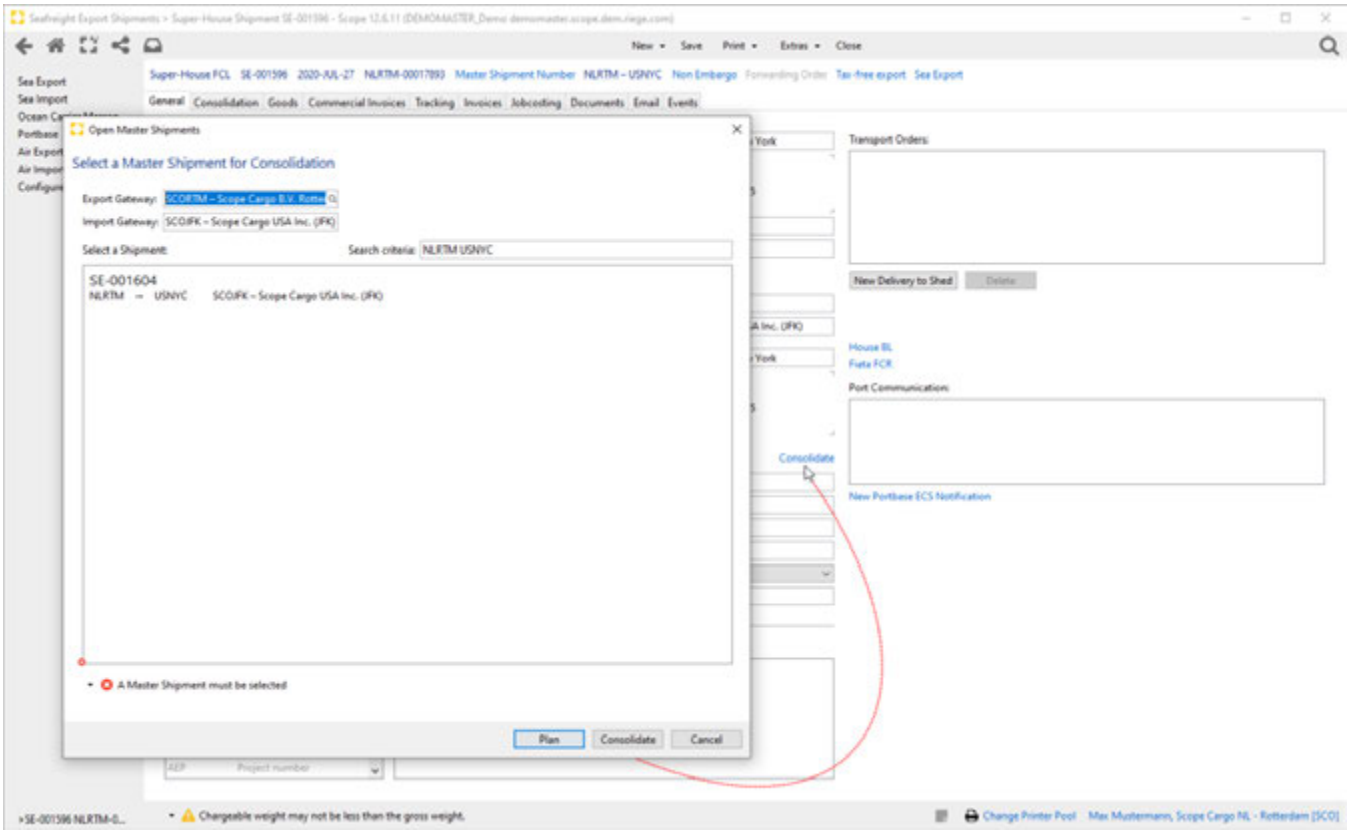
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Consolidate**

If the "consolidate" option is taken, the Open Master Shipments dialog box appears, and an available Master can be selected by choosing the button *Conso lidate*. If the Super-House FCL is consolidated to a Master Shipment the main Carriage Data will be filled with the data from the Master Shipment and appear in the fields regarding the Main Carriage.

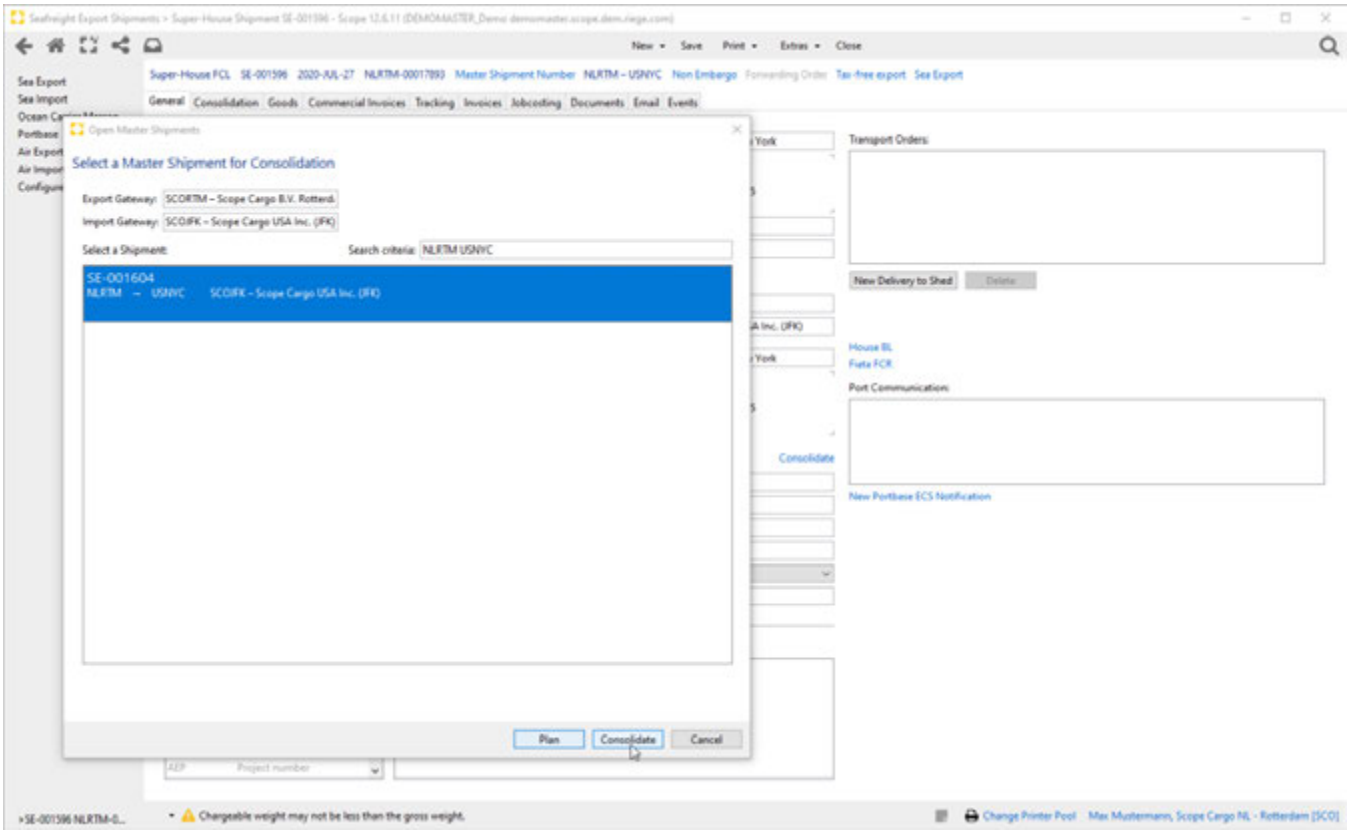
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



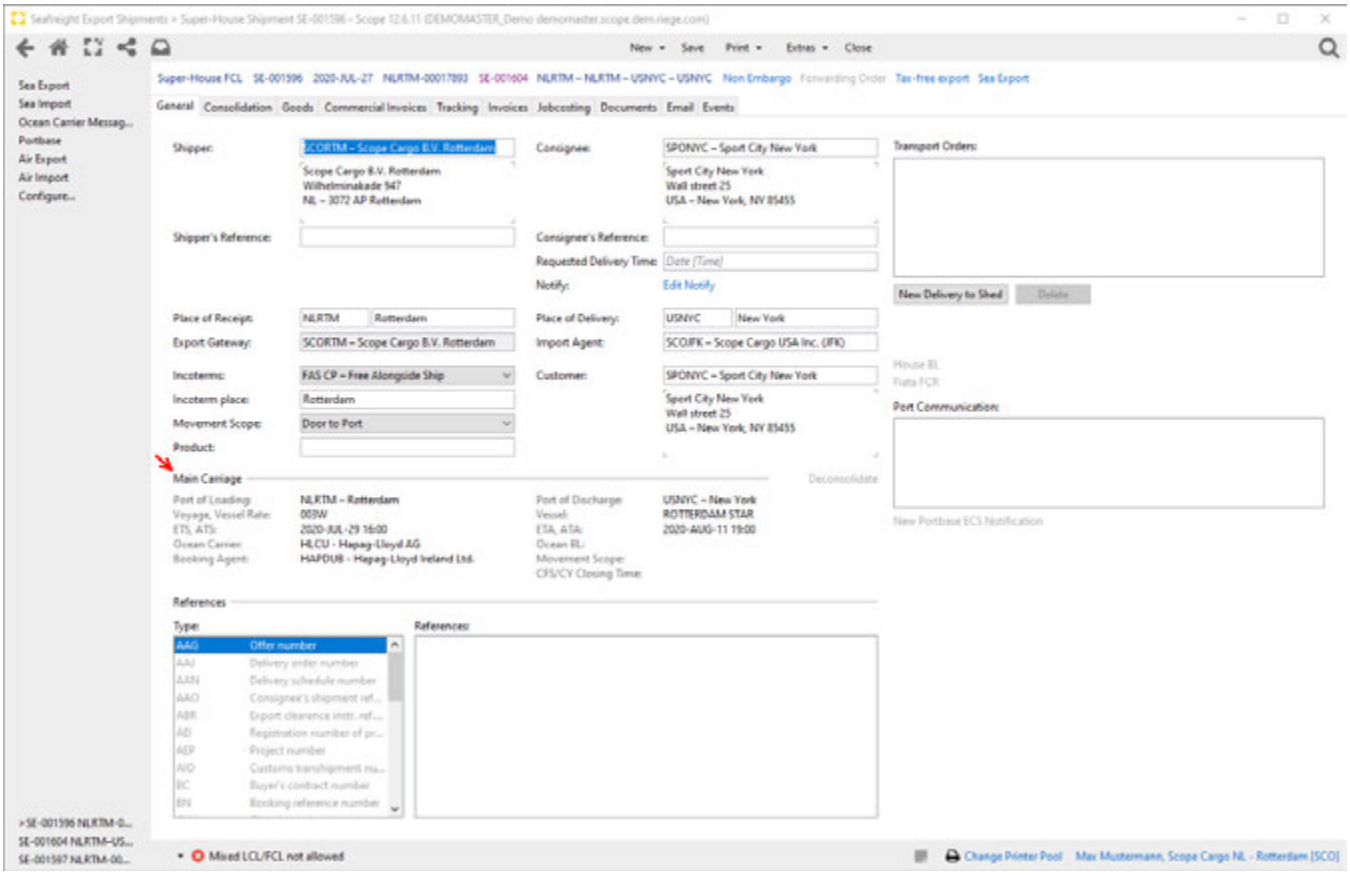
Select Master shipment

In the Open Master Shipments window normally the agent who creates the Super-House FCL shipment is shown as the export gateway. The Import Gateway is the station who will receive and handle the shipment at the destination. The UNLocodes and the full name of the Port can be entered in the field Search criteria to launch an automatic field search function. If the selection is confirmed with the button *Plan*, the consolidation of the Super-House Shipment is not yet confirmed. The Actionlink to *Consolidate* the shipment is still be shown as *Consolidate* and does not change to *Deconsolidate*. The button *Consolidate* confirms the selection and closes the editor shown below. Cancel closes the editor without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



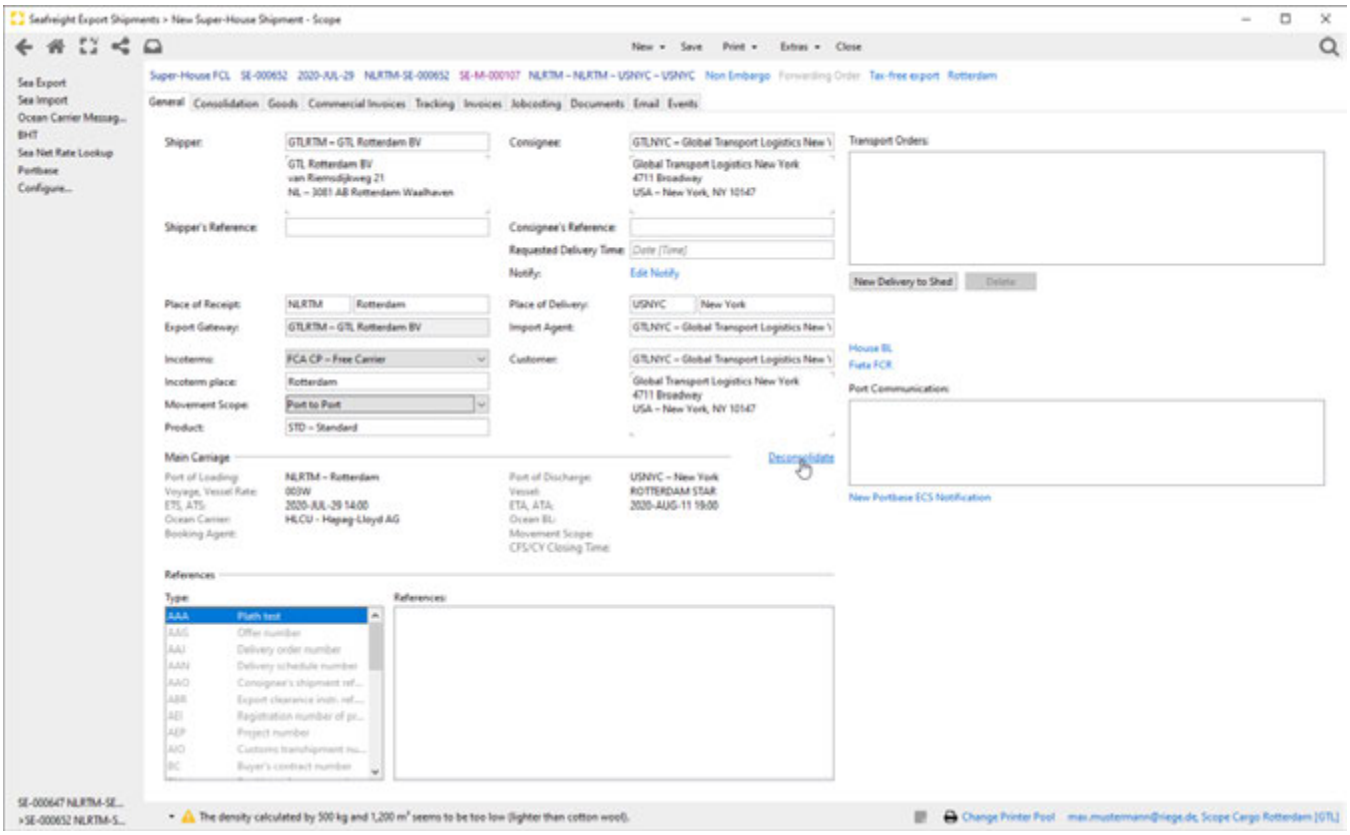
A soon as the Super-House shipment is consolidated on a master shipment, all of this information will appear in the section Main Carriage (planned) from the master.



- **Deconsolidate**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the Super-House FCL is consolidated to a Master Shipment the main Carriage Data will be filled with the data from the Master Shipment and appear in the fields regarding the Main Carriage. The Actionlink shows the option *Deconsolidate* now, instead of the *Consolidate...* option. This link can be clicked to deconsolidate the shipment again. After that, the Consolidate function will be active again.



References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

Transport Orders

In this box transport orders will be shown, or can be issued by using the button *New Delivery to Shed,* or deleted by using the button *Delete*.

see General Tab

Field Description

Consignee

The Consignee address appearing in this field is taken from the field Consignee, entered in the General TAB of the Super-House FCL. If the field is empty, all available House-Shipments will be shown for the selected direction.

Search Criteria

The destination of the available house shipments is used to match them to the destination of the Super-House FCL shipment. The destination of the Super-House FCL shipment is found in the General Tab.

Available House Shipments

`By default, all house shipments are displayed, that match with Search Criteria.`

- When the Consignee and destination are present, only house shipments with matching Consignee and destination will be shown as available for consolidation.
- When the Consignee is left blank, then all open House-Shipments to the destination will be shown regardless of the Consignee that may be present at the house level.
- If the destination is left blank, then all open houses that match the Consignee will be shown, regardless of the destination of the house shipments.
- if both the destination and Consignee are left blank then all open house shipments will be visible regardless of the Consignee or destination of those houses.

Chosen House Shipments

This window displays house shipments that are currently included in the Consolidation. The base of the window shows the total number of houses on the consol, their total number of pieces, gross weight, volume and total chargeable weight.

Add

Moves the highlighted house shipment from the Available House Shipments window to the Chosen House Shipments window to indicate the house is to be included on the consol.

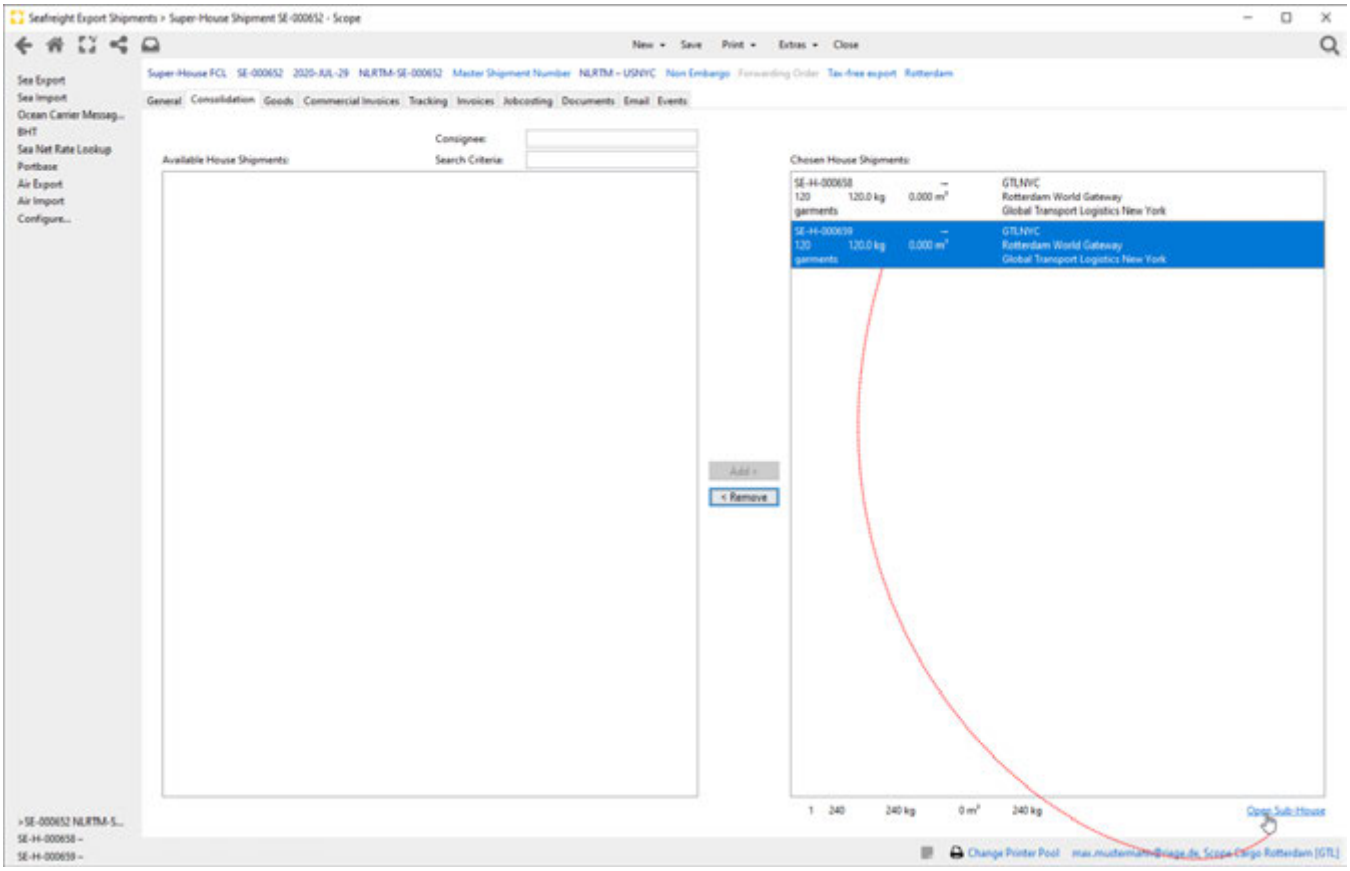
Remove

Removes the highlighted house shipment from the Chosen House Shipments window back to the Available House Shipments window to indicate the Sub-House is to be removed (deconsolidated) from the consol.

Open Sub-House

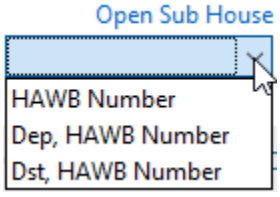
Opens the Sub-House that is marked in the table Chosen House Shipments

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Sort

The selected Sub-House shipments can be sorted using the dropdown menu.



HAWB Number

Sorting is based on house AWB numbers

Dep HAWB Number

Sorting takes place first from departure and within it according to HAWB no.

Des HAWB Number

Sorting takes place first to the destination and within it according to HAWB no.

- **Consolidation TAB - Superhouse FCL consolidated**

As soon as the Super-House FCL is consolidated on a Master Shipment the Consolidation TAB shows the result of the consolidation of the Sub-House shipments in a table and the functions to add or remove further Sub-House Shipments are no longer available.

(g) Jobcosting - Super-House Shipment FCL - Seafreight Export

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated. See also chapter Jobcosting - Functions - General.

- **D** - Direct Shipments
- **B** - Back-to-Back Shipments
- **H** - House Shipments

Keyword Search

To the right of the date and type filters is the keyword search field with the instruction text "Type to search". Any search term can be entered to filter the list of results, for example; customer name, shipper, consignee, depart port etc.

Sorting

The table of shipments visible in the home screen can be sorted by clicking on the individual columns:

Sort Criteria	Description
Type	Shipments are sorted by type-:Direct shipment, house shipment, master shipment.
Shipment number	The shipments are sorted by shipment number in ascending or descending order.
Customer	Shipments are sorted alphabetically by customer name in ascending or descending order.
Dep	Sort shipments by depart port name in alphabetic ascending or descending order.
Dst	Sort shipments by destination port name in alphabetic ascending or descending order.
OceanBL	The shipments are sorted by ocean bill of lading number in ascending or descending order.
HouseBL	The shipments are sorted by house bill of lading number in ascending or descending order.
Order Date	Shipments are sorted chronologically in ascending or descending order using the service date.

Information Area

As each shipment in the summary is highlighted, the details of the shipment appear in the information area of the screen below the summary table.

User Information

The lower right edge of the seafreight export overview displays the user information. By clicking on this link it is possible to switch to a different branch if the correct permissions are available.

Back-to-Back Shipment - Seafreight Import

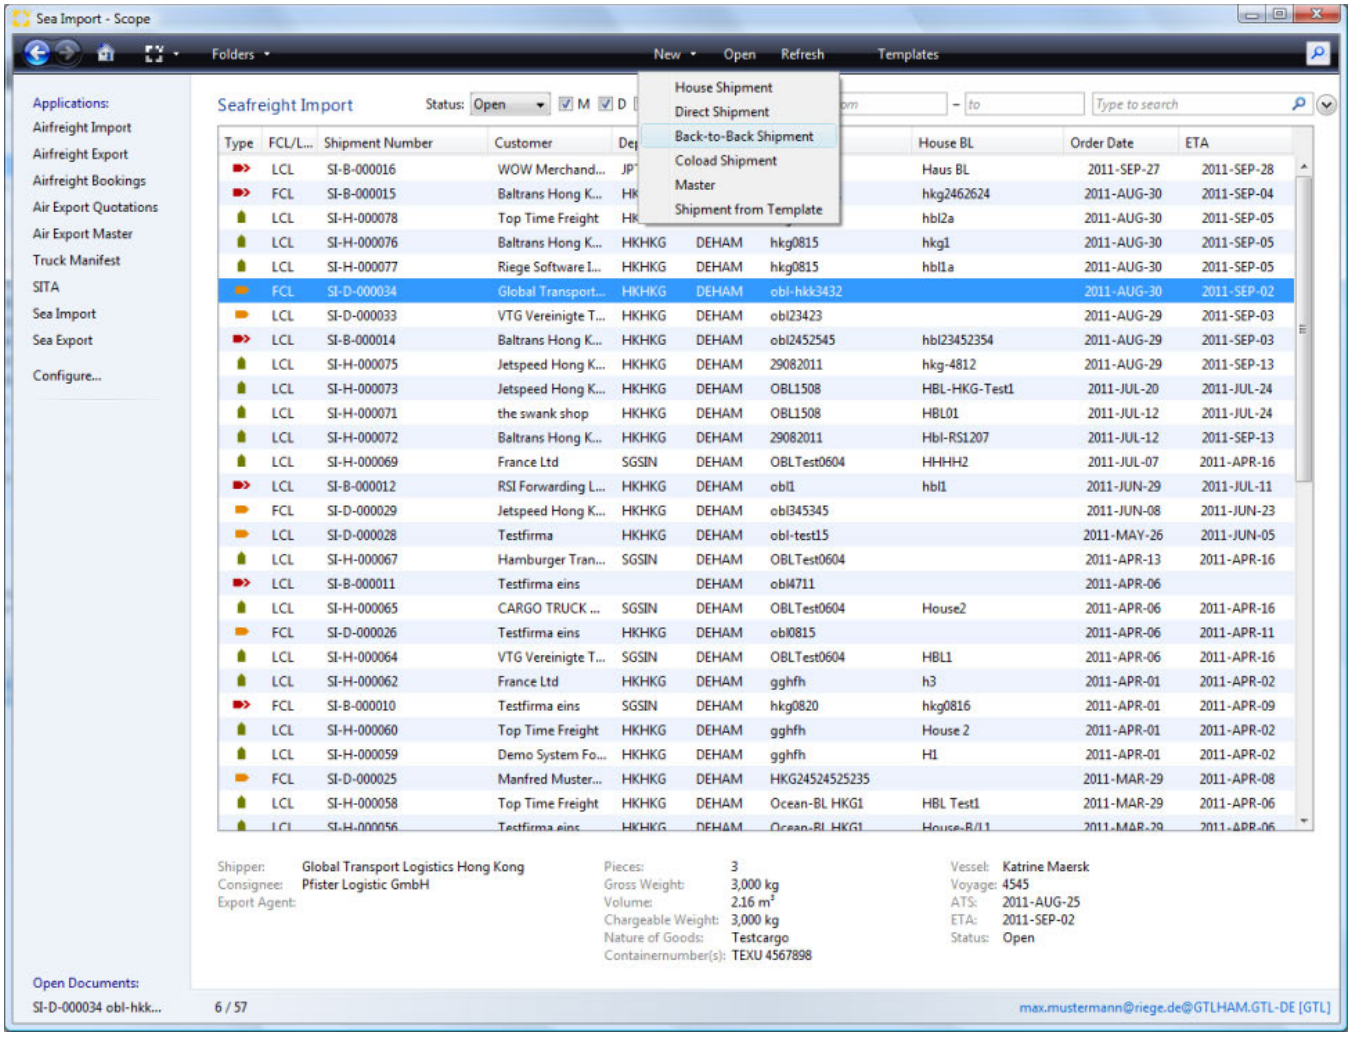
- Introduction
- Description

Introduction

A Back-to-back shipment may be either an LCL or FCL shipment, or it may be a breakbulk shipment or a ro-ro shipment. A single house B/L is issued for a back-to-back shipment and a single ocean B/L or Marine Bill of lading is issued.

Description

Create a back-to-back shipment by clicking the "New" option on the Scope menu bar and from the list of shipment types select "back-to-back shipment". This will open the house shipment "General " tab.



The following tabs are availble to enter back-to-back shipment details:*

- General
- Goods
- Vouchers
- Jobcosting
- Documents
- E-mail

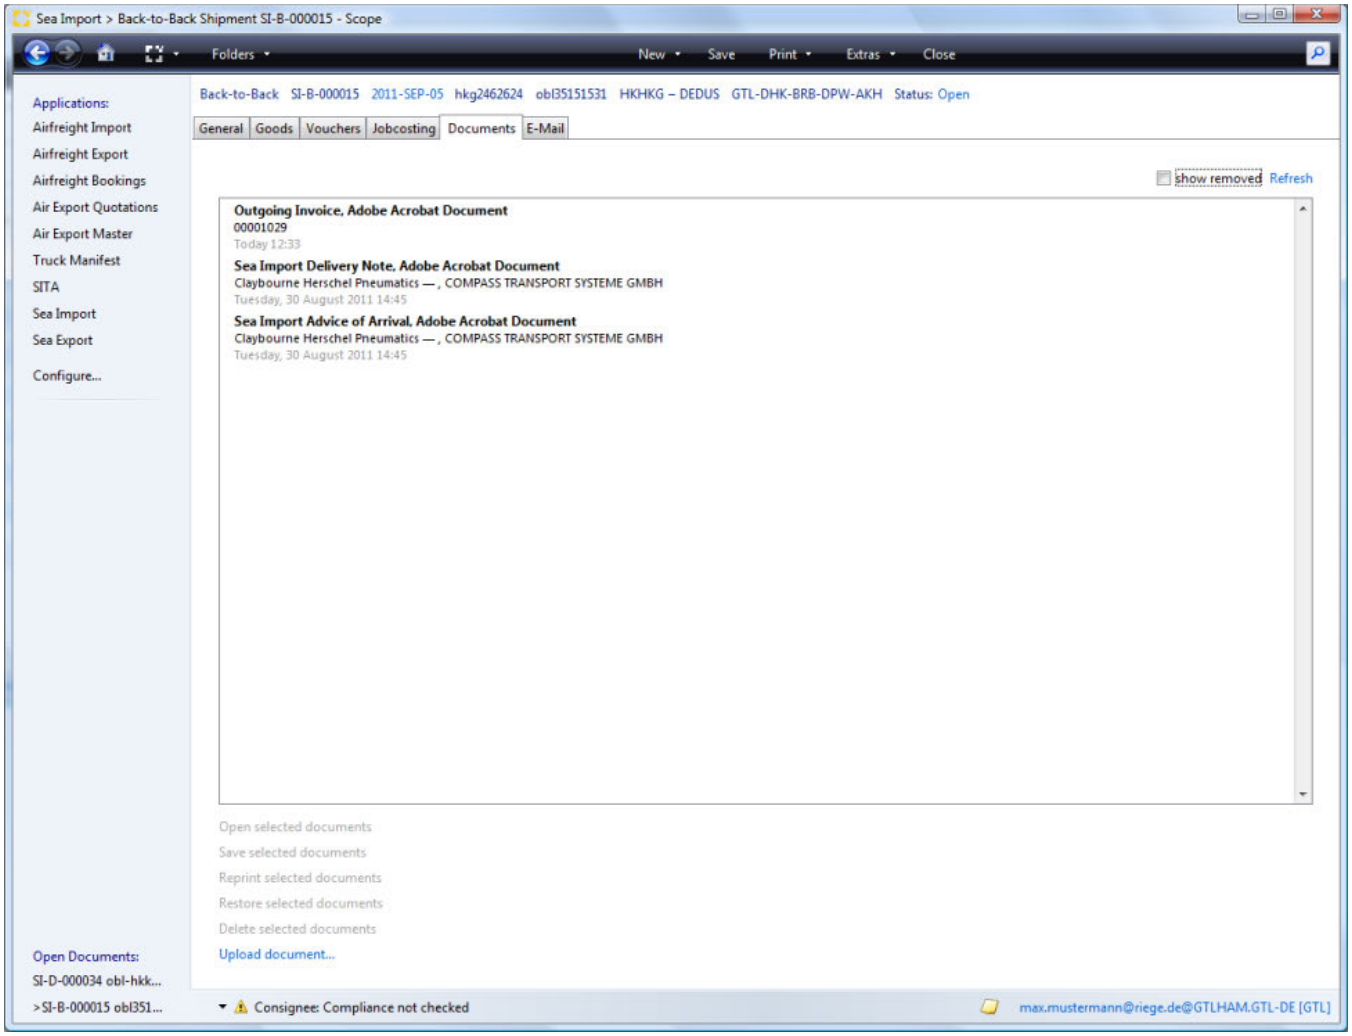
Documents - Back-to-Back Shipments - Seafreight Import

- Introduction
- Description

Introduction

In the *Documents* tab displays in summary form all documents created (transfer orders, arrival notices, invoices, credit notes, invoice cancellations, etc.) The user can also upload documents of different file formats. The user can view and print all the documents shown.

Description



Main menu bar and title bar
Open selected documents
Save selected document
Reprint selected documents.
Upload document...
Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open selected documents

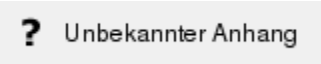
Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

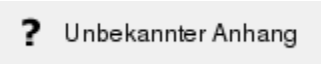
Print the document to the selected printer.

Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.



Update

Updates the current list of documents.

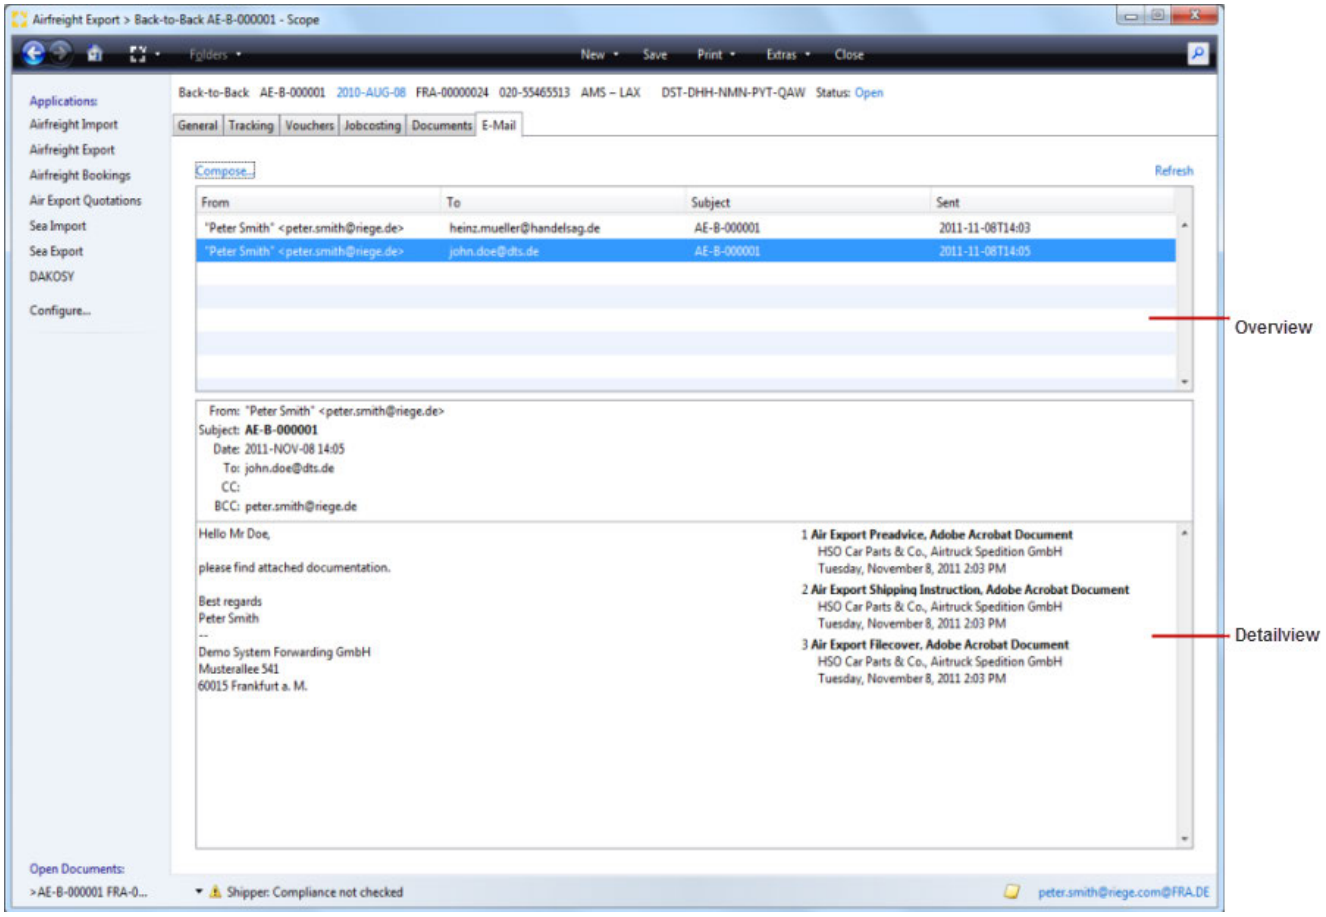
E-mail - Back-to-Back Shipments - Seafreight

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

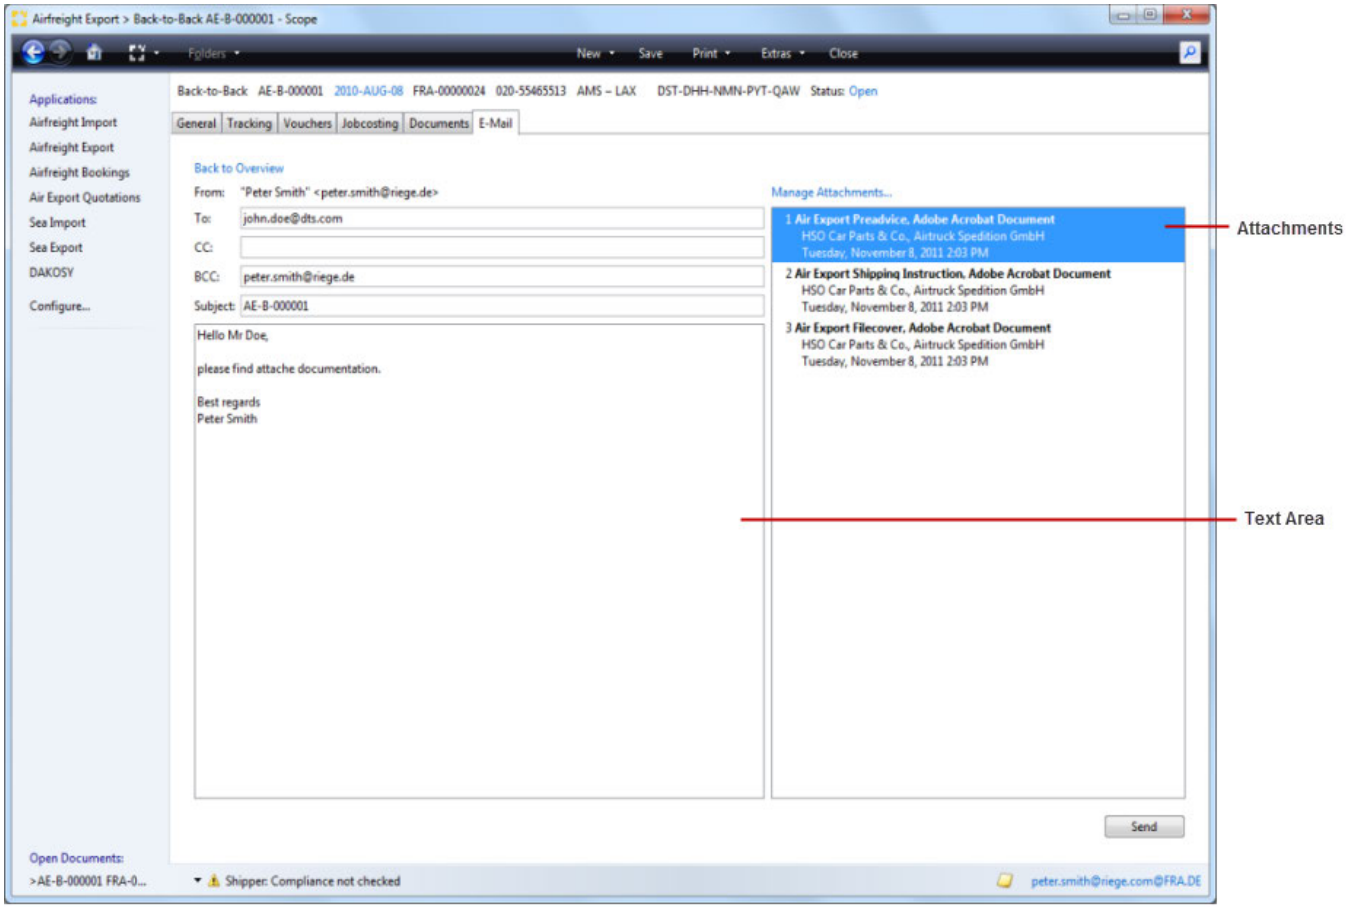
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

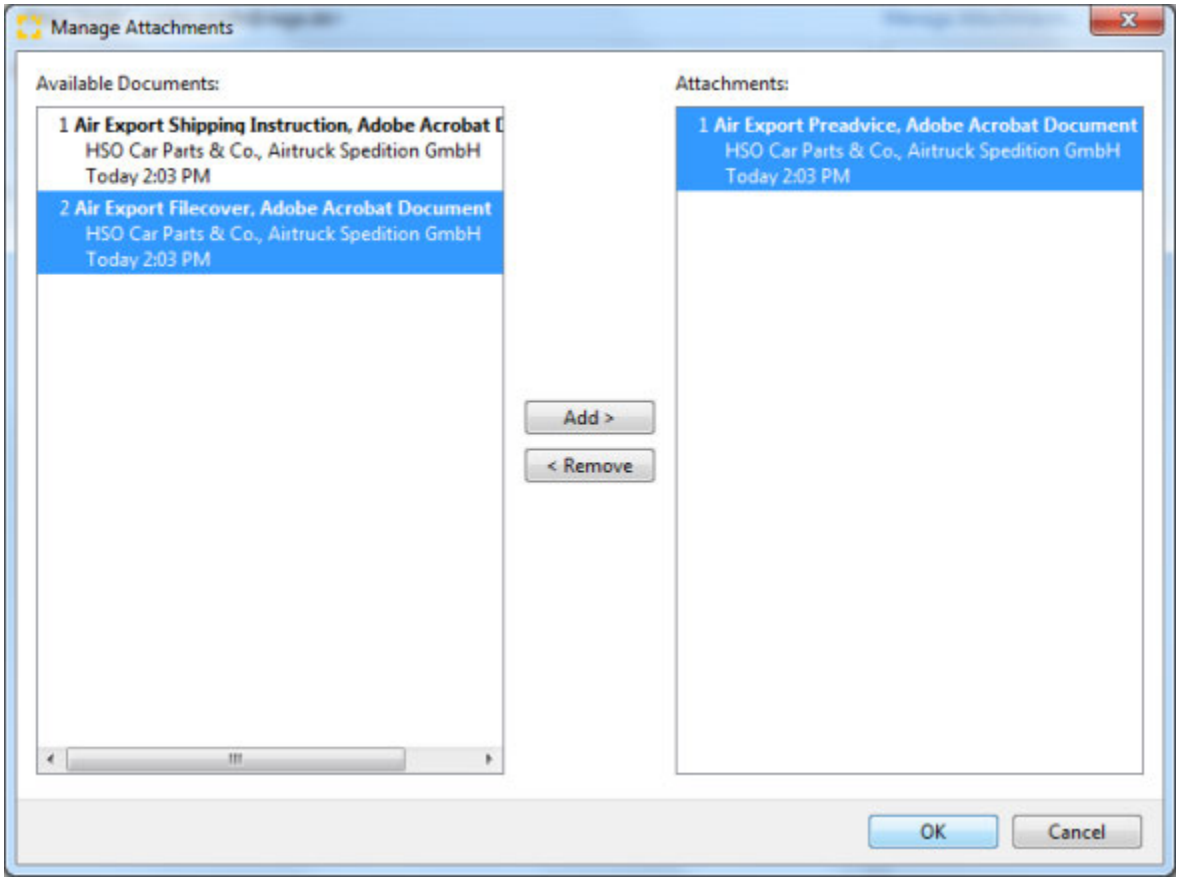
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

General - Back-to-Back Shipment - Seafreight Import

- Introduction
- Description

Introduction

The Back-to-Back editor open at the "General" tab where the parties involved in the shipment, the transport details, summary of the cargo and shipment references can all be recorded. From this tab transport orders can be created and customs information can be entered or customs entries can be created and in some cases transmitted to customs. On saving the information in this tab, a unique shipment number (USI) will be issued for the shipment.

Application actions

In the Scope title bar, various overall functions are available:

New

If sufficient data about the direct shipment has been entered and saved, the "New" option allows:

- New delivery order FCL
- New delivery
- New Customs order

Save

When all mandatory fields for a direct shipment have been entered it is possible to save the direct shipment. At this point a USI is issued.

Print

When the direct shipment is saved this option will allow printing of:

- File cover
- Order confirmation
- Advise of Arrival
- Clearance Instructions Request
- Delivery Note
- Release Order

Extras

When the direct shipment is saved, use the extras option for:

- Create a template (the shipment is used as a template for further shipments)
- Change shipment type - a direct shipment may be changed to:
  --Direct shipment
  --House shipment
  --Coload shipment
  --Master with House

Close

Close the shipment without saving or further action. If there is unsaved data, a dialogue will appear confirming if unsaved data should be discarded.

Title Bar

Above the shipment tabs the title bar appears. This summarizes the details of the shipment and offers further actions:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- **Shipment type**
  This will be "Back-to-Back".
- **Shipment number**
  This unique number (USI) is generated on first saving the shipment. Prior to saving it will display the greyed text *direct shipment*. After saving the shipment number will be generated in the format of the 2 digit mode "SI" (Sea Import) followed by the 1 digit shipment type "B" (Back-to-Back) followed by a 6 digit shipment number.
- **Service date**
  If the arrival ate (A.T.A.)is present on first saving, this will be the service date. If not present then the estimated arrival date will be used.
- **House BL**
- **OBL Number**
  The OBL of the back-to-Back shipment
- **Depart and destination port codes**
- **Internal USI**
- **Status**
  The status will be "Open" until the shipment is billed. By clicking this item the shipment can be manually closed.

Tabs

All available tabs are displayed. The focus will be on the open tab.

Application area

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Edit Partner

Opens the business partner editor , where the partner can be edited.

Edit address

Opens an editor to change the address for the current shipment.

Update address

Updates the address.

Use default address

Sets address to the default address for the field stored in the master address data.

Edit document address

The option "Edit document address" allows the selected address to be edited as required, but these changes are not stored as master data and only appear on this shipment.

New Partner

The option "New Partner" opens the master data maintenance in order to create a new business partner in the Scope database. This new address will then be available as a shipper for example.

Compliance check

Performs an address compliance check.

Edit contact description

Opens a window where a new contact and details can be entered for this shipment.

House BL

The house bill of lading issued by the exporting agent.

Ocean BL

The ocean bill of lading number issued by the carrier.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Incoterms place

The place name referenced by the incoterms.

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of departure

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Shipper's Reference

References used by the shipper to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *R eferences* section of the general tab.

Consignee's Reference

References used by the consignee to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *References* section of the general tab.

Carrier

The owner of the vessel that will carry the goods. This will be the SCAC code and name of the carrier.

Voyage / Transport legs

The voyage number of the vessel may be entered directly. The drop down menu also offers access to the _Transport legs _ editor, which allows details of a multi-leg sailing to be entered.The F3 function key can also be used to call the _Transport legs _ editor.

? Unbekannter Anhang

Voyage

The voyage number of the leg.

Vessel

The name of the vessel for the leg.

Dep

The depart port of the leg

Dst

The arrival port for the leg

A.T.S.

The actual date the vessel departed.

E.T.A.

The estimated date of arrival for the vessel.

A.T.A.

The actual date of arrival for the vessel.

Add

Add a new leg.

Remove

remove the leg highlighted in the list of voyages.

OK

Save the data and exits the *Tranport Leg* editor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Cancel

Cancels selection of a sailing without further action

Vessel

The vessel on which the goods will be loaded.

Liner Agent

The agent of the steamship line to whom the goods will be delivered for export. Only carrier addresses will be available using the search field

A.T.S.

The date and time the cargo departed from the port of departure. This is a date and time field, use the drop down option to select from the calendar

4. E.T.A.

The estimated arrival date and time of the vessel. This is a date and time field, use the drop down option to select from the calendar

A.T.A.

The actual arrival date and time of the vessel at the port of discharge. This is a date and time field, use the drop down option to select from the calendar

Total Number, Type

In the left field the number of packages will be entered. In the right field the packing type is entered (cardboard boxes, pallets, crates ...). The available packing types are maintained in the master data packing types maintenance program . The total entered in these fields defaults to the "goods" tab automatically, and further details about the goods may be entered there.

Gross Weight, Volume

The gross weight of the shipment. This is defaulted in kilograms (kg). If the symbol "kg" is changed to "lb", the total will automatically convert to "kg". In the right pane the total cubic volume i record. This will default to cubic meters (m3). If the symbol "m3" is changed to "CFT" the figure is assumed to be in cubic feet and will automatically convert to "m3"
The data entered in these fields automatically transfers to the to the "goods" tab.

Nature of Goods

A short description of the goods. This is a brief synopsis of the goods to be transported. The data entered in this fields automatically transfers to the to the " goods" tab.

Chargeable Weight

This field displays the freight ton (Frt). It is calculated automatically using a comparison of weight (1 t) versus volume (1 m3). The higher value (ton or volume) is the freight ton.

Export Agent

The agent responsible for shipping the goods from the port of departure. This field will only display partners who are stored with the role "Agent".

Reference

The various reference numbers for the shipment are entered here using the references application

Documents area

New Delivery

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application. New delivery orders will appear in the window above the "New Delivery" action link.

Delete Transport order

Any existing delivery orders will be shown in the window above the "New Delivery" action link. The "Delete Transport order" action link will delete any highlighted existing delivery order in this window.

Customs Area

New Customs Order

Opens the customs order editor.

Assignment of a cargo item to a container
Cargo Detailed Description

Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
? Unbekannter Anhang	Container
? Unbekannter Anhang	Cargo

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
	Adds a new container
? Unbekannter Anhang	Adds a new piece of cargo
? Unbekannter Anhang	Removes a piece of cargo or container
	Moves the item up the list
	Moves the item down the list

LCL or Breakbulk direct shipment

When the direct shipment is not containerized a minimum of 1 cargo item should be present and cargo items can be added by clicking on the ? Unbekannter Anhang icon.

For each cargo item detailed information can be added in the sub tabs:

- Cargo description
- Dangerous Information

FCL Shipment

If the cargo is shipped containerized then the container details must be added using the ? Unbekannter Anhang icon. This will open a container entry screen on the right where the full container details are recorded. On completion of the container details, at least one cargo item must be added to the container using the ? Unbekannter Anhang icon.

? Unbekannter Anhang

Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489.

Unknown

If the "Unknown" box is checked, then the container number can be left empty.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Shipper's owned

Check the "Shipper's owned" box if the carrier owns the container.

Seal

The container seal number

Type

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Remarks

Any remarks particular to this container

Total pieces

The total number of pieces in the container. This is derived from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargo items:

Jobcosting - Back-to-Back Shipment - Seafreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

- Description

Introduction

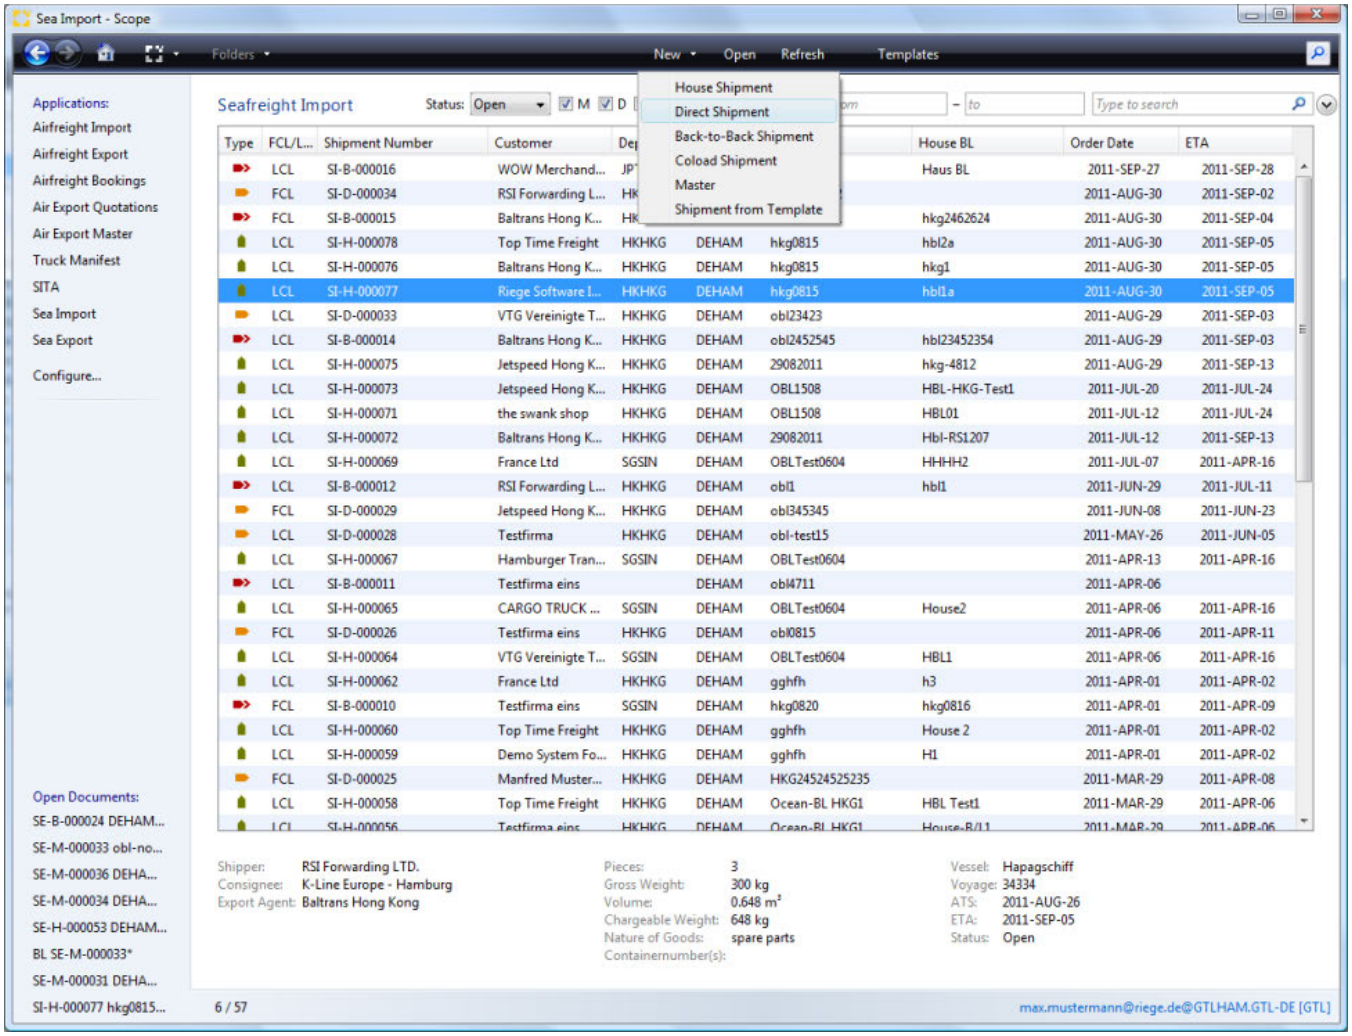
A direct shipment may be either an LCL or FCL shipment, or it may be a breakbulk shipment or a ro-ro shipment. There is no house B/L issued for a direct shipment, instead a single ocean B/L or Marine Bill of lading is issued. In addition there is no import agent for a direct shipment since management of the goods on arrival is handled by the Carrier, who hand the goods over to the import agent at the port of arrival according to the instructions of the Consignee. This application allows the collection of all information for the creation of a direct shipment, generation of documentation of communication of data to partners and authorities.

Description

Create a direct shipment by clicking the "New" option on the Scope menu bar and from the list of shipment types select "Direct". This will open the direct shipment "General " tab.



The following tabs are availble to enter direct shipment details:

- General
- Goods
- Vouchers
- Jobcosting
- Documents
- E-mail

Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open selected documents

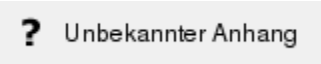
Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

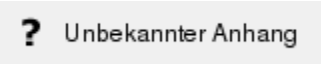
Print the document to the selected printer.

Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.



Update

Updates the current list of documents.

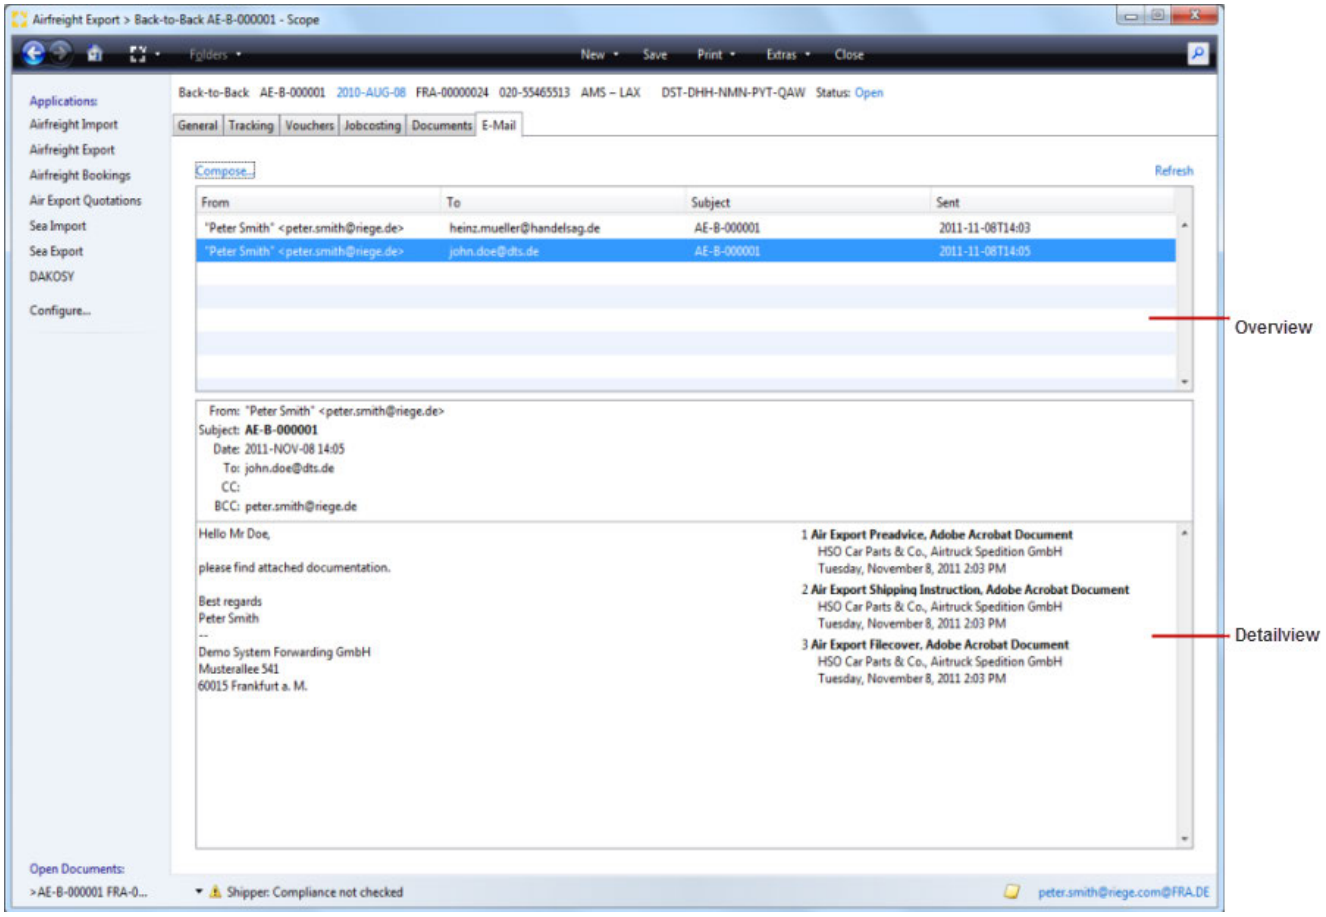
E-mail - Direct Shipment - Seafreight Import

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

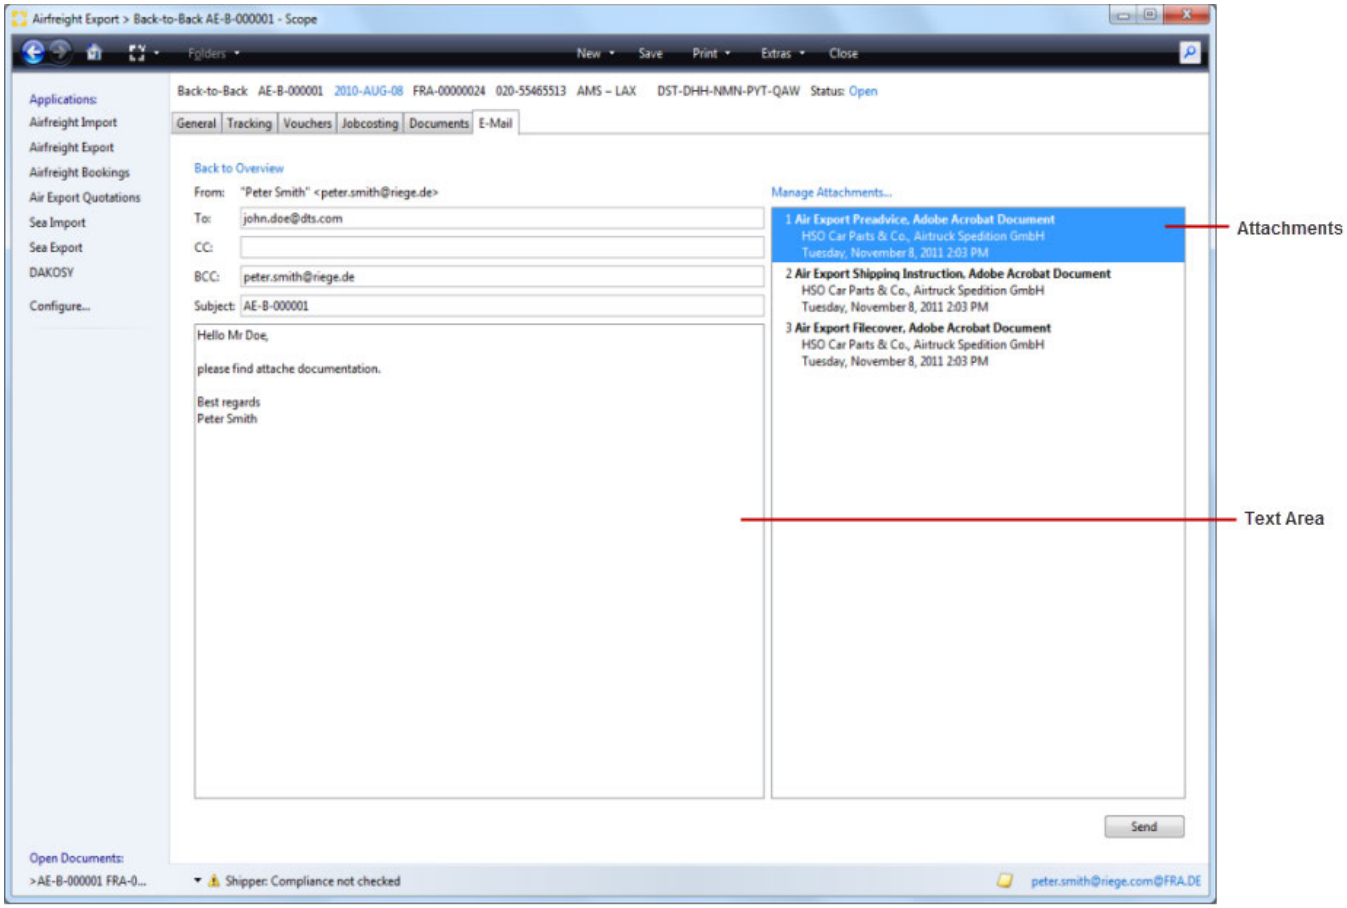
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

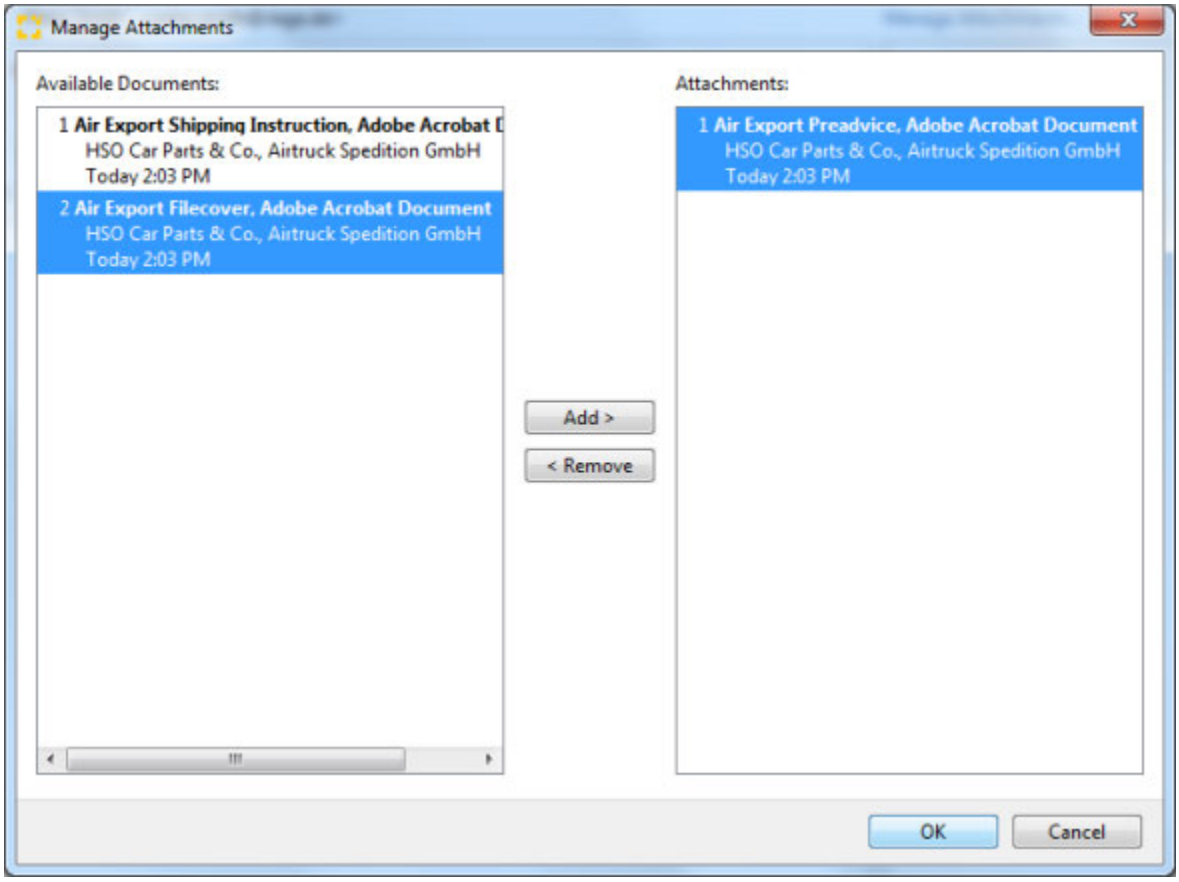
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

General - Direct Shipment - Seafreight Import

- Introduction
- Description

Introduction

The "General" tab of the direct shipment captures the parties involved in the shipment, the transport details, summary of the cargo and shipment references. From this tab transport orders can be created and customs information can be recorded or customs entries can be created and in some cases transmitted to customs. On saving the information in this tab, a unique shipment number (USI) will be issued for the shipment.

Application actions

In the Scope title bar, various overall functions are available:

New

If sufficient data about the direct shipment has been entered and saved, the "New" option allows:

- New delivery order FCL
- New delivery
- New Customs order

Save

When all mandatory fields for a direct shipment have been entered it is possible to save the direct shipment. At this point a USI is issued.

Print

When the direct shipment is saved this option will allow printing of:

- File cover
- Order confirmation
- Advise of Arrival
- Clearance Instructions Request
- Delivery Note
- Release Order

Extras

When the direct shipment is saved, use the extras option for:

- Create a template (the shipment is used as a template for further shipments)
- Change shipment type - a direct shipment may be changed to:
  --Back-to-Back shipment
  --House shipment
  --Master with House

Close

Close the shipment without saving or further action. If there is unsaved data, a dialogue will appear confirming if unsaved data should be discarded.

Title Bar

Above the shipment tabs the title bar appears. This summarizes the details of the shipment and offers further actions:

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- **Shipment type**
  This will be "Direct" indicating a direct shipment.
- **Shipment number**
  This unique number (USI) is generated on first saving the shipment. Prior to saving it will display the greyed text *direct shipment*. After saving the shipment number will be generated in the format of the 2 digit mode "SI" (Sea Import) followed by the 1 digit shipment type "D" (Direct) followed by a 6 digit shipment number.
- **Service date**
  If the arrival ate (A.T.A.)is present on first saving, this will be the service date. If not present then the estaimated arrival date will be used.
- **OBL Number**
  The OBL of the direct shipment
- **Depart and destination port codes**
- **Internal USI**
- **Status**
  The status will be "Open" until the shipment is billed. By clicking this item the shipment can be manually closed.

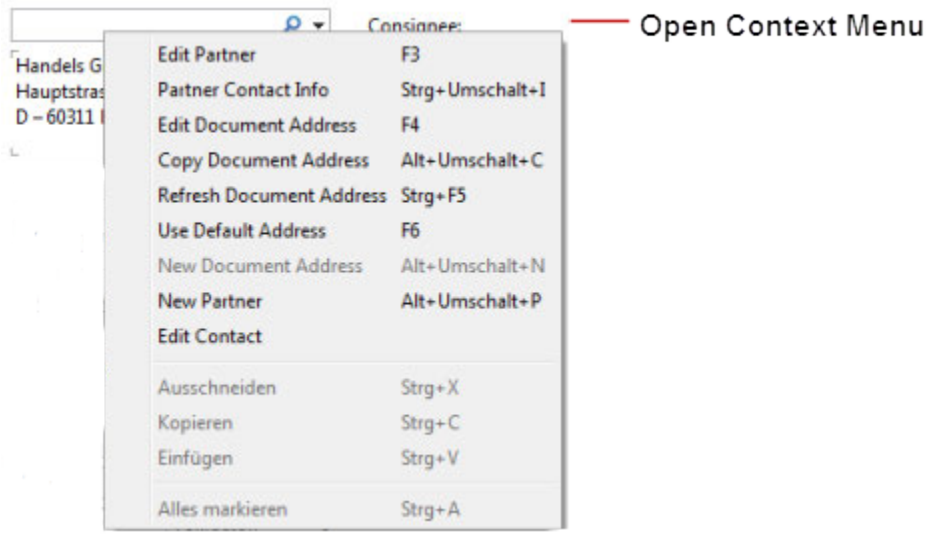
Tabs

All available tabs are displayed. The focus will be on the open tab.

Application area

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.



Edit Partner

Opens the business partner editor , where the partner can be edited.

Edit address

Opens an editor to change the address for the current shipment.

Update address

Updates the address.

Use default address

Sets address to the default address for the field stored in the master address data.

Edit document address

The option "Edit document address" allows the selected address to be edited as required, but these changes are not stored as master data and only appear on this shipment.

New Partner

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The option "New Partner" opens the master data maintenance in order to create a new business partner in the Scope database. This new address will then be available as a shipper for example.

Compliance check

Performs an address compliance check.

Edit contact description

Opens a window where a new contact and details can be entered for this shipment.

Ocean BL

The ocean bill of lading number issued by the carrier.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Incoterms place

The place name referenced by the incoterms.

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of departure

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Shipper's Reference

References used by the shipper to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *R eferences* section of the general tab.

Consignee's Reference

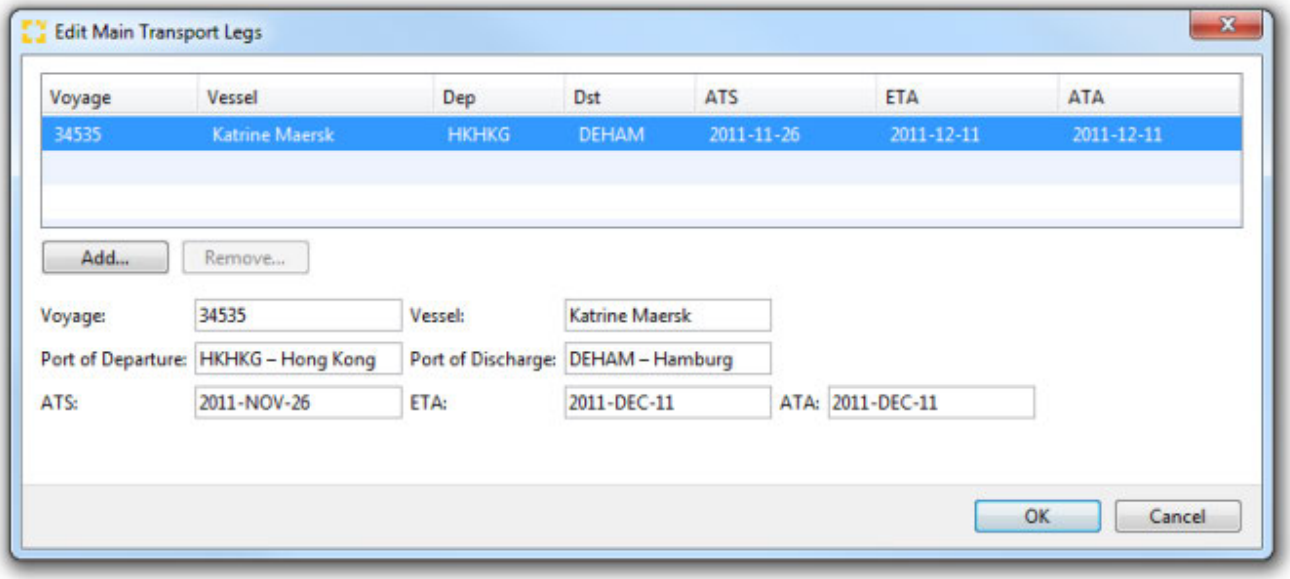
References used by the consignee to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *References* section of the general tab.

Carrier

The owner of the vessel that will carry the goods. This will be the SCAC code and name of the carrier.

Voyage / Transport legs

The voyage number of the vessel may be entered directly. The drop down menu also offers access to the _Transport legs _ editor, which allows details of a multi-leg sailing to be entered.The F3 function key can also be used to call the _Transport legs _ editor.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Voyage

The voyage number of the leg.

Vessel

The name of the vessel for the leg.

Dep

The depart port of the leg

Dst

The arrival port for the leg

A.T.S.

The actual date the vessel departed.

E.T.A.

The estimated date of arrival for the vessel.

A.T.A.

The actual date of arrival for the vessel.

Add

Add a new leg.

Remove

remove the leg highlighted in the list of voyages.

OK

Save the data and exits the *Tranport Leg* editor.

Cancel

Cancels selection of a sailing without further action

Vessel

The vessel on which the goods will be loaded.

Liner Agent

The agent of the steamship line to whom the goods will be delivered for export. Only carrier addresses will be available using the search field

A.T.S.

The date and time the cargo departed from the port of departure. This is a date and time field, use the drop down option to select from the calendar

4. E.T.A.

The estimated arrival date and time of the vessel. This is a date and time field, use the drop down option to select from the calendar

A.T.A.

The actual arrival date and time of the vessel at the port of discharge. This is a date and time field, use the drop down option to select from the calendar

Total Number, Type

In the left field the number of packages will be entered. In the right field the packing type is entered (cardboard boxes, pallets, crates ...). The available packing types are maintained in the master data packing types maintenance program . The total entered in these fields defaults to the "goods" tab automatically, and further details about the goods may be entered there.

Gross Weight, Volume

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The gross weight of the shipment. This is defaulted in kilograms (kg). If the symbol "kg" is changed to "lb", the total will automatically convert to "kg". In the right pane the total cubic volume i record. This will default to cubic meters (m3). If the symbol "m3" is changed to "CFT" the figure is assumed to be in cubic feet and will automatically convert to "m3"
The data entered in these fields automatically transfers to the to the "goods" tab.

Nature of Goods

A short description of the goods. This is a brief synopsis of the goods to be transported. The data entered in this fields automatically transfers to the to the "goods" tab.

Chargeable Weight

This field displays the freight ton (Frt). It is calculated automatically using a comparison of weight (1 t) versus volume (1 m3). The higher value (ton or volume) is the freight ton.

Export Agent

The agent responsible for shipping the goods from the port of departure. This field will only display partners who are stored with the role "Agent".

Reference

The various reference numbers for the shipment are entered here using the references application

Documents area

New Delivery

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application. New delivery orders will appear in the window above the "New Delivery" action link.

Delete Transport order

Any existing delivery orders will be shown in the window above the "New Delivery" action link. The "Delete Transport order" action link will delete any highlighted existing delivery order in this window.

Customs Area

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Open Customs Application

Opens a customs entry applications if available.

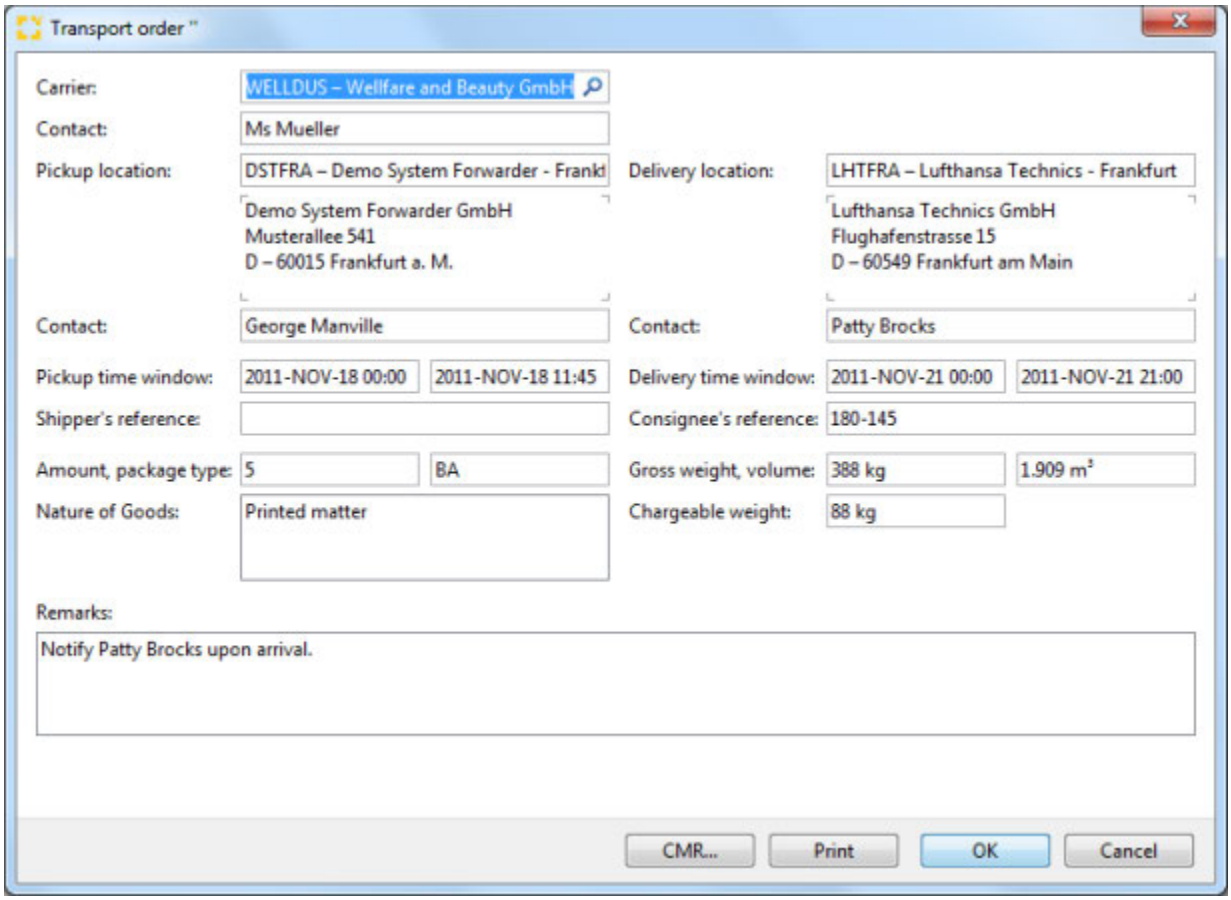
Delivery Order - General - Direct Shipment - Sea Import

- Introduction
- Description

Introduction

Create and print delivery orders or tranfers to other branches. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a set a pickup or delivery addresses link have been stored for this partner, these may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the import agent or or the import agent's pickup address. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

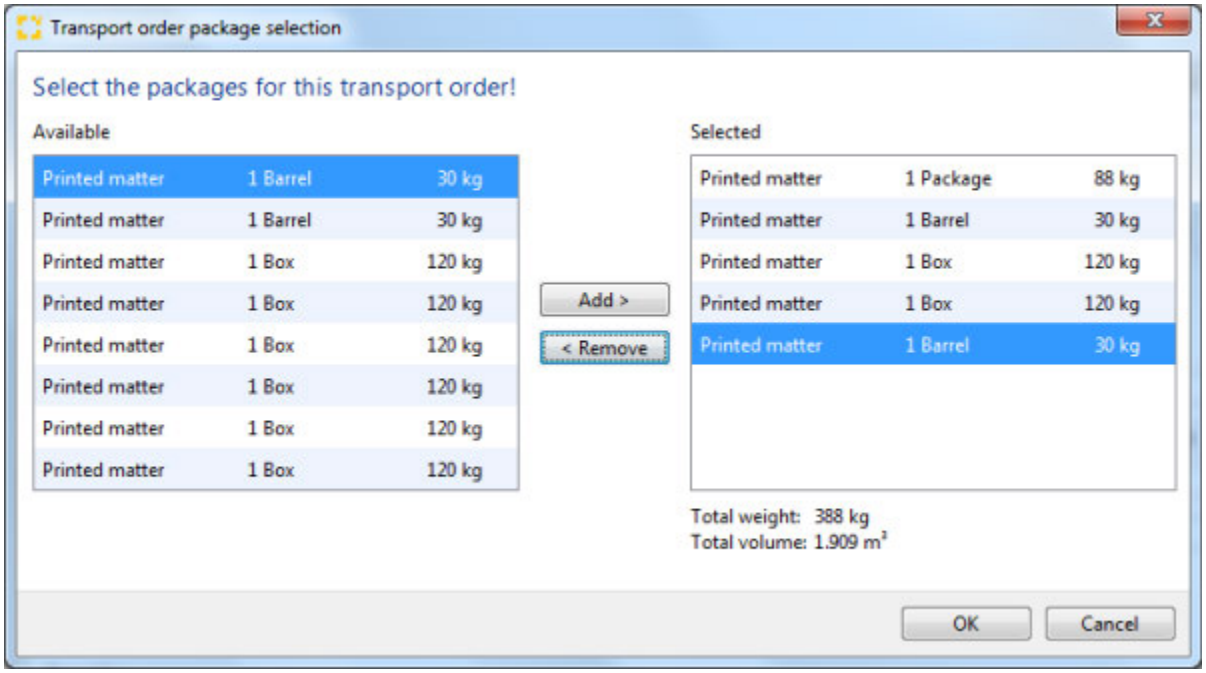
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

> Package selection is only available if the packages have been defined in the package editor of the shipment entry

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Customs orders

When customs details are entered in the main shipment, the "Customs orders" function is available. All the customs orders created on the main shipment will be visible. Use the check box to indicate which customs orders should appear on the delivery order.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Include Shipment Details in printout

check the box to include greater shipment detail on the printed delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Goods - Direct Shipment - Seafreight Import

- Introduction
- Description

Introduction

The tab *Goods* shows a summary of all containers and their goods on the left and two sub tabs on the right showing comprehensive details of the physical nature of the goods and containers, including any dangerous goods information .

Description

The *goods tab* presents the cargo information with the individual packages and containers on the left and the corresponding details of each package or container appears on the right as each package is highlighted.

The goods already entered in the General tab will appear automatically.

Cargo Detailed Description

Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
	Container
	Cargo

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
	Adds a new container
	Adds a new piece of cargo
	Removes a piece of cargo or container
	Moves the item up the list
	Moves the item down the list

LCL or Breakbulk direct shipment

When the direct shipment is not containerized a minimum of 1 cargo item should be present and cargo items can be added by clicking on the  icon.

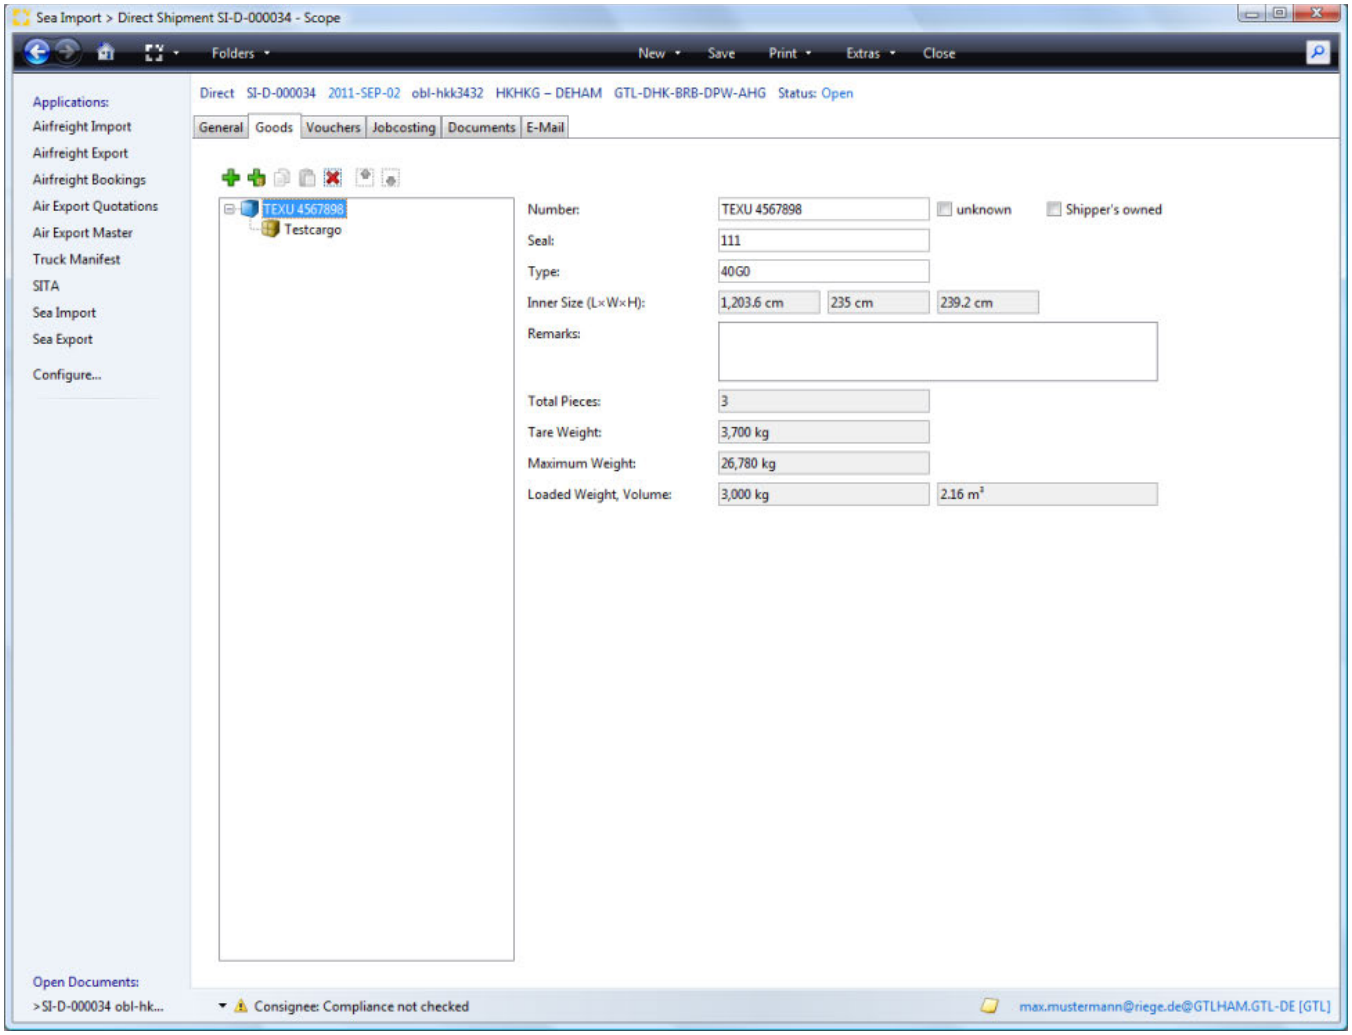
For each cargo item detailed information can be added in the sub tabs:

- Cargo description
- Dangerous Information

FCL Shipment

If the cargo is shipped containerized then the container details must be added using the  icon. This will open a container entry screen on the right where the full container details are recorded. On completion of the container details, at least one cargo item must be added to the container using the  icon.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489.

Unknown

If the "Unknown" box is checked, then the container number can be left empty.

Shipper's owned

Check the "Shipper's owned" box if the carrier owns the container.

Seal

The container seal number

Type

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Remarks

Any remarks particular to this container

Total pieces

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The total number of pieces in the container. This is derived from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargo items:

Category

Enable dangerous goods entry

Checking the dangerous goods flag marks the entire shipment as carrying dangerous goods. In addition the previous greyed data fields of the dangerous goods tab are now activated for entry.

Any cargo marked as dangerous will appear in the cargo list with a red and white "dangerous" symbol.

IMDG Class

IMDG code for the Hazardous class of materials.

UN Number

The UN number of the substance. This is prefixed by "UN" followed by a 4 digit number.

Proper shipping name

The full shipping name of the substance

Technical Name

The precise technical designation of the hazardous substance. This is on the IMO-DGD.

MFAG Number 1

Medical First Aid Guide - Number 1 acc. IMO-DGD.

MFAG-Number 2

Medical First Aid Guide - Number 2 acc. IMO-DGD.

EMS-(Fire)

Emergency Schedule - Number 1 acc. IMO-DGD.

EMS-(spill)

Emergency Schedule - Number 2 acc. IMO-DGD.

Limited Quantity

Check the field to indicate a limited quantity of the dangerous goods.

Exempted Quantity

Check the field if the limited quantity of the dangerous goods is sufficient to exempt it.

Net Weight

The net weight of the dangerous goods (see IMO-DGD).

Flash Point

The temperature in degrees Celsius (° C) at which the hazardous substance will ignite.

Radioactivity

The radioactivity of the hazardous cargo.

Page Number

The page of the hazard data sheets.

Jobcosting - Direct Shipment - Seafreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

House Shipment - Seafreight Import

- Introduction
- Description

Introduction

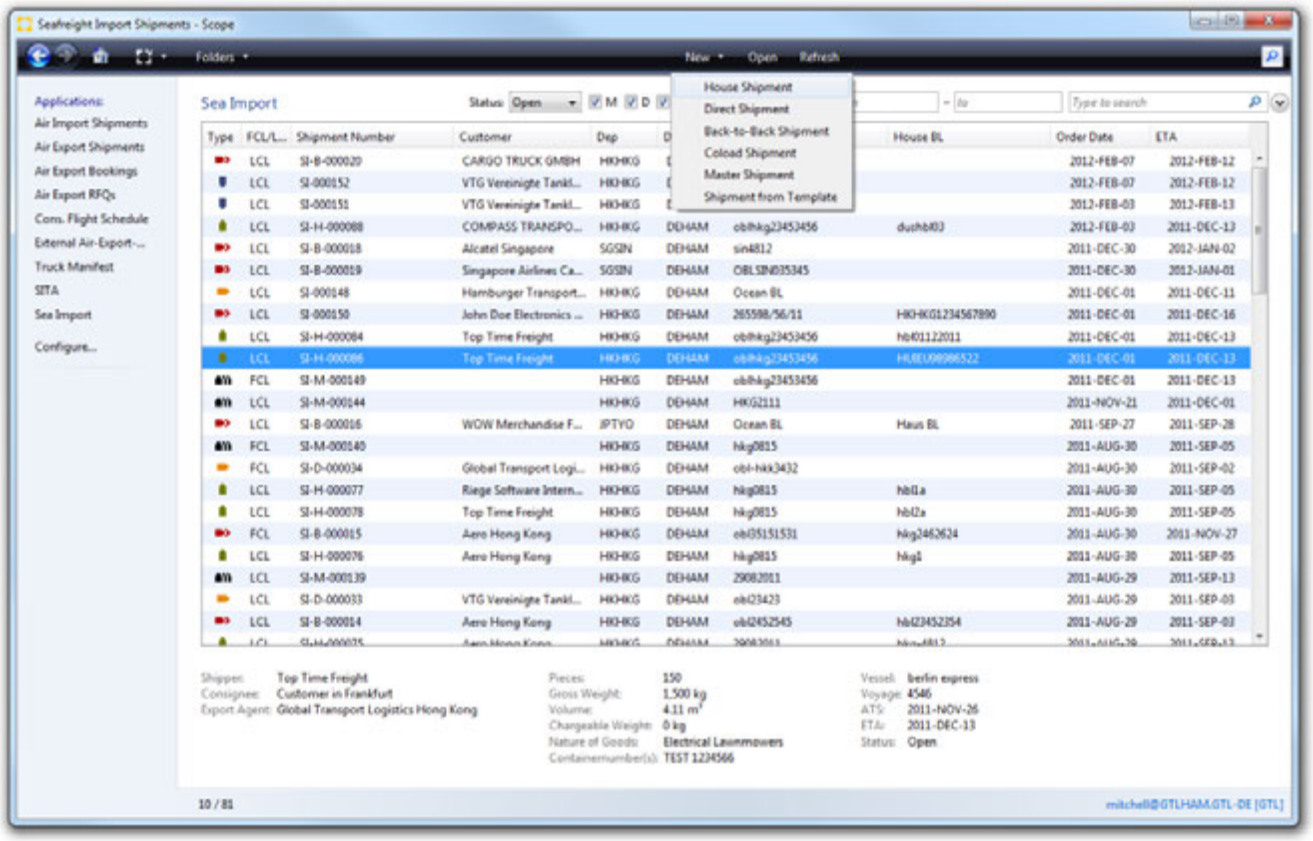
A house shipment is a LCL shipment in which the actual shipper and consignee are named. House shipments are normally consolidated with other house shipments into a master consolidated shipment. This consolidated shipment normally shows the export freight forwarder as the shipper and the import freight forwarder as the consignee. The import forwarder deconsolidates the master shipment into the original individual house shipments and organizes the distribution of these shipment from the point of deconsolidation. The advantage of sending house shipments in a consolidated master shipment is the possibility of filling one or more complete containers with goods. The most favorable shipping rates can be obtained from steamship companies (seafreight carriers) for full container loads.

All relevant data for an LCL shipment is collected and processed when creating a house shipment.

> **Information**
>
> Before creating a sea import house shipment, a master sea import shipment should be created. .

Description

To create a new house shipment, click on "New" in the Scope menu bar and then click the option "New house shipment" (see illustration). This opens the application for the creation of a new house shipment.



The following tabs are available when making a new shipment

- General
- Goods
- Vouchers
- Jobcosting
- Documents

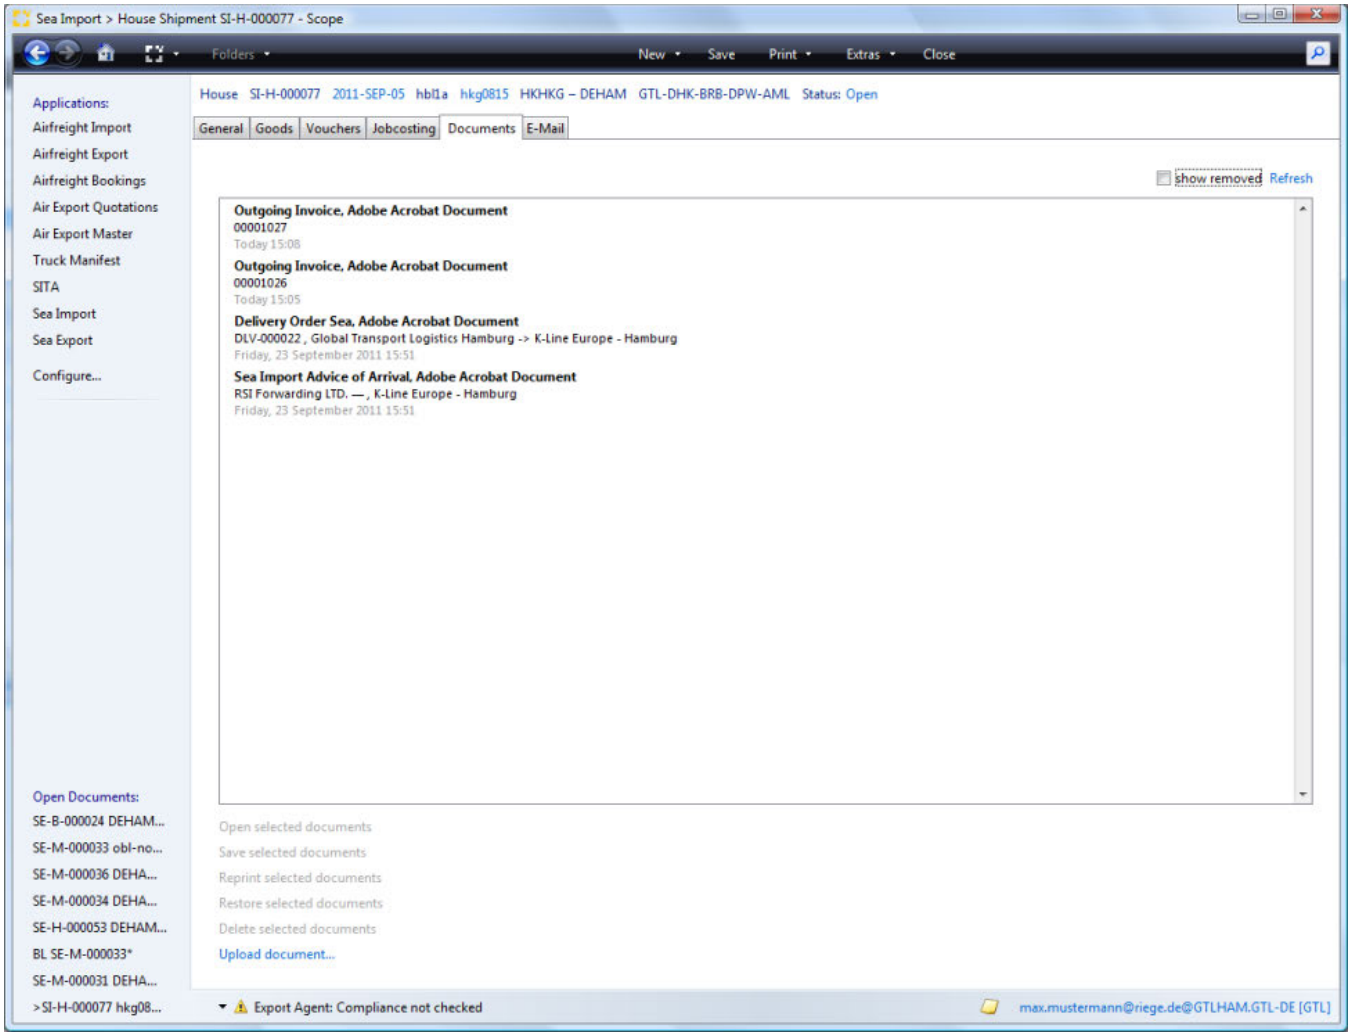
Documents - House Shipment - Seafreight Import

- Introduction
- Description

Introduction

In the *Documents* tab displays in summary form all documents created (transfer orders, arrival notices, invoices, credit notes, invoice cancellations, etc.) The user can also upload documents of different file formats. The user can view and print all the documents shown.

Description



Main menu bar and title bar
Open selected documents
Save selected document
Reprint selected documents.
Upload document...
Update

The following functions are available:

Main menu bar and title bar

see **General** tab

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Open selected documents

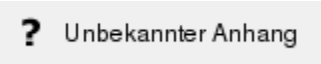
Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

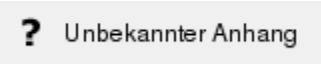
Print the document to the selected printer.

Cancel

Cancel the operation without further action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment.



Update

Updates the current list of documents.

General - House Shipment - Seafreight Import

- Introduction
- Description

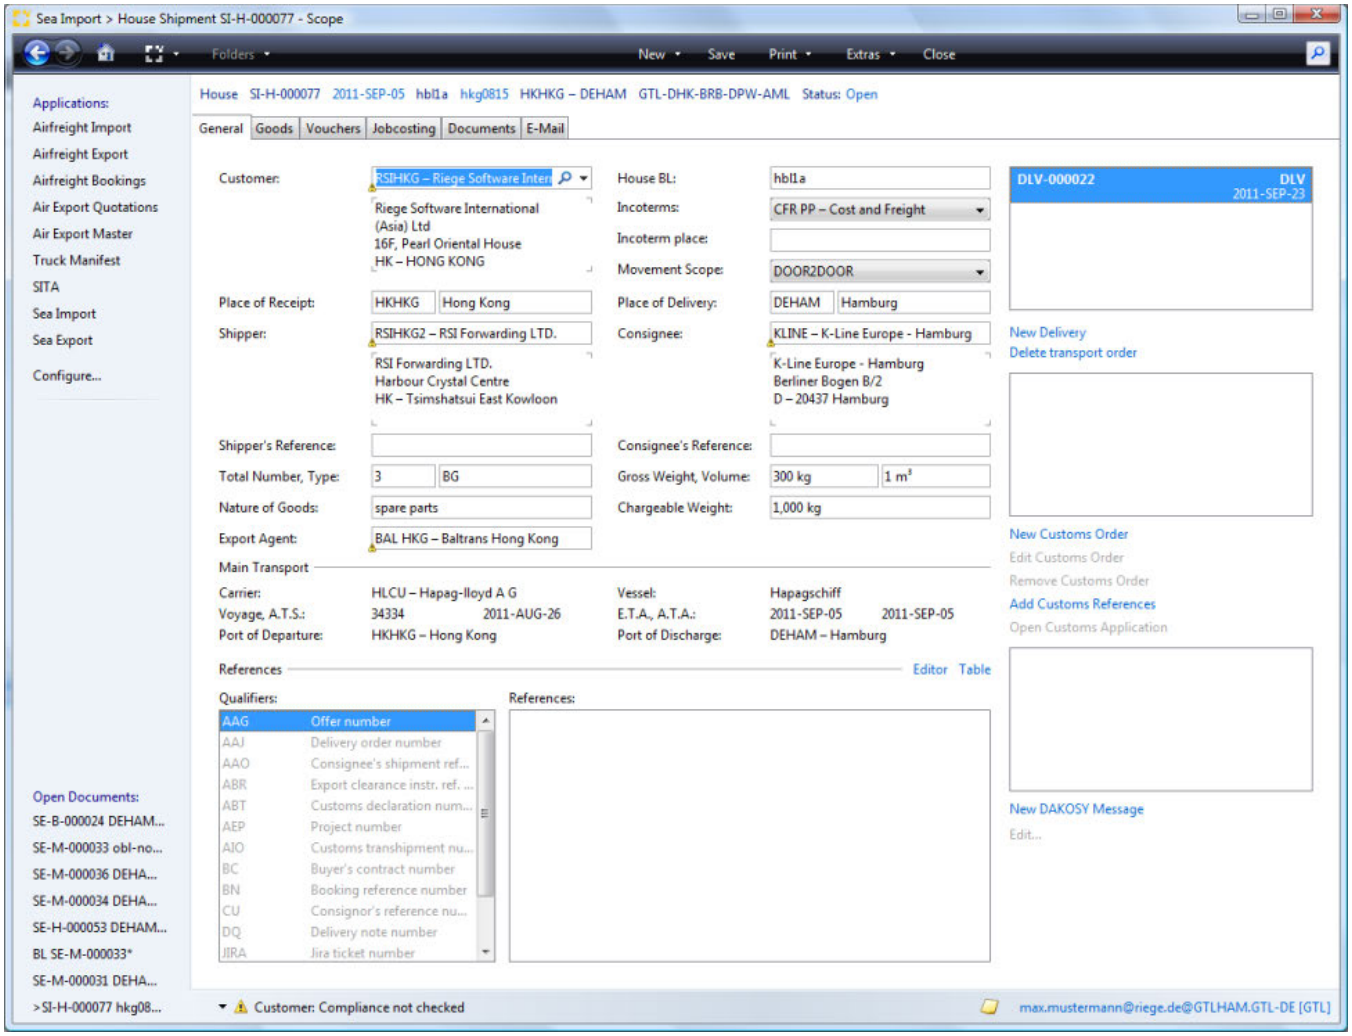
Introduction

In a house shipment all relevant data for an LCL shipment is recorded. LCL shipments are normally created after the master consolidated shipment has been created. On saving a house shipment, a USI (unique shipment identifier) will be created and assigned to the shipment, this can assist in identifying and retrieving the shipment.

The shipment type "house shipment" can be transformed into another type of shipment if the LCL shipment is not included in a consolidation.

Description

A new house shipment will open with the "General" tab where the main shipment data is collected.



- Program Actions
  - Save
  - Print
  - Close
- Shipment information bar

Program Actions

Program actions may be used in any order. They allow saving the shipment, printing documents or closing the shipment.

Save

Saves all the current shipment data.

Print

The "print" action presents the user with the selection of documents shown below which the user can edit in an editor and can then print. The printed documents are then displayed in the tab "Documents" and shown as a Pdf file.

- **File Cover**
- **Order Confirmation**
- **Advice of Arrival**
- **Clearance Instructions Request**
- **Delivery Note**
- **Release Order**

Close

The action "close" will close the shipment. Changes should be saved before closing a shipment.

Shipment information bar

The shipment information bar presents a summary of the most important shipment information.
From left to the right, the information is as follows:

- Shipment type
- Shipment number
- Order date
- Assigned master shipment number - the port of loading - Port of discharge - USI (Unique Shipment Identifier = this unique identification number for the shipment is assigned on saving the shipment for the first time and can be used in the search function to locate the shipment).
- Status - financial status.

> **Financial Status**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the financial status reflects the status of the shipment from the billing point of view. There are three statuses: (1) Open: Outgoing Invoice to Customer not yet sent (2) Billed: Customer billed (3) Closed: All cost estimates resolved and all accounts payable booked Status (2) is set automatically when the invoice to the customer is posted. Status (3) is a manual process by accounting staff. Typically, at the end of every month, all open or billed shipments are reviewed. All shipments where all costs have been allocated are closed.

Change Shipment type

The function "Change shipment type" can be used to convert the shipment into another type of shipment. This is only possible if the LCL shipment is not part of an existing consolidation. An non-consol house shipment can be changed to a:

- **Direct shipment**
- **Back-to-Back shipment**

Tabs

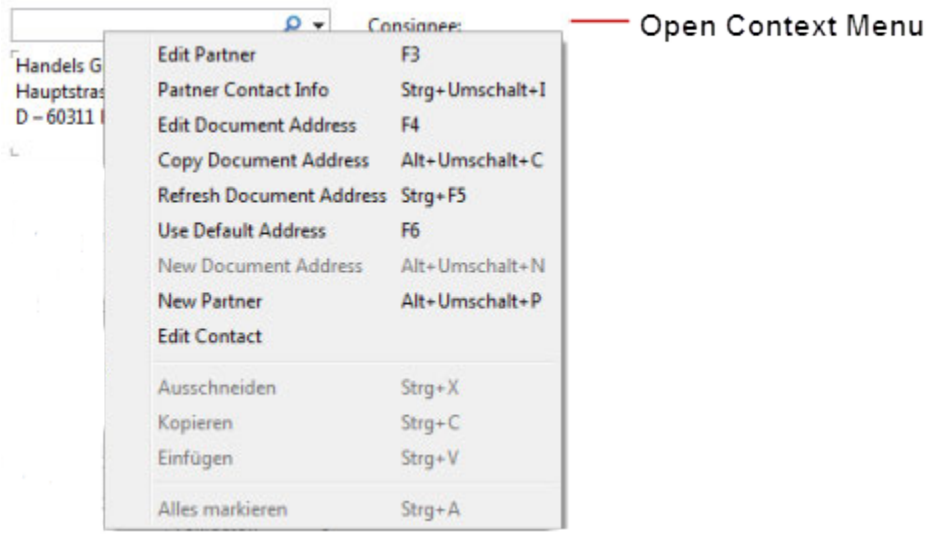
Beneath the shipment summary information, the tabs of the open shipment are shown. The focus is on the tab which is currently being viewed or edited.

Shipment Information area

The main shipment details are displayed.

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.



Edit Partner

Opens the business partner editor , where the partner can be edited.

Edit address

Opens an editor to change the address for the current shipment.

Update address

Updates the address.

Use default address

Sets address to the default address for the field stored in the master address data.

Edit document address

The option "Edit document address" allows the selected address to be edited as required, but these changes are not stored as master data and only appear on this shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New Partner

The option "New Partner" opens the master data maintenance in order to create a new business partner in the Scope database. This new address will then be available as a shipper for example.

Compliance check

Performs an address compliance check.

Edit contact description

Opens a window where a new contact and details can be entered for this shipment.

House BL Number

House B/L Number.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Incoterm Place

The place that the icoterms apply to.

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Shipper's Reference

References used by the shipper to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *R eferences* section of the general tab.

Consignee's Reference

References used by the consignee to identify the cargo. Multiple references should be separated by a comma. All references will automatically appear in the *References* section of the general tab.

Total Number

The total number of pieces on the house bill of lading.

Type

The type of packaging used for the cargo.

Gross Weight

The gross weight of the cargo

Volume

The volume of the cargo in m3. If the unit is over-written with "CFT" it will automatically convert the cubic foot measurement to cubic meters.

Nature of Goods

A summary description of the goods. The nature of goods from the quick shipment entry (during master shipment creation) will default, but can be adjusted as desired.

Chargeable Weight

The chargeable weight of the cargo according to the house bill of lading.

Export Agent

The agent responsible for the cargo in the exporting country.

Main Transport Area

Carrier

The steamship line that transported the goods.

Vessel

The vessel on which the cargo arrived.

Voyage, A.T.S.

The voyage of the master shipment and actual depart date of the master.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E.T.A.

The estimated date of arrival for the cargo.

A.T.A.

Actual Time of Arrival.

Port of departure

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

References

The various reference numbers for the shipment are entered here using the references application

Documents area

New Delivery

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application. New delivery orders will appear in the window above the "New Delivery" action link.

Delete Transport order

Any existing delivery orders will be shown in the window above the "New Delivery" action link. The "Delete Transport order" action link will delete any highlighted existing delivery order in this window.

Customs Area

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Open Customs Application

Opens a customs entry applications if available.

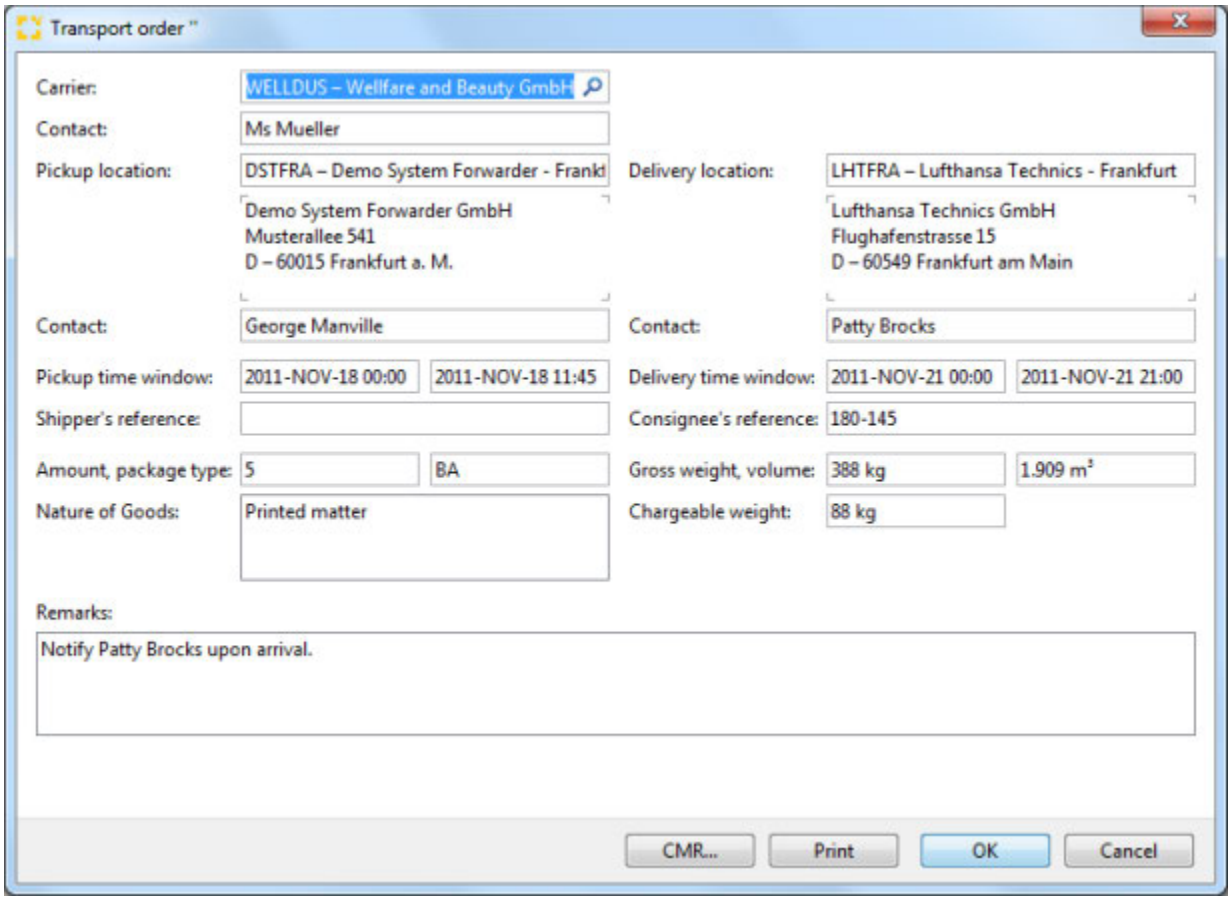
Delivery Order - General - House Shipment - Sea Import

- Introduction
- Description

Introduction

Create and print delivery orders or tranfers to other branches. Additionally, a CMR (International waybill for road freight transport) may also be printed.

Description



Carrier

The trucking company who will transport the consignment. Locate the desired using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner. If a set a pickup or delivery addresses link have been stored for this partner, these may also be used when completing the delivery order. If a set of pickup or delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup location

The address at which the item should be picked up. The desired partner can be located with the search field. The default address will be the address of the import agent or or the import agent's pickup address. The **contact name** for the pickup location may be entered or selected from the list of contacts for this partner. If a set of pickup addresses have been stored for this partner, these may also be used when completing the delivery order.

Delivery Location

The address to which the consignment is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner. If a set of delivery addresses have been stored for this partner, these may also be used when completing the delivery order.

Pickup time window from/to

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The pick up window dates and times , in which the consignment is to be picked up.

Delivery time window from /to

The delivery window dates and times , in which the consignment is to be delivered.

Shippers reference

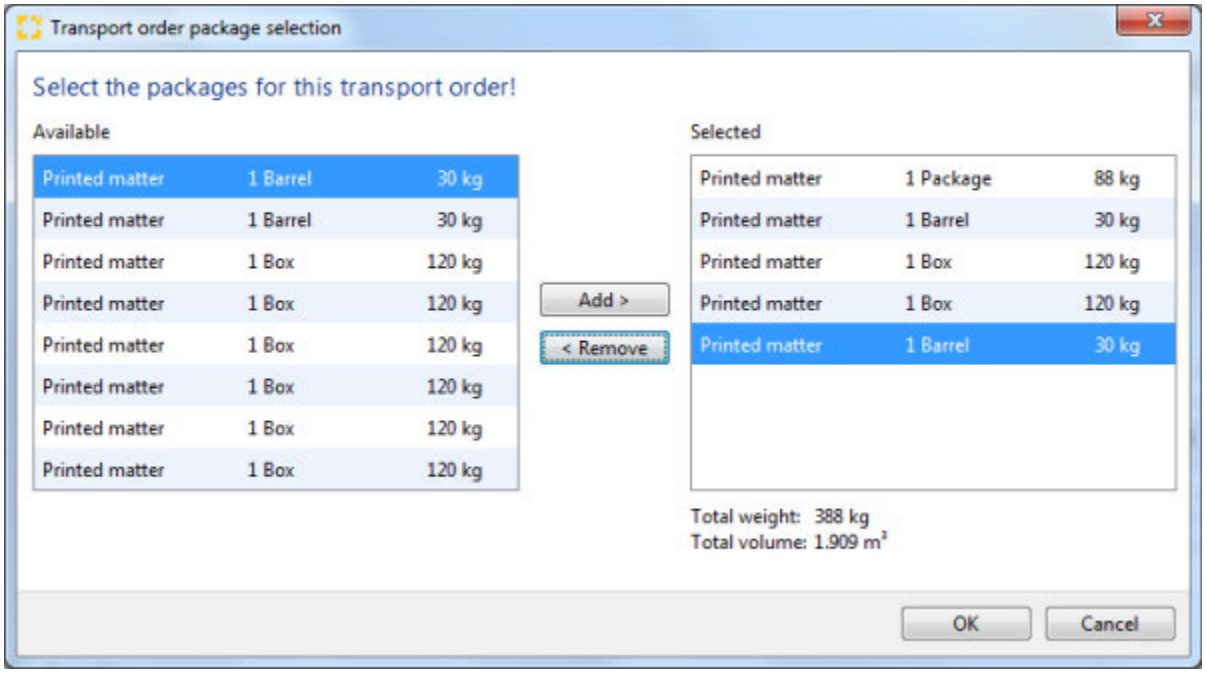
The reference used by the shipper for the consignment.

Consignee's reference

The reference used by the consignee for the consignment.

Amount

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the package selection tool.



By default, all packages are proposed for delivery.

> Package selection is only available if the packages have been defined in the package editor of the shipment entry

Gross weight, Volume

The gross weight and volume of the pieces will appear. If the package editor has been used to select the pieces then these fields will adjust to show the correct volume and gross weight of the selected pieces.

Chargeable Weight.

The gross weight and volume from the main editor or the package editor is defaulted. This information can be further adjusted if necessary,.

Customs orders

When customs details are entered in the main shipment, the "Customs orders" function is available. All the customs orders created on the main shipment will be visible. Use the check box to indicate which customs orders should appear on the delivery order.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Include Shipment Details in printout

check the box to include greater shipment detail on the printed delivery order.

CMR...

Open the CMR editor to create in international road transport order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Category

Enable dangerous goods entry

Checking the dangerous goods flag marks the entire shipment as carrying dangerous goods. In addition the previous greyed data fields of the dangerous goods tab are now activated for entry.

Any cargo marked as dangerous will appear in the cargo list with a red and white "dangerous" symbol.

IMDG Class

IMDG code for the Hazardous class of materials.

UN Number

The UN number of the substance. This is prefixed by "UN" followed by a 4 digit number.

Proper shipping name

The full shipping name of the substance

Technical Name

The precise technical designation of the hazardous substance. This is on the IMO-DGD.

MFAG Number 1

Medical First Aid Guide - Number 1 acc. IMO-DGD.

MFAG-Number 2

Medical First Aid Guide - Number 2 acc. IMO-DGD.

EMS-(Fire)

Emergency Schedule - Number 1 acc. IMO-DGD.

EMS-(spill)

Emergency Schedule - Number 2 acc. IMO-DGD.

Limited Quantity

Check the field to indicate a limited quantity of the dangerous goods.

Exempted Quantity

Check the field if the limited quantity of the dangerous goods is sufficient to exempt it.

Net Weight

The net weight of the dangerous goods (see IMO-DGD).

Flash Point

The temperature in degrees Celsius (° C) at which the hazardous substance will ignite.

Radioactivity

The radioactivity of the hazardous cargo.

Page Number

The page of the hazard data sheets.

Jobcosting - House Shipment - Seafreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

Description

Super-House Shipment - Seafreight Import

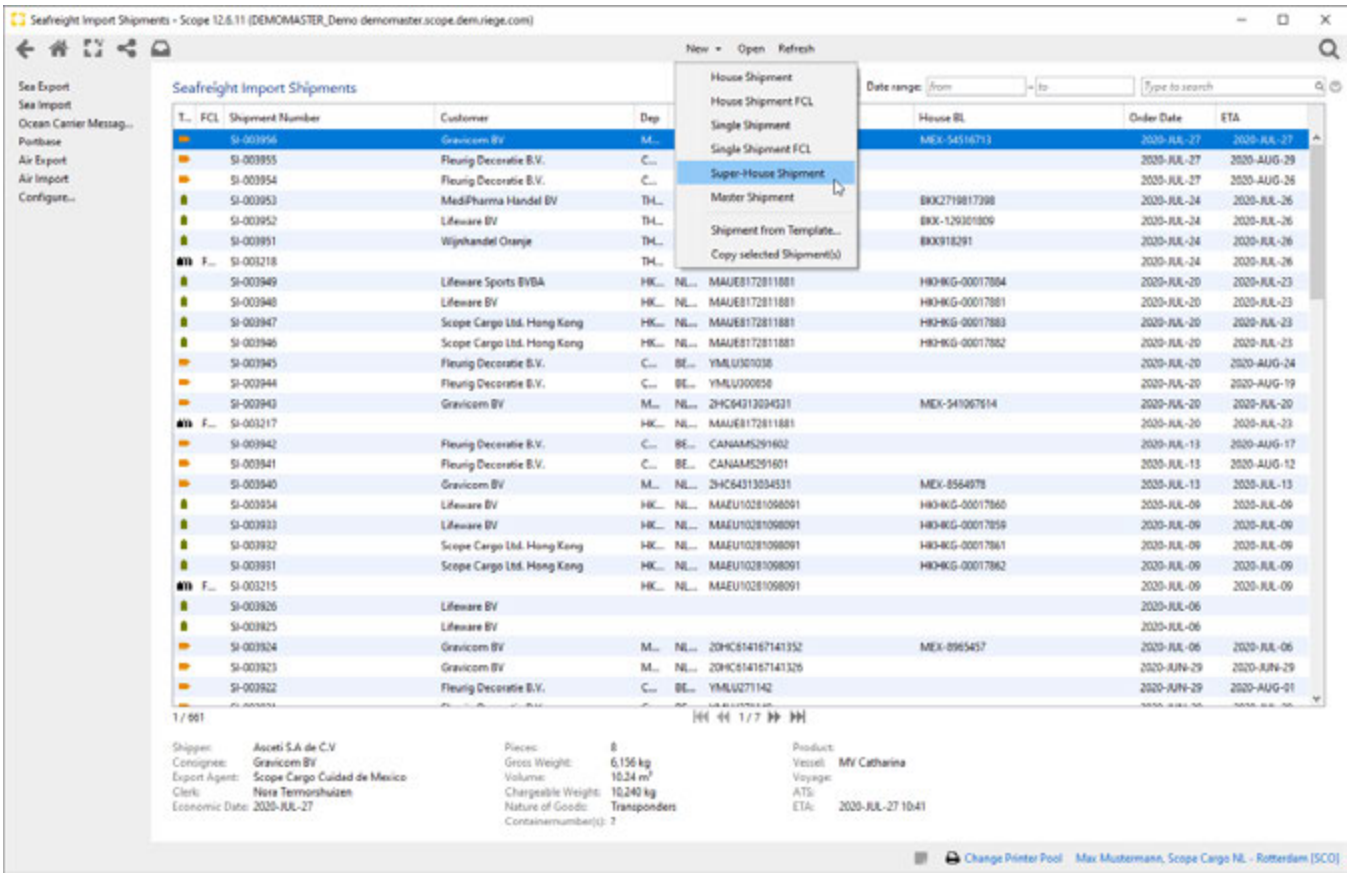
Introduction

The application Super House Shipment Seafreight Import enables the consolidation of regular House shipments to a Super House Shipment. The purpose of a super house shipment is to combine House shipments in such a way that the quantity (weight / volume) enables cost-effective transportation for your customer.

> **Information**
>
> The application of a Super-House Shipment FCL for Seafreight Import Shipments has not yet been implemented in Scope.

Description

With the program action *New* in the Seafreight Import Shipments home view the input dialog for the *Super-House Shipment* can be opened.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(a) General - Super-House-Shipment - Seafreight Import

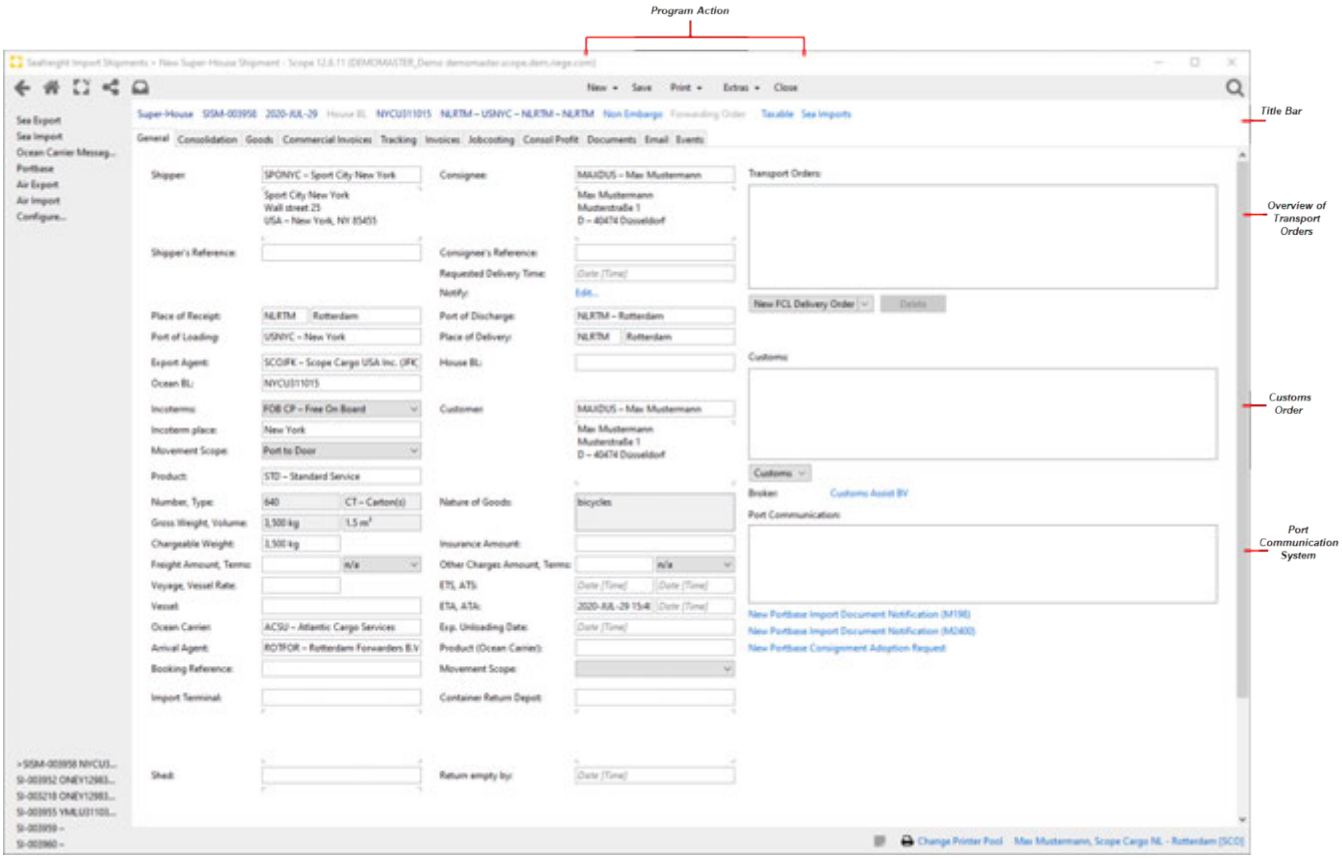
- Introduction
- Description

Introduction

General shipment data of the Super House Shipment can be entered here in the General Tab. The weight and the number of packages of the Sub-House Shipments will automatically be transferred to the corresponding field.

Description

- Program Action
- Title Bar
- Field Description
- Transport Orders
- Customs
- Port Communication



Program Action

New

- New FCL Delivery Order

Opens the window *New Container Delivery Order.* Data for FCL Delivery Order can be entered here.

- New Delivery Order

Opens the window New Delivery Order. Data for a Delivery Order can be entered here.

- New Customs Order

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Opens the window New Customs Order to enter the data and create a new Customs Order.

Save

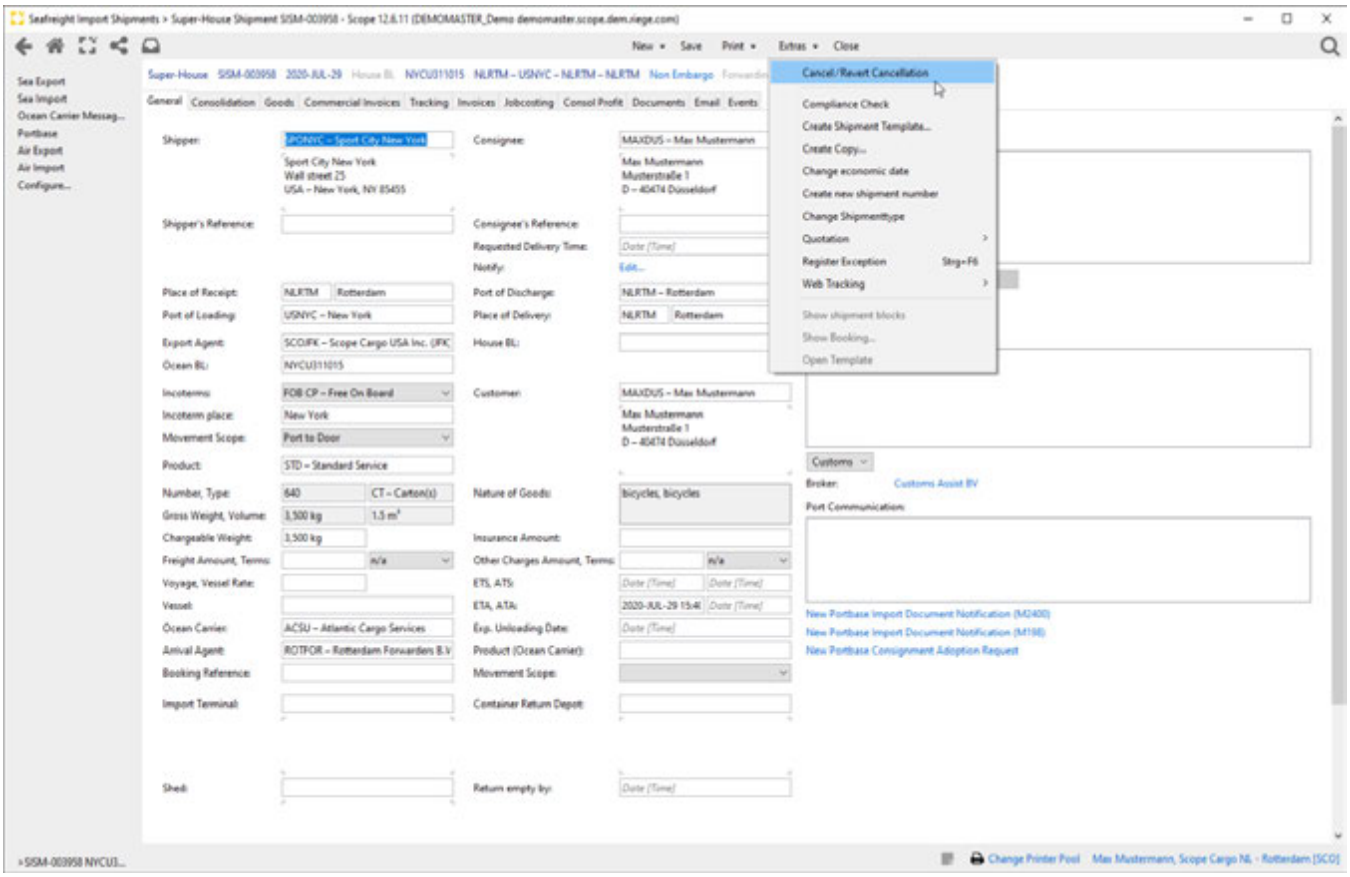
The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case, then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command, the required documents can be printed. Currently the following documents are available:

- Filecover
- Order Confirmation
- Notice of Arrival for Shipper, Consignee, for Export Agent, for Customer, for Notify
- Unloading Lists
- Clearing Instructions Request
- Delivery Note
- Release Order
- Claim Notification
- Shipment Labels
- Quality Report

Extras



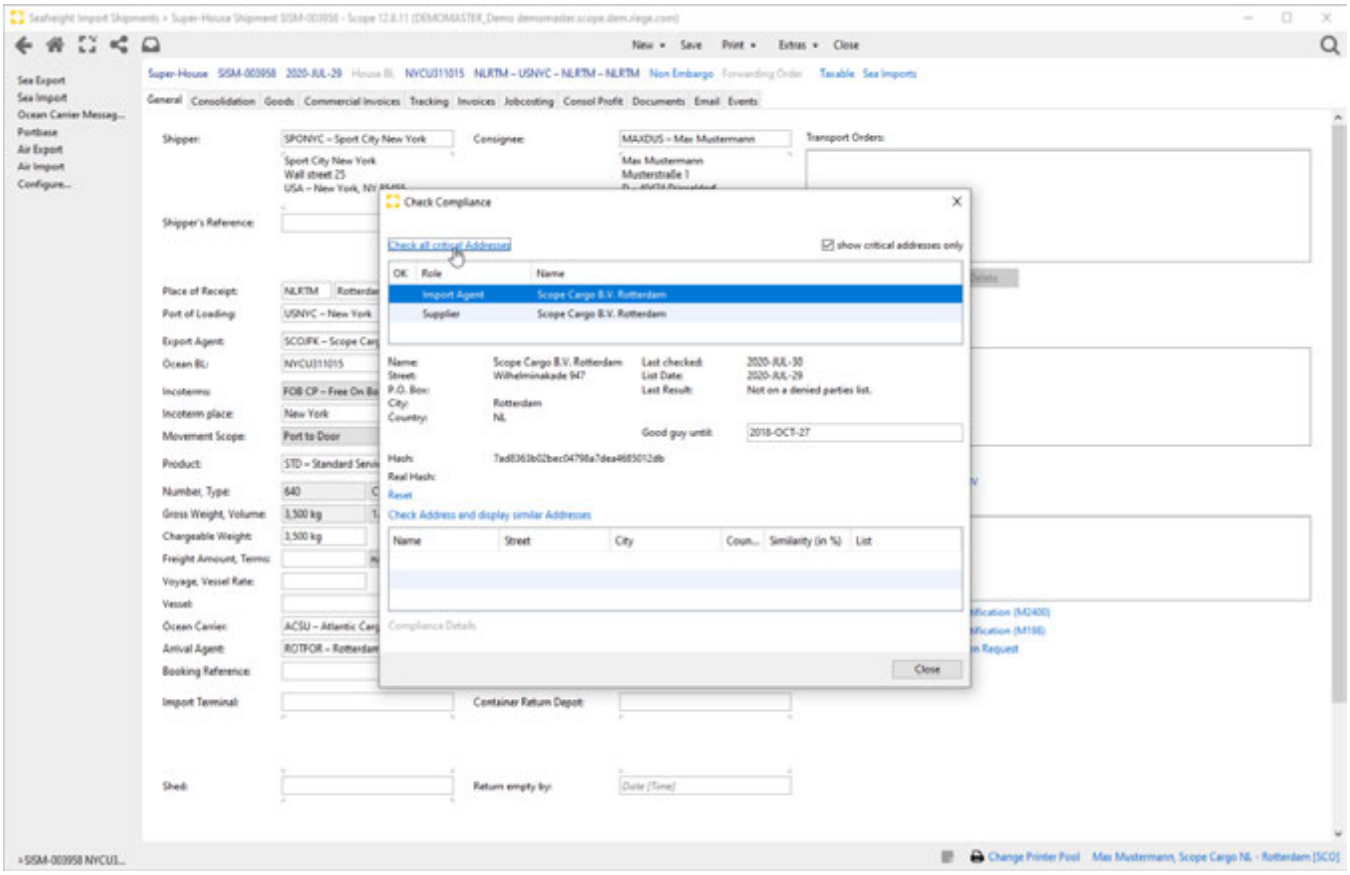
- Cancel/Revert Cancellation

This function cancels a shipment or cancels the cancellation of a shipment. See details here Cancel/Revert Cancellation

- Compliance Check

Opens the *Check Compliance* Screen. In this Screen all critical addresses related to the shipment will be displayed and can be checked.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Create Shipment Template...

This program action opens the screen *Create Template*. The button *Proceed* opens the shipment template editor.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

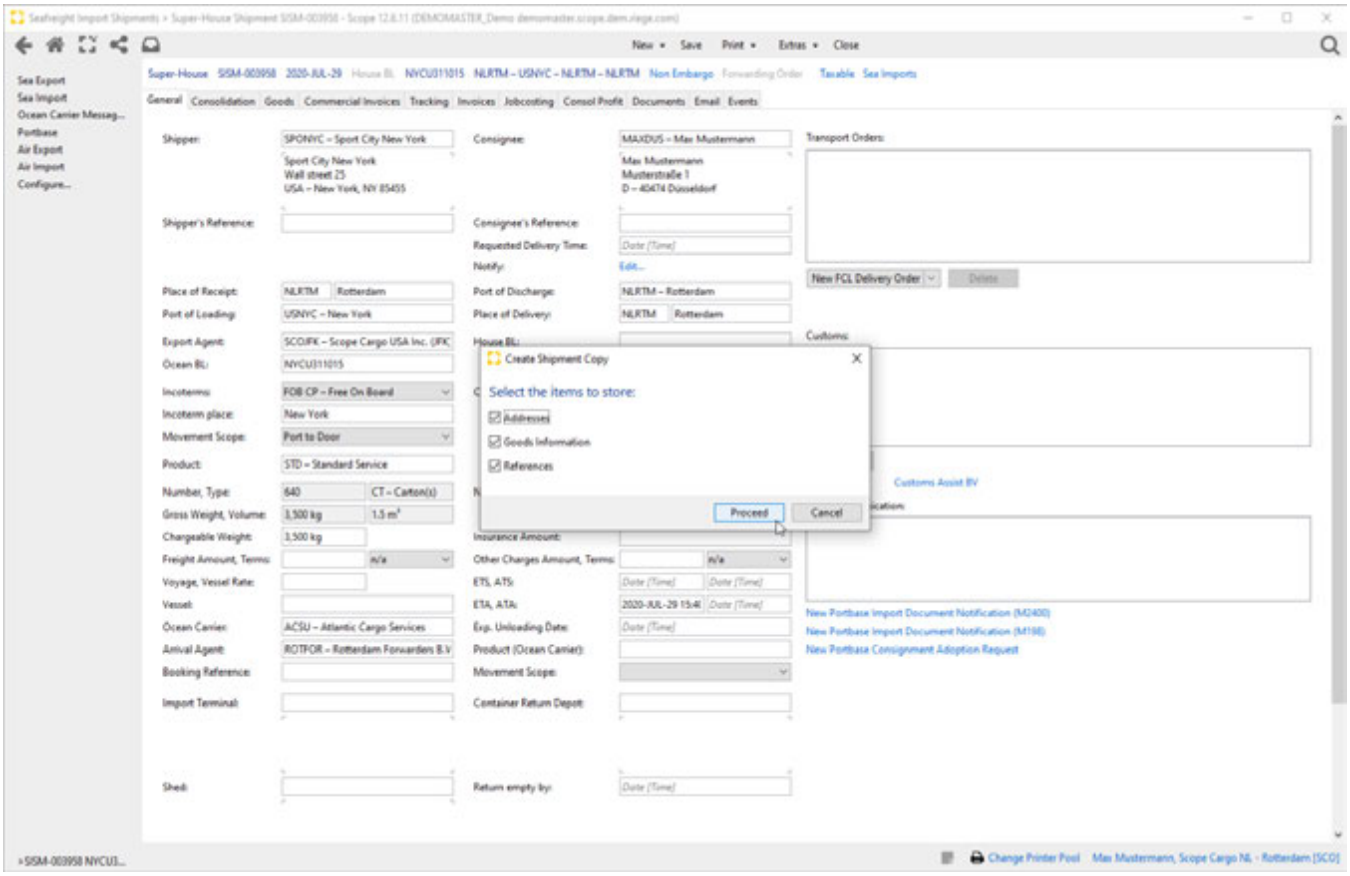
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Create Copy...

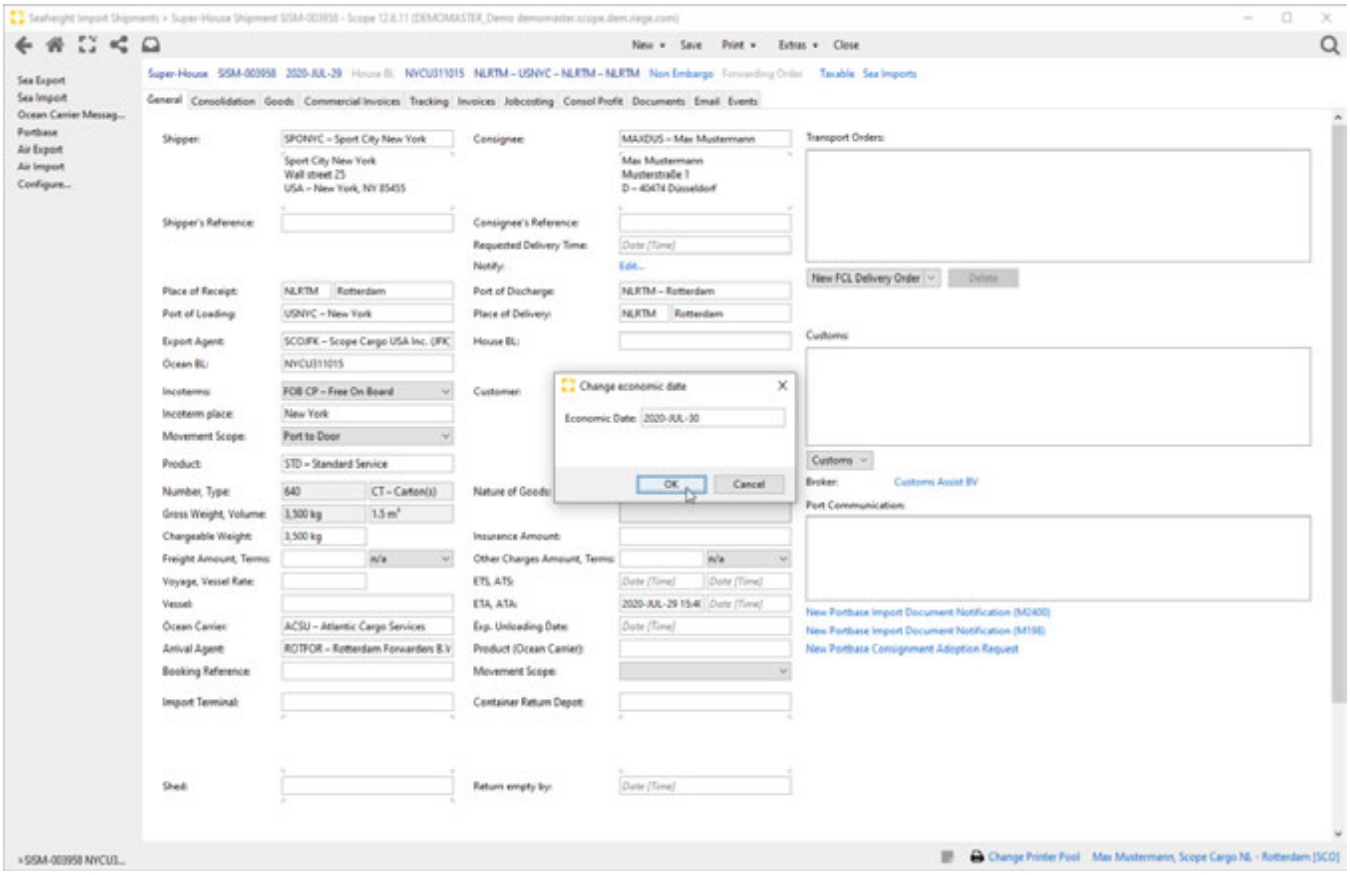
This program action opens the screen *Create Shipment Copy*, where the items to be stored can be selected. The button Proceed will confirm the creation of a copy.



- Change economic date

This function opens the screen economic date, where the economic date can be changed.

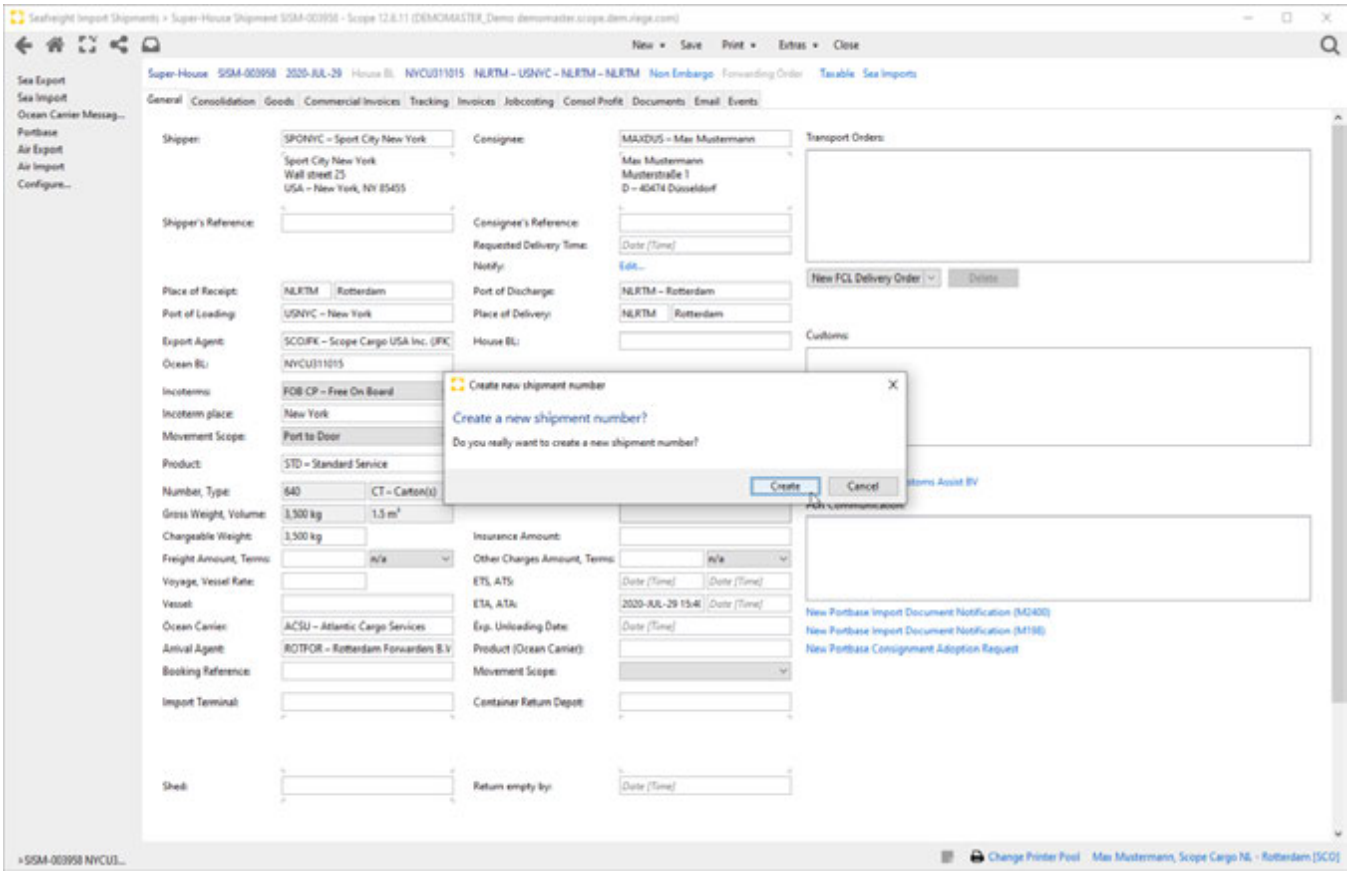
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Create new shipment number

This program action opens the screen *Create new shipment number.* With the button *Create* a new shipment number will be generated.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Change shipment type

This function opens the screen *Change shipment type* where another available shipment type can be chosen, if the function is supported.

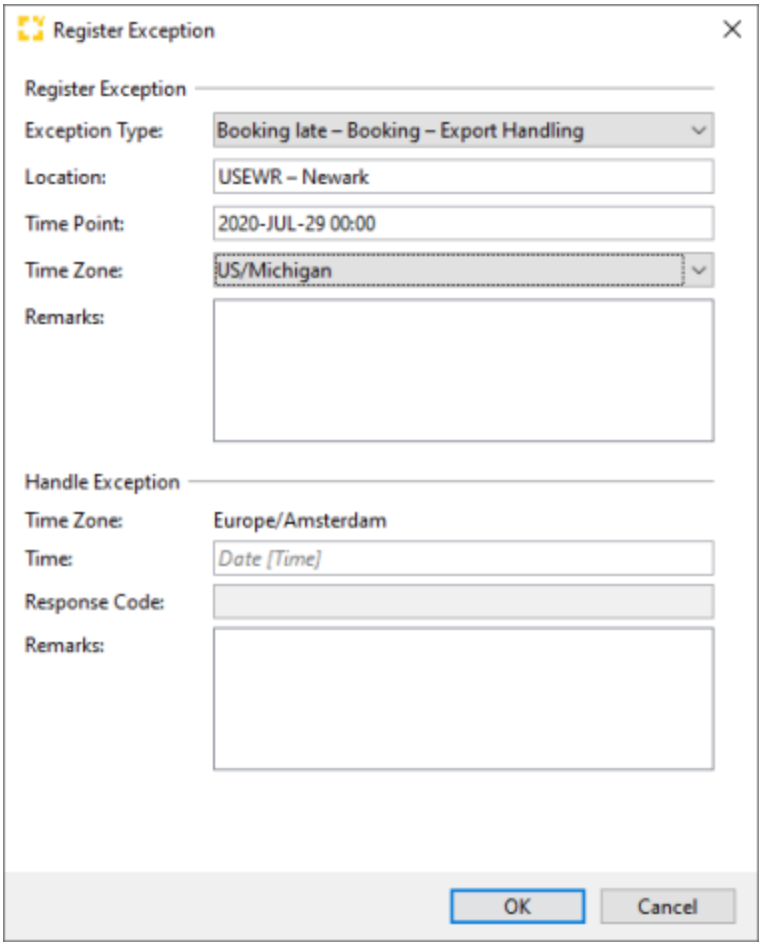
- Quotation

This function can Show, Link or Unlink a quotation for the shipment.

- Register Exception

With this action, exceptions can be created. These represent additional information about the milestones.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Web Tracking

Via web tracking, a URL can be copied, or a program can be opened directly in anonymized web tracking.

- Show shipment blocks

Releases a lock, confirming outstanding payments have been received. See also Top features 12.0

- Show booking...

Opens an existing booking for the shipment.

- Open Template

opens the template that created the shipment

Close

Closes the current entry. If this has not been saved an inquiry box will appear asking if the changes made should be saved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- Type of shipment
  Type of shipment. For this is Super-House
- Shipment number
  Assigned by the system after the shipment has been saved for the first time.
- Economic date
  The date can be changed via Extras - Change economic date.
- House BL Number
  House BL Number entered in the field House BL of the shipment.
- Ocean BL
  Ocean BL number entered in the field Ocean BL of the shipment.
- Departure port - Destination port
  Departure and destination of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- Non Embargo, Approve Embargo
  Embargo Status set due to destination
- Forwarding Order
  Link to a connected Forwarding Order
- Taxability (e.g. "tax-free Export")
  Actionlink indicates the Taxability type and can also be used to change to a new taxability type
- Cost Center (e.g. Sea Import)
  By clicking on this action link, the user will be able to change the Cost Center of the shipment.

Field Description

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Shipper`s reference

Shipper´s reference can be entered here

Consignee`s reference

Consignee`s reference can be entered here

Requested Delivery Time

A requested delivery time can be entered here

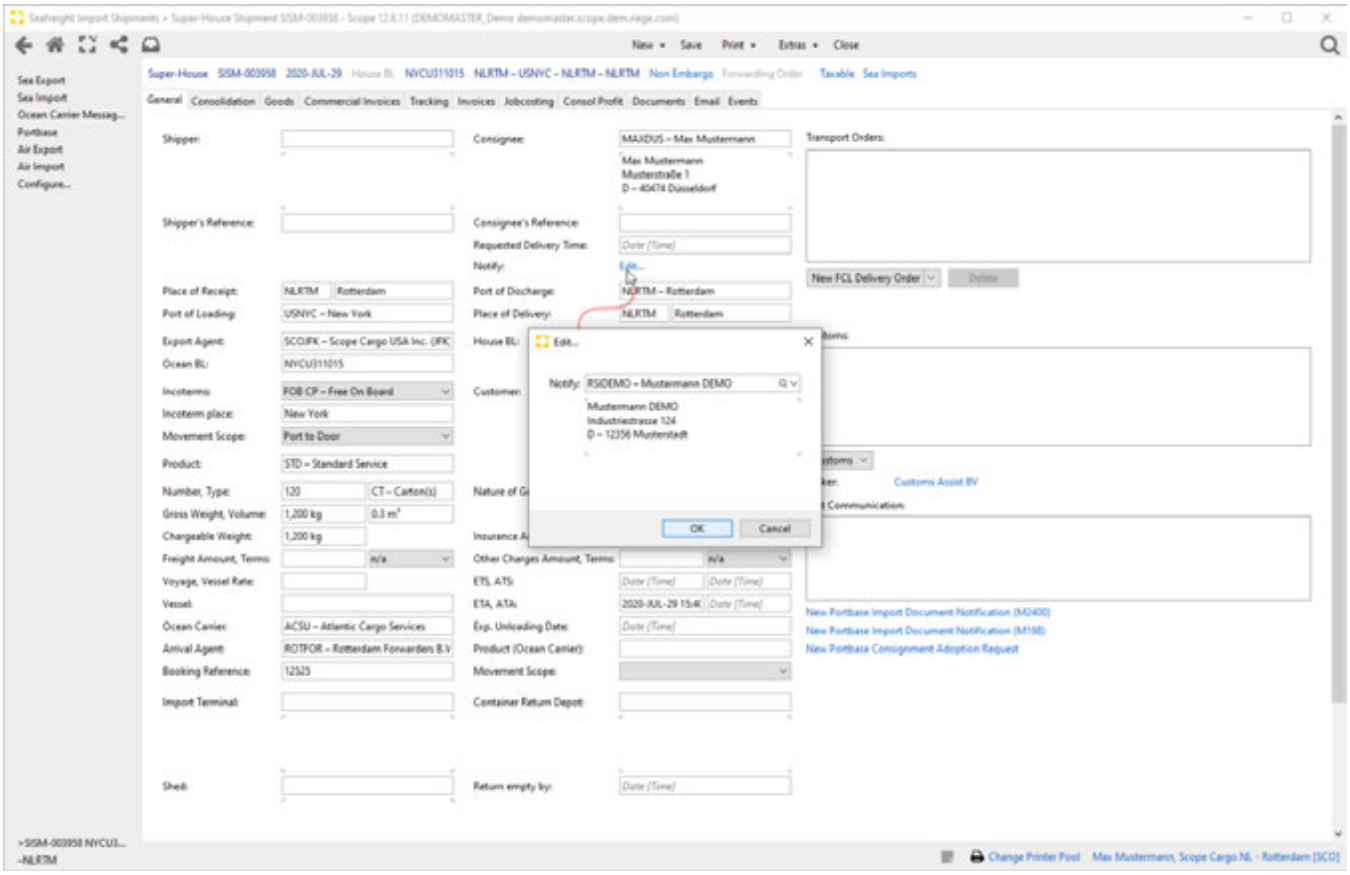
Notify

The party to be Notified when the shipment arrives. If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Edit Notify

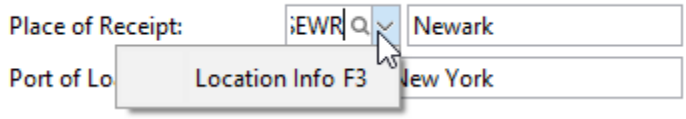
With this action link the editor to add a notify address can be opened. The notify address can be located by using the search field. The context menu of the Partner field provides options for new document addresses to be created or existing document addresses may be edited. In the master data of the partner, if the partner has the role Forwarding Customer applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partner is used in any shipment where this partner is the recipient (consignee).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

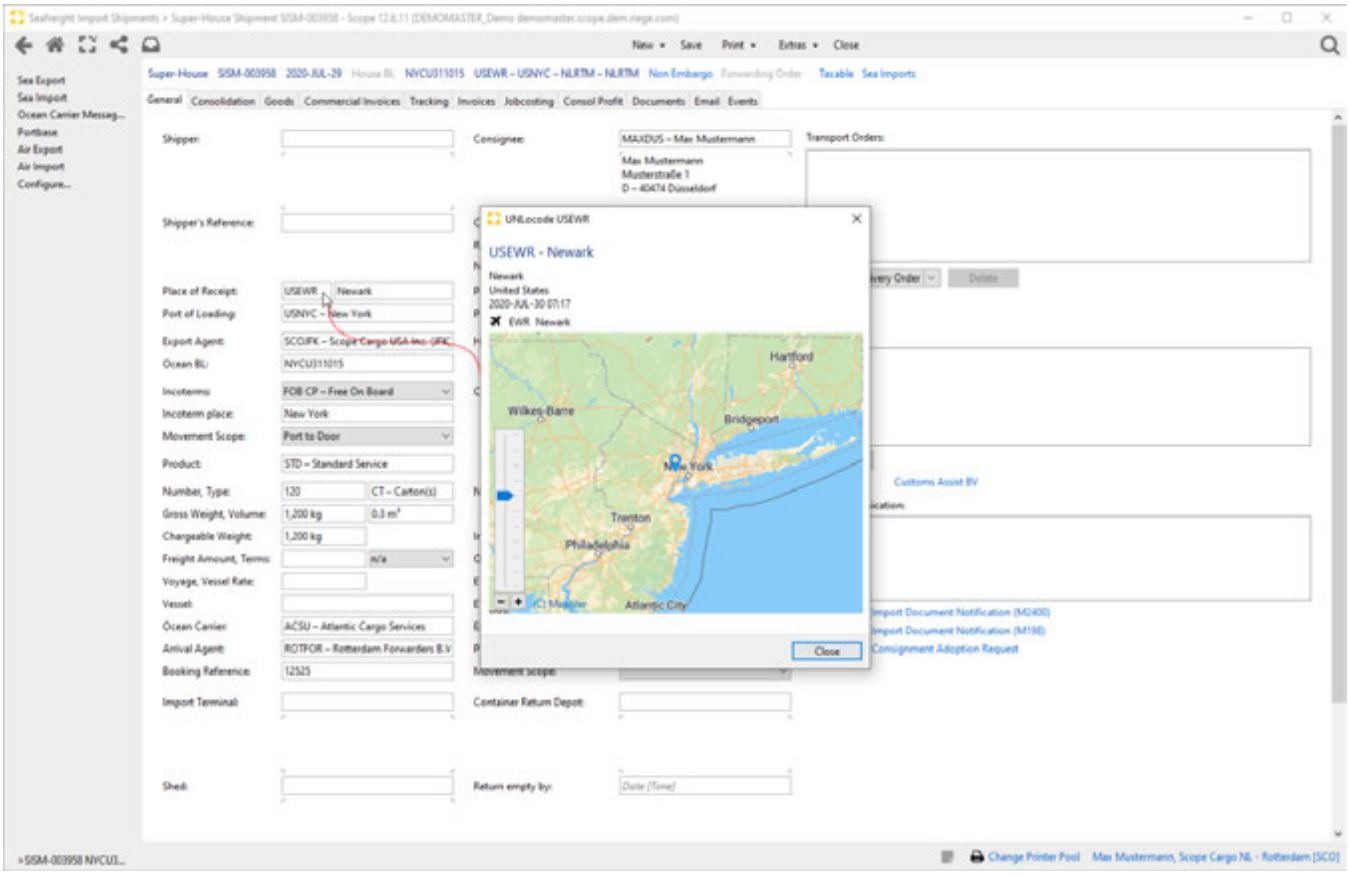


Place of receipt

UNlocode of the place of receipt. The context menu or F3 will open a corresponding map.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Port of Discharge

Port of Discharge of the shipment. The UNLocodes and the full name of the Port are displayed. Either of these can be entered to launch an automatic field search function that will display all ports of destination. The context menu or F3 will open a corresponding map.

Port of Loading

Port of Loading (Departure) of the shipment. The UNLocodes and the full name of the Port are displayed. Either of these can be entered to launch an automatic field search function that will display all ports of destination. The context menu or F3 will open a corresponding map.

Place of Delivery

UNlocode of the place of delivery. The context menu or F3 will open a corresponding map.

Export Agent

The station responsible for consolidating and dispatching the cargo. The desired agent may be found with the search field function.

House BL

Number of the House BL of the shipment

Ocean BL

Number of the Ocean BL of the shipment

Incoterms

The delivery terms for the shipment. The drop-down menu will open a list of all available Incoterms Codes. The Incoterm fills the value of the fields Movement Scope and Customer automatically, as they determine which costs are charged for the sender (backward) or for the recipient (forward).

Incoterms Place

The place name referenced by the incoterms.

Customer

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Generally, the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Movement Scope

Movement Scope of the shipment.

Product

The drop-down menu will open a list of all available Products. The Products must be defined in the master data Forwarding Selling Products.

Number, Type

Total number and type of pieces in the consignment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super House Shipment.

Gross weight, volume

Total gross weight and volume of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Chargeable Weight

Total chargeable weight of the shipment. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Nature of goods

Description of Goods. Field will be filled automatically with the data of the Sub-House Shipment, consolidated to the Super-House Shipment.

Insurance Amount

Amount for an insurance of the freight can be entered here.

Freight Amount, Terms

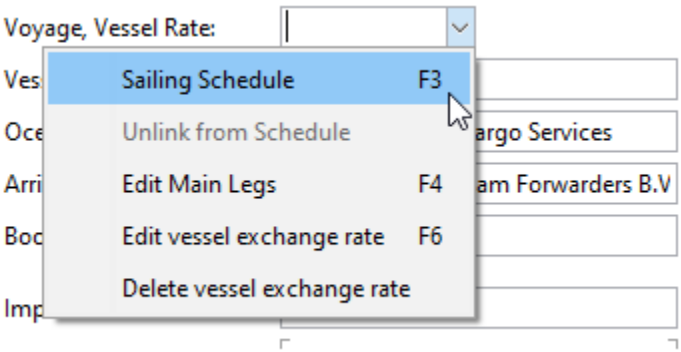
Amount agreed for the freight transport costs. In the field terms value Prepaid, Collect or n/a can be set by the drop-down menu.

Other Charges Amount, Terms

Amount agreed for the other charges freight transport costs. In the field terms value Prepaid, Collect or n/a can be set by the drop-down menu.

Voyage, Vessel Rate

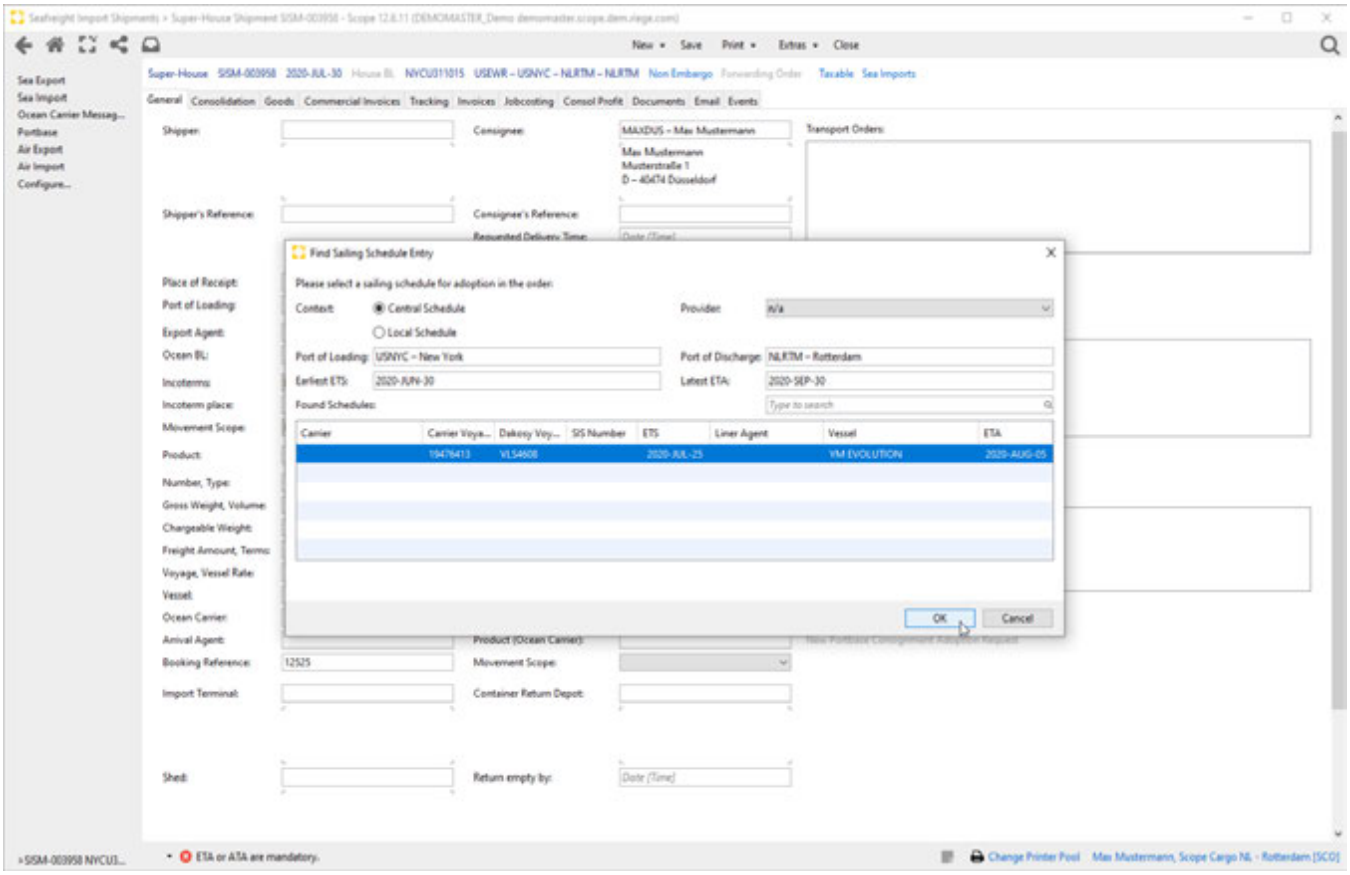
Displays the name of the Voyage. With the integrated drop-down menu, a Sailing schedule can be opened, main legs and vessel exchange rates can be edited.



- Find Sailing schedule F3

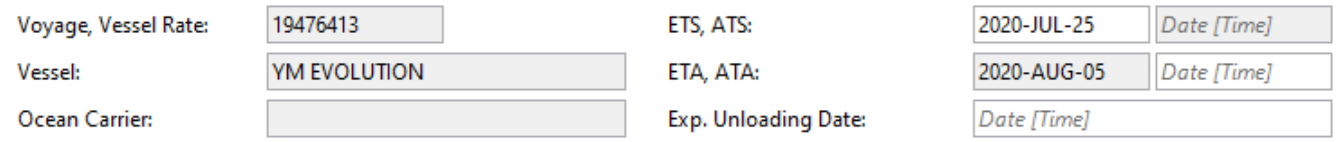
The option Sailing Schedule or F3 opens a Sailing Schedule.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- Select sailing schedule entry

Once the Selection of a sailing schedule entry is confirmed with Ok, all corresponding input fields regarding the voyage will be filled automatically with the chosen sailing schedule entry.



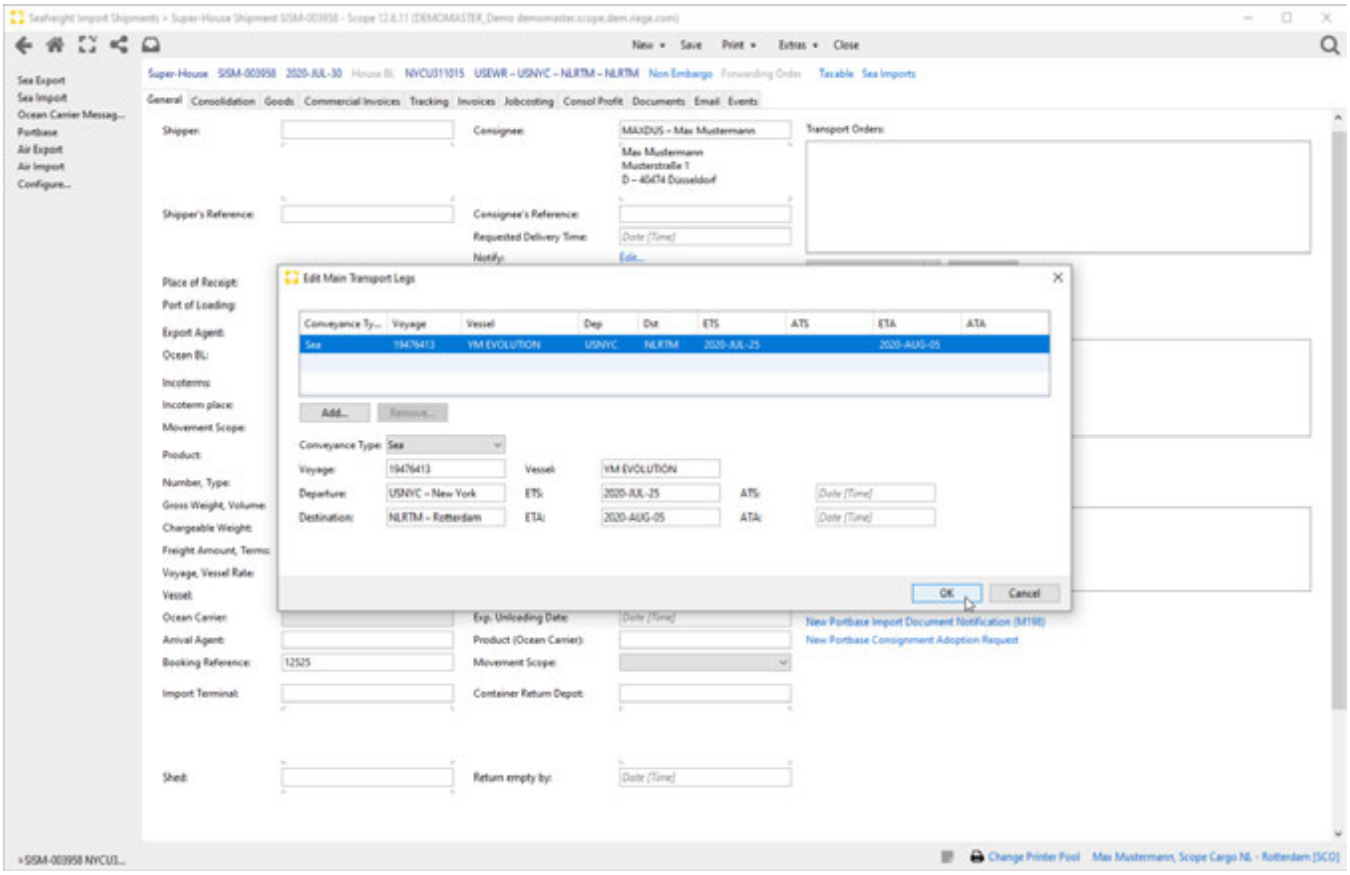
- Unlink from schedule

This function will unlink the shipment from the chosen Selection of from the sailing schedule again and all input fields regarding the main carriage are editable again.

- Edit Main Legs F4

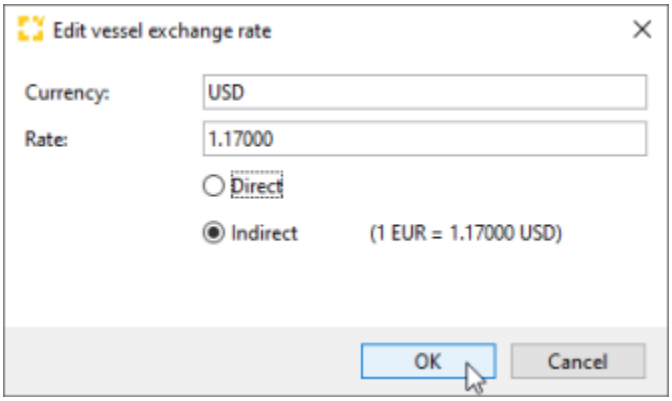
Opens the Edit Main Transport Legs window, where Transport Legs can be added, removed or just edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

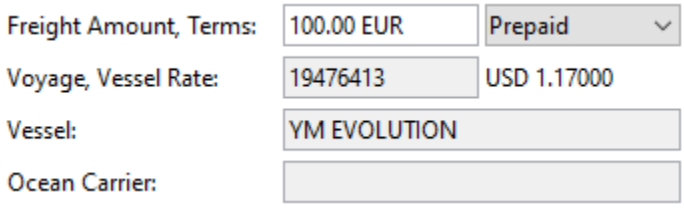


- Edit vessel exchange rate

Opens a window, where the vessel exchange rate can be edited.



Once the exchange rate has been entered, it is displayed next to the input field Voyage, Vessel Rate.



- Delete vessel exchange rate

Will delete an existing vessel exchange rate.

Vessel

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Name of the vessel

ETS, ATS

Estimated and Actual time of departure of the shipment

ETA, ATA

Estimated and Actual time of Arrival of the shipment

Ocean Carrier

Name of the Ocean Carrier

Exp. Unloading date

expected date of the unloading of the shipment

Arrival Agent

Name and Address of the agent at arrival, that can be selected from the partner master data

Product Ocean Carrier

The drop-down menu will open a list of all available Products.

Booking Reference

Booking reference of the shipment

Movement Scope

Movement Scope of the shipment.

Import Terminal

Name and address of the import terminal that handles the shipment. Data can be found with the search field function.

Container Return Depot

Name and address of the container return depot Data can be found with the search field function.

Shed

Name and address of the shed that handles the shipment. Data can be found with the search field function.

Return empty by

Date and time of the return of the empty container to the depot

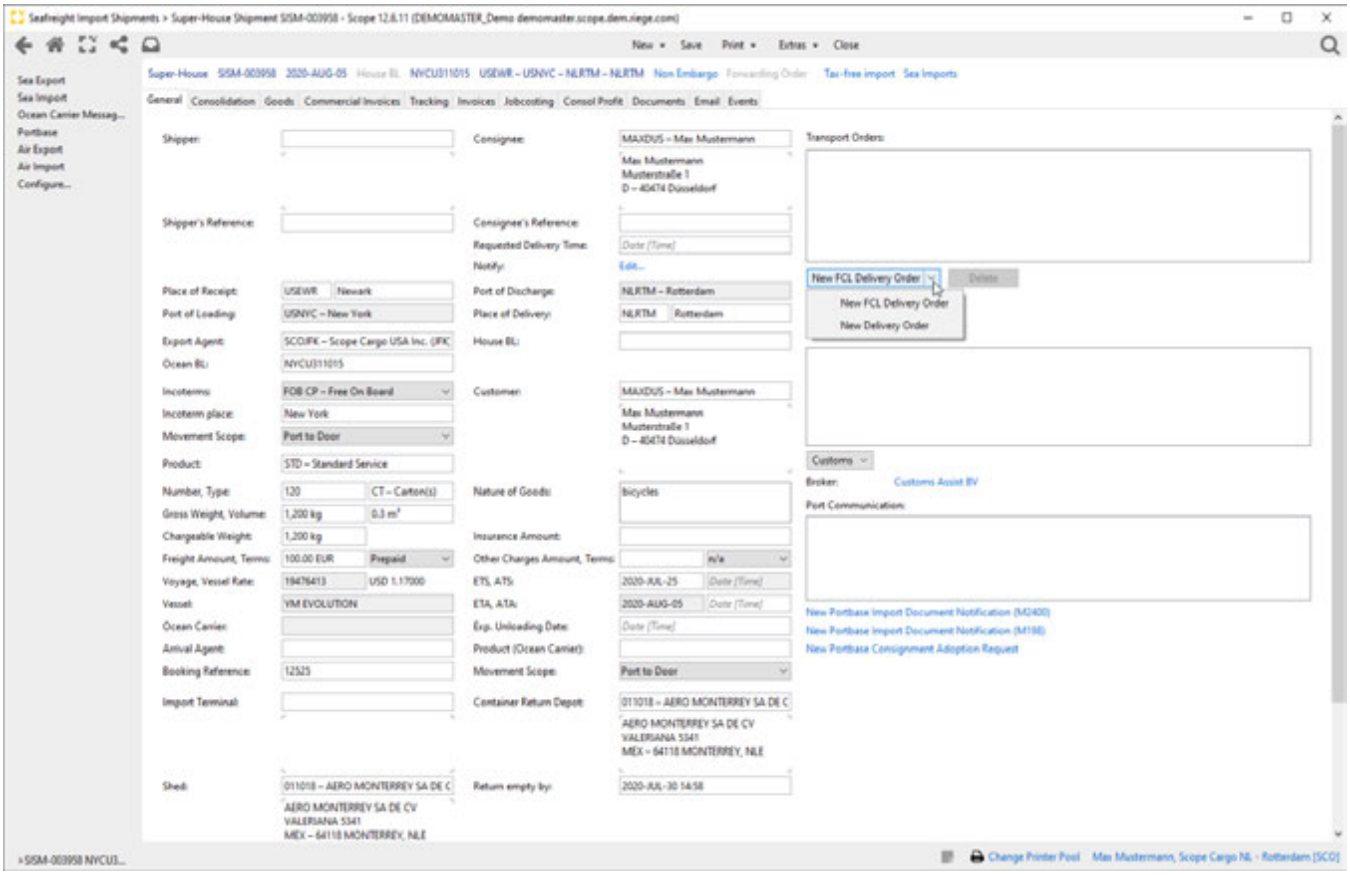
References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

Transport Orders

In this box transport orders will be shown, or can be issued by using the button *New FCL Delivery Order or New Deliver Order,* or deleted by using the button *Delete*.

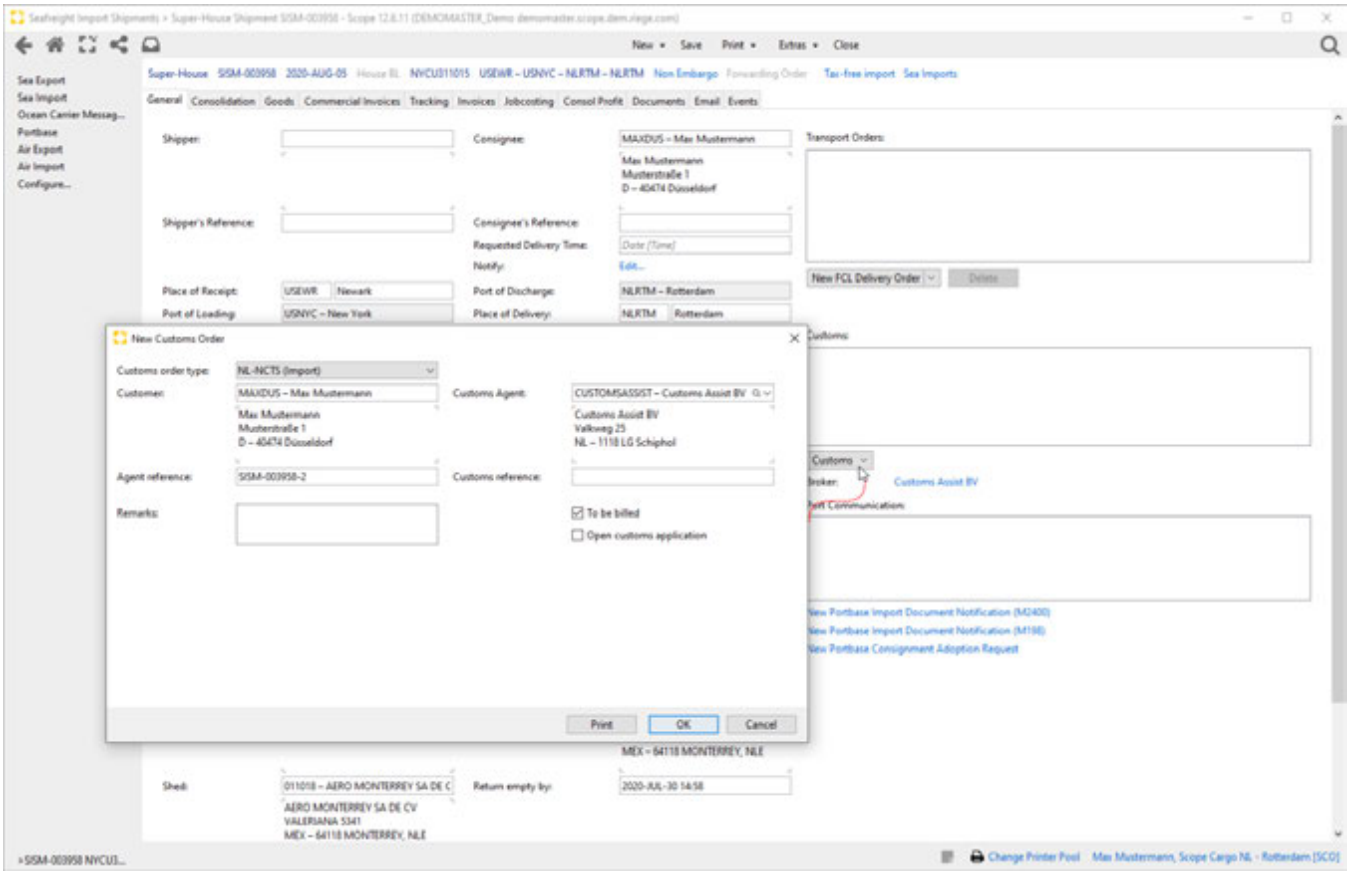
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Customs

In the customs area customs declaration can be issued. A new customs order can be opened by using the drop-down menu to select the available options and open the customs order editor.

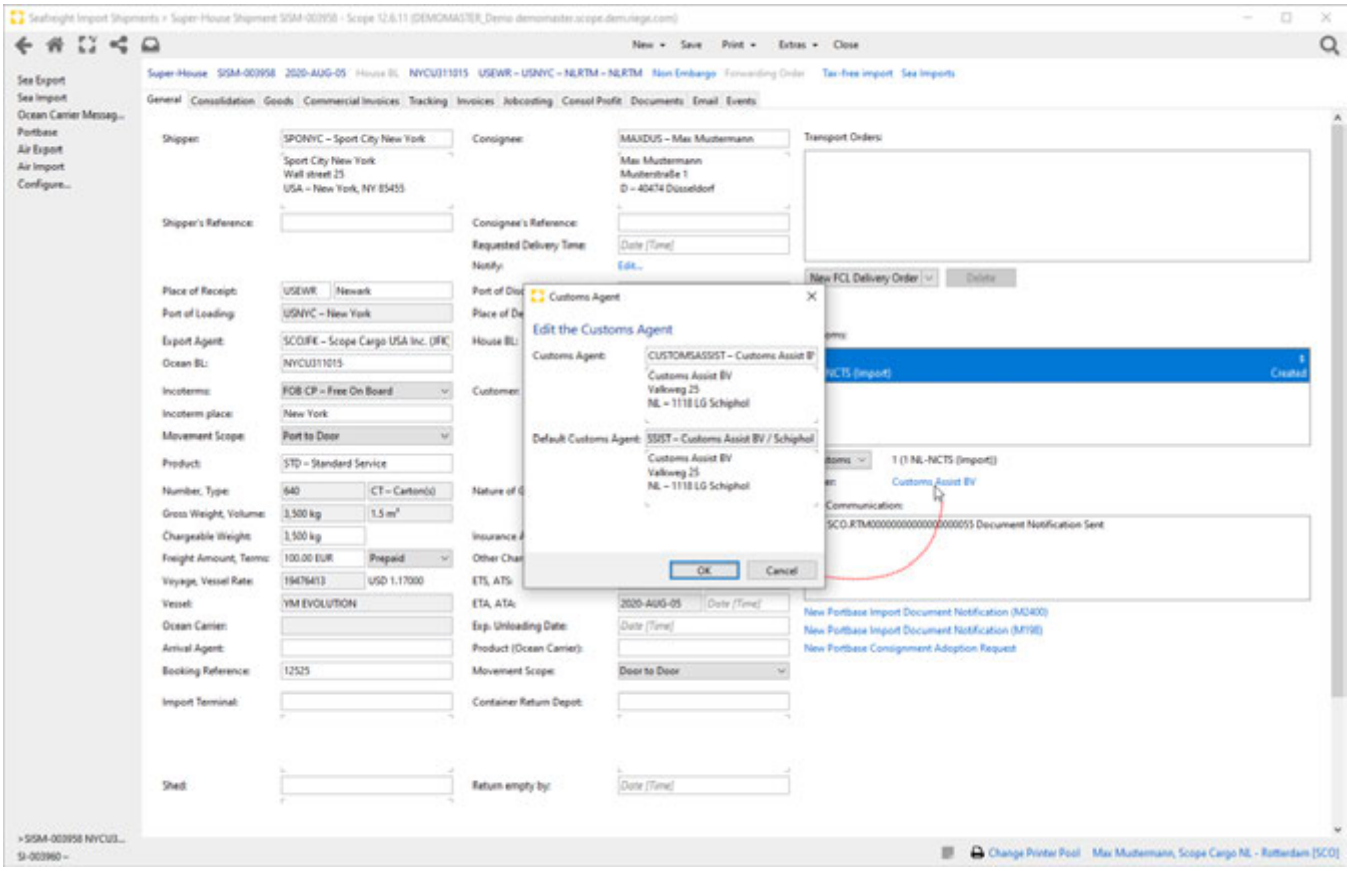
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Broker

Actionlink opens the name and address of the customs broker.

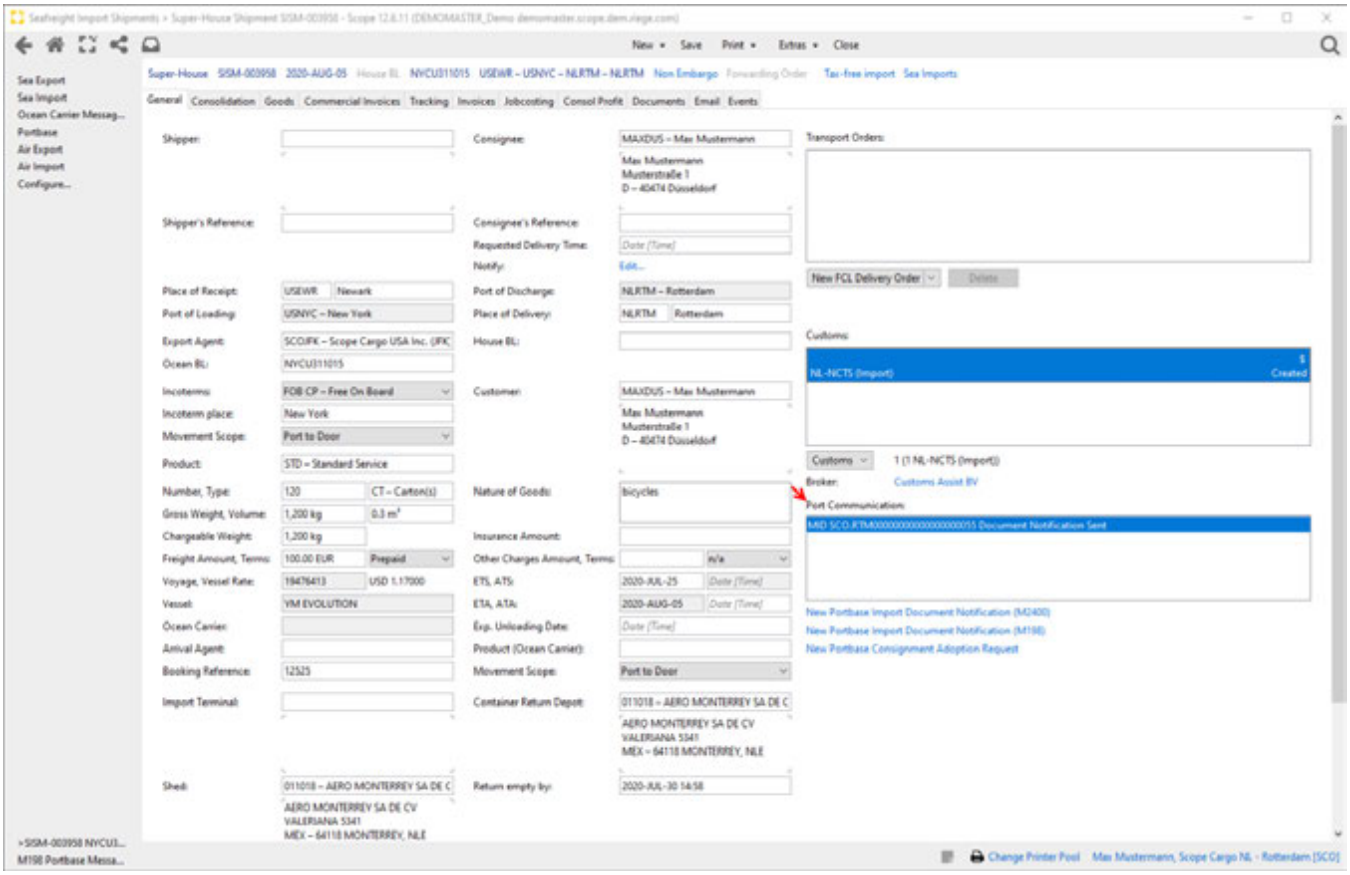
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Port Communication

Port Communication area displays and allows creation of electronic export information within the port communication system.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



New Portbase Import Document Notification, Consignment Adoption Request

(b) Consolidation - Super-House Shipment - Seafreight Import

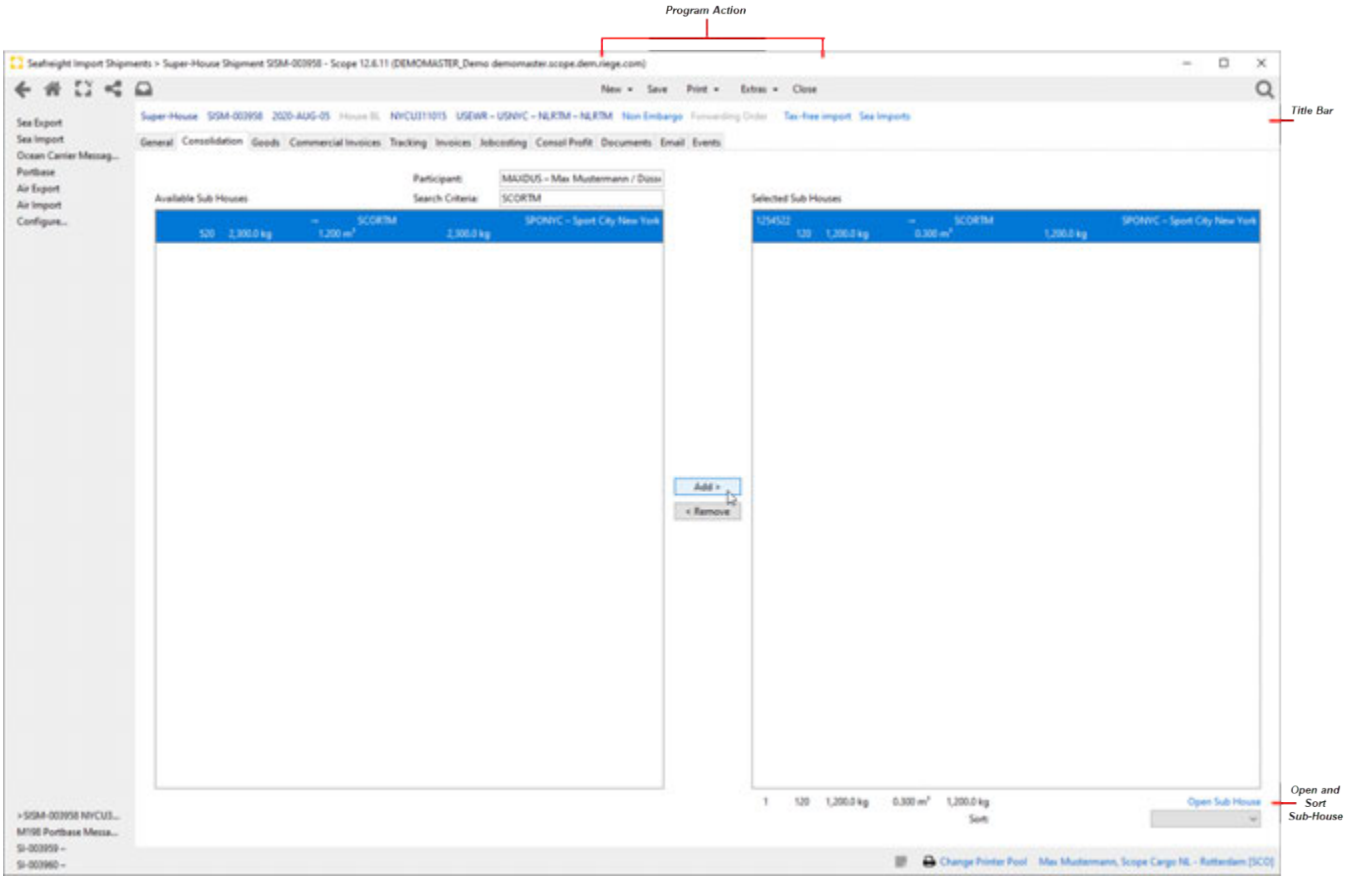
- Introduction
- Description

Introduction

The Consolidation tab presents a view of all available Sub-House shipments that are ready to be consolidated. These can be easily added to or removed from the Super-House shipment.

Description

- Program Action
- Title Bar
- Field Description
- Open Sub-House
- Sort



Program Action

see General Tab

Title Bar

see General Tab

Field Description

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Participant

The Consignee address appearing in this field is taken from the field Consignee, entered in the General TAB of the Super-House. If the field is empty, all available House-Shipments will be shown for the selected direction.

Search Criteria

The destination of the available house shipments is used to match them to the destination of the Super-House shipment. The destination of the Super-House shipment is found in the General Tab.

Available Sub Houses

`By default, all house shipments are displayed, that match with Search Criteria.`

- When the Consignee and destination are present, only house shipments with matching Consignee and destination will be shown as available for consolidation.
- When the Consignee is left blank, then all open House-Shipments to the destination will be shown regardless of the Consignee that may be present at the house level.
- If the destination is left blank, then all open houses that match the Consignee will be shown, regardless of the destination of the house shipments.
- if both the destination and Consignee are left blank then all open house shipments will be visible regardless of the Consignee or destination of those houses.

Selected Sub Houses

This window displays house shipments that are currently included in the Consolidation. The base of the window shows the total number of houses on the consol, their total number of pieces, gross weight, volume and total chargeable weight.

Add

Moves the highlighted house shipment from the Available Sub Houses Shipments window to the Selected Sub House Shipments window to indicate the house is to be included on the consol.

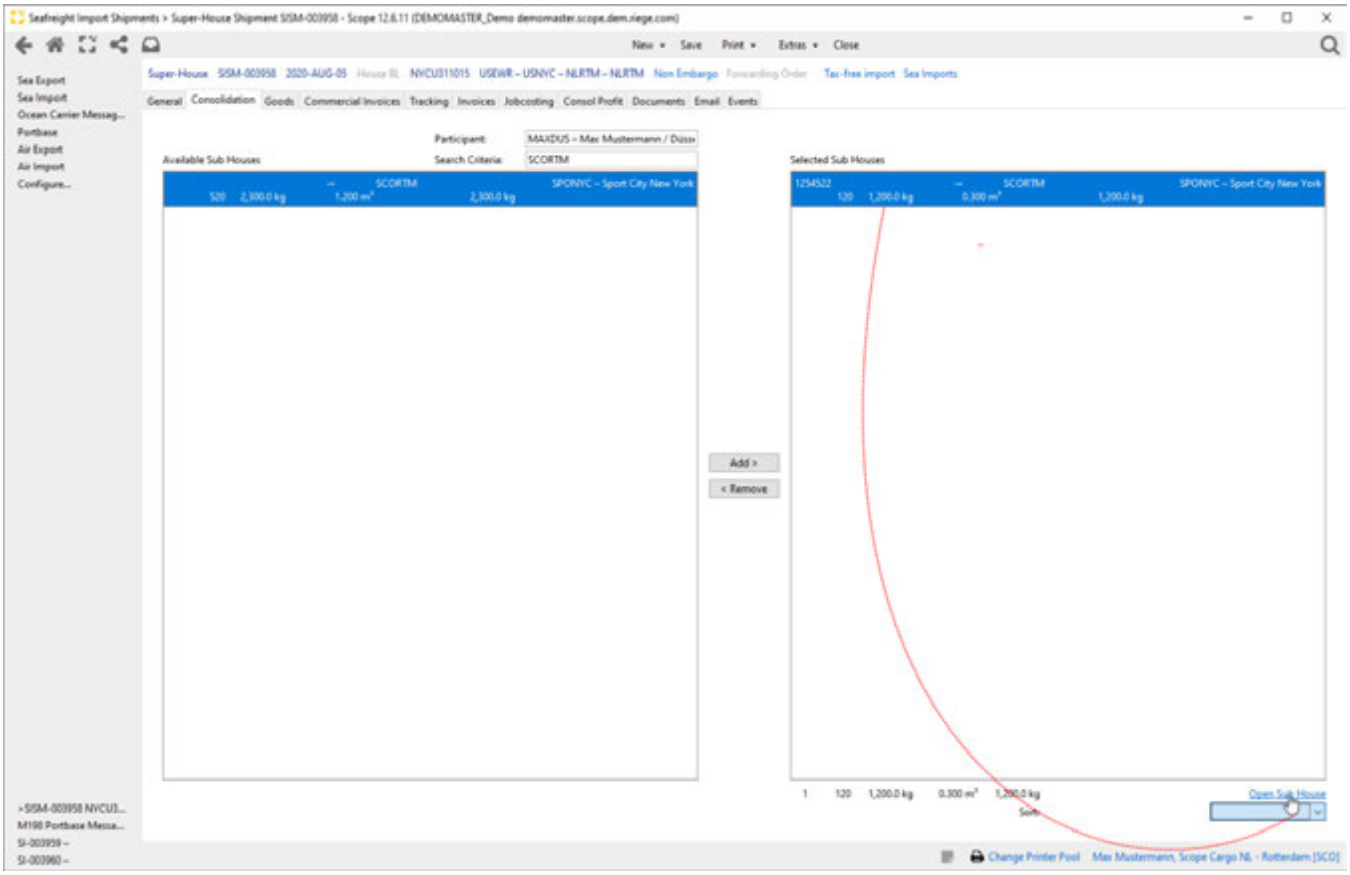
Remove

Removes the highlighted house shipment from the Selected Sub House Shipments window back to the Available Sub Houses Shipments window to indicate the Sub-House is to be removed (deconsolidated) from the consol.

Open Sub-House

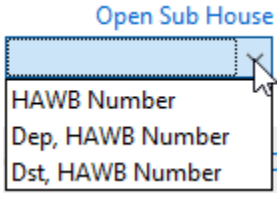
Opens the Sub-House that is marked in the table Selected Sub House Shipments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Sort

The selected Sub-House shipments can be sorted using the dropdown menu.



HAWB Number

Sorting is based on house AWB numbers

Dep HAWB Number

Sorting takes place first from departure and within it according to HAWB no.

Des HAWB Number

Sorting takes place first to the destination and within it according to HAWB no.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

(c) Goods - Super-House-Shipment - Seafreight Import

(g) Jobcosting - Super-House Shipment - Seafreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates, and these are applied according to the nature of the shipment for example the Incoterms used and the chargeable weight of the shipment. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated. See also chapter Jobcosting - Functions - General.

Master Shipment - Seafreight Import

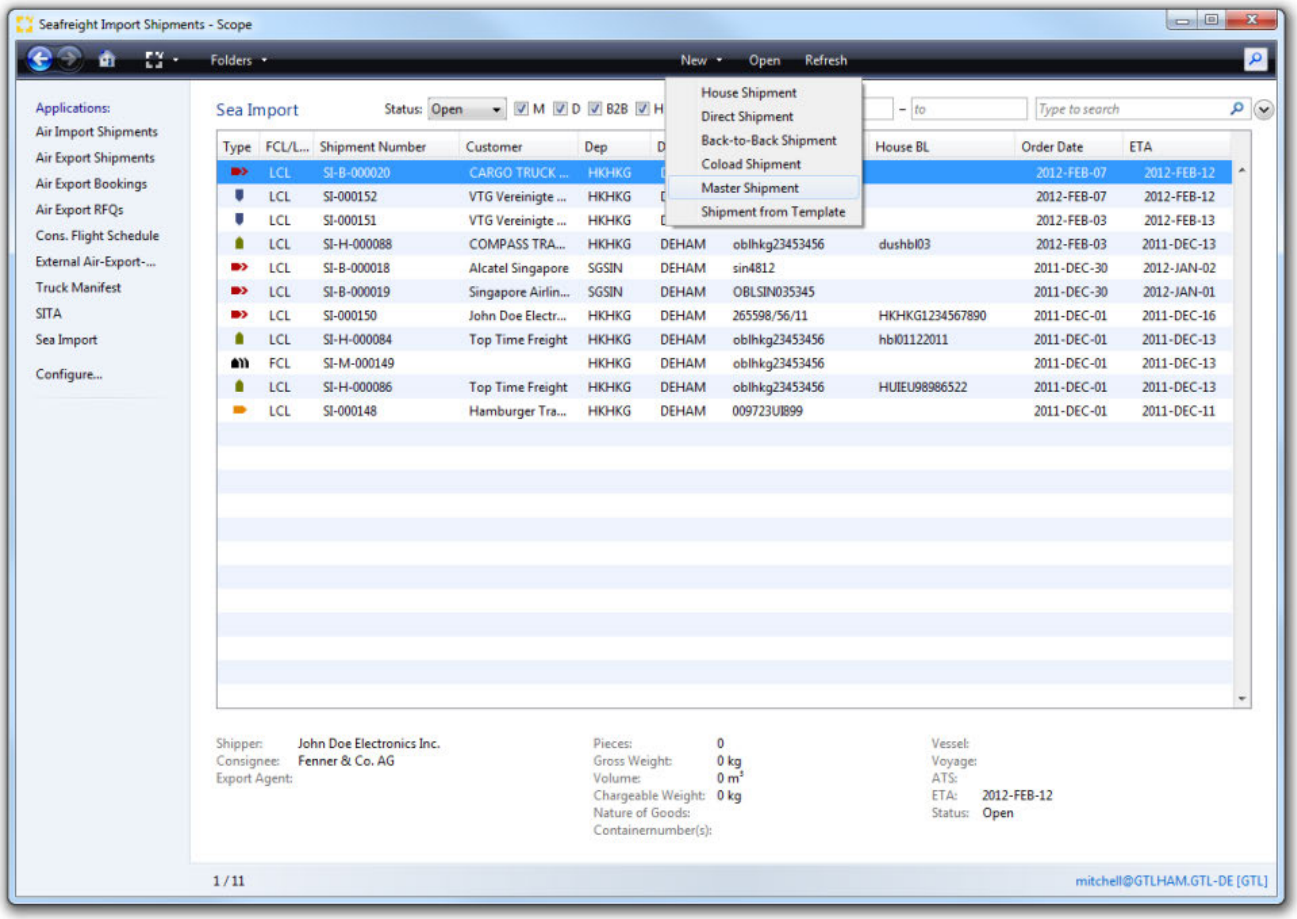
- Introduction
- Description

Introduction

A master shipment is a shipment that includes several house (LCL) shipments . These individual house shipments are bundled in a groupage container. The container is then transported to the terminal and then shipped through to the port of discharge CFS in the importing country. On arrival at the CFS, the individual house shipments are deconsolidated (split) and then distributed to their final destination.

Description

Create a Master shipment by clicking the "New" option on the Scope menu bar and from the list of shipment types select "Master". This will open the house shipment "General " tab.



The following tabs are available to create master shipments.:

- General
- Goods
- Vouchers
- Jobcosting
- Documents
- E-mail

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

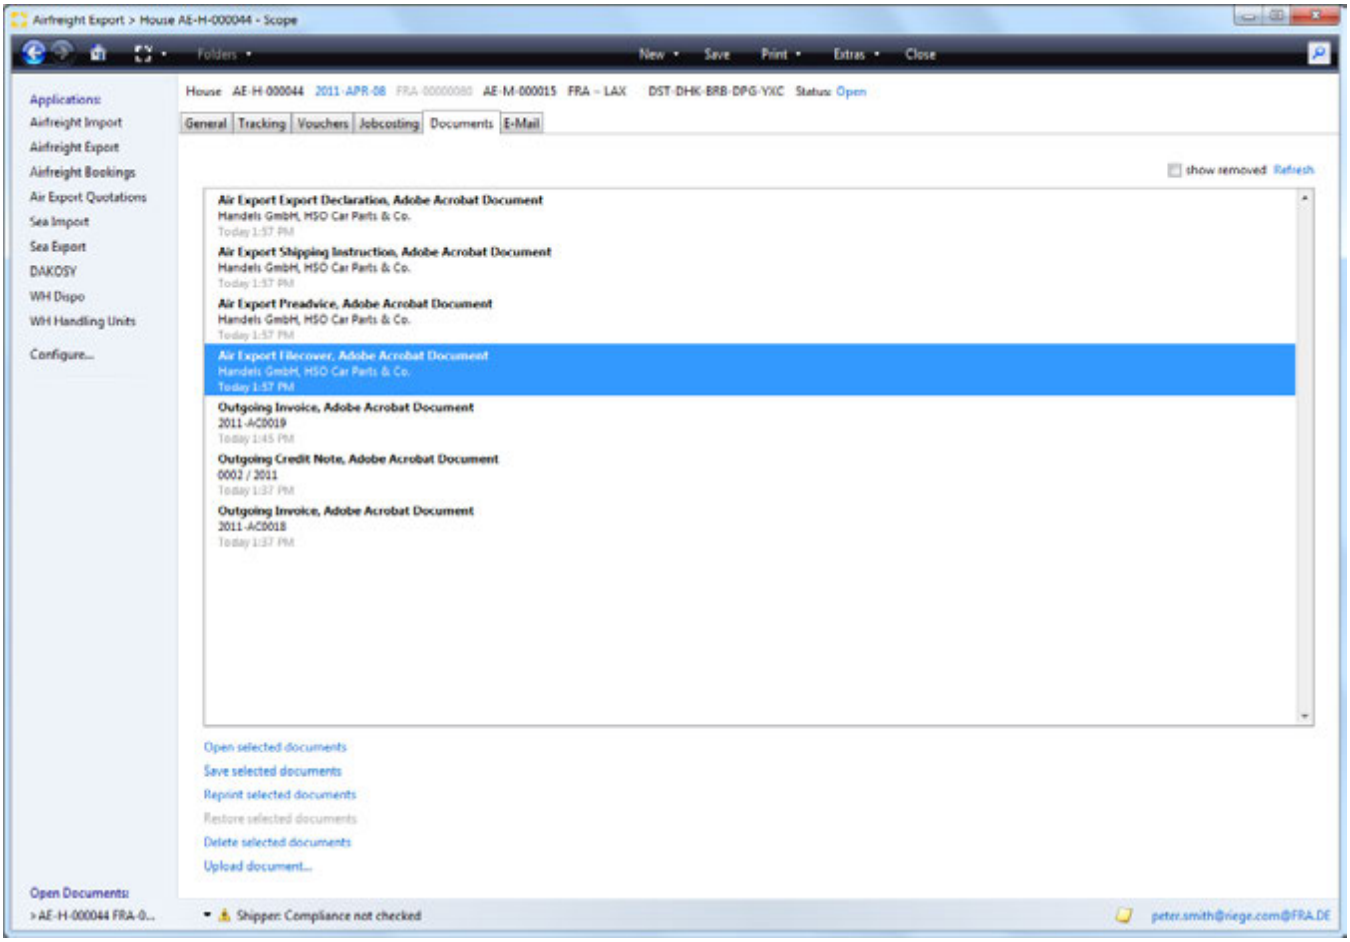
Documents - Master Shipment - Seafreight Import

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. These documents can be opened, downloaded, reprinted, deleted and some documents may be uploaded to web-tracking. Uploaded documents are also displayed.

Description



Document Overview

This area displays all documents that are associated with this shipment or order. The name of the document together with the type of document and creation date are shown. The current version of a document is always displayed. By selecting the show deleted check box, all previous or deleted versions of a document will be shown. These are displayed in ~~strike-through~~ text.

Show removed

Documents that have been previously deleted will be displayed.

Refresh

Updates the current list of documents.

Open selected documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

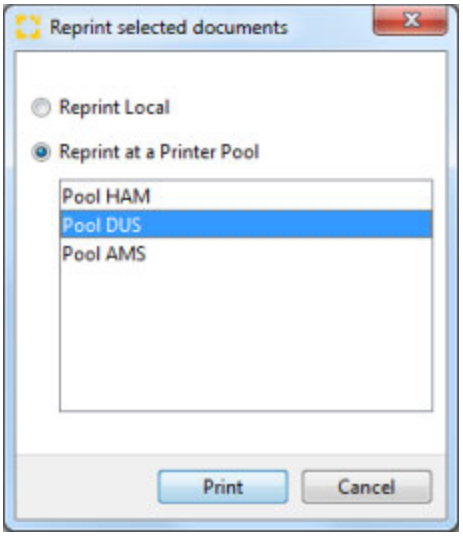
Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the operation without further action.

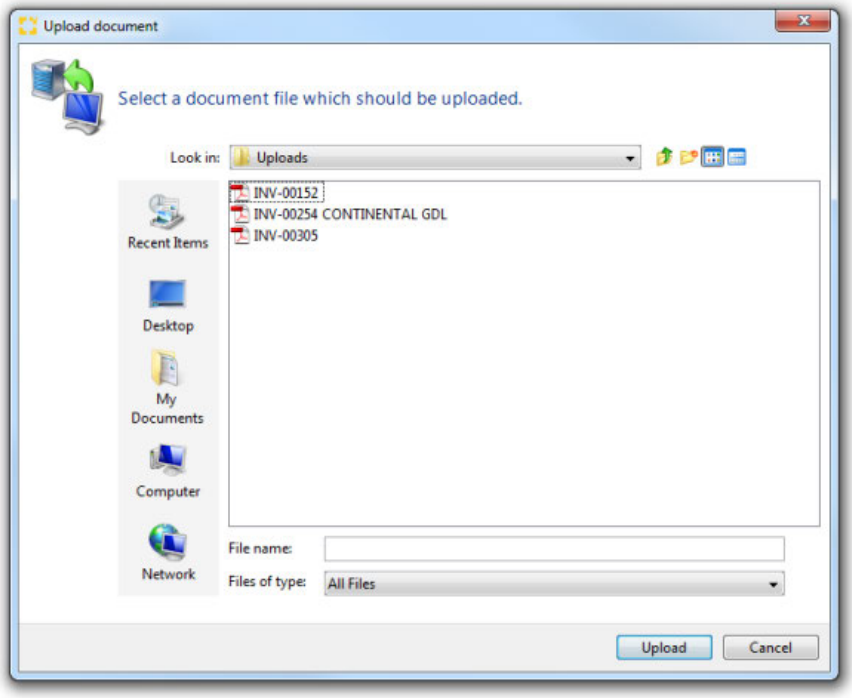
Delete/Restore selected document

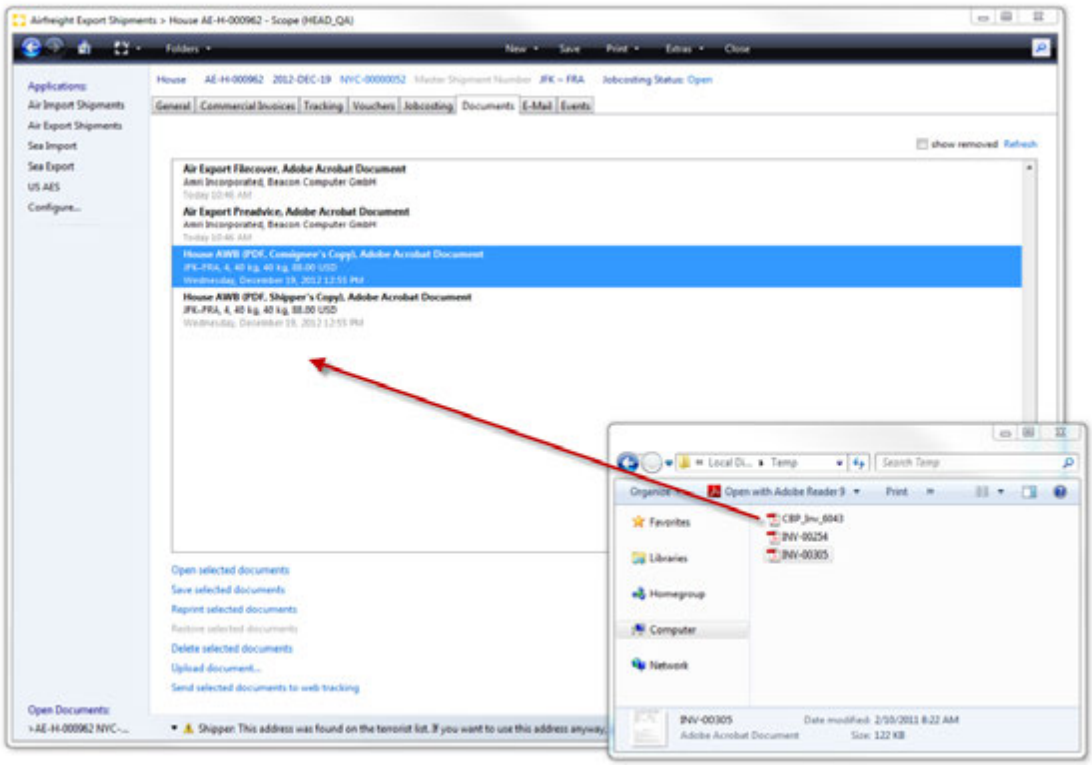
The document highlighted in the list will be deleted from view. Documents are not physically deleted but marked as inactive and therefore not visible. To view all documents including inactive documents, check the show removed box to the right above the document listing. If a document has been deleted, it can be restored by using the show removed check box, highlighting the inactive document and then selecting the *Restore selected documents* action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment. Alternately, navigate to the document on the desktop and drag and drop the document into the documents tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.





Assign Kind of Document type

During upload or via a right mouse click ,it is possible to set a document kind to the uploaded documents
when a uploaded document has a proper kind set, it will be available to automated email processes (invoices, prealerts)

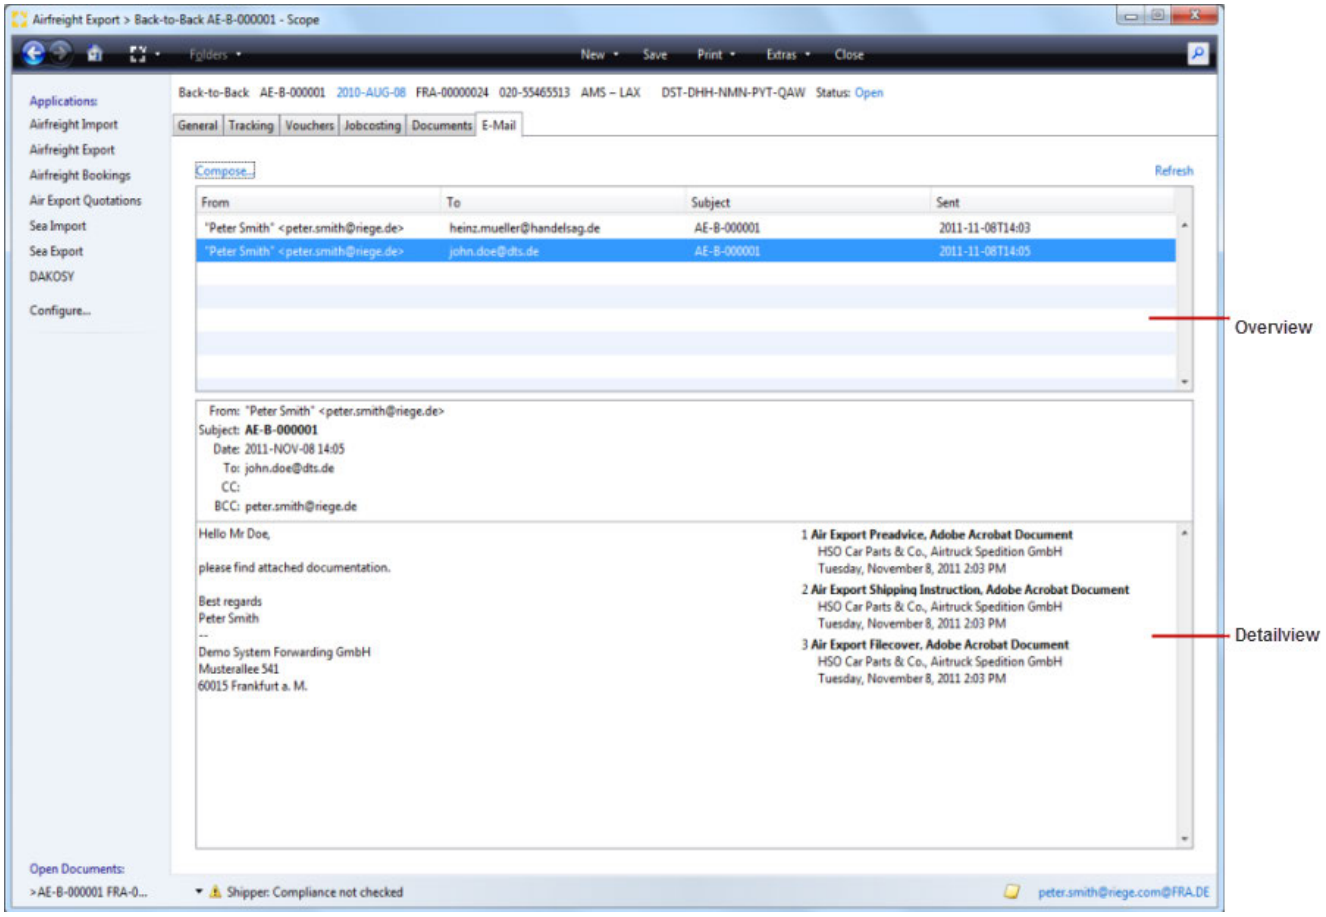
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

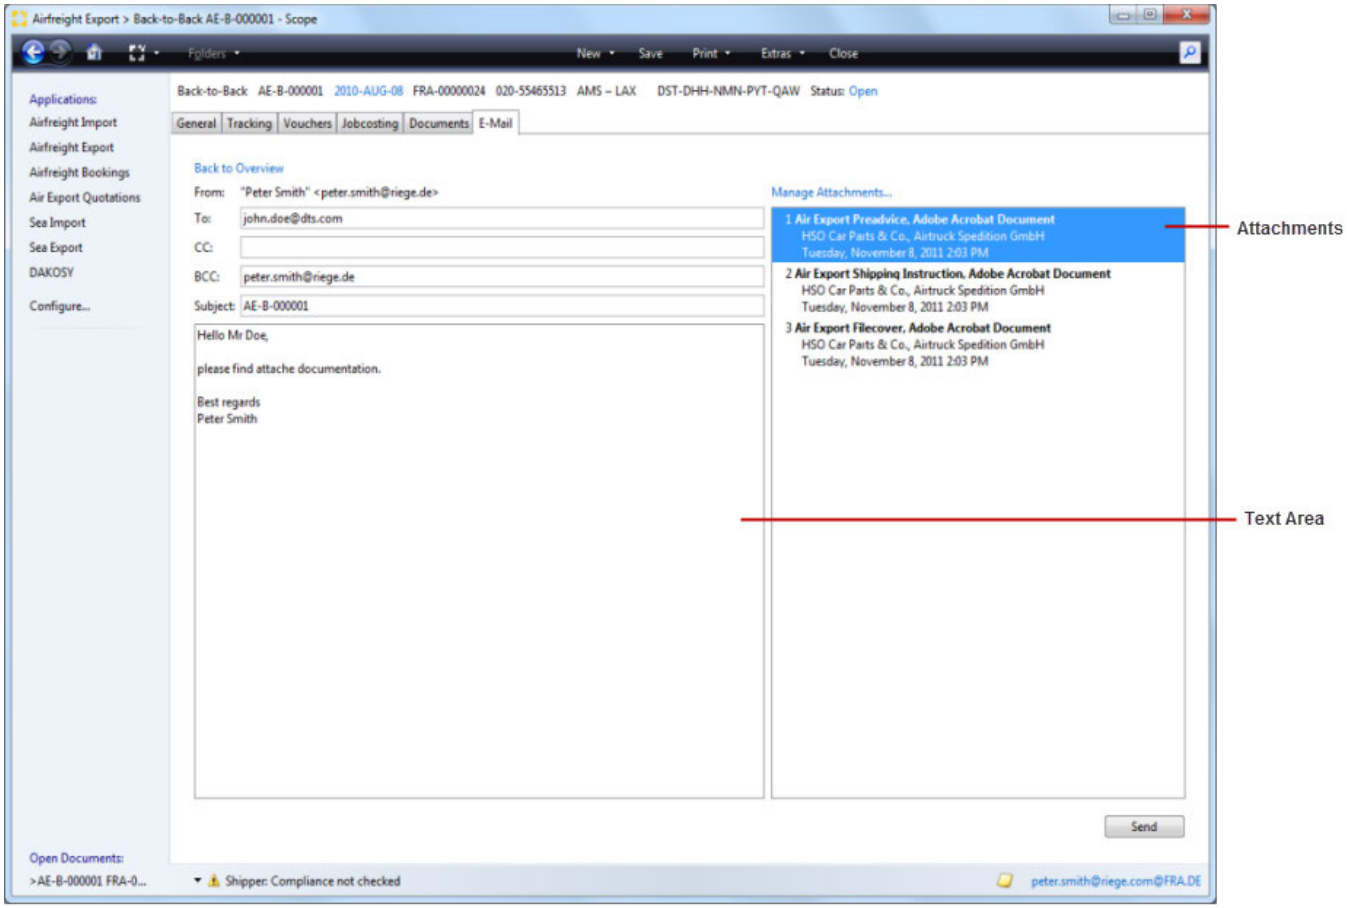
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

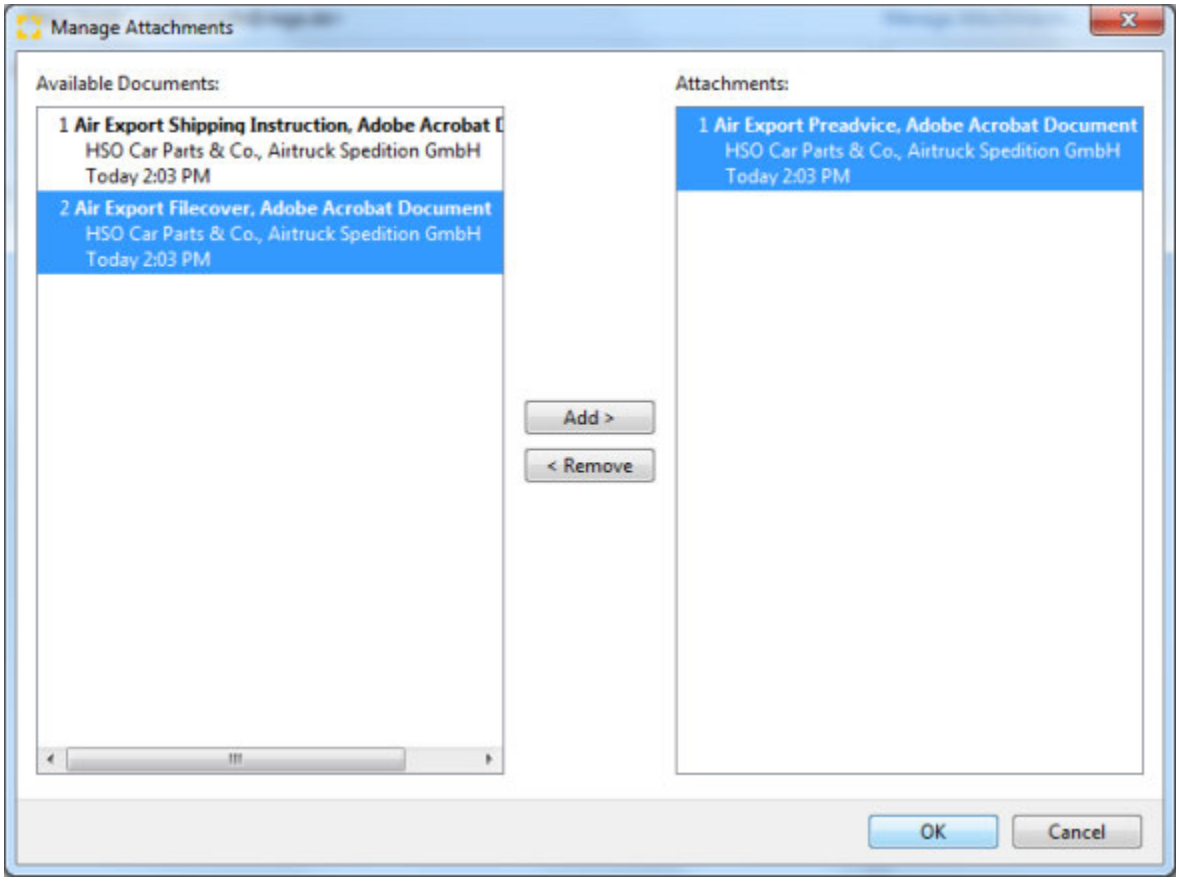
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Program Actions

In the Scope title bar, various overall functions are available:

New

If sufficient data about the master shipment has been entered and saved, the "New" option allows:

- New delivery order FCL
- New Customs order

Save

When all mandatory fields for a master shipment have been entered it is possible to save the direct shipment. At this point a USI is issued.

Print

When the master shipment is saved this option will allow printing of:

- File cover
- Release Order
- Unloading list

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Close

Close the shipment without saving or further action. If there is unsaved data, a dialogue will appear confirming if unsaved data should be discarded.

Title Bar

Above the shipment tabs the title bar appears. This summarizes the details of the shipment and offers further actions:

- **Shipment type**
  This will be "Master" indicating a direct shipment.
- **Shipment number**
  This unique number (USI) is generated on first saving the shipment. Prior to saving it will display the greyed text *direct shipment*. After saving the shipment number will be generated in the format of the 2 digit mode "SI" (Sea Import) followed by the 1 digit shipment type "M" (Master) followed by a 6 digit shipment number.
- **Service date**
  If the arrival date (A.T.A.)is present on first saving, this will be the service date. If not present then the estimated arrival date will be used.
- **OBL Number**
  The OBL of the direct shipment
- **Depart and destination port codes**
- **Internal USI**

Tabs

All available tabs are displayed. The focus will be on the open tab.

Application area

Ocean BL

The ocean bill of lading number issued by the carrier.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Port of departure

Place or port where the goods are loaded onto the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Port of discharge

Place or port where the goods are unloaded from the ship.
The UNLOCODE may be entered directly, or part of the code or place name may be entered and the search function of the field will assist in identifying the correct code.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Carrier

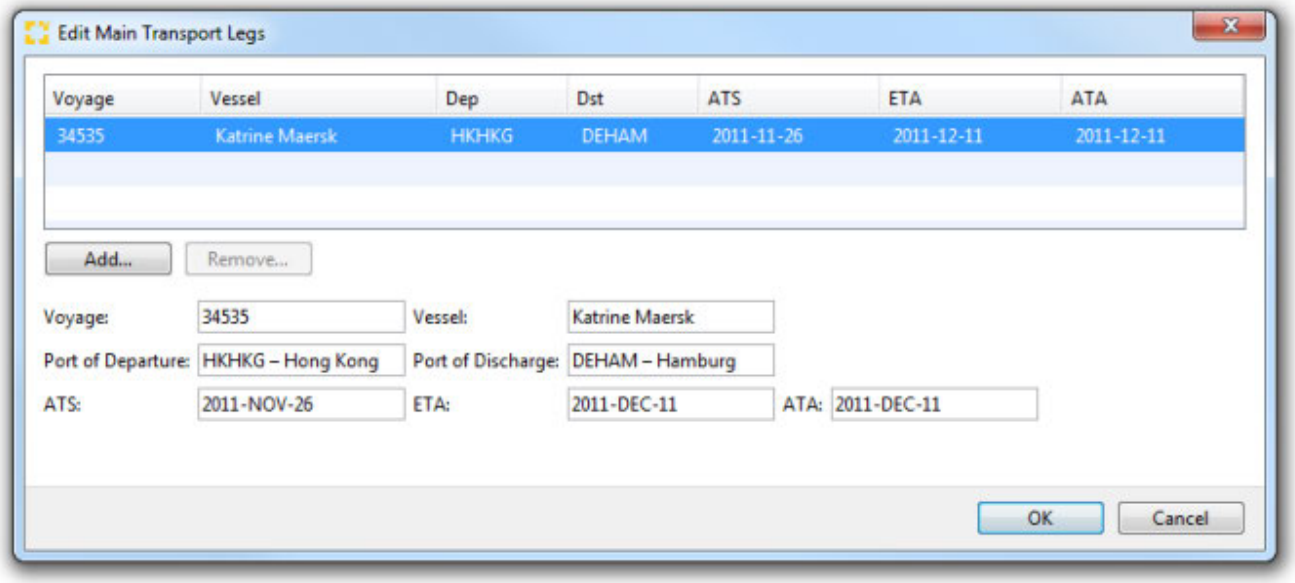
The owner of the vessel that will carry the goods. This will be the SCAC code and name of the carrier.

Vessel

The vessel on which the goods will be loaded.

Voyage / Transport legs

The voyage number of the vessel may be entered directly. The drop down menu also offers access to the _Transport legs _ editor, which allows details of a multi-leg sailing to be entered.The F3 function key can also be used to call the _Transport legs _ editor.



Voyage

The voyage number of the leg.

Vessel

The name of the vessel for the leg.

Dep

The depart port of the leg

Dst

The arrival port for the leg

A.T.S.

The actual date the vessel departed.

E.T.A.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The estimated date of arrival for the vessel.

A.T.A.

The actual date of arrival for the vessel.

Add

Add a new leg.

Remove

remove the leg highlighted in the list of voyages.

OK

Save the data and exits the *Tranport Leg* editor.

Cancel

Cancels selection of a sailing without further action

A.T.S.

The date and time the cargo departed from the port of departure. This is a date and time field, use the drop down option to select from the calendar

4. E.T.A.

The estimated arrival date and time of the vessel. This is a date and time field, use the drop down option to select from the calendar

A.T.A.

The actual arrival date and time of the vessel at the port of discharge. This is a date and time field, use the drop down option to select from the calendar

Total Pieces

The total number of pieces as shown on the master bill of lading. This should correspond to the total number of pieces of all the house shipments consolidated on the master. A cross-check will be done and a warning issued if total master pieces do not match the total number of house pieces.

Gross Weight, Volume

The total gross weight of the consolidation as shown on the master bill of lading. This should correspond to the total gross weight of all the house shipments consolidated on the master. A cross-check will be done and a warning issued if total master gross weight does not match the total gross weight of the house cargoes.

Nature of Goods

This should default to "Consolidated Cargo" since a variety of goods are normally being transported, but this field may be manually edited as desired.

Export Gateway

The agent responsible for shipping the goods from the port of departure. This field will only display partners who are stored with the role "Agent".

House Shipments

The lower section of the screen shows house shipments on the consolidation and provides features to add and create houses for the consolidation. The table of house shipments has the following information:

- House shipment number
- House BL number
- Dst (destination)
- Import Agent - the code of the import agent responsible for the shipment
- Consignee
- Pieces
- Weight
- Volume

Add House

The "Add House" action link allows any existing house that is not part of a consolidation to be added to this master shipment. A dialogue will appear showing available houses. If a house is to be added to the master it should be highlighted and then click "OK", or click "Cancel" to exit the "Add House" dialogue without further action.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Create and add house shipments

Once the basic master details have been entered, the lower section of the screen allows the fast creation of new house shipments and displays a listing of house shipments that have been created and are included on the consolidation.

New (House)

The "New" function button will launch the "New Consolidated House Shipment" editor. This editor has 2 tabs:

- **General tab** - shipper, consignee, depart, destination and shipping terms
- **Goods tab** - in-depth details of the house shipment goods

General Tab - New Consolidated House Shipment

Customer

Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

House B/L

House B/L Number.

Import Agent

The agent to whom the shipment will be transferred on arrival. The agent is normally appointed by the customer, and typically is the freight forwarder creating the consolidation.

Place of receipt

The place of receipt is the place where the goods are handed over by the shipper.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Place of delivery

The place of delivery is the final destination of the goods.
The UNLOCODE can be entered in the left field or the place name may be entered. The search function of the field will then confirm or assist with locating the correct UNLOCODE. The full name of the place will appear in the right field or may be adjusted, for example to to allow for a different spelling of the place name to be used only on this shipment.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Consignee

Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where in addition to other functions, a new partner may be created or an existing partner may be edited.

Total Number

The total number of pieces on the house bill of lading.

Type

The type of packaging used for the cargo.

Gross Weight

The gross weight of the cargo

Volume

The volume of the cargo in m3. If the unit is over-written with "CFT" it will automatically convert the cubic foot measurement to cubic meters.

Nature of Goods

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

A summary description of the goods.

Export Agent

The agent responsible for the cargo in the exporting country.

Incoterms

Incoterms identify the costs risks and tasks associated with international transportation of commercial goods. They are 3 letter codes issued by the ICC (International Chamber of Commerce). The current version of the list is Incoterms 2010. This field is used to record the Incoterms that will be applied to the shipment.
Choose from the following Incoterms using the drop-down menu (Click on the arrow):

Incoterm	Description
EXW	ex works
FCA	free carrier
FAS	free alongside ship
FOB	free on board
CFR	cost and freight
CIF	cost, insurance and freight
CPT	cariage paid to
CIP	carriage, insurance paid to
DDP	delivered, duty paid
DAP	delivered at place
DAT	delivered at terminal

Movement Scope

The type of transport being arranged. These can be selected via the drop-down menu (click on the down-arrow), the following movement orders are available:

Type of order	Description
Door2Door	The shipment is picked up at the customer / plant ("front door") in the exporting country and delivered to the customer / plant ("front door") in the importing country.
Door2Port	The shipment is picked up at the customer / plant ("front door") in the exporting country and transported to the port of loading or port of discharge.
Port2Door	The shipment is received at the port of loading or port of discharge and delivered to the customer / plant ("front door") in the importing country.
Port2Port	The shipment is received at the loading port and transported to the port of discharge.

Proceed with shipment entry

The action link "Proceed with shipment entry" with launch the full house shipment editor.

Cargo Tab - New Consolidated House Shipment

Packages

The packages from the General tab will default as the shipment cargo. This can be edited, or split into individual packages using the action icons:

Symbol	Action
	Adds new cargo.
	Removes the highlighted cargo
	Moves the highlighted cargo up the list.
	Moves the highlighted cargo down the list.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Pieces

The exact number of pieces.

Packing type

To the right of the pieces, the type of packing can be described - pallets, boxes, barrels etc.

Gross Weight

The gross weight of the packages. This figure will default to Kg, but this may be changed to Lbs if required.

Volume

The total volume of the packages. This figure will default to Cubic meters (m3), but this may be changed to cubic feet (CFT)if required.

Stackable

The stackablilty of the packages.

Nature of Goods

A description of the goods. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Marks and Numbers

Any marks and numbers on the goods that are to be noted on the documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Handling Info

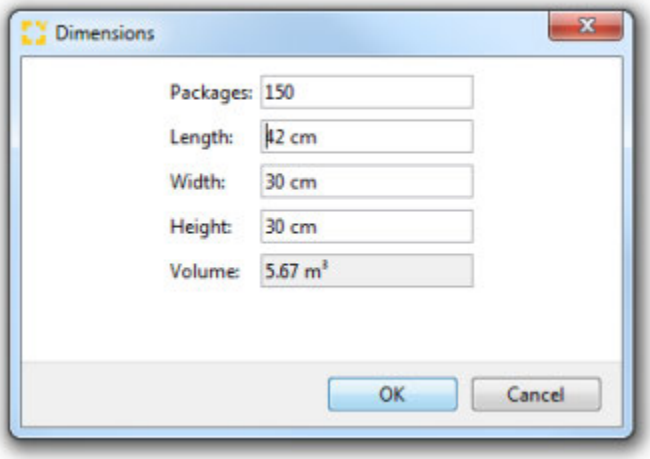
Special handling instructions to be included on documentation. By right clicking, a context menu will appear and allow the selection of text blocks, alternately use **Ctrl + T**

Dimensions

Each piece of the package can be recorded in the *Dimensions Editor*.

New

By clicking on the **new** button the dimensions editor will appear. This can be repeated for each item until all have been entered and the results will be tabulated.



Data is saved by clicking the "OK" button and discarded by clicking the "Cancel" button.

Packages

The number of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Length

The length of each package. The default measurement will be in **cm** but this can be changed to **in**.

Width

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Height

The height of each package. The default measurement will be in **cm** but this can be changed to **in**.

Volume

The volume of the packages will be calculated automatically using the dimensions provided. This field cannot bee edited.

Edit

Any existing package in the summary table of packages my be highlighted and edited by clicking the *edit* button.

Delete.

Any existing package in the list of packages.

H3. Edit (House)

The "Edit" button opens the house shipment highlighted in the summary list and enables the details to be revised.

H3. Delete (House)

The "Delete" button deletes the house shipment highlighted in the summary list.

H3. New from Template (House)

The "New from Template" enables the creation of a new house for the consolidation but does so by allowing an existing shipment template to be selected as the basis of the new house.

Documents area

New Delivery Order FCL

This action enables the creation of a new delivery order. Clicking on this link will open the delivery order application. New delivery orders will appear in the window above the "New Delivery" action link.

Delete Transport order

Any existing delivery orders will be shown in the window above the "New Delivery" action link. The "Delete Transport order" action link will delete any highlighted existing delivery order in this window.

Customs Area

New Customs Order

Opens the customs order editor.

Edit Customs Order

Opens the customs order editor to edit the highlighted customs order.

Remove Customs Order

Removes the highlighted customs order.

Add Customs References

Opens the additional customs references editor. Up to 10 additional customs references may be inserted and linked to the shipment.

Open Customs Application

Opens a customs entry applications if available.

New Delivery Order FCL - General - Master Shipment - Seafreight Import

- Introduction
- Description

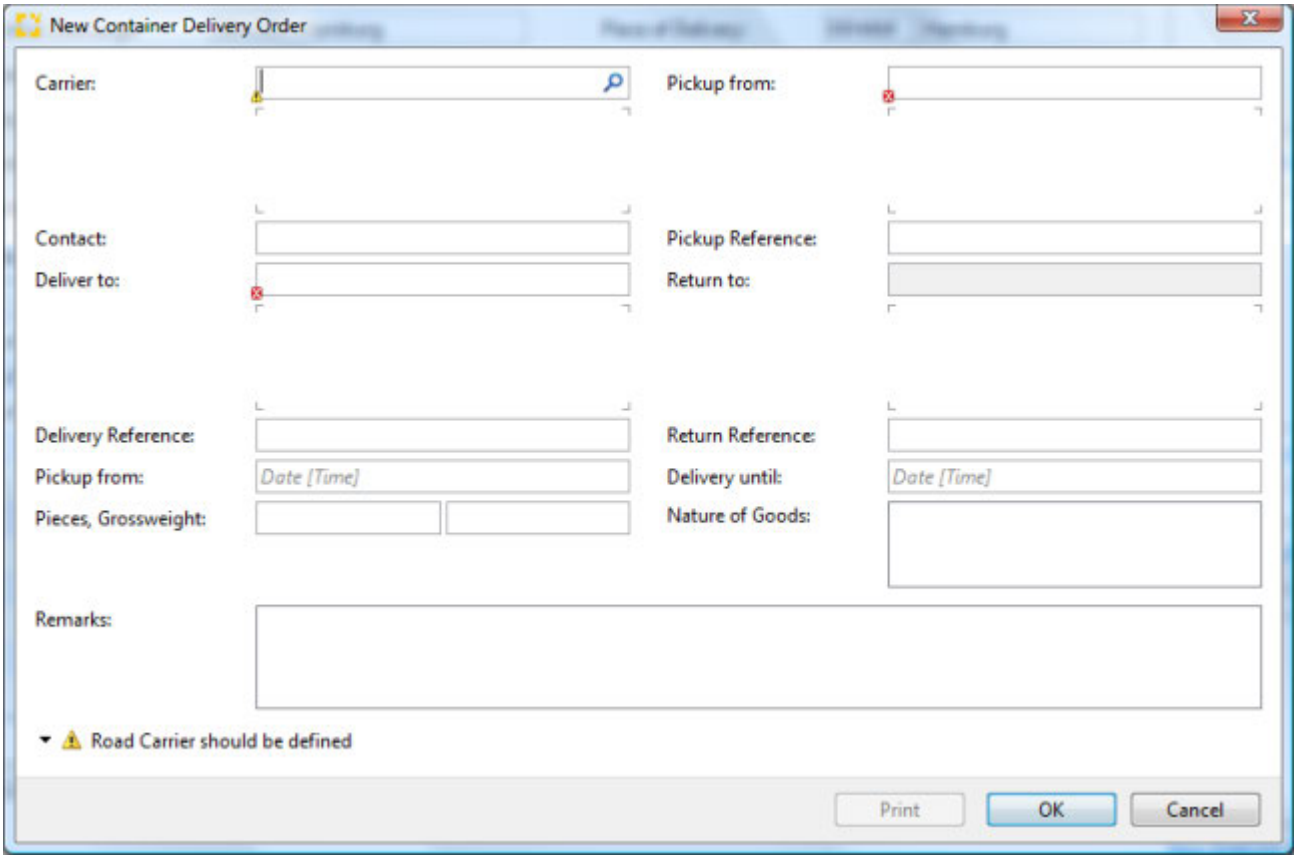
Introduction

Creation of an FCL delivery order requires the full shipment details have been saved in the "General" tab.

The "delivery order" is created by the the forwarding agent to collect the goods from the CFS and have them delivered to the forwarding agents warehouse or Container Freight Station (CFS).

Description

A "Delivery Order FCL" can be created by click the blue action link "Delivery Order FCL". This will open the "New Container Delivery Order" editor.



Carrier

The trucking company who will transport the container. Locate the desired carrier using the search field. The **contact name** for the carrier may be entered or selected from the list of contacts for this partner.

Carrier Contact

The name of the party employed by the carrier who should be contacted for details of the pickup.

Pickup from

The address at where the container should be picked up. The desired partner can be located with the search field.

Pickup Reference

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The reference issued by the steamship line to identify the pickup.

Deliver to

The address to which the container is to be delivered. The desired partner can be located with the search field. The **contact name** for the delivery location may be entered or selected from the list of contacts for this partner.

Return to

The address to which the container should be returned.

Delivery Reference

The reference issued by the agent to identify the delivery.

Return Reference

The reference issued by the steamship line to use on return of the container.

Pickup From

The pick up window (Date / Time), in which the consignment is to be picked up.

Delivery until

The delivery window (Date / Time), in which the consignment is to be delivered.

Pieces

The total number of pieces on this delivery order. The field has a drop down menu or F3 function key to access the container selection tool.

Gross weight

The gross weight of the container.

Nature of goods

A description of the goods.

Remarks

Comments or instructions entered in this field will be printed on the delivery order.

Print

Print the delivery order. The document will be created as a PDF document that can be viewed in the *Documents* tab.

OK

Save the data and close the delivery order editor.

Cancel

Close the delivery order editor without taking any further action.

Cargo Detailed Description

Loading Equipment

The icons within the table of cargo and containers describe the kind of cargo item:

Symbol	Cargo Item
? Unbekannter Anhang	Container
? Unbekannter Anhang	Cargo

Cargo items can be added or deleted using the action icons above the table of cargo items:

Symbol	Action
? Unbekannter Anhang	Adds a new container
? Unbekannter Anhang	Adds a new piece of cargo
? Unbekannter Anhang	Removes a piece of cargo or container
? Unbekannter Anhang	Moves the item up the list
? Unbekannter Anhang	Moves the item down the list

LCL cargo

The house cargoes will appear as ? Unbekannter Anhang.

For each cargo item detailed information can be seen but not edited in the sub tabs:

- Cargo description
- Dangerous Information

FCL Shipment

Container can be added using the ? Unbekannter Anhang icon. This will open a container entry screen on the right where the full container details are recorded. On completion of the container details, at least one cargo item must be added to the container using the ? Unbekannter Anhang icon.

? Unbekannter Anhang

Number

The number of the container, composed of a prefix and terminated by a check digit, for example DUDU 9995489.

Unknown

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

If the "Unknown" box is checked, then the container number can be left empty.

Shipper's owned

Check the "Shipper's owned" box if the carrier owns the container.

Seal

The container seal number

Type

The container type. This is a search field and will only permit container types stored in the container database.

Inner Size (LxWxH)

This will display the inner dimensions of the container. These figures are applied according to the container type and taken from the container database. These dimensions cannot be changed.

Remarks

Any remarks particular to this container

Total pieces

The total number of pieces in the container. This is derived from the cargo items associated with the container.

Tare weight

The container weight from the container database

Maximum Weight

The maximum load for the container include the tare weight. Taken from the container database.

Loaded Weight

The total weight of the cargo items in the container

Volume

The total volume of the cargo items in the container.

Assignment of a cargo item to a container

Cargo can be added to or removed from a container simply by dragging the item into the container or dragging the item out of the container.

Cargo Detailed Description

This area presents sub-tabs for greater detail about the cargo items:

Packing Group
Package Type Code
Transport Code
Category

Enable dangerous goods entry

Checking the dangerous goods flag marks the entire shipment as carrying dangerous goods. In addition the previous greyed data fields of the dangerous goods tab are now activated for entry.

Any cargo marked as dangerous will appear in the cargo list with a red and white "dangerous" symbol.

IMDG Class

IMDG code for the Hazardous class of materials.

UN Number

The UN number of the substance. This is prefixed by "UN" followed by a 4 digit number.

Proper shipping name

The full shipping name of the substance

Technical Name

The precise technical designation of the hazardous substance. This is on the IMO-DGD.

MFAG Number 1

Medical First Aid Guide - Number 1 acc. IMO-DGD.

MFAG-Number 2

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Medical First Aid Guide - Number 2 acc. IMO-DGD.

EMS-(Fire)

Emergency Schedule - Number 1 acc. IMO-DGD.

EMS-(spill)

Emergency Schedule - Number 2 acc. IMO-DGD.

Limited Quantity

Check the field to indicate a limited quantity of the dangerous goods.

Exempted Quantity

Check the field if the limited quantity of the dangerous goods is sufficient to exempt it.

Net Weight

The net weight of the dangerous goods (see IMO-DGD).

Flash Point

The temperature in degrees Celsius (° C) at which the hazardous substance will ignite.

Radioactivity

The radioactivity of the hazardous cargo.

Page Number

The page of the hazard data sheets.

Packing Group

The packing group according to IMO-DGD.
The following packing groups are available:

Packing Group
I
II
III

Package Type Code

Type of packaging according to ADR regulations.

Transport Code

The transport index for radioactive materials.

Category

Indicate the category (tunnel restriction code A through E)

Jobcosting - Master Shipment - Seafreight Import

- Introduction
- Description

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated.

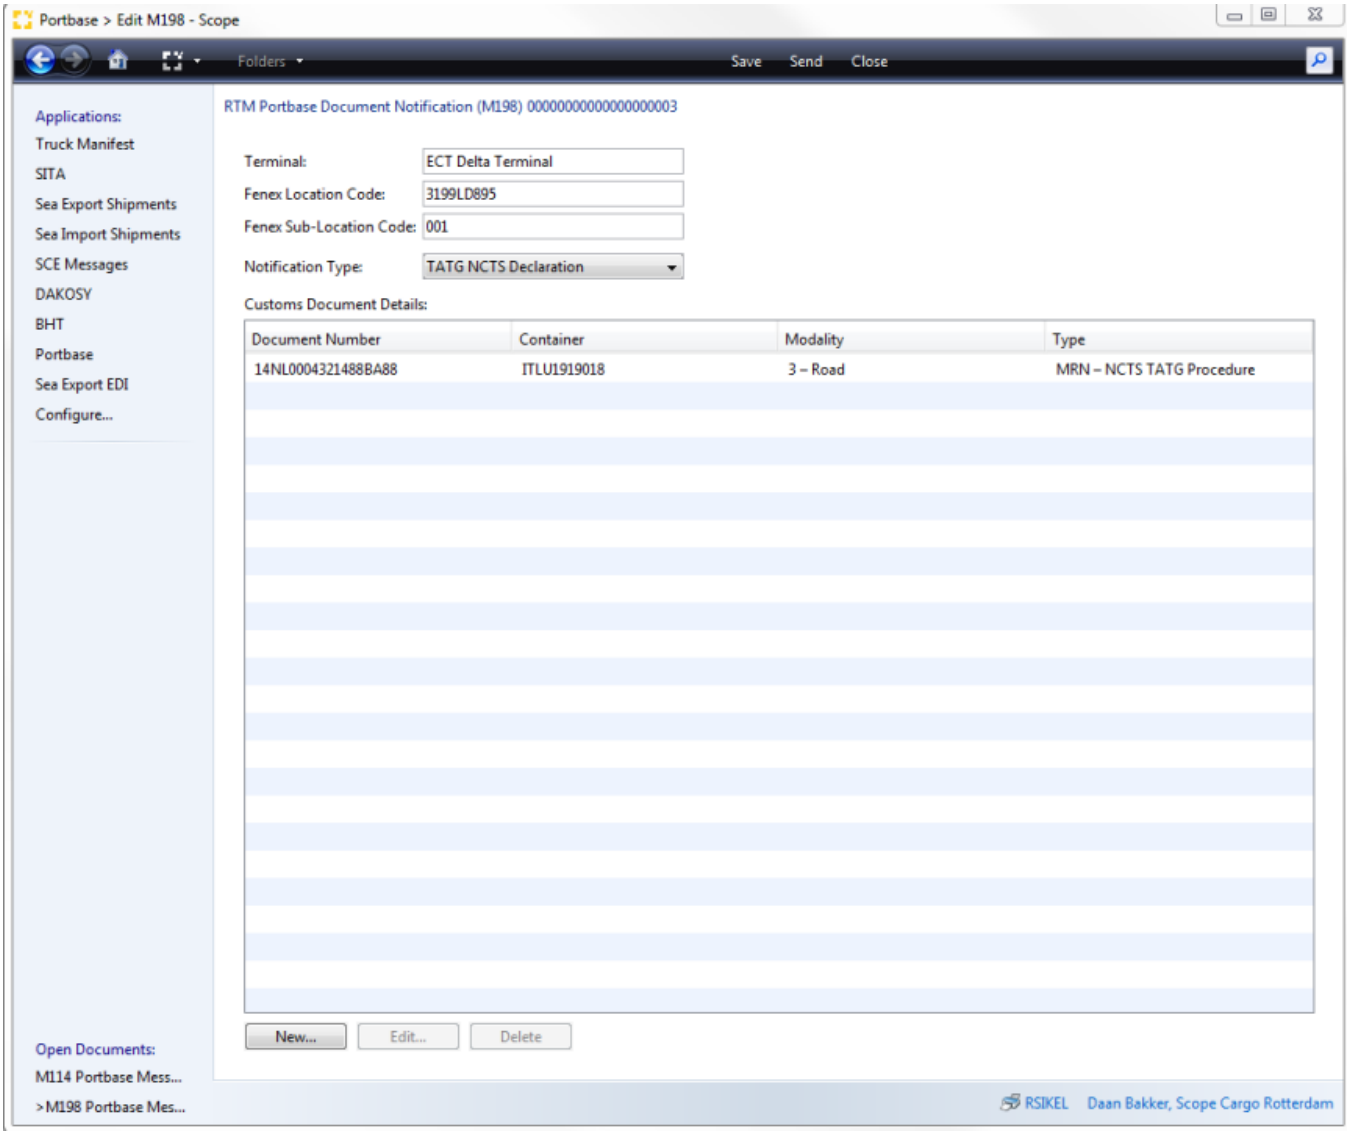
Portbase MID service message

Description

In the MID service the customs documents are reported per container and notification types, Portbase recognizes two notification types of messages. combination of Documents of the different types in a single message is not allowed. Scope will validated on correct linking of types.

Created Customs document	Declaration Symbol	Declaration kind	Declaration type	NCTS control result	Document type	notification type
SAGITTA IMPORT	IM, EU, CO	A,B,D or E	-	n.a.	IM4	normal NCTS or Sagitta Import Document
AGS IMPORT	IM, EU, CO	A,B,D or E	-	n.a.	IM4	normal NCTS or Sagitta Import Document
NCTS	-	-	T-,T1,T2	<> A3 or Empty	NT1	normal NCTS or Sagitta Import Document
NCTS	-	-	T-,T1,T2	=A3	MRN	TATG NCTS Declaration
no customs document				n.a.	ICT	normal NCTS or Sagitta Import Document
Fiat Wegvoering (manual created document or by customs issued document) Emergency Procedure AGS Emergency Procedure NCTS	-	-	-	-	FWV	normal NCTS or Sagitta Import Document

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Terminal

With the terminal a partner registered as portbase participant can be selected, will be defaulted from the container terminal when the MID is created from a shipment .

Fenex Location code

The, by portbase assigned, unique code identifying the terminal, is defaulted from the terminal partner if setup in the partner maintenance

Fenex Sub location code

The, by portbase assigned, unique code identifying the terminal sub location, is defaulted from the terminal partner if setup in the partner maintenance

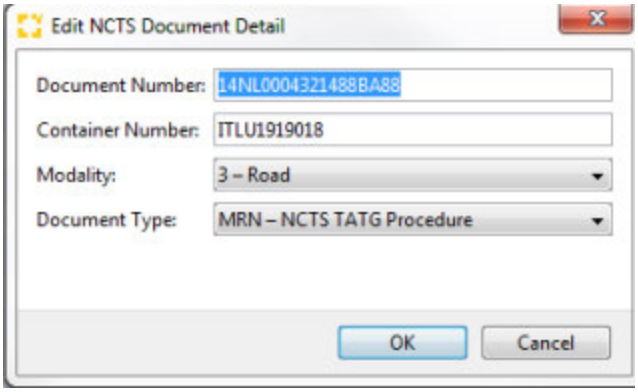
Notification type

The Message notification type for this applicable message as per above listed schedule.

Customs document details

In the customs document details the details of the reported container number and corresponding customs documentation are to be reported.
Details will be defaulted when created from a shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Document number

The corresponding customs document number, if applicable.

Type of declaration number	The reported number
Sagitta IMA	Eori + declaration number
AGS IMA	Customs assigned declaration number
T1	Customs assigned MRN number
FWV	Assigned "fiat wegvoerings nummer"
ICT	no number applicable

Container

The container number listed in the container. should a customs document cover more containers than a new customs document detail section is to be created per container.

Modality

With the modality field the terminal is advised about the method how the shipment covered by the customs document will be retrieved from the terminal.

Type

The type to identify the customs document as per above listed schedule.

New

To add a container / customs document number to the MID message

Handling

- Introduction
- Description

Introduction

The application Scope Handling enables a comfortable warehouse management and handling of goods for companies that run their own warehouse and offer additional services on the handling of shipments, such as handling agents. The application includes a various range of functionalities that can meet the requirements of handling companies. Scope handling includes components for the dispatching of trucks, for the handling of Security measures (like Screening Orders), a Route Management Tool, ULD inventory, RFS (Road Feeder Service) Flights handling. The processes in the warehouse (storage and retrieval of goods, inventory, etc.) can be supported by barcode scanners, which can process label and furthermore labels from customer. Scheduled orders can also be transferred to an external telematics system. The driver can then use a scanner to send the status of the orders and delivery receipts and, if necessary, send photos back to Scope.

The fully **description** of **all available Handling applications** is currently only available in the German version of the Scope User Manual.

Program action

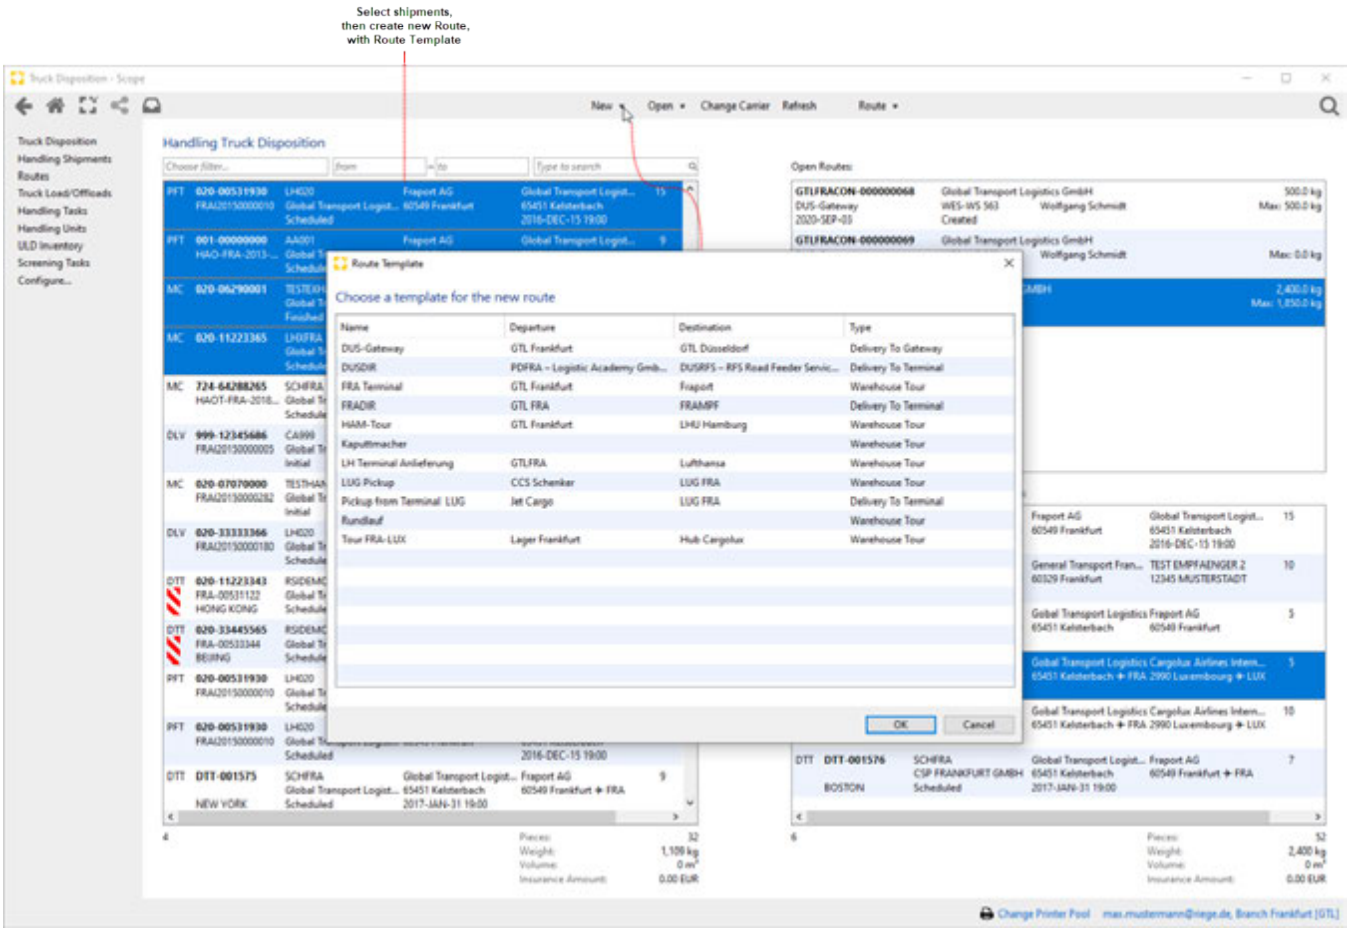
New

A **new route** is created by using the program action *New* in the handling truck disposition. To create a route, at least one tour template in the Handling master data must be maintained in advance. Addresses of involved business partners, or addresses of haulage companies for tour start and stops can be preassigned via the tour template.

Before using the program action New, (left side of the screen) that are to be loaded onto the new route should be marked. The shipments can be marked individually with CTL + mouse click or together with SHIFT + "arrow-up" or "arrow-down" keys.

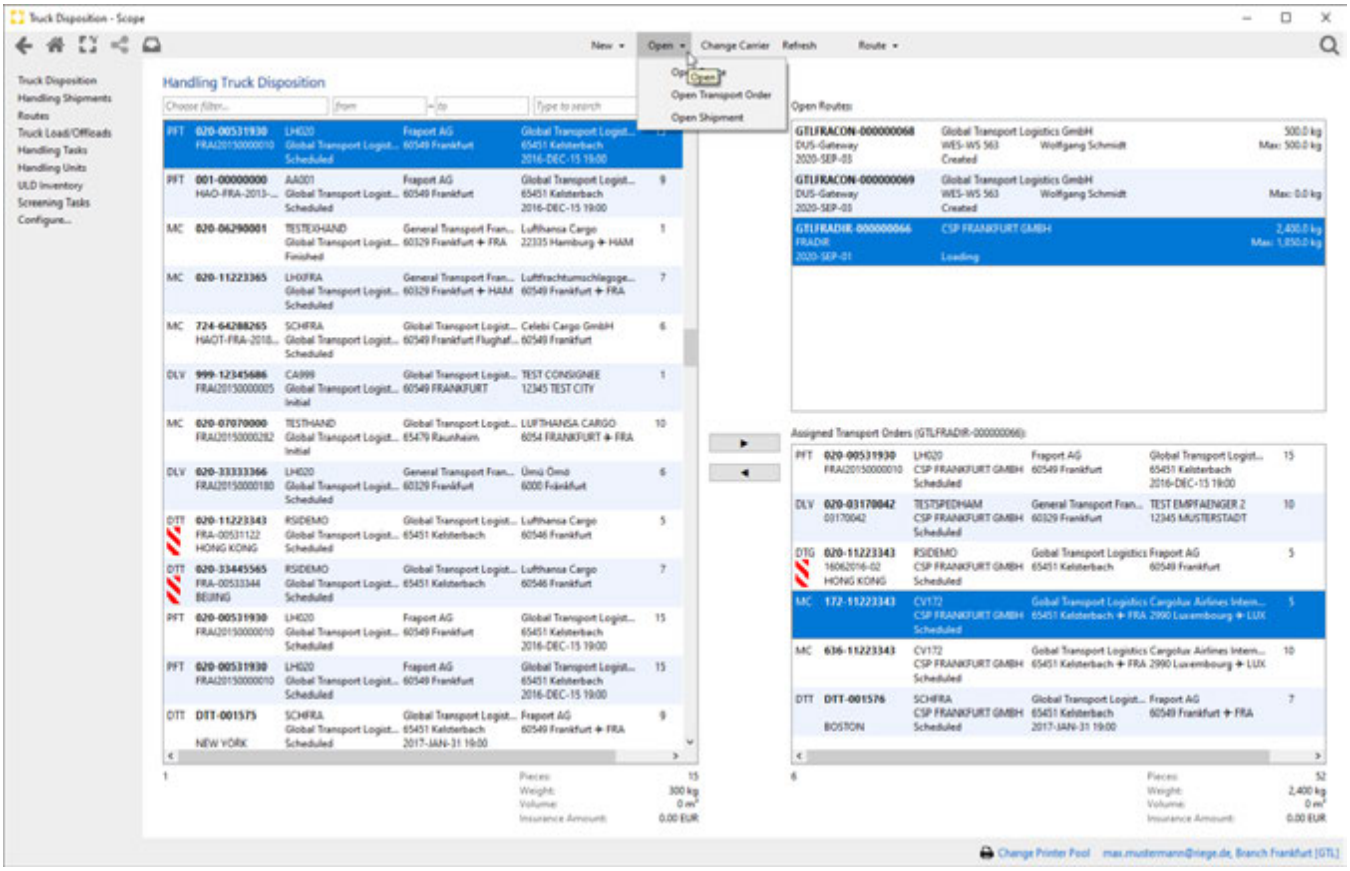
Routes with Status *Created,* have no transport orders been added yet. Routes with Status *Loading* transport orders have already been scheduled. Closed routes will not be displayed here in the Truck Disposition.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Open

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



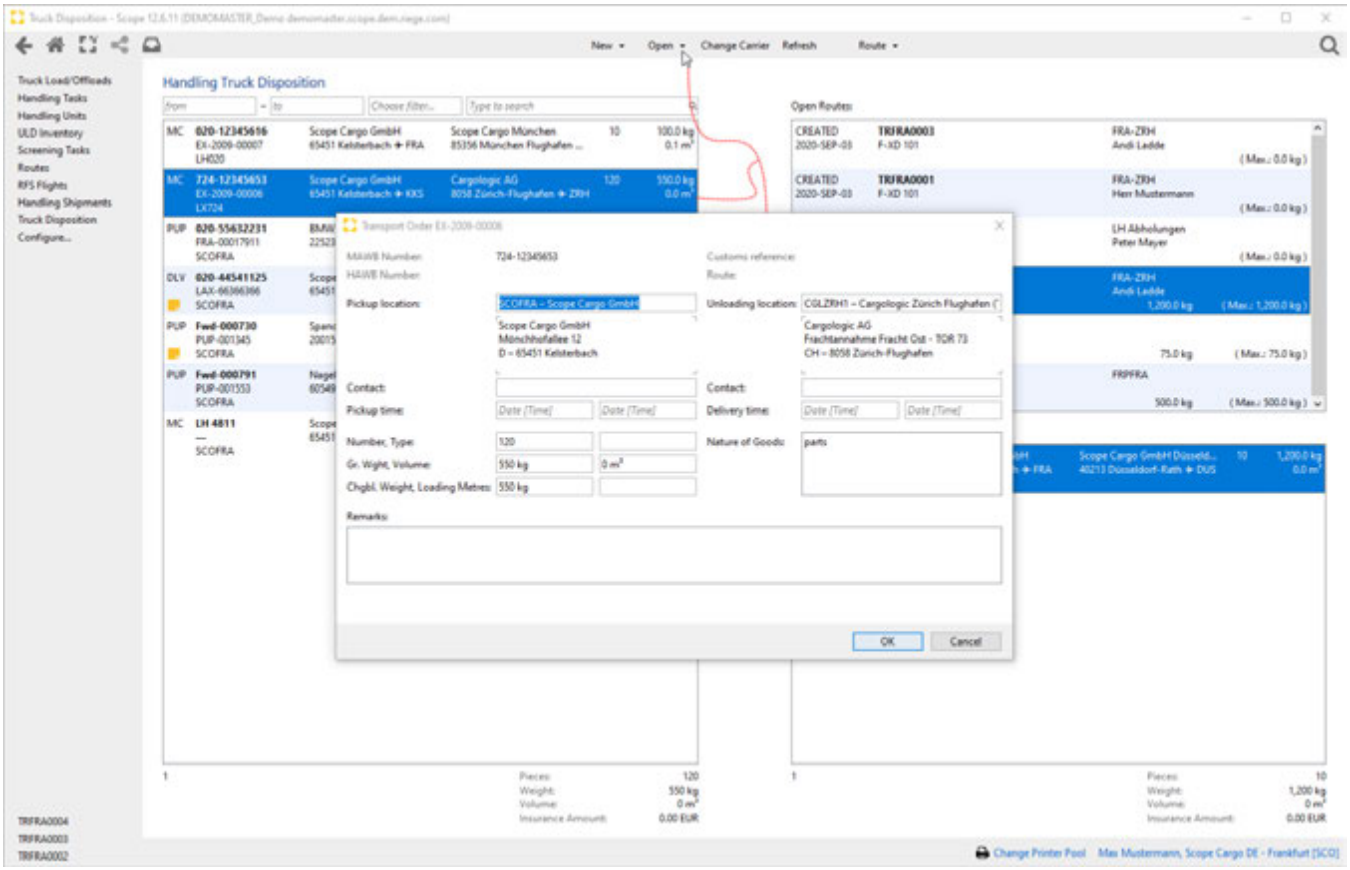
- **Open Route**

The program action Open Route opens a route marked in the overview.

- **Open Transport Order**

The program action Open Transport Order opens a transport order marked in the overview and data can also be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Open Shipment**

If a transport is marked in the overview, this program action will open the original handling shipment (Carrier Export or Forwarder Export)

Change Carrier

With the program action *Change Carrier*, the current road carrier within an order can be changed.

(a) General - Handling - Routes

- Introduction
- Description

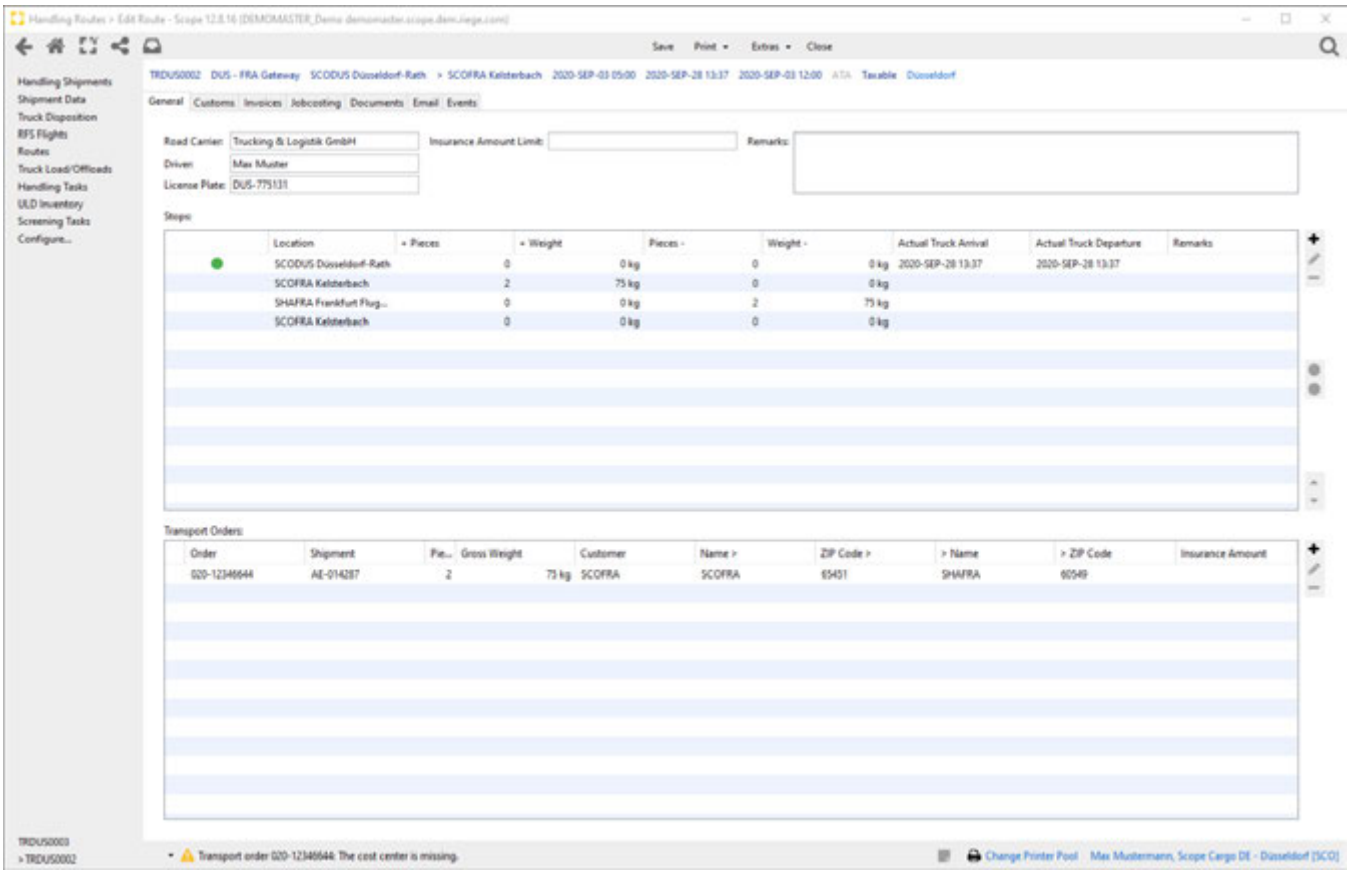
Introduction

A handling tour is created either in the Handling Truck Disposition application or in the Handling Route application. In the General Tab, the assigned transport orders are displayed and the details regarding the driver identity, truck, etc. The scheduling of transport orders for a tour can either be done in the Handling Truck Disposition or within this application in the transport orders area.

Description

- Program Action
- Title Bar
- Field Description
- Stops
- Transport Orders

The details regarding the driver identity in the header data can be taken from the master data, but this must be maintained in a corresponding tour template.



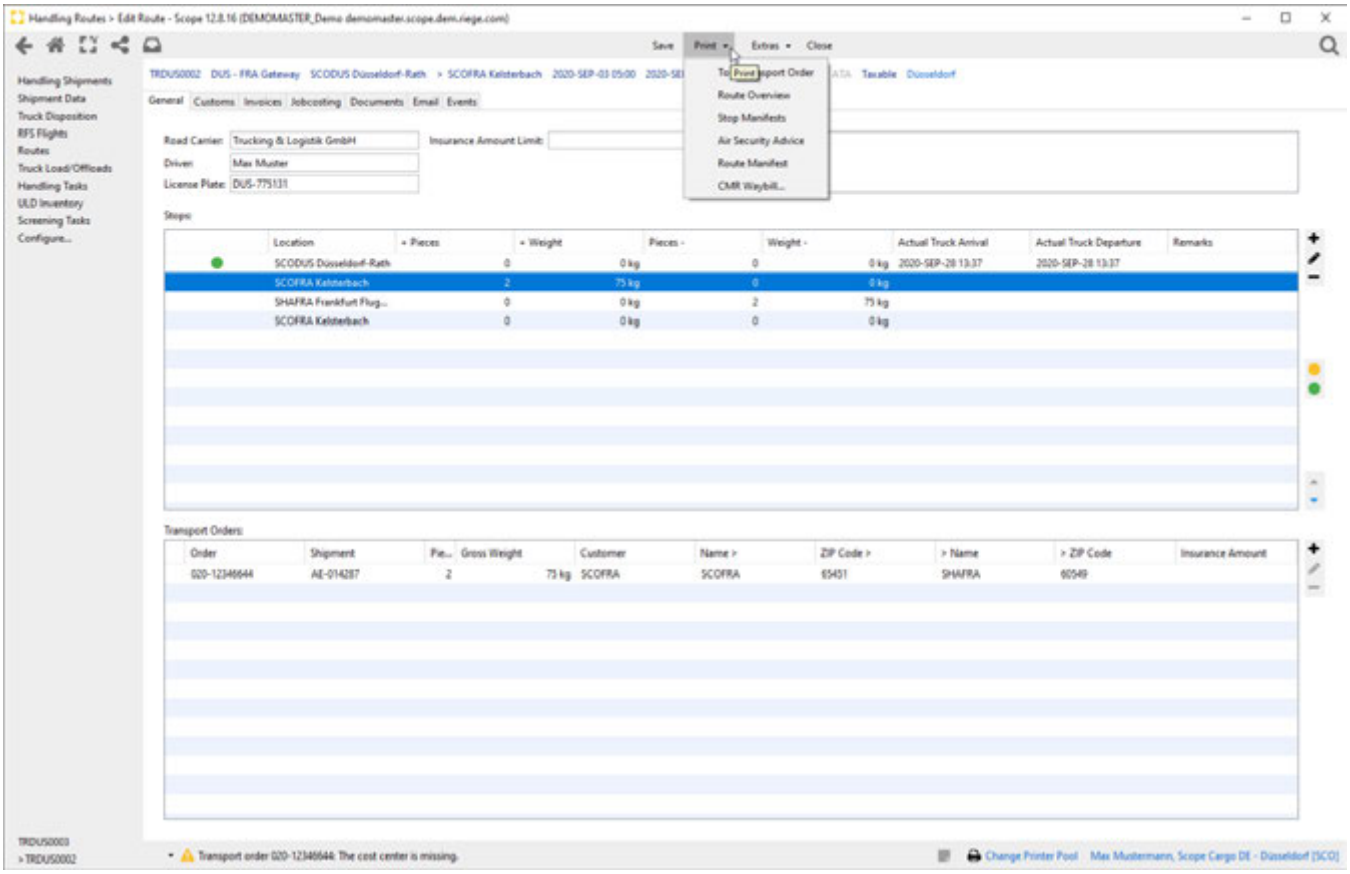
Program Action

Save

Saves the recorded tour data or assigns a tour number when creating a new one.

Print

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



With the program action Print the following documents can be created:

- Tour Transport Order

A printout is generated that shows the respective tour stops and the corresponding sum of these.

- Route Overview

Generates a Route Overview document

- Stop Manifest

Generates a Tour Stop To do List with the overview regarding Pick Up and Delivery Stops

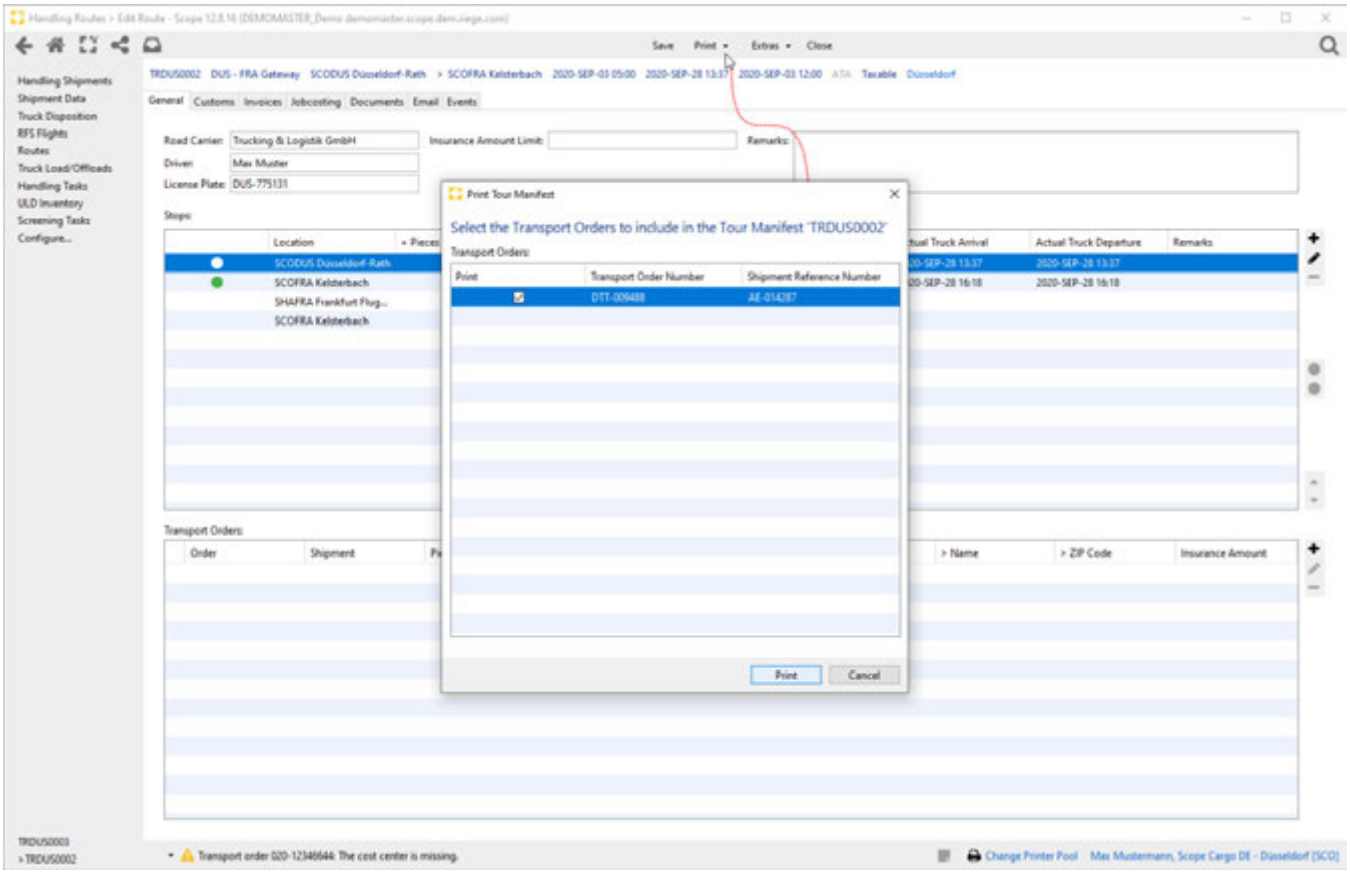
- Air Security Advice

Printout of the Air Security Advice Note

- Route Manifest

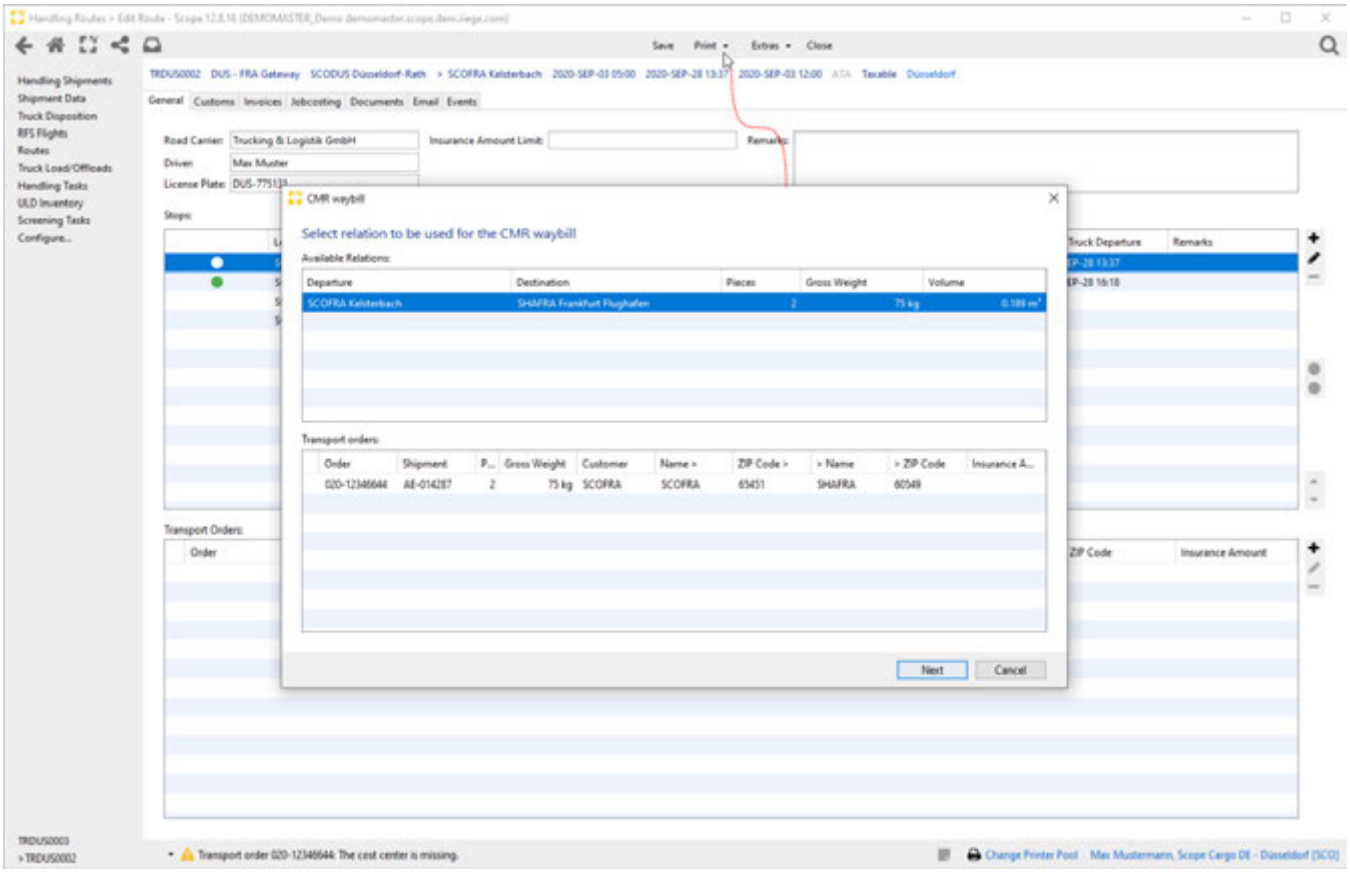
Creates a Tour Manifest printout. Transport orders to be included can be selected before printing.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- CMR Waybill

CMR waybill can be printed. Relation to be used can be selected before printing.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Extras

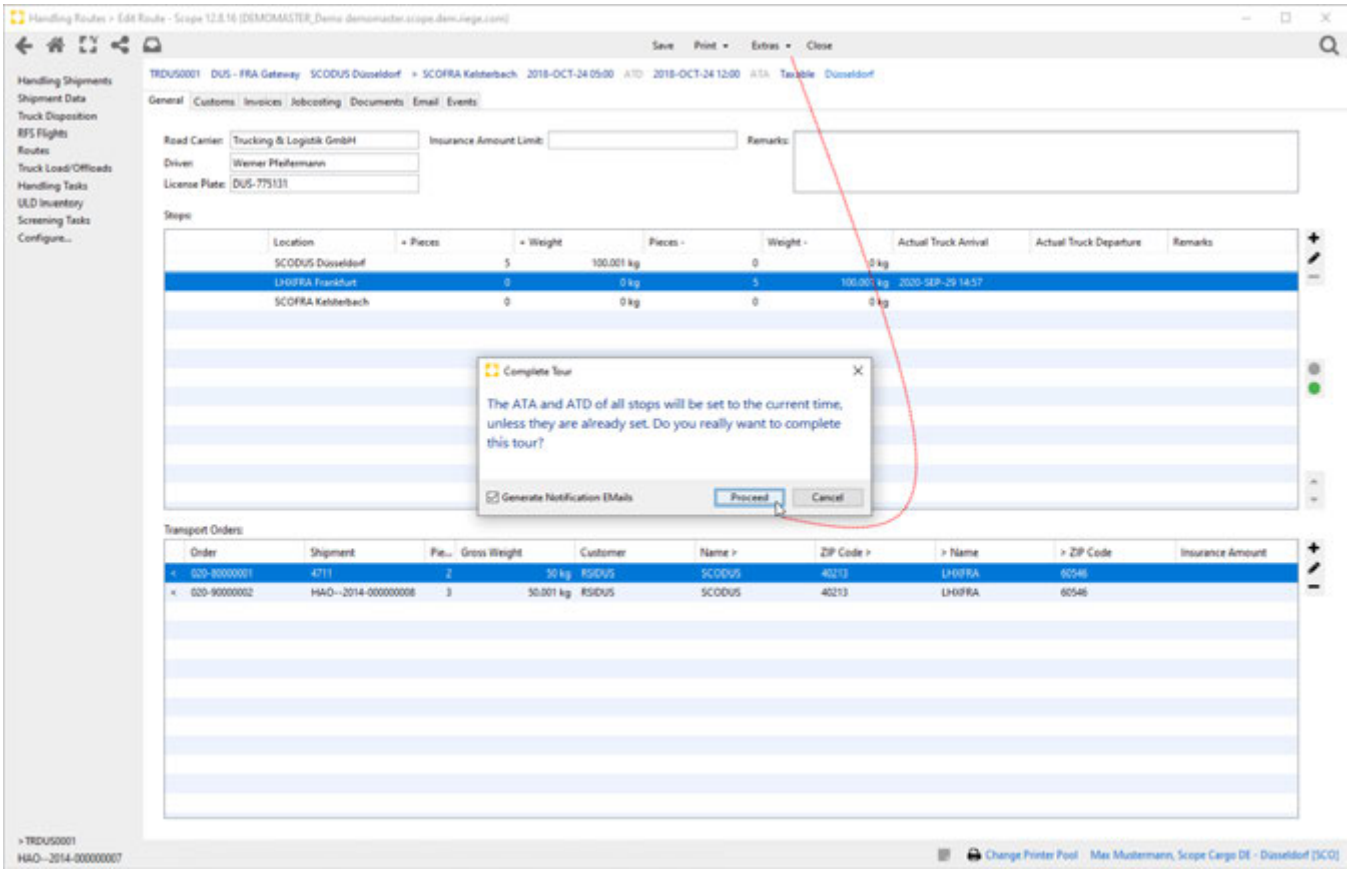
If all shipments have been scheduled for the tour and all customs procedures have been recorded or transmitted to customs, the tour can be completed.

- Extras - Send Warehouse advices:

If the first tour stop is the own branch, a truck load with all the shipments included on the tour is created, by using this program action. Furthermore, by activating this action, other EDI communications may also be triggered.

- Extras - Complete the tour Complete tour:

With the program action Extras - Complete Tour the current time is automatically recorded in the fields ATD and ATA. These time stamps are also synchronized in the transport order of the handling shipment. By executing this program action, Scope assumes that the scheduled tour has arrived at the destination and the transport has been completed. There is also the option of notification emails (delivery receipts / PODs) to send automatically to the respective customer of the transport order. Completed tours are marked with the status "Completed". Invoicing can be done.



- Extras - Reopen Tour

A subsequent change of the time is only possible via the program action *Extras - Reopen Tour* in the tour editor.

- Change Economic date

This function opens the screen economic date, where the economic date can be changed.

Close

Closes the input dialog

(d) Jobcosting - Routes - Handling

Introduction

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability. Cost and revenue is based on the master data sets; activity type, charge type and tariff rates. Jobcosting figures are generated automatically by input of payable vouchers and output of invoices and credit notes (More information is available in the section on Automatic tariffing). Expenditure and revenue accruals may also be manually inserted into job-costing, but it is intended that jobcosting should be largely automated. See also chapter Jobcosting - Functions - General.

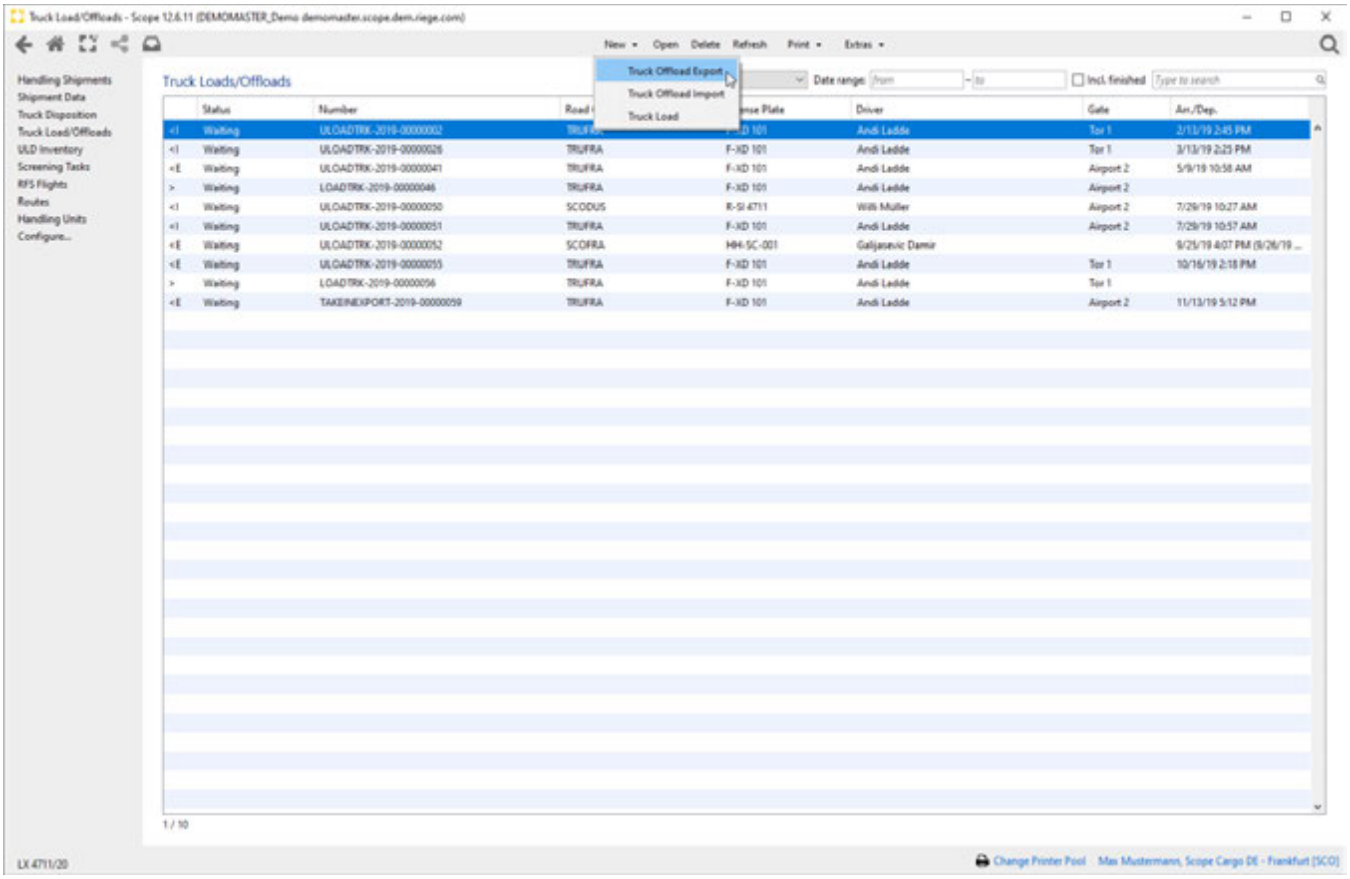
  - Stock Control Message SCM

1.Truck Offload Export

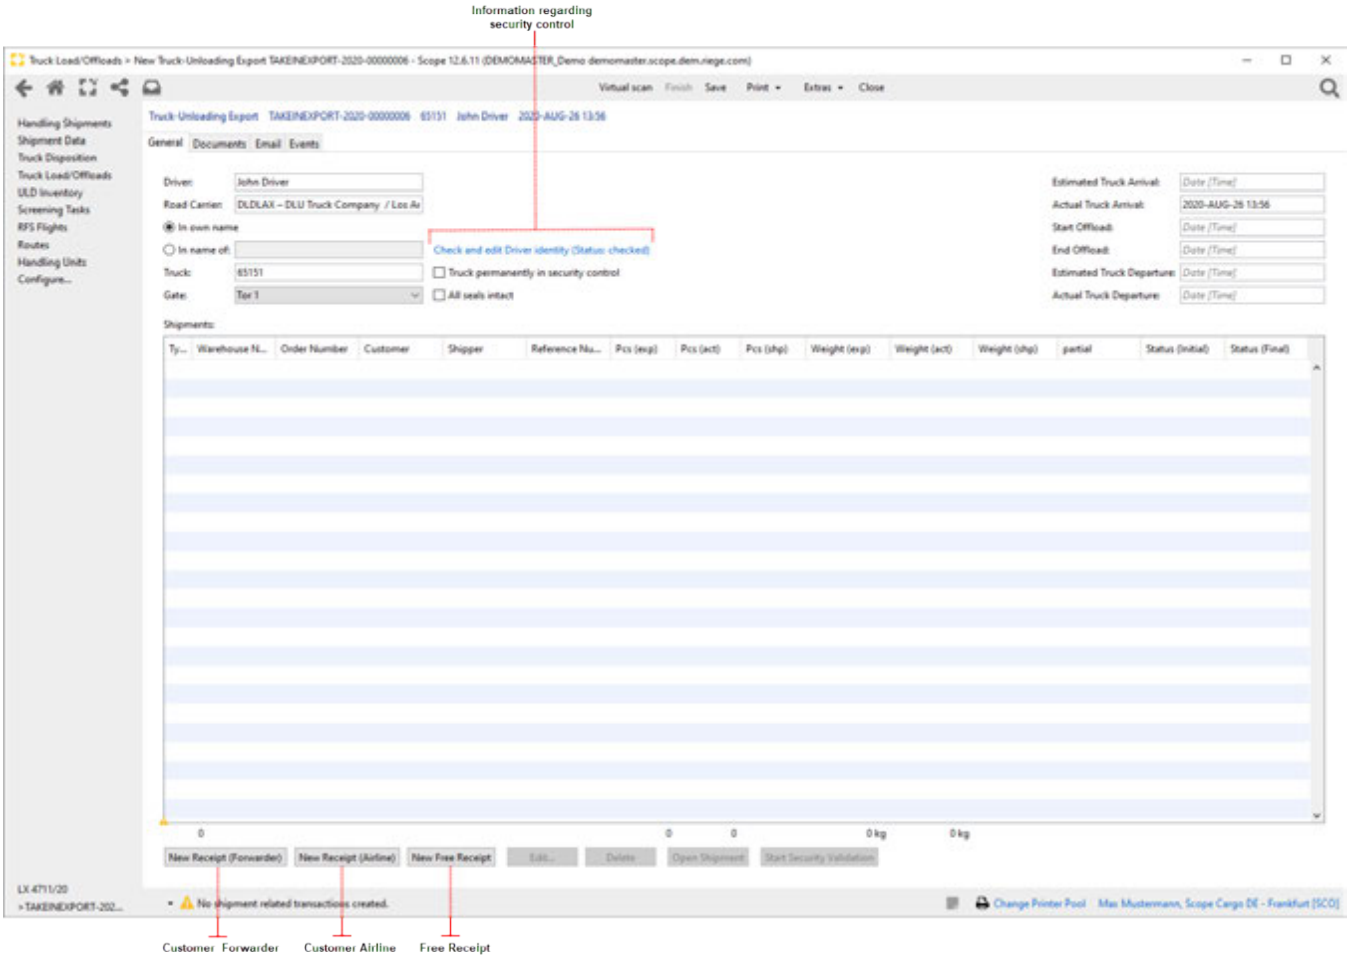
In the Scope Handing Truck Load/Offloads application, shipments from Truck Offloads and Truck Loads can be processed. The program action *Truck Offload Export* opens the editor *Truck-Unloading Export* where export shipment data can be entered.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



First all mandatory input fields (marked with a red validation of the header data of the *Truck-Unloading Export* editor must be filled, such as information regarding security control, driver identity etc.. Then the data regarding the shipment entry can be entered via the button new receipt. There are three possible receipt types. New Receipt (Forwarder), New receipt (Airline) or New Free Receipt.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



A distinction is made between different shipment types based on the customer. The customer entered here is always used as the invoice recipient.

If the **customer** is a **freight forwarder**, the following action must be selected:

- New Receipt (Forwarder)

If the **customer** is an **airline**, the following action must be selected:

- New receipt (Airline)

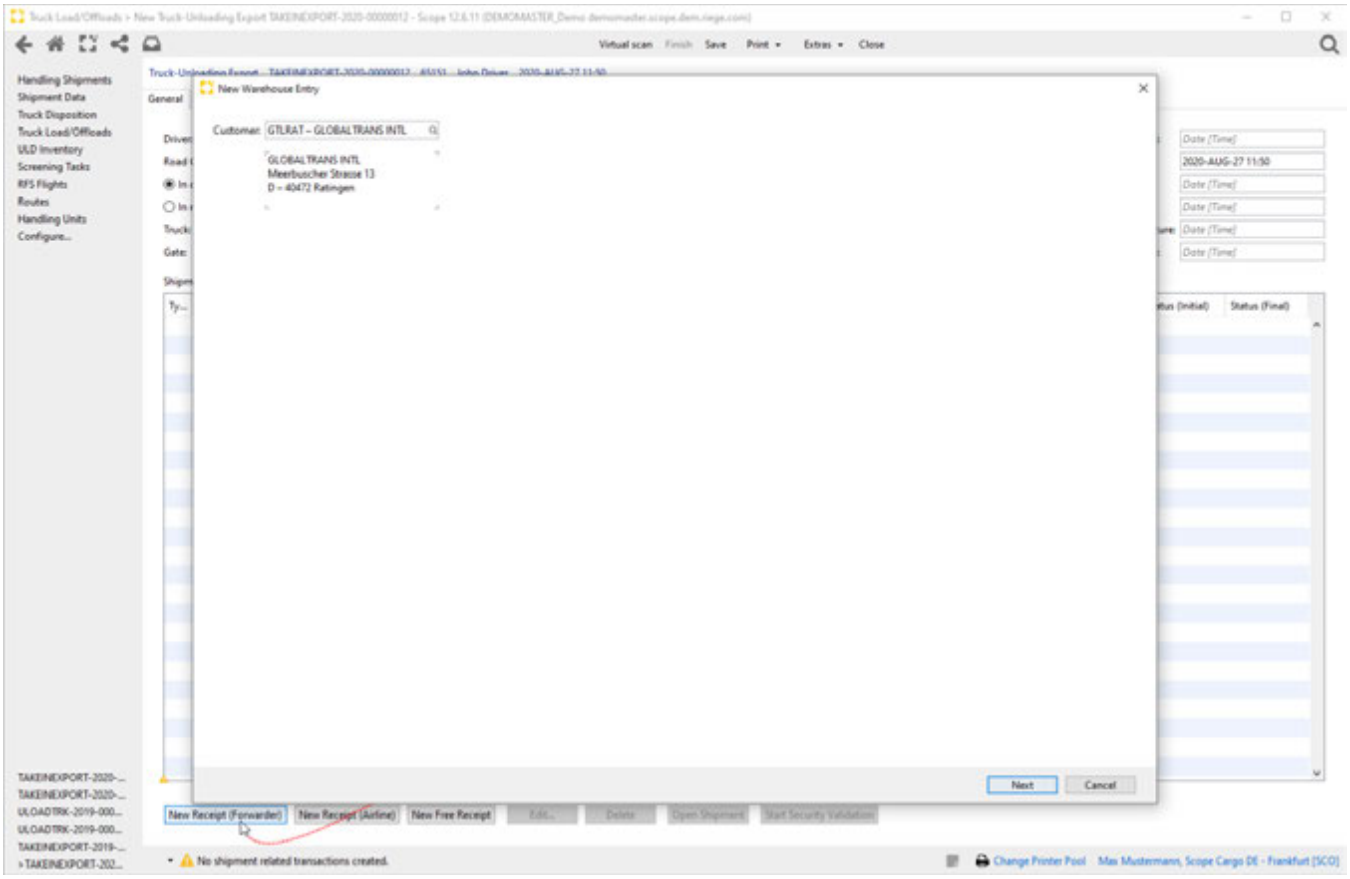
Data Entry Airline, Forwarder shipments

Depending on the type of shipment, further processing of the shipments and available program actions can differ. For example, an FWB or a DGD can only be recorded for airline shipments and also only this type of shipment can be booked on an RFS flight.

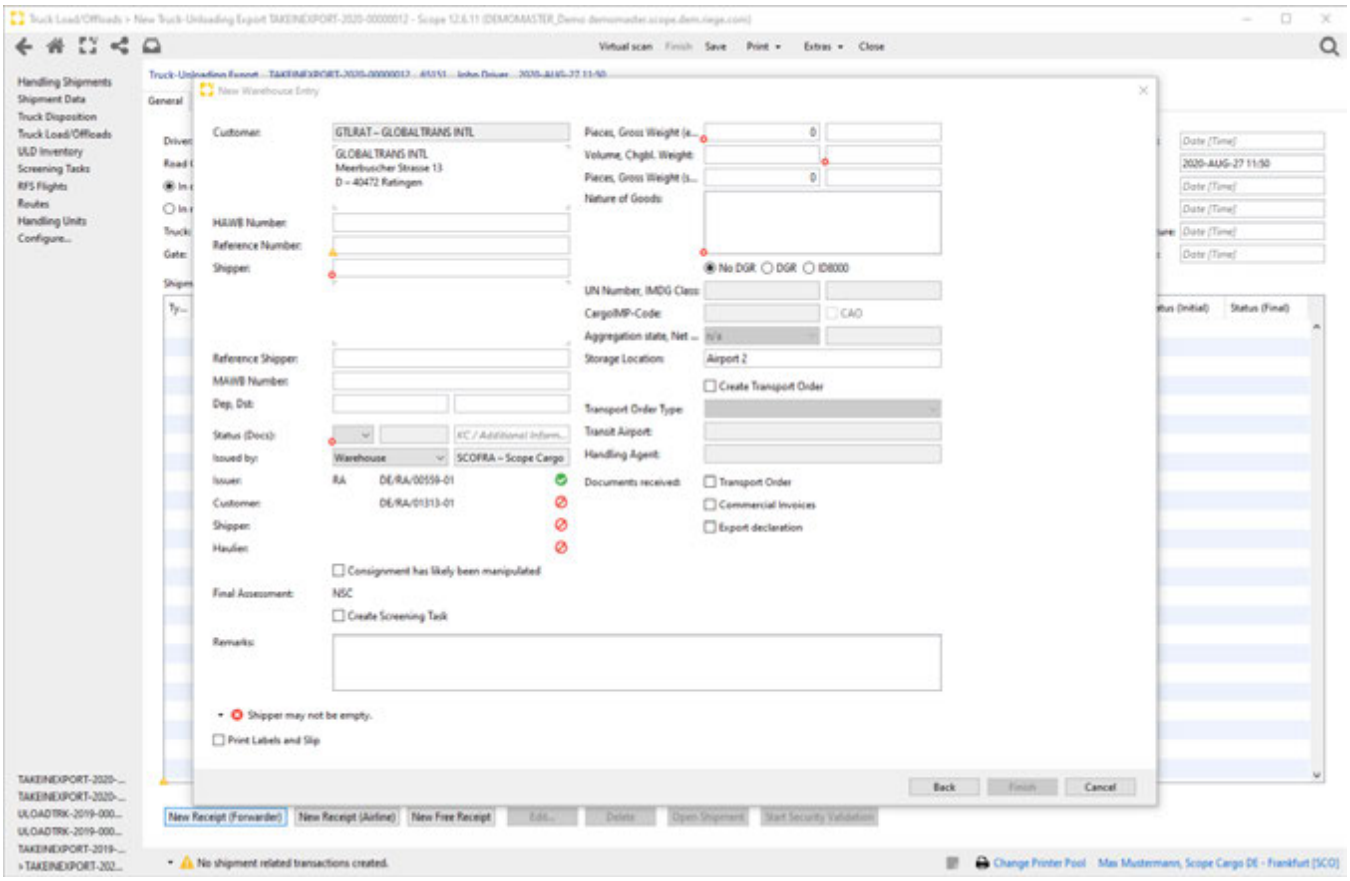
- **New Receipt (Forwarder)**

To enter the data for a new Forwarder Shipment entry, use the button *New Receipt (Forwarder).* It opens the input dialog *New Warehouse Entry,* where the customer partner address can be entered. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



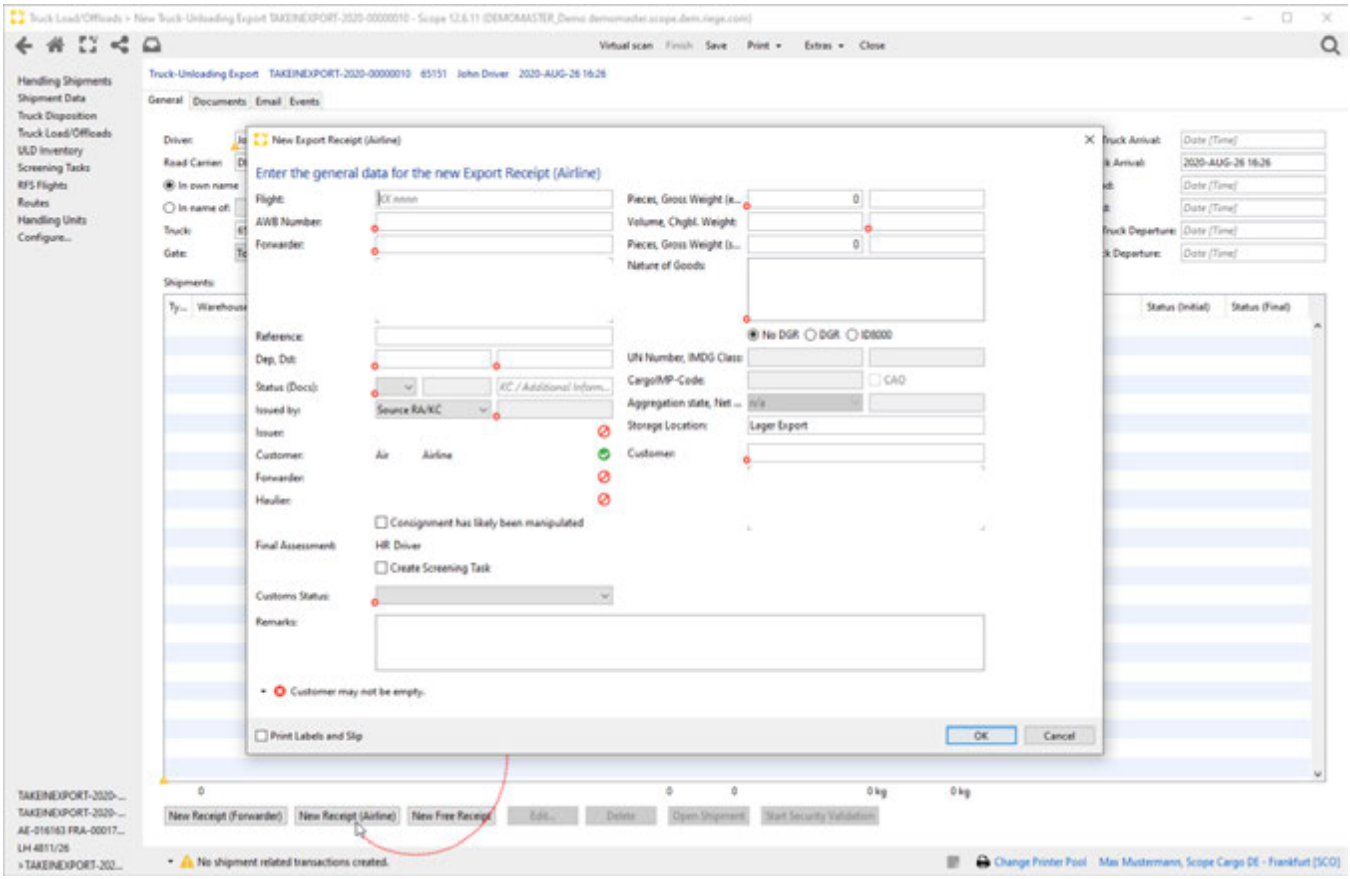
With the button Next data entry can be confirmed and the shipment data can be entered in the editor New Warehouse Entry. First all mandatory input fields (marked with a red validation) must be filled in the editor.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

- **Data Entry New Receipt (Airline)**

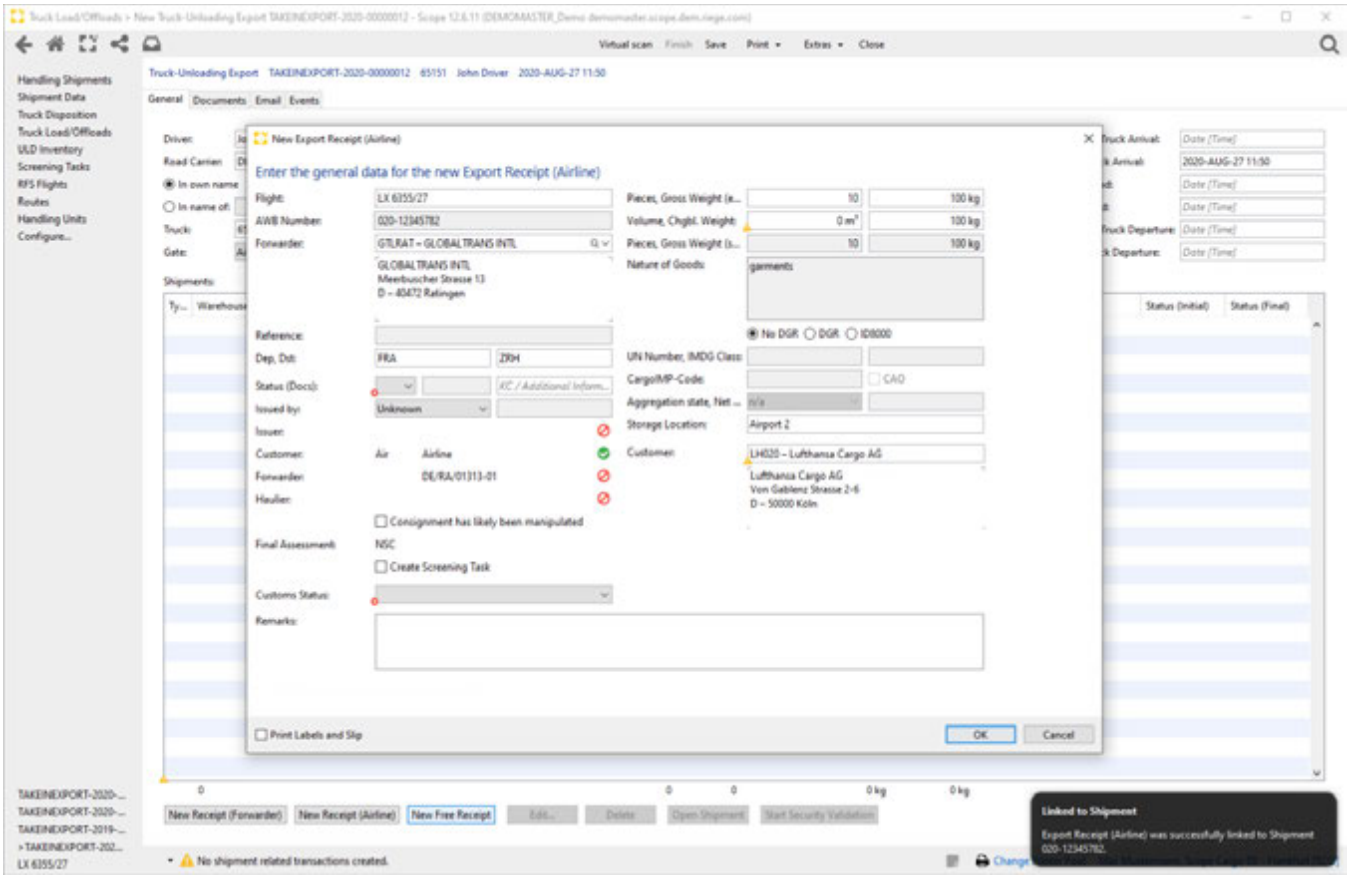
To enter the data for a new Airline Shipment entry, use the button *New Receipt (Airline).* It opens the input dialog *New Export Receipt (Airline).* First all mandatory input fields (marked with a red validation) must be filled in the editor.



Link to Shipments

Data of shipments that have already been entered in an RFS flight or have been received by an interface file (FWB / FHL), are automatically linked to the shipment data, when referred to in the truck unloading. After a successful link, input fields are automatically filled with available data. These can still be edited depending on the actual nature of the freight.

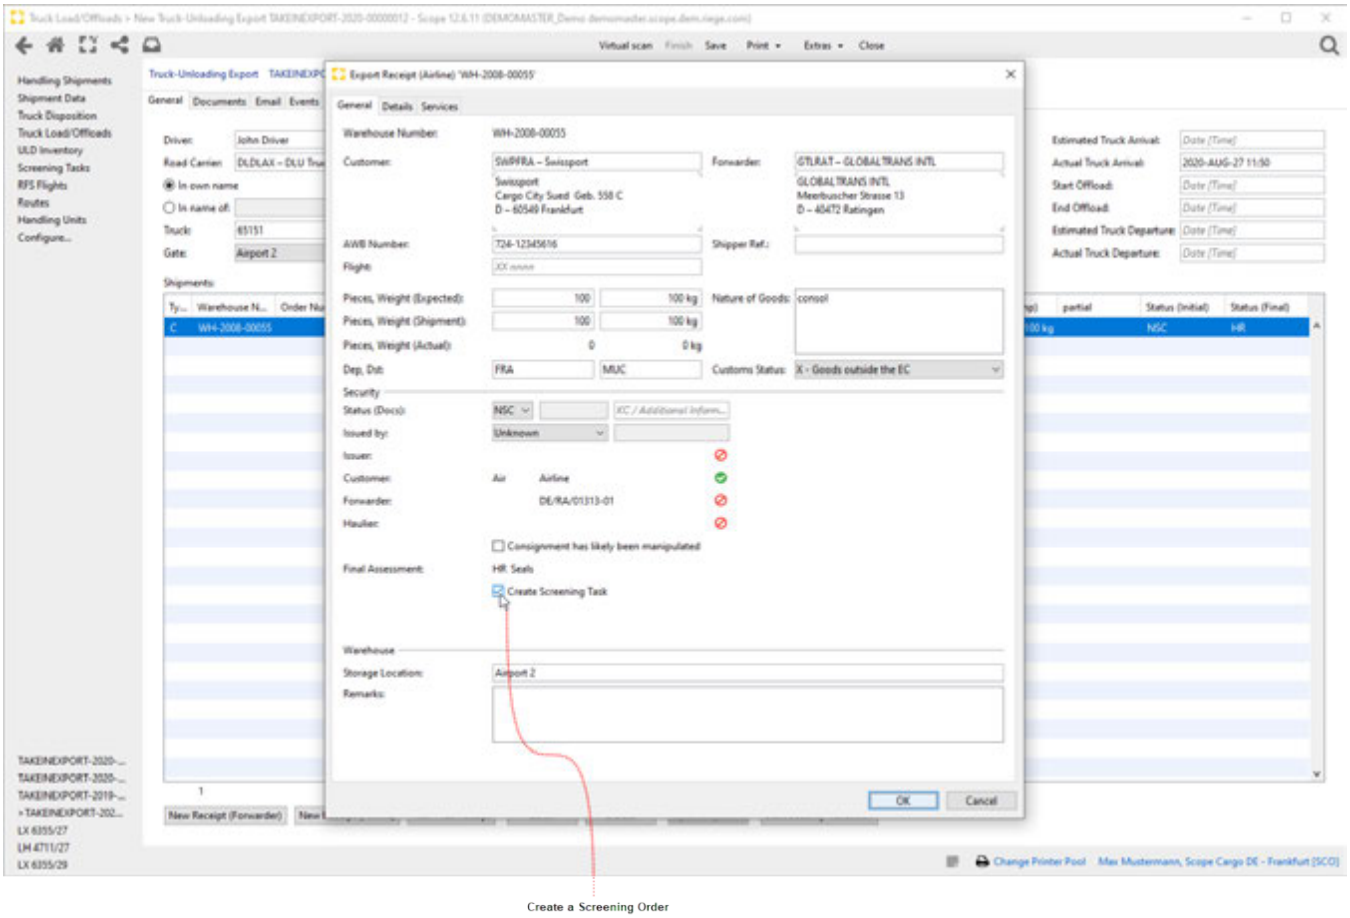
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Create Screening Task

If necessary, a screening order can be created while processing a shipment in the truck unloading. Just mark the checkbox *Create Screening task*. If a shipment is recorded with the status "NSC", the checkbox "Create Screening task" is set automatically. All recorded shipment data are then transferred to a screening order, created for further processing by the LSKK in the corresponding module. An additional recording is therefore no longer necessary (but possible at any time).

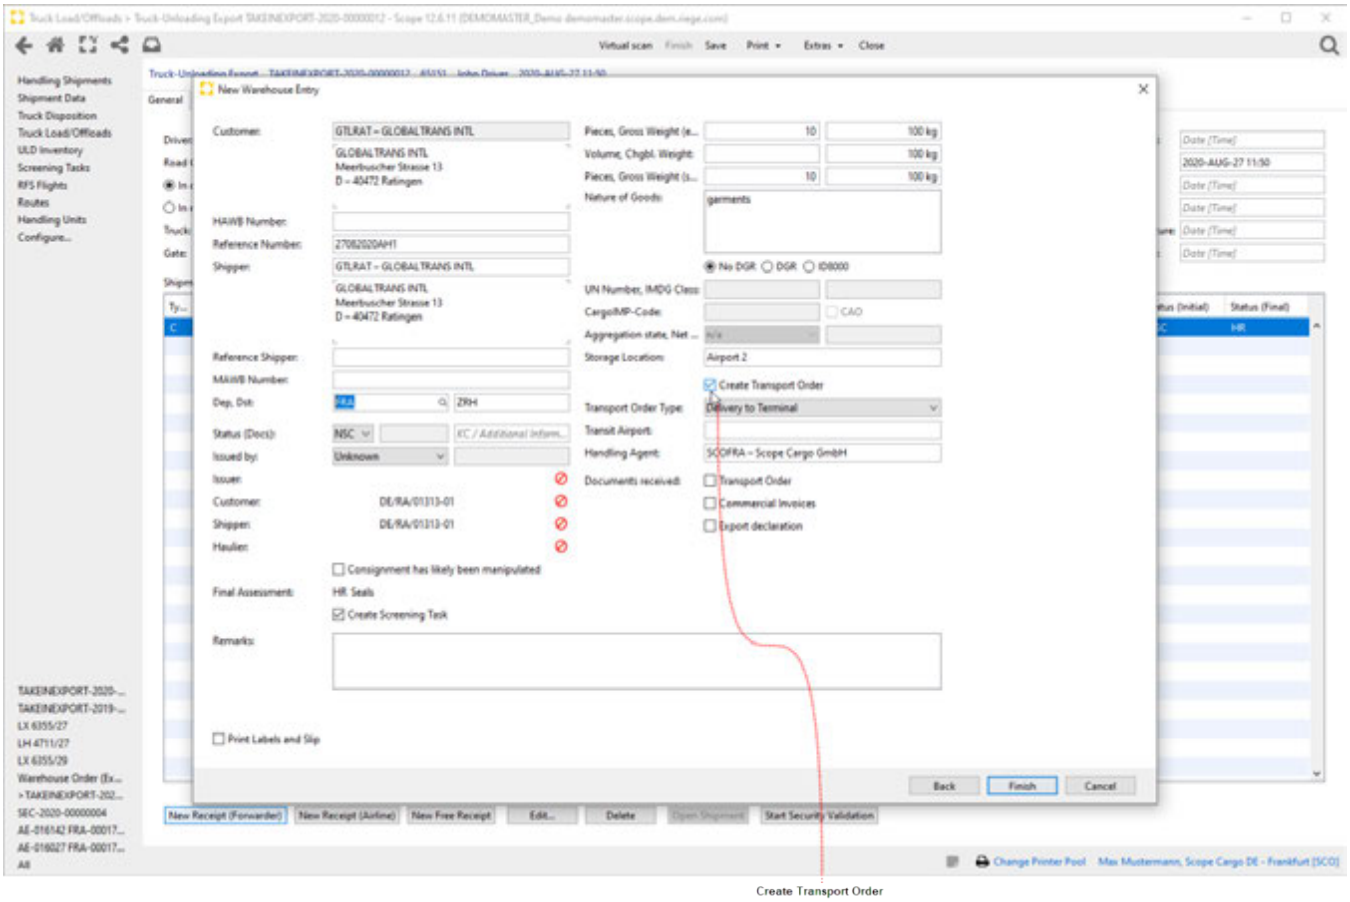
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Create Transport Order

In case that a transport has to be done for a Warehouse Entry of a forwarder shipment, a transport order can be created by marking the checkbox *Create Transport Order.* The automatically created transport order is then visible in the handling application *truck disposition* and can be assigned to the respective route. Furthermore, the data are available then in the corresponding handling shipment, for the purpose of billing or the creation of a forwarding service slip and CMRs.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

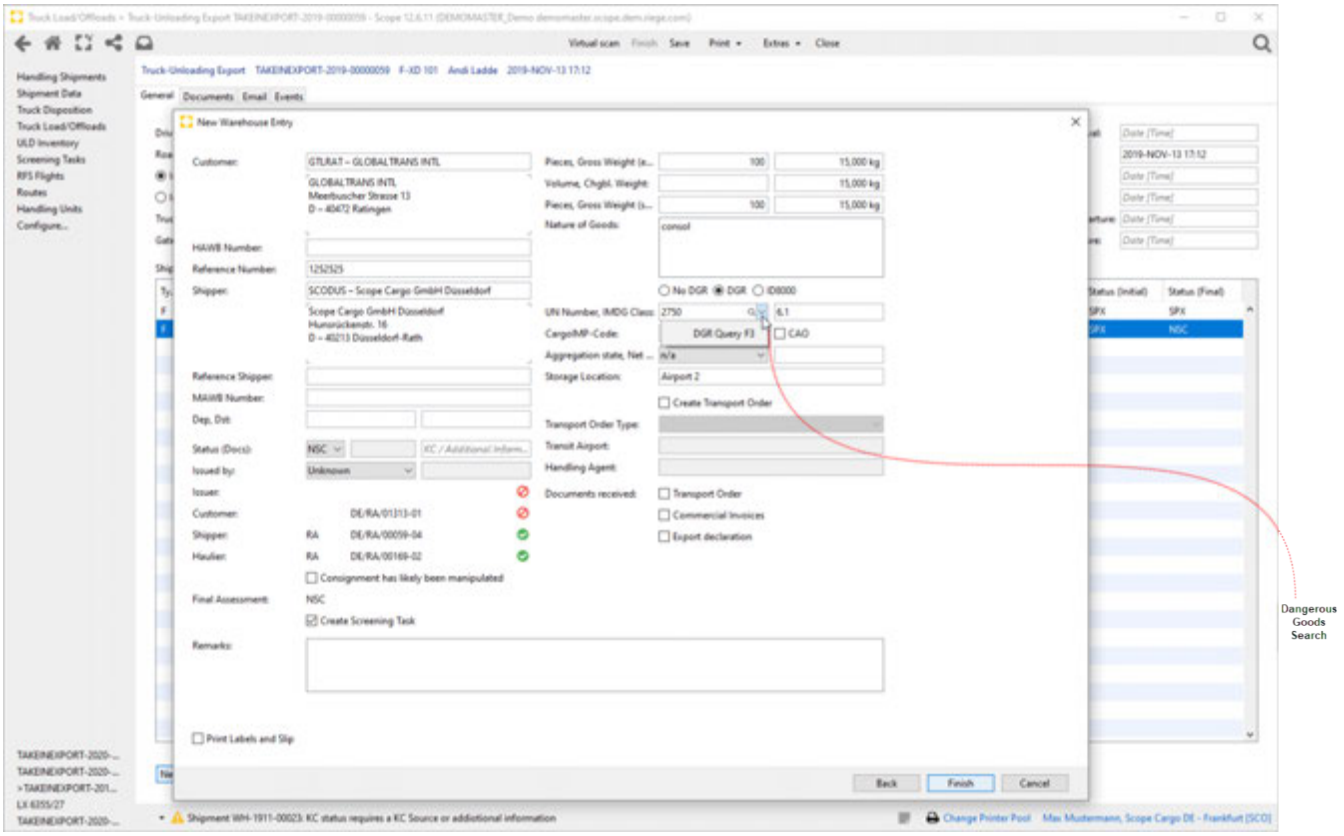


Create Transport Order

Dangerous Goods

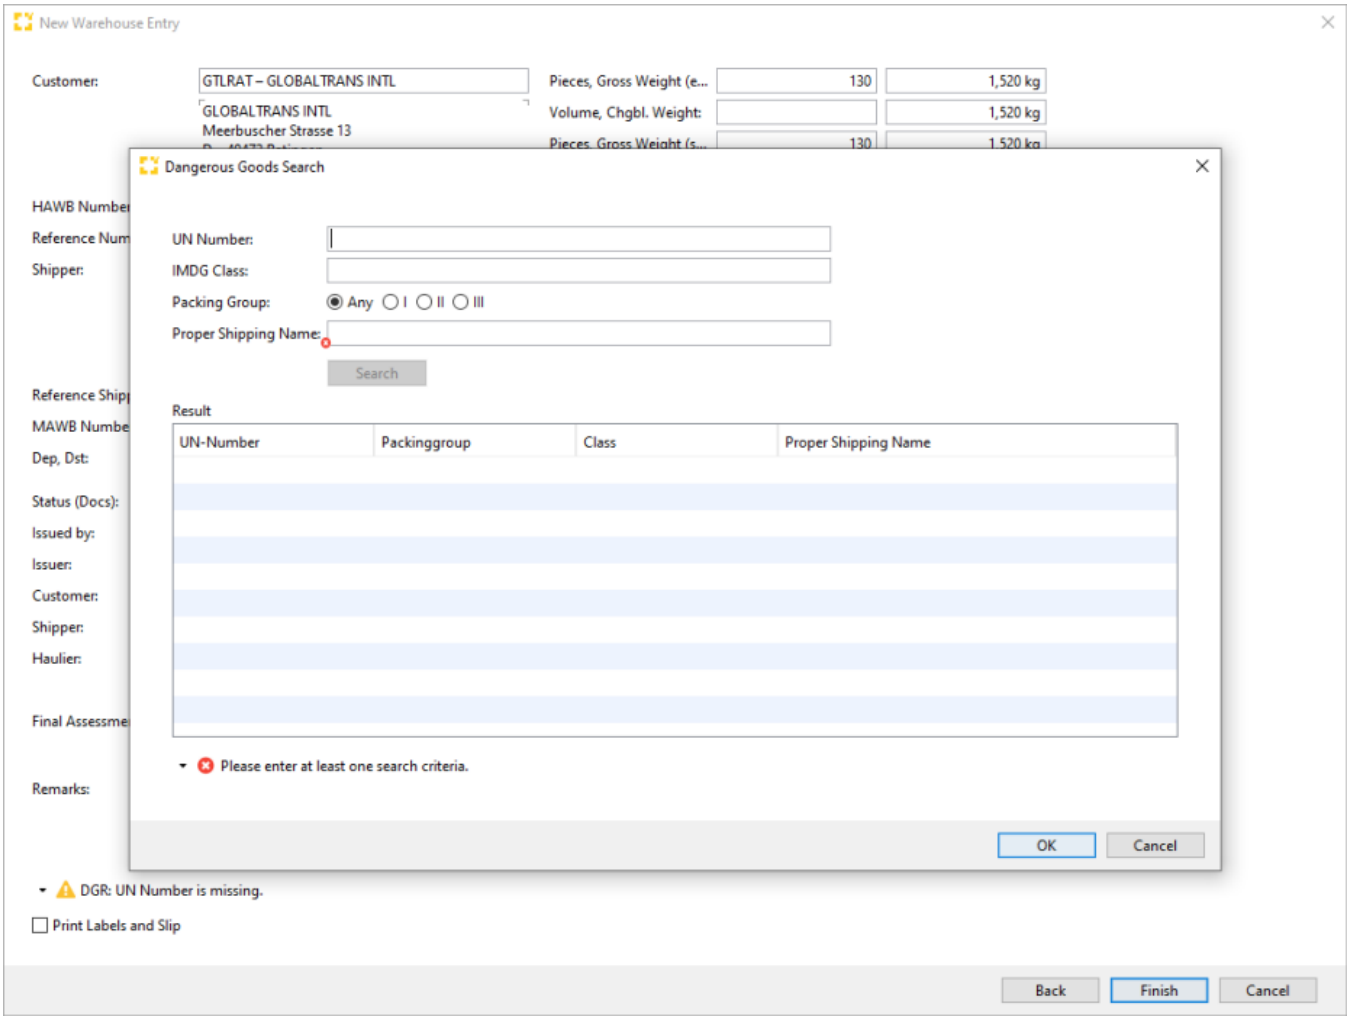
If the consignment received is dangerous goods, this information can be recorded within the truck unloading in the warehouse entry editor. This information is also printed on the warehouse receipt.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



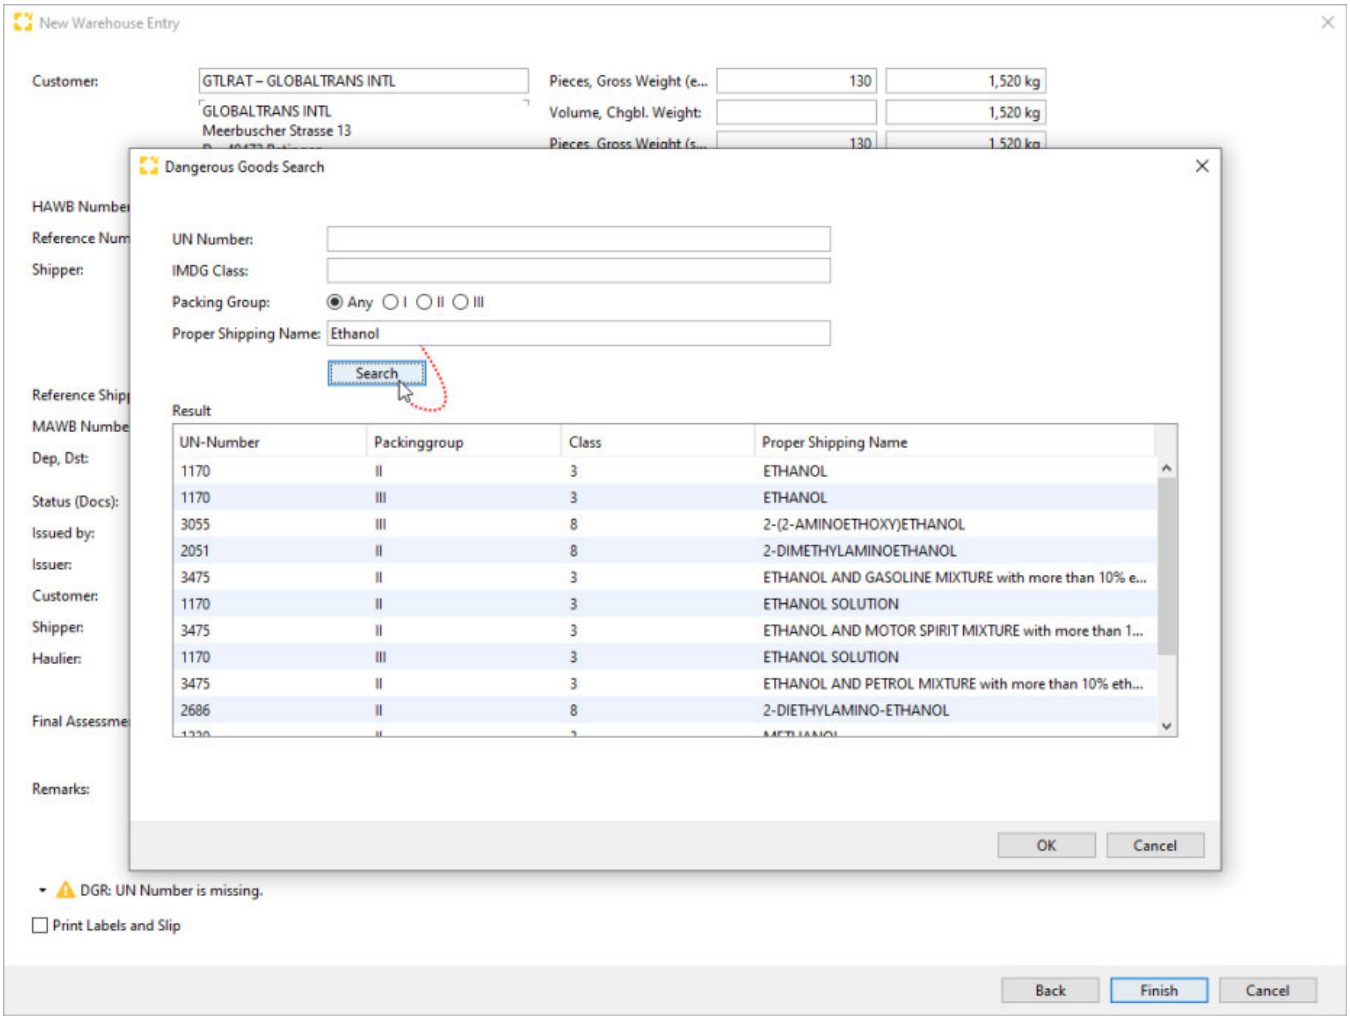
If the checkbox DGR is marked, detailed information regarding the dangerous goods can be entered. There is a dangerous goods information search for Class, Packing Group integrated in the input field *UN Number, IMDG Class*. Just use the drop-down menu or press F3 and the editor for a DGR query opens.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



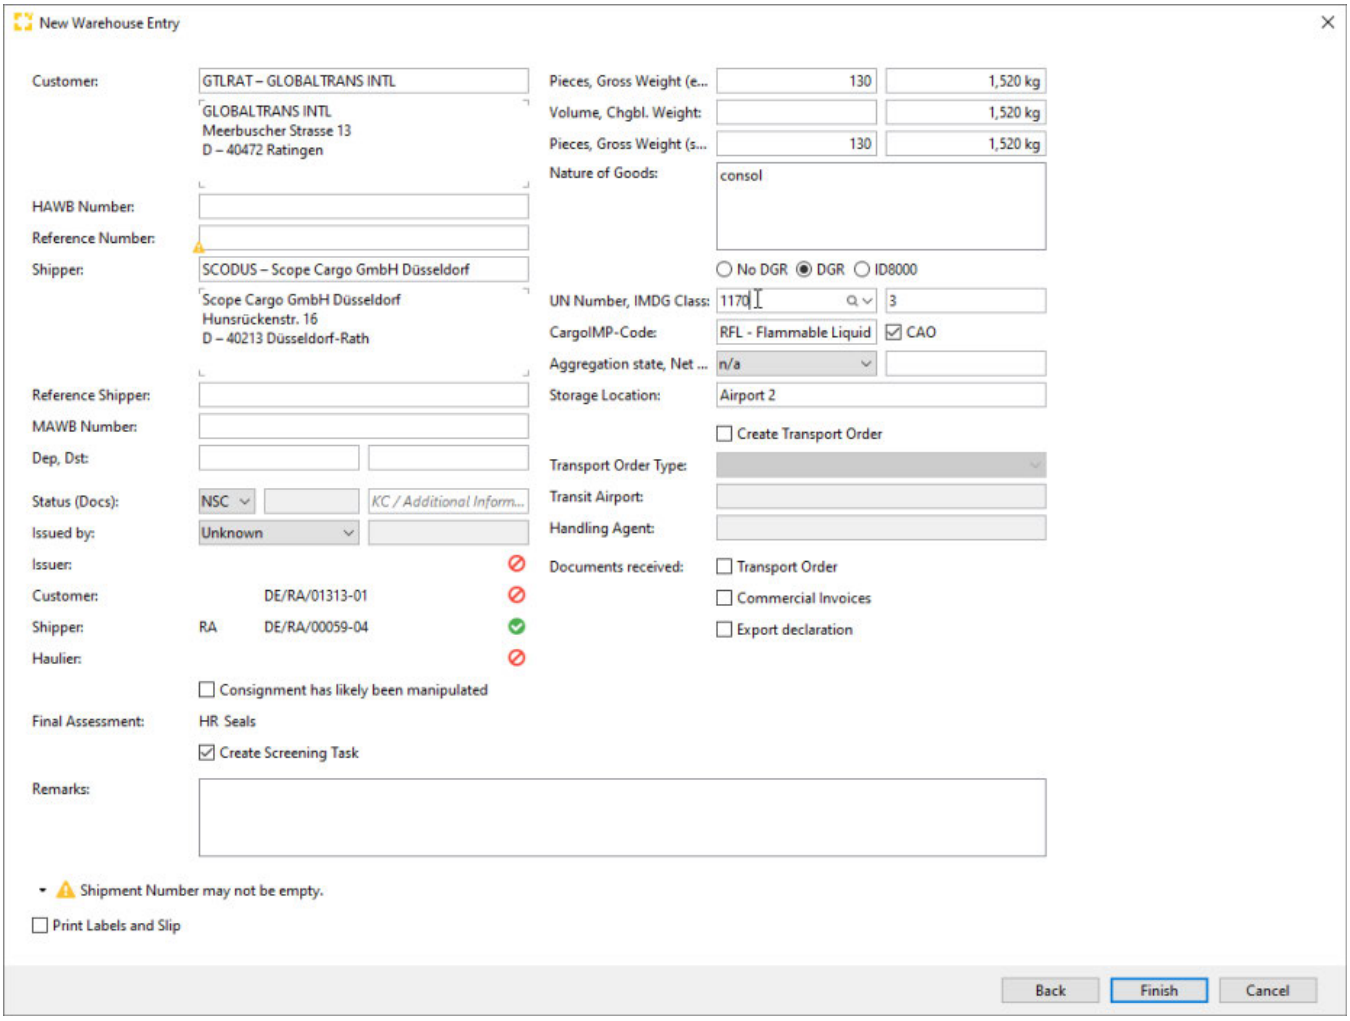
You need to at least to enter one search criteria and the result of the search will be displayed in the screen.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



If an existing UN number is entered in the input field *UN Number, IMDG Class.* all other DGR values are filled in corresponding input fields automatically. These data can still be changed manually afterwards if it does not match the nature of the shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Attention!

The information entered here is **not** included in the shipper's declaration, but in the handling shipment and in the RFS flight, for the purpose of transmitting the FSUs, stored on the package level.

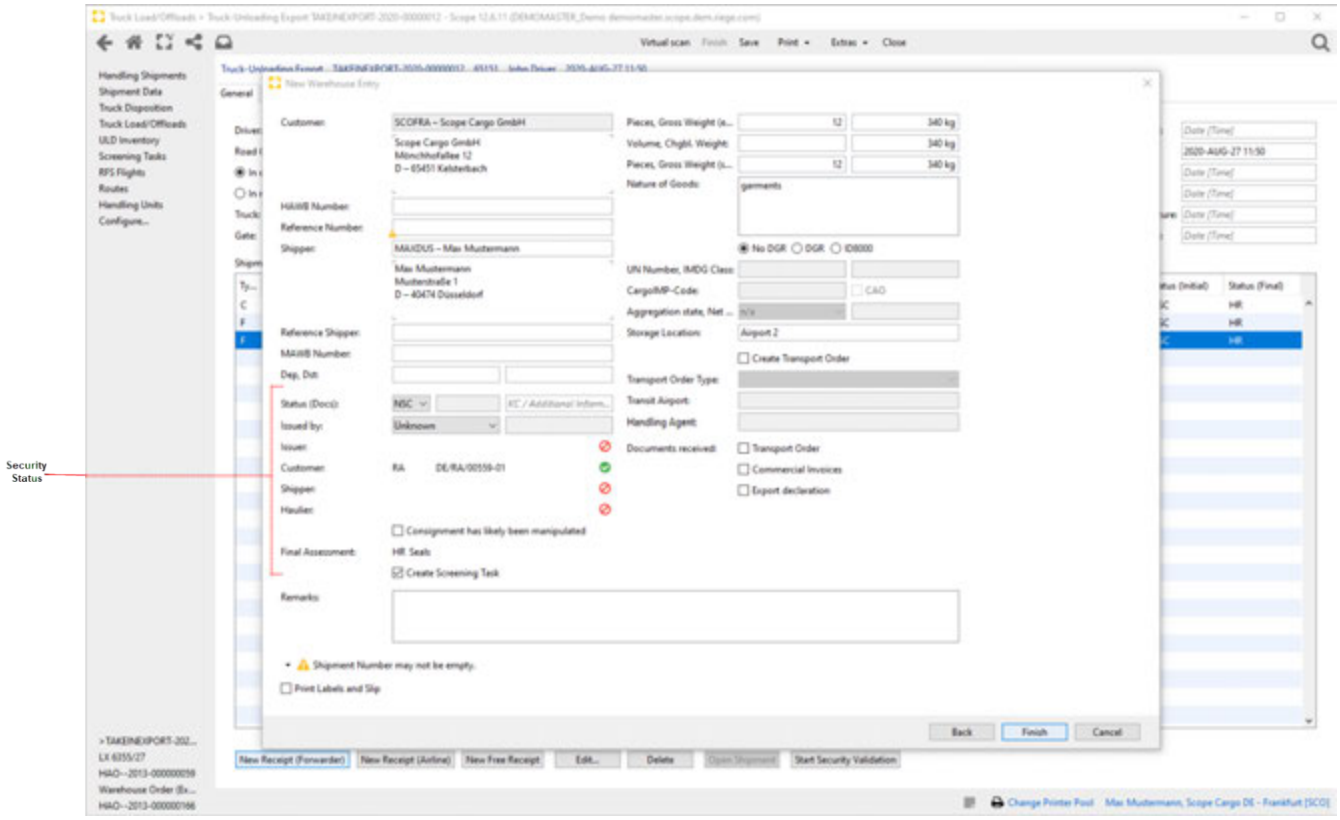
Integrated online verification of the security status (automatic security validation)

When entering data of a warehouse entry, Scope validates the partner addresses against the Union database on supply chain security (RA/KC database) automatically. As soon as the automatic query is carried out, the security status of a shipment is recalculated. The result of the query is automatically printed on the warehouse receipt and also included in the handling shipment.

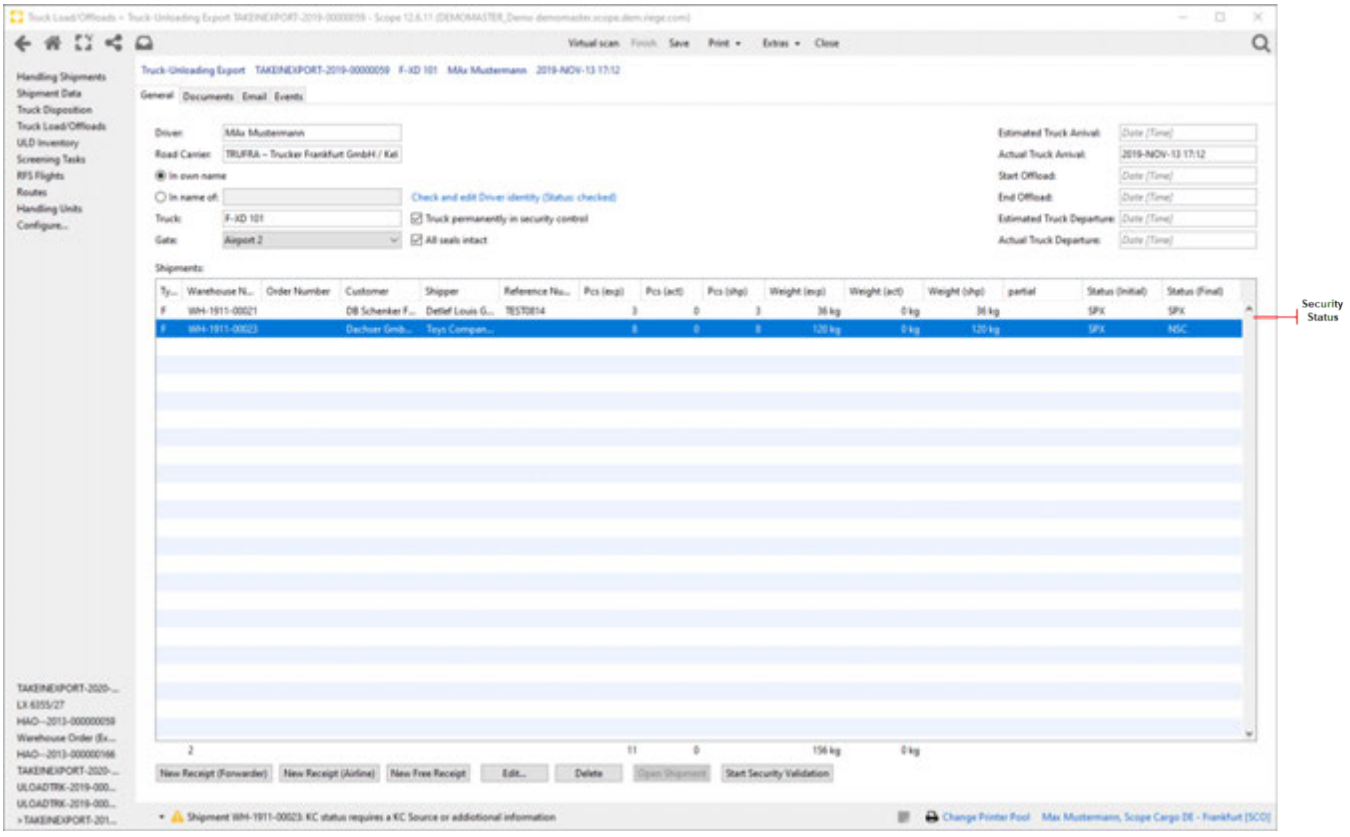
The query directly provides the user with information as to whether the security status of the shipment may be endangered by one of the business partners involved. If one of the addresses (shipper, customer, trucker) in a new warehouse entry is not classified as secure - If maybe no RA/KC number is recorded in the master data (Regulated Agent - Roles - Business Partner - Maintenance and Secure Shipper - Roles - Business Partner - Maintenance), then the security status is set to not secure and this result will be displayed in the warehouse entry editor at once.

See detailed information regarding security set up and functions in Scope here: Air Freight Security.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



The security status is also displayed in the overview of all shipments in the truck unloading.



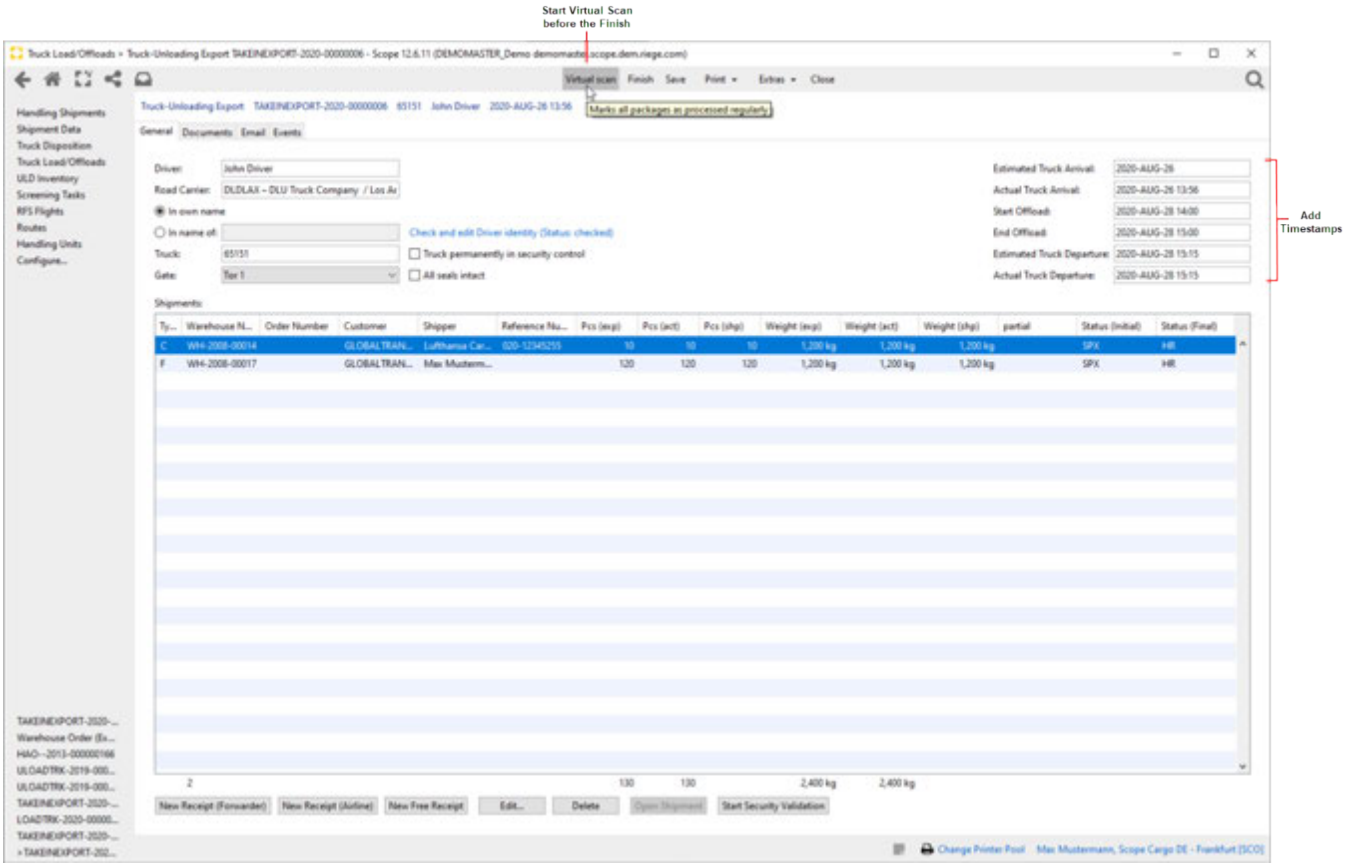
Finish Truck Unloading

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

With the program action *Finish* the Truck Unloading in Scope can be completed. Before the Finish can be done, all data must be checked for correctness. The *Virtual Scan* must be carried out with the corresponding program action. All time Stamps must be entered. Only if all these data are entered, the Finish button will be active. After the Finish is done, the corresponding handling shipments are created in the handling application part Handling Shipments.

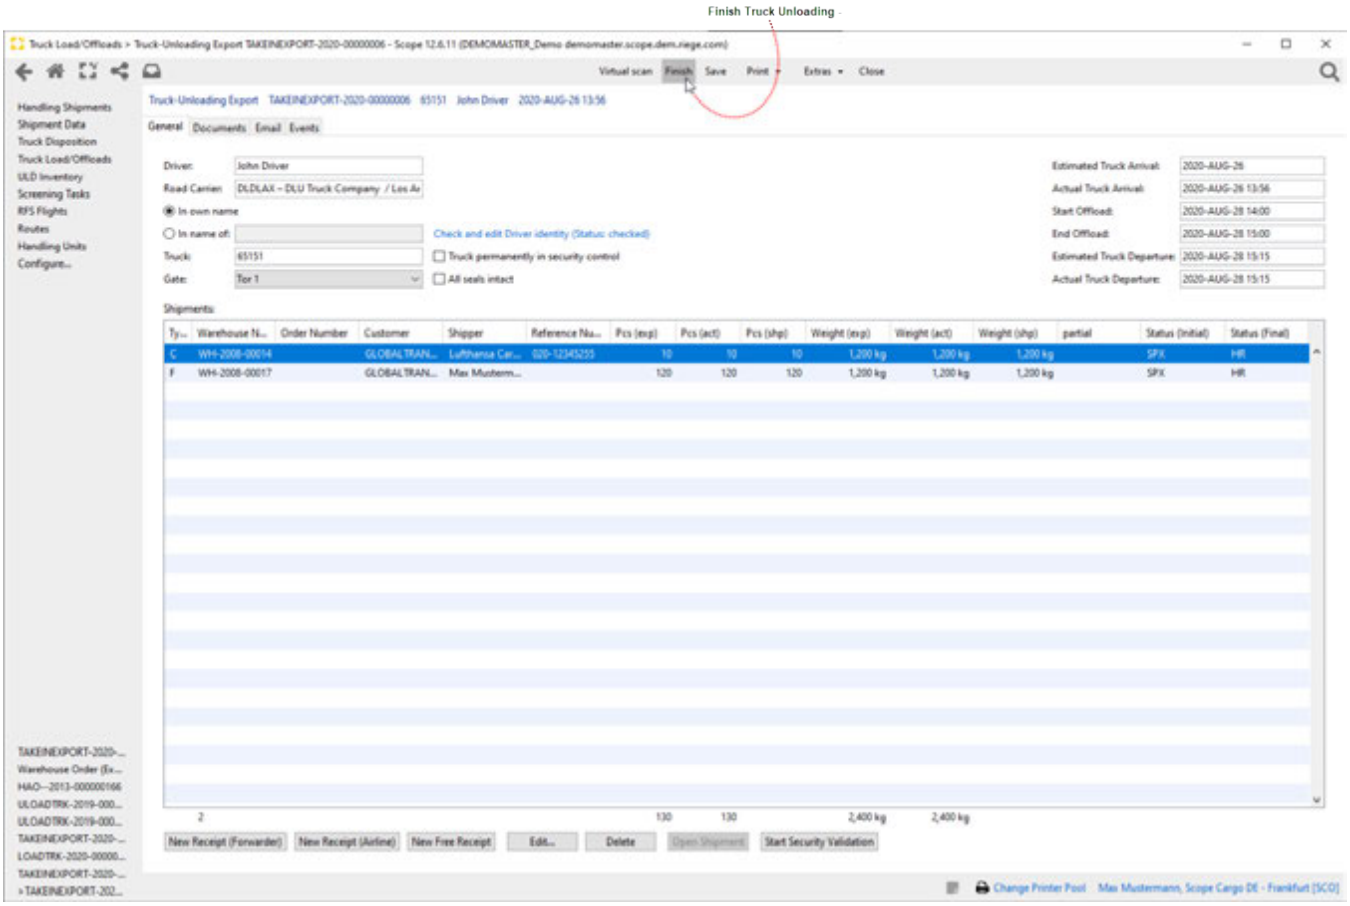
> **Attention!**
>
> Important: After the truck unloading has been finished, the number and weight of the booked packages can no longer be changed. If necessary, incorrect shipments must be canceled or incorrectly booked packages must be entered again with an additonal Warehouse entry or taken out of the warehouse issuing a Truck-Loading entry.

- **Virtual Scan - Add Time Stamps**

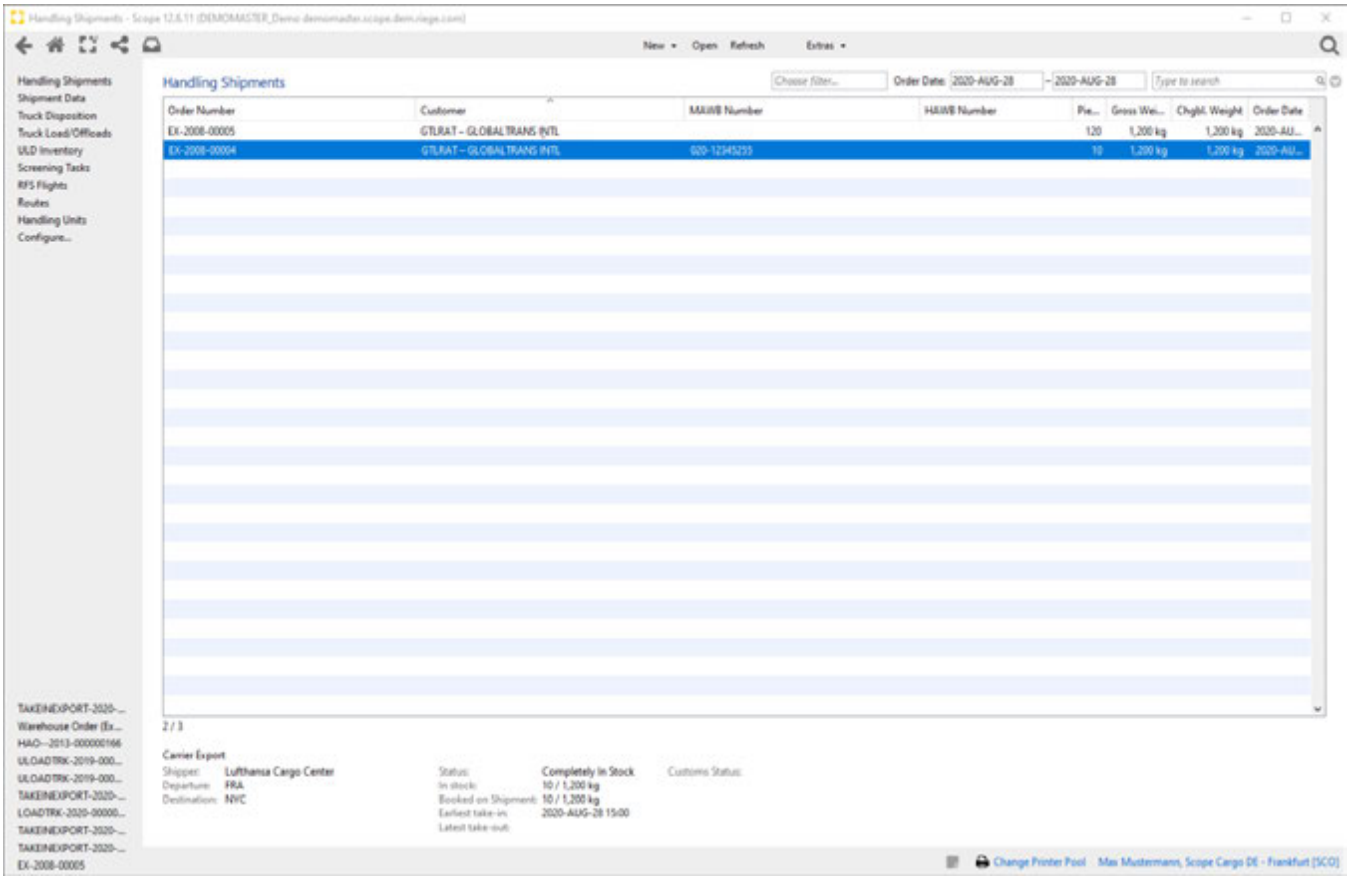


- **Finish**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



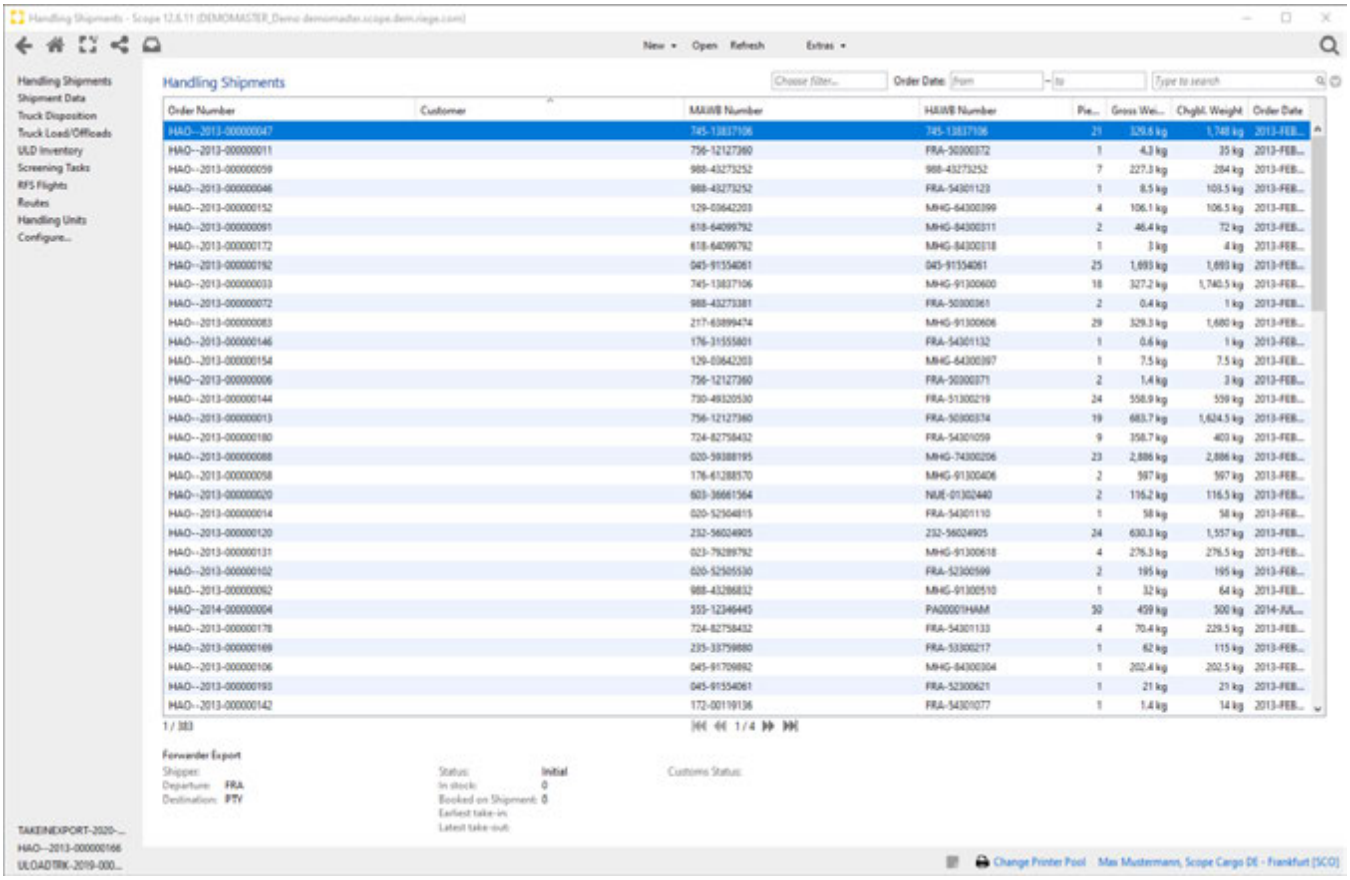
Finish creates Handling Shipments



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

2. Handling Shipments

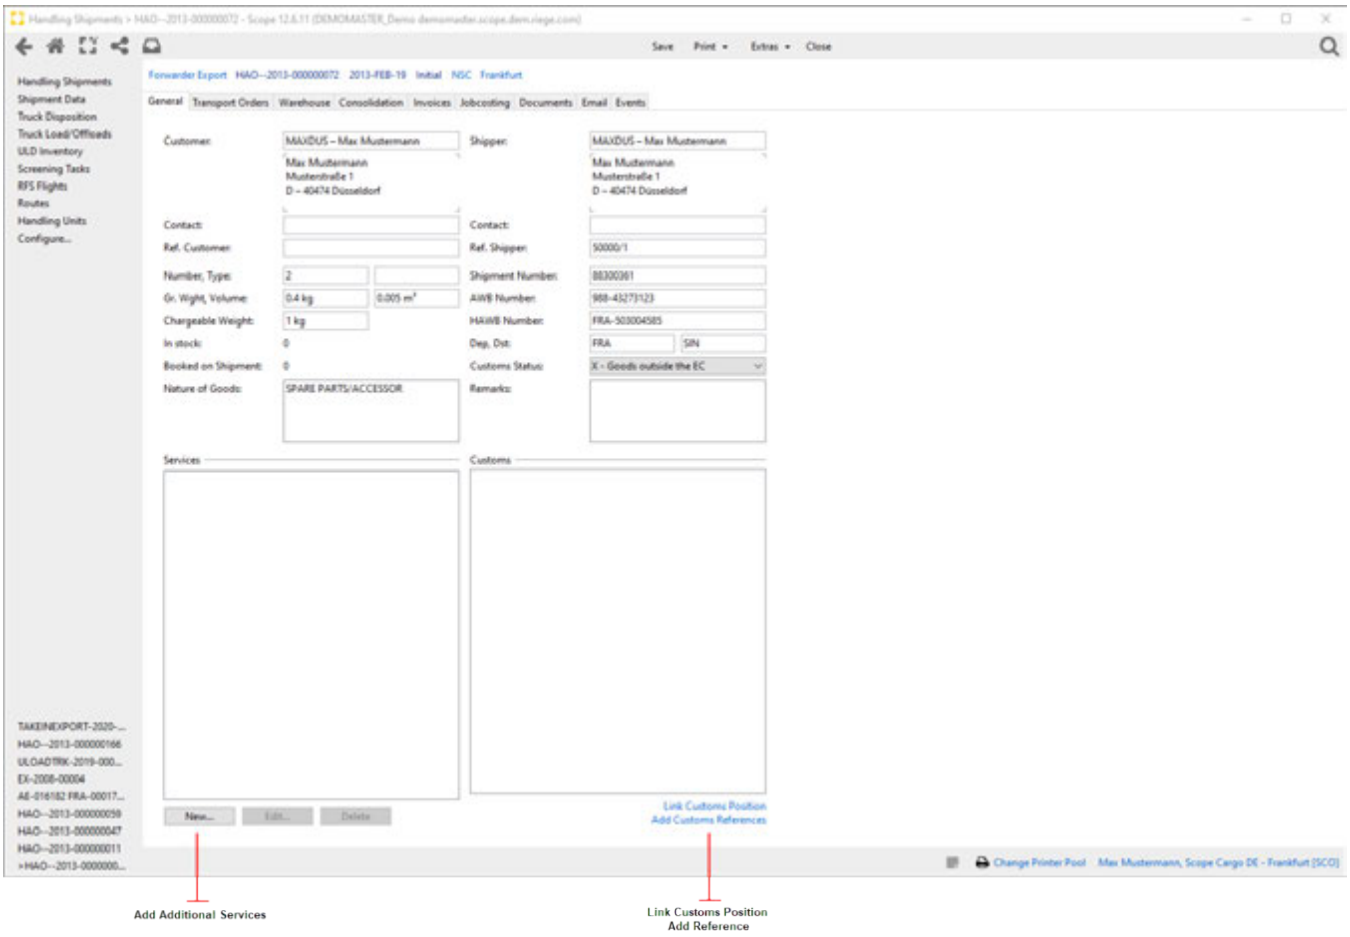
In the home view all current handling shipments are displayed.



General

The General tab of the handling shipment shows all recorded handling shipment data. Additional information such as the customs status, procedures, reference numbers or additional services can be added here. Once additional services have been added here, they will be automatically included in the invoicing. Customs references recorded on the shipment can be processed in the integrated ATLAS modules and be cleared in the Route application of the Handling Module.

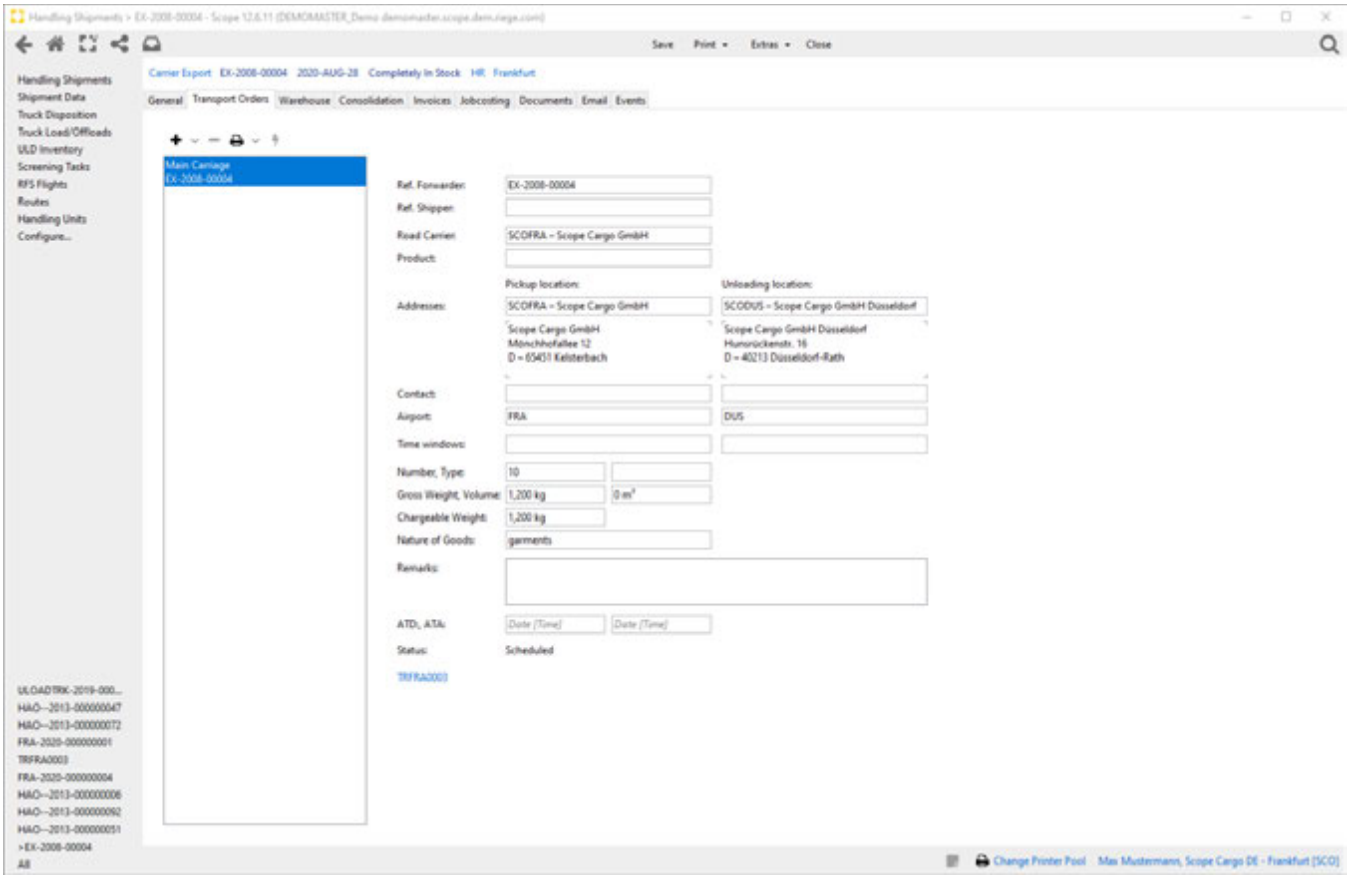
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Transport Orders

In the Tab *Transport orders* of the handling shipment, new transport orders can be directly entered and also the orders that have been created during truck unloading will already be displayed and be available here. If the transport order has already been scheduled on a Route, the status and a link to the respective route are displayed here. If the route is completed, the time stamp ATA is automatically set in the transport order. This is used for traceability in case of queries from the customer.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



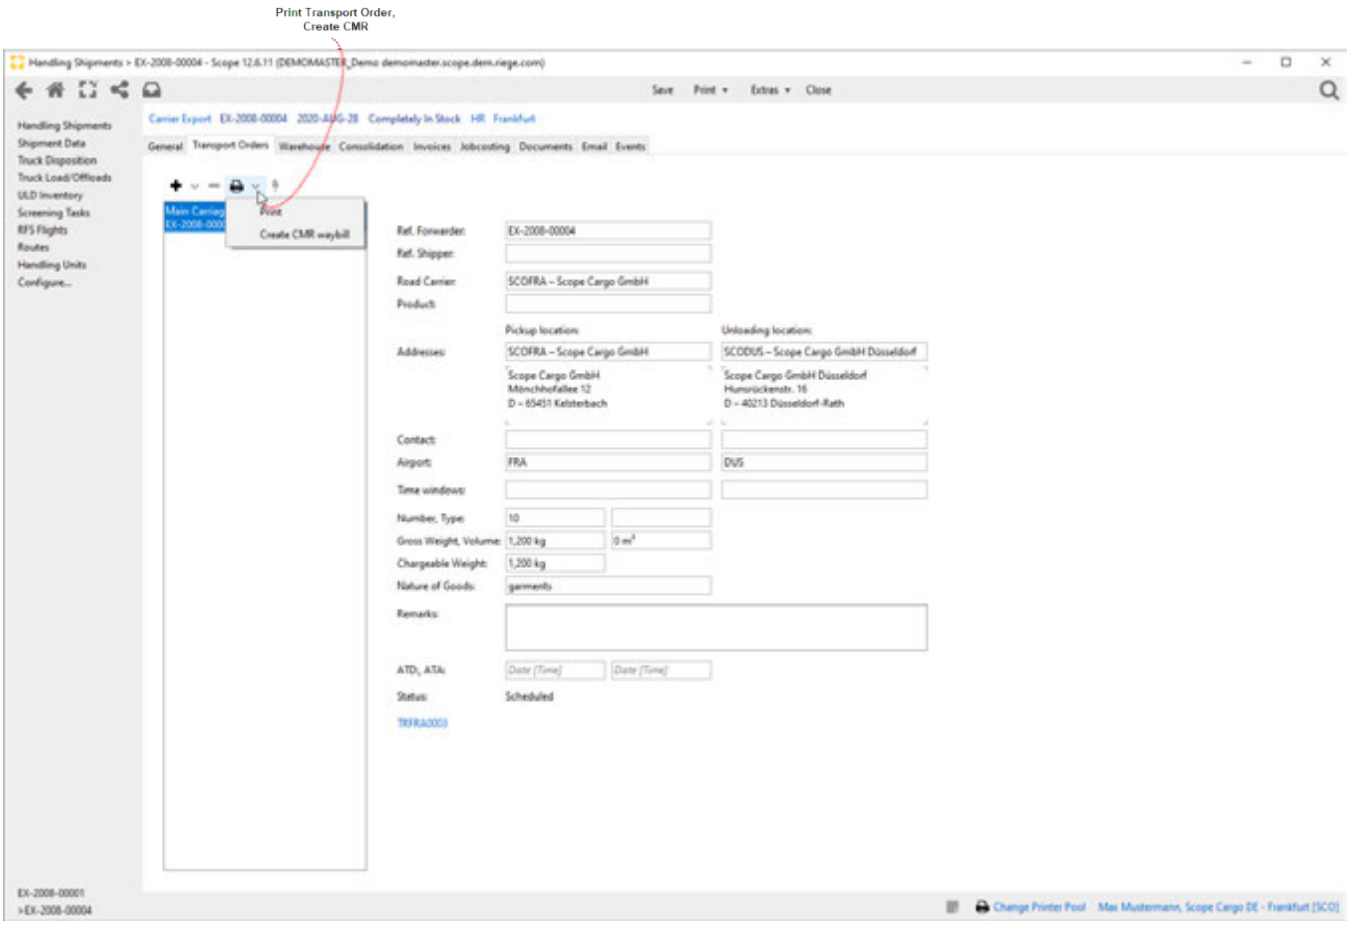
Attention!

The transport order only appears in the Truck Disposition of the Handling Module, if the haulier recorded is its own branch.

Print Transport Order

For the documentary processing of the handling shipment, a printout of the transport order can be made by using the "Print" symbol shown in the transport order overview. In addition to the transport order also a CMR waybill can be printed here. Usually there is no additional data input or information required for this action, as all data from the existing handling shipment will be used for the creation of the print out.

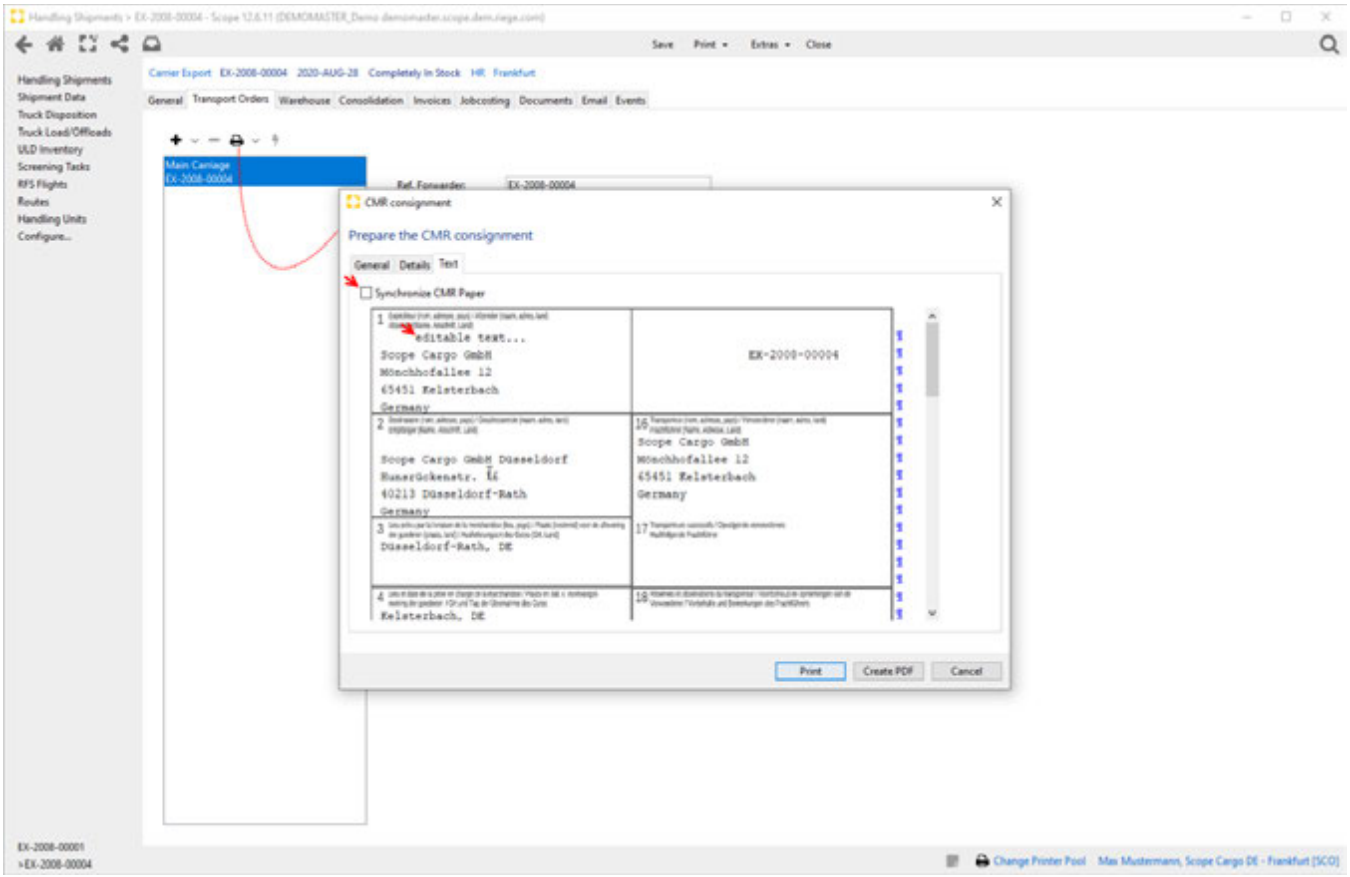
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Edit CMR text

The TAB Text of the CMR provides a visual representation of the printed CMR. The box *synchronize CMR Paper* is checked by default and causes that the text shown in the CMR paper cannot be edited. If the box is unchecked, the CMR paper may be freely edited and the text blocks can be accessed and inserted into the text fields.

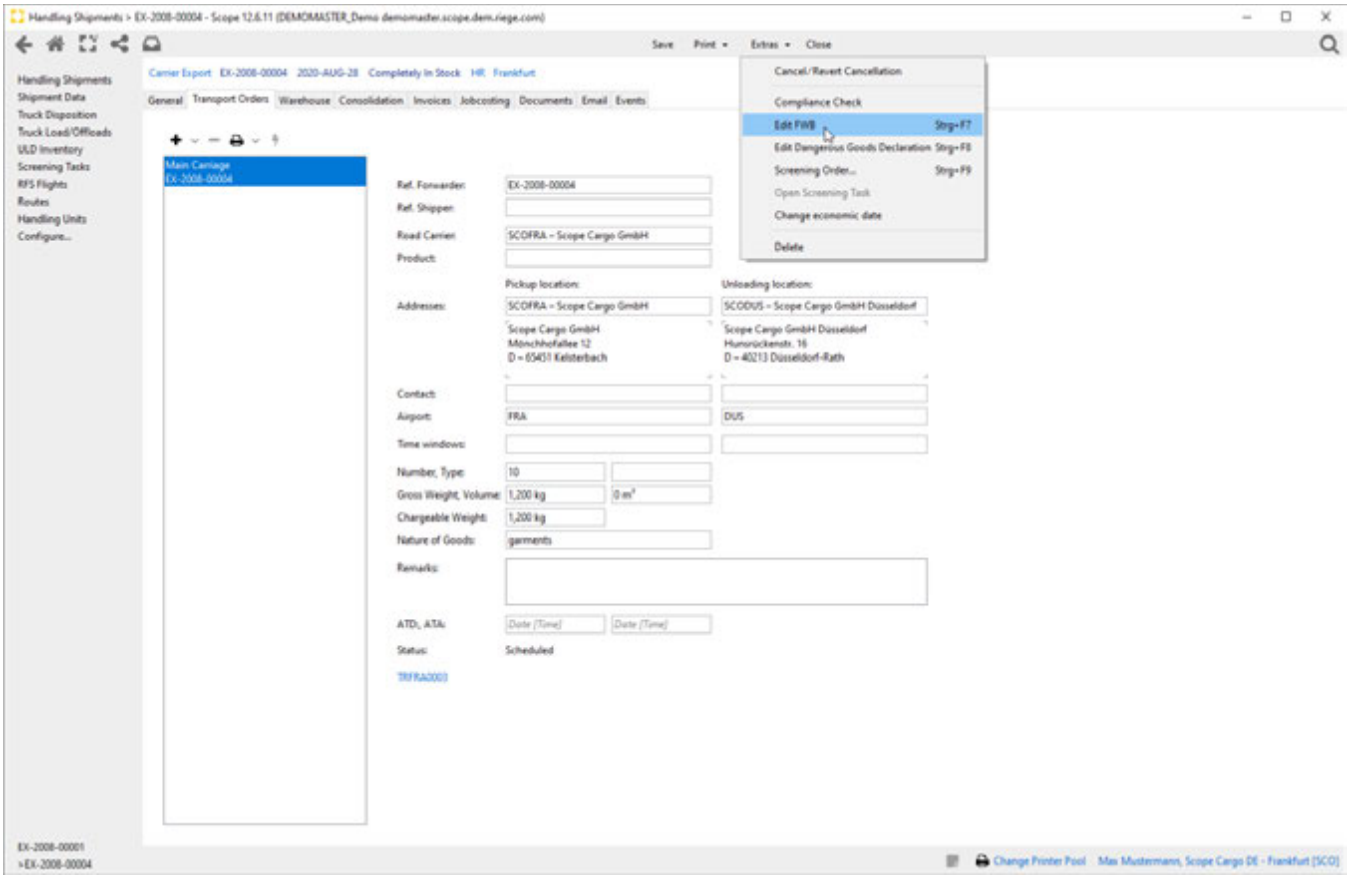
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



FWB/FHL Data Entry & Transmission

In the handling shipment, an FWB and the associated FHL data can be entered via the menu item “Extras” within a carrier shipment.

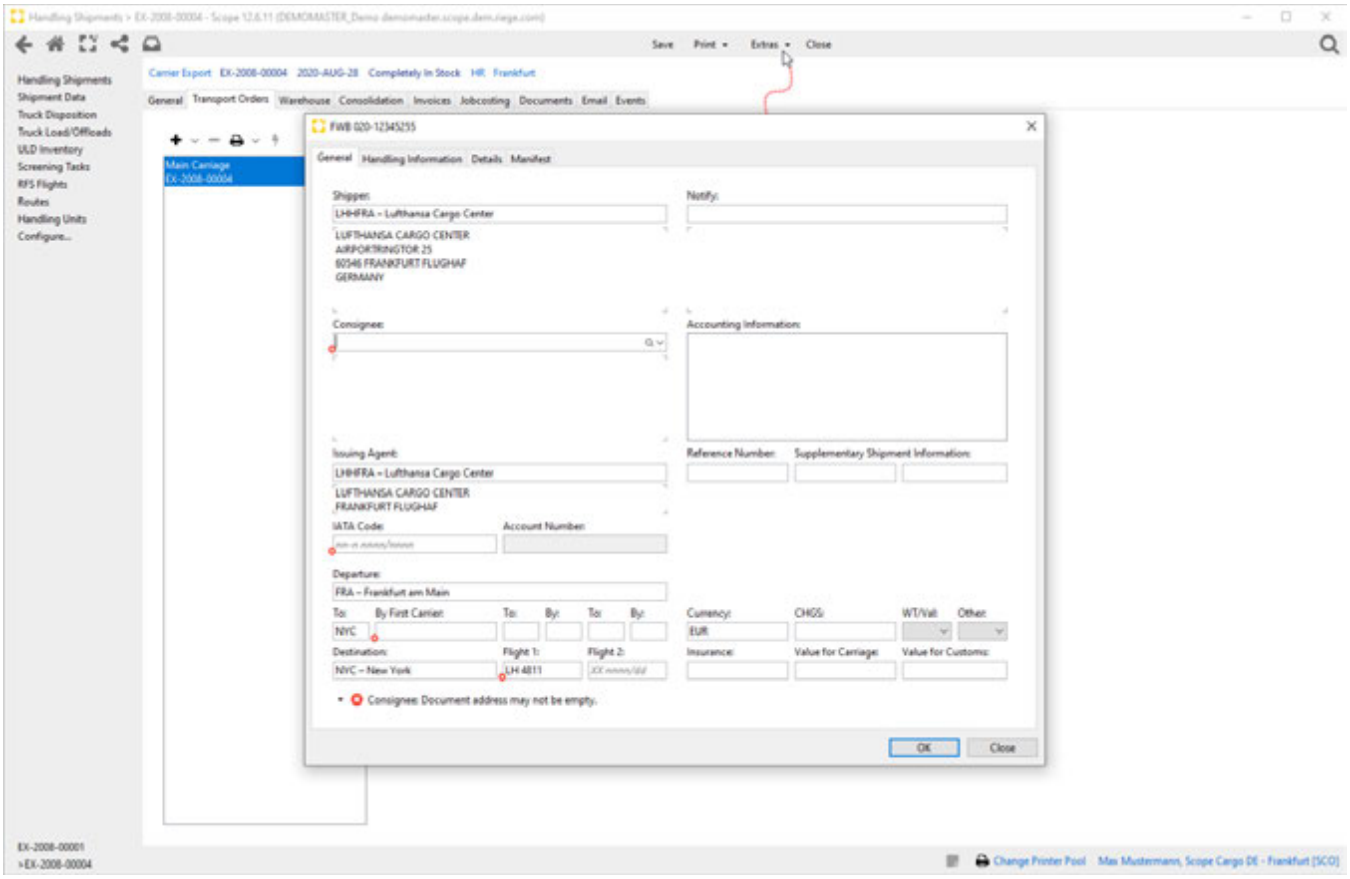
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



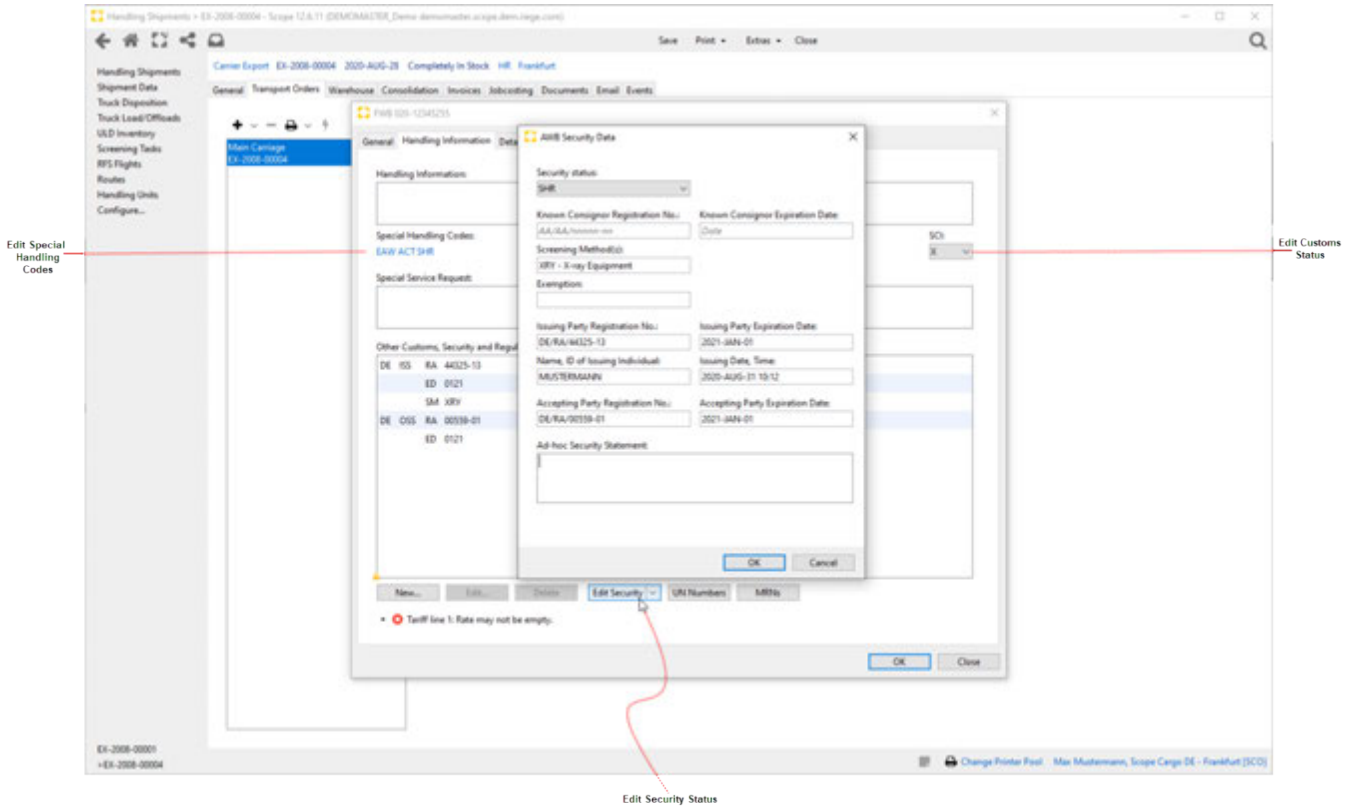
If FWB and FHL data have already been transmitted in advance, all data will automatically be preassigned here. Otherwise the available data from the corresponding handling shipment are displayed here. First all mandatory input fields (marked with a red validation) in the FWB Editor must be filled, before a data transmission to the airline is possible.

In the *General* Tab of the FWB general shipment details can be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

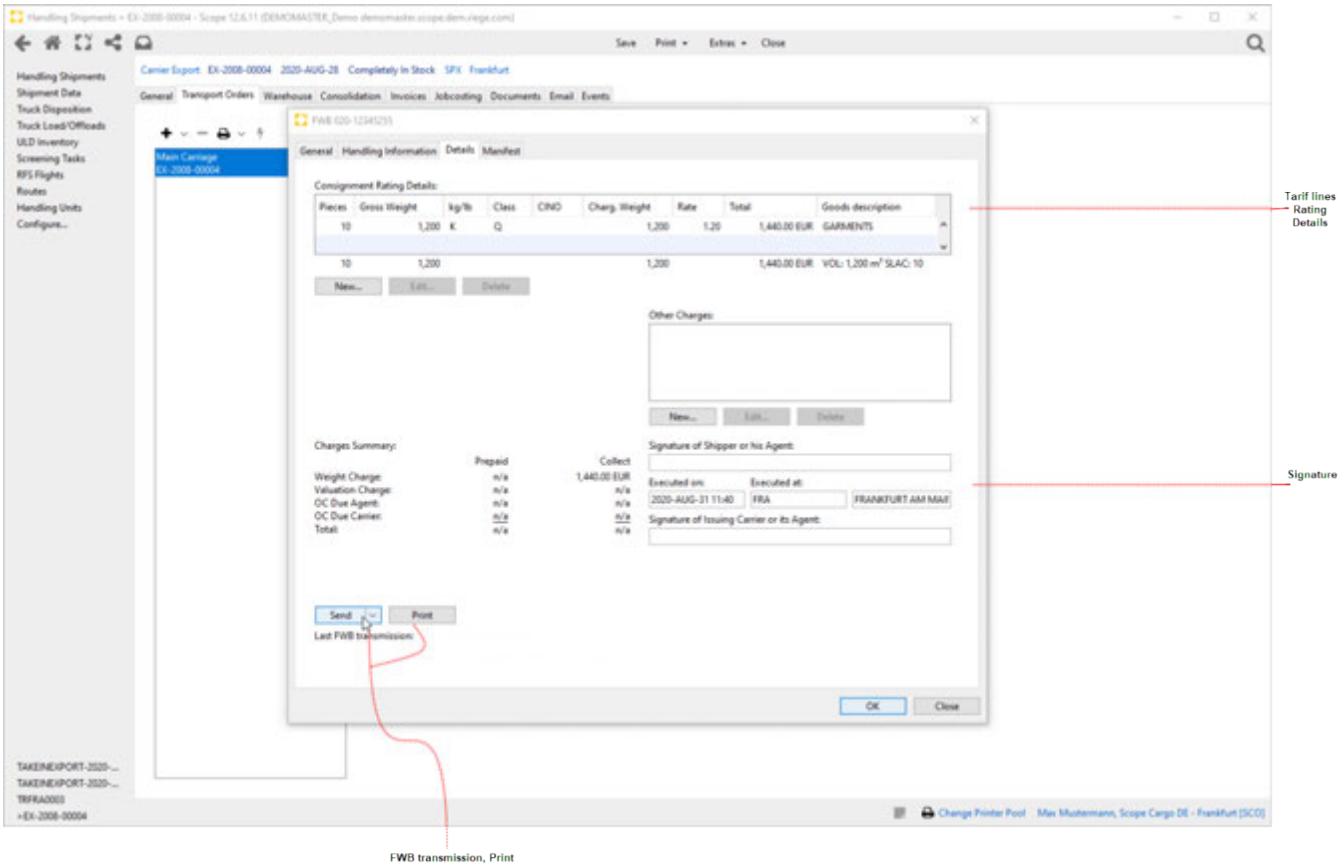


In the Tab *Handling information* of the FWB Editor, all shipment details can be entered that are important to the Airline, such as special handling codes, security and customs status. These data will not be preassigned from the Handing shipment. If FWB and FHL data have already been transmitted in advance, there is no data entry necessary.



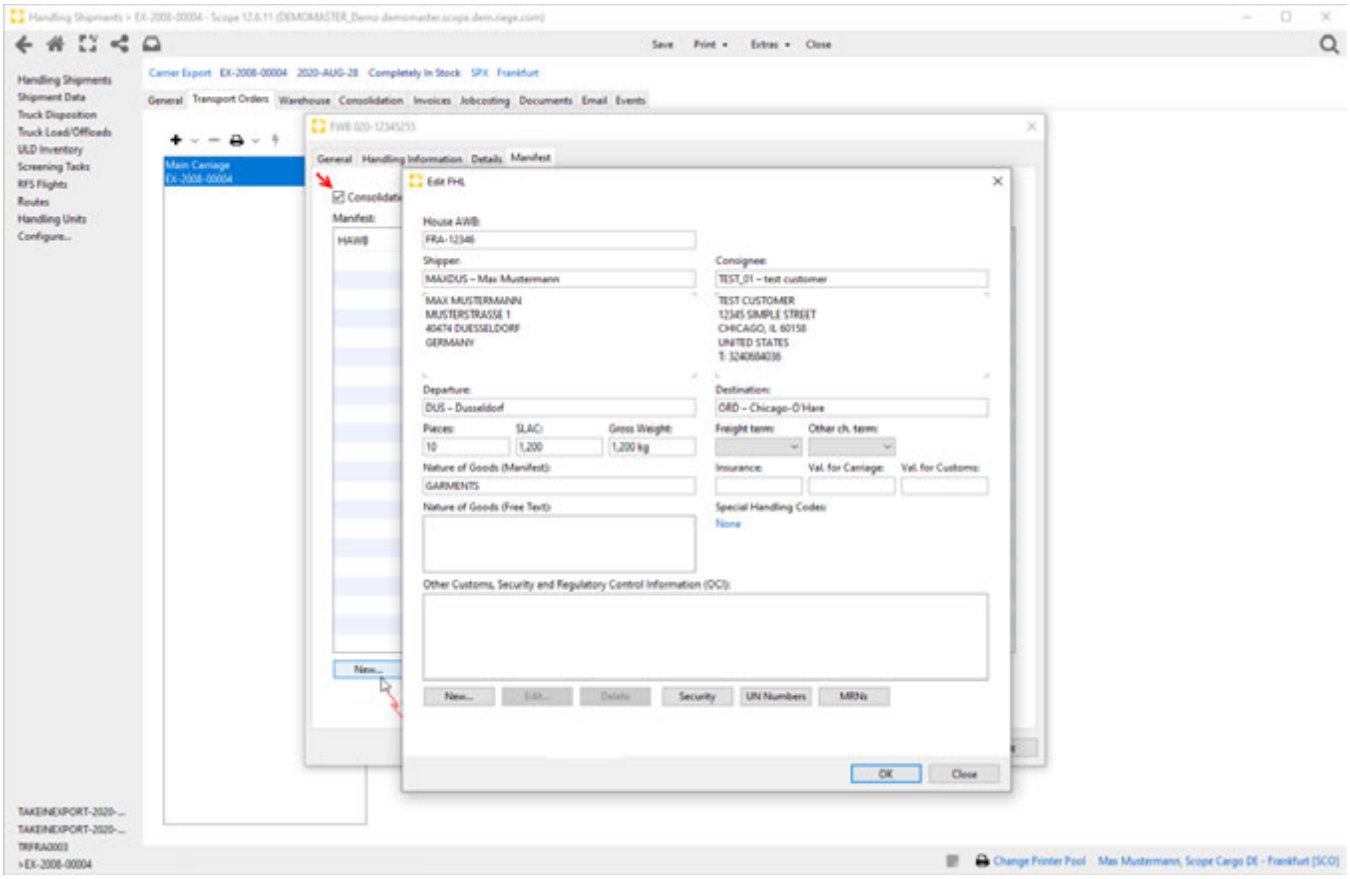
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In the Tab *Details* of the FWB Editor, the consignment rating details and other charges can be entered, as well as the signature of shipper or agent, date and place. If all mandatory fields are filled, the FWB data can be transmitted to the airline with the *Send* button or printed out with the *Print* button.



If necessary, the House AWB data (FHL) can be entered in the "Manifest" tab. By ticking the box “Consolidation”, the program button “New” is activated. The New button opens the editor for editing FHL data. After the data has been entered, the transmission of the FHL data can be triggered using the “Send” button in the “Details” tab. together with the FWB data.

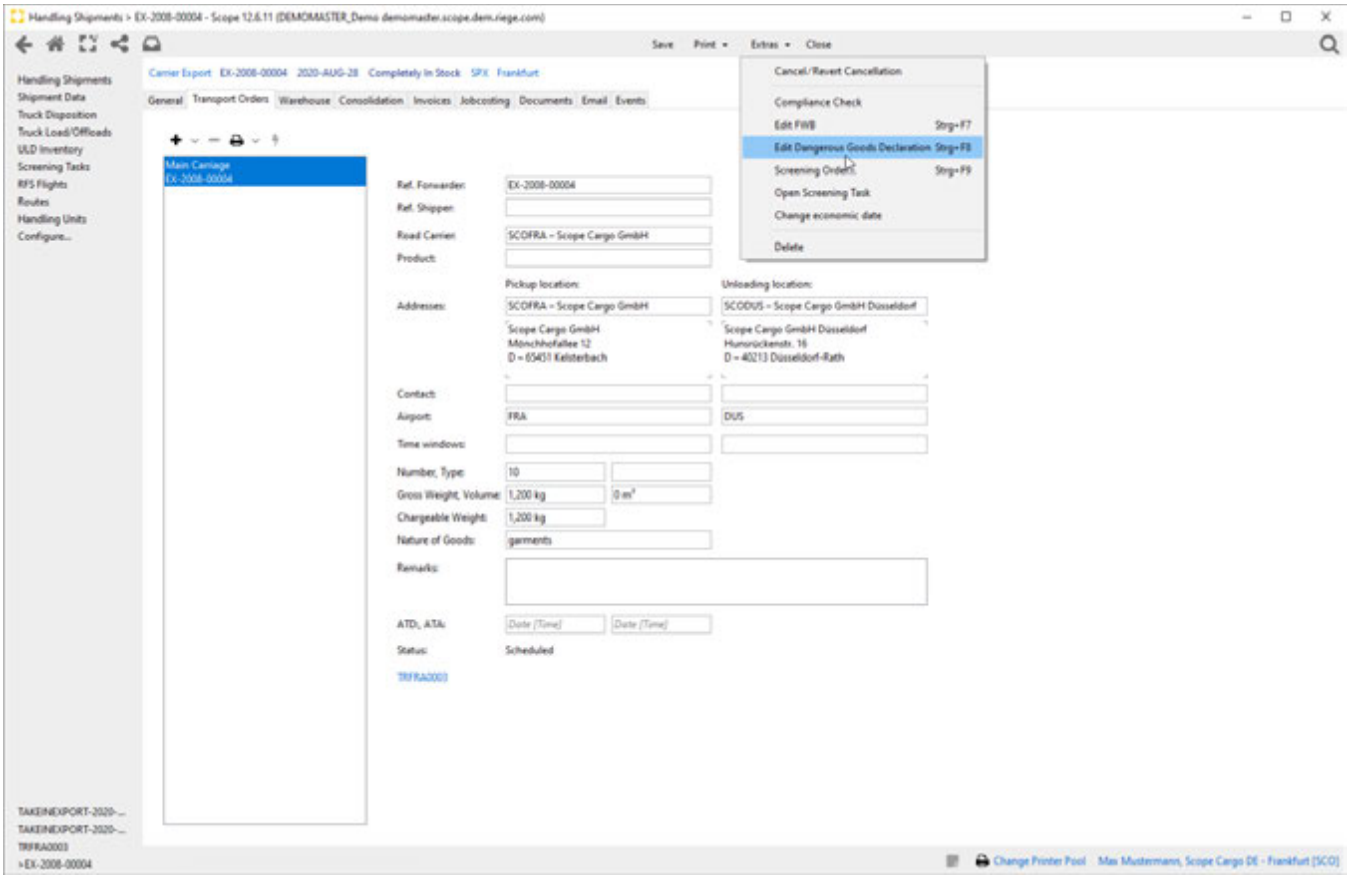
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



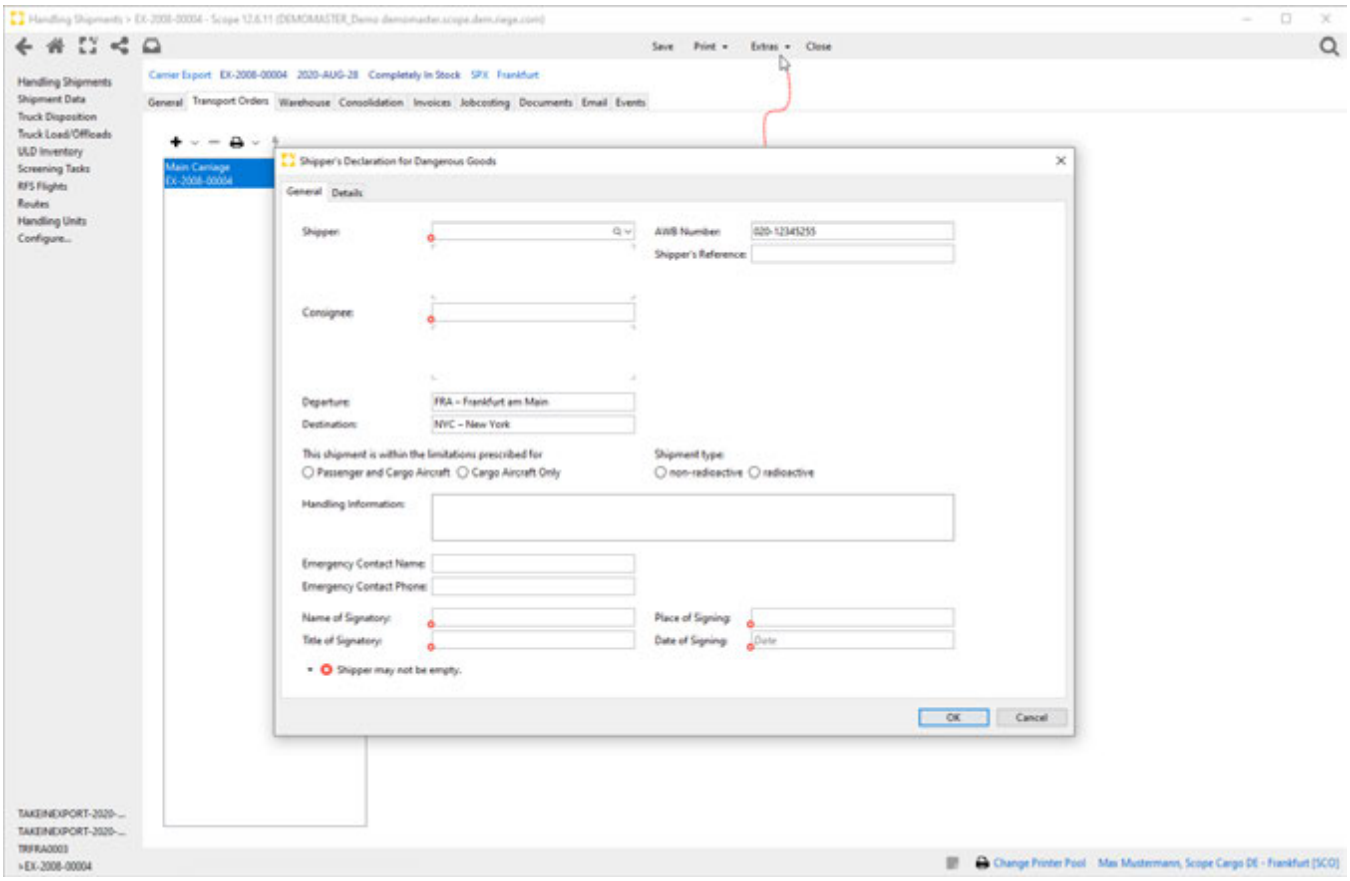
Create Declaration for Dangerous Goods (DGD), FDD transmission

In the handling shipment, a shipper's declaration for dangerous goods (FDD =Declaration for Dangerous Goods Data) can be entered. With the program action *Extras - Edit Dangerous Goods Declaration* the editor *shipper`s declaration for dangerous goods* can be opened within an airline shipment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

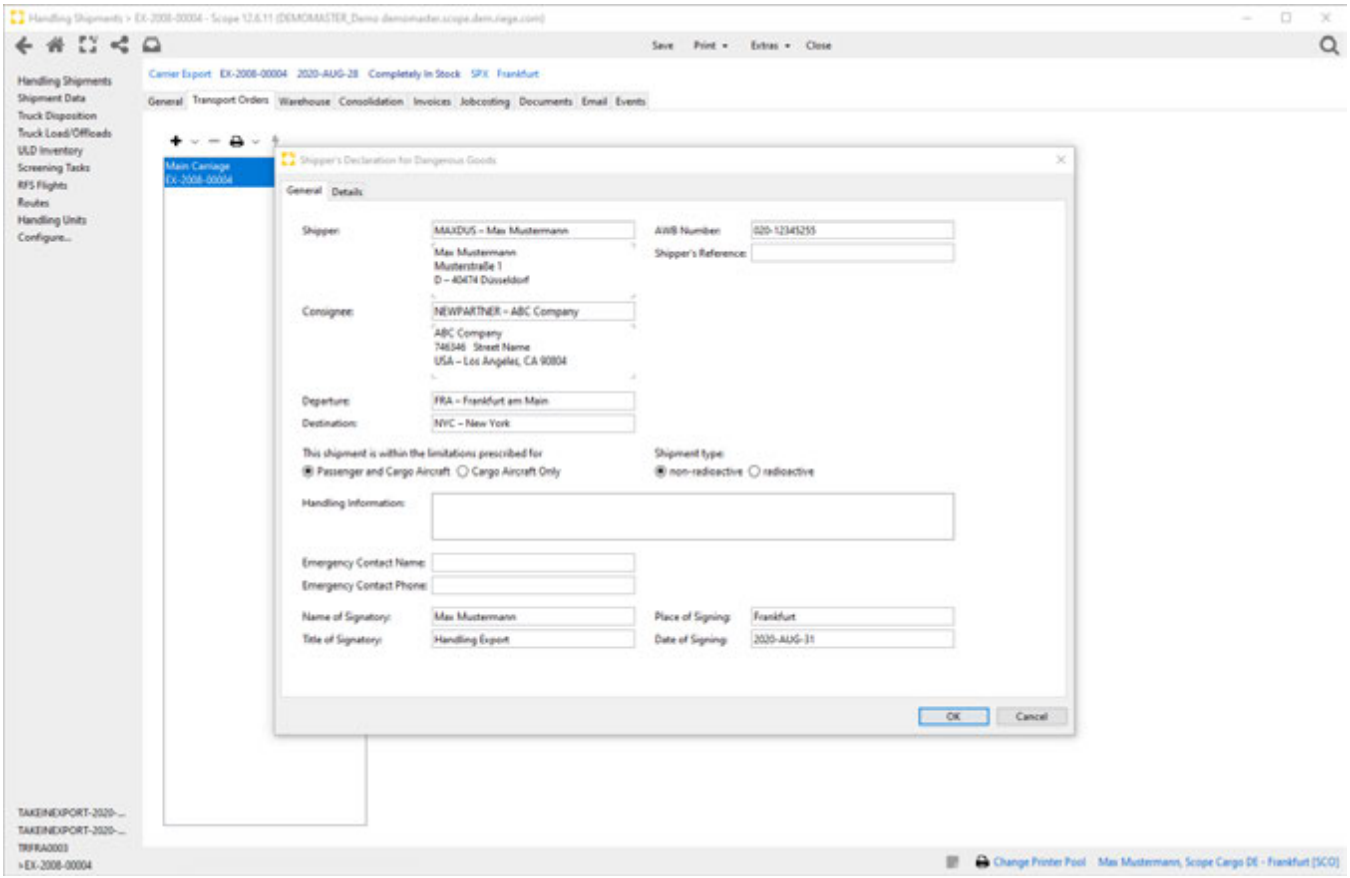


If a FDD data record has already been transmitted in advance, all data from this is automatically preassigned in the input fields. If not, first all mandatory input fields (marked with a red validation) in the DGD Editor must be filled, before a data transmission to the airline is possible, or a printout can be done.



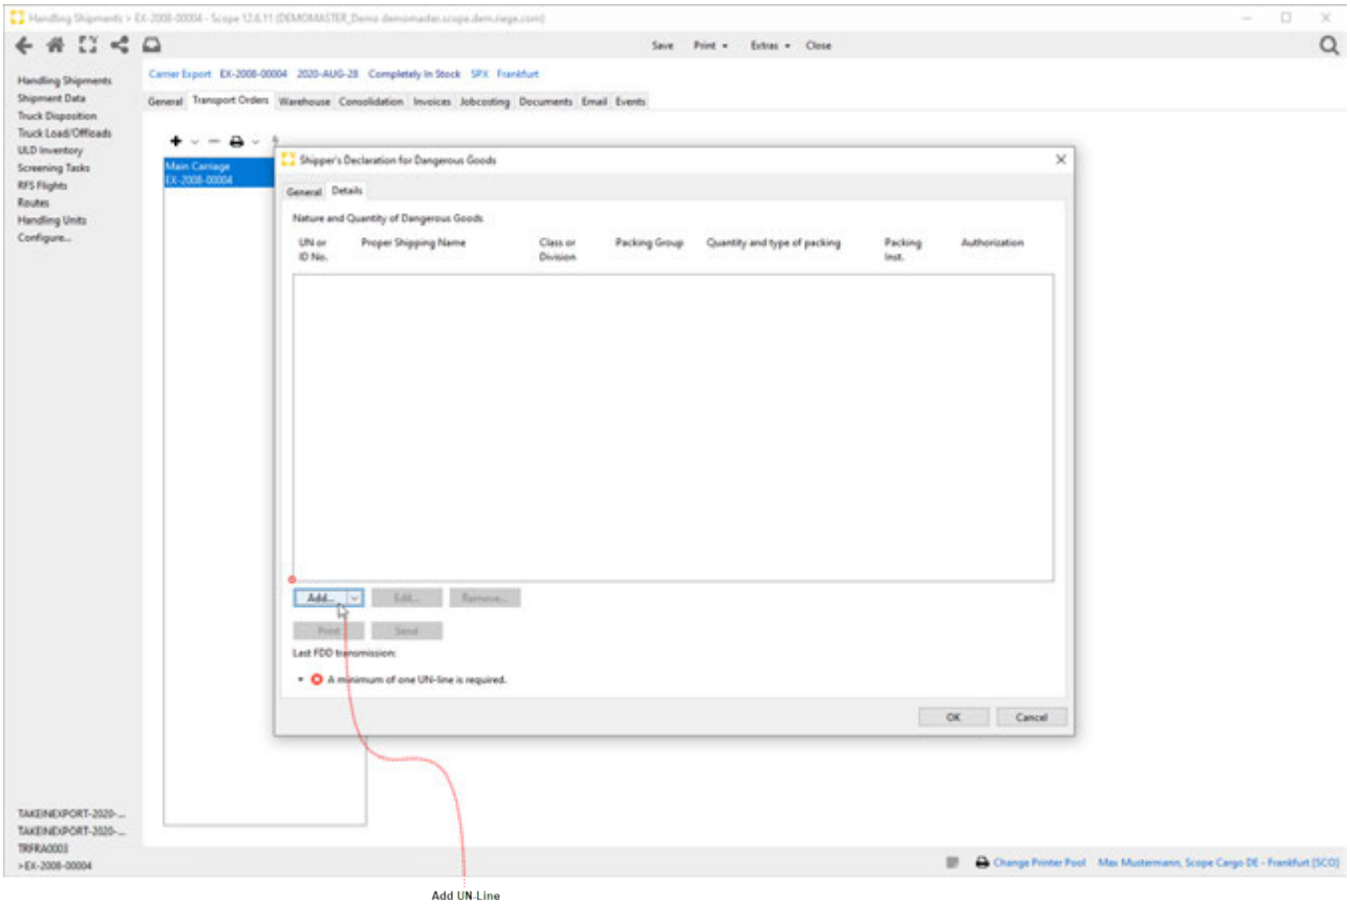
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In the *General* Tab the general header data of the DGD can be entered.



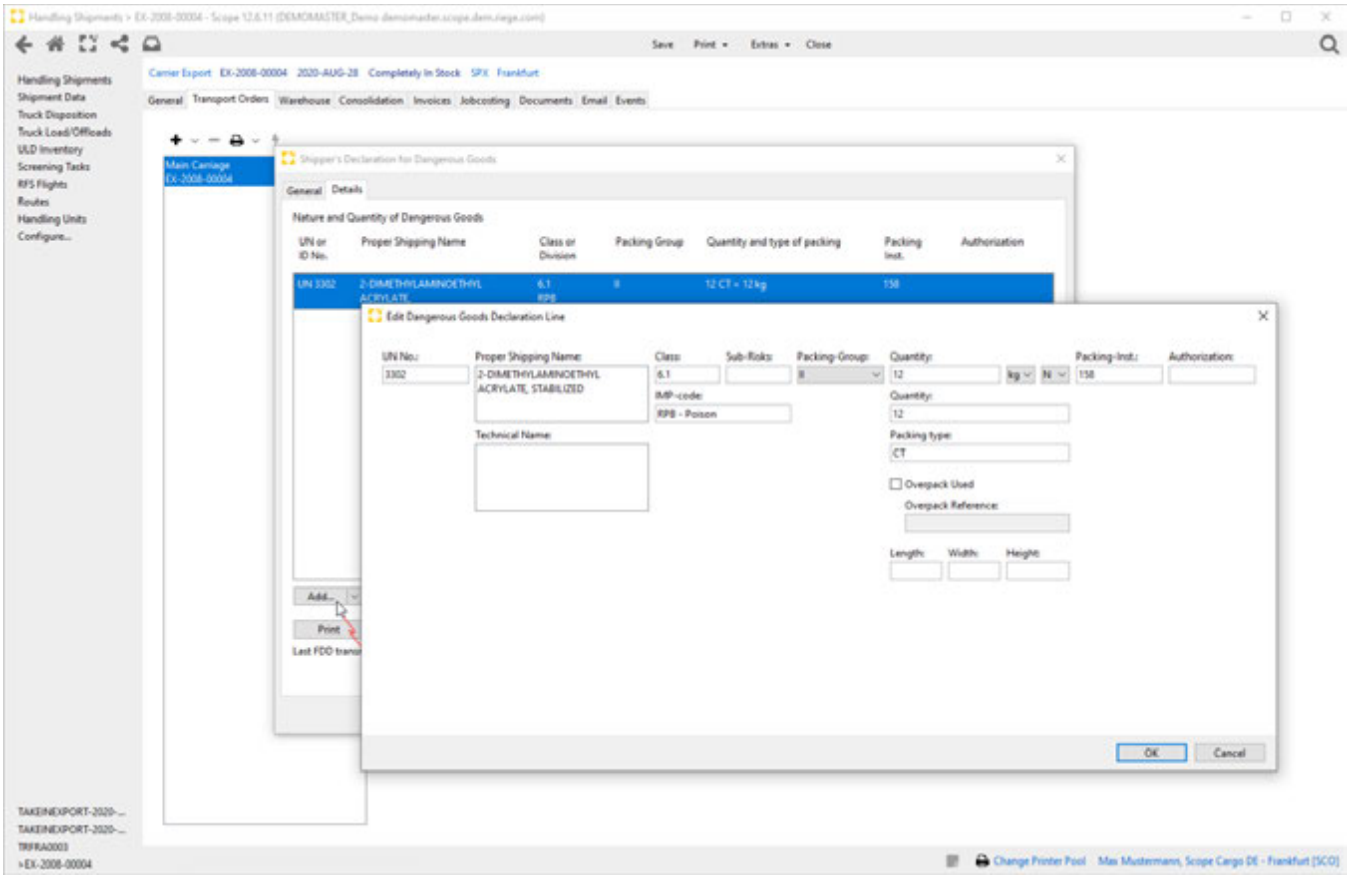
In the *Details* Tab of the DGD editor the individual dangerous goods lines of the shipper's declaration can be entered. With the button *Add...* a new UN Line can be added.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



There is a dangerous goods information search for Class, Packing Group integrated in the input field *UN No.:* Just use the drop-down menu or press F3 and the editor for a DGR query opens. If an existing UN number is entered here in the input field *UN No.* all corresponding DGR values are filled in the following input fields automatically. These data can still be changed manually. Only the input fields " net quantity" and "packing instruction" need to be filled manually with the appropriate values.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

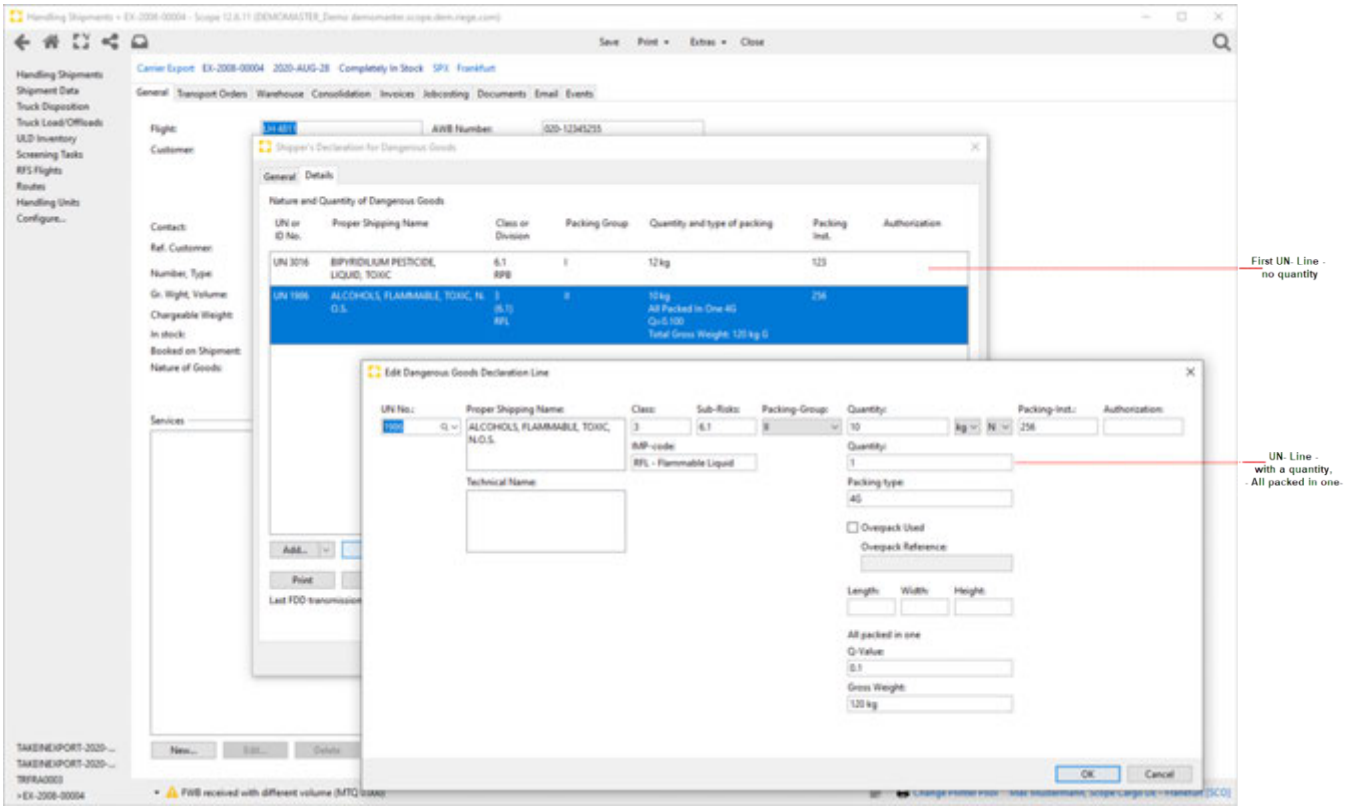


- All Packed In One + Overpack Use

When entering an "All Packed In One" package, the following rule applies:

If the "Quantity" field in a dangerous goods line is filled with a quantity, but not in the previous UN Lines, this will automatically result in the note on the shipper´s declaration for dangerous goods : "All Packed In One - Packing type"

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



All packed in One - Packing Type

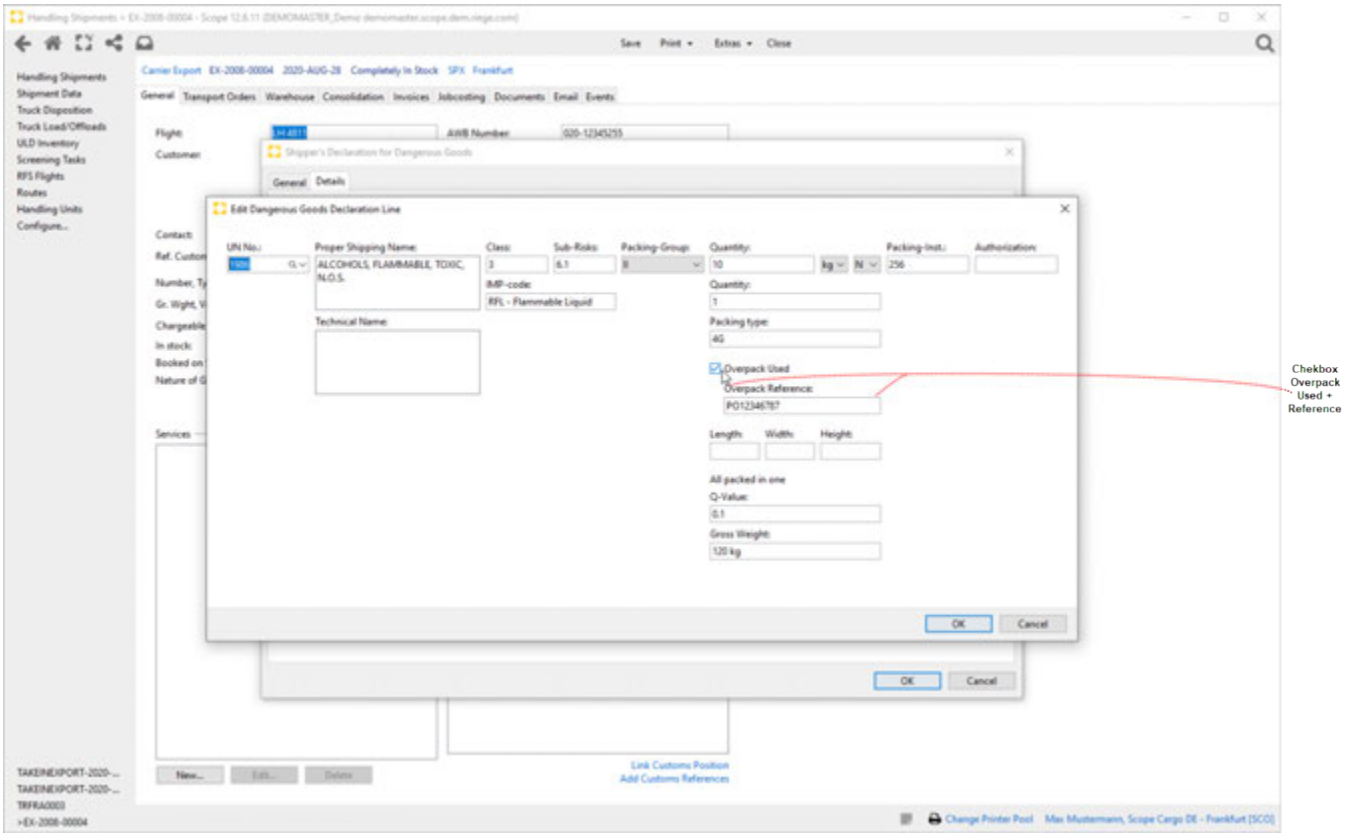
NATURE AND QUANTITY OF DANGEROUS GOODS

Dangerous Goods Identification				Quantity and type of packing	Packing Inst.	Authorization
UN or ID No.	Proper Shipping Name	Class or Division (Subsidiary Risk)	Packing Group			
UN 3016	BIPYRIDILIUM PESTICIDE, LIQUID, TOXIC	6.1	I	12kg	123	
UN 1986	ALCOHOLS, FLAMMABLE, TOXIC, N.O.S.	3 (6.1)	II	10kg All Packed In One 4G Q=0.100 Total Gross Weight: 120 kg G	256	

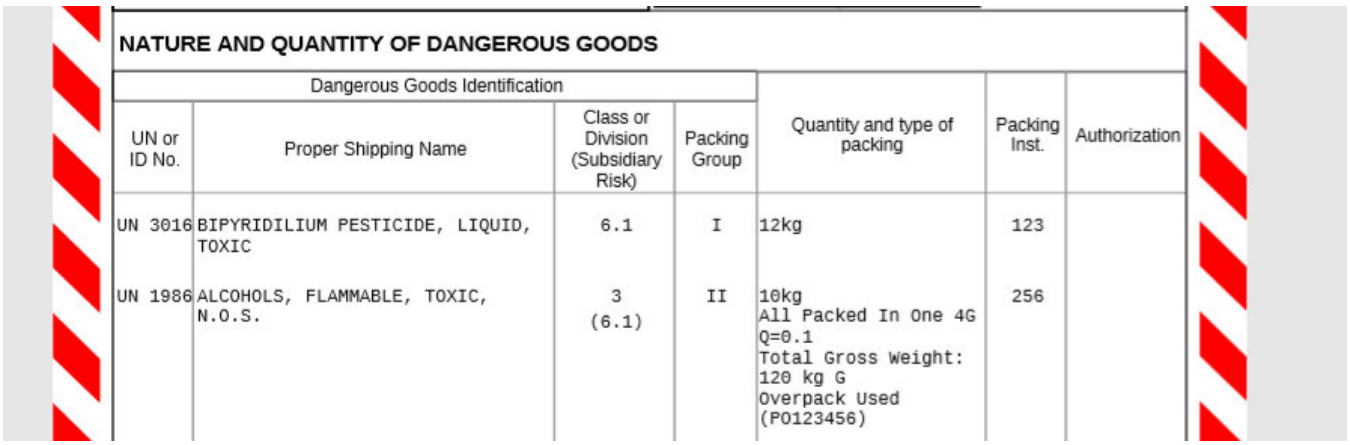
When entering an "Overpack Used" package, the following rule applies:

If the checkbox "Overpack Used" is set, when a dangerous goods declaration line is recorded, the following note will be shown on the shipper´s declaration for dangerous goods: "Overpack Used - Overpack Reference"

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Overpack Used - Overpack Reference



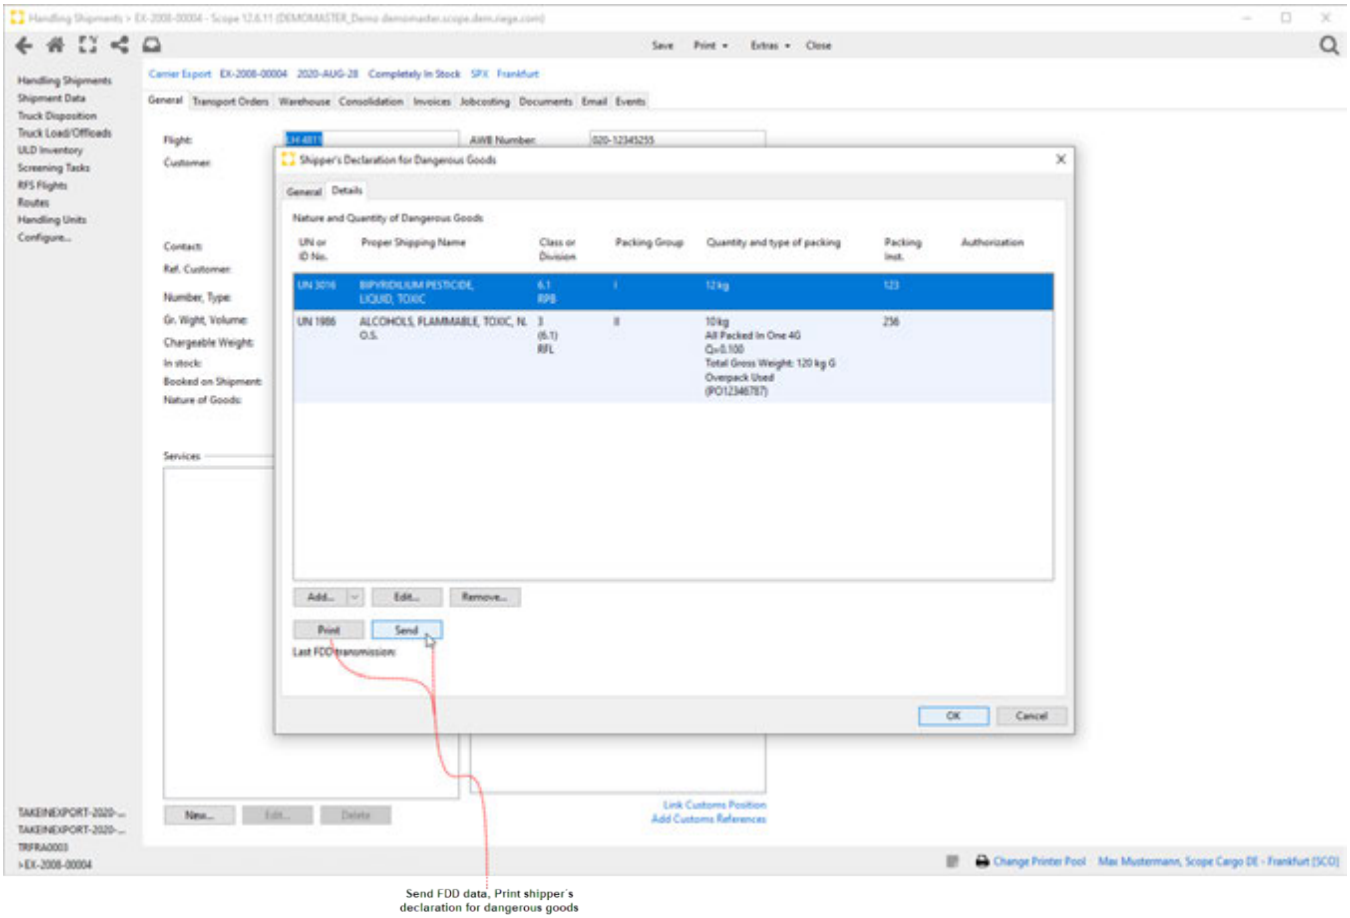
NATURE AND QUANTITY OF DANGEROUS GOODS

Dangerous Goods Identification				Quantity and type of packing	Packing Inst.	Authorization
UN or ID No.	Proper Shipping Name	Class or Division (Subsidiary Risk)	Packing Group			
UN 3016	BIPYRIDILIUM PESTICIDE, LIQUID, TOXIC	6.1	I	12kg	123	
UN 1986	ALCOHOLS, FLAMMABLE, TOXIC, N.O.S.	3 (6.1)	II	10kg All Packed In One 4G Q=0.1 Total Gross Weight: 120 kg G Overpack Used (PO123456)	256	

Print and Send FDD

After the data has been entered, the transmission of the FDD data can be triggered using the *Send* button. Printout of the shipper`s declaration for dangerous goods can be triggered with the *Print* button.

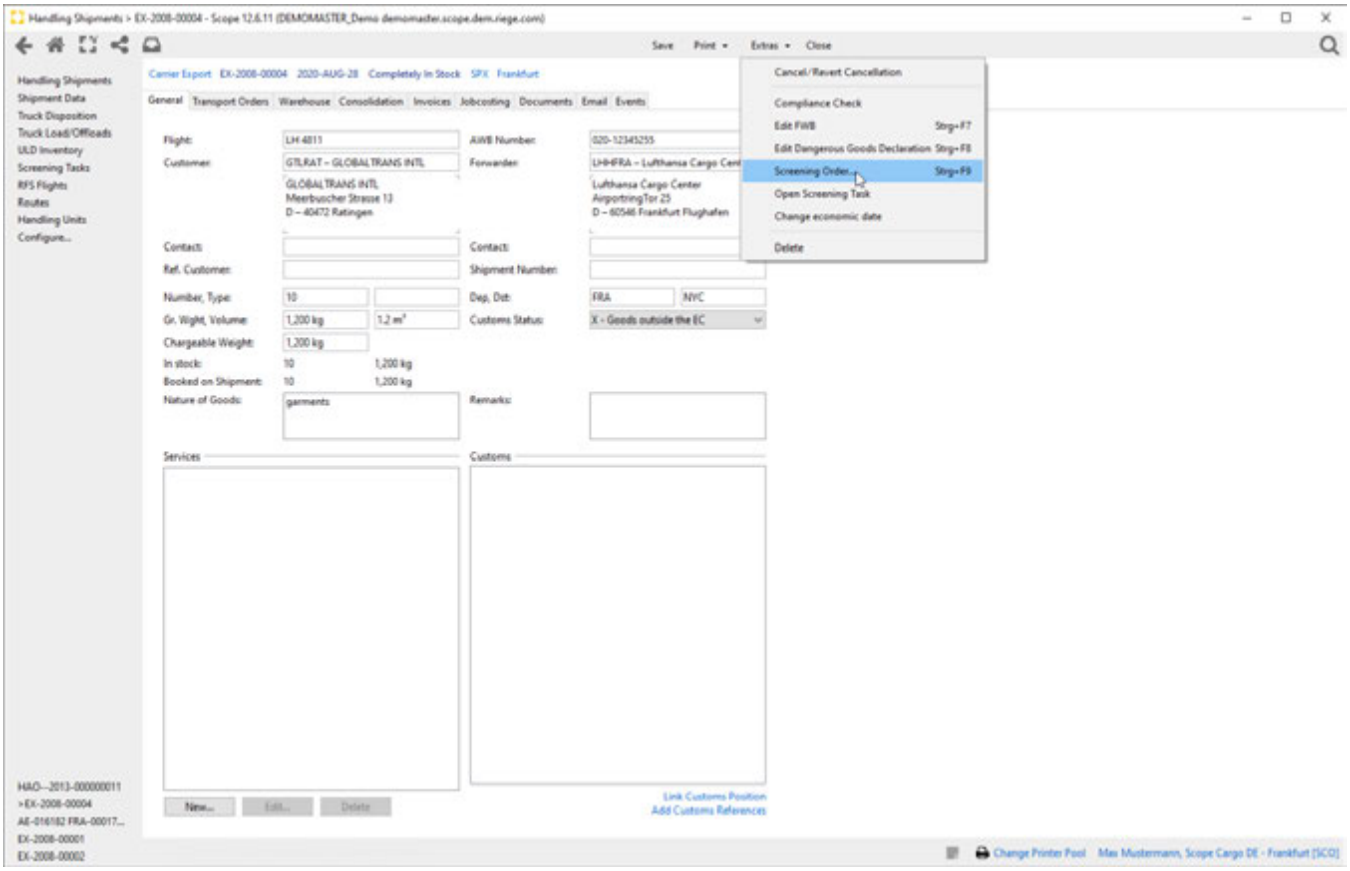
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Screening Order

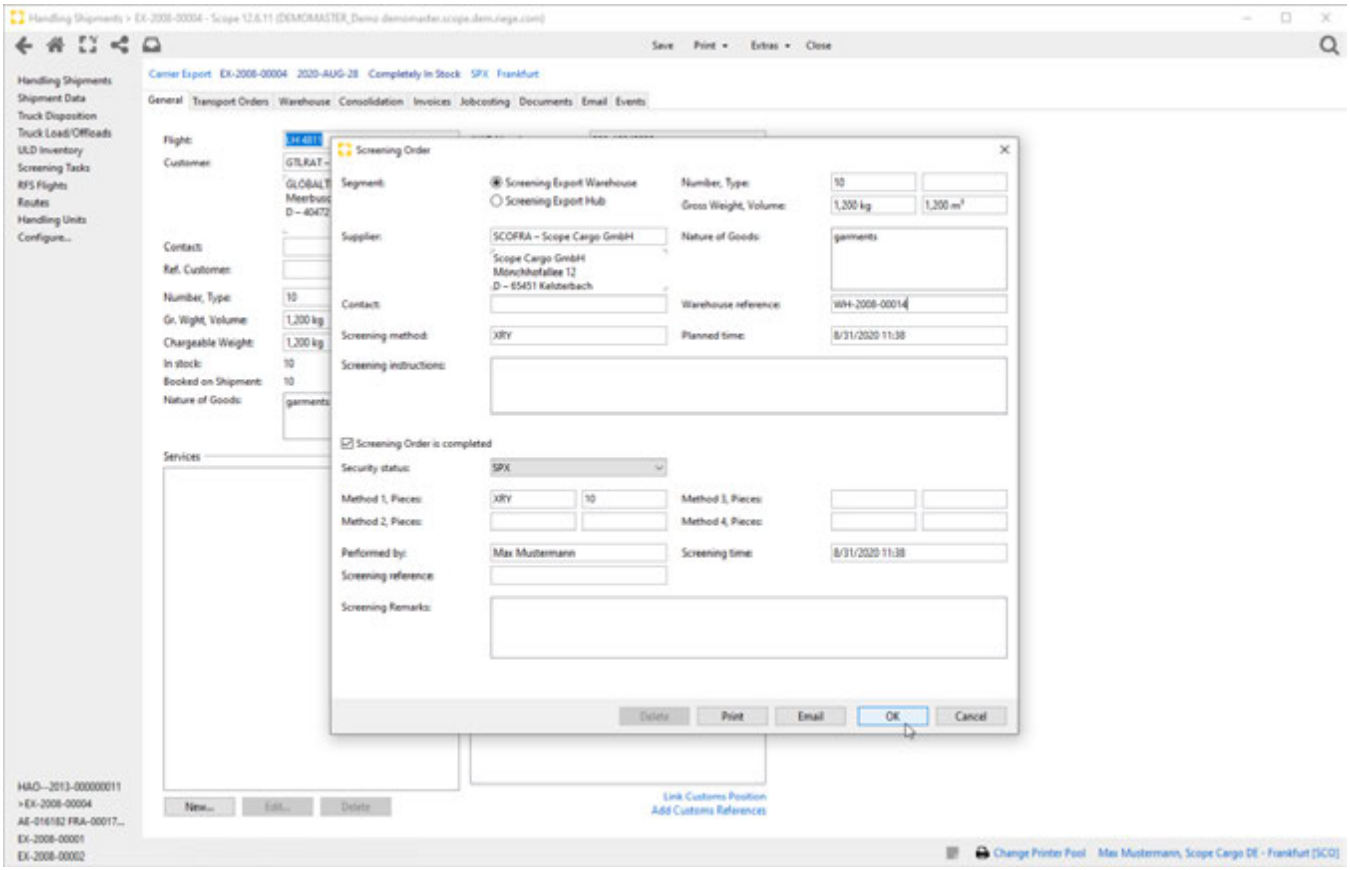
If not yet issued during Truck Offloads, the security status of a handling shipment can be updated by applying a security measure by using a *screening order*. Via program action *Extras - Screening order* in the handling shipment or with the keyboard shortcut Ctrl-F9, the editor to enter the data for a *Screening Order* can be opened.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



If a security measure has been done by an external partner, the information about this must be entered manually in the *Screening order editor.* If a security measure is carried out by own staff via the handling module Screening task, data are already displayed here, and the security status of the handling shipment is automatically updated. The security measure as a special service is automatically shown in the tariff line, when the charge type is set in the tariff settings accordingly.

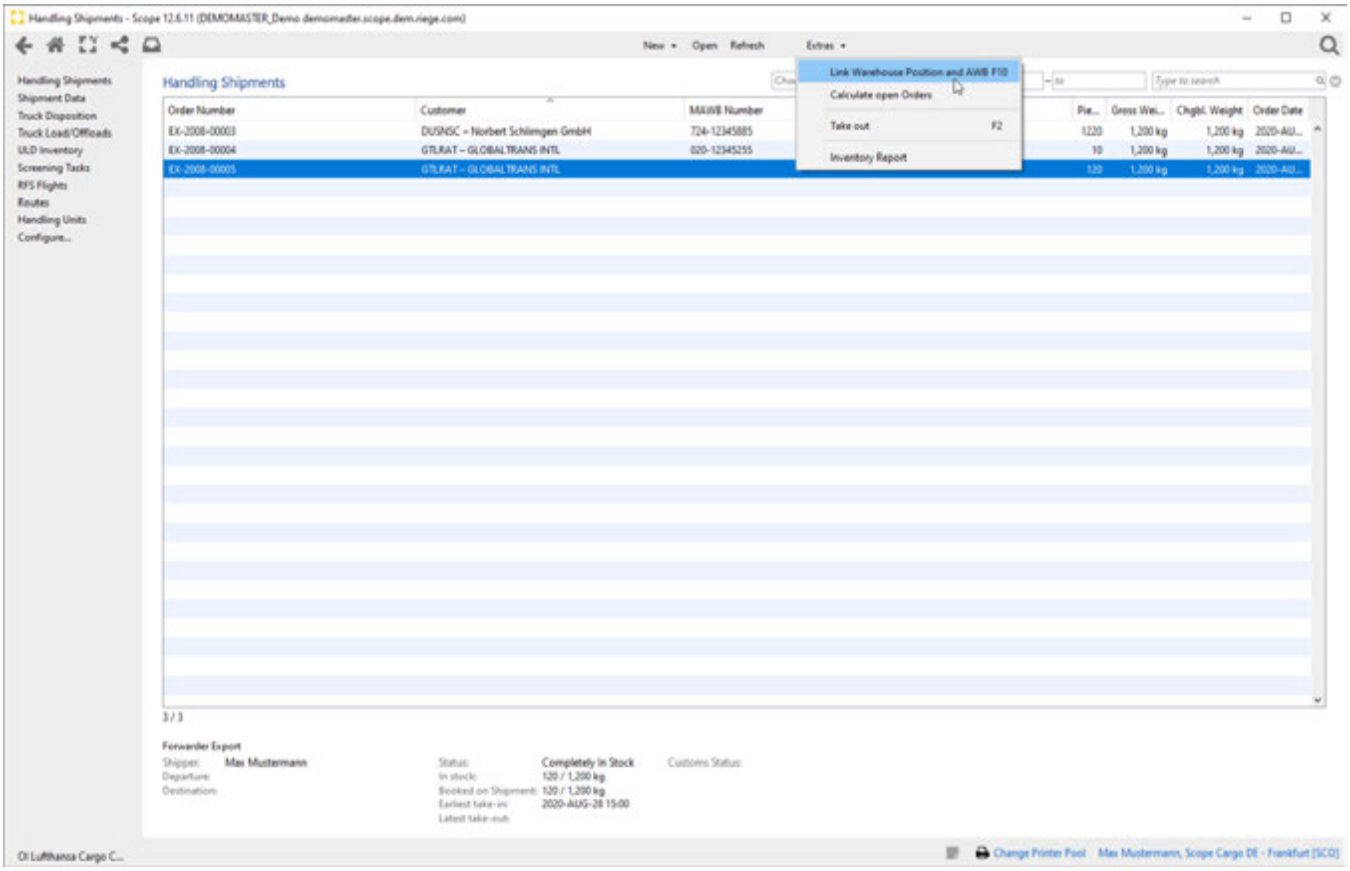
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Link Warehouse Position and Airwaybill

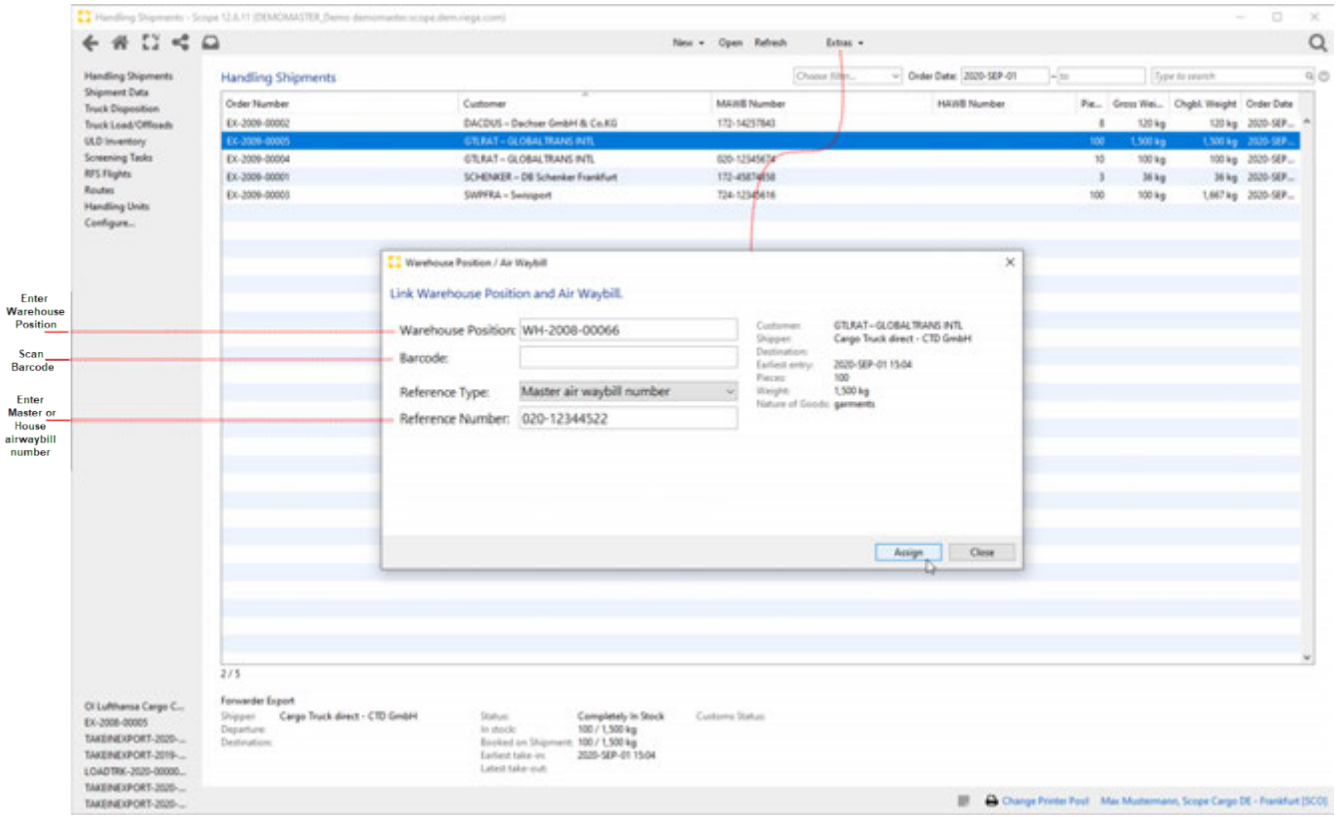
If a handling shipment is received and the Aiwaybill number is not known yet, the shipment number or shipper´s reference can be used instead for a start. The aiwarybill number can later be entered manually or via label Scan by using the program action Extras - *Link Warehouse Position and Airwaybill* in the home view of the handling shipments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Scope automatically can determine from the format whether it is a House Airwaybill Number or a Master Airwaybill Number that has been entered and enters the value in the respective field.

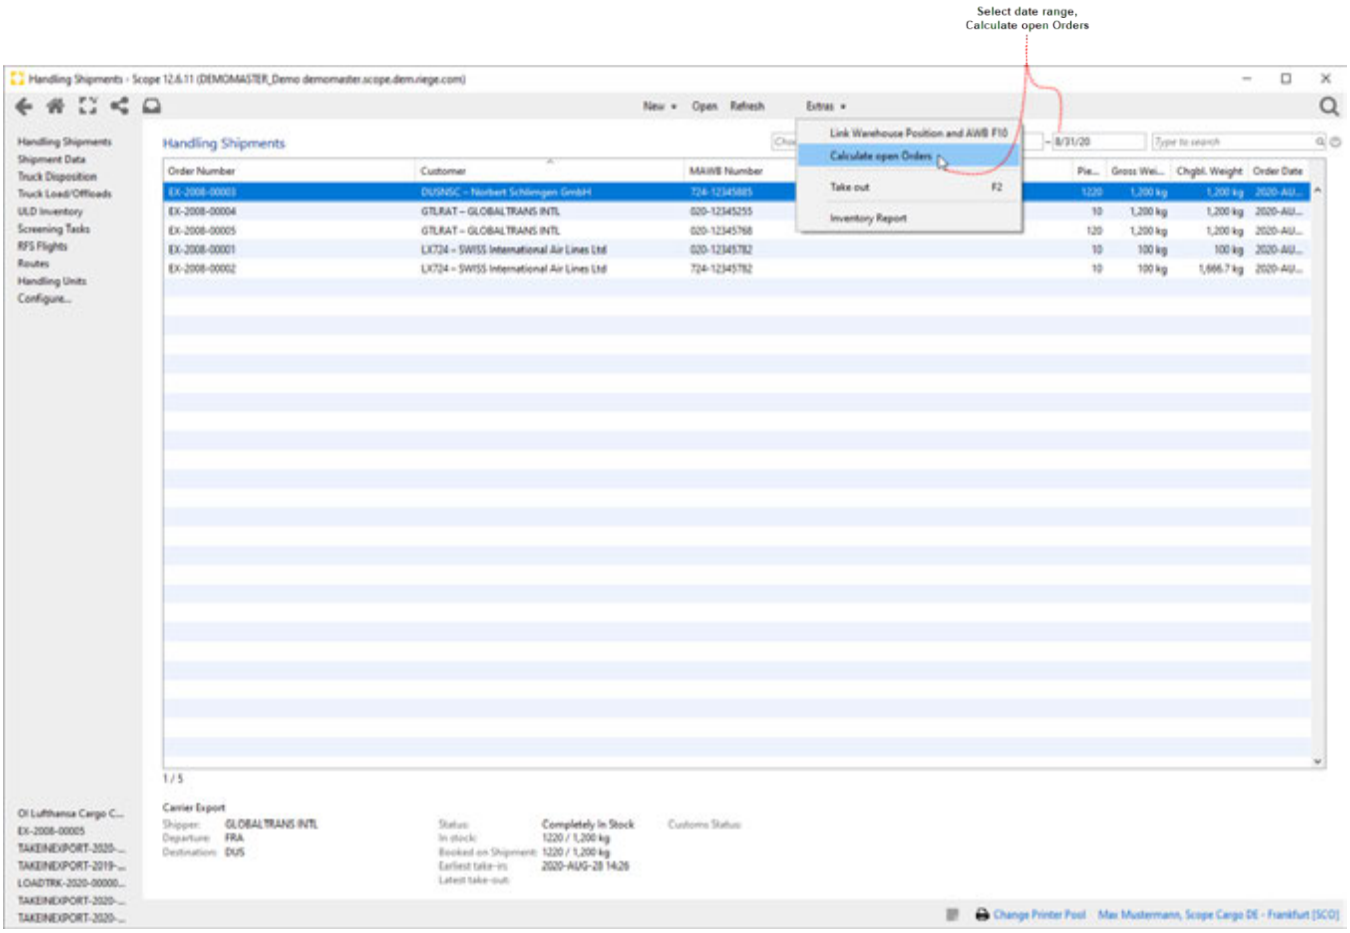
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Calculate Open Orders

At the end of a billing period, it is possible to trigger an automatic billing of all handling shipments from the respective billing period, by using the program action *Extras - Calculate open orders* in the home view of the application Handling Shipments. Before applying the action, select a date range for the billing period,

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



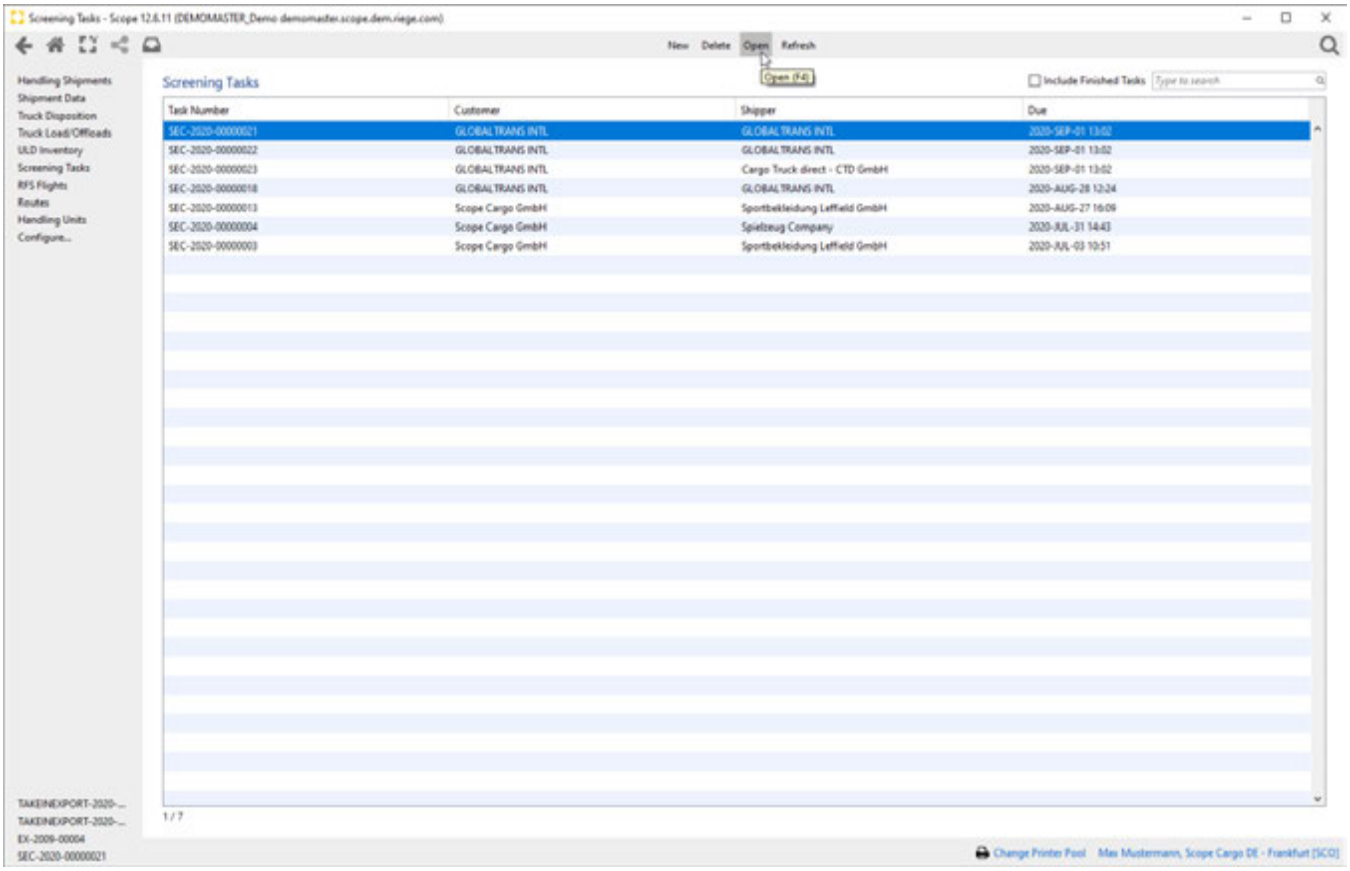
Attention!

After the program action has been applied successfully, the accounting status of the handling shipments change from open to billed. This shall avoid a double automatic billing.

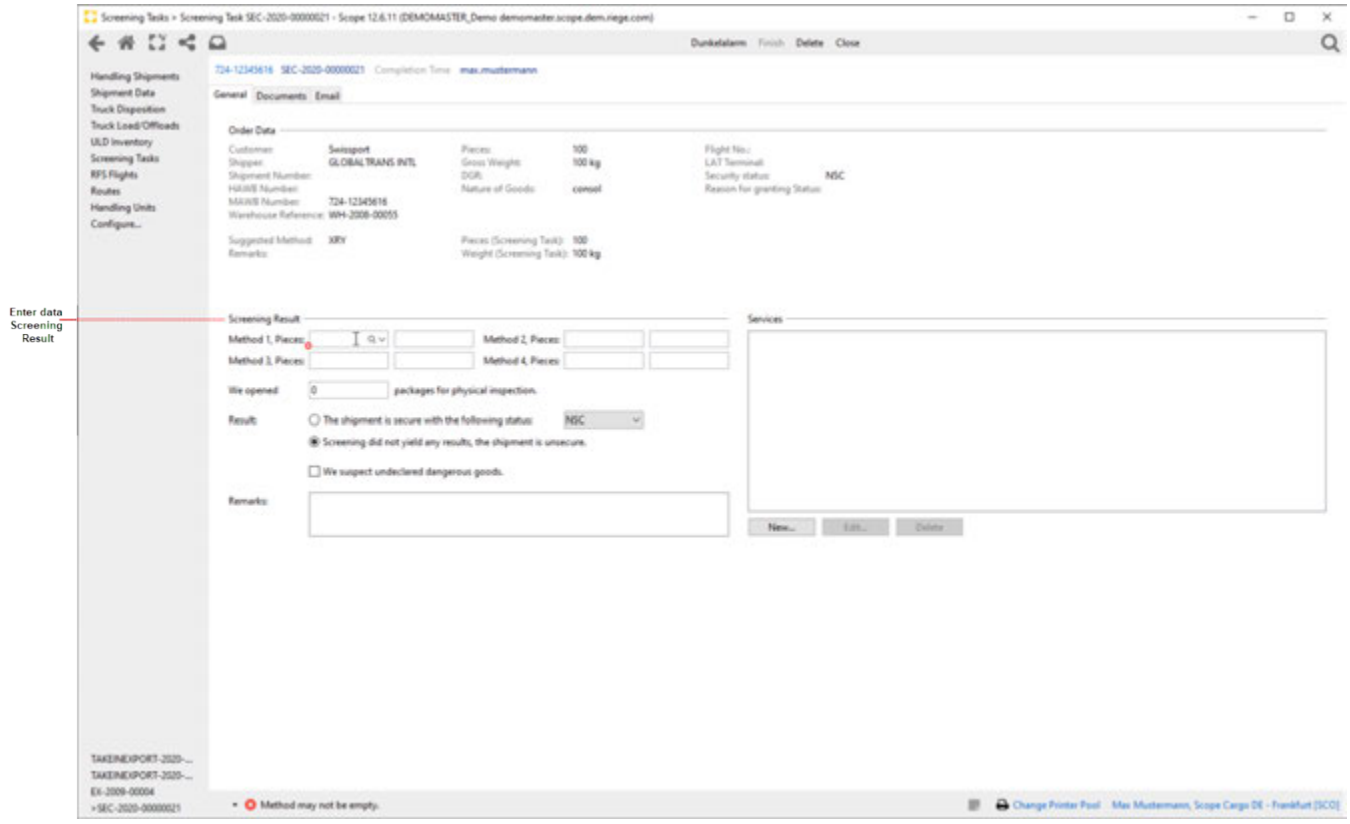
3. Screening Tasks

If a security measure has been issued while processing the Truck Offload or in the handling shipment itself by own staff and by the company's own branch, this screening orders can be found in the home view of the handling S*creening Tasks* application

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

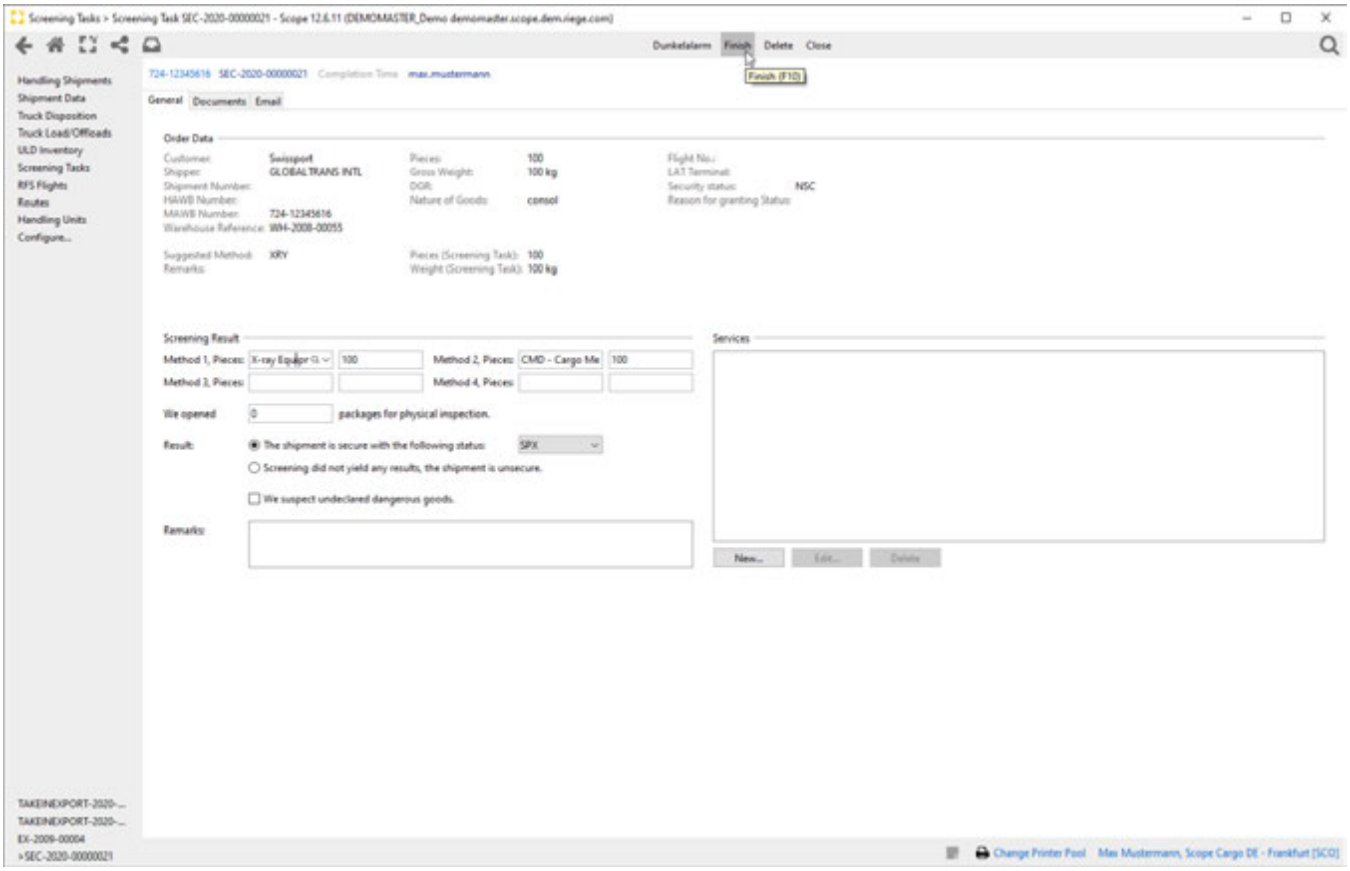


With the program action the screening task can be opened and the data can be edited and completed by the LSKK (german air security control personnel).



After entering data and editing the Screening task it can be completed with the program action *Finish.* After this the IATA CSD is automatically printed and sent to the respective client by email.

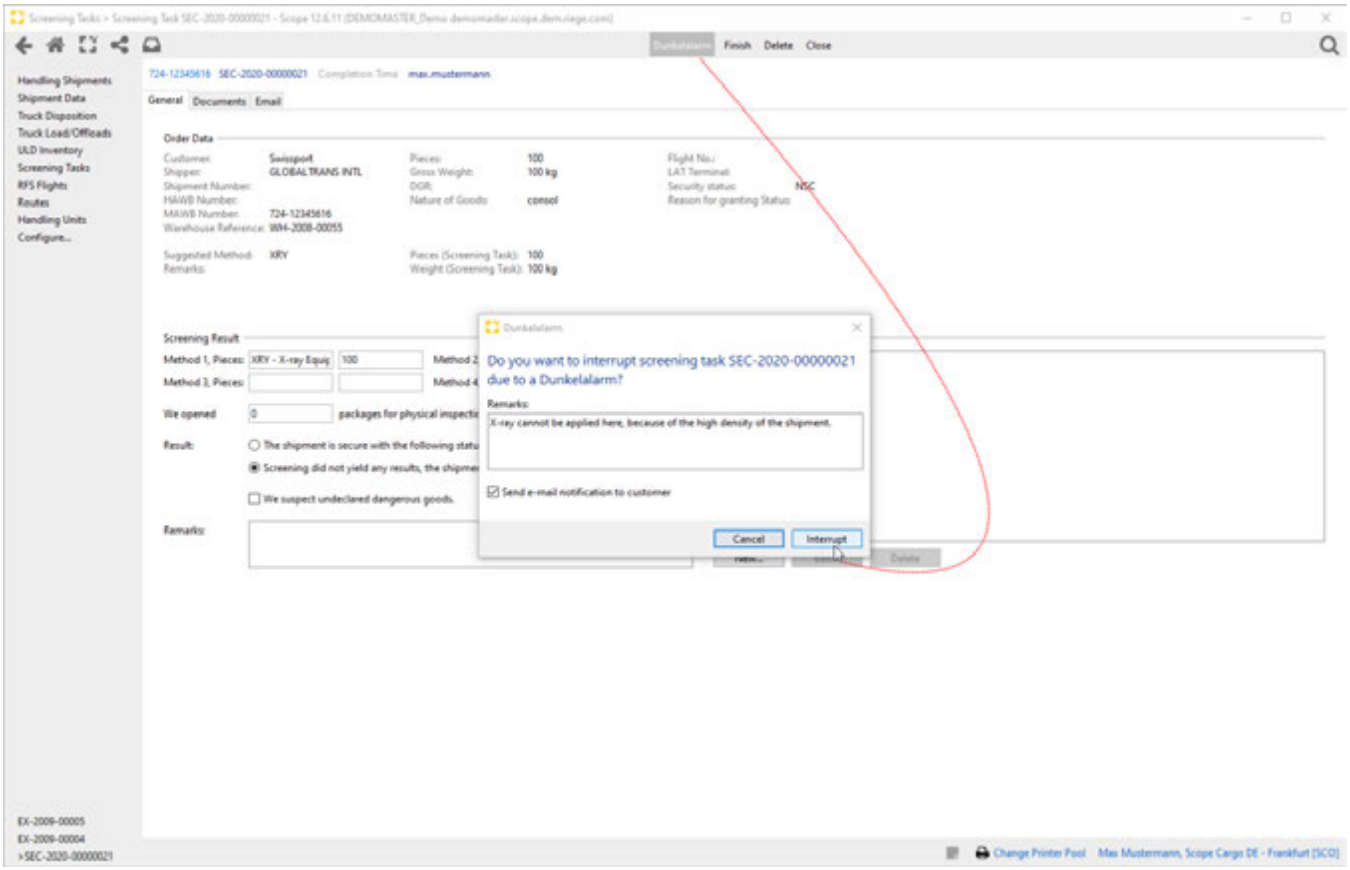
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



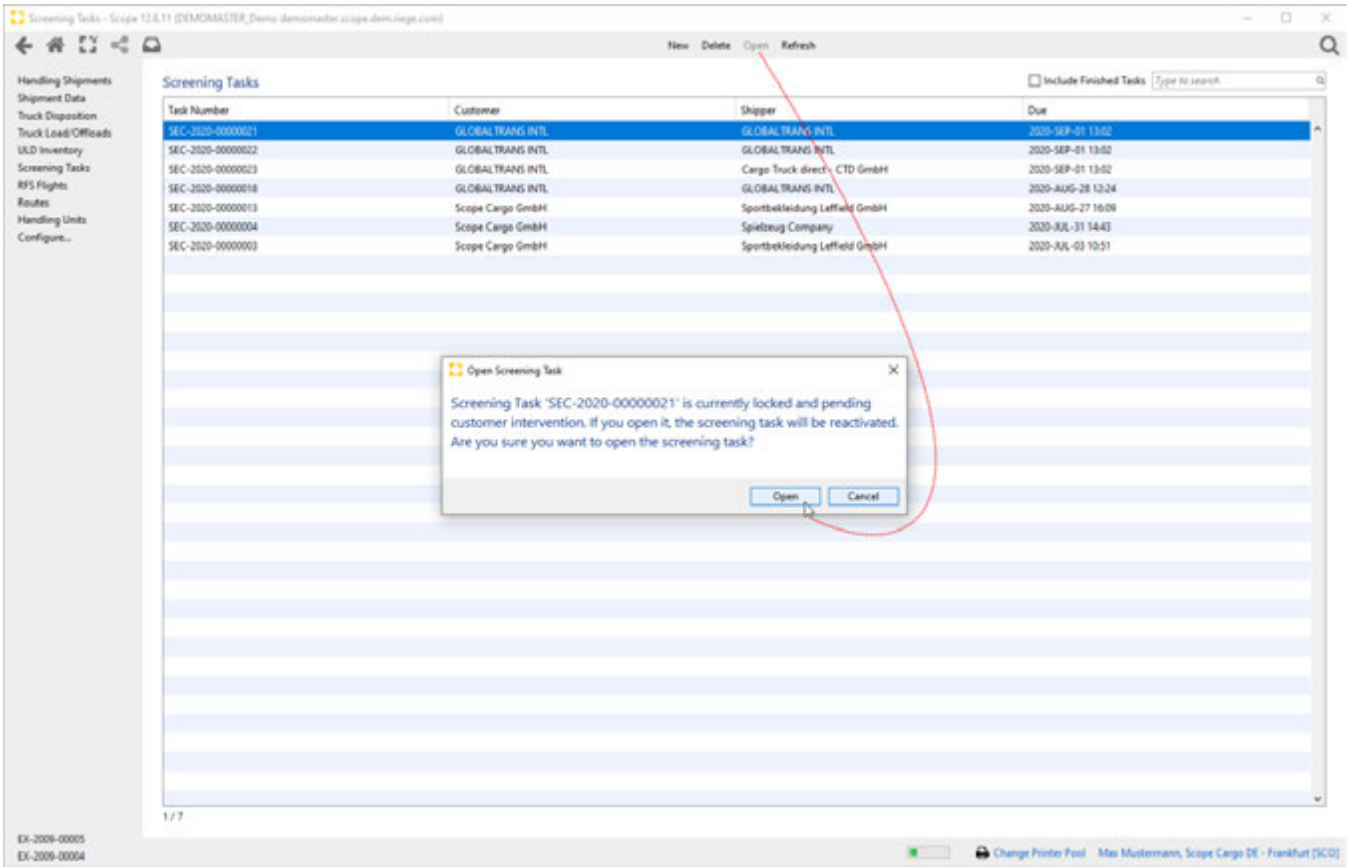
Dunkelalarm - dark alarm (X-ray density alert)

Should a dark alarm be triggered by x-ray equipment during the security measure (due to too high a density of the shipment or similar), this can also be recorded in the respective screening task. With the program action *Dunkelalarm* the editor *Dunkelalarm* can be opened to enter the information in the Remarks text box. If the checkbox *Send e-mail notification to customer* is marked, an e-mail to the customer will be send automatically with the recorded comment.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



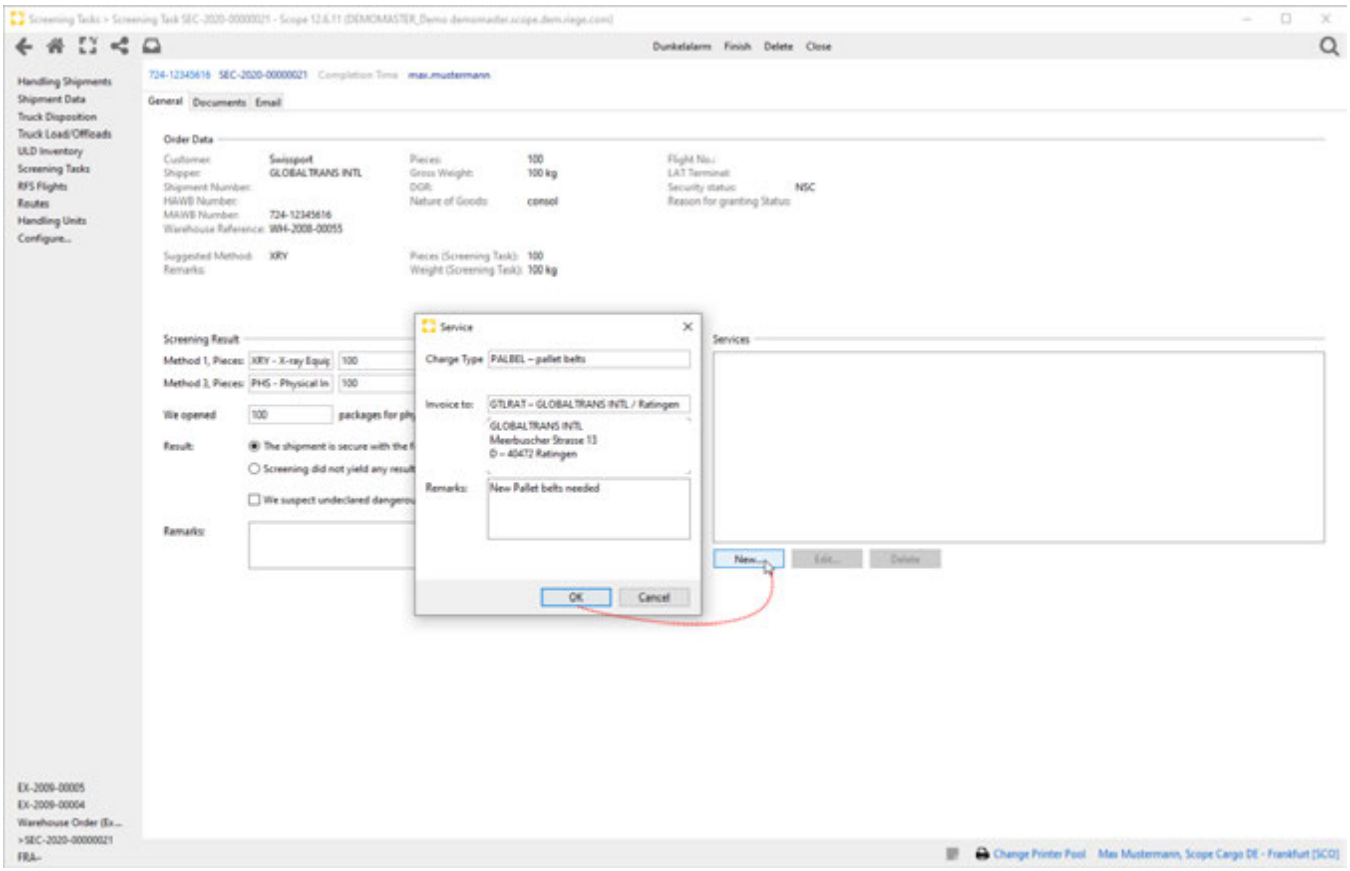
To complete the Screening Task, an air security control personnel (LSKK in Germany) needs to reopen the Screening Task and change the result of the Screening Task to SPX or SHR.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Add Services to Screening Task

If additional services need to be applied during a security measure, or consumables are used, there is the option to enter these costs as services in the screening task. The special services recorded here are automatically included in the handling shipment and be available there for the invoicing.

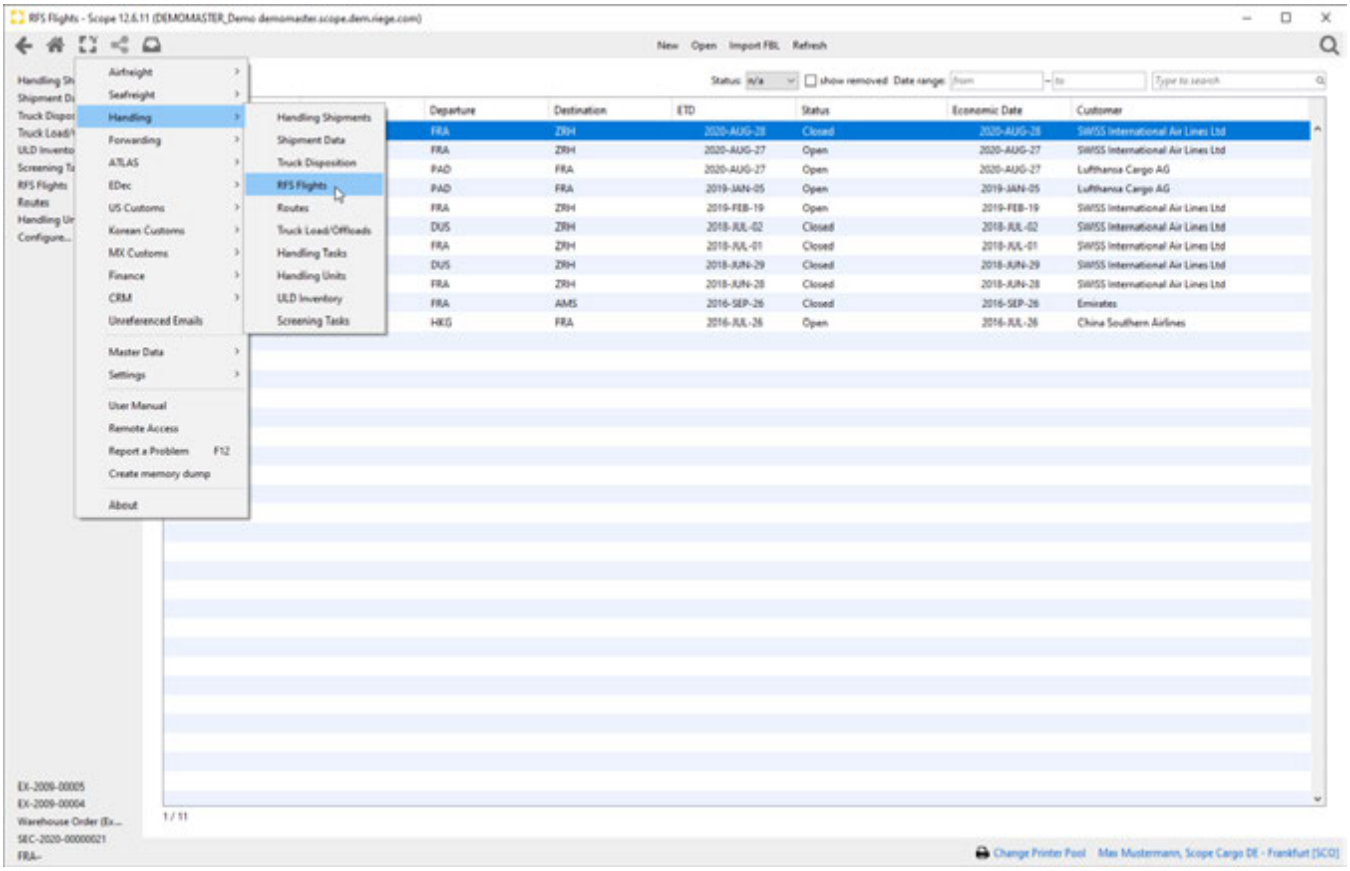


4. RFS Flights

New RFS Flight

In the handling module *RFS Flights* Carrier handling shipments can be added to an existing flight or a new data entry can be done.

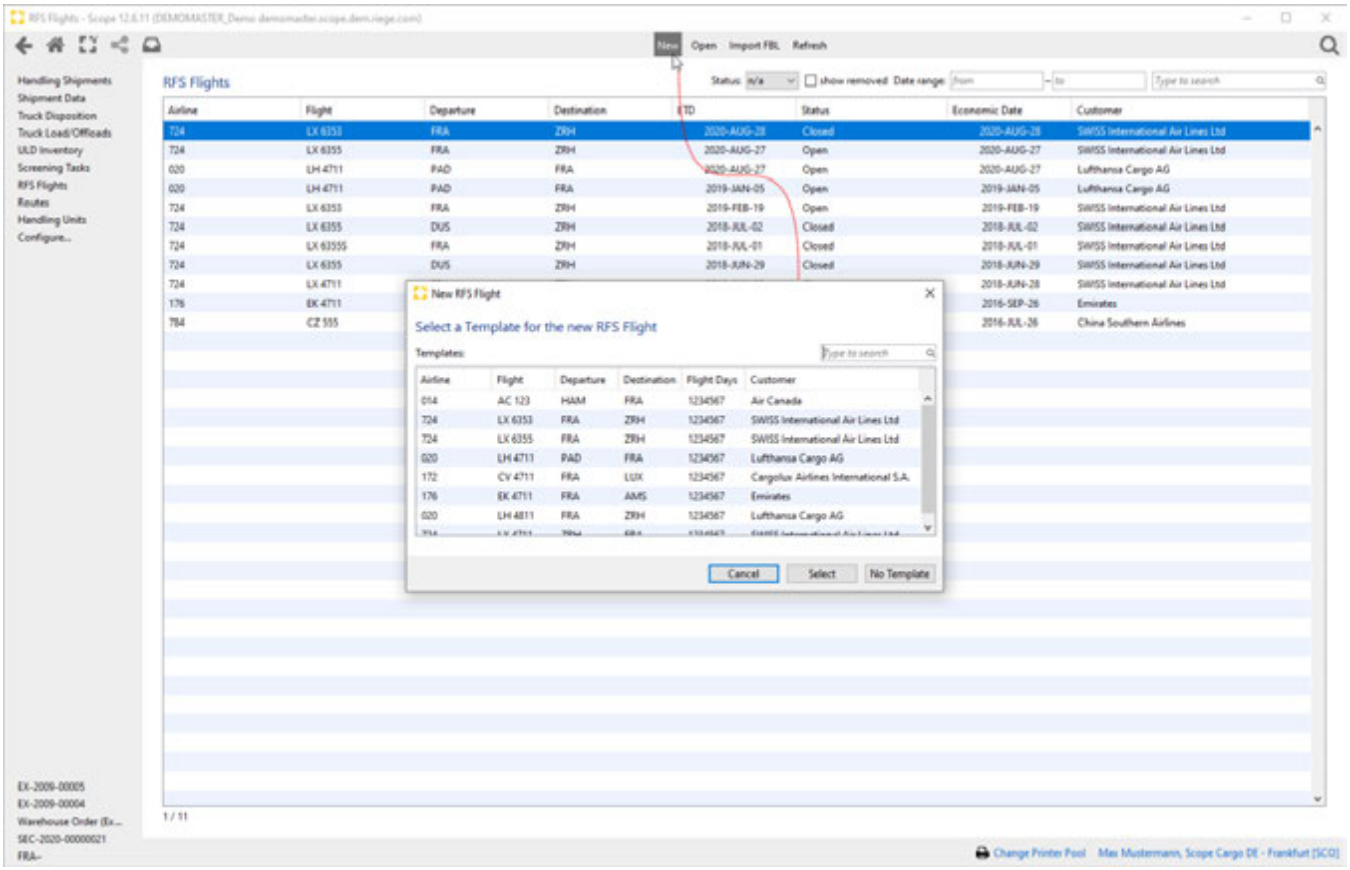
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



A new RFS flight is automatically created with the shipment data it contains, if the respective airline sends FBL messages and the associated updates. If no FBL messages are transmitted by the respective airline, the RFS flight must be created manually. For the manually entered RFS flights there is a template function that can be used.

With the program action *New* a dialog window *New RFS Flight* opens and a template for the new RFS flight can be selected. Flight Details. SITA Messages and SITA addresses are contained in the templates.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Attention!

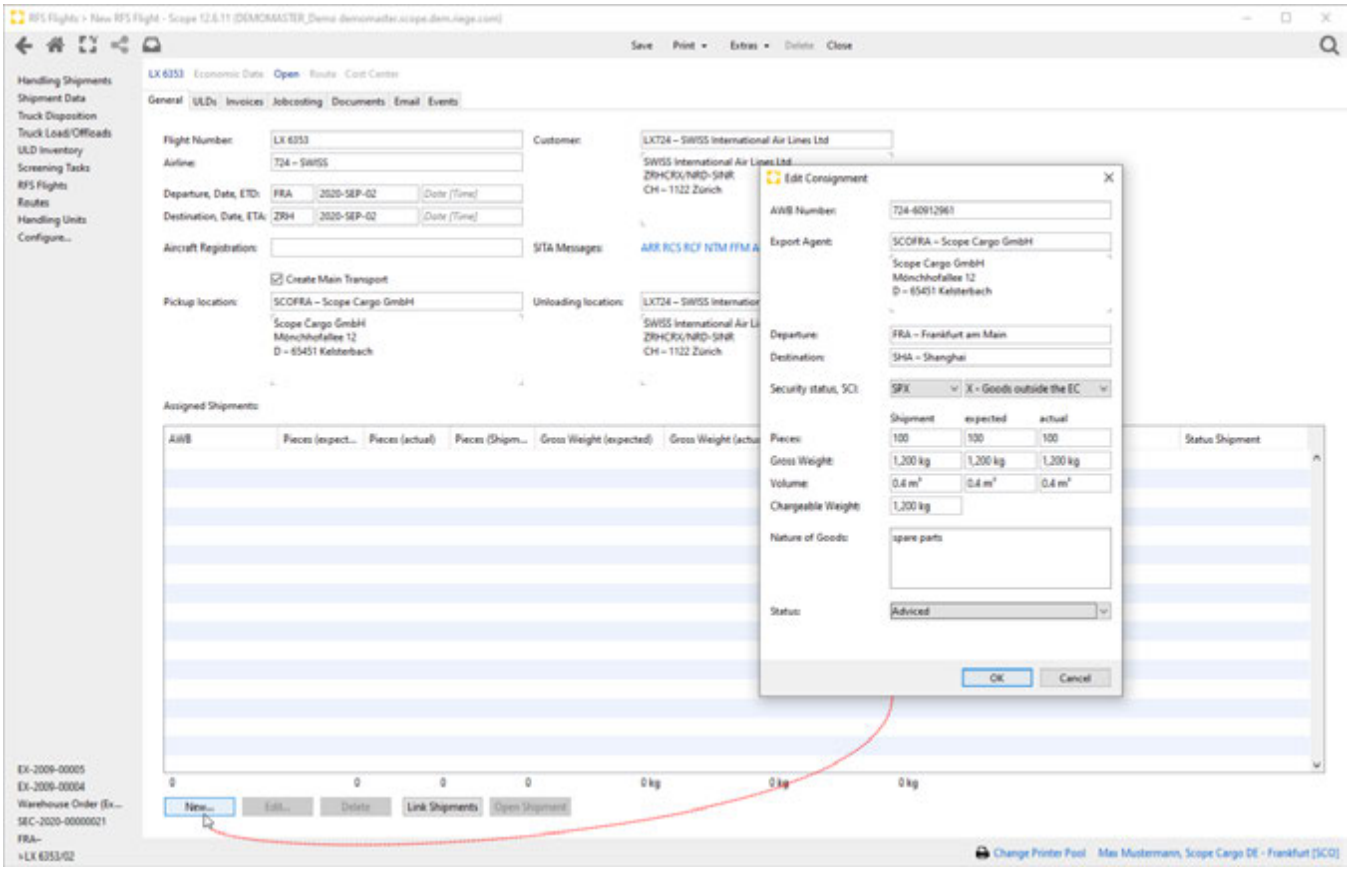
If an RFS flight is created without a valid template (or fallback template), the SITA messages to be sent and the SITA addresses must be entered manually, otherwise no SITA messages can be sent to the airline.

Add shipment to RFS Flight

After the header data of the respective RFS flight has been completed, the data of the associated shipments can be recorded on them. If there are no shipment data have yet been received by a truck offloading or if there is still no flight number assigned, the shipment data must be entered by using the button *New*. All requested data have to be entered here.

- **New...**

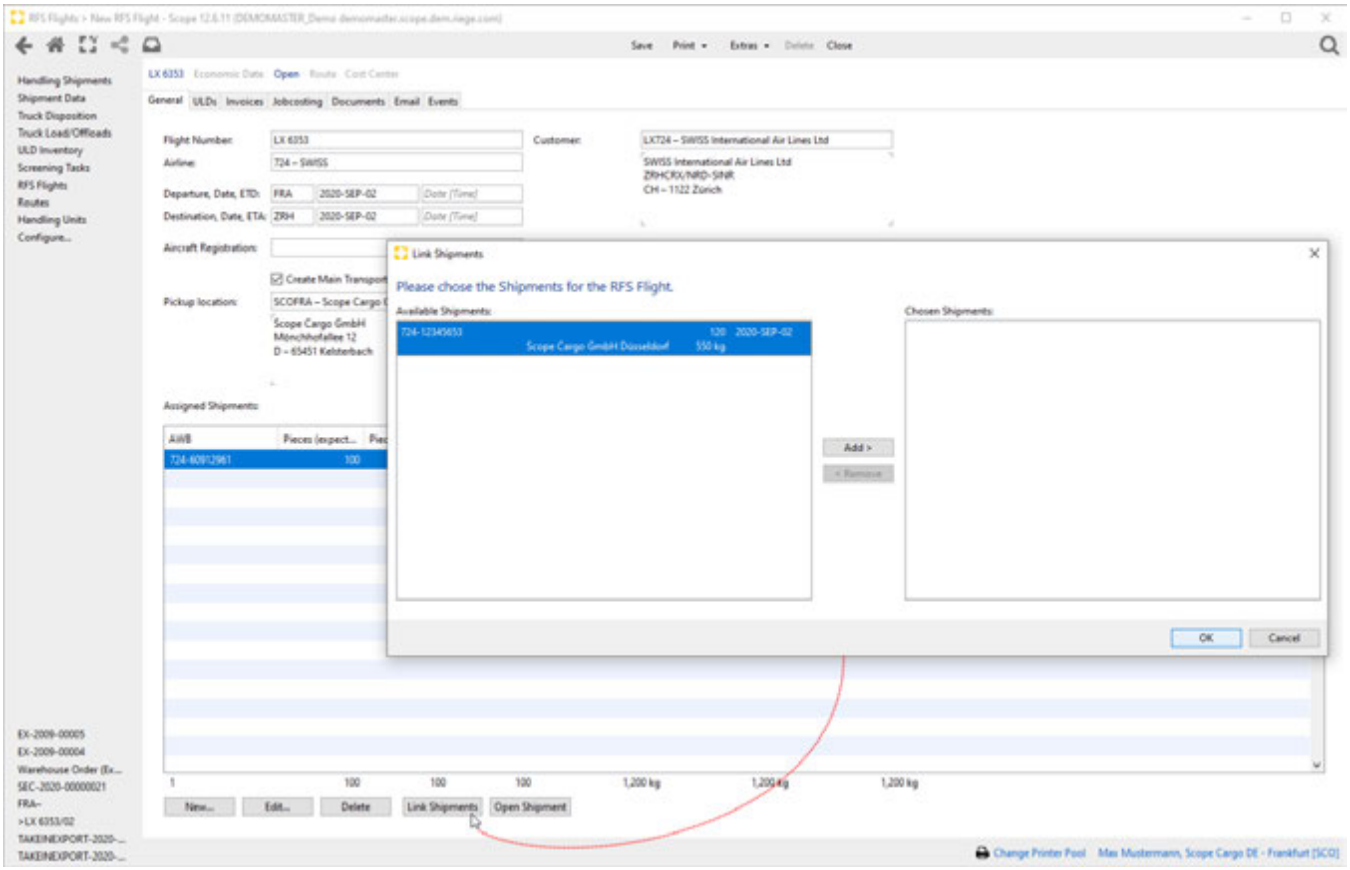
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



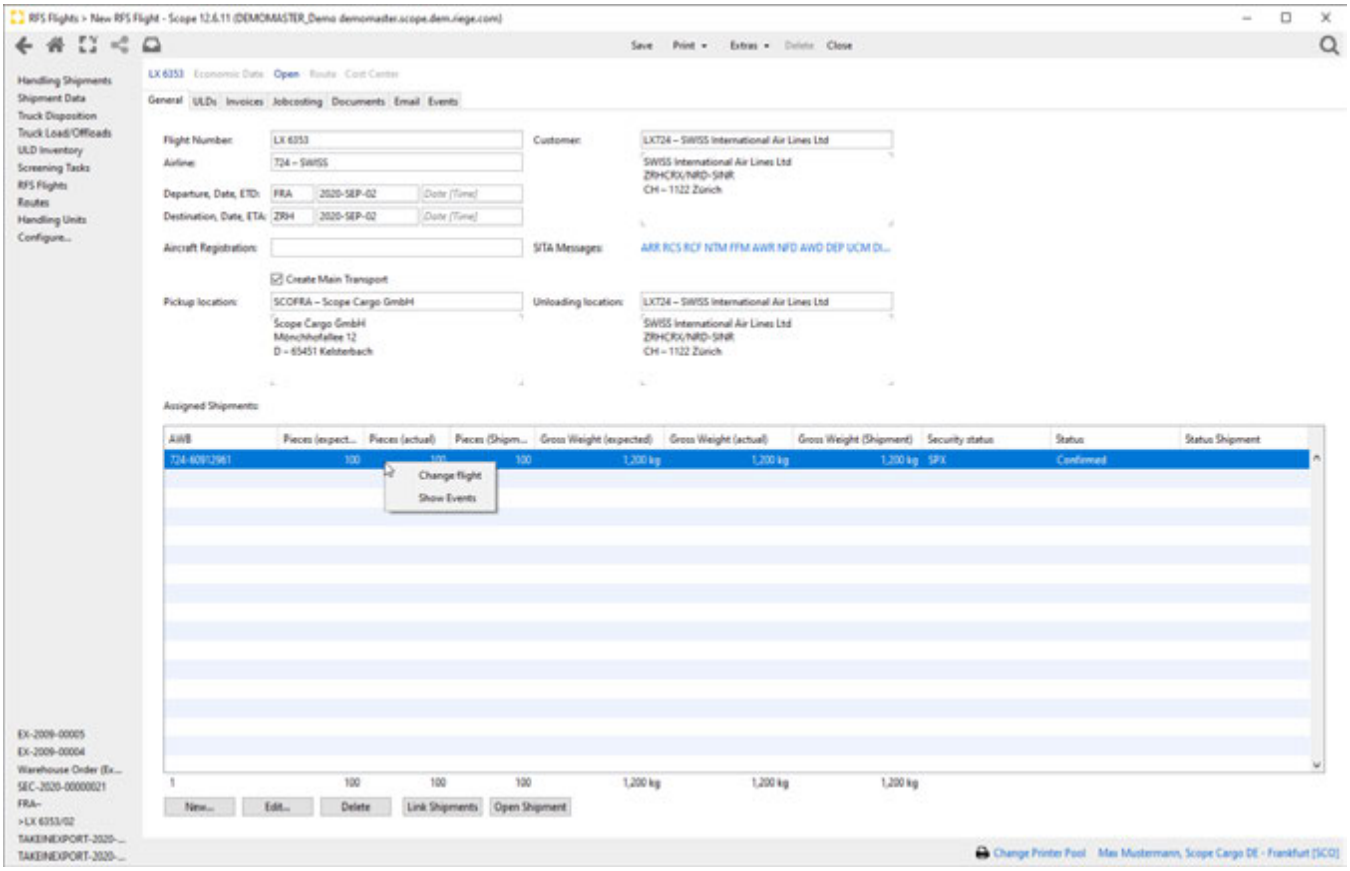
- **Link Shipments...**

If the shipment has already been recorded by a Truck Offloading and been assigned to a Flight Number the shipment can be linked to the RFS Flight by using the button *Link Shipments*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



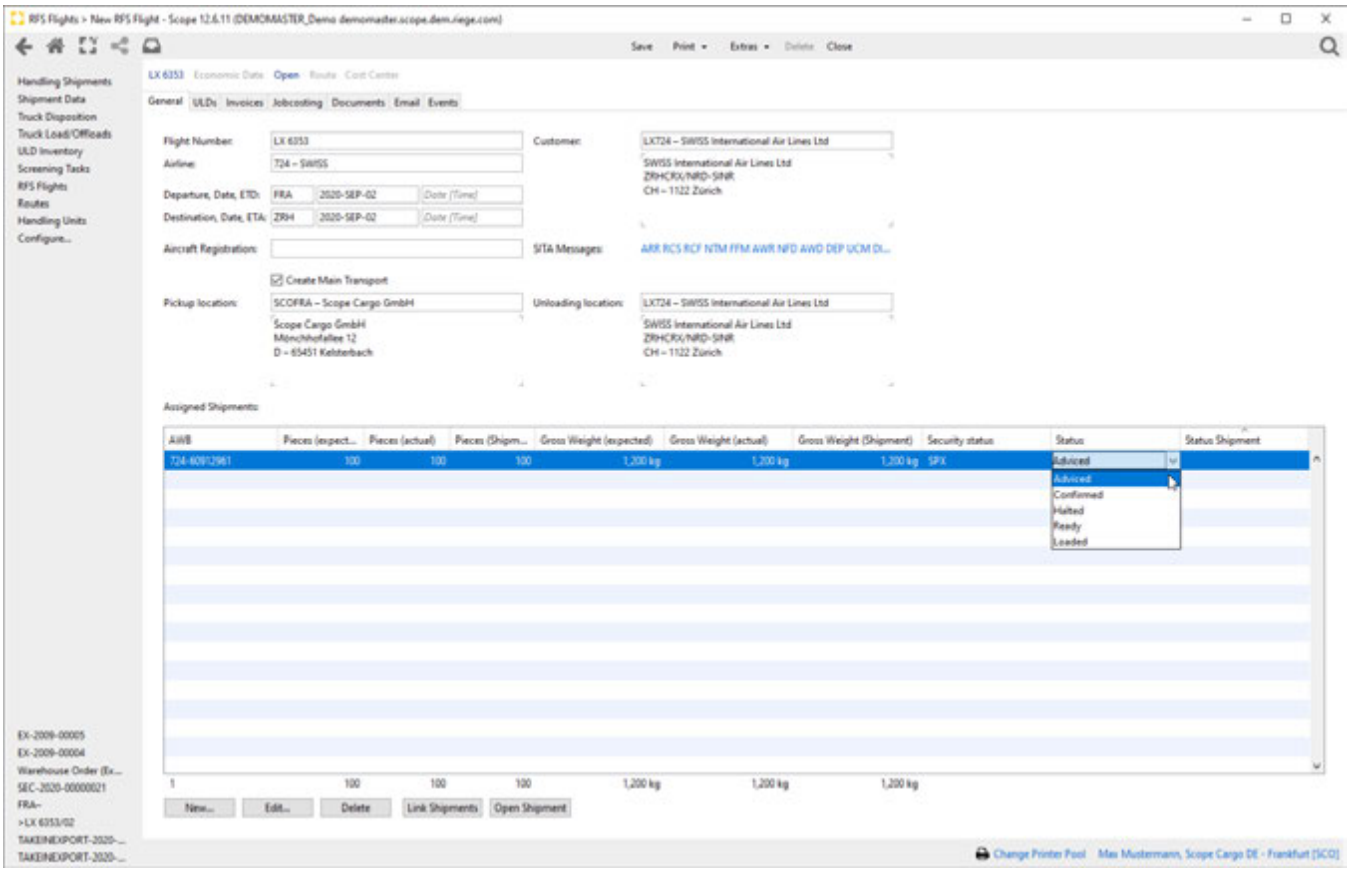
If the shipment was already added to on an RFS flight, but should be rescheduled to another flight, this can be done by using the context menu *Change Flight* (use the right mouse button). This is only possible, if there is an additional, open RFS flight available on the same day.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Status

For each assigned shipment in the RFS flight a status can be assigned to the shipment. This status determines whether the shipment is included in the SITA messages and documentation or not.



- **Advised:**

The shipment has been advised, but has not yet arrived in the warehouse.

- **Confirmed:**

The shipment has already been recorded on the RFS flight and is expected, but no receipt in the warehouse has yet been posted.

- **Halted:**

A loading stop was reported for the shipment

- **Ready:**

The shipment is recorded on the RFS flight and has already arrived at the warehouse

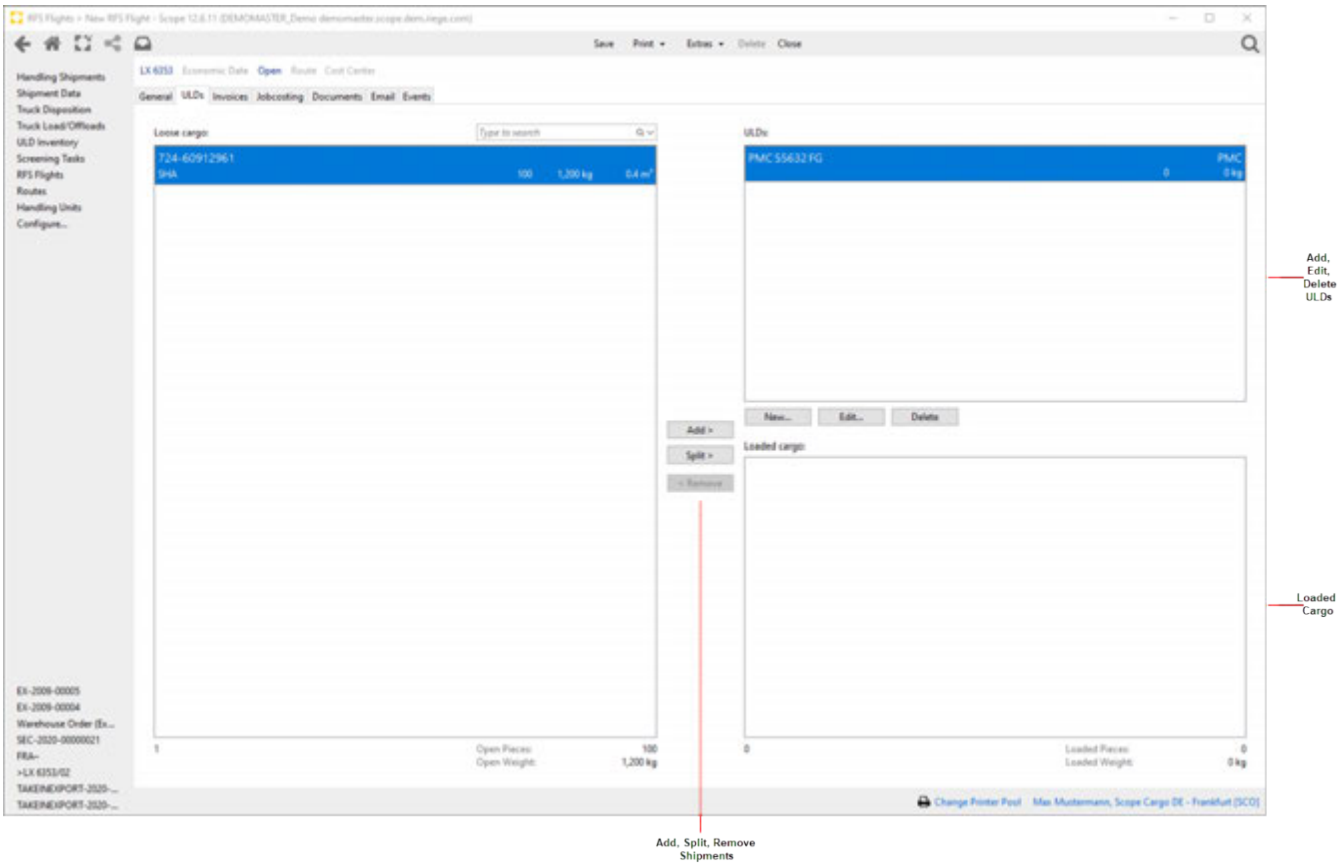
- **Loaded:**

The shipment was loaded on the planned RFS flight.

ULDs

In the *ULDs* tab of the RFS flight, the recorded shipments can be dispatched to air freight containers. The containers used here must be recorded in the ULD (Unit Load Device) inventory in advance so that they are available for disposition. With the *Add* or *Remove* button, shipments can be dispatched to or removed from the respective ULD unit. Shipments can also be divided into different ULD units using the *Split* button. After the disposition has been completed, the documentation or SITA messages can be created.

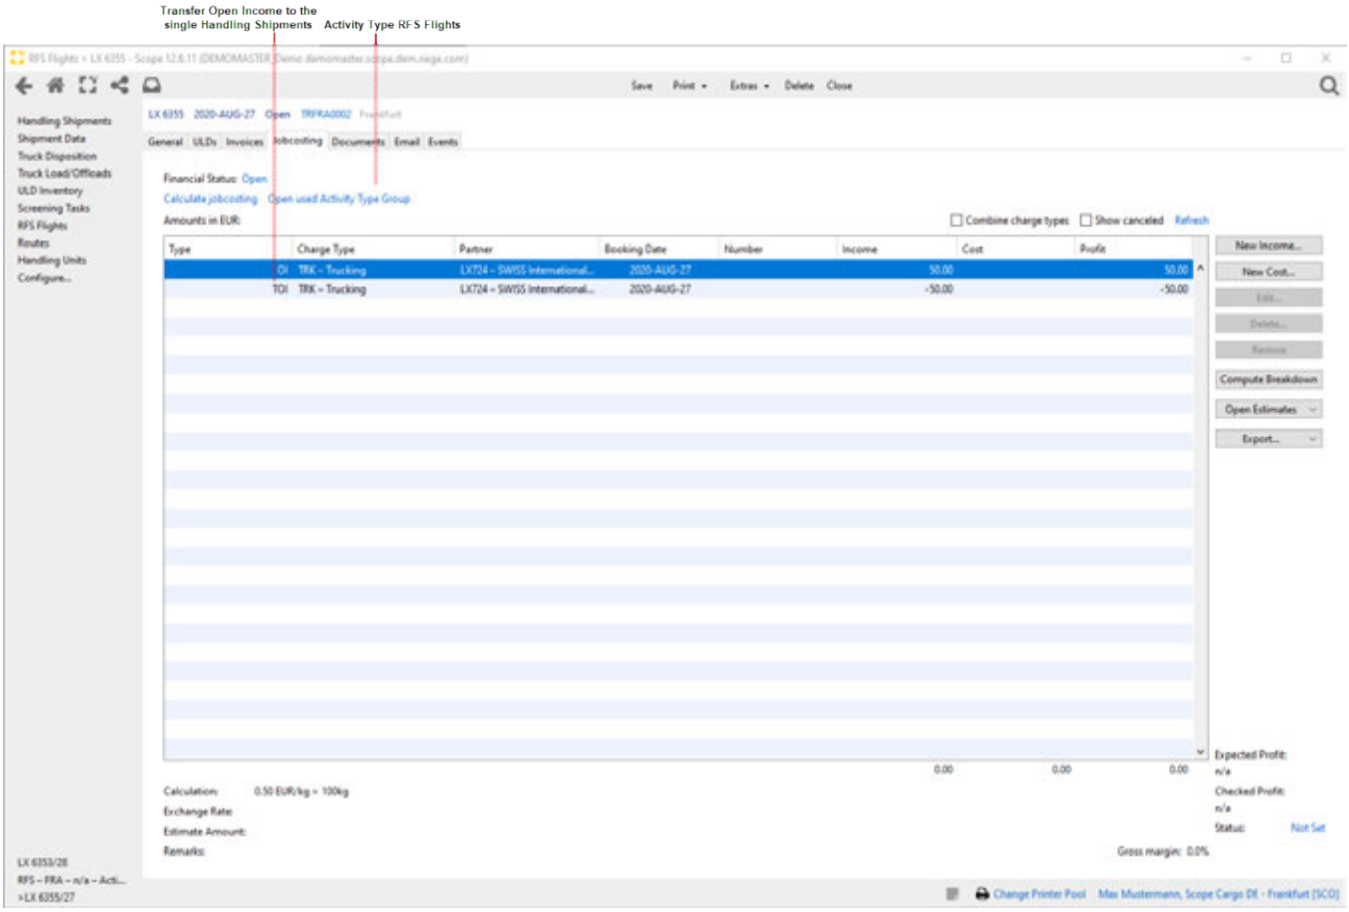
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Invoicing and Breakdown

It is possible to create invoices and do jobcosting control within the RFS Flight application. There is a Tab Invoices and a Tab Jobcosting included in the RFS Flight editor. For the automatic billing a special activity type is available. After outgoing invoices have been created, there is a breakdown of the costs into the individual handling shipment. This is usually done automatically, after the RFS flight das been completed, but the process can also be carried out manually via the button *compute breakdown*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Printing

As soon as the data input of the RFS Flight has been completed, including the status, all important documents to process the flight can be printed by using the program action Print. Currently the following documents are available:

- Loading List

Printout of the Loading List of the RFS Flight

- RFS Cargo Manifest

Official Cargo Manifest to hand over to the Airline. This document will be printed automatically.

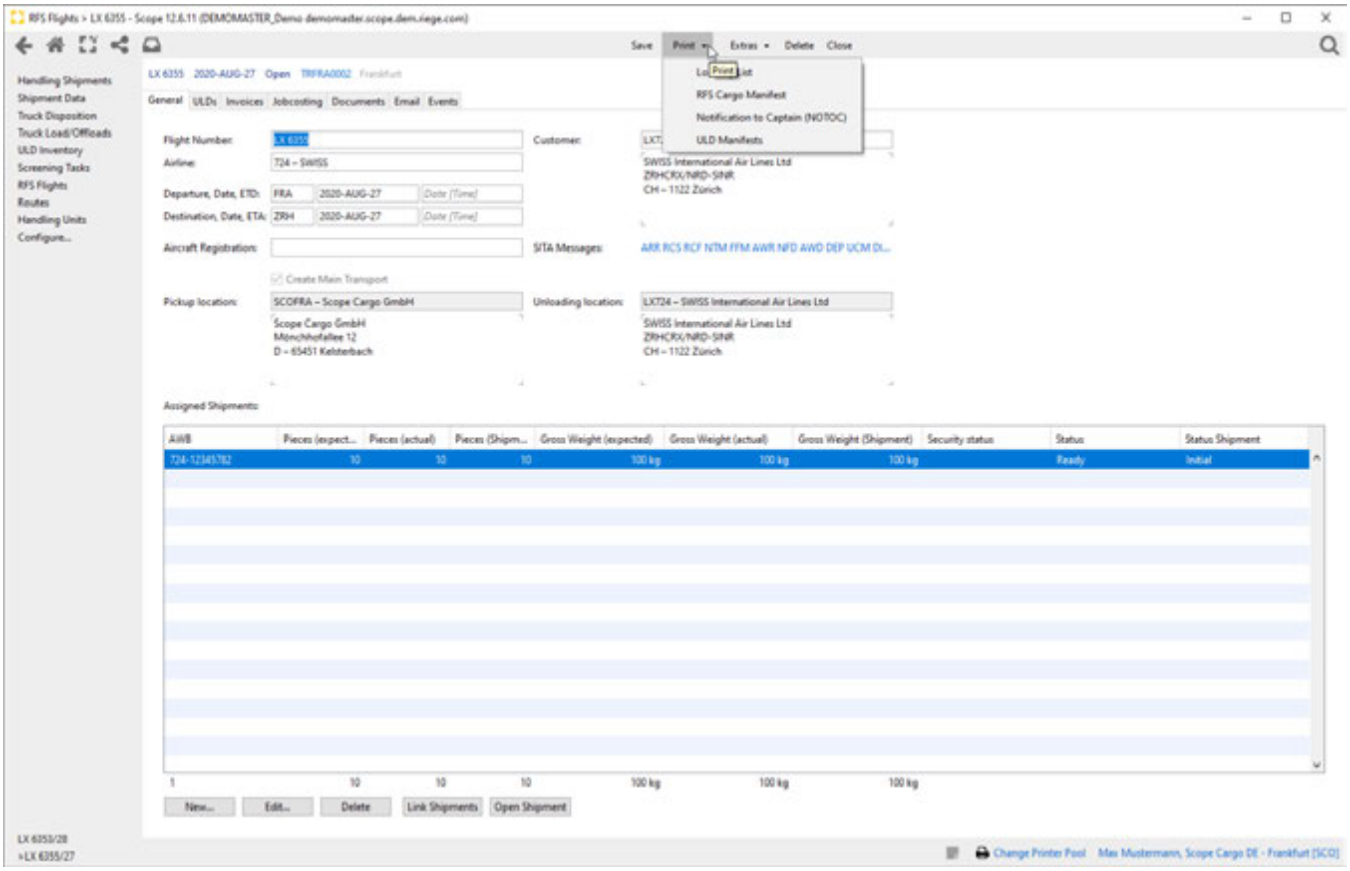
- Notification to Captain (NOTOC)

Official Dangerous Goods Documentation to hand over to the Airline. All DGR information that have been entered in a shipper´s declaration of dangerous goods in a handling shipment will be printed on that document. Information regarding dangerous goods entered on package level, will not be printed on the NOTOC.

- ULD Manifest

A ULD Manifest can be printed and hand over to the warehouse for the packing of the loading units or can be attached to the container

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



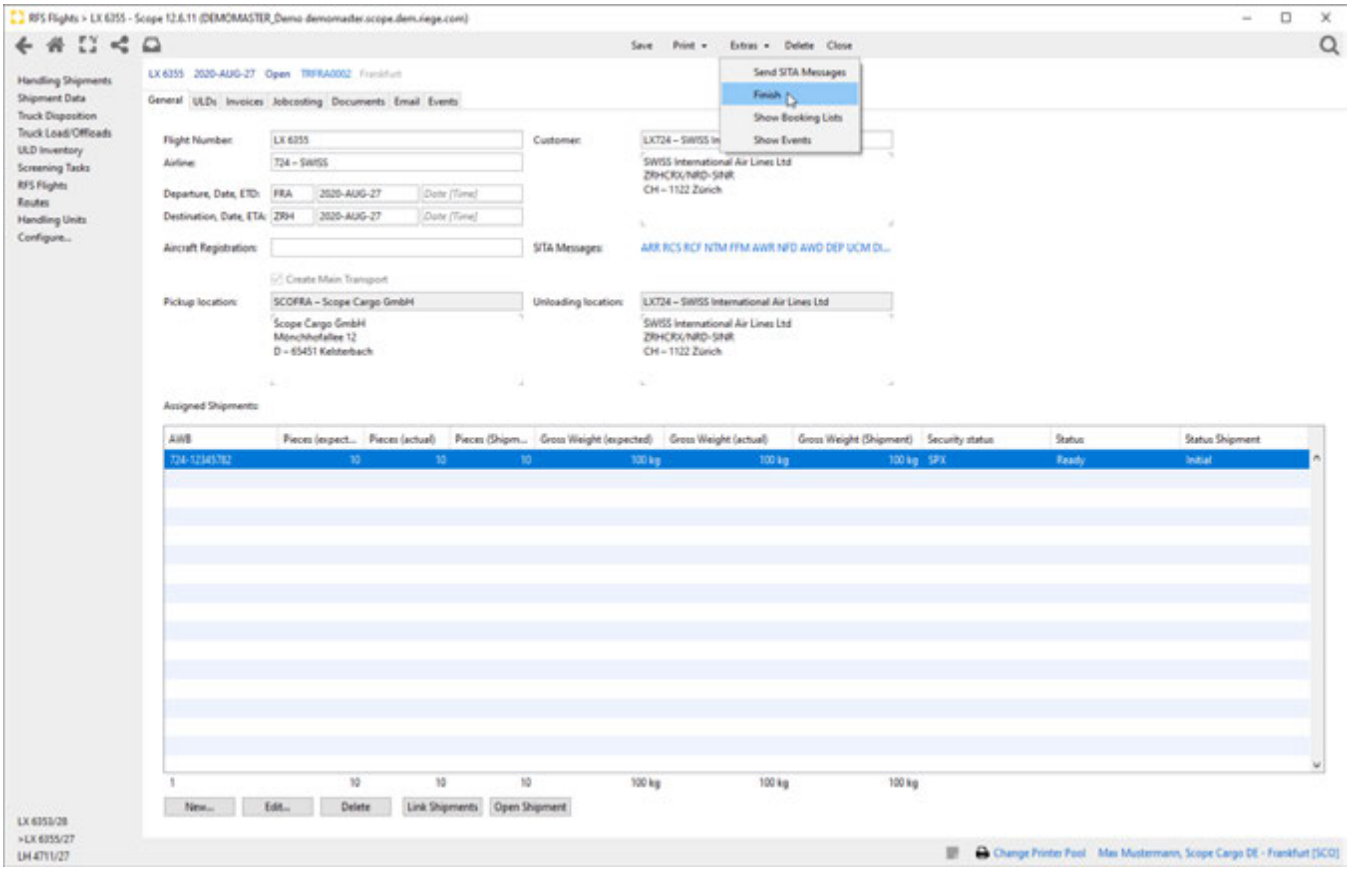
Finish RFS Flight

The RFS Flight can be completed by using the program action *Finish (Extras -Finish)*. This triggers the following actions:

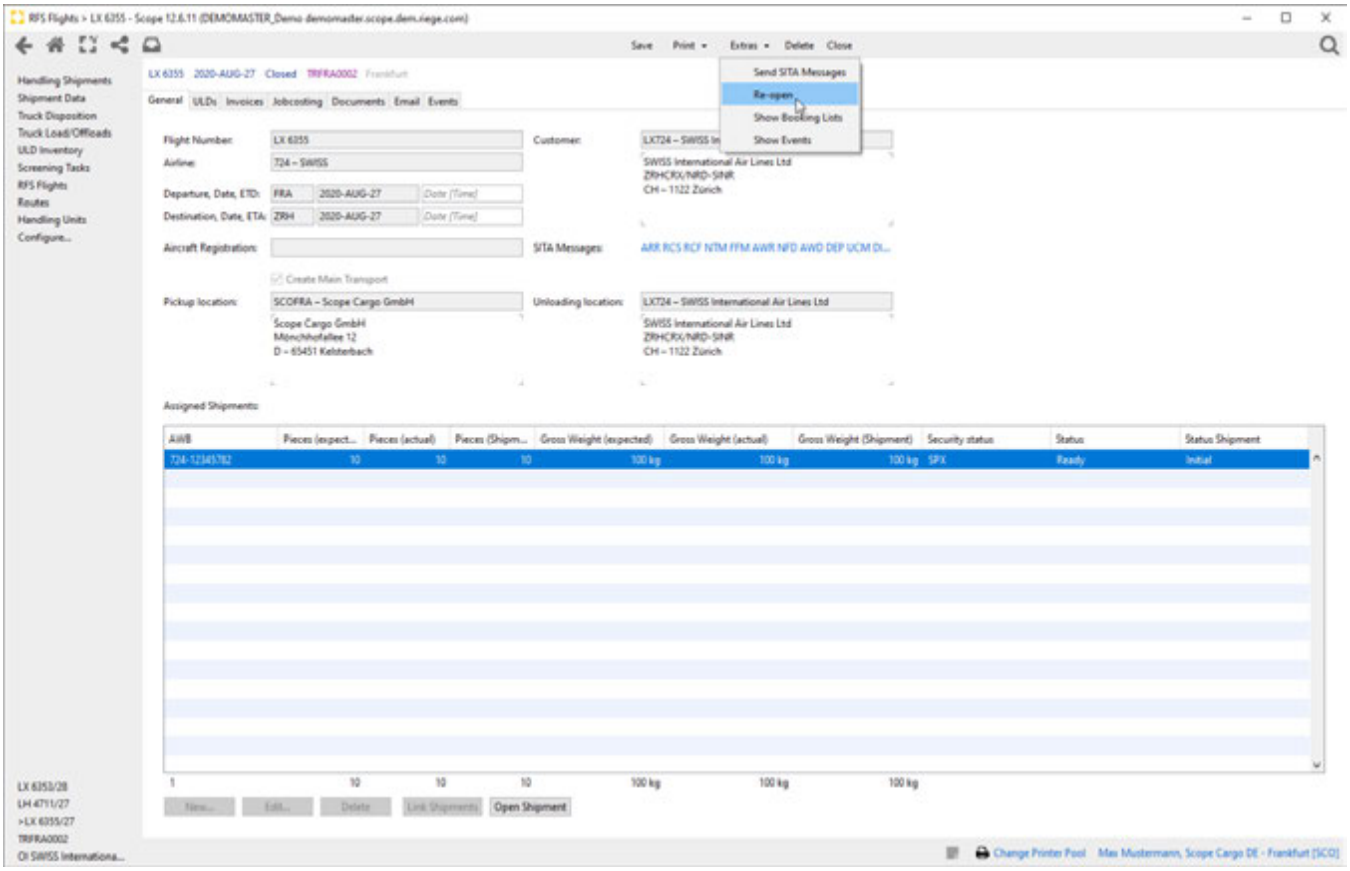
- Transmission of the SITA message
- Automatic billing and transfer to handling shipments
- Printing RFS Cargo Manifest

Furthermore a transport order (main leg) is created., that must be scheduled on a route.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



If changes need to be made to the RFS flight, after the Finish has been carried out, the RFS Flight can be activated again. By using the program action Extras-*Re-open* the RFS Flight can be edited again. Please note that the above mentioned actions, will be triggered again when the completing the flight again after changes haven been made.



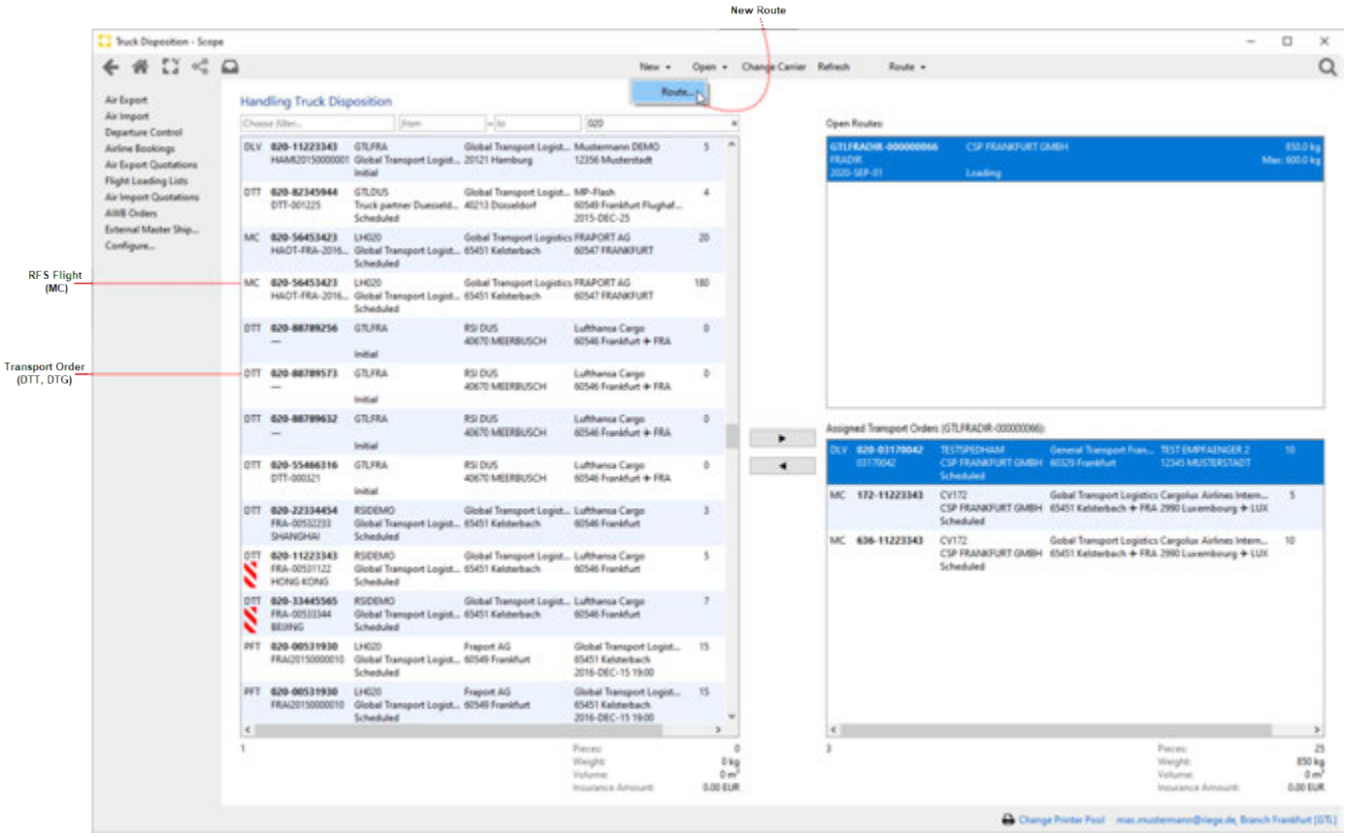
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

5. Truck Disposition

New Route

All recorded transport orders, including the completed RFS flights, are displayed in the truck disposition. These can be scheduled on a tour. A new route is created using the program action *New* in the handling truck disposition. To create a route, at least one tour template in the Handling - master data must be maintained in advance. Addresses of involved business partners, or addresses of haulage companies for tour start and stops can be preassigned via the tour template.

Routes with Status *Created,* have no transport orders been added yet. Routes with Status *Loading* transport orders have already been scheduled. Closed routes will not be displayed here in the Truck Disposition.

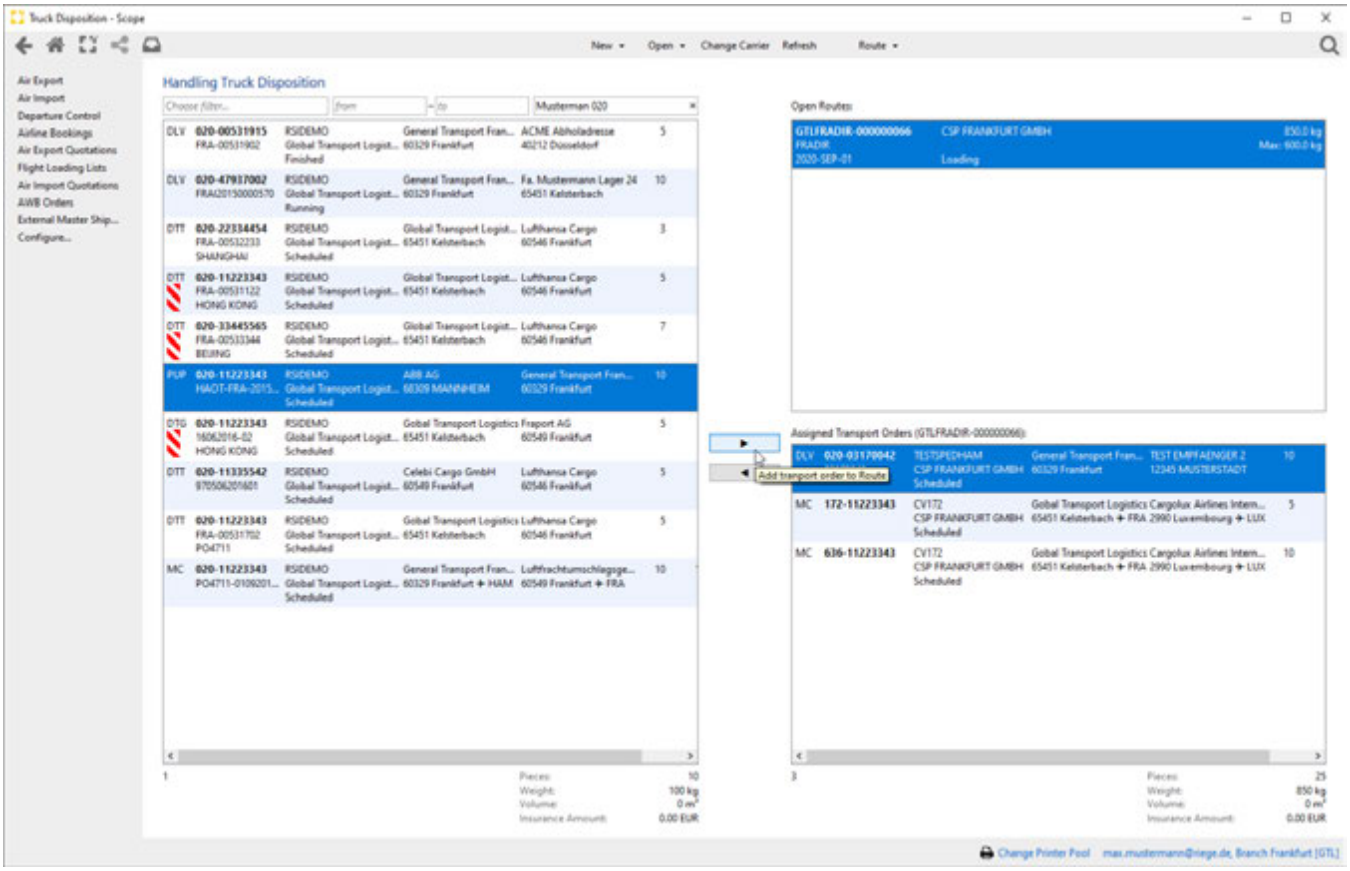


Scheduling Transport Orders and RFS Flights

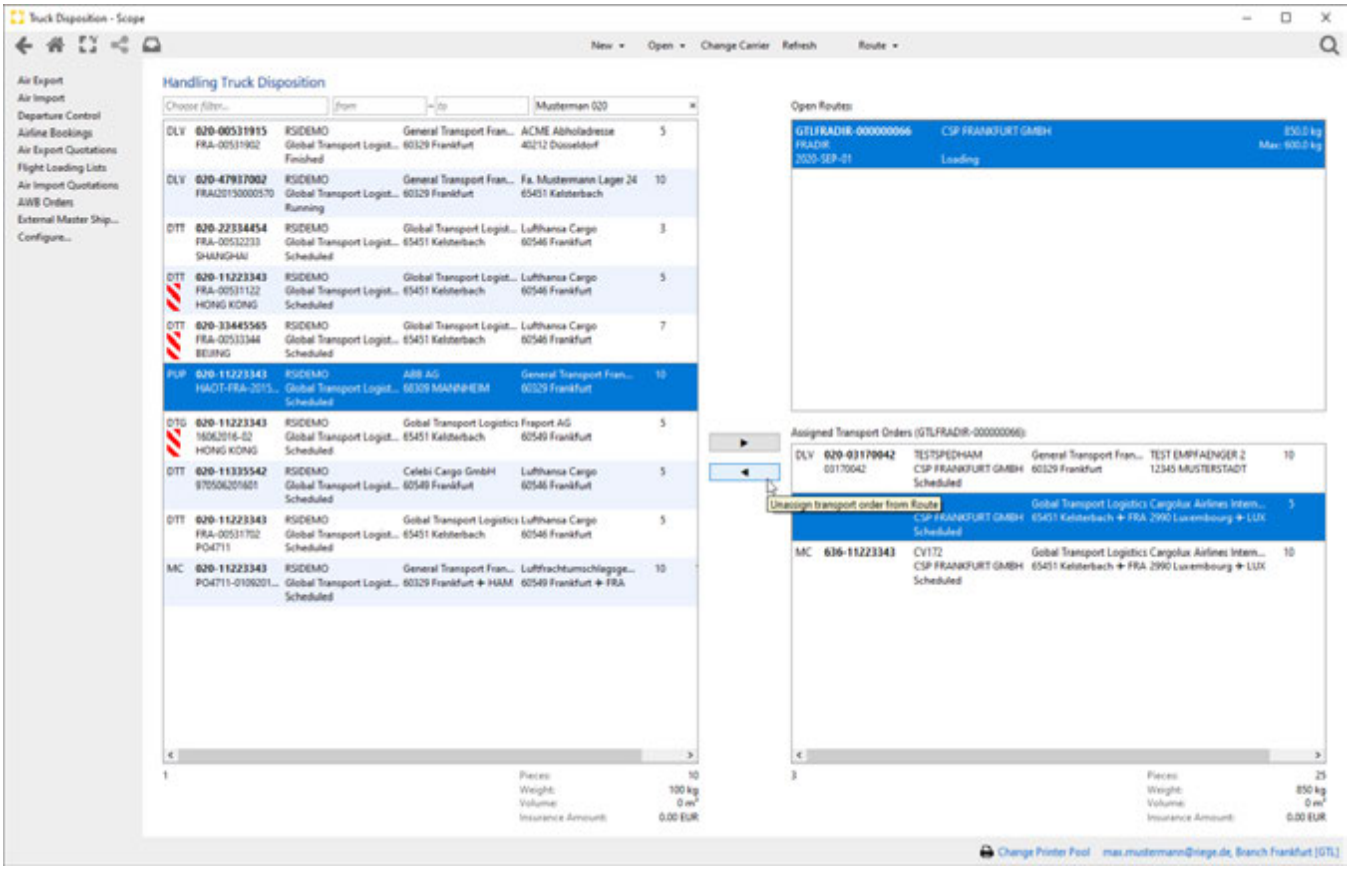
After a new route has been created, the respective transport orders can be added or removed by using the buttons *Add transport order to Route* or *Unassig n transport order from Route*. By using the filter option and search field, transport orders can be searched by order date, order type or shipment reference. If the mouse cursor is held for a few seconds on the respective transport order, the exact shipment details are displayed in a pop-up window. With a double click on the respective tour, it will be opened automatically.

- *Add transport order to Route*

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

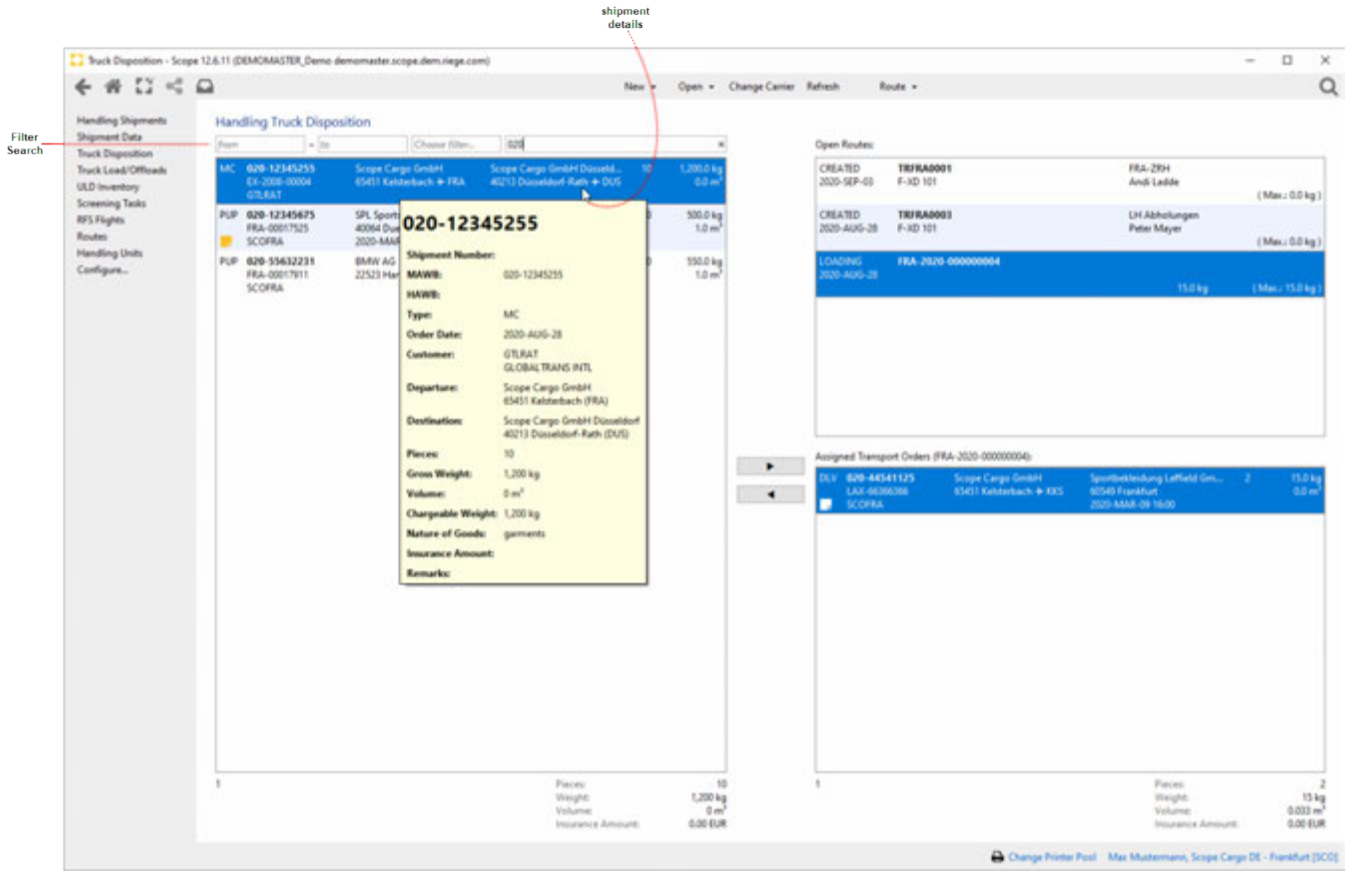


- *Unassign transport order from Route*



- Filter, Shipment Details

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

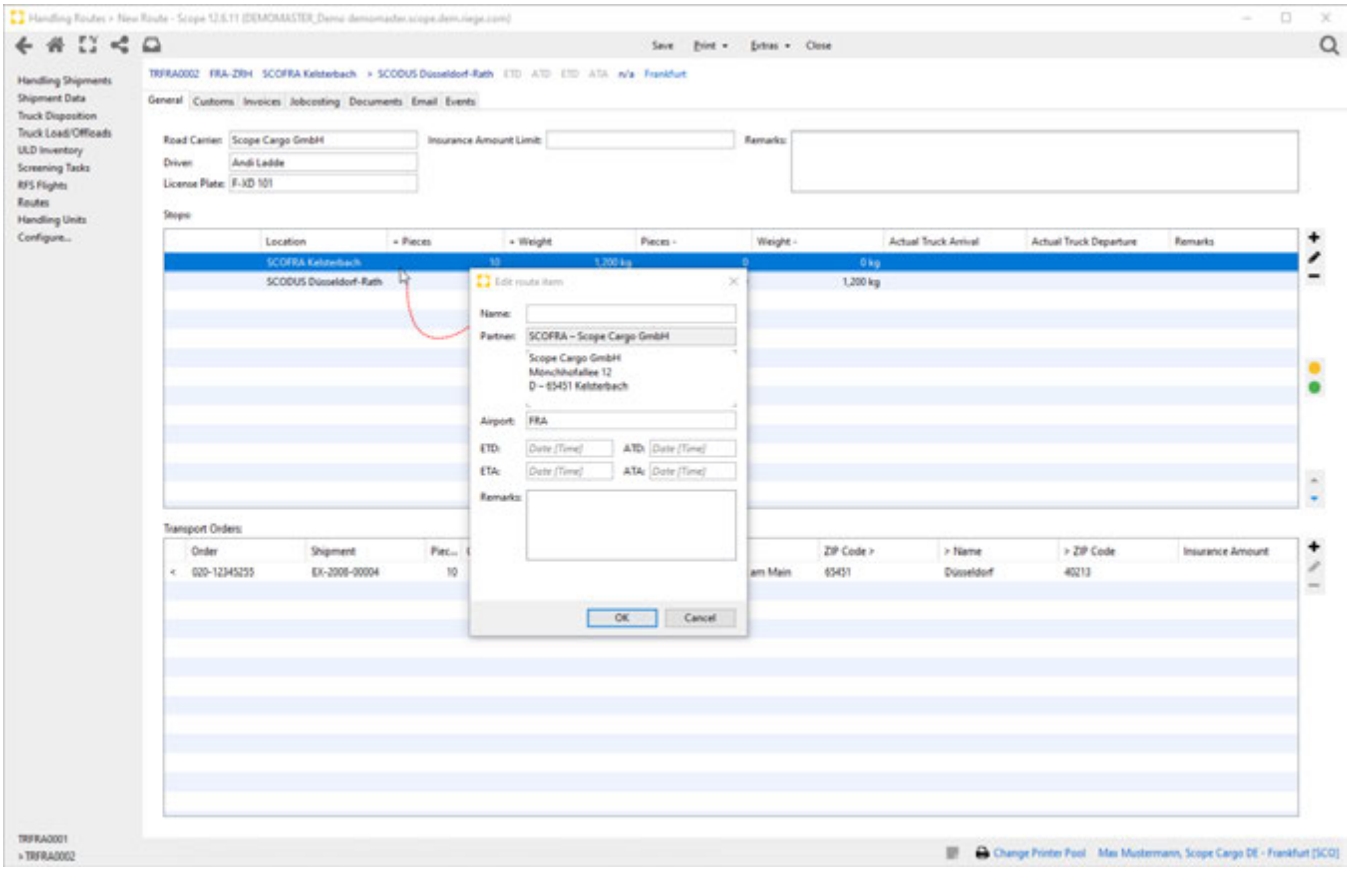


6. Routes

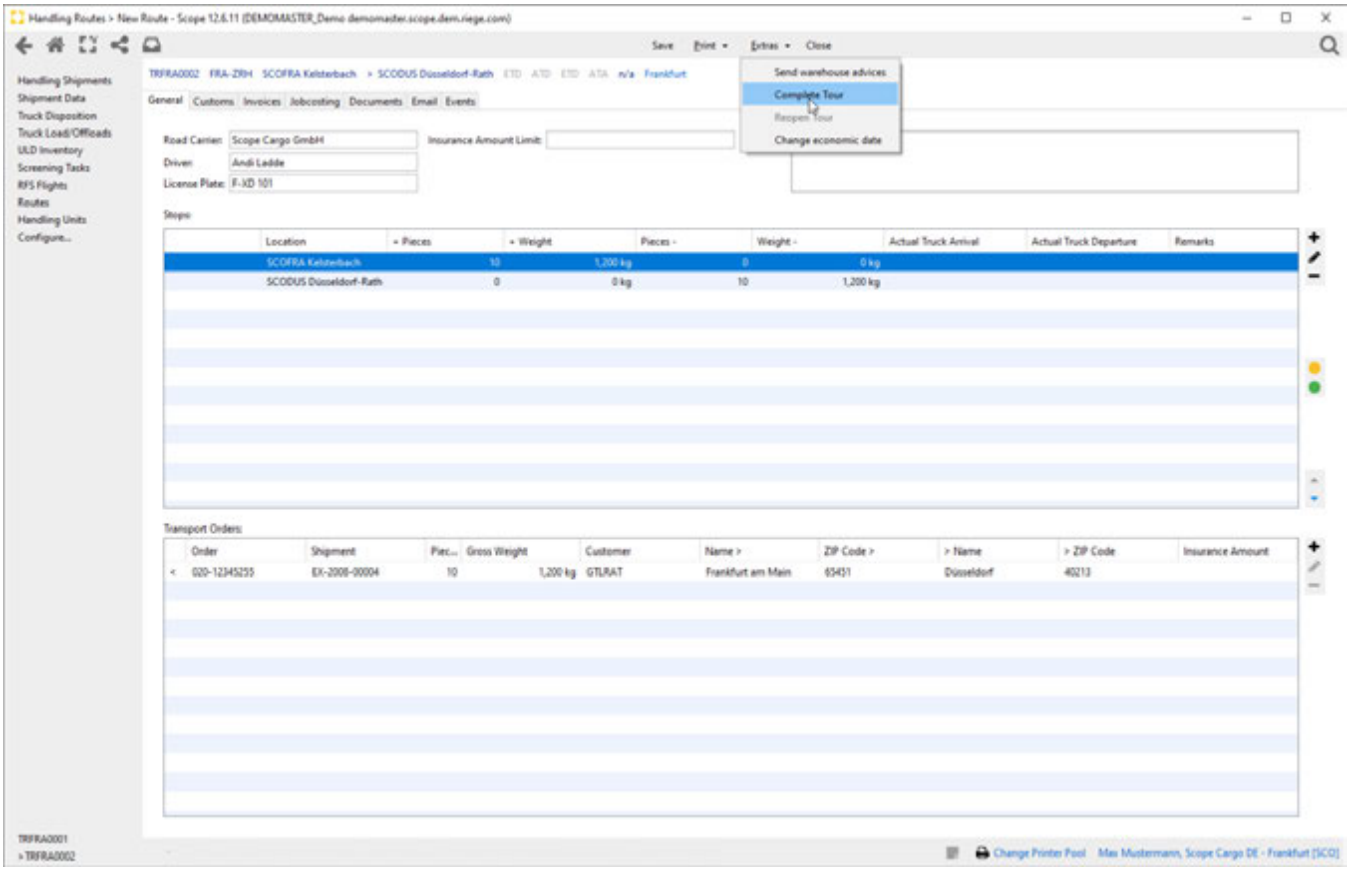
Route Stops

The transport orders scheduled on a route are automatically sorted according to route stops or unloading points within the tour. The single route stop items can be edited manually by double-clicking on the respective route stop item. As soon as the time stamps ATD and ATA are entered the tour stop is completed.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

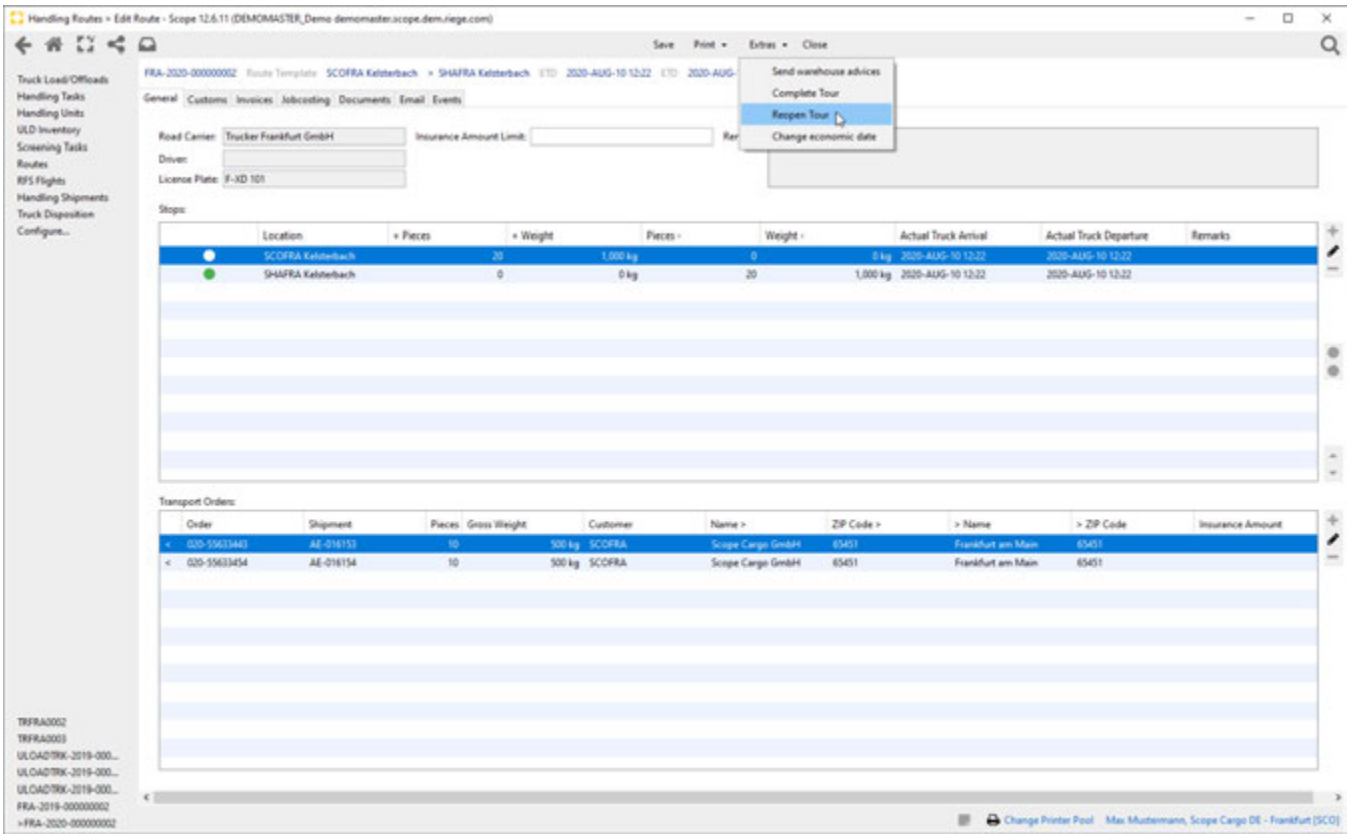


With the program action Extras - Complete Tour the current time is automatically recorded in the fields ATD and ATA. These time stamps are also synchronized in the transport order of the handling shipment.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

A subsequent change of the time is only possible via the program action *Extras - Reopen Tour* in the tour editor.

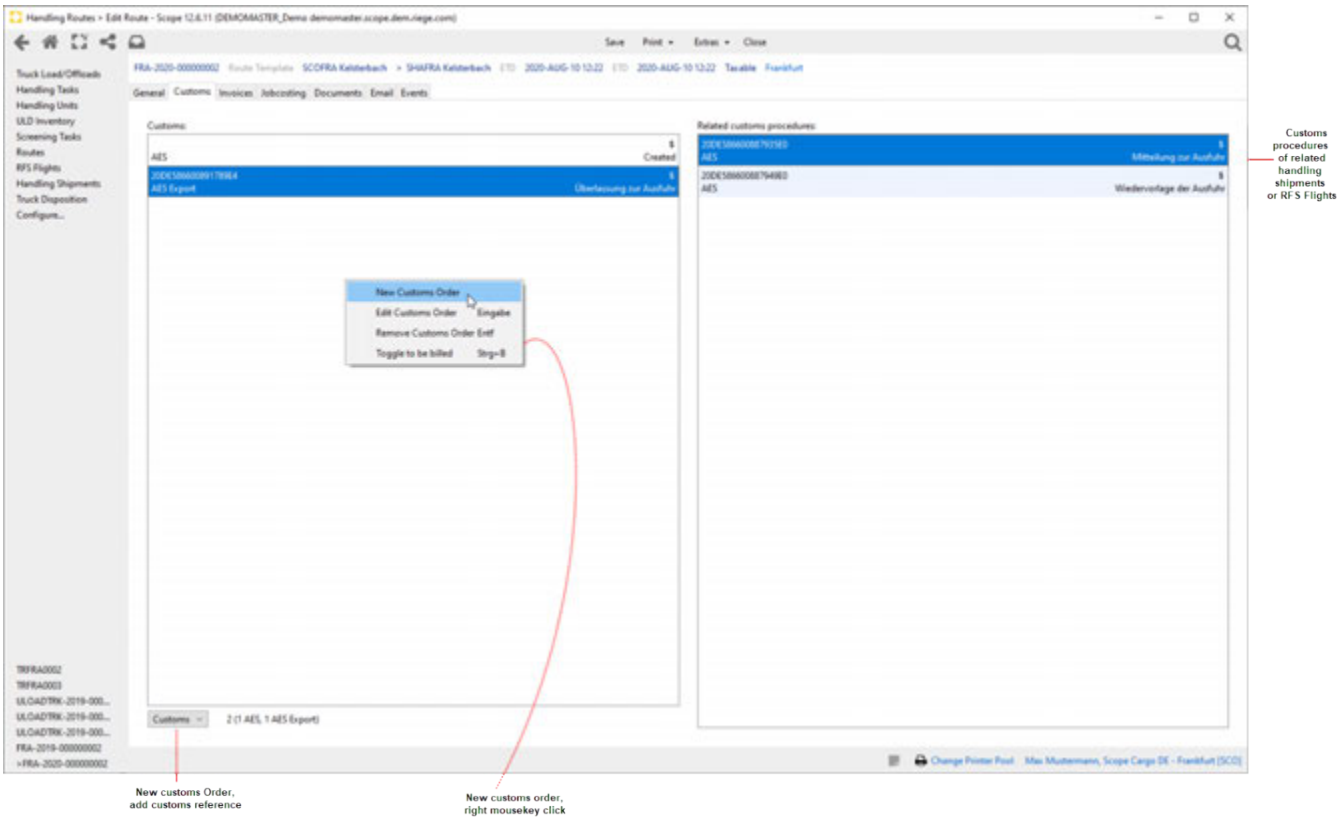


Customs

Under the Tab *Customs* in the tour editor, new customs procedures based on the tour data can be created. The tour data is then automatically preassigned in the respective customs process. Furthermore, all customs references recorded on the handling shipments are displayed here, for control and further processing. With the Button *Customs* or a click with the right mousekey the editor for choosing a customs procedure, or adding a customs reference opens. The customs procedures are available for the country specific process. For e.g. Germany the following customs procedures are available:

ATLAS NCTS (Export/Import) , ATLAS AES (Export), ATLAS Zolllager (Import), ATLAS Einfuhr (Import), ATLAS SumA (Import)

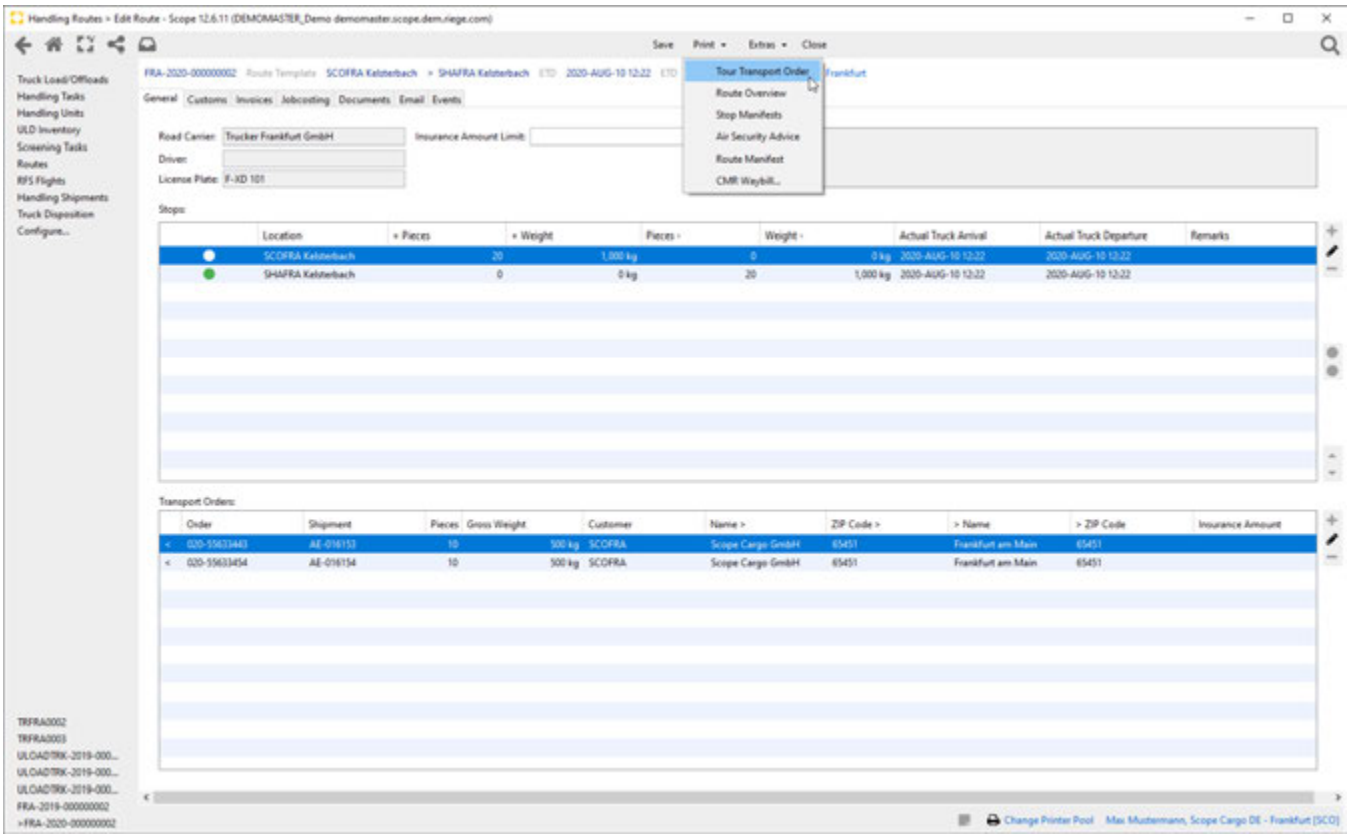
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Printing

All important documents for the transport can be issued by the program action *Print* in the tour editor, like transport order, manifest, Air Security Advice or a CMR Waybill. After printing, the documents are available in the *Document* tab and can be send per mail via the E-mail function.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Send warehouse advices and complete the tour

If all shipments have been scheduled for the tour and all customs procedures have been recorded or transmitted to customs, the tour can be completed.

Two program actions are available for this.

- Extras - Send Warehouse advices:

Using this program action, a truck load with all the shipments included on the tour is created. Furthermore, by activating this action, an interface file is created for the purpose of Slot assignment generated at the place of destination.

- Extras - Complete the tour Complete tour:

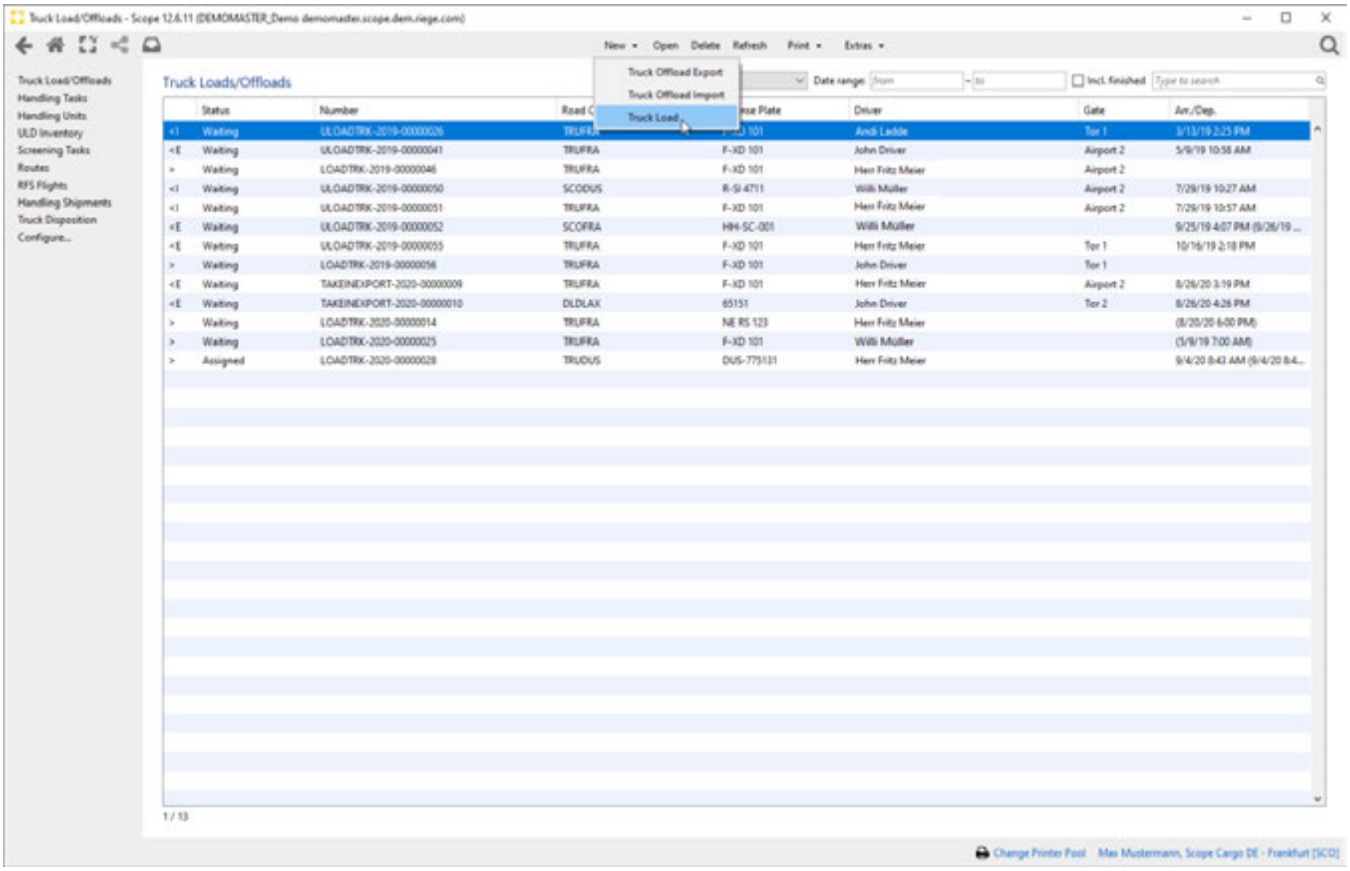
With the program action Extras - Complete Tour the current time is automatically recorded in the fields ATD and ATA. These time stamps are also synchronized in the transport order of the handling shipment. By executing this program action, Scope assumes that the scheduled tour has arrived at the destination and the transport has been completed. There is also the option of notification emails (delivery receipts / PODs) to send automatically to the respective customer of the transport order. Completed tours are marked with the status "Completed".

7. Truck Load

Create Truck Load

In the home view of the Handling Truck Load/Offloads application, a *Truck Load* can be created using the program action *New*. This is only necessary if the loading is not carried out by using the program action *Send Warehouse advices* when completing the route, or not by a Warehouse Take out in the handling application Handling Shipments (Extras - Take out). In these cases, a Truck-Loading will be issued automatically.

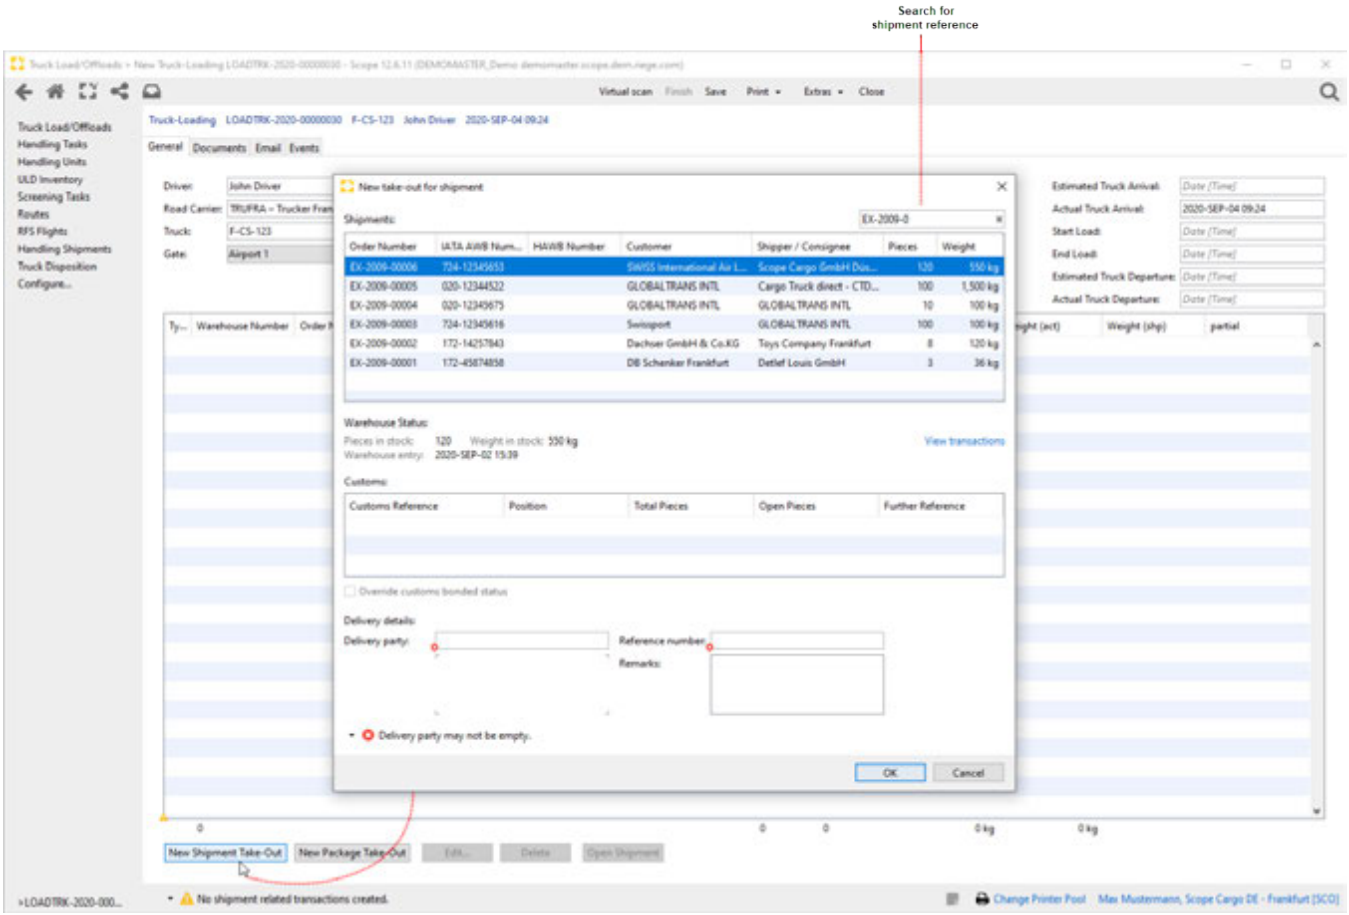
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- New Shipment Take-Out

In the Truck Loading editor, a take out for a complete handling shipment can done by using the button *New Shipment Take-out.* The editor *New take out for shipments* opens and in the search field it is possible to look for the by entering a shipment reference, e.g. Mawb, Hawb, shipment number.

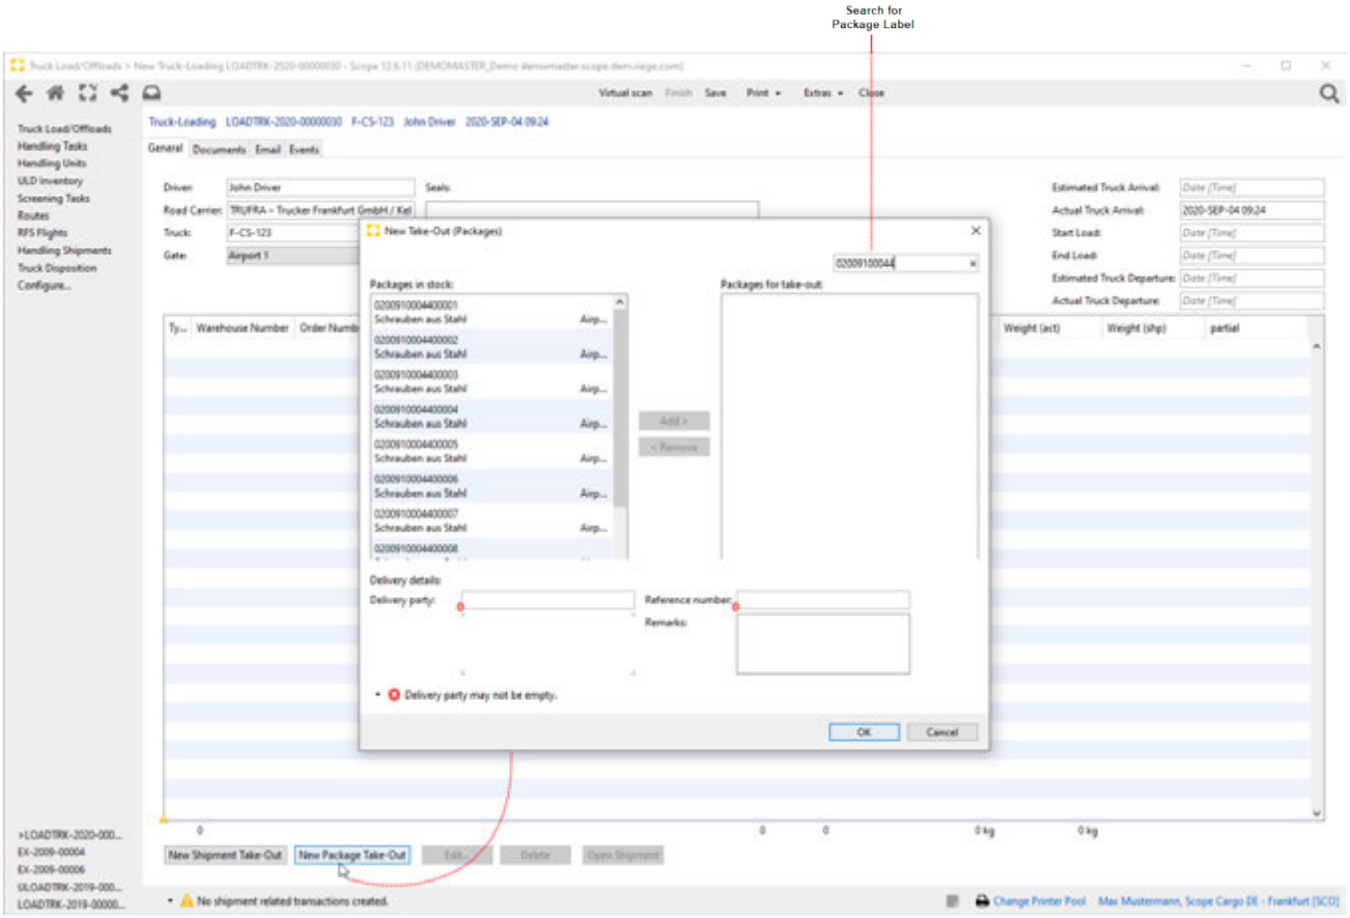
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- New Package Take-Out

If necessary, a take out can be done for single packages of a shipment by using the button *New Package Take-out.* The editor *New Take-Out (Packages)* o pens and in the search field it is possible to do a search with the package labels to find the corresponding packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



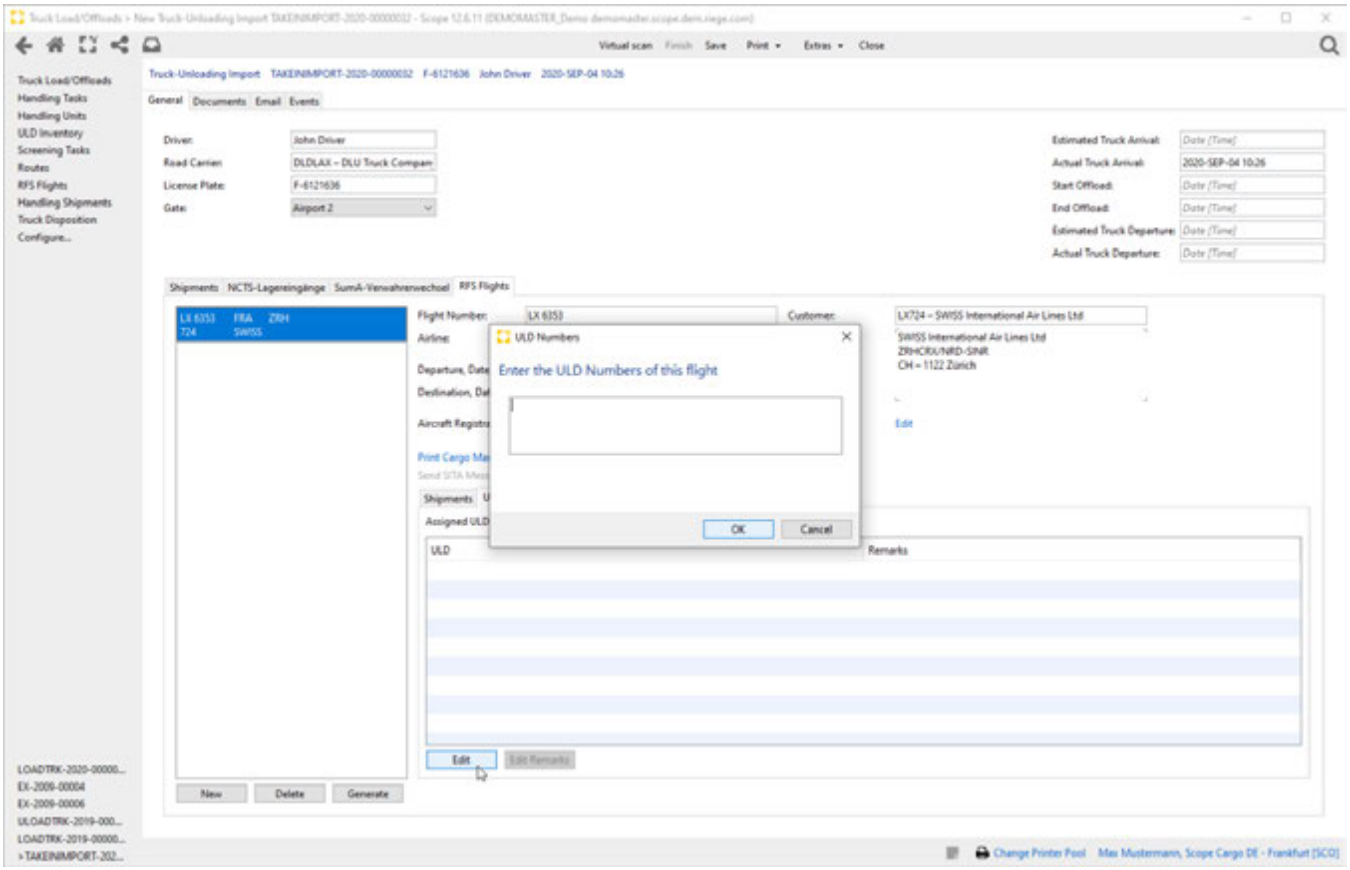
8. ULD Inventory

Booking air freight containers

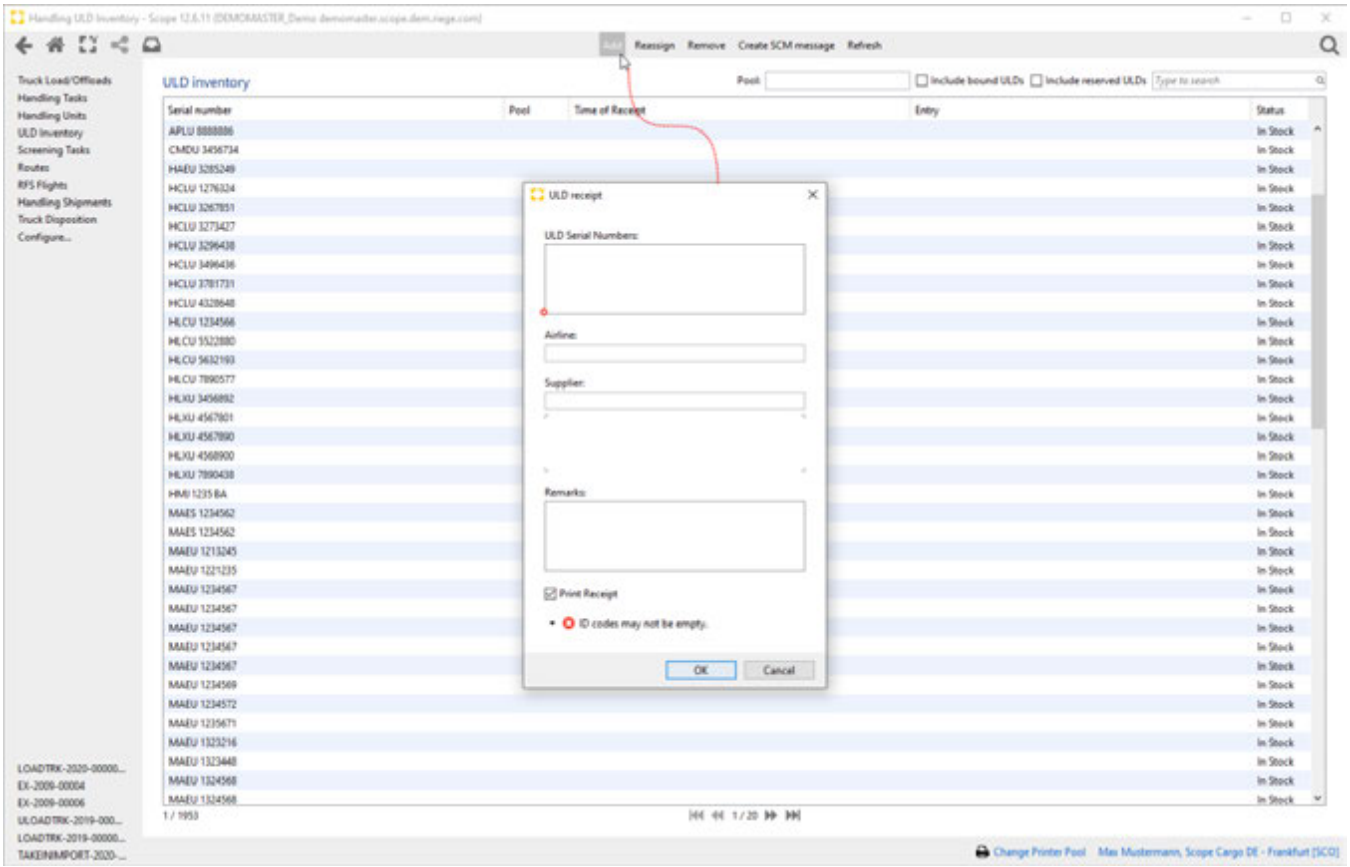
There are two options for booking air freight containers in the ULD inventory.

1. Registration of empty ULDs in the Truck-Unloading Import

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

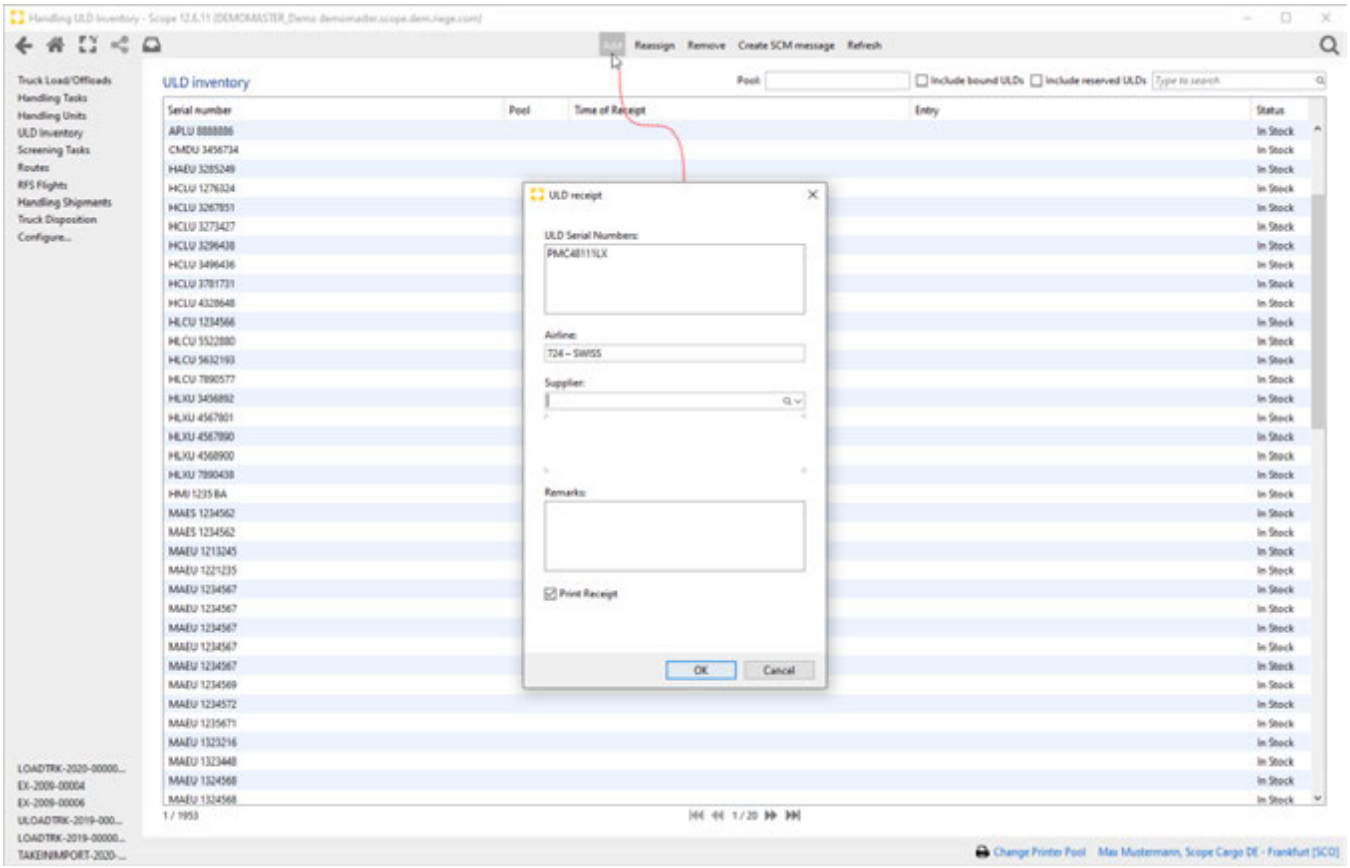


2. Manual ULD data entry in the Handling application ULD Inventory



Enter ULD data and confirm with OK. ULD is then shown as available in stock with status In Stock.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



All booked ULDs are listed in the ULD inventory with a corresponding status.

- Initial - ULD is available for planning
- Reserved -ULD was recorded on a RFS flight
- Bound - ULD has already been installed

Stock Control Message SCM

In the ULD inventory, a SCM message can be triggered as required., by using the program action *Create SCM message*. When creating the SCM message, the respective address of the Airline and the associated SITA address of the Recipient of the message must be entered manually. In addition, comments can be sent to the airline in a text box Remarks. After the transmission has been completed, the SCM message can be accessed at any time in the Scope application Airfreight - Airline messages to be checked or do a printout for proof.

Import - Workflow - Handling

- Introduction
- Description

Introduction

In this chapter you will learn how to process import handling shipments in the Scope Handling application.

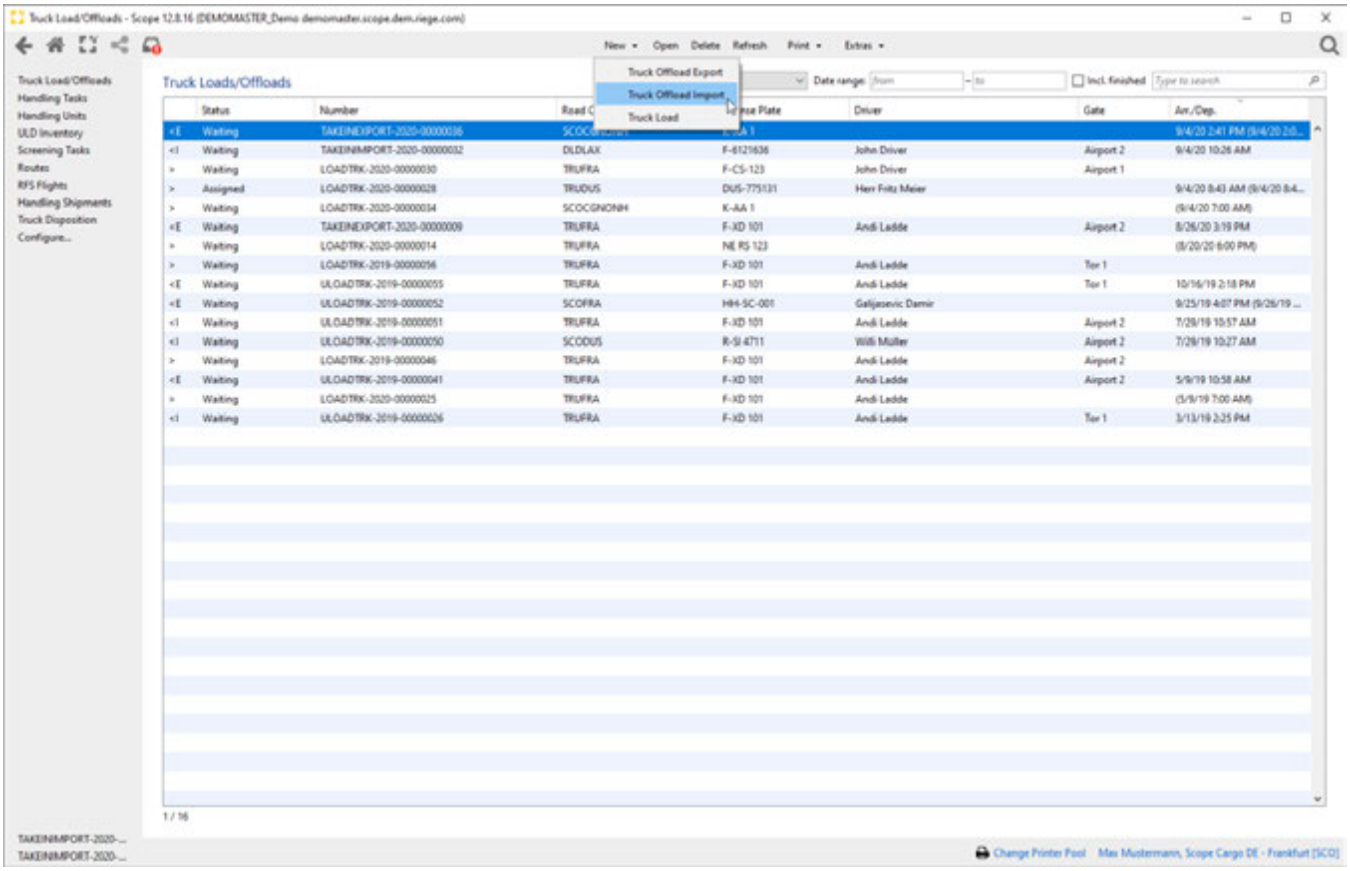
Description

- 1.Truck Offload Import
  - Edit & Add Shipment data
  - Generate RFS Flights
  - Finish Truck Unloading
  - Missing Packages
  - Part Shipment
- 2. Handling Shipments
  - General
  - Transport Orders
  - Print Transport Order
  - Warehouse
  - Deconsolidation
  - Invoices
  - Jobcosting
  - Documents
  - Email
- 3.Take Out
  - Take Out - Handling Shipment
  - Truck-Loading
  - Take Out Part Shipment

1.Truck Offload Import

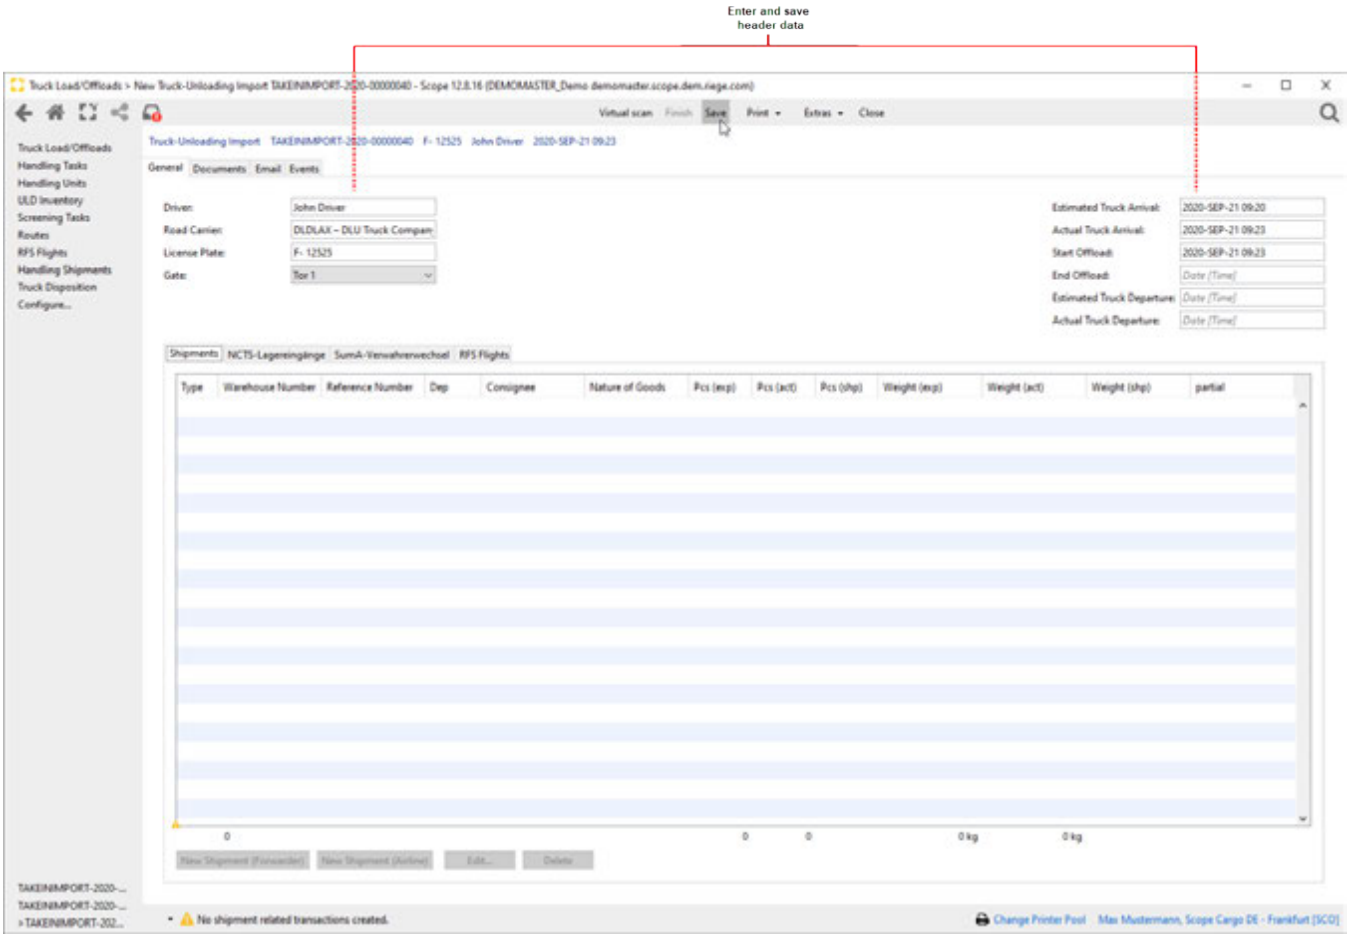
In the Scope Handing Truck Load/Offloads application, shipments from Truck Offloads and Truck Loads can be processed. The program action *Truck Offload Import* opens the editor *Truck-Unloading Import* where export shipment data can be entered.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



First all mandatory input fields (marked with a red validation of the header data of the *Truck-Unloading Import* editor must be filled, such as information regarding driver identity, etc. .Data regarding the shipment entry can be entered via the button new receipt. There are three possible receipt types. New Shipment (Forwarder), New shipment (Airline).

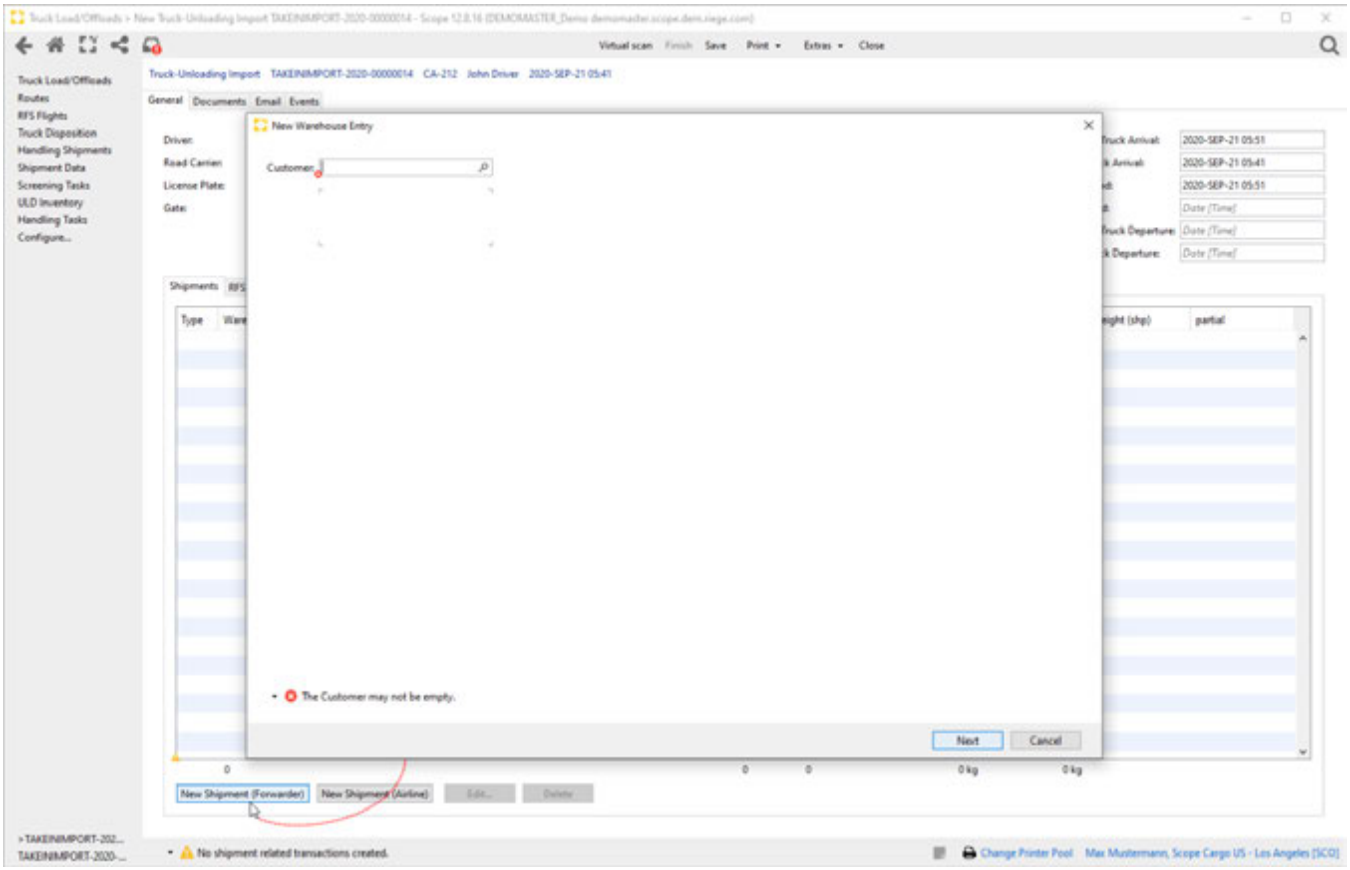
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



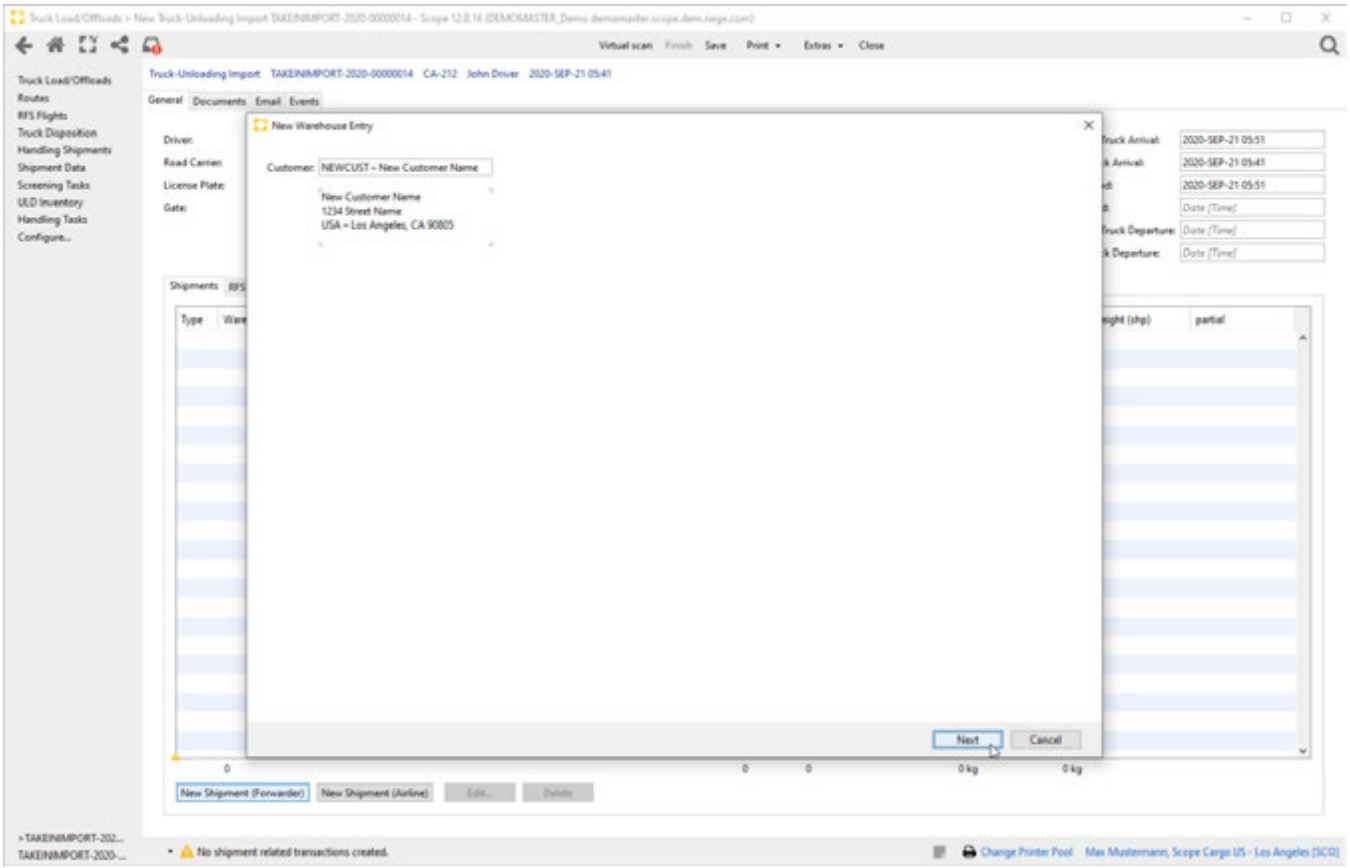
- **Data Entry New Shipment (Forwarder)**

To enter the data for a new Forwarder Shipment entry, use the button *New Shipment (Forwarder).* It opens the input dialog *New Warehouse Entry,* where the customer partner address can be entered. The desired partner may be found with the search field. The drop-down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

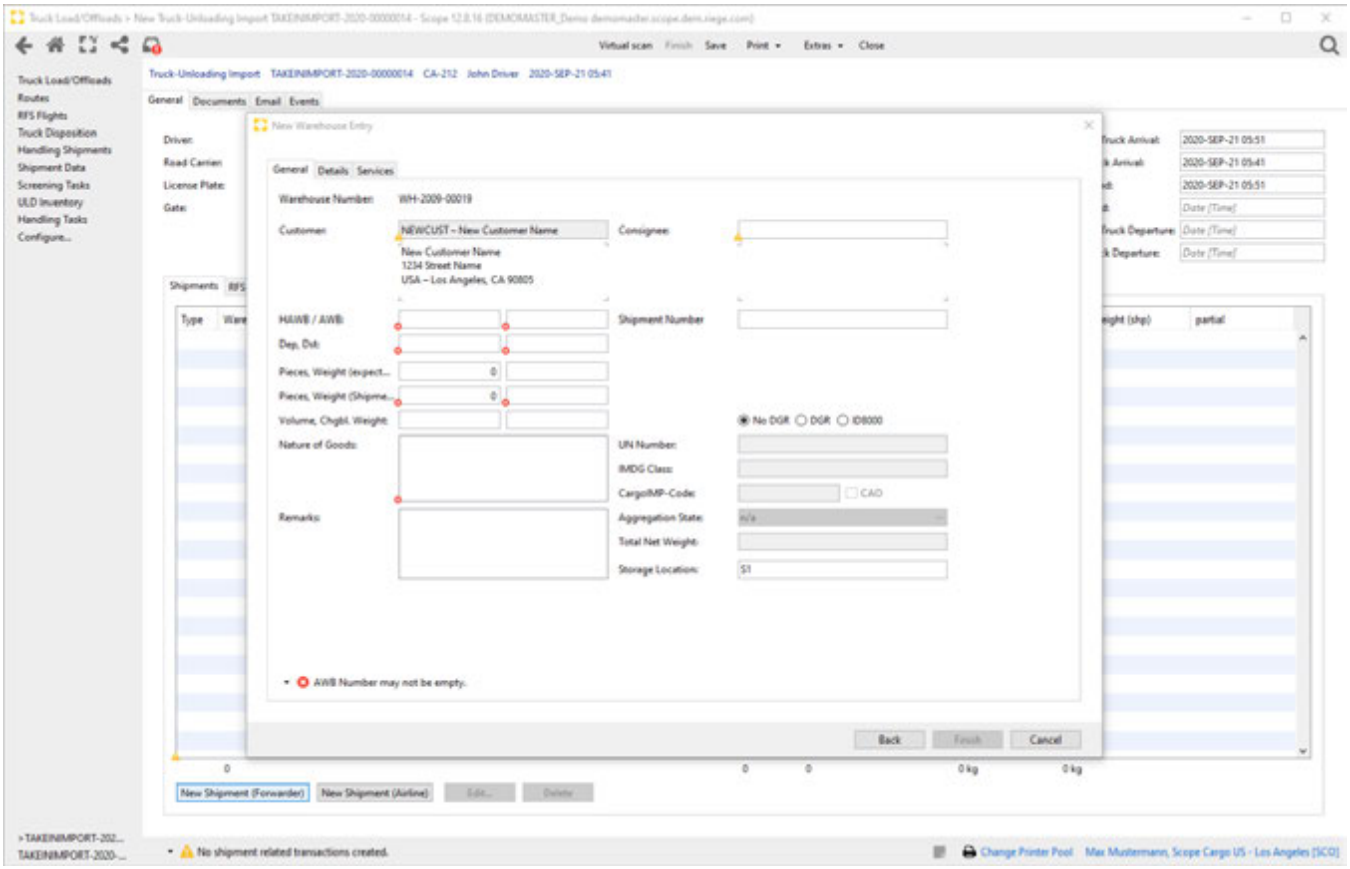


With the button Next data entry can be confirmed and the shipment data can be entered in the editor New Warehouse Entry.



First all mandatory input fields (marked with a red validation) must be filled in the editor. With the button *Finish* data entry can be confirmed.

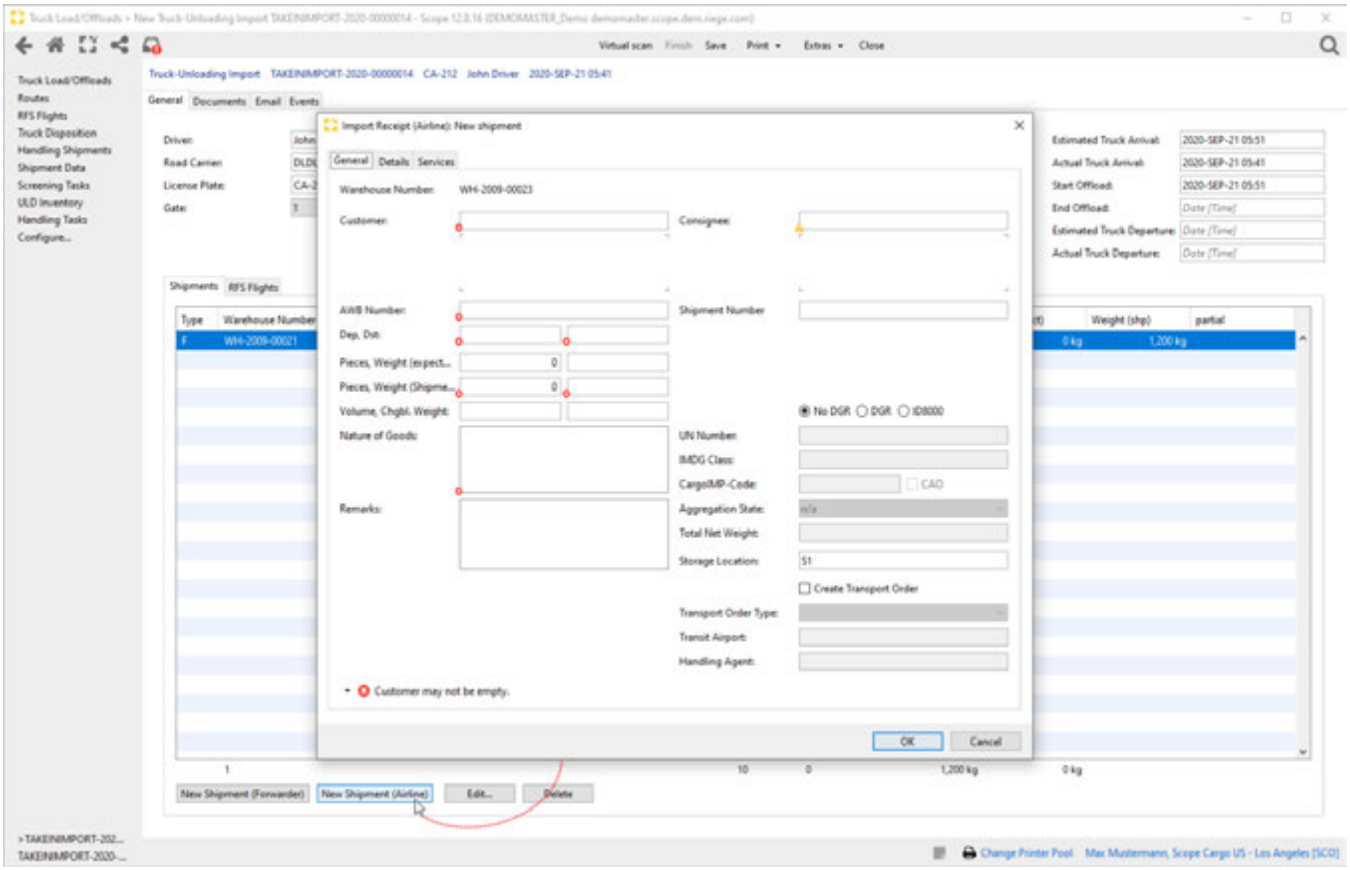
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



- **Data Entry New Shipment (Airline)**

To enter the data for a new Airline Shipment entry, use the button *New Shipment (Airline)*. It opens the input dialog *Import Receipt (Airline): New Shipment.* First all mandatory input fields (marked with a red validation) must be filled in the editor. With the button *OK* data entry can be confirmed.

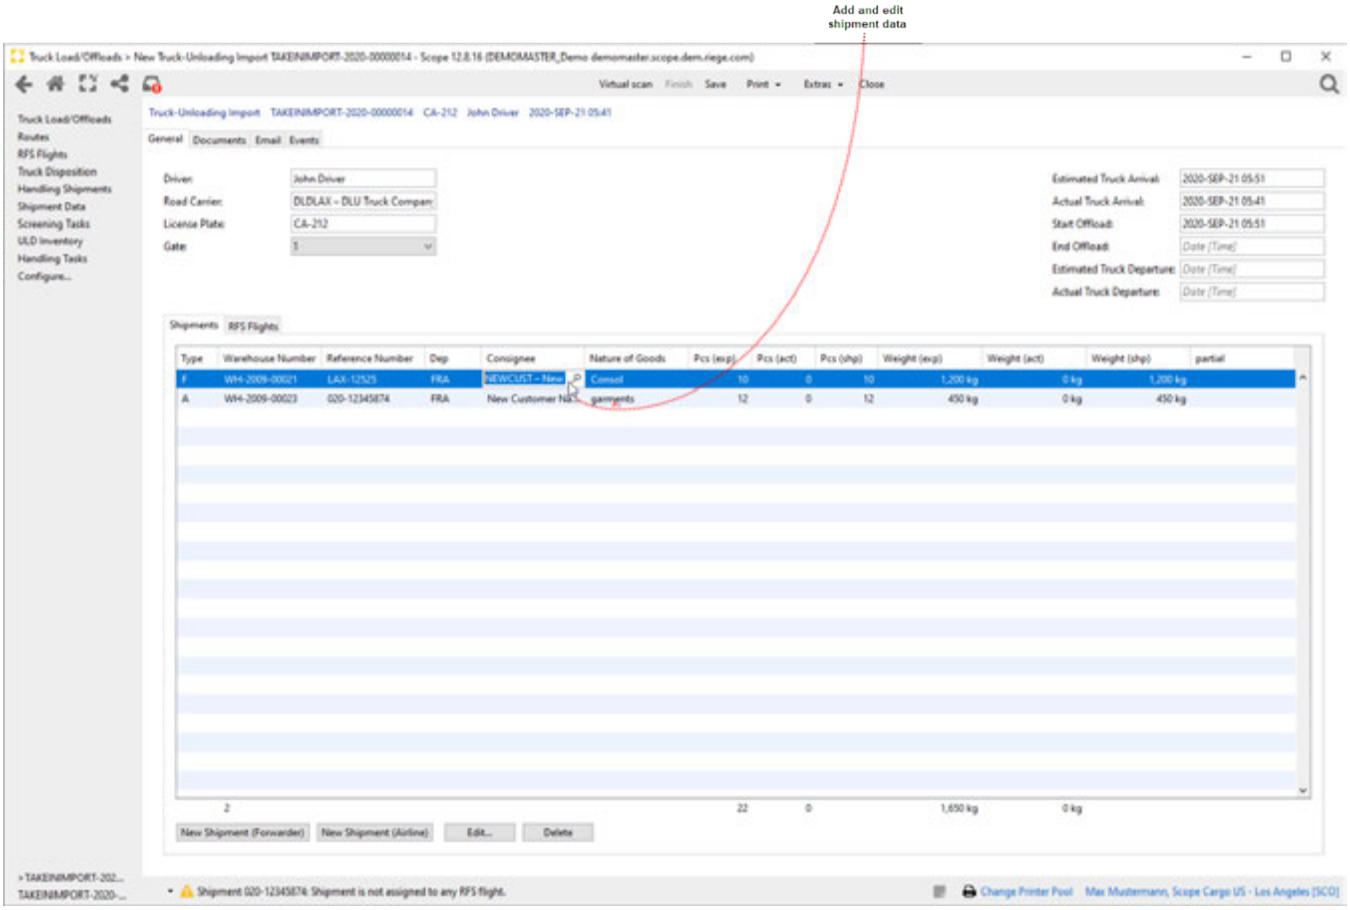
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Edit & Add Shipment data

In the Shipments TAB, shipment data can be edited or changed by clicking into the corresponding column (Reference Number, Dep,Consignee,Nature of Goods, Pcs shp, Weight shp).

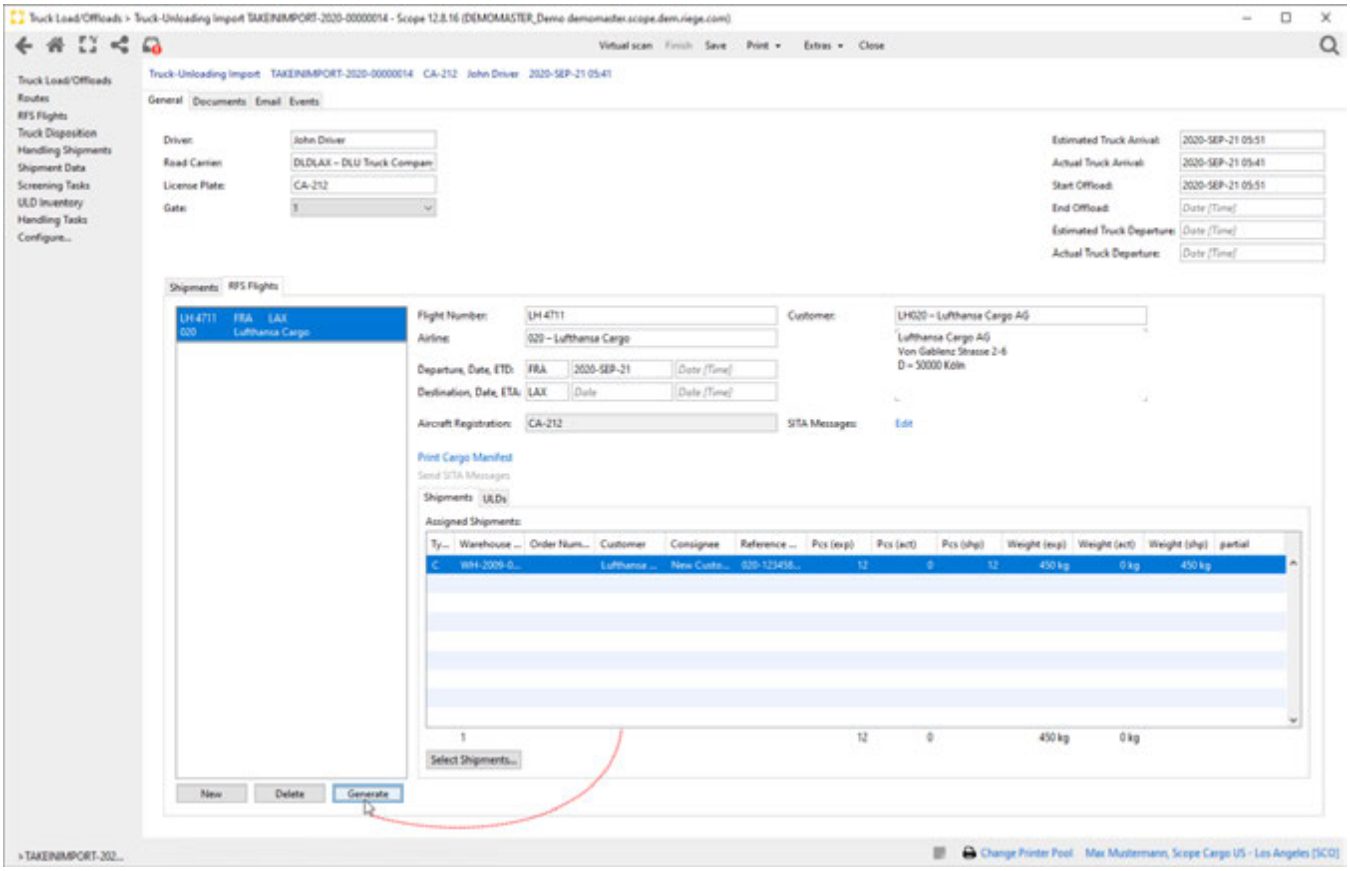
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Generate RFS Flights

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

With the RFS flight it can be defined, which SITA messages will be sent to a defined recipient. If the shipment is entered manually, an RFS flight can also be created using "New" and then be added.



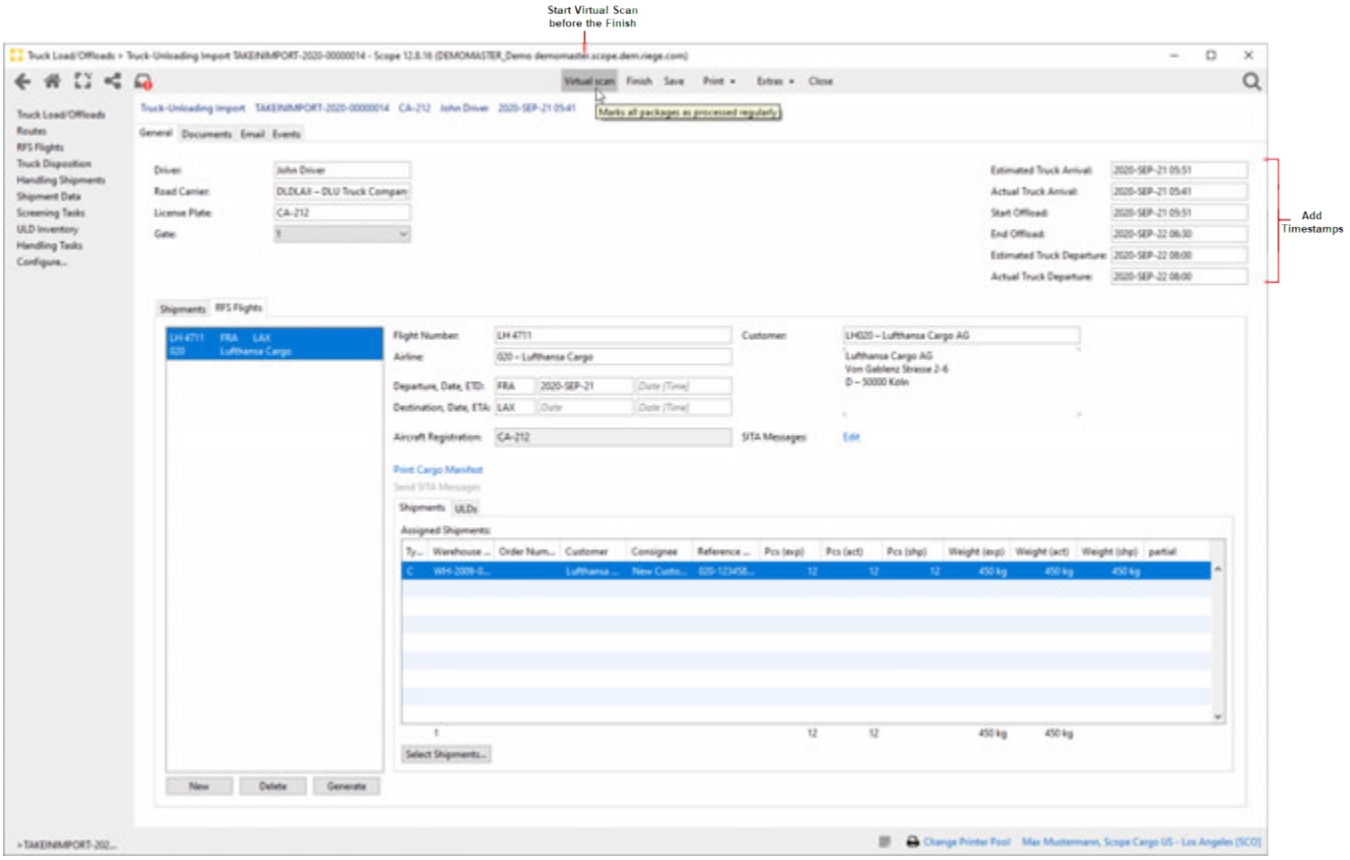
Finish Truck Unloading

With the program action *Finish* the Truck Unloading in Scope can be completed. Before the Finish can be done, all data must be checked for correctness. The *Virtual Scan* must be carried out with the corresponding program action. All time Stamps must be entered. Only if all these data are entered, the Finish button will be active. After the Finish is done, the corresponding handling shipments are created in the handling application part Handling Shipments.

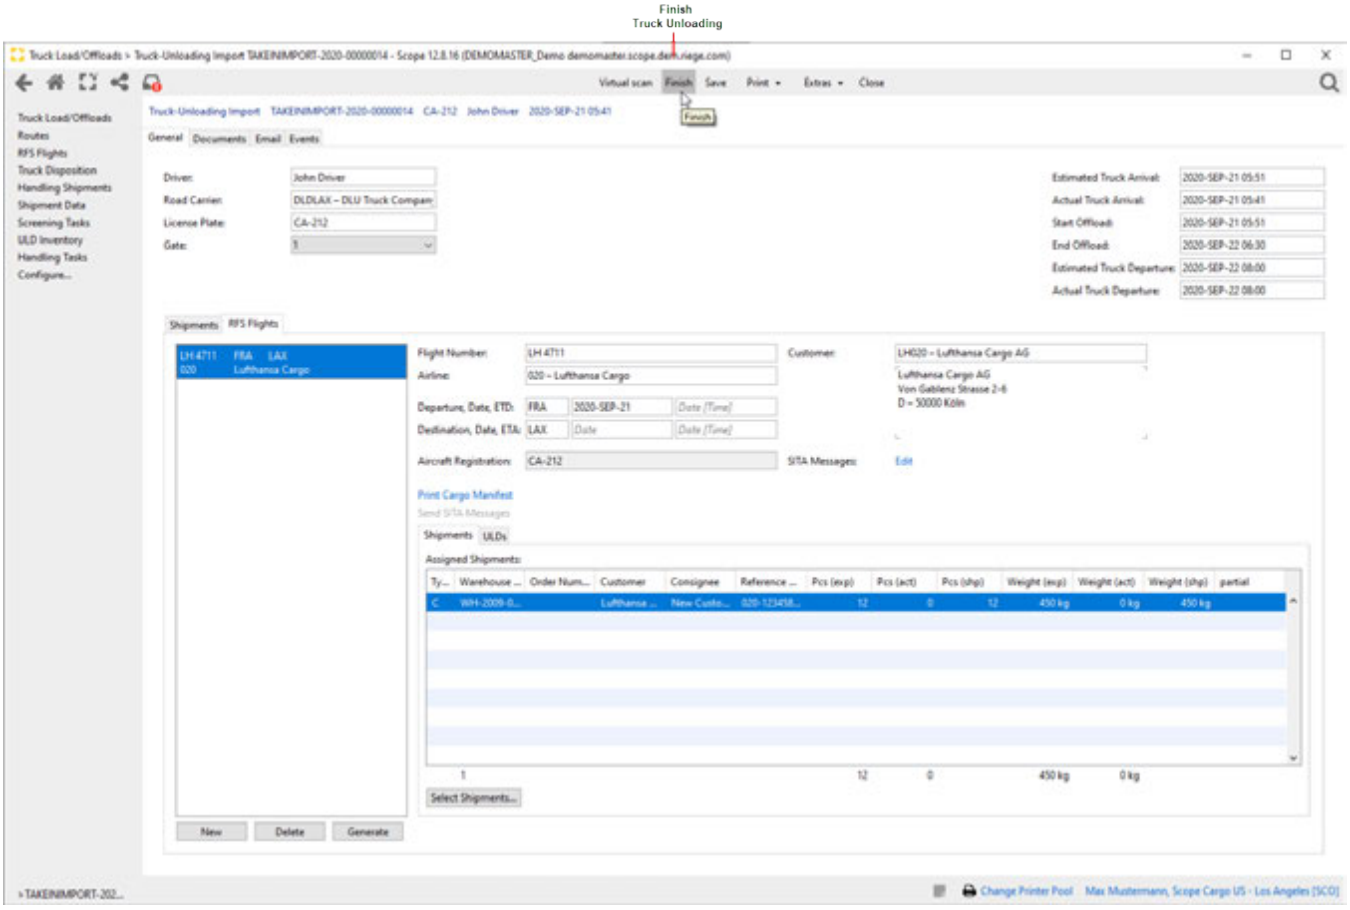
> **Attention!**
>
> Important: After the truck unloading has been finished, the number and weight of the booked packages can no longer be changed. If necessary, incorrect shipments must be canceled or incorrectly booked packages must be entered again with an additional Warehouse entry or taken out of the warehouse issuing a Truck-Loading entry.

- **Virtual Scan - Add Time Stamps**

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

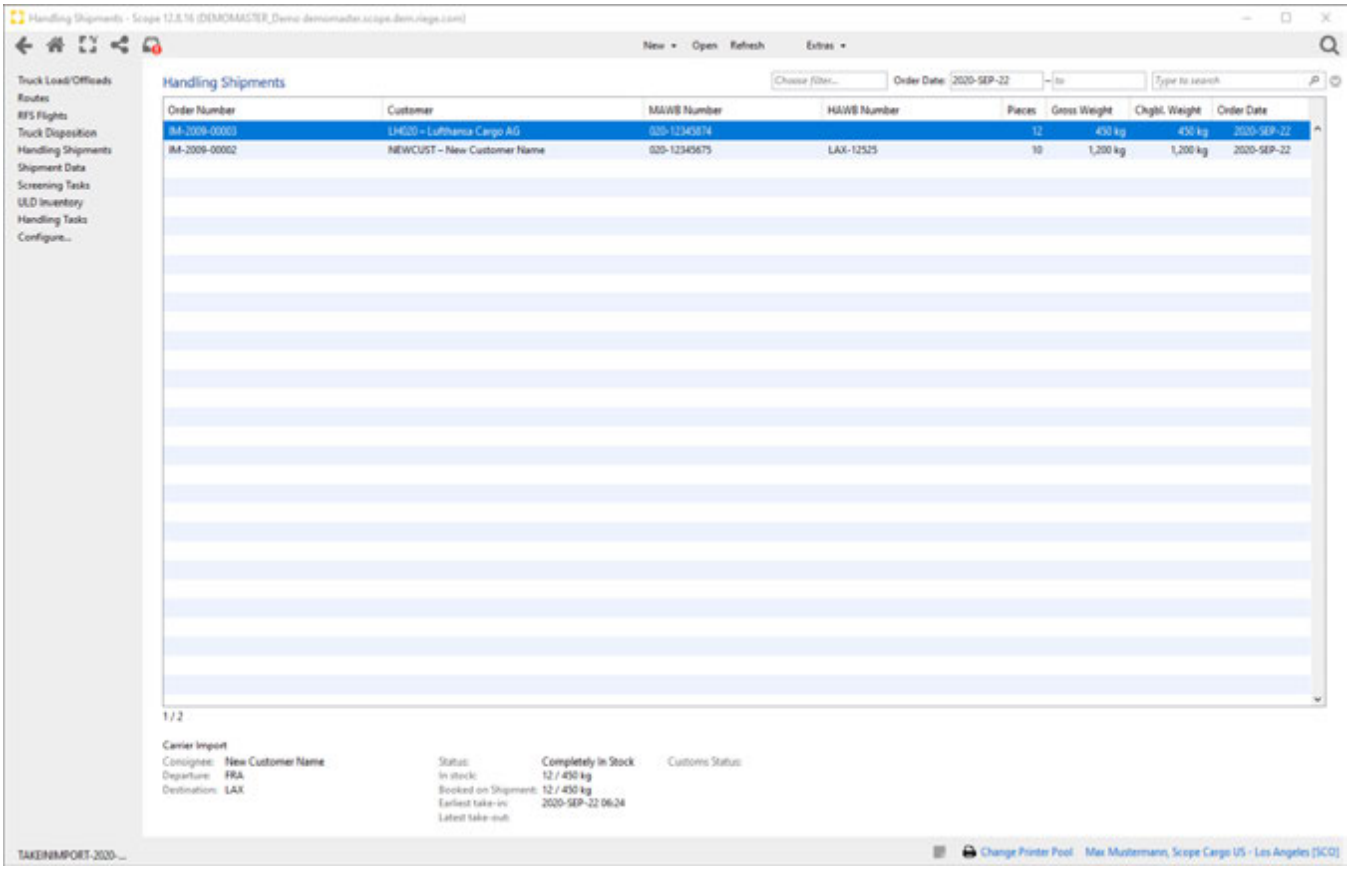


- **Finish**



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Finish creates Handling Shipments



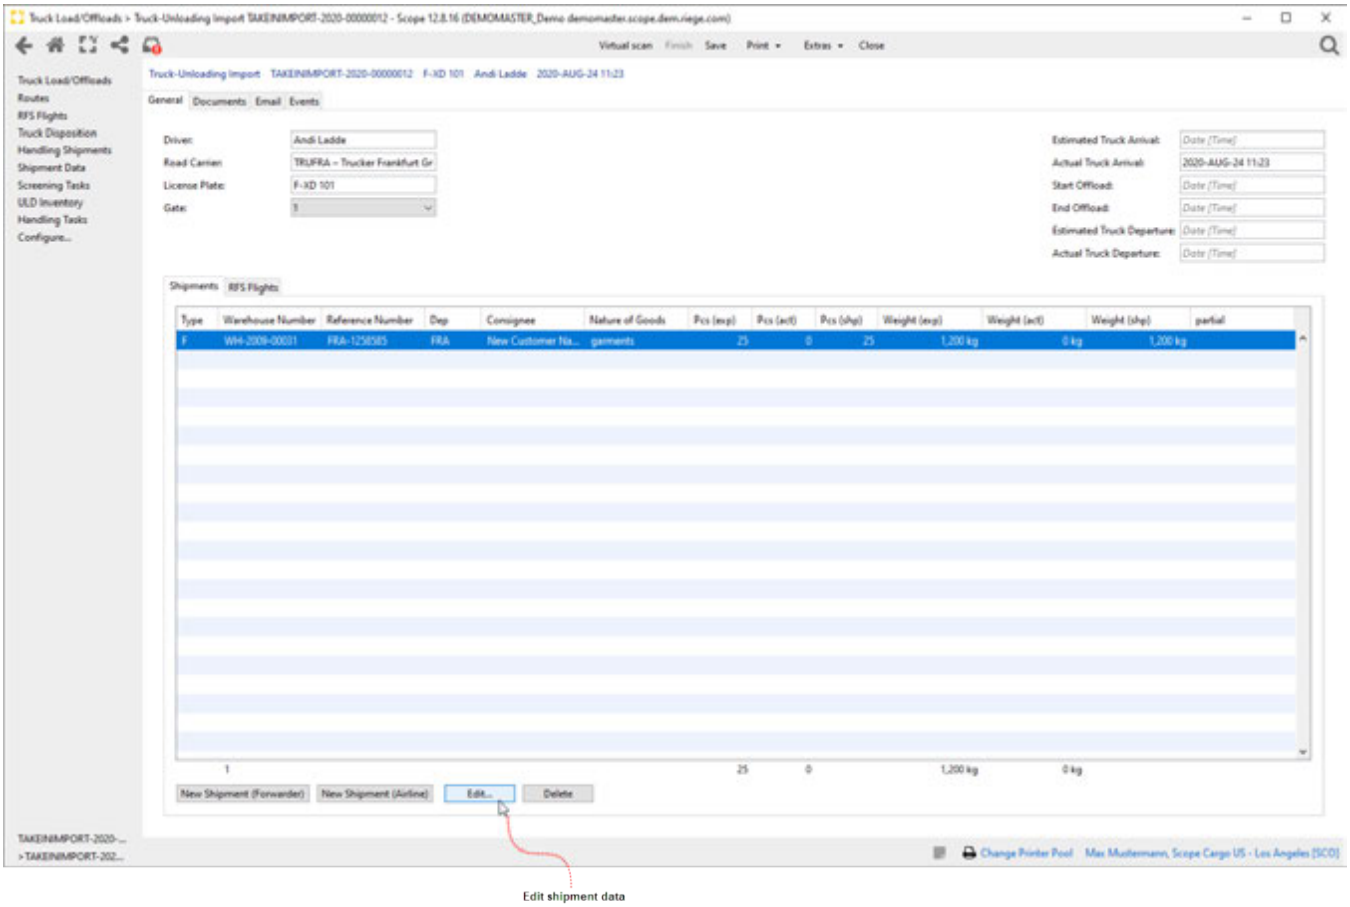
Missing Packages

If packages are found missing during the truck unloading, the respective shipment data must be edited, and the missing packages can be marked as "expected".

1.Edit Shipment data

With the button *Edit*... the shipment data can be entered.

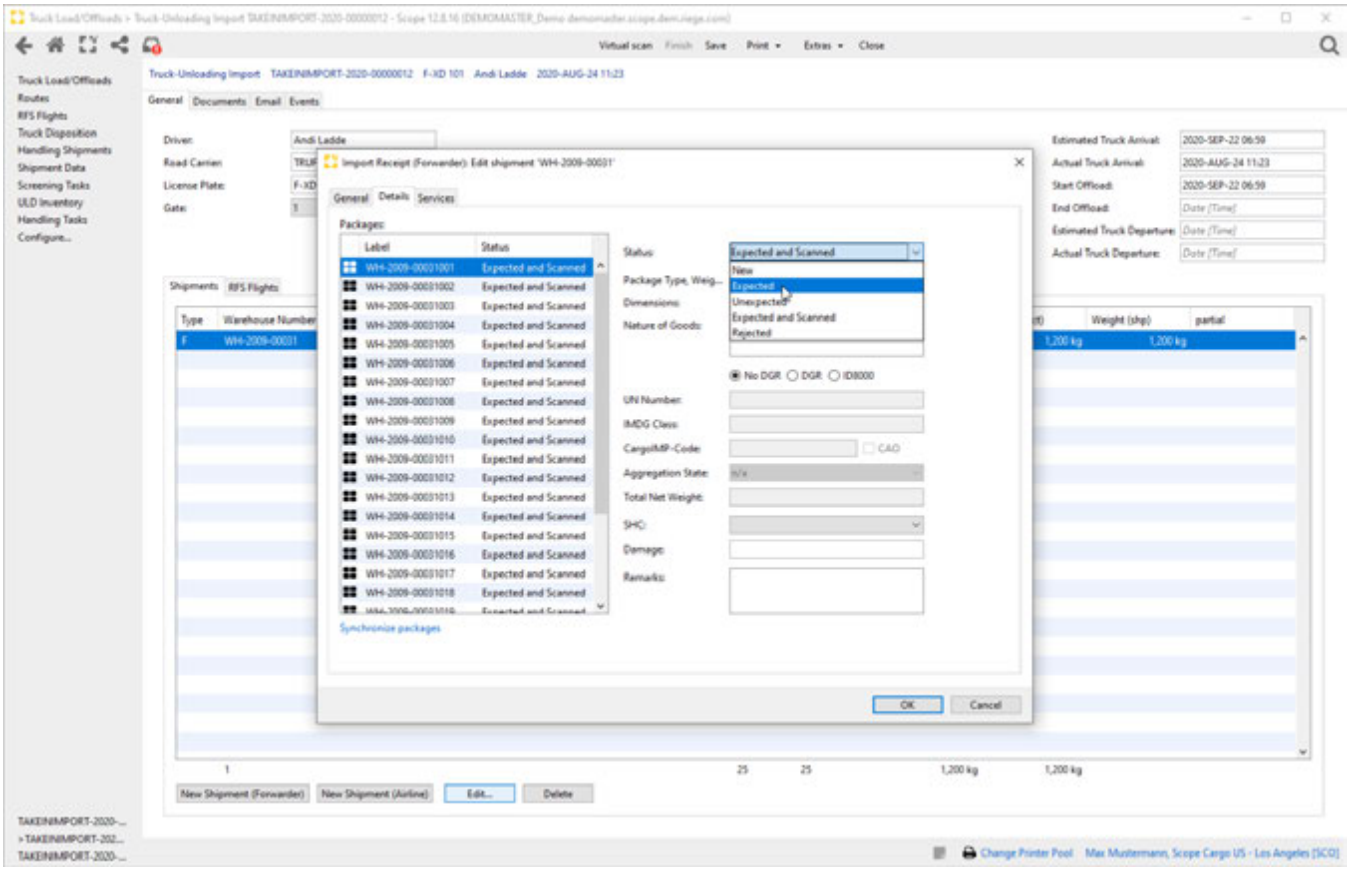
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



2. Change Status

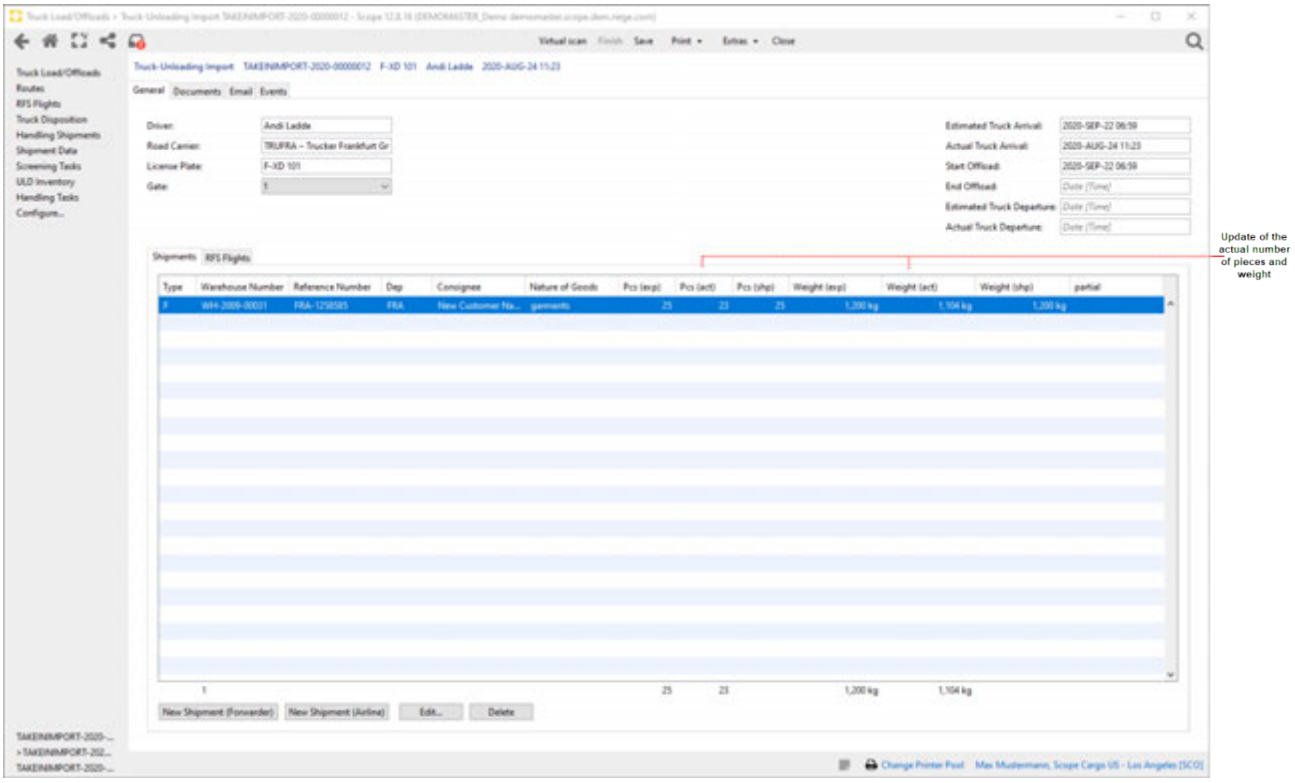
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In the Tab Details of the shipment data, the status of the respective packages must be changed from "Expected and Scanned" to status "Expected".



3. Update Pcs and weight (act)

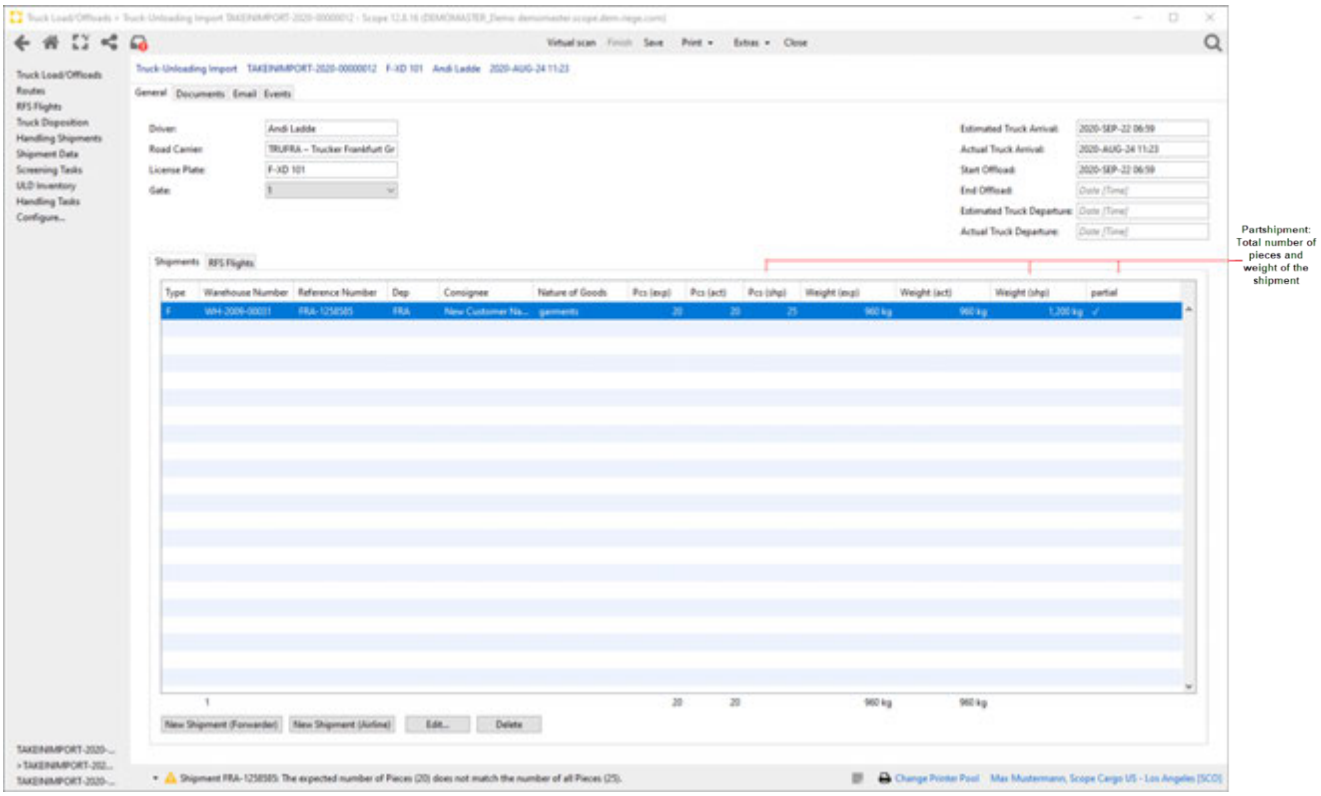
After all missing packages have been recorded, Scope automatically updates the actual number and weight of the pieces in the shipments overview.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Part Shipment

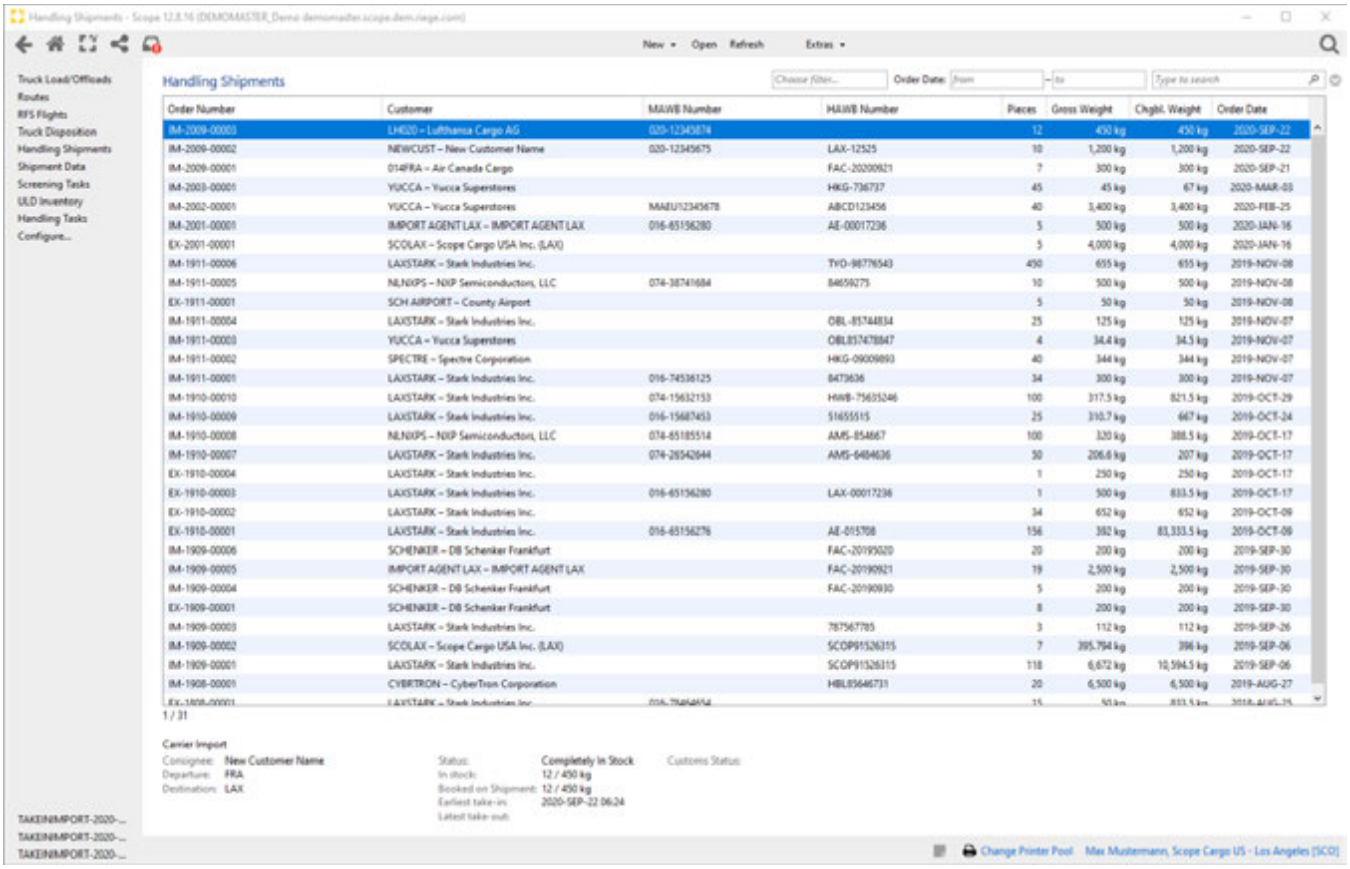
In the case of a part shipment, the expected total number of packages and weight of the shipment must be entered before the truck is unloaded. With this data entry, all other parts for this shipment will be booked, and the shipment data is automatically preassigned for all subsequent parts of the shipment.



2. Handling Shipments

In the home view all current handling shipments are displayed.

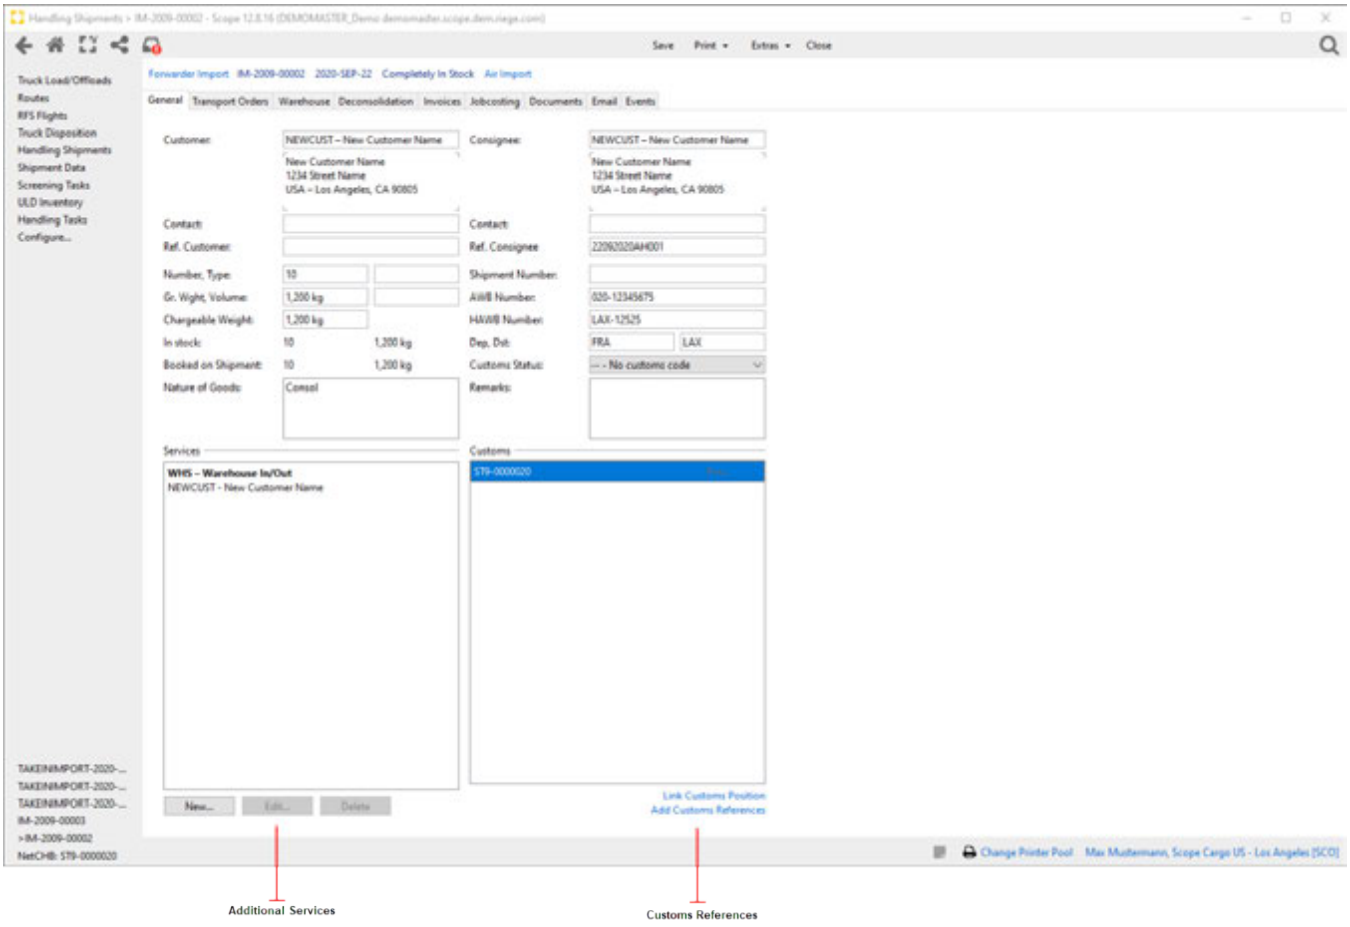
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



General

The General tab of the handling shipment shows all recorded handling shipment data. Additional information such as the customs status, reference numbers or additional services can be added here. Once additional services have been added here, they will be automatically included in the invoicing.

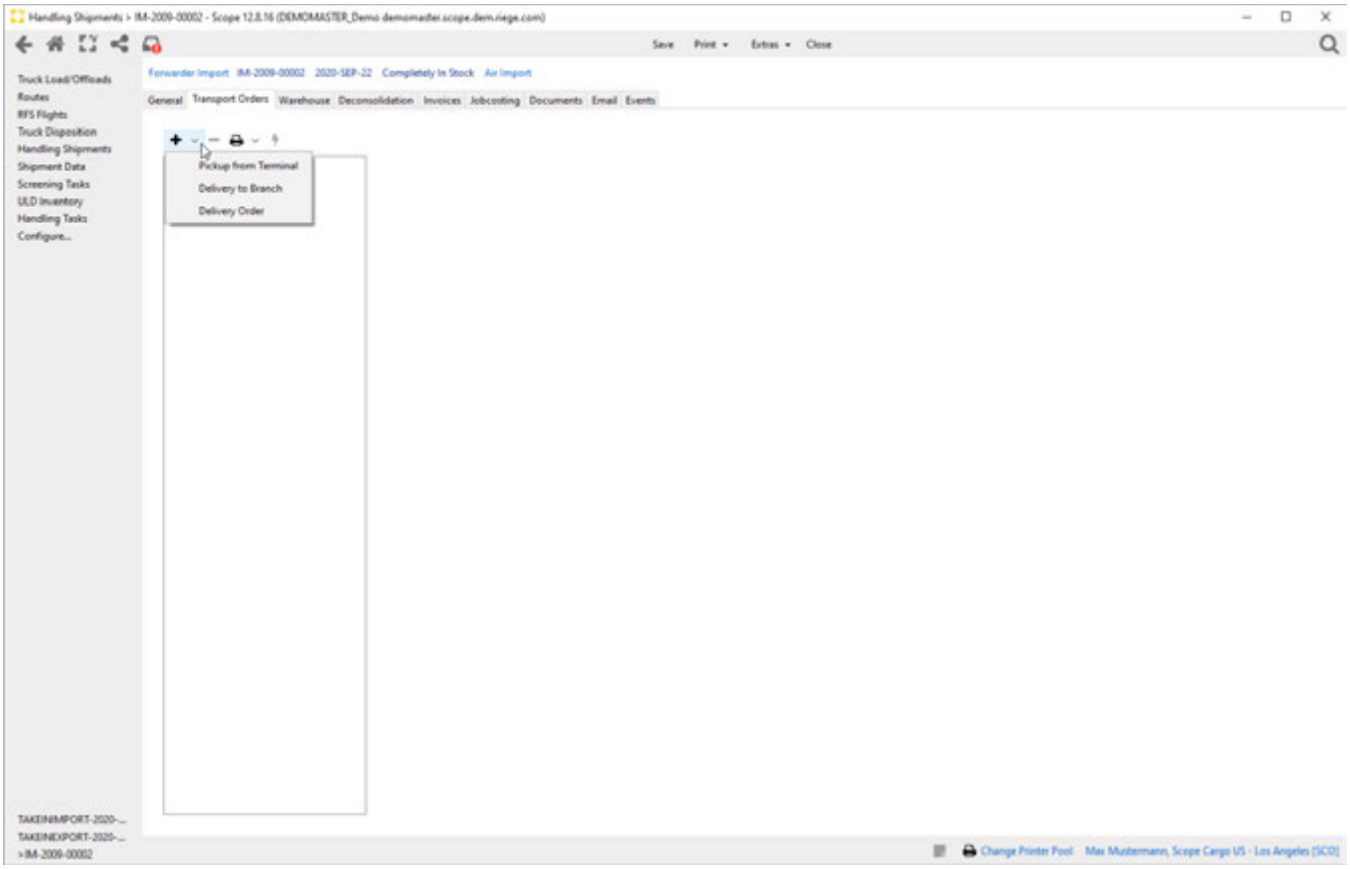
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Transport Orders

In the Tab *Transport orders* of the handling shipment, new transport orders can be directly entered, printed and subsequently be scheduled on a Route.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



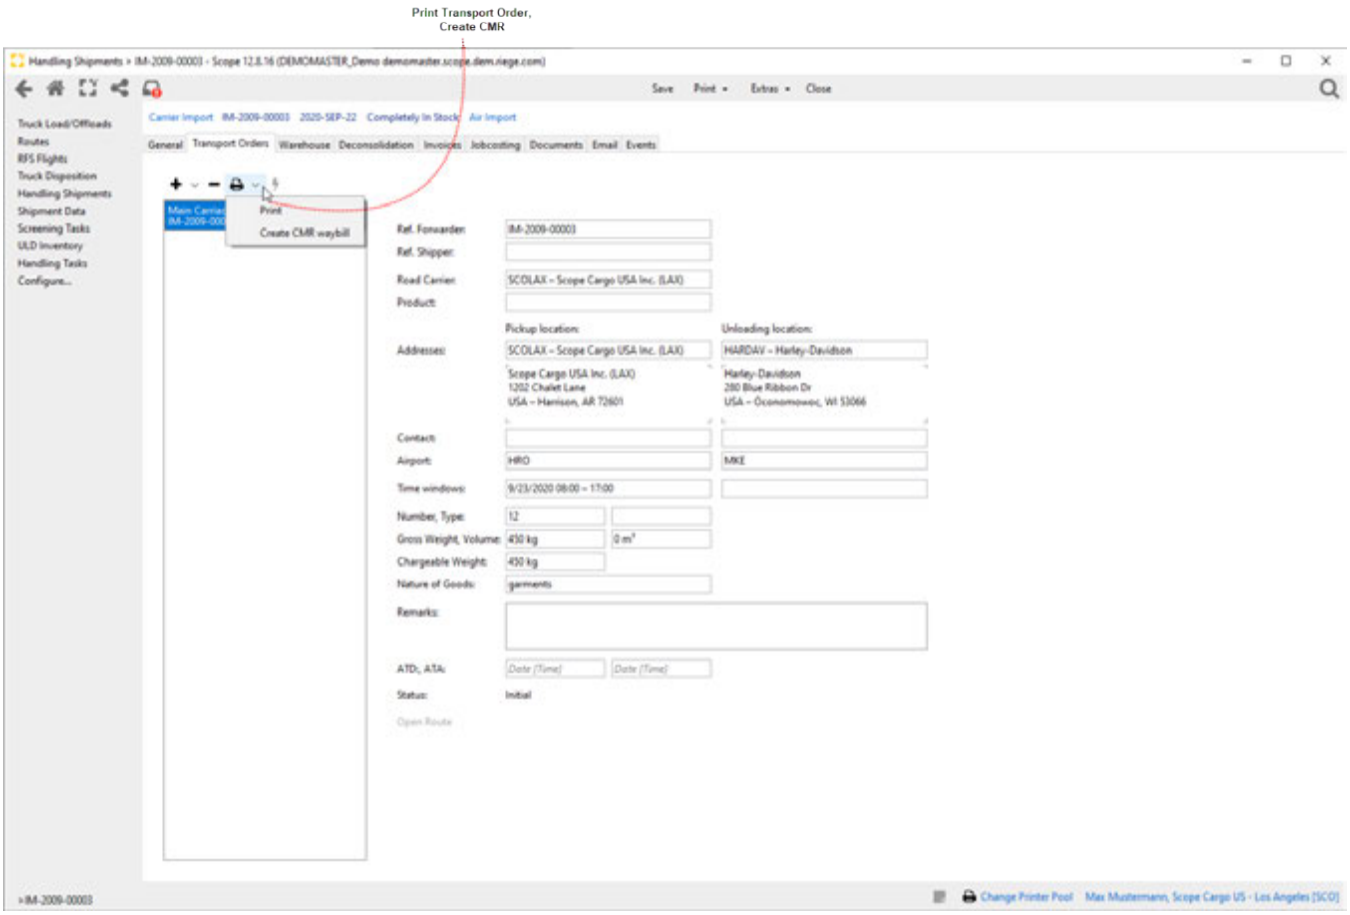
Attention!

The transport order only appears in the Truck Disposition of the Handling Module, if the haulier recorded is its own branch.

Print Transport Order

For the documentary processing of the handling shipment, a printout of the transport order can be made by using the "Print" symbol shown in the transport order overview. In addition to the transport order also a CMR waybill can be printed here. Usually there is no additional data input or information required for this action, as all data from the existing handling shipment will be used for the creation of the printout.

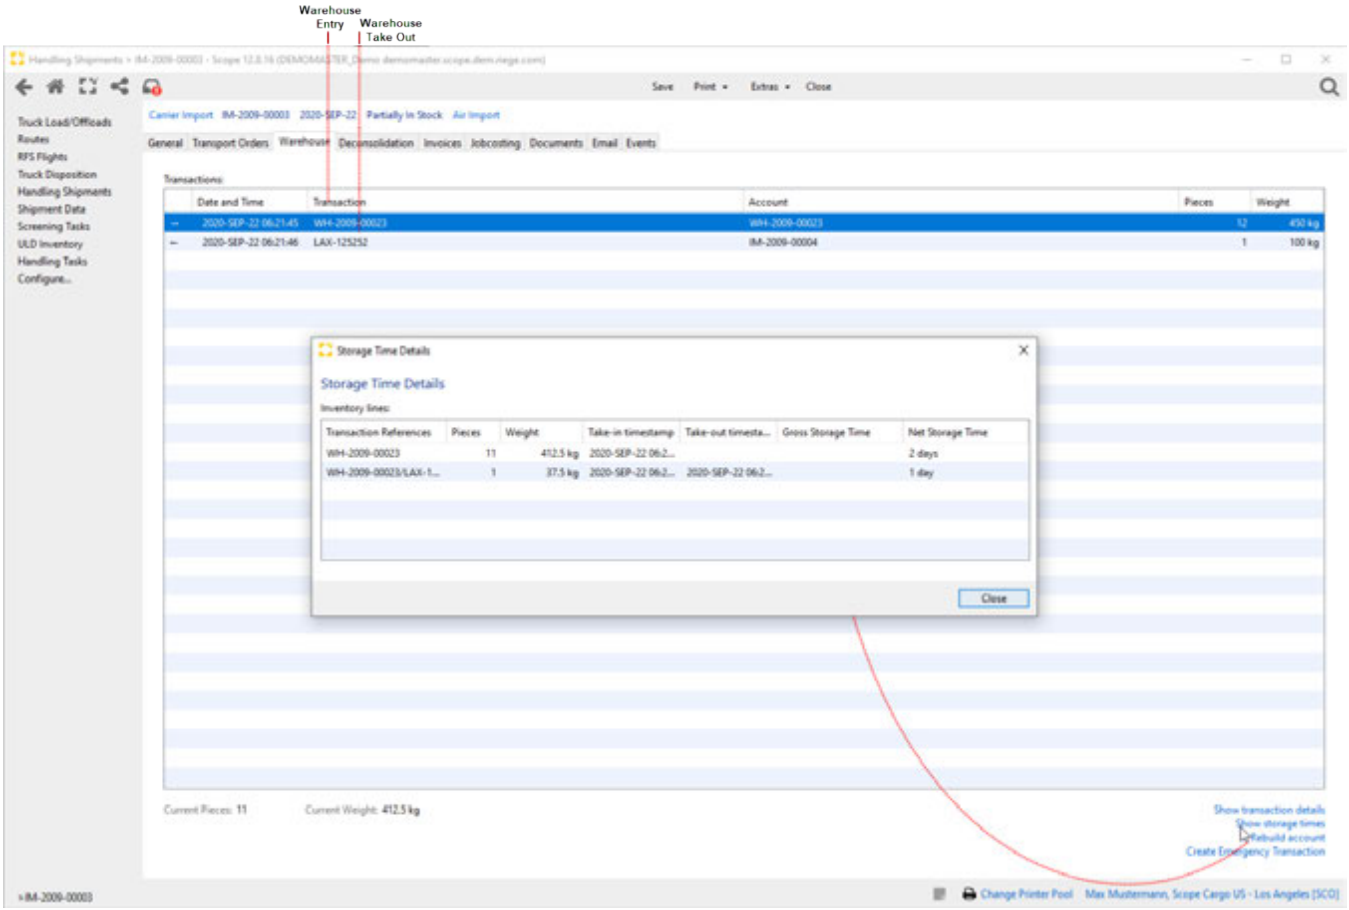
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Warehouse

In the Warehouse Tab all inventory booking can be traced. It is shown exactly when the shipment was taken in and out of the warehouse. The storage fee is calculated on the basis of the storage days calculated there.

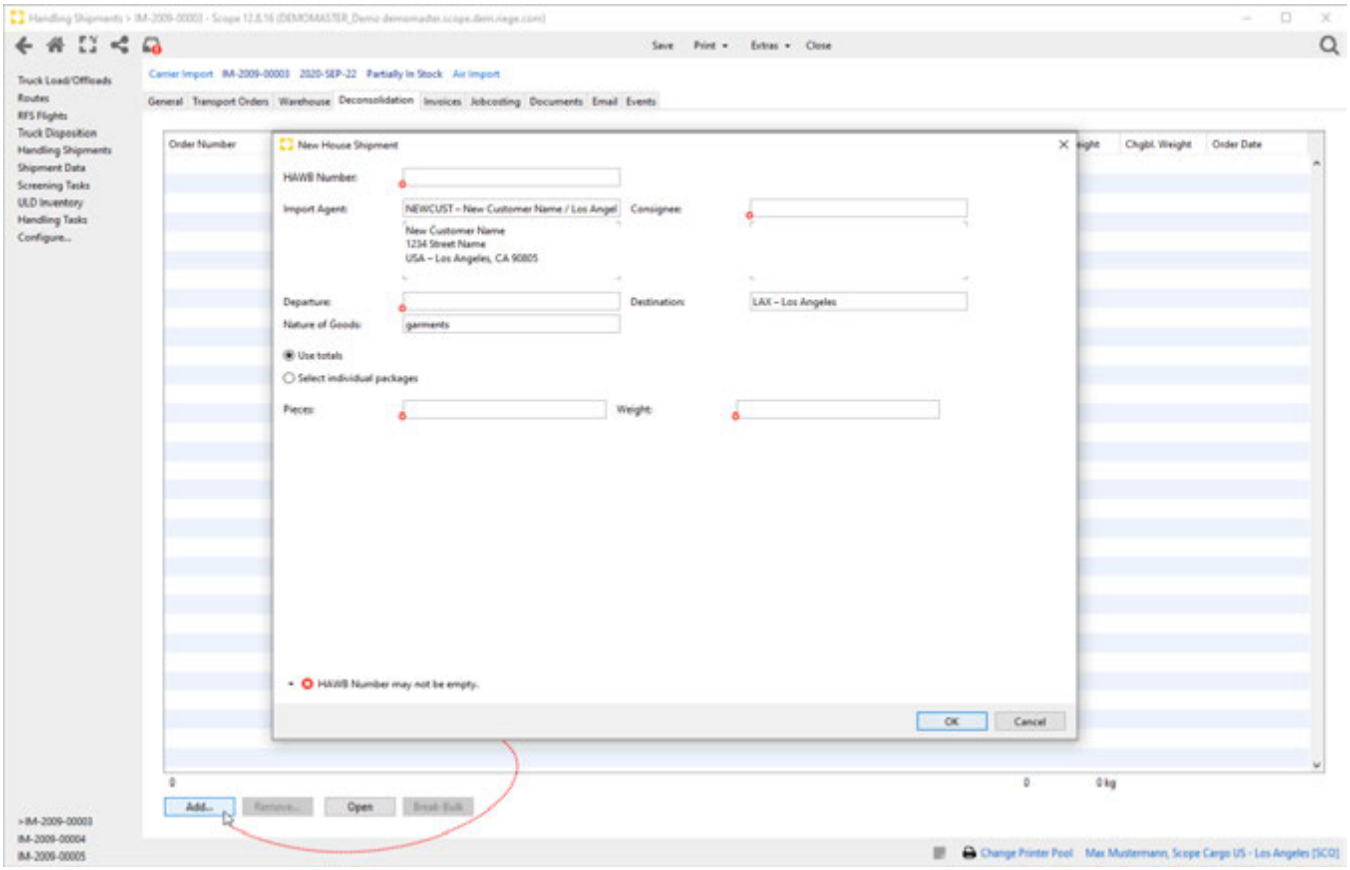
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



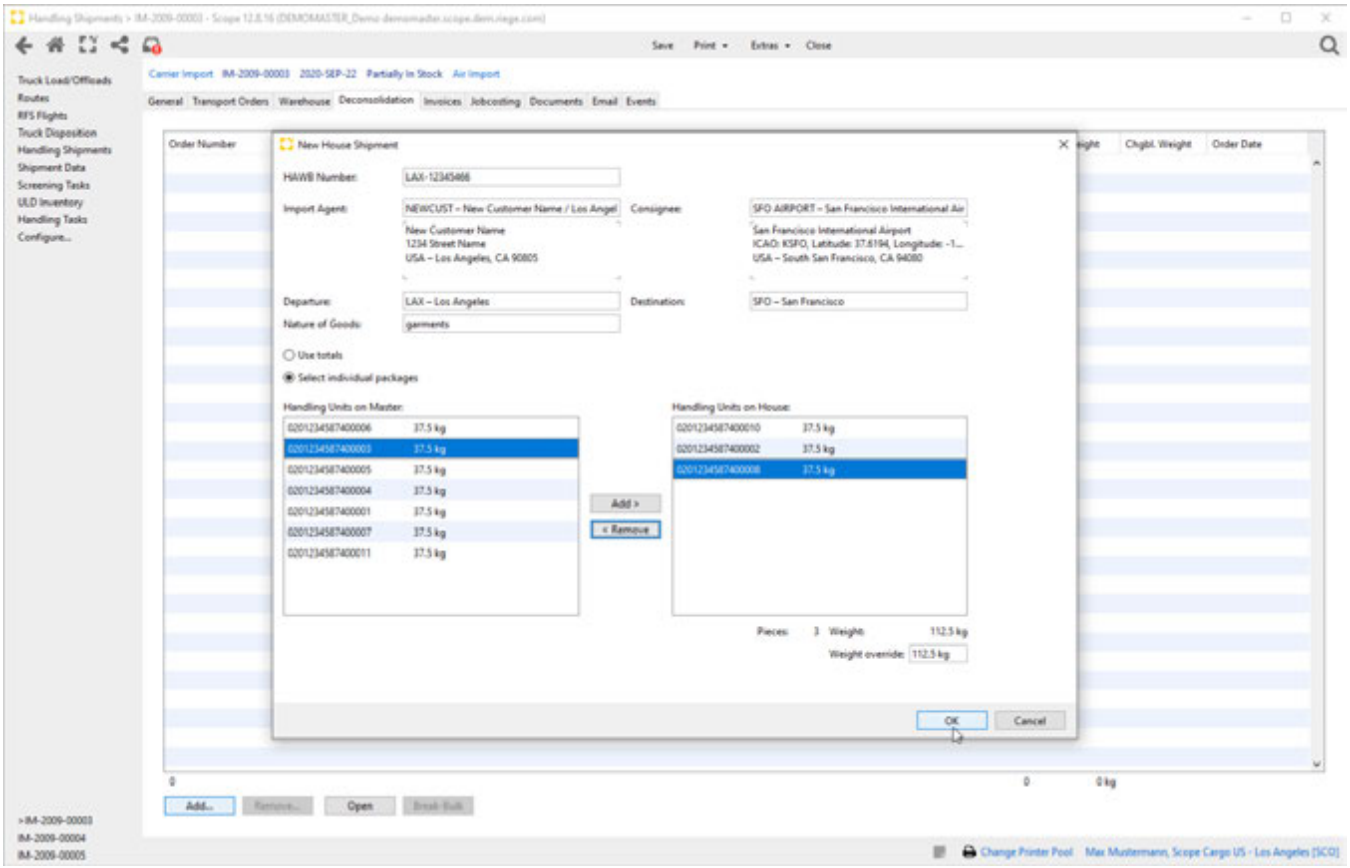
Deconsolidation

In case a Deconsolidation on the shipment must be done, the data of the house shipments can be entered by clicking on the button *ADD*.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

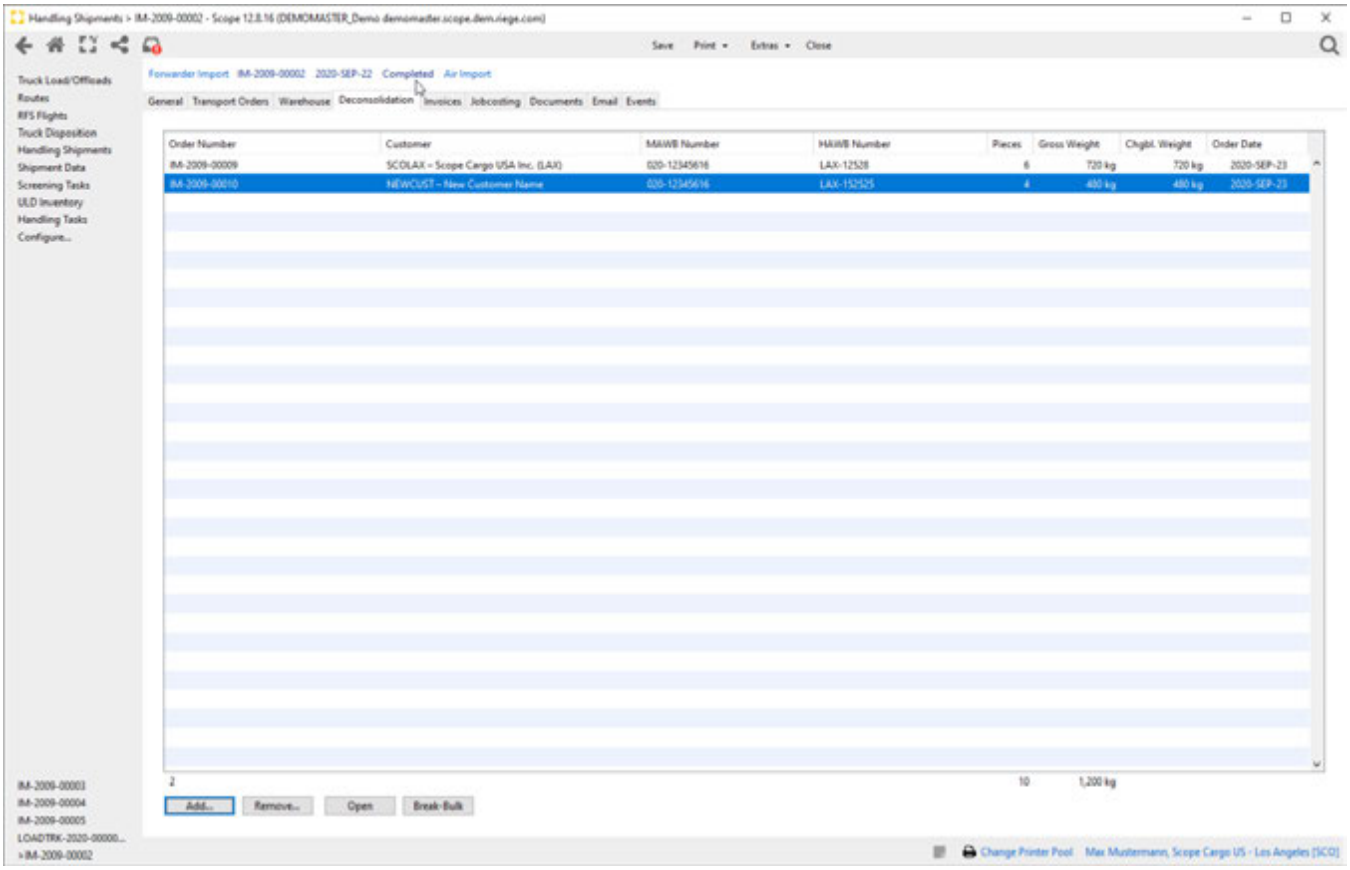


Data entry can be confirmed with button *OK*.

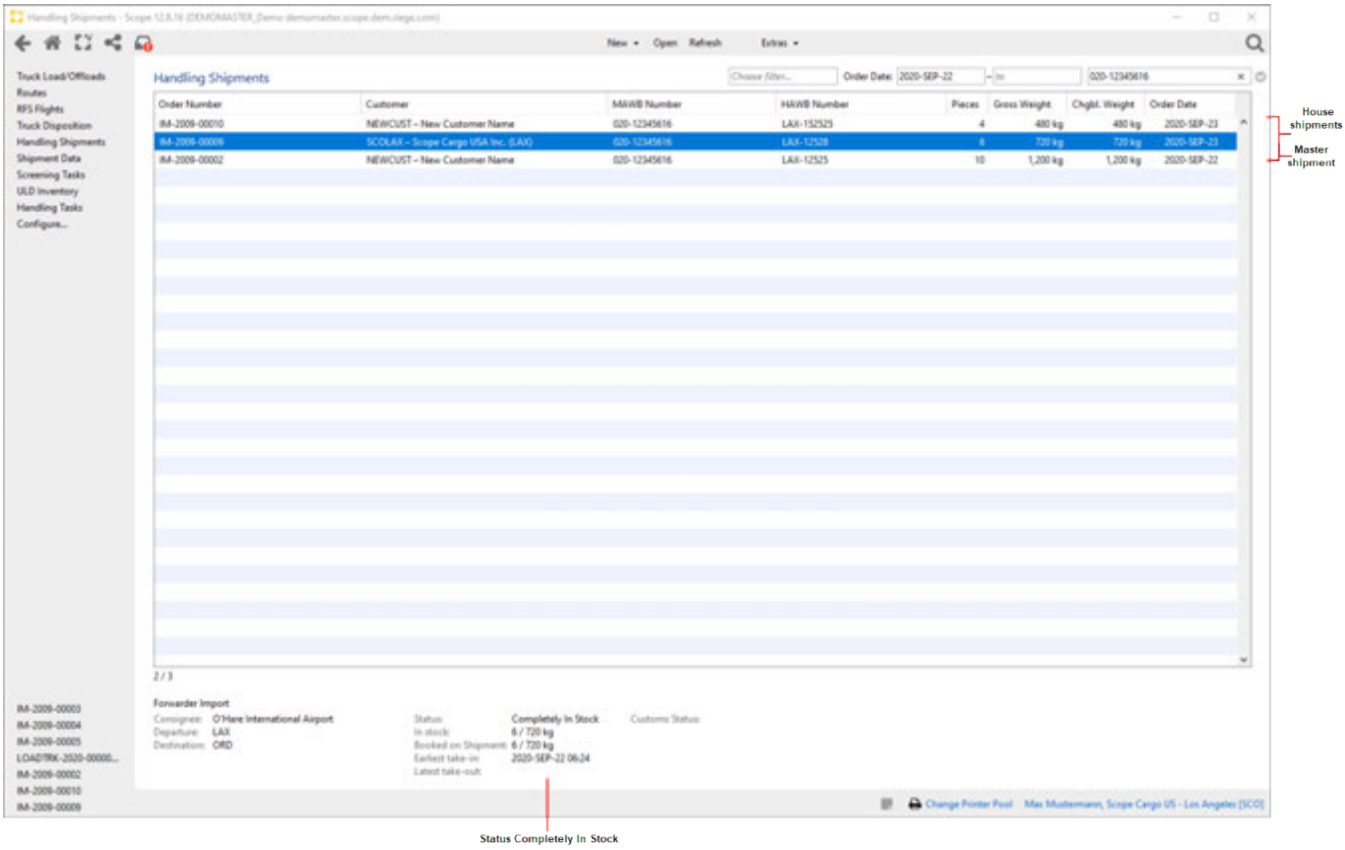


As soon as the Deconsolidation is finished, the shipment status changes to Completed.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



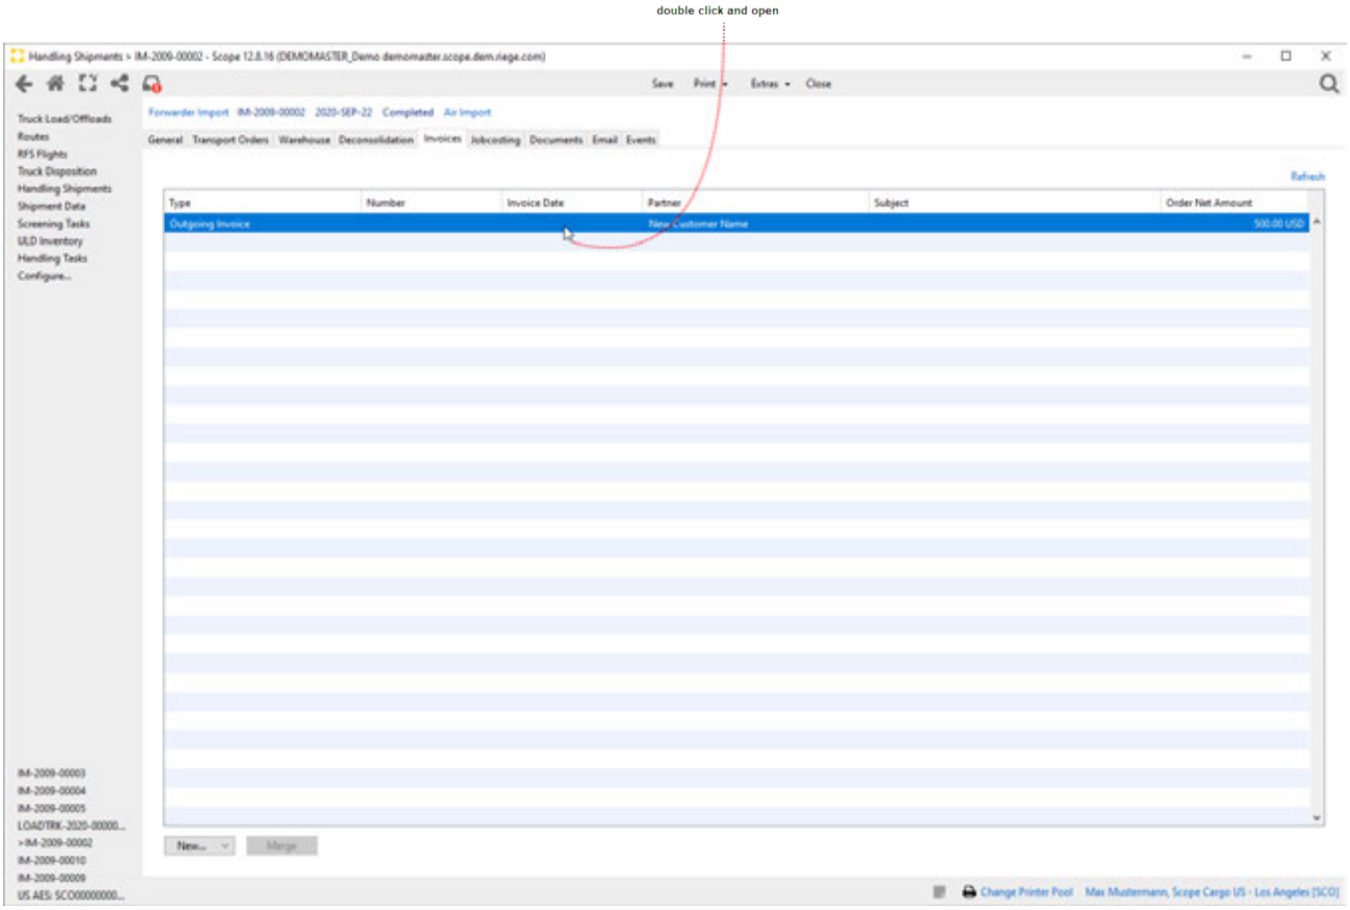
The new House shipments added, will also be displayed in the handling shipment overview, with shipment status Completely In Stock.



Invoices

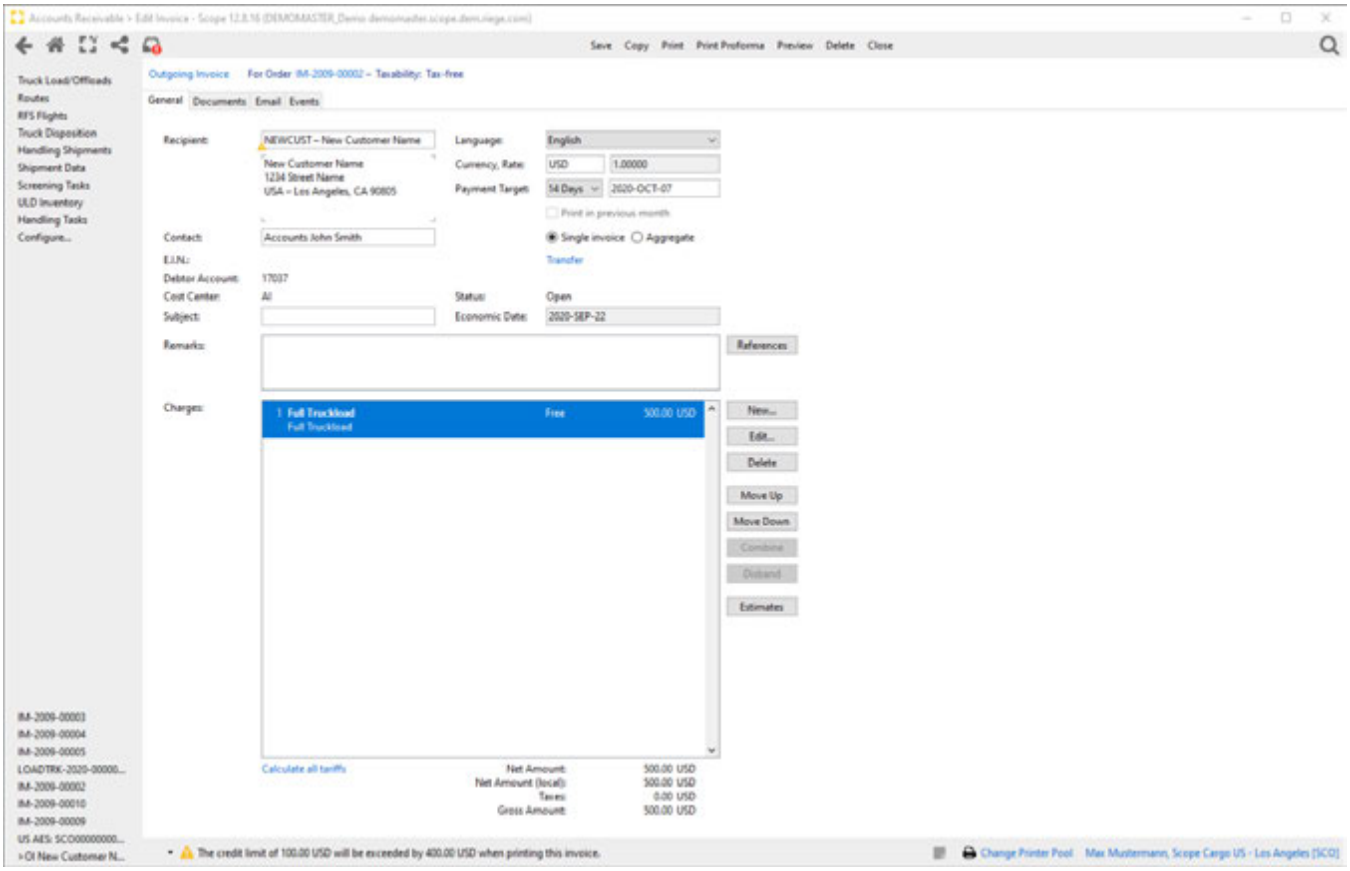
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

In the TAB Invoices it is possible to create invoices. All outgoing invoices for this shipment are displayed in this tab.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

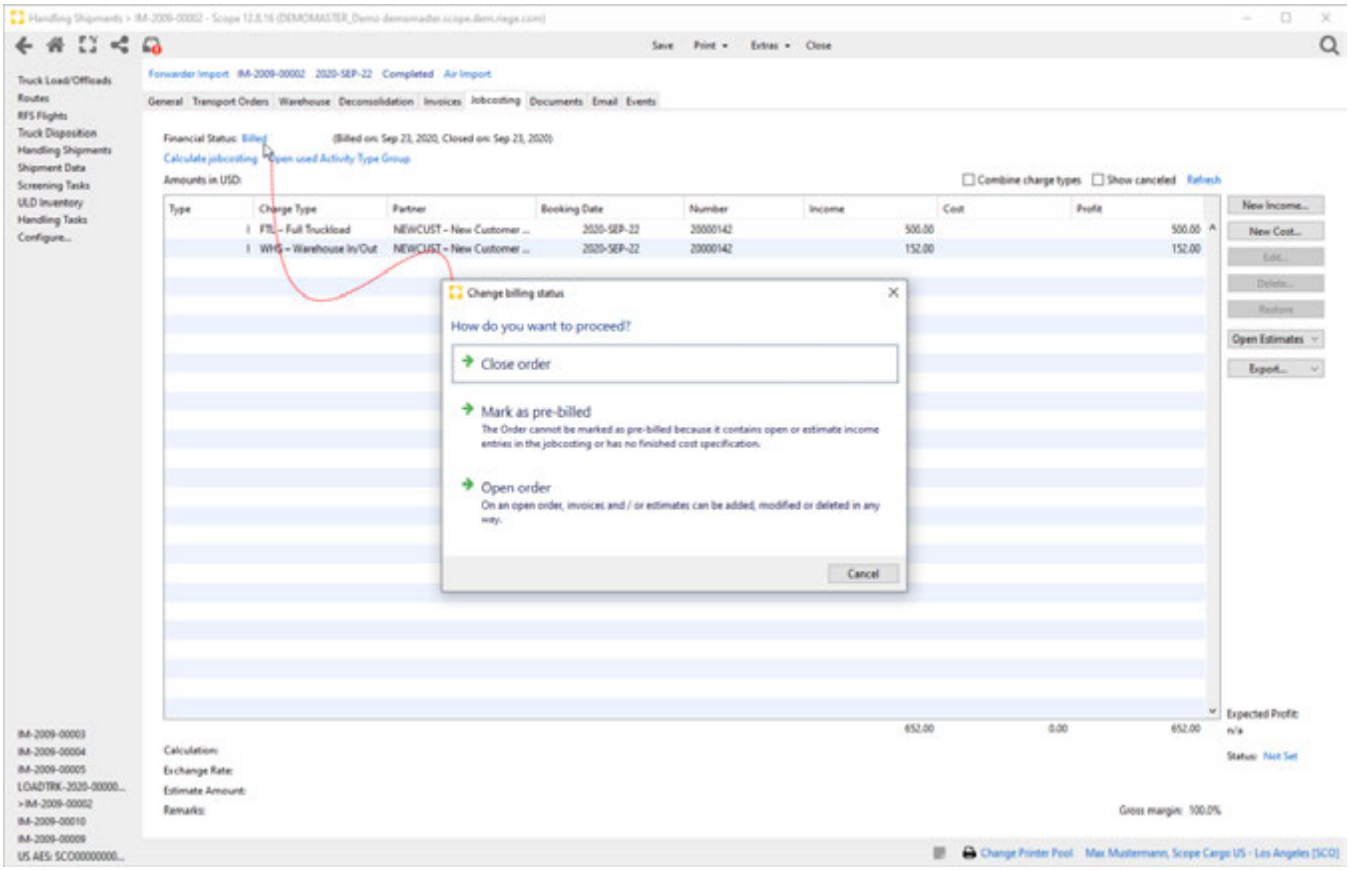
Invoices can be opened with a double click to be edited manually.



Jobcosting

The tab jobcosting displays all costs and revenues. This enables an overview of the profitability of the shipment. If the outgoing invoice or collective invoice has already been completed, the financial status automatically changes to the Status Billed. The Status can be adjusted by clicking on the shown status actionlink. This will *open* the change billing status window. For example, if no more outgoing invoices are created for the respective shipment or an existing invoice is no longer to be changed, e.g. after the monthly closing, the financial status can be manually set to Closed.

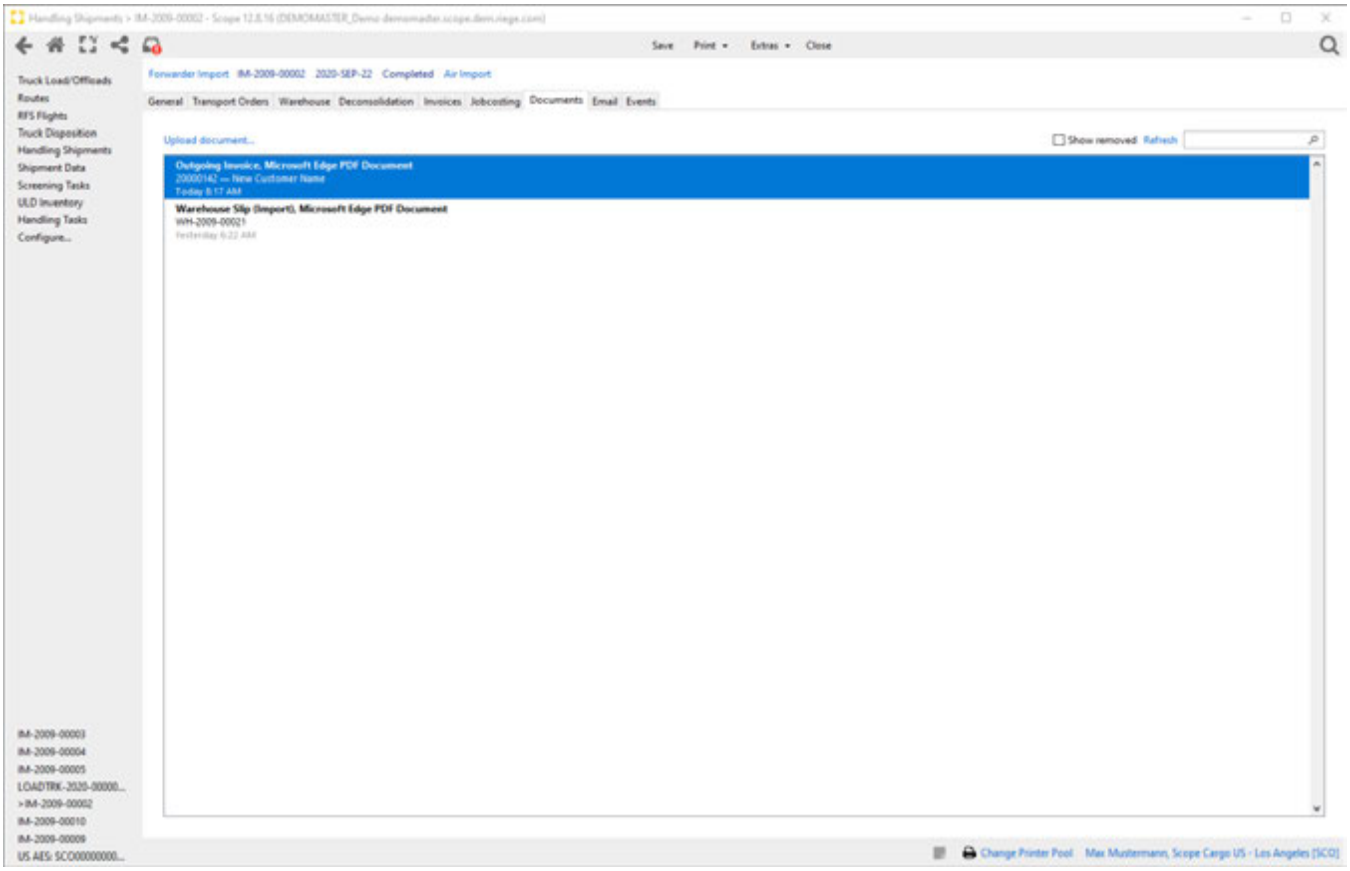
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Documents

The documents tab shows all documents that have been created and printed for the current shipment. Uploaded documents are also displayed. See also Documents - Functions - General.

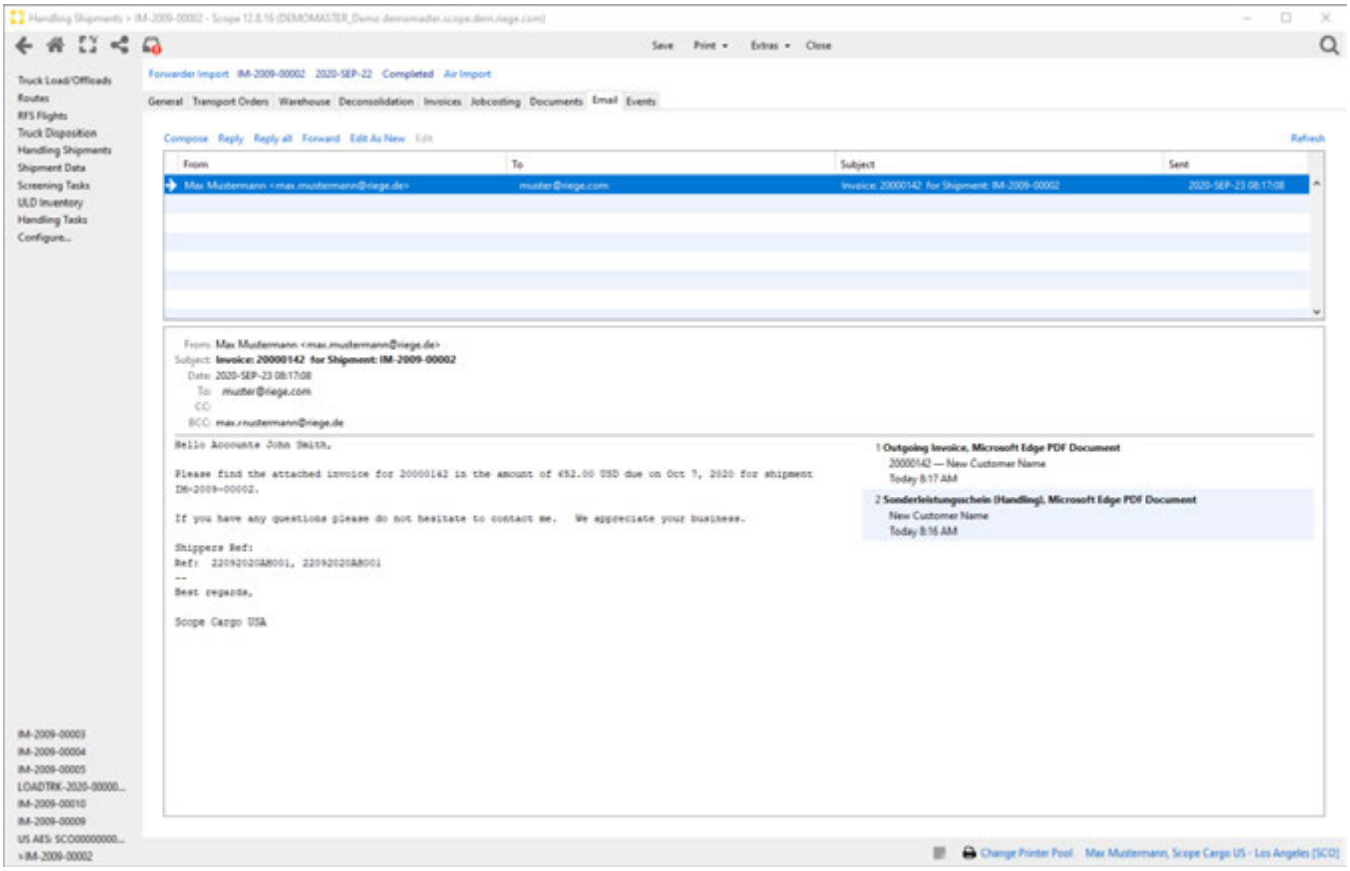
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Email

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment. See also E-Mail - Functions - General.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

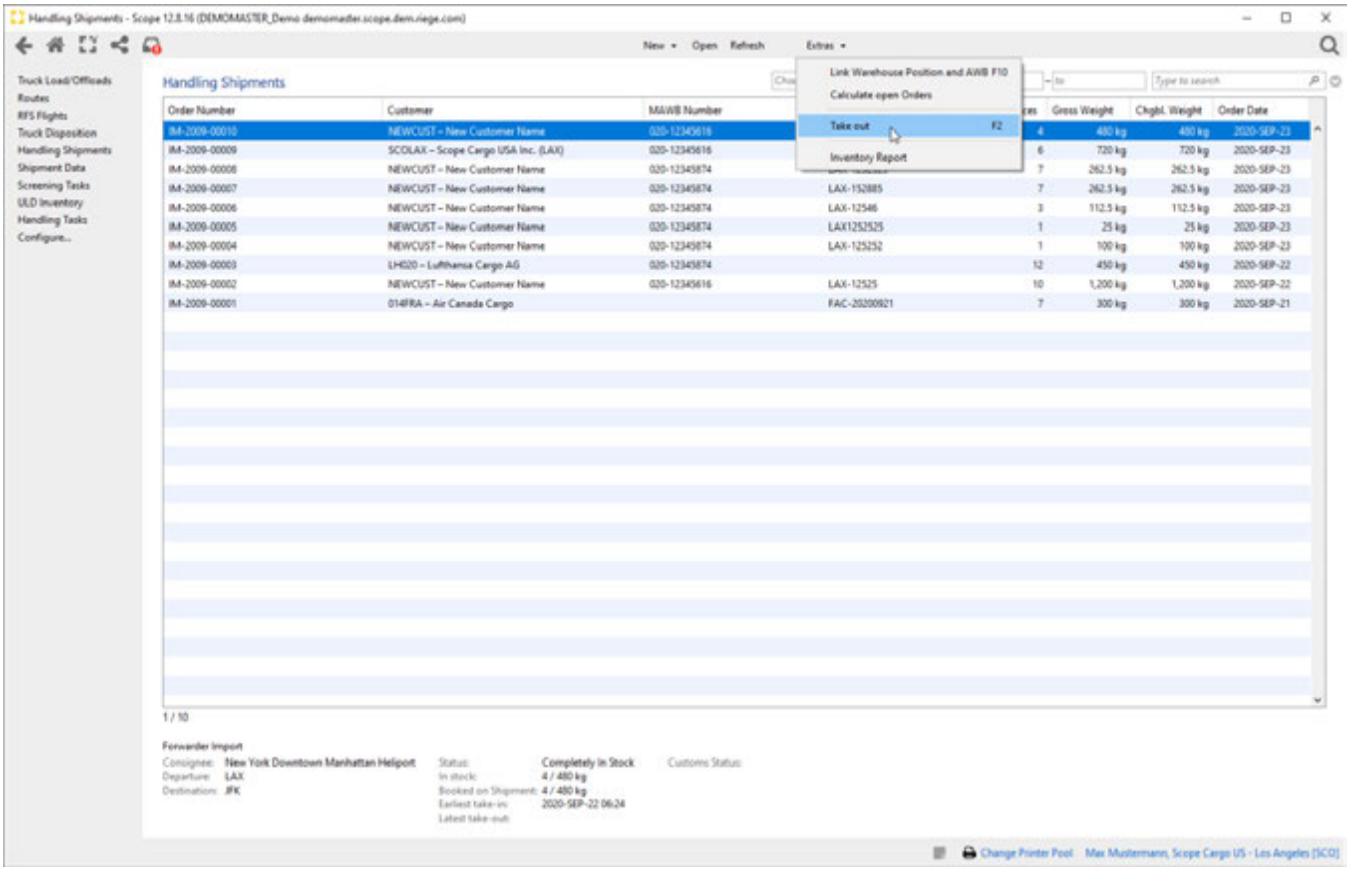


3.Take Out

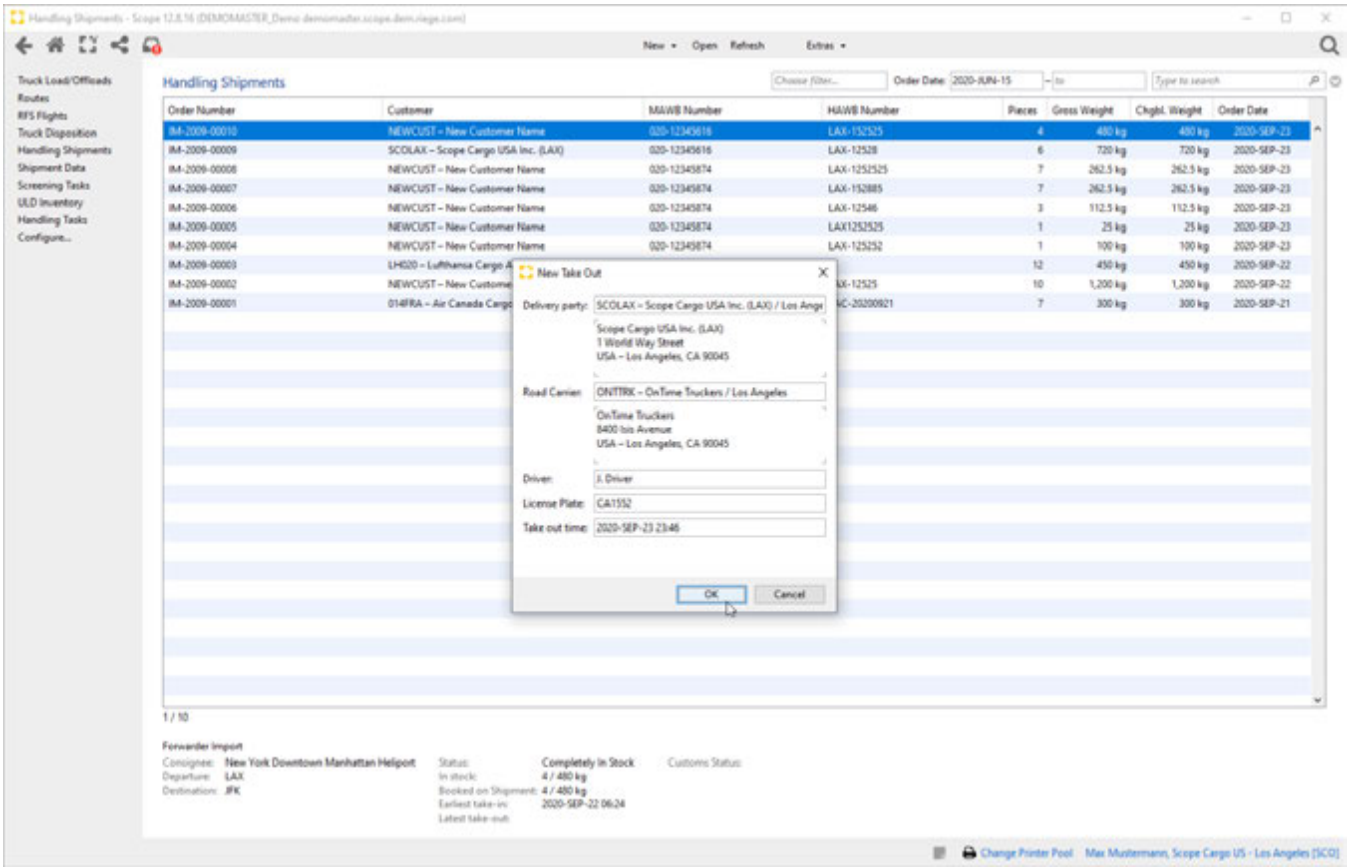
Take Out - Handling Shipment

A shipment can be taken out of the warehouse using the program action *Take Out* in the Scope handling shipment application.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



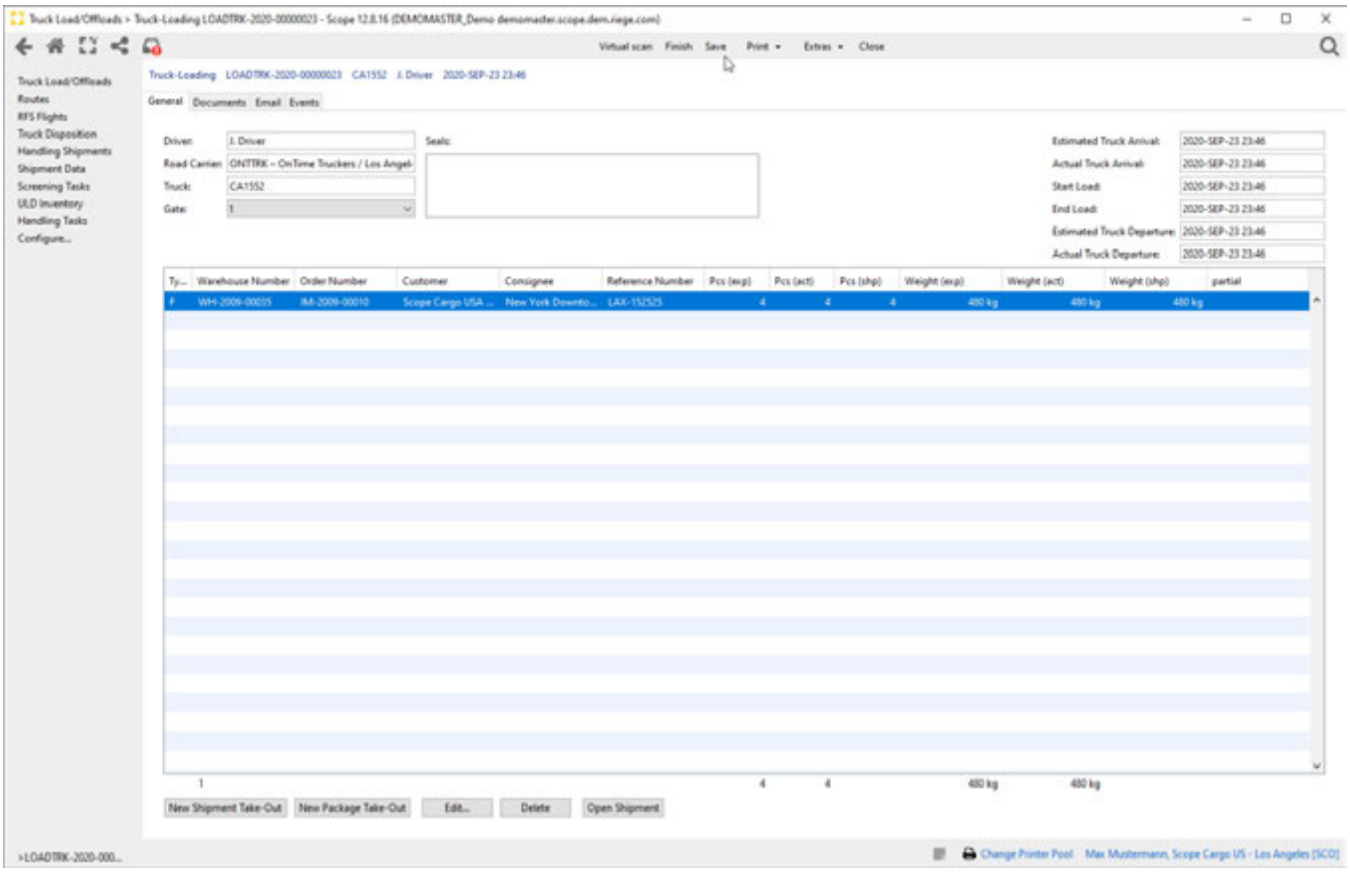
The program action *Take Out* opens the New Take Out Editor. If there is a customs status to be considered, there is a check in Scope wether the goods have a status that allows a take out.



Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Truck-Loading

As soon as the entry of the Take out data is confirmed with the OK button, the editor for a new Truck-Loading will be opened automatically. These data just need to be saved and Truck-Loading can be finished afterwards.



Take Out Part Shipment

In case that only a part of a shipment should be taken out, the shipment data in the Truck-Loading editor must be edited. With the button *Edit... the* shipmen t data will be displayed, and the corresponding packages need to be set to the status Expected.

Security - Set up - Handling

- Introduction
- Description

Introduction

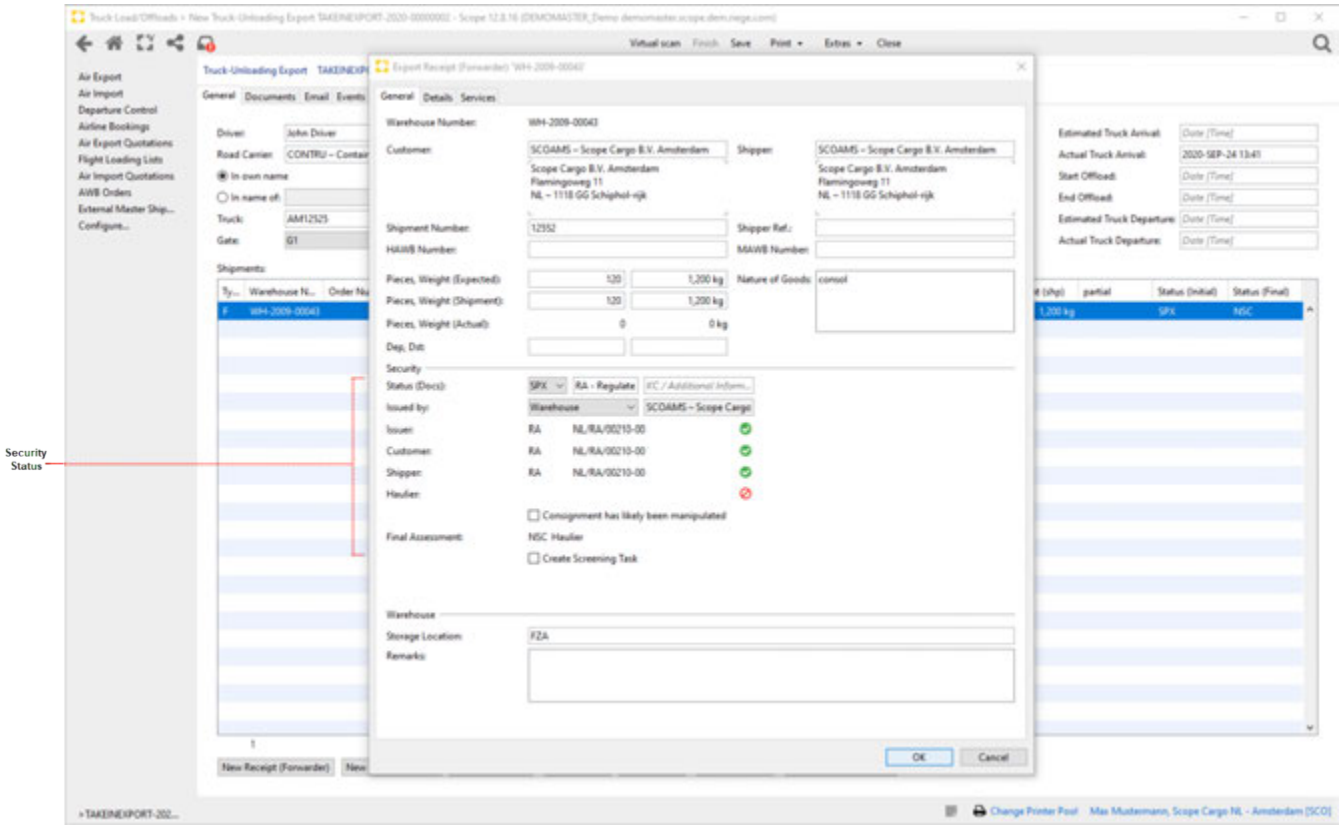
Scope offers various program functions to ensure the careful validation and documentary requirements when processing air freight shipments regarding air freight security. The security set up must be set up for each branch.

Description

When entering data of a warehouse entry, Scope validates the partner addresses against the Union database on supply chain security (RA/KC database) automatically, or if necessary, a manual validation can also be done. As soon as the automatic query is carried out, the security status of a shipment is recalculated. The result of the query is automatically printed on the warehouse receipt and also included in the handling shipment. The query directly provides the user with information as to whether the security status of the shipment may be endangered by one of the business partners involved. If one of the addresses (shipper, customer, trucker) in a new warehouse entry is not classified as secure - If maybe no RA/KC number is recorded in the master data (Regulated Agent - Roles - Business Partner - Maintenance and Secure Shipper - Roles - Business Partner - Maintenance), then the security status is set to not secure and this result will be displayed in the warehouse entry editor at once. See detailed information regarding security set up and functions in Scope here: Air Freight Security. For Haulier ID`s the check must be done manually.

- New Entry Forwarder
- New Entry Airline

New Entry Forwarder

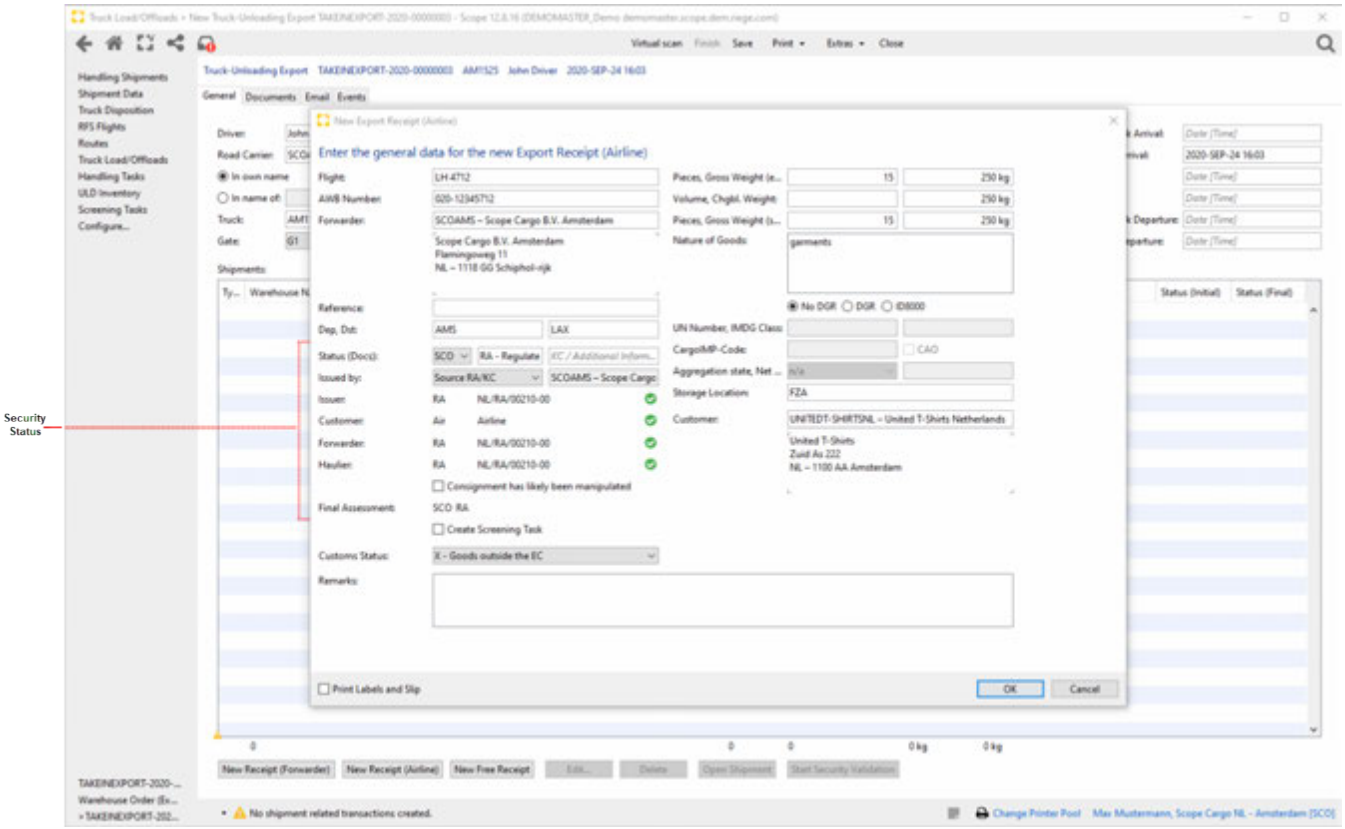


Issued by			
Unknown	column issuer	⛔	not secured, security status is not comprehensible
Customer	column issuer	✅ or ⛔	✅ customer is RA or KC ⛔ customer is no RA or KC

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

		⛔	
RA / KC	Shipper is RA or KC	✅	For example: The shipper is a forwarding company , with RA Status For example: The shipper is the original shipper of the goods with KC
	Versender ist *kein* RA oder KC	⛔	Shipment is not secured
Warehouse	Warehouse of the aHandling Agnt (RA Status)	✅	For example: A shipment es delivered to the warehouse with status not secured. Handling Agent applies a security measure.
Others	other RA`s	✅	For example: A forwarding company forwards a shipment to a 3rd party, that applies a security measure, for having the goods delivered afterwards to the Airline with Status SPX.

New Entry Airline



Issued by			
Unknown	column issuer	⛔	not secured, security status is not comprehensible
Customer	column issuer	✅	With Airline Shipments the customer is **always** an Airline und therefore the shipment status is secured

Services - Handling

- Introduction
- Description

Introduction

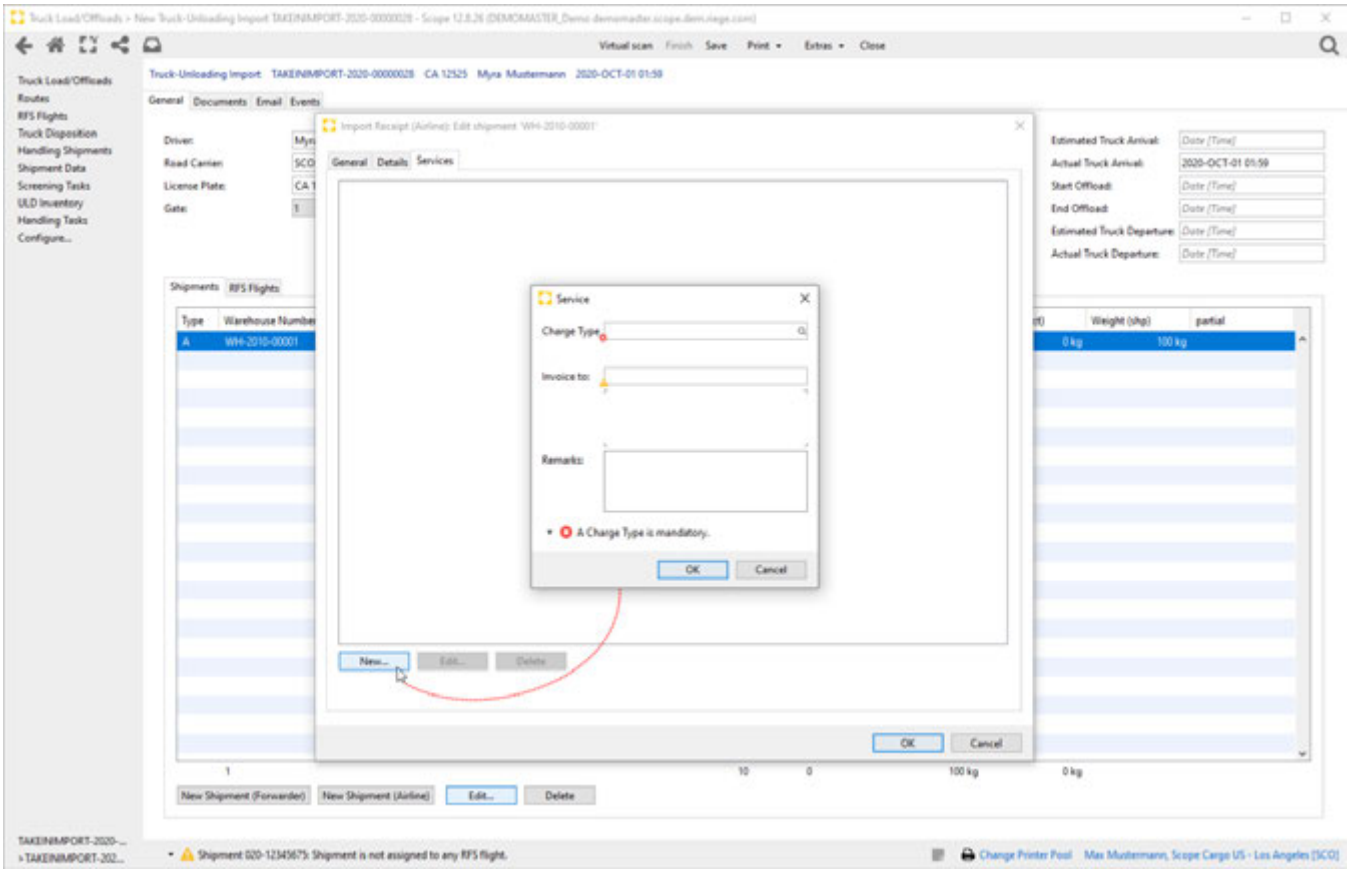
When handling a shipment in a warehouse, Special Services are types of costs that must be considered for the billing. In the TAB Services the user has to state that a special service has occurred. To whom the special service is billed and how high the costs are, is either determined automatically on the basis of the stored master data or must be added manually to the invoice. A proper setup of charge types is essential to obtain accurate job costing from the system.

Description

- New...
- Charge Type
- Invoice to
- Remarks

With the button *New...* , e.g. in the input dialog *Import Receipt (Airline)* for the handling of a shipment in the Handling Truck Load/Offloads application, the information regarding special services can be entered in the input dialog *Service*.

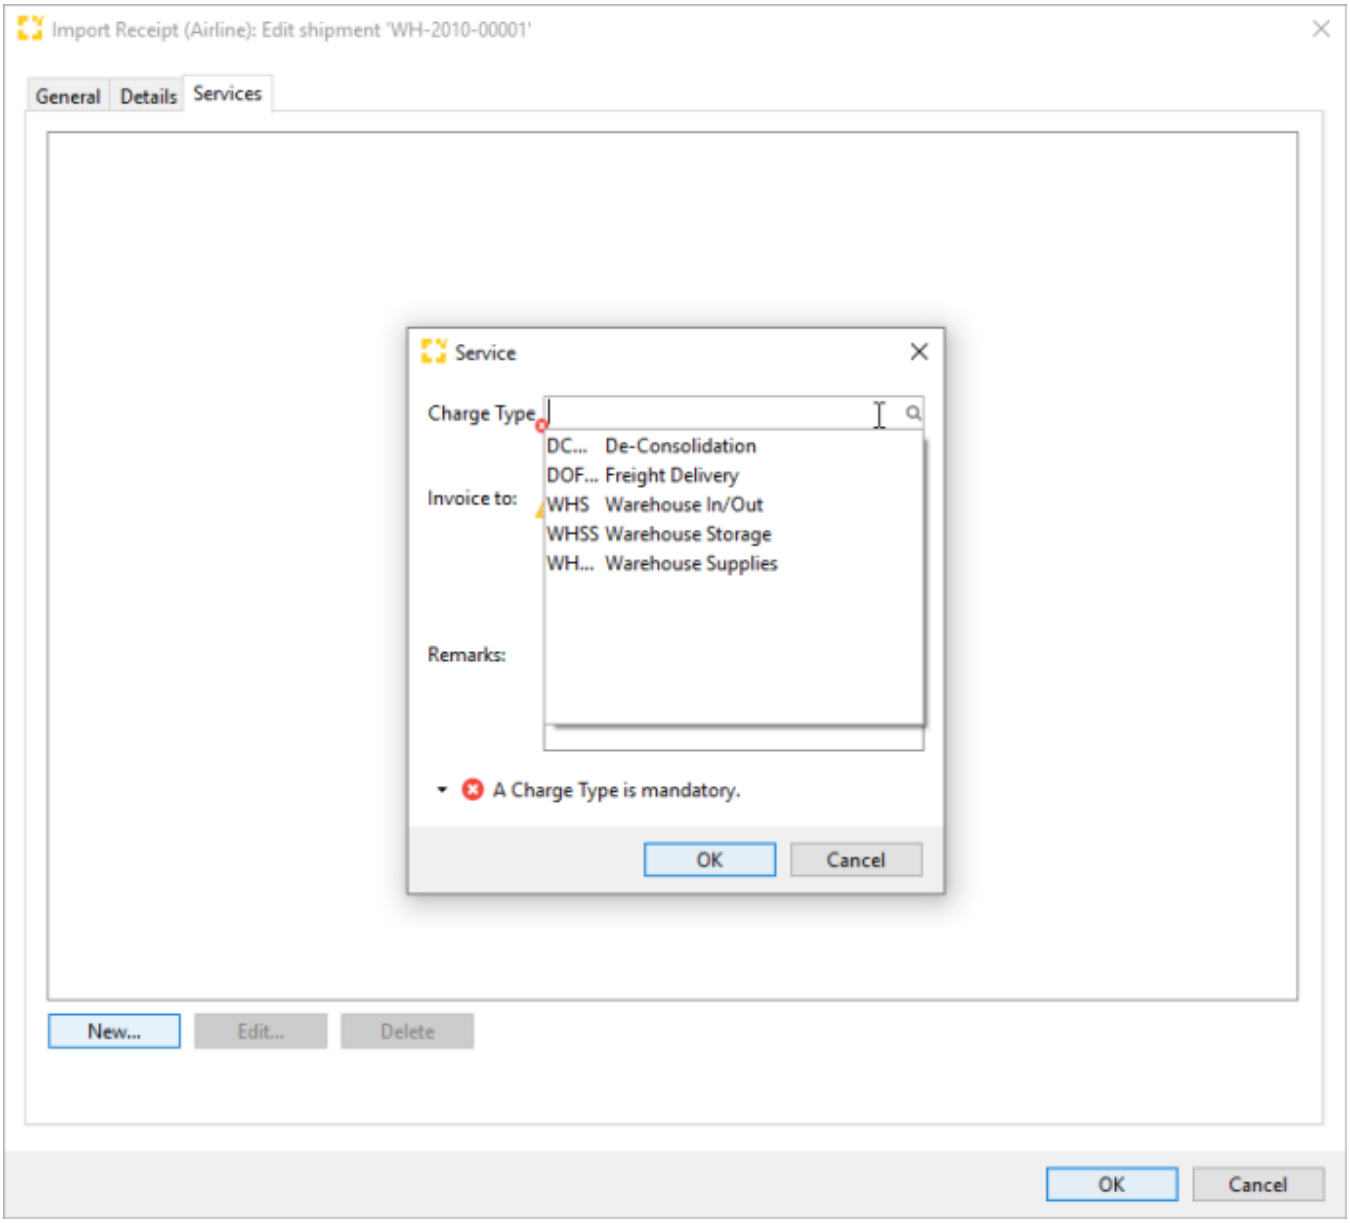
New...



Charge Type

The user can choose from a list of charge types that are defined as special services.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Invoice to

The user can indicate here to whom this special service is to be charged. Since the user often does not know at this point in time to whom the service is to be calculated, a standard value can be stored in the charge type profile. This standard value can be overwritten at this point.

Remarks

This text field can be used for comments that will be printed in the forms.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

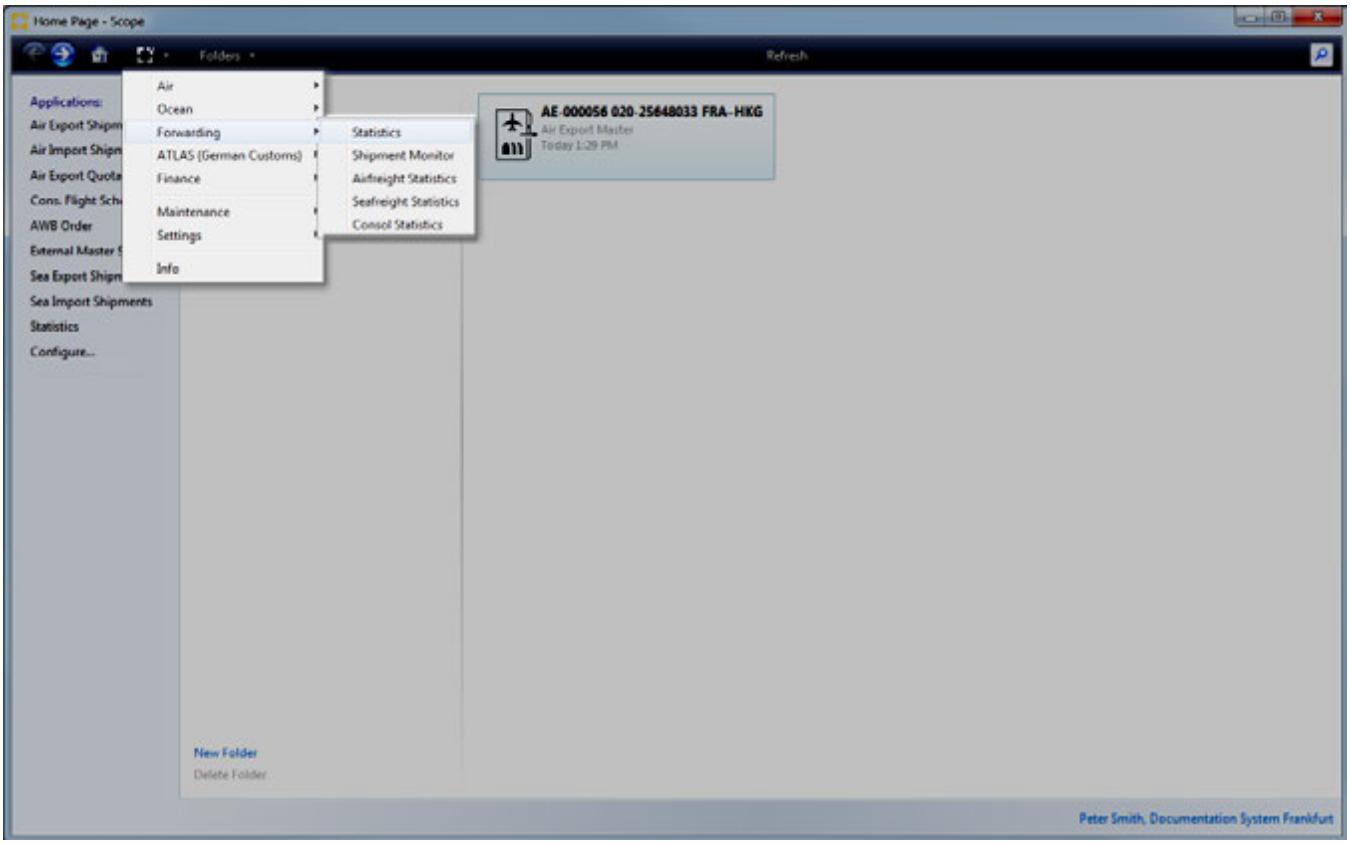
Forwarding

- Introduction
- Description

Introduction

Operational activities that are not specific to air or sea are grouped in the *Forwarding* section.
Additionally, all shipment relevant statistics can be found here. For financial reporting please choose the menu "Finance" and then "Reporting".

Description



The overall functionality of filtering data and narrowing the search runs are described in the section Advanced Filter Functions in detail.

The *Forwarding* applications are described in detail in the dedicated pages as attached below.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Aircraft On Ground

- Introduction
- Description

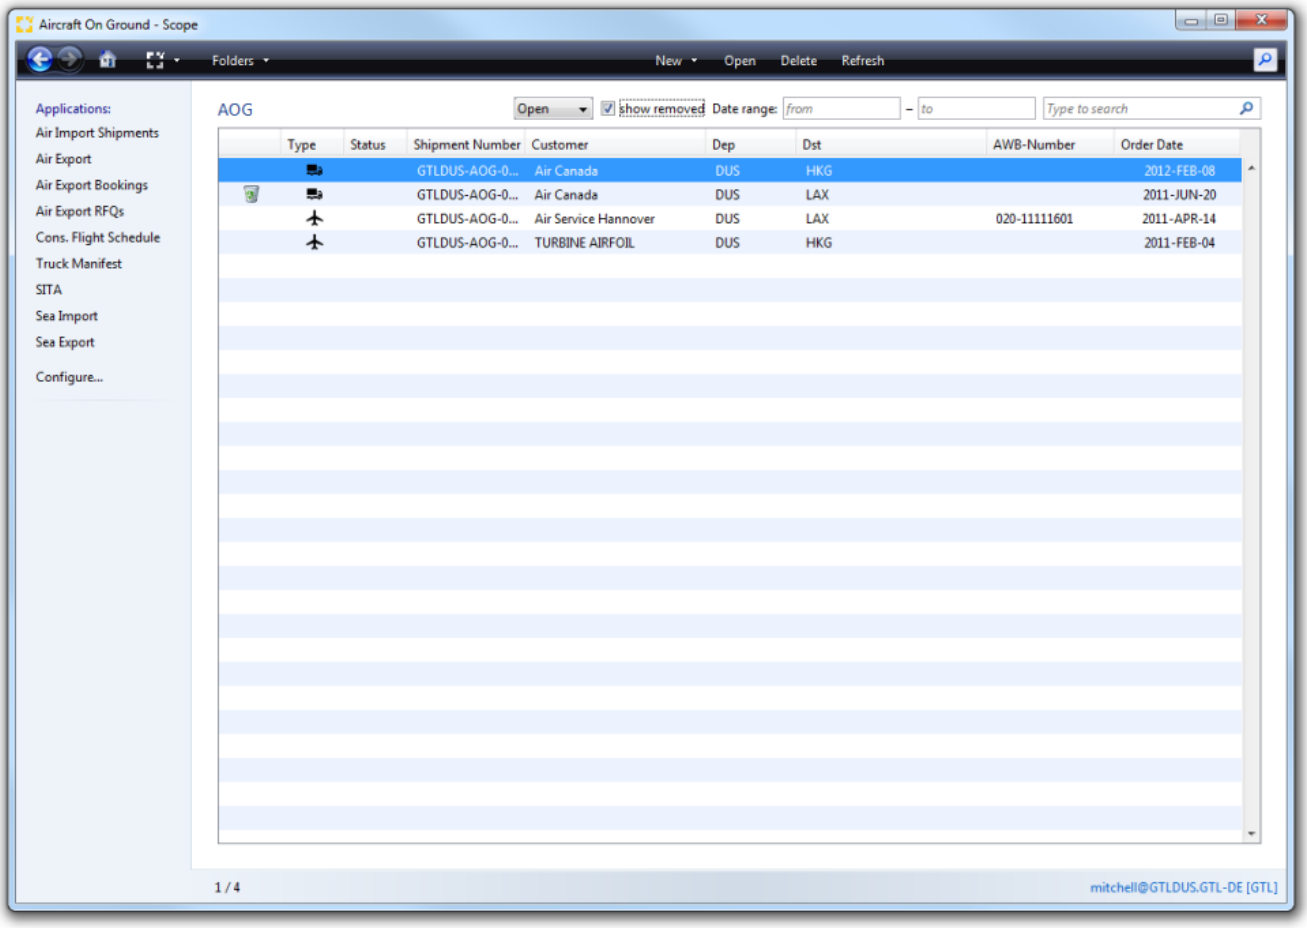
Introduction

The term Aircraft On Ground (AOG) is an aviation term used by pilots to indicate that an aircraft is not in airworthy condition and must be grounded. Non-operational commercial aircraft incur substantial expenses and inconveniences for the owner and must be restored to active service swiftly. A sector of the freight industry has become established to meet the requirements of the aviation industry in expediting aircraft parts to their destination. These **AOG** shipments are set apart from regular freight shipments since AOG shipments generally receive maximum priority regardless of cost by all carriers.

Scope provides an application designed for AOG operations which allows AOG shipments to be quickly and easily cleared. During creation of an AOG shipment the best and fastest method of shipment is frequently uncertain and the AOG module allows shipments to easily migrate from air to trucking modes of transport as circumstances dictate.

Description

The AOG module presents the standard overview of AOG shipments, comprising a menu bar with actions, a search and sort header and a main window displaying shipments in summary form.



New

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

With ***New - Air*** a new AOG Airfreight shipment can be created.
With ***New - Road*** a new AOG truck shipment can be created.

Open

Opens the AOG shipment highlighted in the overview. Alternately, the shipment may be *double clicked* to open it.

Delete

Deletes the AOG shipment highlighted in the overview. The shipment will not be physically deleted, but is marked as inactive. Note the show removed optio n described below. A deleted AoG shipment may be restored by editing it.

Refresh

Updates the index to ensure the latest AOG shipments are visible in the overview.

Show deleted

This box may be checked to include previously deleted AOG shipments in the overview. These deleted shipments may be restored by opening them.

Date rage: from / to

These date fields are used to search for AOG shipments according to the date they were created. If left blank, all AOG shipments matching other search criteria will appear.

Type to search

This is a full text search field. Any detail of the AOG shipment may be entered to narrow the search for the required shipment.

AOG Summary table

The listing shows all *air* shipments using the  icon and *road* shipments using the  icon in the left hand column. In addition the status, shipment number, customer, departure (Dep), destination (Dst), AWB number and order date are displayed.

When creating or changing AOG shipments the functions of the AOG editor are described in the following chapters:

- Documents - AOG - Forwarding
- E-Mail - AOG - Forwarding
- General - Air - AOG - Forwarding
- General - Road - AOG - Forwarding
- Jobcosting - AOG - Spedition
- Vouchers - AOG - Forwarding

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

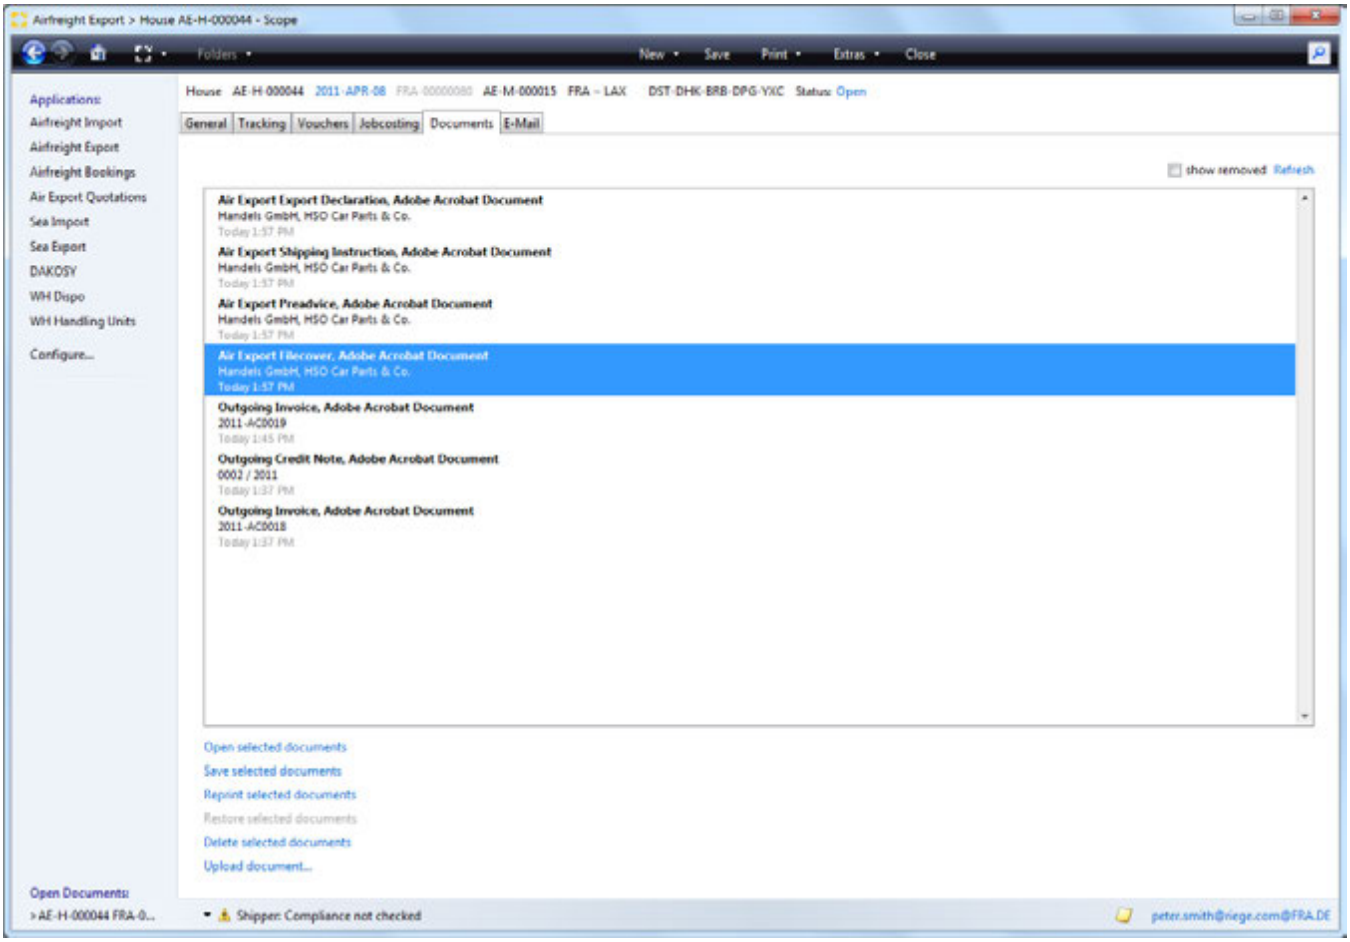
Documents - AOG - Forwarding

- Introduction
- Description

Introduction

The documents tab shows all documents that have been created and printed for the current shipment. These documents can be opened, downloaded, reprinted, deleted and some documents may be uploaded to web-tracking. Uploaded documents are also displayed.

Description



Document Overview

This area displays all documents that are associated with this shipment or order. The name of the document together with the type of document and creation date are shown. The current version of a document is always displayed. By selecting the show deleted check box, all previous or deleted versions of a document will be shown. These are displayed in ~~strike-through~~ text.

Show removed

Documents that have been previously deleted will be displayed.

Refresh

Updates the current list of documents.

Open selected documents

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

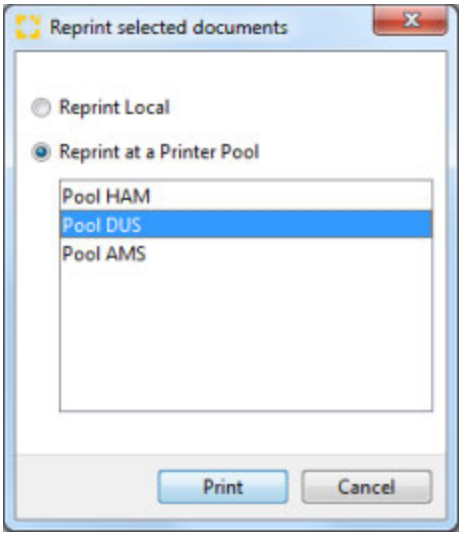
Opens any document currently highlighted in the list. Documents will open according to the file type associations of the local pc. For example Adobe Acrobat Reader will be used to open PDFs if that is the program associated with PDFs on the local pc.

Save selected document

Save the selected document to a drive on the local PC. A folder navigator will appear to allow navigation to the correct folder.

Reprint selected documents.

Opens a print application that allows the document to be printed to the local printer, or to a printer in an available print pool. It is possible to setup the print pools of remote offices to be accessible for printing to these remote offices.



Local printer

Print the document on the predefined default printer.

Print to printer pool

Allows selection of a printer pool from the list displayed.

Printer-Pools (List)

The desired printer pool can be selected from the list. Documents can be set to print to particular printers automatically.

Print

Print the document to the selected printer.

Cancel

Cancel the operation without further action.

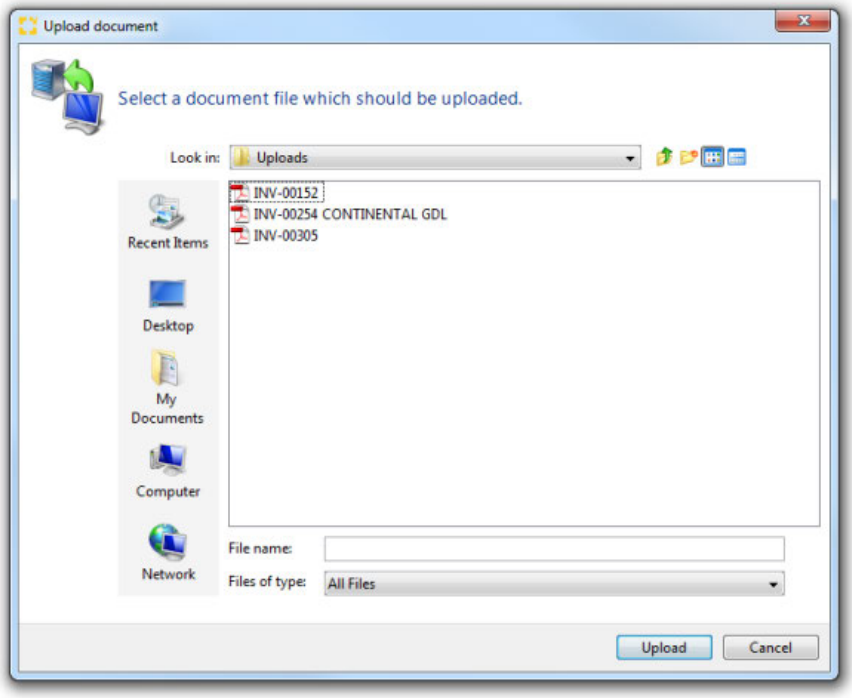
Delete/Restore selected document

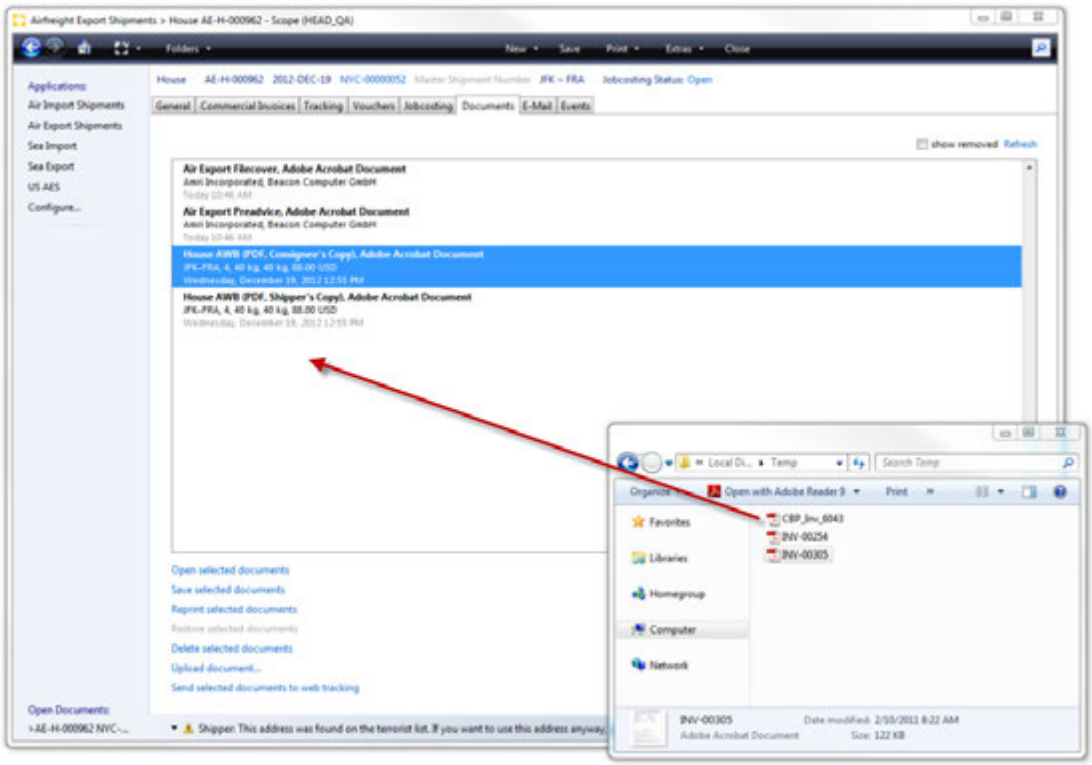
The document highlighted in the list will be deleted from view. Documents are not physically deleted but marked as inactive and therefore not visible. To view all documents including inactive documents, check the show removed box to the right above the document listing. If a document has been deleted, it can be restored by using the show removed check box, highlighting the inactive document and then selecting the *Restore selected documents* action.

Upload document...

Opens a file dialogue window which can be used to upload an external file to the current shipment. Alternately, navigate to the document on the desktop and drag and drop the document into the documents tab.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

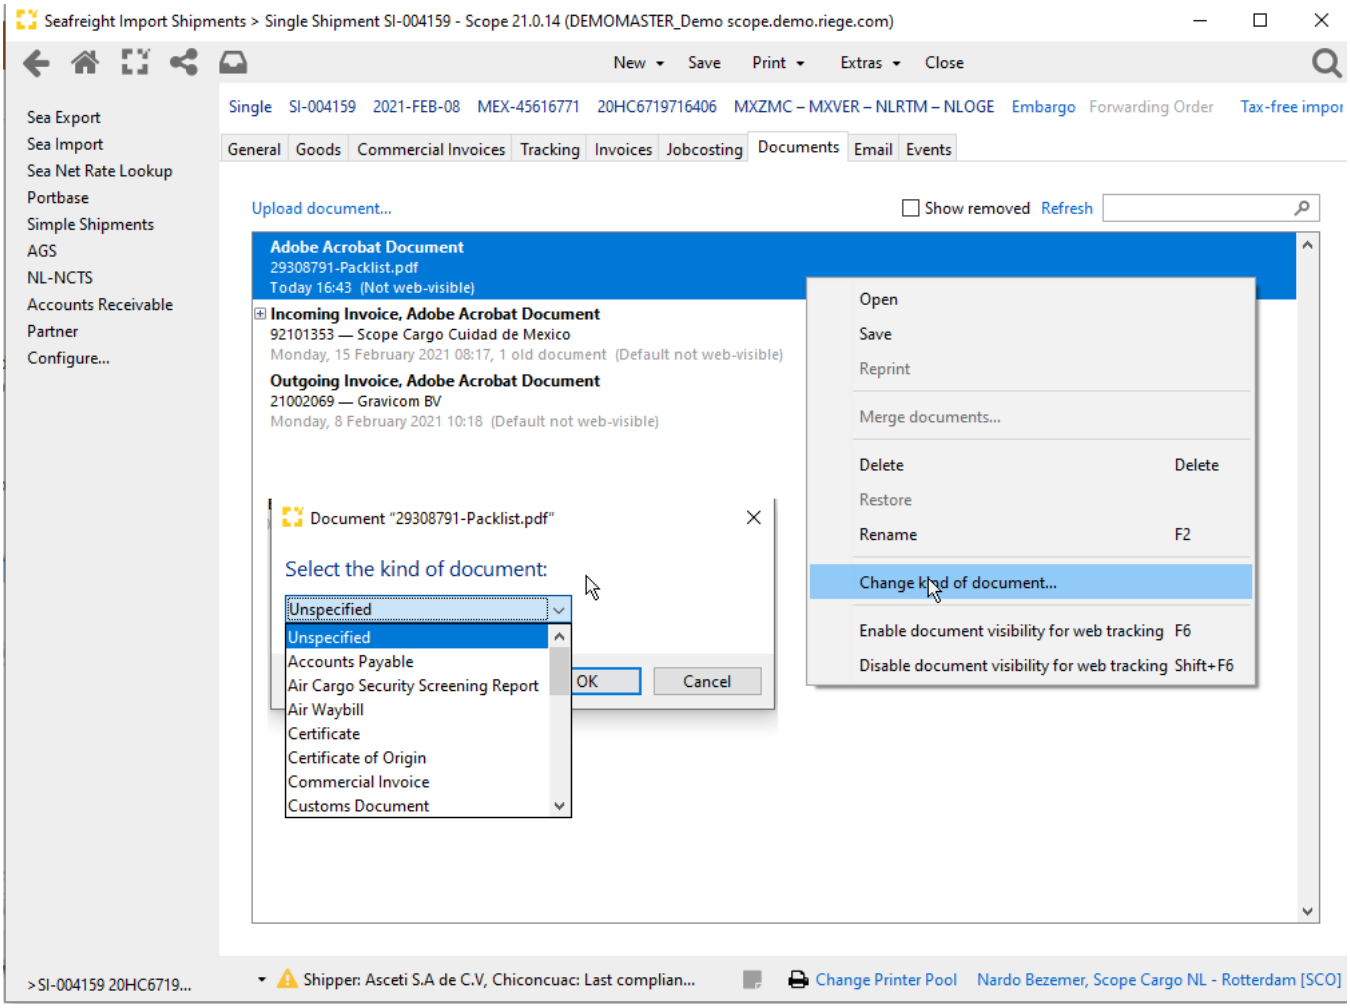




Assign Kind of Document type

During upload or via a right mouse click ,it is possible to set a document kind to the uploaded documents
when a uploaded document has a proper kind set, it will be available to automated email processes (invoices, prealerts)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Available kinds are :

- Accounts Payable (incoming invoice)
- Air Cargo Security screening report
- Air Waybill
- Certificate
- Certificate of Origin
- Commercial Invoice
- Customs document
- Dangerous Goods Declaration
- Forwarding instructions
- Goods receipt
- House Bill of lading
- Image
- Insurance Certificate
- Master Air Waybill
- Master B/L (Draft)
- Master B/L
- Packing List
- Proof of delivery
- Shipping documents
- Shipping Instructions
- Waybill

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

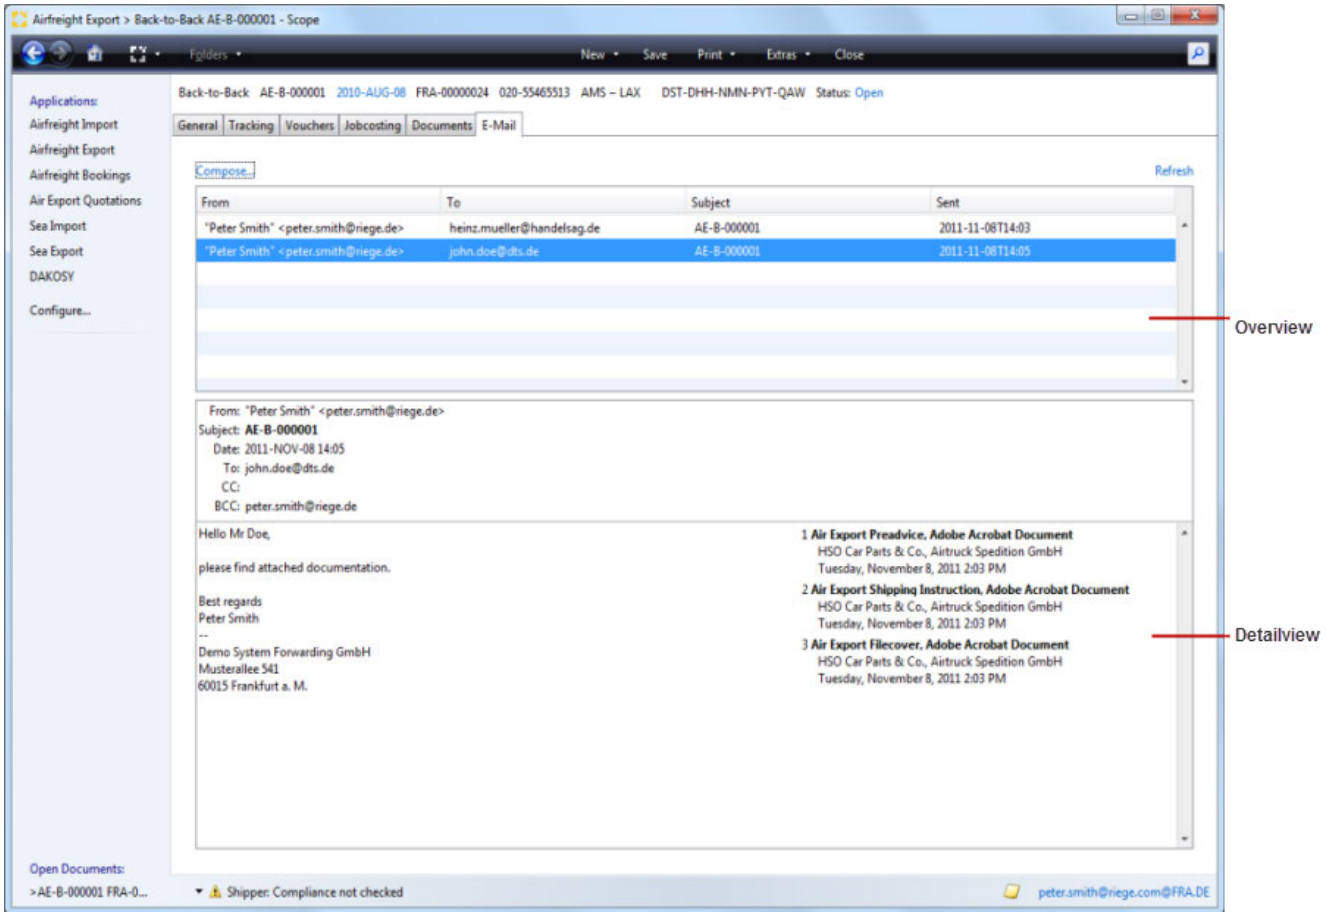
E-Mail - AOG - Forwarding

- Introduction
- Description

Introduction

In most application there is an E-mail function. This allows the quick creation of emails related to the shipment and to easily attach documents stored within the shipment.

Description



New E-Mail...

Opens the e-mail editor to create a new e-mail and send it.

Refresh

Refreshes the list of existing emails

Overview

An overview of all pre-generated e-mails with sender, recipient, subject and date of shipment all displayed. The marked email will be displayed in detail in the lower part of the screen.

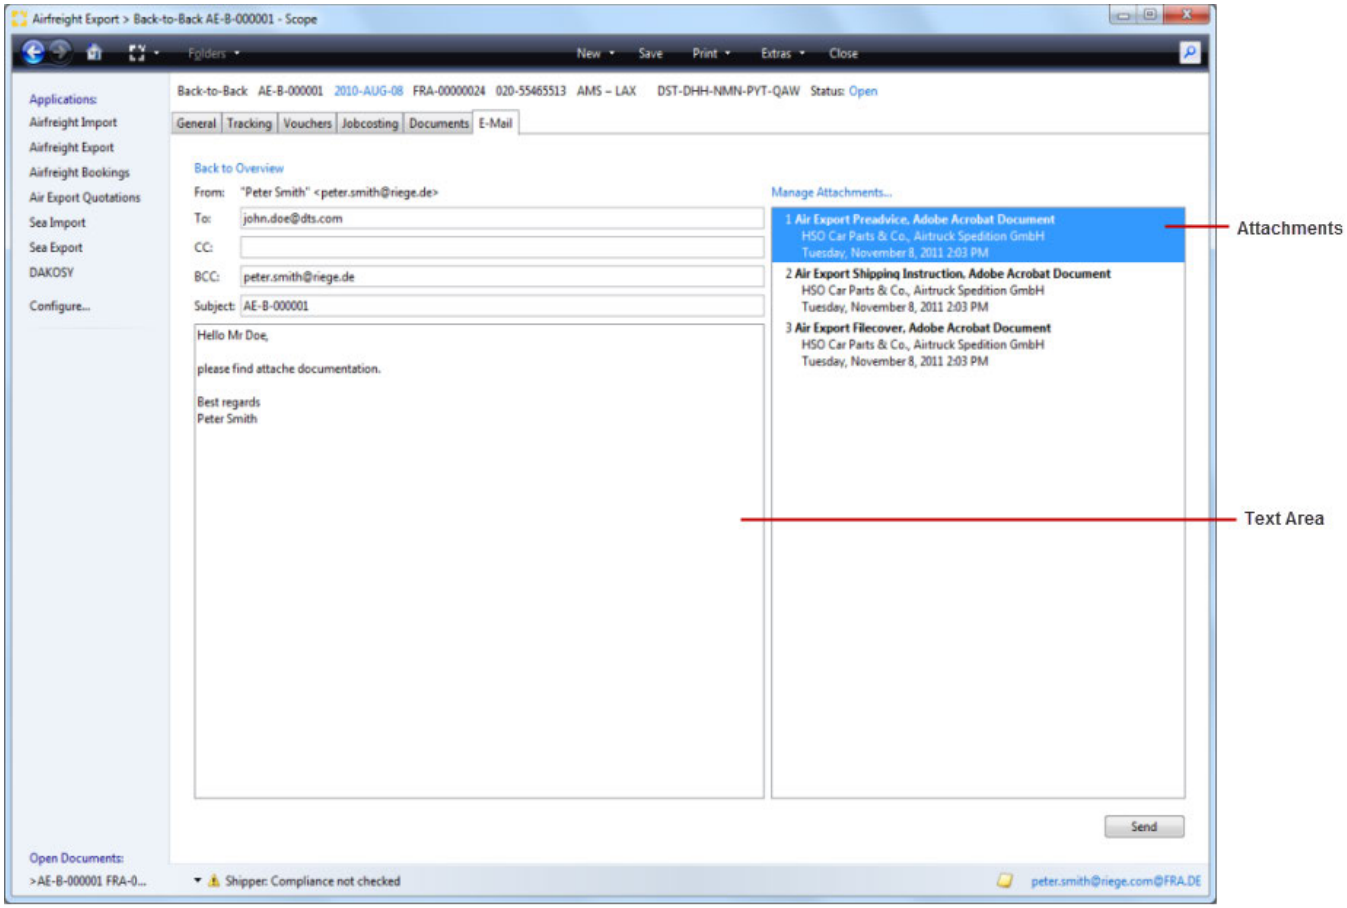
Detail section

In this area, displaying the marked email in the overview shows, all parties receiving the mail, the body text of the mail and any attachments.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

E-Mail Editor

selecting the "compose" option produces the email editor.



Back to overview

this will return the view to the e-mail overview screen.

From

E-mail sender. The sender name and e-mail address is taken from the user profile of the current user.

To

E-mail recipients. The e-mail address of the recipient can be entered here. Multiple e-mail recipients can be entered if separated by commas.

Copy

E-mail recipient or recipients to which a copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas.

Blind Copy (BCC)

E-mail recipient or recipients to which a blind copy of the e-mail will be sent. Multiple e-mail recipients can be entered if separated by commas. By default, the e-mail address of the sender or logged on user is used so that the user will automatically receive an e-mail copy in their external e-mail program.

Subject

The subject of the email that is being composed.

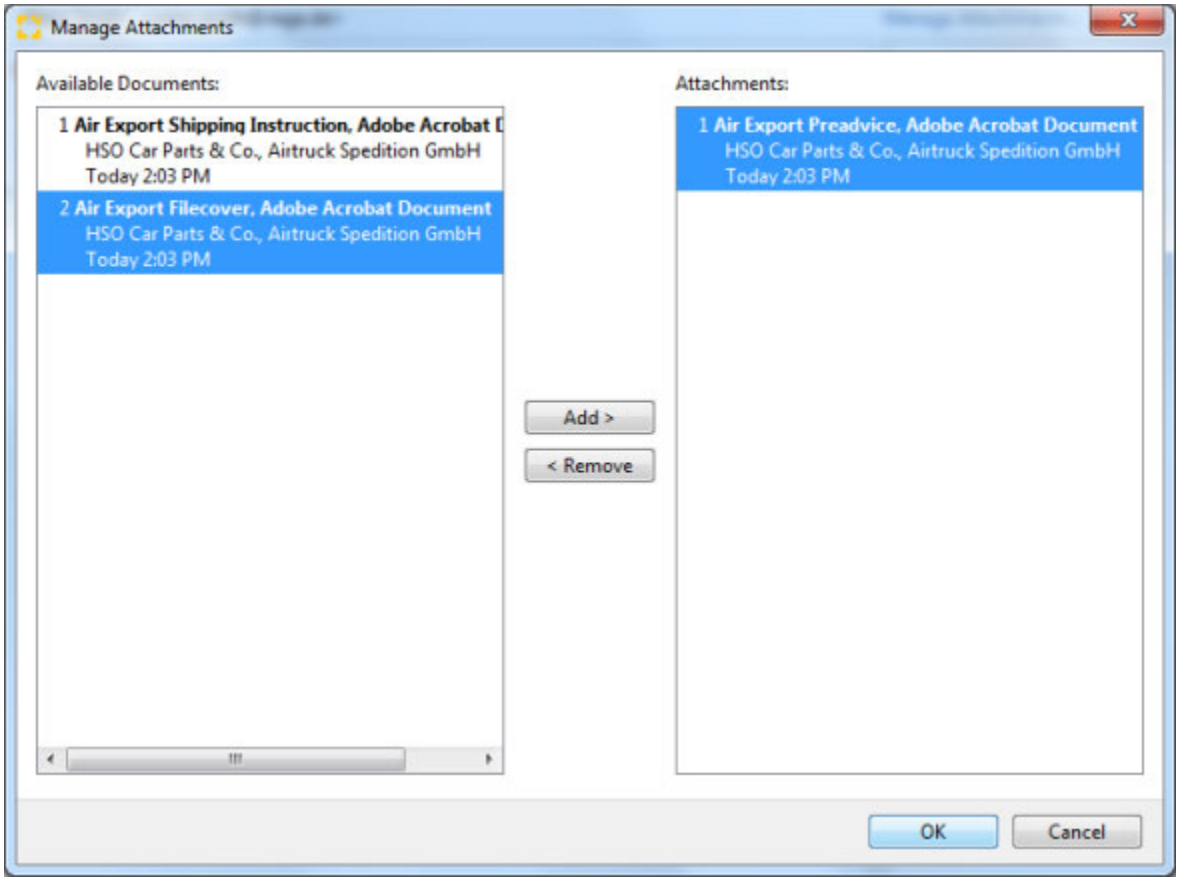
Text area

The area where the content of the email is written.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Manage Attachments...

This action will open a popup window in which the attachments to this e-mail can be added or removed.



Available Documents

This area will display all documents that are currently in the documents tab of the shipment. Only these may be included as attachments.

Attachments

This area will display documents that are already attached.

Add

Moves one or more selected documents from the list of available documents and adds these to the e-mail as an attachment.

Remove

Moves one or more of the selected documents form the **attachments** area back into the **available documents** areas. This removes the document from the email.

> **External Documents**
>
> External documents such as those stored locally on a hard disk or a network drive can be uploaded to the **documents tab of the application using the *Upload documents* option in the *document tab**. Once this is done, these documents will now be available as documents that can be attached to emails.

OK

Confirms the documents to be attached and closes the pop-up window.

Cancel

Closes the attachments pop-up without any further action.

Attachements

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This areas displays all the documents that have been attached to the email.

Send

Send the E-Mail.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

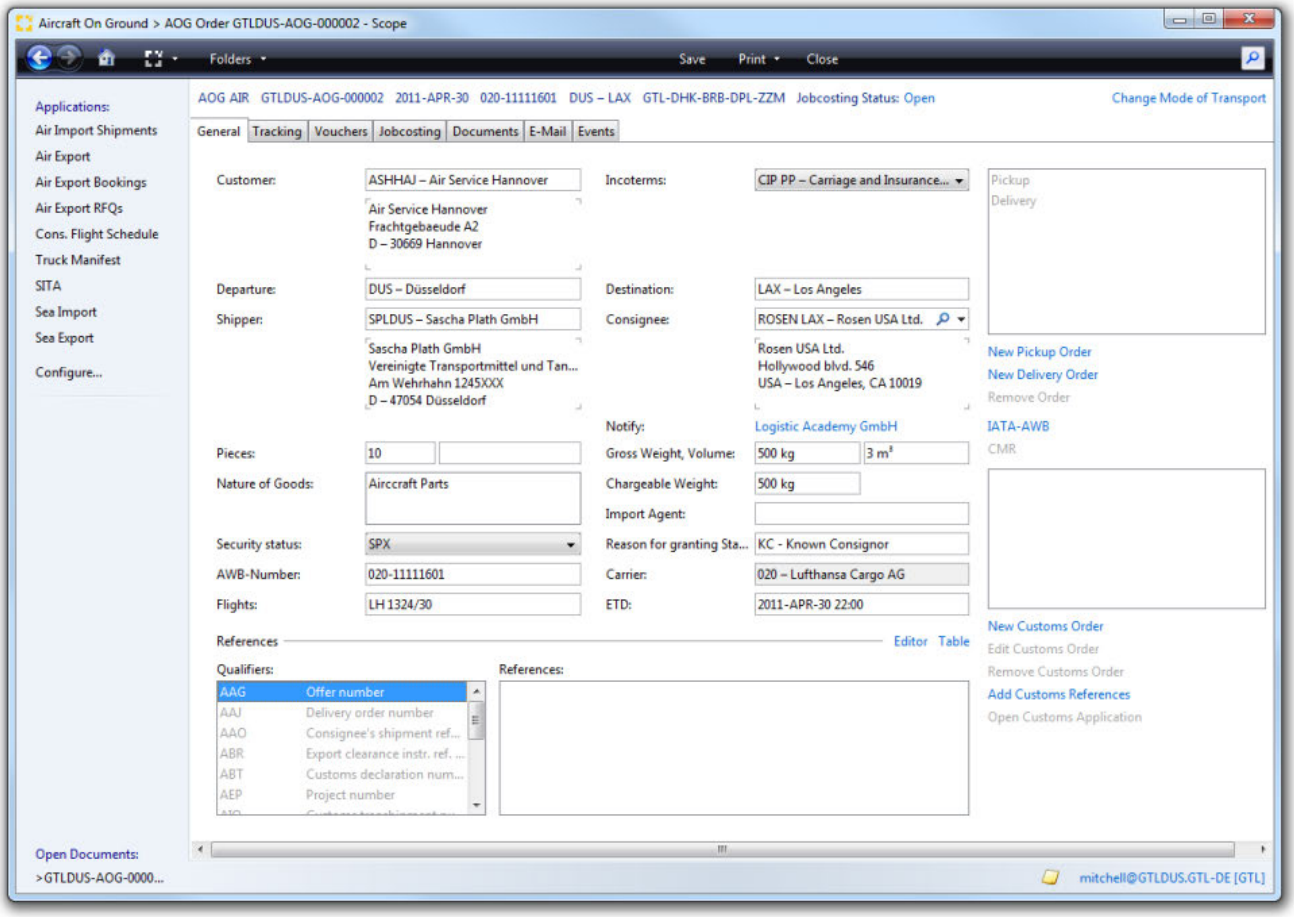
General - Air - AOG - Forwarding

- Introduction
- Description

Introduction

The **General** tab of the AOG shipment editor is where information such as the bill of lading number, sender, recipient, number of packages and the weight of the shipment can be stored and edited. The data entry is very similar to a regular air export direct shipment since an AOG shipment is a direct shipment. In addition pickup and [delivery orders|] can be created. An IATA-AWB can also be created and printed. AOG shipments can also be created as road shipments and this is detailed in the chapter on AOG Road Shipments.

Description



Save

The save option will ensure the entered data is stored. Saving is only possible if all required fields are filled and the corresponding validation icons are not present. If this is not the case then an error message will appear in the corresponding display.

Print

By clicking on the appropriate item in the list under the print command , the required documents can be printed.
Currently the following documents are available:

- File cover
- Preadvice
- Release Note (or Shipment Certificate)
- Export Certificate
- Master Labels (waybill labels)

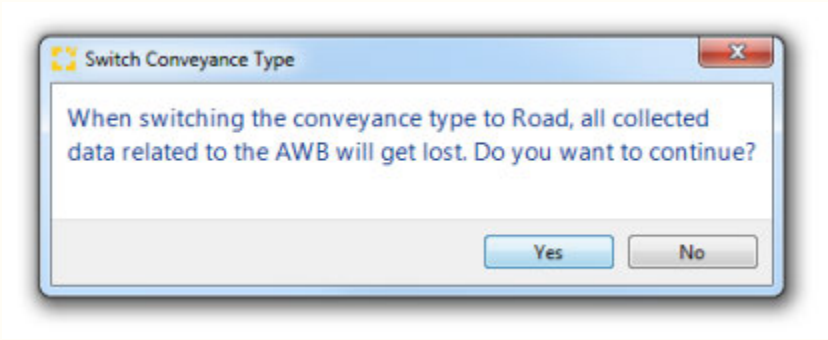
Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Title Bar

The following information and actions appear in the title bar for a shipment. Blue text indicates that the text has an action link and offers further activities.

- **Type of shipment**
  Type of shipment. For an AOG air shipment this is *AOG AIR*
- **Shipment number**
  Assigned by the system after the shipment has been saved for the first time.
- **Service date**
  The service date of a shipment is set as follows:
  When present, ETD (Estimated Time of Departure / Expected Time of Departure)
  -otherwise
  If an air waybill has been printed, date of air waybill (AWB) printing.
  -otherwise
  The current date when the shipment is first saved.
  The date will not change unless it is clicked (popup-window) and will update/ revise the actual correct date. (This can be necessary if the shipment number contains the service/ settlement period)
- **Air Waybill number**
  Air Waybill number entered or pulled from the pool of Air Waybill numbers.
- **Departure airport - Destination airport**
  Departure and destination of the shipment.
- **USI number**
  Unique shipment identification number (Unique Shipment Identifier). When the shipment is first saved this identifier is automatically generated by the system and is used for internal purposes.
- **Jobcosting Status**
  An indication if income and costs on the shipment have been finalized.
- **Change Mode of Transport**
  This action link will convert the shipment to an AOG Road shipment.

When a shipment is changed from *air* to *road*, all existing AWB information will be deleted. If an AWB number has been assigned, this will be restored to the airline pool . To prevent accidental changs, a pop-up dialogue appears to confirm changes:



Customer

Generally the customer is the business partner who is responsible for generating the shipment and for the transportation costs. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Incoterms

The delivery terms for the shipment

Departure

Airport of departure of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic [full text search|Full Text Search - Field Types - User Interface - General#feldsuche] that will display all matching airports.

Destination

Airport of destination of the shipment. The IATA-Code and the full name of the airport are displayed. Either of these can be entered to launch an automatic full text search that will display all matching airports.

Shipper

Shipper of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Consignee

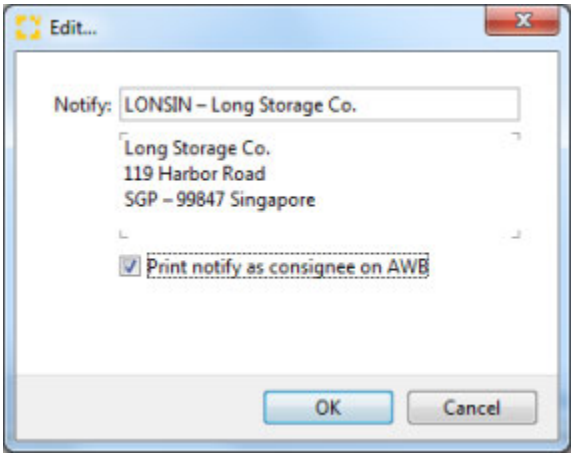
Consignee of the shipment. The desired partner may be found with the search field. The drop down menu will open the business partner context menu where amongst other things, a new partner may be created or an existing partner may be edited.

Notify

The party to be Notified when the shipment arrives. Typically, consignment is addressed to the recipient but actually delivered to the Notify.

If a notify has not been entered, the action link *Edit* will be displayed. Once a Notify is recorded it will display the first line of notify address. Clicking on this action link will open the Notify editor.

Notify Editor



Notify

The notify address can be located by using the search field. The context menu of the Partner field provides options for new partner addresses to be created or existing partners may be edited.

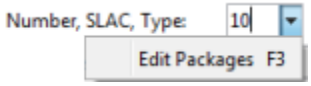
> In the master data of the (partner / Role - Airfreight Export), if the partner has the role "Forwarding Customer" applied, this role allows a permanent Notify address for the partner to be saved. This will be used automatically when this partners is used in any shipment where this partner is the recipient (consignee).

Print Notify as Consignee on AWB

Enabling this option in the Notify pop-up will cause the notify address to be printed in the consignee box of the air waybill and the recipient (consignee) address will print in the accounting information box of the air waybill. If the option is disabled, the receiver is print as normal in the consignee box and the Notify address is printed in the accounting information box.

Number

Total number of packages in the consignment



The total number of packages, packaging type, gross weight and volume can be entered at this stage in the appropriate fields starting with the total number of packages. Within the number field, press F3 or select the drop down menu for access to the package editor. The package editor allows much greater detail to be entered about individual packages.

> If the package editor has been used to capture details about the packages, then the package fields are disabled and any additions or changes to packages must be made using the package editor. If required, all packages and their details can be removed from the package editor and this will release the package fields in the general shipment entry, allowing package totals to be entered instead of details.

Type (Packing type)

The type of packages used for the cargo. The available packing types are maintained in the master data packing types maintenance program . (If the package editor has been used to enter a variety of packing types, this field is blank.)

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Gross weight, volume

Total gross weight and volume of the shipment

Nature of Goods

The description of the goods. It is possible to select from predefined text blocks. If the packages editor has been used to enter multiple descriptions of goods, then these product descriptions will appear in this field as comma separated values)

Chargeable Weight

Total chargeable weight of the shipment.

Import agent

The station that will receive the cargo at the arrival airport. The field search function can be used to locate an alternative agent.

The Import Agents available at the destination will vary according to the following:

- If no destination has been entered, then all agents are offered for selection
- If a destination is entered and the master data for that destination has only one agent assigned to it, then that agent will be used as the import agent for the shipment.
- If a destination has more than one agent assigned by the master data then the field will be blank but it is only possible to select one of the assigned agents.
- If a destination is assigned where no agent has been assigned in the master data , then it is not possible to select an agent until an agent is assigned in the master data

Security status

The security status of the consignment (of a shipment) according to Regulation (EC) No 300/2008. The following status are currently possible:

- not secured (NSC)
- secure for all-cargo and all-mail aircraft only (SCO)
- secure for passenger, all-cargo and all-mail aircraft (SPX)

Reason for granting the security status

If the security status of the shipment is set as "SCO" or "SPX", then the reason for granting these statuses is required as per Regulation (EC) No 300 /2008. The following status are currently possible:

- AC - Account Consignor
- HS - Handsearch
- KC - Known Consignor
- SC - Simulation Chamber
- TD - Trace Detection
- XR - Secured by XRAY

Non-secure items (not secured) do not require a reason security code. The safety data for Business or private shippers can be maintained in the partner master data.

Further information about security is available in the role descriptions RegB UAN and secure shipper.

AWB-Number

Fundamentals of the AWB-Nummer

Airlines use IATA compliant tracking numbers (AWB) numbers. These consist of 11 numbers. The first three numbers are referred to as a prefix, and also indicate the airline. The remaining 8 numbers are the actual bill number where the last number is a check digit which is calculated from the previous figures. The AWB number is usually represented as follows: aaa-nnnnnnnp (a prefix = / n = number / check digit p =) Example: 020-12345675

AWB These numbers must be allocated by the respective airline. There are three ways to enter this one AWB number.

1. Manual Input

- A single MAWB number assigned by the carrier may be manually input. (This should only be required for airlines that are rarely used.)
  Enter the AWB number in the manner of a normal text box. The number will be automtically be checked to ensure it is valid (correct check digit).

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

The number can be entered with or without a hyphen after the prefix of AWB. For valid AWB numbers the hyphen will automatically be added if not already present and the prefix will be used to determine the airline used in the "Carrier" field.

2. Automatic MAWB number from the pool

- MAWB numbers can be pulled automatically if they have been stored in a pool of AWB numbers that have been assigned to the airline. (Usually batches of 100 or more AWB numbers are assigned to a carrier).
  To pull from the pool, instead of inserting the whole MAWB number, only the prefix is entered and then exit the field. The result is the system will pull the next available AWB number from the pool of the relevant airline. The two-letter airline code may also be used, example: 020 or LH.

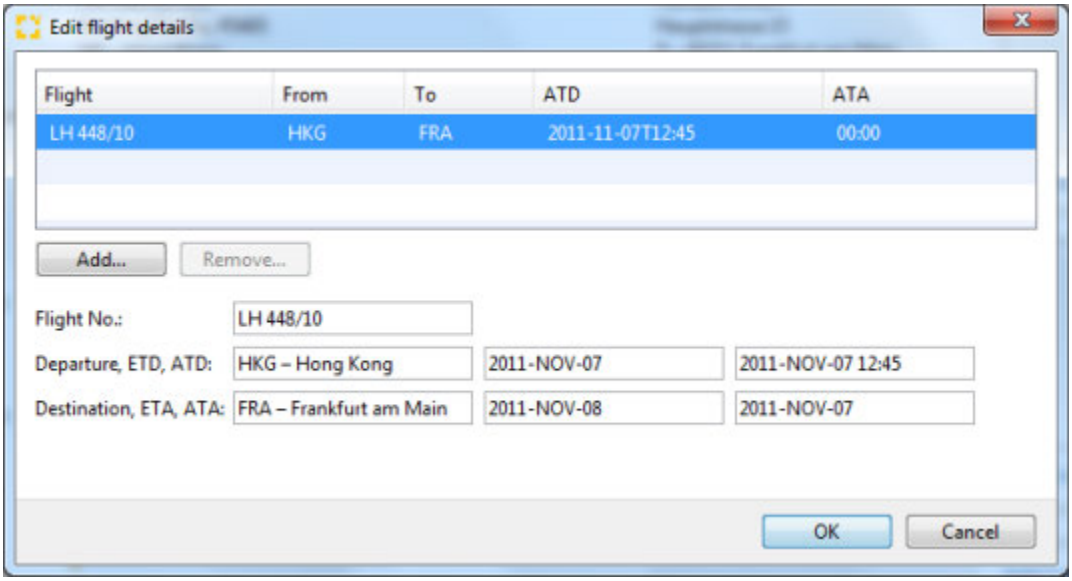
AWB-number pools must be maintained in the master carrier data

- If an AWB number has been drawn from the pool or entered manually, this number is "reserved" for a period of 30 minutes. During this time, this number may be used in any other program while the shipment remains unsaved. As soon as the shipment is saved, the number is permanently marked as "used" and cannot be used in any other shipment.
- If a MAWB number is removed from the field, or replaced by another MAWB number, the original number is automatically released and returned to the pool of MAWB numbers (restock). The number can then be reused in another shipment.

Carrier

This field will display the name of the carrier based on the MAWB number selected. This field cannot be edited.

Flights



Enter the flight data for the shipment. Use the drop-down menu or press F3 to access the flight data editor. This allows detailed flight and routing data to be entered.

ETD

Estimated time of departure

References

This section records various types of references and the references themselves. These can then be printed or transmitted electronically to other destinations. More information about the function of the references editor is available here.

New Pickup Order / New Delivery Order

These action links will open the transport order editor where pickup notes or delivery orders may be created.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

New delivery to gateway

this action link will allow a transport order to be created in order to haul the goods to the gateway. Clicking the link opens the gateway delivery order application.

Remove order

This option will delete any delivery or pickup note that has already been created. The document highlighted in the pane showing existing delivery/pickup notes will be deleted. It is only possible to delete a pickup note or transport order if it has not been printed and if there are no entries in the costs and revenue section of the shipment.

All transport orders that have been created will be visible in the transport orders window. These may be re-opened by *double clicking* them. They may then be re-edited and printed again if necessary.

IATA-AWB

Opens the IATA AWB editor to enter information about the freight bill and to print the IATA AWB.

New Customs order

Opens a Customs order editor to create a new customs order

Edit Customs order

Opens the customs order editor to edit an existing customs order highlighted in the pane showing customs orders.

Remove Customs order

Remove an existing customs order highlighted in the list of created customs orders.

Add Customs references

Opens the Add Customs references application. Up to 10 additional customs references may be added.

- More information on individual customs applications see the chapter on Customs.

Tip

Use the key combination **Ctrl + I** to see details about the user session including email address and phone number. It is also possible to take over the session from the existing user.

IATA-AWB - AOG - Forwarding

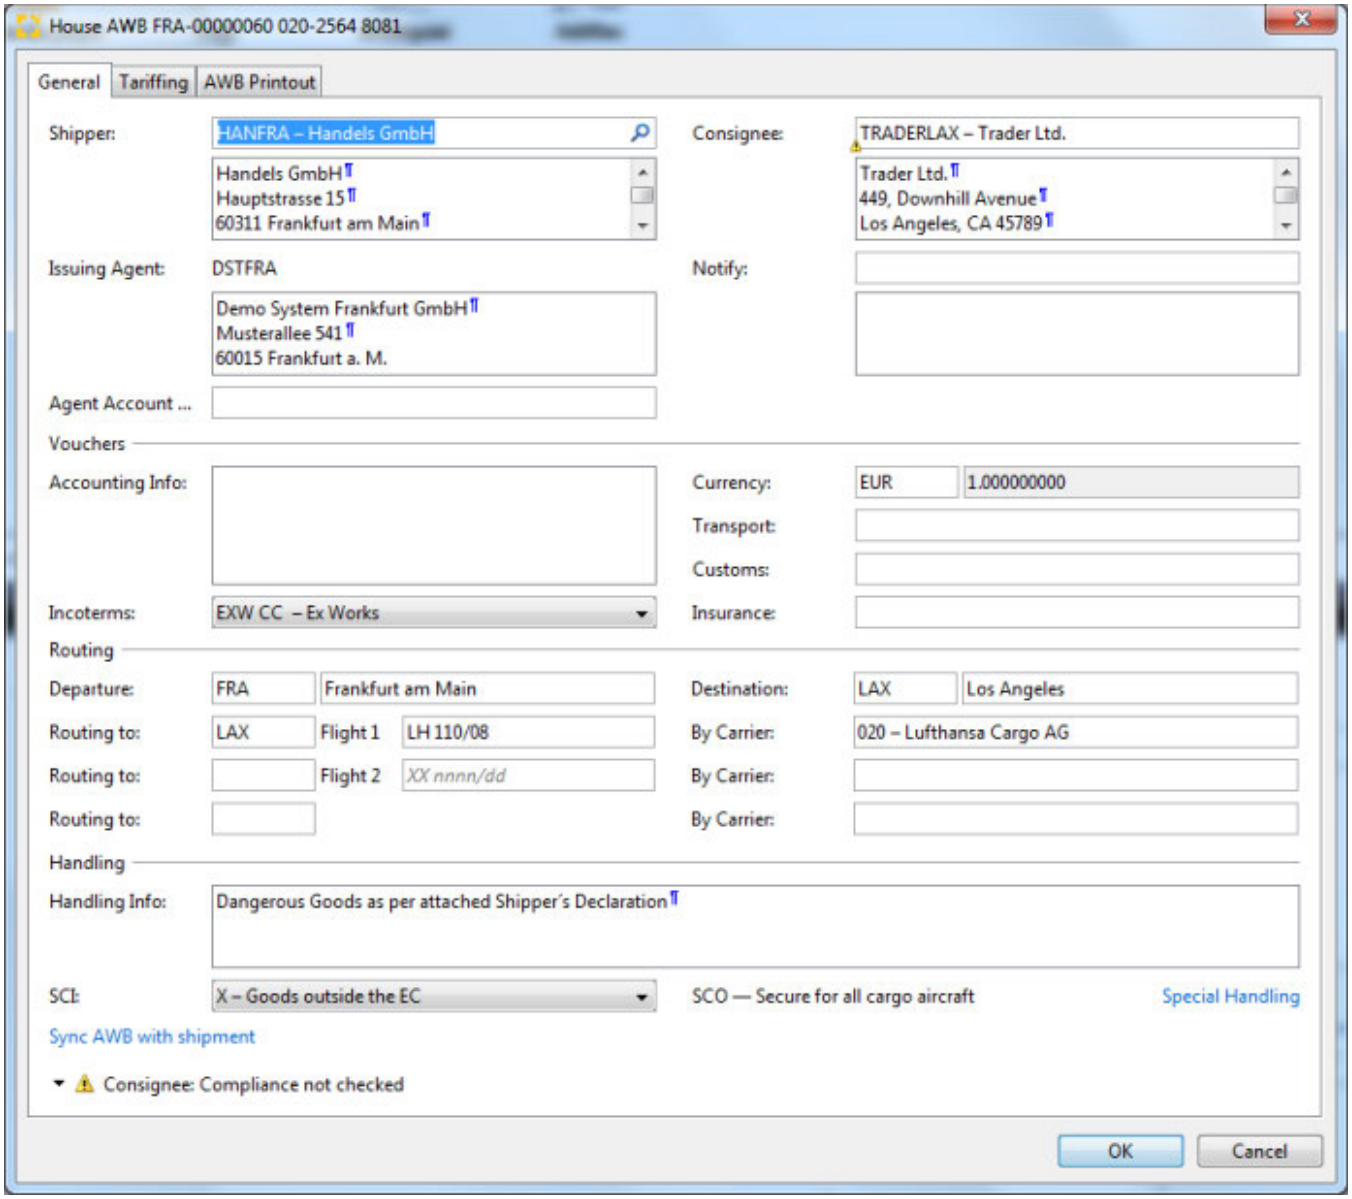
- Introduction
- Description

Introduction

The AWB editor allows all actions necessary to edit, customize and print AWBs. The editor offers great flexibility; much of the shipment data can be defaulted from the main shipment entry and master data, however these can be over-ridden without changing the data entered in the main shipment entry. The editor allows complete visualization of the AWB on screen before it is actually printed.

Description

General



Shipper / Consignee

Shipper and Consignee for shipment. These may be found with the field search or can be entered directly. Predefined text blocks may also be inserted.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Issuing Agent

Here the address of the issuing agent (own address) is used. If required, the field can be also adjusted manually or predefined text blocks can be inserted.

Agent Account

This field is used for master, Back2Back and direct shipments for the Cass-Acount number of the agent.

Notify

Notify from shipment editor (if available). The notify address can be replaced by using the search field function or entered manually. In addition, it is also possible, in this address field, to insert predefined text modules.

Accounting Info

This field is for any accounting information which is to print on the AWB in the accounting information box. If a notify has been entered, it will be inserted here by default. Iit is also possible to insert in the area othere addresses and predefined text blocks.

Incoterms

The incoterms are taken from the shipment editor, but can be replaced as needed by an entry from the drop down menu.

Currency / Transport / Custom / Insurance

Insert the airway bill currency (by default, local currency) and any transport, customs or insurance costs that should print on the airway bill.

Departure / Destination

This information will default from the shipment editor (departure / destination), but can be changed manually as needed. The field is also a search field that can find any IATA location code by entering the airport name or even the country code. This will produce a drop-down list of possibilities.

Routing to / Flight / Carrier

The flight data (routing, flight numbers and carriers) is taken from the shipment editor. If these have not been assigned they will appear blank but can be completed manually. The **Routing to** and **By Carrier** fields are also search fields for easy location of IATA location codes and carrier, respectively.

Handling Info

Handling information can be entered if required and will print in the appropriate box on the airwaybill. In addition, it is also possible to insert predefined text blocks .

SCI (Special Customs Information)

Select the custom status (if any) from the drop down menu.

Security Status (without field description)

In addition to the SCI field, the security status of the shipment is displayed for user information. The value of this field can not be changed.

synchronize AWB with shipment

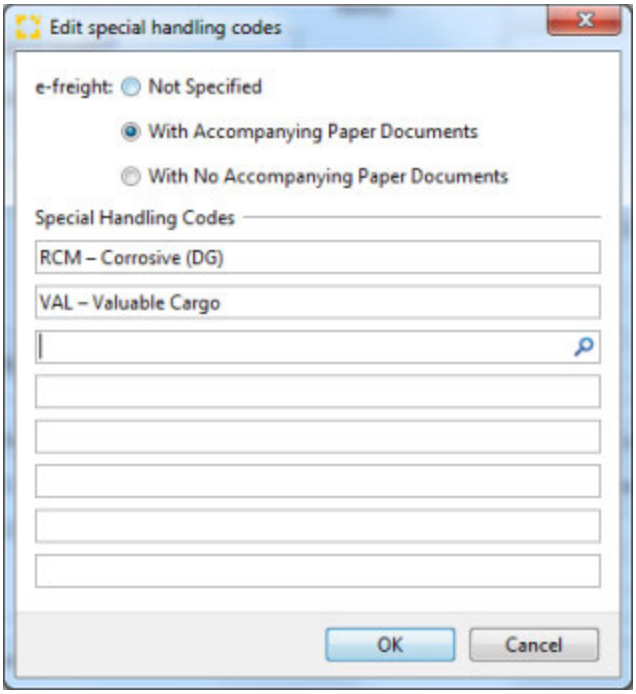
If new data has been entered into the shipment editor, this can be pulled into the AWB editor with this action-link.

Any data in the AWB editor that is overwritten during synchronization with the shipment editor will be lost.

Special Handling

This action link opens the Special Handling Editor. The information inserted will be used by the handling functions of e-freight. This is a method for creating a *paperless* airwaybill. This is not supported by all carriers in addition to this extra data, additional technical implementation is required. For more information, please contact your RSI customer support.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Not specified

Will not create a paperless AWB.

With accompanying Paper Documents

Additional paper documents such as certificates will accompany the shipment. A paperless AWB is created and sent with the EAP code.

Without accompanying Paper Documents

There are no accompanying paper documents. A paperless AWB is created and transmitted with code EAW in the FHL message.

Special Handling Codes

Extra handling codes can be recorded. A list of available codes is provided. The corresponding codes can be found using the search field.

OK

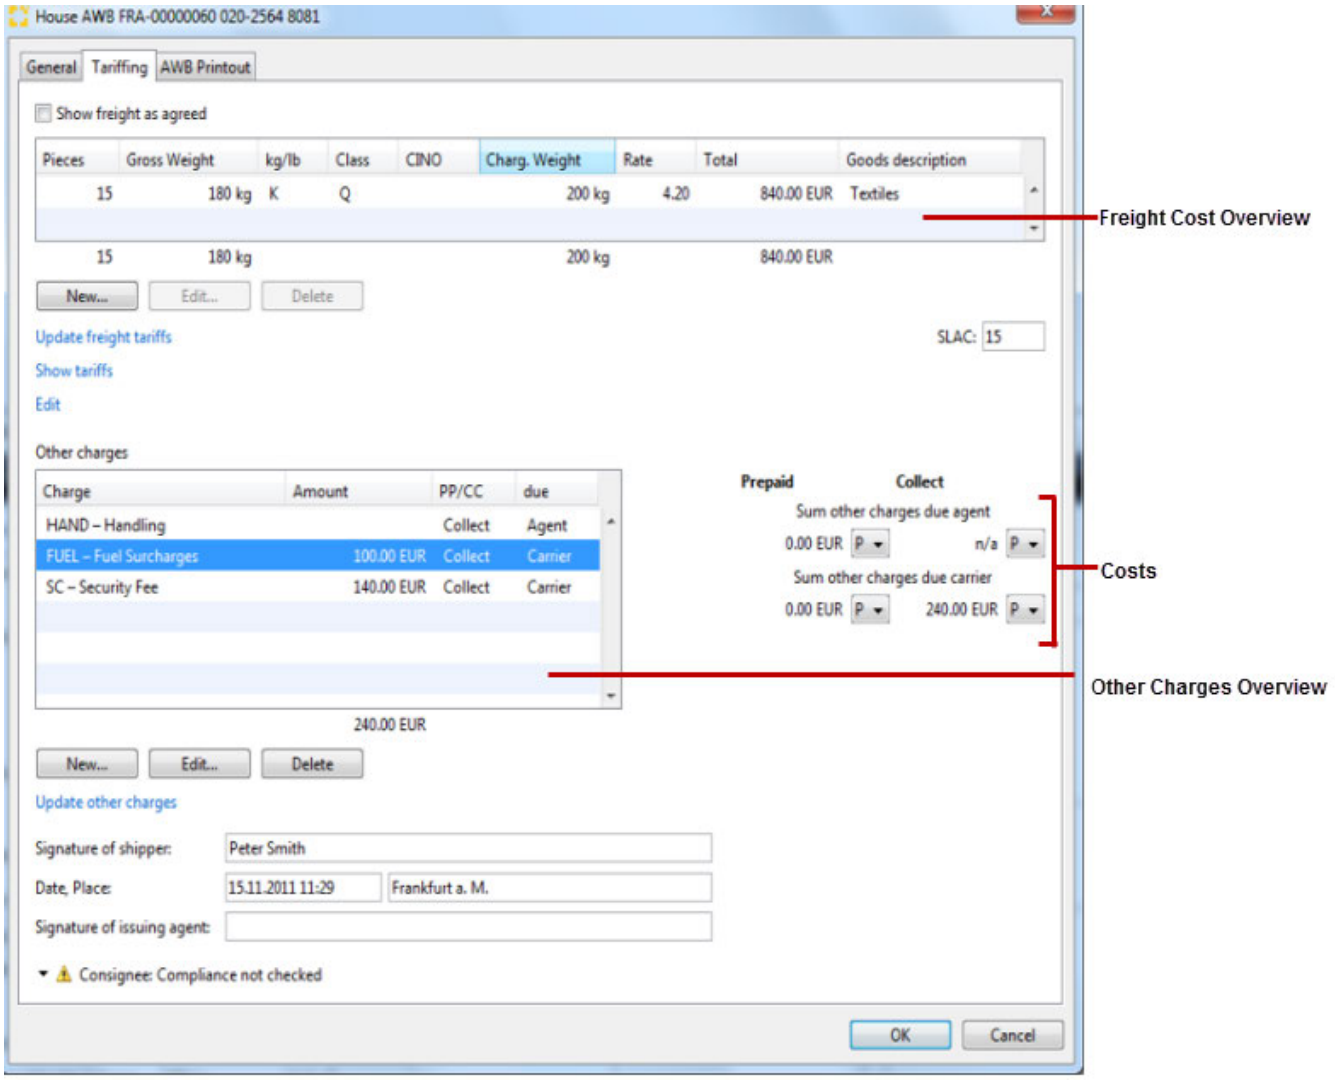
Saves the data and closes the editor.

Cancel

Closes the editor without further action.

Tariffing

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.



Shown freight as agreed

By checking this box, the amount of freight charges are not printed on the air waybill and are replaced with the statement *AS AGREED*.

Freight charges overview

In this table the calculated and collected tariff lines for the current program are shown. If part of the shipment is dangerous goods (DGR), these will appear as a separate tariff line. The following columns are displayed:

Pieces

Number of packages. This is automatically taken from the shipment editor.

Gross weight

The gross weight of the shipment. This is also imported from the shipment editor.

kg/lb

Indicates whether the weight is in kg or lbs. Kilograms are shown as *K*, and Lbs. as *L*.

Advice/ Class

The Class of tariff rate applied. The available rate classes are:

rate type	rate class
Simple Rate	M, N, O, Q

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Euro Charge Rate	B, K
Specific Commodity Rate	C
Percent Rate	R, S

CINO

CINO number (Commodity Item Number). This is only displayed if a corresponding tariff has been determined. The Commodity Item Number must be applied in the appropriate tariff master data.

Chargeable weight

The chargeable weight which has been calculated using the gross weight and volume.

Rate

The airfreight rate as per tariff master data, or manual input.

Total

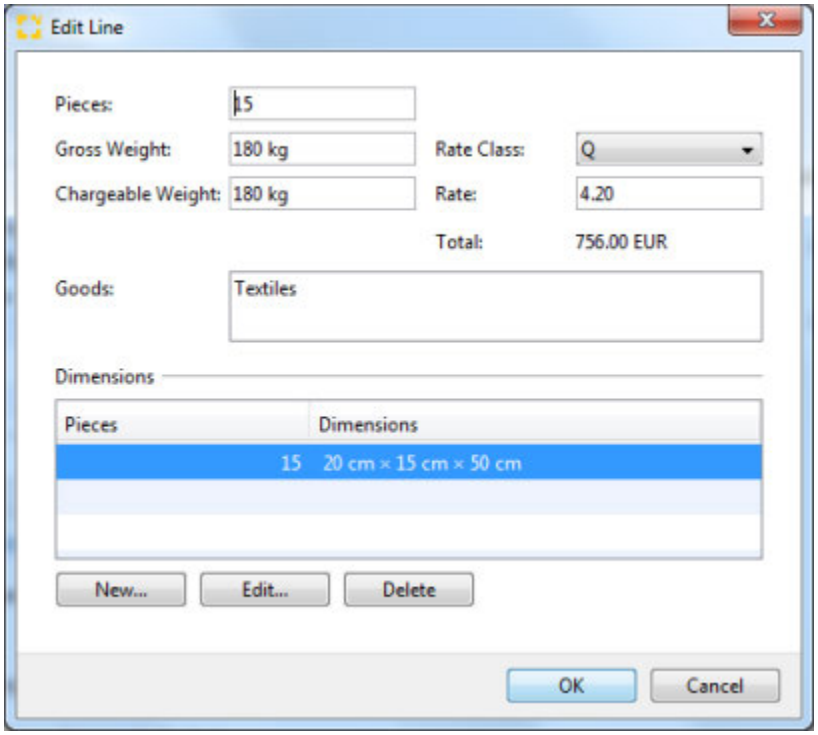
Total airfreight amount calculated from chargeable weight, weight and airfreight rate.

Goods

This information is defaulted from the field *description* in the shipment editor, but can be (if necessary) amended as described below.

New

This button creates a new freight cost line. First the type of rates must be selected from a pop-up window and then the freight cost line editor opens.



Pieces

Number of packages.

Gross weight

Gross weight of packages.

Chargeable Weight

chargeable weight of packages.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Rate class

The appropriate selection dropdown list, the desired rate class will be selected.

Rate

Here the required airfreight rate can be entered.

Total

The total freight amount, calculated from chargeable weight and airfreight rate displayed.

Goods

Description (contents of the packages).

Pieces / Dimensions

With *new*, a new line with the number and dimensions of packages can be entered. With *Edit* the highlighted row in the table is opened for editing. Alternatively, it can also be opened with a double click on the appropriate line. *Delete* removes a selected line.

- The data in the freight-line editor will automatically be updated with the new data entered.
- The entered number of packages and their dimensions are NOT included in the shipment editor.

Edit

Opens the tariff entry highlighted in the freight cost overview highlighted with the freight costs-line editor. Alternatively, double clicking on the appropriate line will also open it.

- The number of packages and their sizes are defaulted from the shipment editor. These data, as described above, regardless of the data shipment editor can be modified, supplemented or deleted.

Delete

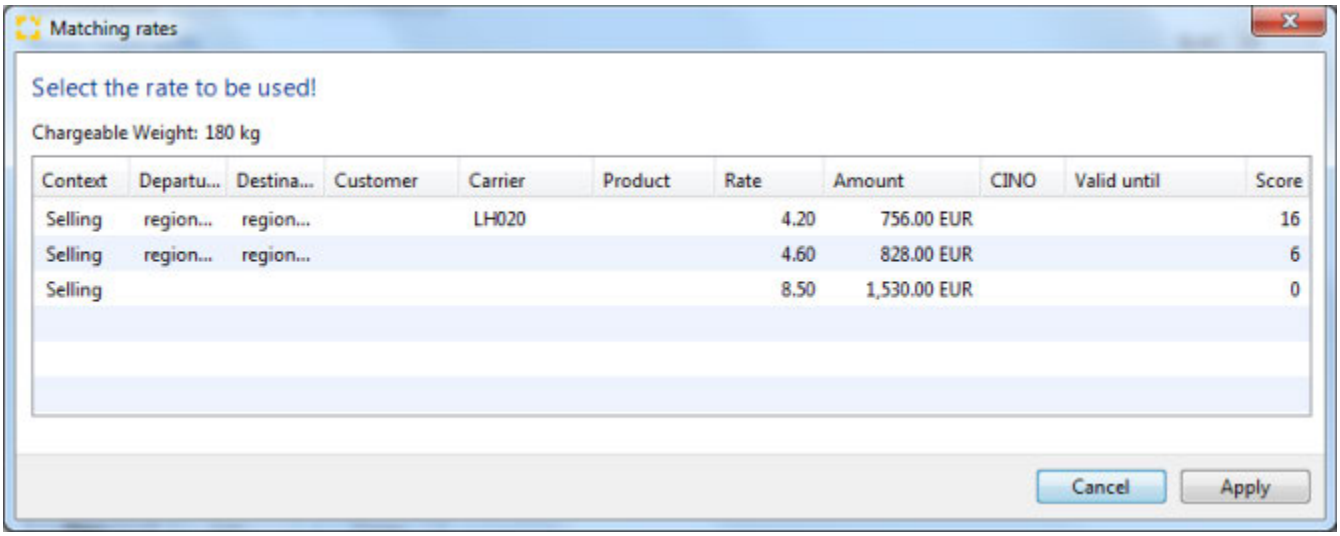
Deletes a marked line in the freight cost overview.

Update freight tariffs

With this action, the freight costs will be updated using the master tariff data. At the same time, any changes to the values of the number of packages and weights in the shipment editor are also updated in the AWB editor.

Shows Tariffs

This action link will display all tariffs that have been stored in the master data and which meet the criteria of the shipment. This information will appear in a separate pop-up window.



Chargeable Weight

The chargeable weight will be displayed from the tariff lines.

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

Context

Shows the tariff context (type of tariff) to. Only *IATA* tariffs are shown for direct shipments.

From / To / Customer / Carrier

This information will display depending on how a tariff has been created in the master data. Departure, destination, departure country, destination country, customer, carriers may all appear if they are part of a rate the matches the current shipment.

Rate / Amount

Shows the relevant tariff stored in the airfreight rates and the calculated amount based on the chargeable weight.

CINO

Shows the corresponding tariff where a CINO-number (Commodity Item Number) is used, if available.

Valid up to

Validity date of the displayed tariff.

Score

Each tariff is weighted by matching the elements of the tariff with the shipment data in order to calculate a point score. The more points a tariff has, the more closely it fits to the current shipment. For example a general tariff of *departure* to *destination* will score lower than a tariff that is specific to the shipper where the *departure* and *destination* also match those of the shipment.

OK

Uses the highlighted tariff in the overview as the tariff for the line item in the tariff editor.

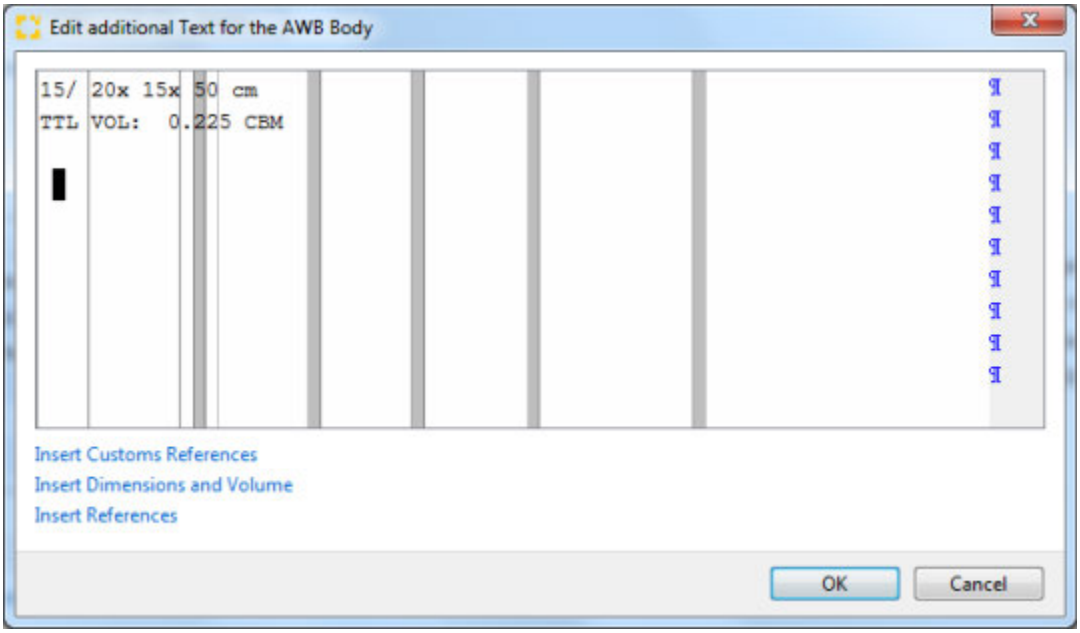
Cancel

Closes the tariff overview without further action.

> More information on tariffing is available in the section Automatic tariffing.

AWB additional text.....

This action creates a separate pop-up window which shows the central part of the air waybill. This can be entered as free text which is then printed in the corresponding area of the air waybill. In addition there is the possibility to insert predefined text blocks. By default, the dimensions and the volume of tariff lines from the editor are inserted.



Insert Customs References

Copyright 1985-2014 Riege Software International GmbH. All rights reserved.

This action link will automatically insert any existing customs references at the position of the cursor.

Insert Dimensions and Volume
